A

Prefatory INTRODUCTION

TO THE

READER.

THE Knowledge of foreign Countries is certainly the beſt ACADEMY for the enlarging, cultivating and enriching the Minds of Men, eſpecially the younger Sort, who being generally confin'd by Education and Cuſtoms at Home, (which few ever ſurmount) and being limited to a narrow Sphere of Thought, are frequently puffed up and choak'd for want of a free Air and a large extenſive Proſpect; hence it is, that ſo many become unfit for publick Buſineſs, or even common Converſation, and thereby fruſtrate the chief End and Deſign of EDUCATION, frequently falling into many Diſorders upon every little Contradiction, and conſequently boggle at every Thing that lies out of their way of thinking.

THIS terraqueous Globe we inhabit may juſtly be compar'd to a true and perfect Mirrour, in which may be diſtinctly ſeen the delightful Phænomena of Nature, with the myſterious Arts of Government: Every Climate affording new Scenes, wherein our Readers may obſerve that the Harmony of the Univerſe conſiſts in a wonderful Variety.

THERE are indeed ſome People that amuſe themſelves with what paſſes daily before their Eyes, but are little affected with the Affairs of the remote Parts of the World, and 'tis grown a Maxim with others to reject all foreign Relations of Things for Fables; theſe value themſelves upon their Incredulity, and are ſuch ſtrict Friends to Truth, that they never acknowledge any themſelves: On the other Hand, there are Perſons that run directly counter to thoſe before recited, who chiefly enquire after Wonders, and are only ſatisfied with whatever raiſes their Admiration; they think all that is genuine and natural, muſt of courſe be flat and inſipid, and for want of being rous'd up with aſtoniſhing Adventures and continual Prodigies, drop aſleep over the beſt penn'd Relations of the moſt celebrated Hiſtorians.

THE Author of the enſuing Sheets is not inſenſible, that the politer Part of Mankind will expect ſomething therein more than has hitherto appear'd; and therefore as the Nature of the WORK requires, an uncommon Method will be taken to diſtinguiſh it from any of the Performances of this Kind: He therefore thinks it juſt and neceſſary to introduce this large Undertaking, with an Account of the Order and manner of Proceeding which will run thro' every Branch of this HISTORY; diſcarding at the ſame Time all obſolete, fictitious and romantick Accounts, as well as the many inconſiſtent and idle Relations of ſome of our modern AUTHORS, as being of an evil Tendency to HISTORY itſelf, as well as to the READERS thereof.

PREVIOUS therefore to what is above remark'd, the AUTHOR thinks fit to apprize the Publick, that he has not only ſpent great Part of his Life in ſtudying HISTORY, but has alſo gone thro' the numerous Difficulties that attend travelling into the remoteſt Parts of the World; which has certainly enabled him to juſtify or condemn what other AUTHORS have laid down as Authentick, as well as to furniſh Mankind with a Detail of the farther Improvements that have been made both Abroad and at Home, as the WORLD has encreas'd upon us both in Age and Knowledge.

ACCORDING therefore to the laudable Cuſtom of ſeveral HISTORIANS that have gone before me, I intend to begin the enſuing Piece with a Deſcription of the *Eaſtern* Nations, and travel *Weſtward* with that glorious Planet the SUN, the immenſe Fountain of Heat, Light and Fire; So that when this WORK is compleated, the judicious Reader may take a Survey of the various Dominions throughout the ſpacious Univerſe, even ſitting at home in his Cloſet, and converſe with the remoteſt Nations, without incurring any manner of Riſque or Peril which Travellers are momentarily expos'd to; wherein he may trace as it were the Footſteps of that infinite Contriver the omniſcient Architect, wherein are ſo wonderfully diſplay'd an Infinity of Characteriſticks that denominate the ſupreme Being of Beings its Almighty AUTHOR.

THIS Performance was not at firſt deſign'd to make its Appearance in Publick after this Manner, but true it is, that ſuch are the Difficulties that AUTHORS are laid under, by a Set of People who have embodied themſelves into a Community, and ſuch are their mercenary Views, that unleſs Gentlemen will give away the Fruits of their Labour, Knowledge and Learning, their WORKS muſt be inevitably loſt to Poſterity, to the irreparable Damage of the Republick of Literature: Thus much the AUTHOR has thought proper to premiſe by way of Apology for this Undertaking's coming out Weekly; wherein particular Care will be taken to render it pleaſing and agreeably entertaining to every SUBSCRIBER.

The INTRODUCTION.

THE Method propos'd ſhall be juſt and regular, and the Stile familiar, plain, and eaſy, fitted to every Capacity, and digeſted in the following Manner, *viz.*

PART I. Contains a Deſcription of the Empire of *China*, wherein *Great Tartary* will be compris'd, being united together by Conqueſt; the Kingdoms of *Japan*, *Tonquin*, *Cochin-China* and *Siam*; the *Ladrones*, *Philippine* Iſlands and *Macaſſar*, *Amboyna*; *Banda* and the *Molucta* Iſlands; with a more full Account of the barbarous Treatment the *Engliſh* met with from the *Dutch*, when they were expell'd the *Spice-Iſlands*; *Borneo*, *Java* and *Sumatra*. The large Continent of *India* deſcrib'd, with Remarks on the Oeconomy of the GREAT MOGUL; an Account of the *Engliſh* and other *European* Settlements on the *Indian Coaſts*; Likewiſe an Account of the *Diamond* Mines, their Manner of working therein, and a Table of the Value of DIAMONDS according to their ſeveral Weights: Alſo the Kingdoms of *Pegu* and *Arracan* in the Iſland of *Ceylon* deſcrib'd, being remarkably famous for the beſt CINNAMON in the World. The Empire of *Perſia*, with a conciſe hiſtorical Account of the Revolutions that have happen'd there from the Uſurpation of *Mereweis*, to the late Pacification with the *Turks* and *Muſcovites*. *Arabia*, with their Method of travelling thro' the Sandy DESERTS with their CARAVANS to *India*; the Fertility and Salubrioufneſs of *Arabia Fœlix*, and the Sterility of *Arabia Petra*: Likewiſe an Account of *Aſiatick Tartary* and the *Turkiſh* Dominions in *Aſia*, viz. *Chaldæa*, *Aſſyria*, *Meſopotamia*, *Armenia Major* and *Minor*, *Syria*, *Paleſtine*, or the *Holy Land*; the Curioſities and Sacred Relicks thereof amply deſcribed, *&c.*

PART II. Contains a Deſcription of the TURKISH Empire in EUROPE, wherein their capricious Government, and the late extraordinary Revolutions, the Depoſing of the GRAND SIGNIOR and other remarkable Occurrences are largely treated of; *Ægypt* deſcrib'd; the Pyramids, Catacombs, and other Curioſities ſo much remark'd by Travellers, being the Footſteps of venerable ANTIQUITY and priſtine Grandeur, with it's modern State and Condition are conſider'd: An Account of *Crim* and *Little Tartary*, *Romania*, *Greece*, the Iſlands of the *Archipelago*, and the reſt of the *Turkiſh European* and *African* Dominions. Alſo a genuine Deſcription of the *Empires*, *Kingdoms* and *States* of the remaining Part of EUROPE, with an ample Relation of their Modes of Government, what Alterations have lately happened in the ſeveral Parts thereof, and whatever elſe is remarkably Curious and worthy of Obſervation.

PART III. Contains a Deſcription of the ſeveral Parts of AFRICA, the Situations and Extent of the reſpective Kingdoms and States, the ſeveral Provinces each is divided into; the principal Rivers, Lakes, Canals and Springs; Cities, Towns, Fortifications, Factories, Palaces, Publick Buildings, Houſes and Furniture: The Genius, Temper, Stature and Complexion, Shape and Habits of the ſeveral Nations thereof; with their Entertainments, Diet, Diverſions, Feſtivals, Viſits and Ceremonies; Roads, Poſts, Manner of Travelling and Carriages: Their Manufactures, Trade, Shipping and Navigation; Husbandry, Tillage, and Nature of the Soil; Plants, Animals and Minerals; Learning, Honours, Liberal and Mechanick Arts; Language, Characters, Hiſtory and Chronology: The Prince's Courts, Prerogatives and Succeſſions; Courts of Juſtice, Magiſtrates, Laws, Cuſtoms and Puniſhments; Coins Weights and Meaſures: Religion, Temples and Superſtition: Marriages, Women, Children and Slaves; Funeral Rites, Mourning, Monuments, Tombs, *&c.*

PART IV. Contains an Account of AMERICA, as divided into Northern and Southern, the ISLANDS thereof deſcrib'd; an Account of the Diamond Mines lately diſcover'd in *Braſil*; NATURAL HISTORY and RARITIES deſcrib'd, the *Engliſh*, *French*, *Dutch* and *Spaniſh* Settlements and Trade; the Gold and Silver Mines in *Mexico*, *Peru* and *Braſil*, with their Manner of ſmelting and refining thoſe Metals: Likewiſe an Account of their Sugar Works, Tobacco Plantations, Indico Works, Cotton Trees, and dying Woods, noted Plants, Medicinal Drugs; ſtrange Animals, as Beaſts, Birds, Inſects and Fiſhes, and in ſhort, every thing elſe that is worthy the regard of an indefatigable Traveller, are amply and fully deſcrib'd in this largeſt Tract of Land. Alſo an Account of the *Engliſh South-Sea* Trade, and other curious Matters.

AS to the GEOGRAPHICAL Part of this WORK, the MAPS will be drawn from the Deſigns of the beſt and moſt approv'd GEOGRAPHERS of the Age, in which will be carefully laid down, the Latitudes, Longitudes, Diſtances and Bearings of the moſt eminent Cities and other Places of Note from each other, exactly adjuſted to a Scale of Engliſh Miles: And for the better Illuſtration of the HISTORY, the REMARKABLES will be depicted and rang'd Borderwiſe round the MAPS.

THUS, Friendly SUBSCRIBERS, I have briefly handled the deſign'd Method of treating this copious Subject, which I hope will be very ſatisfactory: I ſhall only add, that particular Care will be taken as to the Neatneſs and Correctneſs of the TYPOGRAPHICAL PART, on a good Paper and Character, and thoſe that deſire it, may have it printed on a Superfine Royal Paper at an advanc'd Price.

I am, Gentlemen, your very humble Servant,

B. LE STOURGEON.

A COM-

PREFACE.

THERE is no Sort of Writing, in which a greater Variety of uſeful Knowledge may be communicated to the Publick, than in a Work of Geography, built upon a Plan ſo extenſive as This. It includes not only what is ſtrictly to be underſtood by the Word Geography, but alſo all that comes under the Name of Hiſtory, whether Natural, Civil, Eccleſiaſtical, Literary, or Mechanical. Nor is it content with merely relating Things as they appear, but learns from the Philoſopher to reaſon on their latent Principles. It enters likewiſe on the Province of the Moraliſt and Divine, by enquiring freely concerning the Virtues and Vices, and pronouncing Sentence on the peculiar Cuſtoms, Ceremonies, and ſuperſtitious Obſervances of the People under Conſideration. It preſents alſo the moſt infallible Syſtem of Politicks that can poſſibly be drawn up, founded on the Experience of all Ages and all Nations: For as much as the ſame Cauſes ſeldom fail of producing the ſame Effects, in the Body Politick, as well as in the Natural Body.

Theſe Advantages, and many others that might be enumerated, being duly conſidered, we ſhall have no Occaſion to ſay any thing more in Behalf of the preſent Performance, than that we have endeavour'd to make it anſwer, as near as poſſible, to what we have promiſed in the Title. It muſt not be pretended, indeed, that we have done this equally in all Parts; that being a Point of Perfection, to which the moſt curious Enquirer could never yet attain, in a Work of ſuch Extent and Variety, as a Univerſal Hiſtory of the World: But if we have been copious where we could, and very exact where we could not be copious; if we have ſaid nothing but upon good Grounds, nor omitted any Thing material that was well atteſted; what can there be wanting to make This, in general, the moſt Uſeful Volume of the Kind, that is now extant?

As for the People to whom it may be thus uſeful; What Man or Woman is there, that converſes ever ſo little in the polite World, who has not often Occaſion to be ſet right in ſome of the Particulars here related? Even Geography itſelf, tho' the eaſieſt perhaps

of

of all Sciences, both to learn and retain, is yet not ſo familiar to the Generality of Readers, but that they have frequent need to refreſh their Memories as to the Situation of Places. How much more are theſe Helps wanting in other Matters, ſuch as the various Product of the Earth and Water, the numerous Rites of different Nations, the Revolutions of ſmall States, that make an inſignificant Figure in our common Hiſtories?

Every one may perceive, that we have hitherto ſpoken of thoſe Readers only, who had before informed themſelves in Matters of this Nature: And if to them ſo much Advantage and Pleaſure may accrue, from only reviving thoſe Parts of Knowledge which they had before attained; doubtleſs much more of both will be experienced, by ſuch as launch out into a new Field of Geographical and Hiſtorical Learning. To Theſe give us leave to ſay, that they may here meet with enough to ſet up upon in good Converſation, and perhaps to paſs for the beſt Hiſtorians in Company. At leaſt they will avoid that Contempt, which uſually falls on Perſons entirely ignorant of what is done out of their own Country, and before their own Time; as, comparatively ſpeaking, too many of our Countrymen are.

Give us leave to add, That the Character of being too fond of what is Foreign, which is caſt by the major Part of our Commonalty on the Nobility and Gentry of this Nation, betrays, when carried to Exceſs, too much of that Selfiſhneſs, which is the Effect only of an illiberal Education, and which a little Reading in the Hiſtories of other People uſually wears from off the Mind. Every Country hath its Advantages, as well as *England*; and 'tis not thro' Their Defects, but the falſe Taſte of the Importers, that the moſt cry'd-up Commodities are Eunuchs and Fathions.

A DE-

A COMPLEAT

Universal HISTORY,

Of the Several

Empires, Kingdoms, States, &c.

A

DESCRIPTION

OF THE

EMPIRE of CHINA.

PART I. CHAPI.

The Situation and Extent of this vaſt Empire deſcrib'd; The Name, Climate and Limits of the ſeveral Provinces thereof; with the chief Rivers, Canals, Lakes and Springs, that Country is ſupply'd with.

China and *Tartary* one Dominion.

CHINA, of all the Dominions of the Earth, is celebrated as well for Politeneſs and Civility, for Grandeur, for Riches and Magnificence, as for Arts and Inventions, and is united with *Great Tartary*, which together conſtitute one mighty Empire, in which is comprehended all the Eaſtern Continent of *Aſia*. The Southermoſt Part of *China* lies in the Latitude of 21 Degrees North, and the Northermoſt Part of *Tartary* ſubject (as before obſerv'd) to this Empire, lies in the Latitude of 55 Degrees North, which makes the whole Extent from North to South 34 Degrees, or 2040 *Engliſh* Miles. But if we extend it, as ſome Authors have done, to the Latitude of 60 Degrees North, and in the Iſland of *Haynam* in the South, which is 18 Degrees North Latitude, this will make 8 Degrees more, or 480 Miles, which added to the former Eſtimation of 2040 Miles, makes 2520. The Breadth from Eaſt to Weſt is judged to be above 1000 Miles in moſt Parts, and therefore the Circumference muſt be 7000 Miles and upwards.

Extent thereof.

Boundary between *China* and *Muſcovy*.

THE River *Tamour*, which lies 55 Degrees of North Latitude, was till lately the Boundary of this Empire towards *Muſcovy*; but upon a Treaty of Peace between the *Czar* of *Muſcovy*, and the Emperor of *China*, the *Czar* agreed to demoliſh his Forts upon that River, and yielded up the Right of Pearl-Fiſhing in it, and of Sable-Hunting in the Country adjacent to *China*, which perhaps may have occaſion'd ſome Geographers to extend the *Chineſe* Dominions further North; but as we don't hear of any Towns or People beyond the River *Tamour*, worth mentioning, that River may properly be reckon'd the Northern Boundary: At the fore-mention'd Treaty it was alſo agreed that the River *Argun* ſhould be the Boundary of the *Chineſe* towards the Weſt, and that the Town of *Argun*, which is in the Latitude of 52, and the Longitude of 125 Eaſt from *London*, ſhould be the utmoſt Limits of the Czar's Dominions on that Side.

Name of the Country, whence derived.

CHINA or CINA, according to ſome Writers, derives its Name, from *Cin* one of their Emperors; others ſay, it is called *Tchoum-cocve* by the Inhabitants, which ſignifies in their Language the *Middle-Kingdom*, fancying themſelves ſeated in the Centre of the World: And tho' the People of *India* as well as the *Europeans* continue to call it *China*, it is to be obſerv'd that every new Family on their mounting the Throne, give their own Name to the Empire; and by that Name it is always call'd by their Subjects. *Navarette* ſays, it was call'd *Chin* by the People of *India*, from the great Produce of Silk, that Word ſignifying *Silk* in their Language. But however the Name is deriv'd, it is generally agreed that this is the ſame Country that anciently went by the Name of *Cathai*. The great *Cham* ſo much talk'd of formerly, was no other than the Emperor of *China*; and *Cambala*, where he is ſaid to reſide, was indeed the City of *Pekin*: Nor is it much to be wonder'd at, that we were formerly ſo much in the dark, having little or no Commerce with that People till within theſe 200 Years, being much about the Time the *Europeans* found a Paſſage thither by the *Cape of Good Hope*.

No other great *Cham* than the Emperor of *China*

Climate.

CHINA (diſtinct from *Tartary*) extending from the Latitude of 21, to about 42 Degrees North, have their longeſt Day in the South 13 Hours and a half, and about 15 Hours in the North. The Northern Provinces have generally a very ſevere Winter, which continues about 4 Months, *viz.* from the Beginning of *November* to the Beginning of *March*, when their Rivers and Canals are generally frozen up: In the Southern Provinces they ſee no Froſt or Snow; but, as in other Countries which lie within or near the Tropicks, they have uſually ſtormy Weather and Rains, about the Equinox, particularly in Autumn; and this is all the Winter they

they know, the reſt of the Year they enjoy a clear Sky, and an almoſt uninterrupted Serenity: Nor are their Heats ſo great, but they may eaſily be born, being abundantly aſſiſted by Grotto's and refreſhing Shades, to which they retire during the Heats of the Day: At which Time there is a profound Silence, and a general Ceſſation from all Buſineſs as if it was Midnight; the Evenings and Mornings properly conſtitute the Day in all Hot Countries; Mid-day as well as Midnight being aſſign'd for their Repoſe.

THE *Chineſe* have many Books, containing ample Deſcriptions of their Country; wherein they exactly note all that their Provinces particularly poſſeſs; what is the Extent, Quality, and Force of each; what Number of Cities they have, how many Officers and Men they have that bear Arms; the Number of Men that ſtudy the *Sciences*; who pay Tribute; with many other Particulars; which have been ſo imperfectly treated by other Writers, things, we ſcarcely could agree in the Names of the 16 Provinces, and of ſeveral Cities and Rivers, till the *French* Jeſuits came to ſettle among them, who thro' their great Application and Induſtry, have largely furniſh'd us with genuine Relations of many Particulars, we before had only confus'd and lame Deſcriptions of; from whoſe Accounts we ſhall proceed to furniſh our Readers, with what is remarkable and curious; and firſt I ſhall begin with an Account of the Names of the 16 Provinces, their Produce, Boundaries, Extent, &c.

China divided into 16 Provinces.

CHINA is generally divided into 16 Provinces, 7 Northern and 9 Southern; the firſt is *Leaotum* or *Leaotung*, which lies beyond the great Wall, and is bounded towards the Weſt by an Arm of the Sea, which divides it from *Corea* on the Eaſt, by the Mountains of *Great Tartary* on the North, and the *Kang-Sea* or Gulph of *Pekin* on the South; this Province is ſituate between 39 and 42 Degrees of North Latitude; the Capital City whereof is called *Xynam*.

Province of Leaotum.

THIS City is well and uniformly built, being ſquare and fenc'd with good brick Walls, plaiſter'd over with Porcelain, which renders it exceeding hard and ſtrong, and are commonly very broad, having the Benefit of ſeveral Towers, as well for Beauty as Defence: Its Soil, among other things, produces the Root *Ginſen*; this Root is very much eſteem'd for its ſanative Quality, it ſtrengthens and reſtores Health to the Sick, and is commonly ſold for double its Weight in Silver. Its Inhabitants are leſs civiliz'd than the reſt of *China*, but more robuſt, and fit for the Fatigues of War; its other Places of Note are *Ruheo*, and *Chincheo*, and are both ſeated on the Sea-ſide.

Province of Pekin.

2. PEKING or PEKIN, wherein is the Seat of the Emperor; is bounded by the great Wall on the North, which divides it from *Tartary*, on the South by the Province of *Honan*, on the Eaſt by the *Kang-Sea*, and on the South-Eaſt by the Province of *Xantum*, and on the Weſt by the Province of *Xanſi*; it extends from 36 to 41 Degrees of Latitude; the Capital City whereof is *Pekin*.

THIS City is the Metropolis of *China*, and the principal Reſidence of the Emperor; whoſe Court is very numerous, conſiſting of a great Number of Miniſters of State, Mandarins, Eunuchs, Prieſts and Gentry, Officers Civil and Military; with a great Number of Guards both Horſe and Foot; beſides above 120000 Families, which inhabit the Cities, Towns, &c. belonging to this Province, which contains about 130 Cities, beſides Towns and other Places of leſs Note. They are ſupply'd with Grain, as Maize, Wheat and Rice, from other Provinces, there being ſcarcely a Quantity ſufficient to furniſh Subſiſtence for ſo great a Number of Inhabitants which this Province contains, which is far more populous than any of the others.

3. THE Province of *Xanſi* is bounded on the Eaſt by *Pekin*, by the great Wall on the North, by the Province of *Honan* on the South, and the River of *Hoang* or *Yellow River*, on the Weſt, which divides it from *Xenſi*; the Capital City is *Tayven*. *Province of Xanſi.*

THIS Province hath many Mountains, by reaſon of which it is not near ſo fertile, as that of *Pekin*, neither is it ſo large, ſo populous, nor ſo pleaſant; yet with the Induſtry of the Inhabitants it produceth Corn, Rice and Maize; but that Defect is recompenc'd by the Numbers of Cattle they breed, and the great Plenty of Vineyards; inſomuch that the whole Empire is furniſh'd from hence, with pickled Grapes and dry'd Raiſins. They have likewiſe two ſorts of Mines, the one of Brimſtone the other of Stones, which are inflammable, and make very good Fuel. In the Sulphur Mines they make little Holes, which gives a ſufficient Heat to boil any thing they have occaſion for: And theſe Stones well prepar'd will keep Fire Night and Day without being ſtirred up. In this Province are about 90 Cities and great Towns, ſix of which are of conſiderable Note; as, 1. *Xanſi*. 2. *Quanchio*. 3. *Hoquan*. 4. *Tiancau*. 5. *Chenchio*. and, 6. *Suchio*. All which are well built, and very populous.

4. THE Province of *Xenſi* is bounded by the great Wall and by *Tartary* on the Weſt and North, by *Suchuen* on the South, and *Xanſi* on the Eaſt; the Capital City whereof is *Sigan*. *Province of Xenſi.*

THIS Province yields Plenty of Wheat, Maize and Barley, and but little Rice; they feed much Cattle, and their Sheep are ſhear'd thrice a Year, in Spring, Summer and Autumn; their firſt ſhearing is the beſt: It yields Musk, which is taken out of the Navel of a Beaſt of the Bigneſs a Deer, with ſeveral other Perfumes, and Plenty of Rhubarb, which they carry into *Perſia* and other Places: And it is through this Province that the Caravans travel from the Weſt. They have Gold, which they gather among the Sand of the Rivers, after it has been waſh'd down from the Mountains by the heavy Rains; they have ſeveral Mines, which they are not permitted to open. This is the Weſtermoſt of the Northern Provinces, and the largeſt of all the ſixteen; it is very populous, and is well ſtored with great Towns and Cities, as, 1. *Sigan*. 2. *Tatonfu*. 3. *Canchcu*. 4. *Suchcu*. 5. *Quitu*. 6. *Quiachcu*. With ſeveral others of leſs Note.

5. THE Province of *Honan* is bounded by *Xanſi* and *Pekin* on the North, *Xenſi* on the Weſt, and *Nankin* on the Eaſt; and lies between the Latitude of 33 and 37; the Capital City whereof is *Schaifung* or *Caifum*. *Province of Honan.*

THIS Province is very fertile, and the Climate very temperate; the freeſt from Mountains, and the fartheſt from the Sea. It produceth the beſt Fruits in the World; as well thoſe known to us in *Europe*, as others; and that in ſo great quantity, that they are ſcarce valued. It comprehendeth 7 great Cities, the chief City of which bears the Name of the Province; the other chief Places, are, 1. *Temechio*. 2. *Suntchu*. 3. *Caifun*. 4. *Chunchio*. And about 100 leſſer Ones, all well inhabited.

6. THE Province of *Nankin*, which is bounded on the North and Weſt by *Xantum* and *Honan*, on the Eaſt by the Ocean, and on the South by *Huquam* and *Chekiam*, and extends from 30 to 36 Degrees of Latitude; the great River *Kiam* runs thro' it; the Capital City is *Nankin* or *Kiamnin*. *Province of Nankin.*

THIS Province is the faireſt and richeſt, and the Inhabitants thereof are the moſt civiliz'd of all the Empire; and it was formerly the chief Reſidence of their Sovereigns, till it was remov'd from *Nankin* to *Pekin*. It hath 14 great and fair Cities, the Chief of which are, 1. *Nankin* its Metropolis. 2. *Sincu*. 3. *Kiatim*. 4. *Xambay*. 5. *Xamchu*. All which are very populous; in ſome of them about 200000 People are conſtantly employ'd in making of Callicoes: All which

which are commodiously seated on Arms of the Sea, which make several Isles. The City of *Nankin* is situated upon the River *Kiam*, that is, *the Blue River*, and upon an indifferent high Hill, so that it commands all the adjacent Plains. The Circumference of the City is 24 Miles, encompassed with a strong Stone Wall, environ'd with 130 Gates, and defended by 12 Forts.

Province of *Xintum.*

7. THE Province of *Xintum*, bounded on the North and East by the Sea, by *Pekin* on the West, and *Nankin* on the South; the chief City whereof is *Cinan.*

THIS Province lies between *Pekin* and *Nankin*, it is well watered with Rivers, which makes it very fertile, abounding with so great Plenty of Flesh, Fowl, Fish, Grain, Fruits, *&c.* that the Inhabitants of the Province, who are very numerous, cannot consume the Encrease, but are forced to furnish other Provinces; they have also great store of Silk, and other rich Commodities. It hath several great Cities, the chief of which are, *Cinan*, *Paumkeu*, *Cucoyan*, *Linceu*, &c.

Province of *Chekiam.*

8. THE Province of *Chekiam*, bounded on the North by *Nankin*, on the East by the Sea, by the Province of *Kiamsi* on the West, and *Fokien* on the South; and extends from 27 to 31 Degrees of Latitude; the Capital City whereof is *Hamcheu.*

THIS Province is esteem'd one of the best in *China.* The pleasant Rivers which run through it, and the many good Ports and Islands it hath, makes it very commodious for Trade; they Merchandize very largely in Raw Silks, and wrought Silks mix'd with Thread; also in various kinds of Stuffs, which are distributed not only to the other Provinces of *China*, but to all the World; the other Provinces not having sufficient for their own use: Of this Silk there is one sort which is reserv'd to be employed in divers curious Work, mix'd with Gold, and those are only for the use of the Emperor's Palace. This Province hath about 70 Cities, of which 6 are of considerable Note, as *Quinsay*, now call'd *Hamcheu*, once the Metropolis of *China*; 2. *Liampo*, a fair City seated on the Sea; 3. *Aucheo*, also commodiously seated on the Sea; 4. *Scaoutam* an Inland City; 5. *Checuian* also an Inland City, but fair, well built and much frequented; 6. *Sucu*, seated on the Sea, and about 25 Leagues from the City of *Nankin.*

Province of *Kiamsi.*

9. THE Province of *Kiamsi*, is bounded by *Chekiam* and *Fokien* on the East, *Huquam* on the West, *Nankin* on the North, and *Quantum* on the South; and extends from 26 to 31 Degrees of Latitude; the Chief City whereof is *Nanchan.*

THIS Province is enclos'd with Mountains, which have their Passages open to the neighbouring Provinces, and particularly on the Coast of *Canton.* On the Mountain of *Mulin*, there is a great Concourse for the Carriages of Merchandizes which are transported from *Canton* to *Nankin*; which is done by mounting the River of *Canton*, unto the Foot of the Mountain, from whence the Carriages being taken out of the Vessels, are loaden and born upon Mens Backs to the other side of the Mountain, where there is found another navigable River, which crosses this Province, till it falls into the River *Kiam*, which leads to *Nankin* and the Sea. In this Province are 12 great Cities, besides about 60 small ones; the chief City is call'd *Nanchan*, seated on a Lake; 2. *Cinlou*; 3. *Nangan*; 4. *Quanhamfu*, &c. their Inhabitants are so numerous that they are constrained to spread themselves throughout the Empire to seek their living: It is in one of the Cities of this Province that they make Porcelain or China Ware, the Water being fit to give it Perfection.

Province of *Huquam.*

10. THE Province of *Huquam* bounded by *Kiamsi* on the East, *Honan* on the North, *Quamsi* and *Quantum* on the South; the Capital City whereof is *Vuchan* or *Vuchang.*

THIS Province is so abundant in Rice, that it is able to furnish great Part of *China*, they have likewise plenty of Oil and Fish; the River *Kiam* and several other Rivers and Lakes cross it on all Sides, by which they carry their Commodities to *Nankin* and to *Quincheu*: It is very populous, containing 15 great Cities, and about 100 small ones; the chief of which are, 1. *Vuchan*; 2. *Quotechio*; 3. *Miamu*; and, 4. *Pascin.*

Province of *Suchuen.*

11. THE Province of *Suchuen* is bounded on the East by *Huquam*, on the West by the Mountains of *India*, on the North by *Xensi*, on the South by *Queycheu*; the Capital City whereof is *Chingtu.*

THIS Province is one of the least of the 16, of a lofty Situation, and pours down its Streams into the neighbouring Provinces; Here is found good store of yellow Amber, and excellent Rhubarb. Its chief Cities are 8 in Number, besides about 120 of less Note; all which are exceeding populous, the Principal whereof is *Chingtu.*

Province of *Queycheu.*

12. THE Province of *Queycheu* is bounded on the North by *Suchuen*, on the East by *Quamsi*, and by *Yunan* on the West and South; the Capital City whereof is *Queyang.*

THIS Province is full of Hills, which makes it not very fertile in Corn, Fruits, *&c.* but it hath abundance of Quicksilver, and breeds the best Horses of any Province in *China.* They have but 15 Cities, the Chief of which are *Queyang*; 2. *Tocchai*; 3. *Liamu*; 4. *Cipan*; 5. *Paukin*, *&c.* Here is also a famous Lake, call'd *Cucui-Hai*, from whence several Rivers do issue forth that water the Country.

Province of *Yunan.*

13. THE Province of *Yunan* is bounded on the East by *Queycheu* and *Quamsi*, on the West by *India*, and on the South by *Tonquin*; the Capital City whereof is *Yunan.*

THIS Province is the last on the South Coast; the Women have here the liberty to go in publick to buy and sell, which those of other Parts do not. It hath Mines which yield a kind of Amber, redder and less pure than ours; which hath some particular Virtue against Fluxes: Besides this, they transport few Commodities to other Parts; tho' there is a great deal of Gold and other Commodities produc'd here, as Agats, Rubies, Sapphires, Benjamin and Silk; they have also excellent Horses, Camels and Elephants. They have likewise several great and small Cities, the Chief of which bears the Name of the Province.

Province of *Quamsi.*

14. THE Province of *Quamsi* is bounded by *Yunan* on the West, by *Queycheu* on the North, *Quantum* on the East, and *Tonquin* and *Cochin-China* on the South.

THIS Province enjoys the same Temperament with *Canton*, yields the same Commodities, and in as great Plenty; but it is not so much frequented by Merchants, nor hath scarce any Strangers; the Reason is, because the Rivers lose and discharge themselves all in the Province, and at the City of *Canton*; which forces them to pass thro' the Hands of those of *Canton*, to barter their Goods for others. They have 10 large Cities, the Chief of which is call'd *Quamsi*, which is well built and very populous, besides about 100 smaller.

Province of *Quantum.*

15. THE Province of *Quantum* is bounded by *Quamsi* on the West, *Huquam* and *Kiamsi* on the North, *Fokien* on the East, and the Ocean on the South; the Capital City whereof is *Fochen.*

THIS Province, tho' one of the least in Extent, yet by reason of the Goodness of the Soil, and the Commodiousness of its Situation; being the first that presents it self to those of *Europe*, *Africa*, and *Asia*, which come to *China*, abounds in Wheat, Rice and other Grain, Sugar, Gold, Precious Stones and Pearls, Quicksilver, Copper, Steel, Iron and Tin, Saltpetre, Silk, Calambuck Wood, *&c.* The Inhabitants are very civil, industrious and ingenious, but they are better at Imitation than Invention

tion; being in the firſt ſo great Maſters, that there is no Rarity or Manufacture whatſoever, that comes to their ſight, but they will exactly Pattern as well as any *Europeans*; and are very expert in all Sorts of Goldſmiths Work. In this Province are about 80 Cities ſmall and great, the Chief whereof is *Canton*.

Province of *Fokien*.

16. THE Province of *Fokien* is bounded on the Weſt by *Kiamſi*, on the South by *Quantum*, on the North by *Chekiam*, and on the Eaſt by the Ocean; the Capital City whereof is *Focheu*.

THIS Province is not near ſo fertile as the former; its Inhabitants endeavour to repair this Default by their Trade with Strangers, and principally with *Japan*, the *Philippines*, *Formoſa*, or *Fair Iſland*, which is directly oppoſite to their Coaſt. The Earth produceth Gold, Iron, Steel, Sugar, Calamba, Spices, Drugs, Quickſilver, Precious Stones, Fruits, Corn, and Cattle; alſo Silk and Cotton, of which they make divers Manufactures; they likewiſe make all ſorts of Paper: There are ſeveral Cities of Note, but its Chief are, 1. *Focheu*, ſeated on a fair River; 2. *Chinchco*, alſo commodiouſly ſeated on a River, or rather an Arm of the Sea, from whence it is diſtant about 10 Leagues; 3. *Tachco*; 4. *Huquio*; and, 5. *Chiamchiu*, which two laſt are ſeated far within Land.

Corea, *Tonquin* and *Siam* Tributary to *China*.

THE Kingdoms of *Corea*, *Tonquin* and *Siam*, are alſo Tributary to *China*: *Corea* is a Peninſula; or as ſome ſay an Iſland, being bounded on the Weſt by the Province *Leaotung* and the Gulph of *Nankin*, on the Eaſt and South by the Sea of *China*, and on the North by *Nuuh*, a Province of *Tartary*, and lies between the Latitude of 36 and 42 Degrees; the Chief City whereof is *Kinki*.

THIS being accounted by ſome a Province of *China*, occaſions our Notice of the Situation of it in this Place. As the Kingdoms of *Tonquin* and *Siam*, which lie to the Southward of *China*, have Princes of their own, they ſhall be diſtinctly treated of hereafter.

IN the 16 Provinces of *China* are reckon'd 155 Capital Cities, 1312 of the ſecond Rank, 2357 fortify'd Towns, and 10,128,789 Families.

Nieuhoff tells us, that it appear'd by the Poll-Book, which is exactly kept, there was at the Time he reſided there, upwards of 58 Millions of People in the Empire of *China*; and that this is very eaſily known, becauſe every Maſter of a Family is oblig'd under a ſevere Penalty, to hang over the Door of his Houſe a little Board, giving a particular Account of all the Souls in his Houſe; and that there is an Officer over every 10 Houſes, who examines the Truth of thoſe Accounts, and makes his Report to a ſuperior Magiſtrate thereof.

THE principal Rivers of *China* are *Kiam* or the *Blue River*, and the *Hoambo* or *Yellow River*. The *Kiam* takes its Riſe in the Province of *Yunam* upon the Borders of *India*, and runs from Weſt to Eaſt quite croſs the Empire, and thro' the Provinces of *Suchuen*, *Huquam* and *Nankin*, running a Courſe of above 1000 Miles. The *Hoambo* or *Yellow River*, has its Riſe in the Weſtern Mountains of the Province of *Suchuen*, and runs Northward along the Borders of *Tartary* beyond the great Wall, where it re-enters *China*, and then runs Southward between the Provinces of *Xanſi* and *Xenſi*, after which it paſſes Eaſtward thro' *Honam*, *Xantum* and *Nankin*, taking its Courſe above 1800 Miles, and empties itſelf into the Sea about 90 Miles North of the Mouth of the *Kiam*.

River *Kiam*

THE River *Kiam* is ſaid to be unfathomable in ſeveral Places; the *Chineſe* have a Proverb amongſt them, which is this; *the Sea* (ſay they) *hath no Bounds, and the* Kiam *hath no Bottom*. HAI YOU PIN: KIAM YOU TI. And in fact ſo it is, for in ſome Places there is none to be found; in others they ſay there is 2 or 300 Fathom Water. Nevertheleſs it has been obſerv'd, that their Pilots don't carry with them above 50 or 60 Fathom of Line at longeſt, which makes me believe their Curioſity ſeldom extends ſo far as to ſound to the Depth of 300 Fathom; and the Impoſſibility of finding the Bottom with their ordinary Plummet, is ſufficient in my Opinion to incline them to ſuch-like Hyperboles. The Navigation of this River, when ſwell'd by Torrents from the Mountains, is exceeding dangerous, and becomes ſo rapid, that many times they bear away the Iſles, with them or leſſen them very much, and ſometimes form new Ones in their Place; One cannot but admire to ſee them exchange their Places in ſuch a ſhort Time, juſt as if by diving, they had paſs'd from one Place to another; which occaſions ſuch conſiderable Alterations every Year, that the Mandarins, leaſt they ſhould be miſtaken, order them to be meaſur'd every three Years, thereby to augment or diminiſh the Impoſts and Duties according to the Condition they are found to be in.

Hoambo or *Yellow River*.

THE ſecond River of Note is call'd *Hoambo*, or *Yellow River*, it is ſo nam'd becauſe the Earth it ſweeps away with it, (eſpecially after great Rains) give it that Colour, and many other Rivers in that rainy Seaſon ſeem rather Torrents of Mud than Rivers: The Waters of *China* in general are not fit to drink till they have been boil'd, which is their principal Reaſon of drinking them hot, and infuſing *Tea* or ſome other Herbs in them to make them wholeſome as well as palatable.

THIS River hath in former Times cauſed great Deſolation in *China*, and they are ſtill forced to keep up the Waters by ſtrong Banks, which are conſtantly repair'd with great Care; notwithſtanding which the Inhabitants of the Cities thereabouts are often under Apprehenſions of being overwhelm'd. They likewiſe have been careful in the Province of *Honan*, (the Ground lying very low thereabouts) to ſurround the greateſt Part of the Cities, about a Mile from the Walls, with a Tarraſs cas'd with Turf, to prevent being ſurpris'd by Accidents and Caſualties in caſe the Bank ſhou'd be broken down; as happen'd about 80 Years ago: The Emperor endeavouring to force a Rebel to raiſe the Siege he had for a long Time laid to the City of *Honan*, caus'd one Part of the Banks to be broken down, thereby to drown the Beſiegers; but the Relief he afforded the City prov'd more fatal than the Enemy wou'd have been; the whole Province almoſt was laid under Water, together with many Cities, and Villages in Abundance; there periſh'd above 300,000 People in that Metropolis.

China is furniſh'd with many other Rivers of leſs Note, but yet more commodious for Trade and Commerce: Beſides which, there is likewiſe in every Province one grand Canal, which ſerves as a high Road, the Banks whereof are lin'd with great ſquare Stones of coarſe Marble, upon which the People walk to tow their Boats along; they are generally of a clear, deep running Water, gliding along ſoftly that it can ſcarcely be perceiv'd; from each great Canal are cut ſeveral ſmaller, which are again branch'd out again into Rivulets that generally end at ſome Town or Village. They have alſo the Convenience of a great many Bridges for the neceſſary Communication with the oppoſite Shores, conſiſting of 3, 5, and ſometimes 7 Arches, the middlemoſt being always extraordinary high, ſo that the Boats may paſs thro' without lowering or ſtriking their Maſts: The Arches are built of Marble, very well fram'd, the Supporters well fitted, and the Piles ſo ſmall that at a Diſtance they would be imagin'd to hang in the Air. Theſe are frequently met with, not being far aſunder; and the Canals being ſtrait as they uſually are, make a beautiful Proſpect, both ſtately and agreeable: The Canals diſcharge themſelves into ſome Lake or great Pond, out of which all the adjacent Country is watered: So that theſe clear and plentiful Streams, embelliſh'd

by

by ſo many fine Bridges, bounded by ſuch neat and convenient Banks, which ſerve as ſo many Cauſeways, equally diſtributed into ſuch vaſt Plains, cover'd with a numerous Multitude of Boats and Barges ſailing different Ways, and crown'd (if I may be allow'd the Expreſſion) with a prodigious Number of Cities, Towns and Villages ſeated upon the Banks whoſe Ditches are fill'd, and whoſe Streets are thereby form'd, which does at once make that Country the moſt fruitful and beautiful in the World: *Europe* we are well aſſur'd has nothing to boaſt of comparable to it.

Great Number of Boats and Barges.

China formerly overflow'd.

THE *Chineſe* ſay their Country formerly was totally overflow'd, and that by main Labour and great Induſtry they drain'd the Water by cutting it a Way thro' theſe uſeful Canals: Which if true, the Boldneſs and Induſtry of their Workmen is very much to be admir'd, who have thus made great artificial Rivers, and of a kind of a Sea, as it were, created the moſt fertile Plains in the World.

Great Canal.

AMONG all thoſe Canals in the Southern Provinces, one above the reſt is call'd the *Great Canal*, becauſe it runs thro' the whole Country from *Canton*, the Southermoſt Province of *China*, to *Pekin* the Imperial City in the North; you muſt only travel a ſhort Day's Journey by Land to croſs the Hill *Moilin* that bounds the Province of *Kiamſi*: From this Mountain iſſue two Rivers; one runs Southward to the Sea, and the other Northwards as far as the River of *Nankin*, whence by the *Yellow River*, and ſeveral Canals, you may proceed by Water even to the very Mountains of *Tartary*. In this great Tract of Land the Ground not being always Level, a Deſcent being wanted proportionable to the flowing of the Waters; to ſupply this Defect, inſtead of Sluices there are ſeveral great Water-falls, or Torrents more or leſs rapid according to the Difference of the Level, precipitated from one Canal into another: Now to cauſe the Barks to aſcend, they make uſe of a great Number of Men, who are maintain'd for that Purpoſe near the Water-falls; to draw up the Veſſels which go againſt the Stream, they have ſeveral Capſtans upon the Banks: after they have faſten'd Cables round the Veſſel, they raiſe it by little and little till they have brought it into the upper Canal, in a Condition to continue its Voyage whither it is bound: This Method of theirs is very tedious, attended with great Toil and exceeding dangerous. They would be wonderfully ſurpris'd, ſhould they behold with what Eaſineſs one Man alone, who opens and ſhuts the Gates of our Sluices, makes the longeſt and heavieſt laden Barks ſecurely to aſcend and deſcend.

Method of lifting loaded Veſſels out of one Canal into another.

IN ſome Places the Waters of two Canals have no Communication, yet for all that they make the Boats paſs from one to the other, notwithſtanding the Level of one is 15 Foot above the other: And this is the way they go to work; at the End of the Canal they have built a double *Glacis*, or ſloping Bank of Free-ſtone, which uniting at the Point extends itſelf on both Sides up to the Surface of the Water; when the Bark is in the lower Channel, they hoiſt it up by the help of the Capſtans to the Plane of the firſt *Glacis*, ſo far, till being raiſ'd to the Point, it falls back again by its own Weight along the ſecond *Glacis*, into the Water of the upper Channel, where it ſhoots away a pretty while like an Arrow out of a Bow; and they make it deſcend after the ſame manner proportionably. The ſe Barks being commonly very long and heavy laden, 'tis a Wonder they eſcape being ſplit in the middle, or being broken-back'd (as 'tis call'd among Seamen) when they are pois'd in the Air, upon the Acute Angle; for conſidering the Length of the Lever, muſt needs have a ſtrange effect upon it, yet we don't hear of any ill Accident happening thereupon.

Great Canal free from Water-falls.

WE meet with no ſuch Water-falls in the Grand Canal, becauſe the Emperor's Barks, that are as large as our Frigates, could not be rais'd by Strength of Arm, nay, and would infallibly be ſplit in the Fall: All the Difficulty conſiſts in aſcending back again upon theſe Torrents, of which I have ſpoken; yet this is what they perform ſucceſſively, tho' not without ſome Trouble and Expence.

THE Great Canal is very uſeful for the Tranſportation of Grain and Stuffs, which they fetch from the Southern Provinces to *Pekin*. There are (if we may give Credit to the *Chineſe*) a 1000 Barks, from 80 to 100 Tun, that make a Voyage once a Year, all of them freighted for the Emperor, without counting thoſe of particular Perſons, whoſe Number is infinite. When theſe prodigious Fleets ſet out, one would think they carry the Tribute of all the Kingdoms of the *Eaſt*; and that one of theſe Voyages alone was capable of ſupplying all *Tartary* with a ſufficiency to ſubſiſt ſeveral Years; yet for all that *Pekin* alone hath the Benefit of it; and it wou'd be as good as nothing, did not the Province contribute beſides to the Maintenance of the Inhabitants of that vaſt City. Their Ships for the Sea-Service are not comparable with thoſe of *Europe*, and their Skill in Navigation is very indifferent, yet upon their Rivers or Canals, they manage large Veſſels as big as Ships, by a few Hands with great Dexterity: Their Veſſels are flat-bottom'd, the Head and Stern ſquare, but the fore-part not quite ſo broad as the Stern; they have a Main-Maſt and a Fore-Maſt: The Fore-Maſt has a Yard and a ſquare Sail; their Maſts are not pieced like ours, one ſet on the Head of the other, but are only one ſingle Tree. Their Sails are made of a thick Matt, ſtrengthen'd with Laths or ſplit Cane at about two Foot diſtance: They build little Rooms or Cabins upon the Deck, from one End to the other, rais'd about ſeven or eight Foot high, neatly painted and gilt within and without, and withal very commodious, that takes off, or at leaſt very much abates the Fatigues of long Voyages. The Mandarins or great Officers frequently travel after this manner, and no where ſpend their Hours more agreeably, for here they viſit one another without that Formality and Ceremony requir'd on Shore, playing and paſſing away their Time as if they were all of one Family: Freedoms are never taken by Magiſtrates in their own Juriſdiction.

Some of the Canals very dangerous.

NOTWITHSTANDING the ſailing upon theſe Canals is in general very pleaſant, yet there are ſeveral rapid Torrents on which they ſail with the utmoſt Danger; the Veſſels being ſometimes whirl'd about with an incredible Swiftneſs for a conſiderable Time, and are at laſt daſh'd in Pieces upon the Rocks. In the Province of *Foküen*, for eight or ten Days ſailing, their Veſſels are in continual Danger of periſhing; there are ſo many Cataracts or rocky Streights, that it is hardly poſſible for the Boats to paſs thro' without being daſh'd to Pieces on one Side or other; every Day almoſt ſome Veſſel or other is wreck'd in theſe Torrents, but it often happens they ſplit near the Shore, and the Paſſengers are by that means ſaved; tho' ſometimes their Veſſels are daſh'd to Pieces and the Crews are buried in a Moment: But the Danger often proceeds from want of Hands to manage their Barks, for if inſtead of eight Men they had fifteen, all the Violence of the Streams wou'd not be able to carry them away, ſo dextrous are theſe People at ſtemming the Force of the Current. But it is common in *China*, as well as other Parts of the World, to riſque Ship and Cargo, rather than be at the Expence of a ſufficient Number of Hands to work a Ship thro' the many Difficulties that they are continually liable to.

'TIS obſervable that there is hardly a City or Village throughout the vaſt Empire, more eſpecially in the Southern Provinces, but has the Conveni-

ency of ſome navigable River, Lake, Canal or Arm of the Sea; and that there are as many People, nearly, living upon the Water as there are upon the Land: Wherever there is a Town upon the Shore, there is another of Boats upon the Water; and ſome Ports are ſo block'd up with Veſſels, that it will take up ſeveral Hours to get croſs them to Land. Theſe Veſſels are made as commodious as their Houſes; and there are many born, live and die in them: They likewiſe keep Hogs, Poultry, Dogs and other Animals on Board, in the ſame manner as if they were on Shore.

Vaſt Floats of Timber.

THERE are beſides theſe Veſſels, a great Number of Floats of Timber perpetually going up and down the Rivers and Canals, which carry whole Villages of People upon them. This Timber is cut chiefly in the Province of *Suchuen*, which adjoins for *India* on the Weſt; their Trees grow tall and ſtrait, and are fit for all ſorts of Building, eſpecially Shipping. The Emperor reſerves ſome for his private Uſe, and ſometimes ſends 300 Leagues for Trees of a prodigious Bigneſs, of which he makes Pillars for his Temples or other Publick Buildings. The Inhabitants alſo trade much in them, for having lopt off all the Branches, they tie 80 or 100 together, and faſten ſo many ſuch Rows one behind another as reach almoſt a Mile in Length, and riſe two or three Foot above the Water, upon which the People build wooden Huts or Cabins, where the Timber-Merchant, his Family and Servants lie during the whole Voyage, which is ſometimes three or four Months.

Fountains.

THERE is likewiſe to be found in *China*, ſeveral Fountains that ebb and flow as regularly as the Sea doth; whether they have a Communication with the Ocean by ſubterraneous Paſſages, or whether occaſion'd by being impregnated (in their Paſſage thro' certain Earths) by Salts and Sulphurs, and ſo may be apt to cauſe this Fermentation, is a Philoſophical Point to be diſcuſs'd by thoſe who make Nature the chief Subject of their Enquiry.

Lakes and Ponds.

SINCE I have begun to ſpeak of the different Waters of *China*, I cannot paſs over in ſilence the Lakes and Ponds that are almoſt every where to be found throughout the Provinces. Thoſe that are produced in the Winter by the Torrents from the Mountains, lay waſte the Fields, and render the Country thereabouts during Summer barren, ſandy, and full of Flints: Thoſe that ariſe from the Springs are abounding in Fiſh, and yield a conſiderable Revenue to the Emperor, by the Salt they afford; there is one of them among the reſt in the Province of *Kiangſi*, in the middle whereof appears a ſmall Iſland, where abundance of People come to divert themſelves during the exceſſive Heats. There is a natural Salt produc'd from this Spring in great Plenty, very white, and of a pleaſant Scent, which they continue to make all the Summer long, with that Succeſs, that the Salt would be ſufficient for the whole Province, if it were as ſalt as that of the Sea; nevertheleſs, they commonly make uſe of it to ſeaſon their Meat withal.

Salt ſpringing.

Water of a petrifying Quality.

In the Iſland of *Hainan*, belonging to *China*, there is a ſort of Water, whether it be a Lake or Fountain, is not certainly known, that petrifies Fiſh: Father *le Compte* ſays, he himſelf brought over Crawfiſh, that preſerv'd their Nature and Figure, and was ſo far chang'd into Stone, that the Claws and Body of them were very hard, ſolid, and little differing from Stone. But the Wonders of Nature are not ſo very ſingular to *China*, for the like petrifying Quality of Springs are to be met with in ſeveral other Parts nearer Home, nay, our own Kingdoms are not exempt therefrom.

THEIR Rivers, Canals and Lakes, are plentifully ſtor'd with great Varieties of Fiſh; many of them are of the ſame kind as thoſe we are furniſh'd with in *England*; there are alſo many other Sorts of Fiſh that we are wholly Strangers to, among which the *Golden* and *Silver Fiſh* that are found in divers Provinces, do afford particular Ornaments in the Courts and Gardens of great Perſons; they are commonly about four or five Inches in Length, and of a proportionable Thickneſs; the Male is of a moſt delicate Red from the Head to the middle of the Body, or a little farther, the reſt with the Tail is gilded, but with ſuch a glittering, exceeding that of burniſh'd Gold, that our real Gildings cannot come near it: The Female is white, its Tail and one part of its Body, looks as if it was perfectly waſh'd over with Silver; their Tails are not even and flat as that of other Fiſh, but ſhap'd ſomething like a Noſegay, thick and long, and gives a particular Grace to this pretty Animal, that ſets it off, being beſides perfectly well proportion'd. Silver and Gold Fiſh.

THOSE who breed theſe Fiſh are extraordinary careful; for they are very tender and ſenſible of the leaſt Injuries of the Air; they put them into a large Baſon, ſuch as are in Gardens, at the bottom of which they place an Earthen Pot turn'd upſide down, full of holes on the Sides, that they may retire into it in hot Weather to ſhelter themſelves from the Sun: They likewiſe ſtrew particular Herbs on the Surface of the Water that keeps always green, and maintain the Coolneſs; this Water they change two or three times a Week, yet ſo that freſh Water may be put in, according as the Baſin is emptied, which muſt never be left dry. Any great Noiſe, as that of a Cannon or Thunder, too ſtrong a Smell, or violent Motion, are prejudicial to them, and ſometimes occaſion their dying; they live almoſt upon nothing, for the earthy Parts that are mix'd with the Water, breed ſmall Worms, which ſuffice in a manner to keep them alive; tho' they ſometimes fling in little Balls of Paſte; but there is nothing better for them than a Wafer, which ſteep'd makes a Sort of a Pap, of which they are very greedy, and indeed is adapted to their natural Delicacy and Tenderneſs. In the Southern Parts of the Country they multiply exceedingly, provided Care be taken to remove their Eggs, which ſwim upon the Water, and which the Fiſh commonly eat; they place them in a particular Vaſe expos'd to the Sun, and there they preſerve them till they are hatch'd by the Heat; the Fiſh are at firſt of a black Colour, (which they ſometimes retain ever after) and are chang'd by little and little into other Colours, as Red, White, Gold and Silver, according to their different Kinds: The Gold and Silver Colour begins at the extremity of the Tail, and expands itſelf more or leſs in a particular manner. Manner of breeding them.

IN the Province of *Fokien* there is a famous Lake, the Water thereof is Green, and the *Chineſe* aſſert that it changes Iron into Copper. They have a Palace likewiſe ſeated on the Banks of the Lake not far diſtant from the former; in an Apartment of which one is laid to hear the ringing of Bells every time the Heavens threaten a Storm. And in the Province of *Quantum* there are Waters that change Colour every Year, in Summer and Winter, and in Autumn they turn blue, but of ſuch a fine blue, that it is made uſe of by the Inhabitants to dye their Stuffs with. A famous Lake.

CHAP.

CHAP II.

Containing a Deſcription of their Cities, Towns, Fortifications, Palaces, and other Publick Buildings; Houſes and Furniture.

The Imperial City.

PEKIN is the Imperial City of *China*, and principal Reſidence of the Emperor; it is called the North Court, to diſtinguiſh it from *Nankin*, the South Court, another very conſiderable City, where the Court of their Emperor was formerly kept, being the moſt commodious and beſt ſituated of the whole Empire; but the continual Incurſions of the *Tartars*, their warlike but troubleſome Neighbours, oblig'd their Monarchs to ſettle in the moſt Northerly Province, to be in a continual Readineſs to oppoſe them, with a numerous Army that they uſually kept near the Court.

Situation.

PEKIN is ſituated in 40 Degrees of North Latitude, in a very fertile Plain, and not far from the Great Wall: Its Neighbourhood to the Sea on the Eaſt, and the great Canal on the South, affords it a Communication with ſeveral fine Provinces, from which they have part of their Subſiſtence.

Extent.

THIS City, which is of an exact ſquare Form, was formerly 12 Miles in Circumference; but the *Tartars* ſettling there, forc'd the *Chineſe* to live without the Walls, where they built a new Town, which being more long than large, does with the old one make an irregular Figure: Thus *Pekin* is made up of two Cities; one is called the *Tartars*, becauſe none elſe are permitted to inhabit there; and the other the *Chineſe*, as large, but far better peopled than the firſt; they are 18 Miles in Circumference, allowing 1200 Paces to each Mile, being exactly meaſur'd by the Emperor's expreſs Command.

Exceeding Popu lous

THIS City is reckon'd to be four times as large as *Paris*, but their Houſes are but one Story high, their Streets are very wide, and the Emperor's Palace is of a vaſt Extent, containing Parks, Gardens, Canals, *&c.* They have Magazines of Rice therein, ſufficient for the Maintenance of above 200,000 Men, and large Courts fill'd with little Houſes, in which thoſe who ſtand for their Doctor's Degree are examin'd; which alone would make a large City: The Streets of this City are extremely crouded, which obliges the Quality to have a Horſeman ride before them to clear the Way; the wideſt Streets are not free from Confuſion; for at the ſight of ſo many Horſes, Mules, Camels, Waggons, Chairs, and Crouds of 100 or 200 People, who gather here and there round the Fortune-tellers, one would imagine that ſome unuſual Show had drawn the whole Country to *Pekin*.

INDEED, to outward Appearance our moſt populous Cities are Wildernеſſes in reſpect of this, eſpecially conſidering there are more Women then Men, and that among ſo vaſt a Multitude, you ſhall very ſeldom meet with any: This perhaps has made ſome People think both Cities might contain ſix or ſeven Millions of People, which is really a great Miſtake, for it is certain a Judgment can't be form'd of the Number of Inhabitants in any Place by the Crouds that are ſeen in it.

THERE are ſeveral Reaſons given for the great Multitudes of People that are met with in this City; for *firſt*, Abundance of Country People daily reſort to *Pekin* to Market, and no River coming up cloſe to the City, all Sorts of Goods are brought thither by Land Carriage, which occaſions the Streets to be fill'd with Waggons, Camels, and other Beaſts of Burthen, with their Drivers; inſomuch, that Morning and Evening the Gates are ſo throng'd, a Man muſt wait ſome Hours before he can paſs by.

Artificers work at their Employers Houſes.

Secondly, MOST Artificers in *China* work in the Houſes of their Employers; as for Example, if a Man wants a Suit of Cloaths, the Taylor comes in the Morning to his Lodging, and there works all Day, and at Night returns Home; and ſo of the reſt. Tradeſmen are here continually looking out for Buſineſs, even the Smiths carry with them their Anvil, Furnace and other Implements for their ordinary Uſe: Beſides, People of Faſhion have numerous Trains of Servants to attend them abroad, either on Horſeback or in Chairs; the Mandarins have all their Officers to wait on them in their Formalities wherever they go, ſo that they form a kind of Proceſſion: The Lords belonging to the Court, and Princes of the Blood, never are without a great Guard of Horſe, they being neceſſitated to go every Day to Court; their Equipage is ſufficiently cumberſome to the City. It is therefore evident that theſe Cuſtoms which are peculiar to *China*, muſt very much encreaſe the Throng, and therefore it is no wonder that this City, as well as others in *China*, ſeem more populous than they really are. However, 'tis computed there are no leſs than two Millions of Inhabitants in the City of *Pekin*, which is certainly more than double the Number of Inhabitants than either *Paris* or *London* is furniſh'd withal.

Shop-keepers make a fine Show

THE principal Streets in *Pekin* are built in a direct Line; the greateſt being about 120 Foot broad, and 3 Miles long, and the Shops in which they ſell their Silks and China-Ware generally take up the whole Steeet, and make an agreeable Appearance: And that which renders it more ſo, is a Cuſtom the Tradeſmen have of ſetting up a Board before their Shops, (on a little kind of Pedeſtal) above 20 Foot, long painted, varniſh'd and gilt, on which are written in large Characters, the Names of the ſeveral Commodities they ſell: Theſe kind of Pilaſters, thus plac'd on each Side of the Street, and almoſt at equal Diſtances, make a pleaſing ſhow: 'This is uſual in almoſt all the Cities of *China*, and in ſome Places they have been ſo neatly painted, that one would think they were rather deſign'd as Ornaments for a Theatre, than Signs for Tradeſmen.

Great Inconvenience from Mud and Duſt.

TWO Things, however, detract much from the Beauty of this City; the firſt is, that the Houſes are not proportionable, being neither well built, nor high enough: The ſecond is, That they are always peſter'd with Mud and Duſt. The Country, altho' ſo well regulated in every Thing elſe, is deficient in theſe Particulars: Both Winter and Summer are equally troubleſome to thoſe that walk abroad, and therefore Horſes and Chairs are much in requeſt; for the Dirt ſpoils their ſilken Boots, which they wear there; and the Duſt ſticks to their Cloaths, eſpecially if they are made of Sattin, which they have a way of oiling, to give it the more Luſtre. There is ſo much of the latter rais'd by the Multitude of Horſes, that the City is always cover'd with a Cloud of it, which gets into the Houſes, and makes its way into their Cloſets, ſo that take what Care they will, their Goods will be always cover'd with it; tho' they ſtrive as much as poſſibly they can to allay it, by continually be-ſprinkling the

Streets

Streets with Water; notwithſtanding which it is very troubleſome and unhealthy.

The Walls of Pekin.

THE Walls of this City are of ſo great a Height, that they hide the whole Town, and are proportionably thick, inſomuch that ſeveral Horſemen may ride a-breaſt upon them. They are defended by ſquare Towers about a Bow-ſhot diſtance from each other. The Ditch before them is dry, but very broad and deep. The Gates are of a prodigious Height, and at a Diſtance look very magnificent; every Gate of the Town has a Fortreſs or Redoubt, built before it of an equal Height with the Gate, which being join'd together by high Walls, form a handſome Square, large enough for 500 Men to draw up in Battalia. The Paſſage into it is by the ſide Wall between the Gate and the Fort, and not directly forward; then turning to the Right, you enter the Gate of the City, where a ſtrong Guard is always kept. The Arches or Gateways are built with Marble; but the reſt of the Walls with Brick. The *Chineſe* are very incompleat in their Fortifications; for they have no other Works beſides a Wall ſtrengthen'd by ſquare Towers, and a deep Ditch, ſometimes dry, but oftner full of running Water, with ſome Bulwarks or Baſtions, and a few ordinary Iron Guns upon their Walls; there are nine Gates in the *Tartar* City; three towards the South, and two on each of the other Sides. The *Chineſe* City is alſo wall'd round, and has ſeven Gates, and a large Suburb at every Gate.

City Gates well-guarded.

Emperor's Palace.

OF all the Buildings this mighty City conſiſts in, the Emperor's Palace is the moſt remarkable, which ſtands in the midſt of the *Tartar* City, and is of an oblong Square, about two Miles in Length and one in Breadth, defended by a good Wall. This Palace includes not only the Emperor's Houſe and Gardens, but the Apartments of his Officers, and a great Number of Artificers, who are conſtantly employ'd by the Emperor. None are permitted to lie within the innermoſt Palace but the Eunuchs: The inner Palace conſiſts of nine large Courts, the Arches thro' which one paſſes from one Court to another are very ſtately, being of an extraordinary thickneſs, and proportionable in Breadth and Height, and built with fair white Marble; and over each there is a large ſquare *Gothick* Building; but the Offices on each ſide theſe Courts are but mean: Thro' one of theſe Courts ran a ſmall Rivulet, over which were built ſeveral little Bridges of Marble, tho' whiter in Colour and of better Workmanſhip than the Arches of the Gates they paſs through: It is obſervable that the Beauties of this celebrated Palace does not conſiſt ſo much in being compos'd of ſeveral curious Pieces of Architecture, as in a prodigious Quantity of Buildings, with many Courts and Gardens adjoining, which are all regularly diſpos'd, and in the whole make up a Palace really Grand and Magnificent.

Offices but mean.

Imperial Apartments.

THE Emperor's Apartment is in the midſt of one of theſe great Courts, which is ſupported by a ſquare Baſis or ſolid Building of an extraordinary Bigneſs, whoſe Top is adorn'd with a Balluſtrade, much after our Faſhion; this ſupports another like unto it, but tapering upwards, over which are plac'd three more, ſtill loſing Bulk as they gain in Height. Upon the uppermoſt is built a large Hall, whoſe Roof being cover'd with gilt Tiles, is born by the four Walls, and as many Rows of varniſh'd Pillars, between which the Imperial Throne is ſeated. Theſe vaſt Baſes with their Balluſtrades made of white Marble, and thus diſpos'd like an Amphitheatre, makes a glorious Show, and when the Sun ſhines, appears to be cover'd with a Palace glittering with Gold; eſpecially conſidering the Situation of it in the Centre of a ſpacious Court, ſurrounded by four ſtately Rows of Building: So that were its Beauty enrich'd with the Ornaments of our Modern Architecture, and by that noble Simplicity which is ſo valued in our Buildings, it would doubtleſs be as ſumptuous as ever was rais'd by Art.

THIS Palace however is not inferior to any in the Eaſt for Richneſs and Fairneſs, for when you come to the Imperial Lodgings, there indeed, the Portico's ſupported by ſtately Pillars, the white Marble Steps, by which you aſcend to the inward Halls and Chambers of State, which are furniſh'd with the richeſt Furniture imaginable; four of which are eſteem'd the richeſt in the World; the gilt Roofs, the fine carv'd Work, Varniſh, Gilding and Painting they are adorn'd with, Marble or Porcelain Floors, and above all, the great Number of different Pieces of Architecture which they conſiſt of, dazzle the Beholder's Eye, and really look exceedingly Grand, and every way becoming the Majeſty of ſo formidable a Monarch.

Imperial Guards.

THE Guards, plac'd in the Gates and Avenues of the Palace, have no other Arms but their Scymitars, and are not ſo numerous as ſome relate; but there is a great Number of Lords and Mandarins conſtantly attending at the uſual time of Audience, when this Monarch appears in the greateſt State and Splendor imaginable. The Power and Inſolence of the Eunuchs was formerly an inſupportable Grievance to the Princes of the Empire; but the laſt Emperors of *China*, eſpecially thoſe deſcended from *Tartary*, have very much humbled them, that they make at preſent an inconſiderable Figure: The youngeſt ſerve as Pages, and the others are put to ſome of the meaneſt ſervile Offices.

Great Number of Attendants.

Great Appearance when the Emperor goes Abroad.

AT the time the Emperor makes his Appearance, which is four times a Month, he is then attended with 4 or 5000 Noblemen and Mandarins to make their Court, together with many petty Kings, who are his Vaſſals, and attend in their Turns at Court: And when he goes abroad, his Attendants are ſo numerous, that they would compoſe a good Army; *Maigaillans* has given us the Order of the Emperor's Proceſſion when he goes out of the Palace to offer Sacrifice, or perform any Publick Duty, wherein the Attendants amount to at leaſt 8000 Men, four Elephants, and ſeveral hundreds of Horſe: When he goes abroad, which is uſually to the Province of *Leaotum* or *Tartary* a hunting, a vaſt Army always attends him.

Emperor's Wives and Concubines.

THE Number of the Emperor's Wives and Concubines are not eaſily known to any one, being ſeldom ſeen by any but himſelf; they are all Maidens of Quality, which their Mandarins or Governours of the Province ſelect for their Monarch's Uſe; and as ſoon as they enter the Palace, they have no farther Correſpondence with their Friends, not even their own Fathers: This ſore'd and perpetual Solitude, (for many of them are not taken notice of by the Emperor) ſets them upon many Artifices and Intrigues to get into his Favour, and the Jealouſies they have of one another fills them with continual Suſpicions, Envy and Hate, and make them for the moſt part very miſerable. Among thoſe who are ſo happy as to gain the Approbation of their Prince; there are three choſen which bear the Title of Queens: Theſe are honour'd in a far higher Degree than the reſt, having each of them their ſeparate Lodgings, their Court, their Ladies of Honour, and other Royal Attendants.

Houſes of the Grandees.

NOTHING is wanting that can contribute to their Diverſion: Their Furniture, Cloaths and Attendance is rich and magnificent; and all their Happineſs conſiſts in pleaſing their Lord, for no Buſineſs of any Moment comes to their Knowledge; and as they do not aſſiſt the State with their Counſels, ſo neither do they diſturb it with their Ambition.

THE Houſes of their Grandees do not deſerve the Name of Palaces; they are but one Story high, as are all the reſt; tho' the great Number of Lodgings for themſelves and Servants make ſome amends for their want of Beauty and Magnificence. Not

but

but the *Chineſe* are as much in love with looking great and ſpending high, as any other Nation; but the Cuſtom of the Country, and the danger of being taken Notice of, is a very great Curb to their Inclinations.

A remarkable Story.

FATHER *Le Compte* ſays, When he was at *Pekin*, a Prince and one of the chief Mandarins, had built him a Houſe ſomewhat more loſty and ſtately than the reſt; this was imputed to him for a Crime, and thoſe whoſe Province it was, accuſed him before the Emperor, inſomuch that the Mandarin, fearful of the Event, pull'd down his Houſe while the Buſineſs was under Examination, and before it was determined.

Courts of Juſtice.

THEIR Courts of Juſtice (where they try Criminals and Cauſes) have little Advantage over the reſt: The Courts are large, the Gates lofty, embelliſh'd with Ornaments of Architecture ſomething tolerable; but the inner Halls and Offices can boaſt neither of State nor Cleanlineſs.

The Royal Obſervatory.

THE *Royal Obſervatory* at *Pekin* is very ſumptuous, and is furniſh'd with a handſome Apparatus of Inſtruments for Aſtronomical Obſervations; a Deſcription thereof tis hop'd will be acceptable to our Readers: This Obſervatory is contiguous to the Walls of this City, ſtanding about ten or twelve Foot above the Bulwark; you firſt enter a Court of a moderate Extent, in which there is a little Houſe, being the Habitation of the Perſon that looks after the Obſervatory: from thence turning to the Right, you meet with a narrow Stair-Caſe, by which you mount to the Height of a ſquare Tower; upon which there is a Platform, where their Mathematical and Aſtronomical Inſtruments are plac'd; they are large, well caſt, embelliſh'd with Repreſentations of Dragons, and very well diſpos'd to the Uſes they are deſign'd for; and were the Niceneſs of the Diviſions anſwerable to that of the Work, and Teleſcopes adapted to them according to the preſent Method with us, nothing that we have of that kind might be brought into Competition with them; of which we have the following Account.

An Armillary Sphere.

THE firſt is an Armillary Sphere ſix Foot Diameter: This is ſupported by four Dragon's Heads, whoſe Bodies after ſeveral Windings are faſten'd to the Ends of two brazen Beams, plac'd at right Angles, which ſupport the whole Weight of the Sphere. Theſe Dragons were choſen for Ornament rather than any other Animal, becauſe it is part of the Emperor's Coat of Arms; and likewiſe they imagine the Dragon is capable of influencing, or rather diſturbing the whole Frame of Nature; for theſe Reaſons moſt of their Decorations in Architecture conſiſt of Dragons, varied in abundance of odd ridiculous and unnatural Poſtures: But to proceed; four Lions of the ſame Metal, ſtand under the End of the aforeſaid Beams, whoſe Heads are rais'd higher or lower by Screws. The Circles are divided, both in their exterior and interior Surface by interſected, Lines, into 360 Degrees each, and each Degree into 60 Minutes, and the latter into Portions of 10 Seconds each, by ſmall Pins.

Horizontal Azimuth.

THE ſecond is an Equinoctial Sphere of ſix Foot Diameter; this Sphere is ſupported by a Dragon, who bears it on his Back bowed, and whoſe four Claws ſeize the four Ends of its Pedeſtal, which, as the former, has two brazen Beams, croſſing at right Angles, whoſe Ends are likewiſe born by four Lions, which ſerve to ſet it right. This Deſign is noble and well perform'd.

Equinoctial Sphere.

THE third is an Horizontal Azimuth, ſix Foot Diameter; this Inſtrument is uſeful for taking of Azimuths, being compos'd of a large Circle horizontally plac'd. The two Sights, which ſerves it for a Diameter, is moveable round the Circumference of the Rim, and carries with it a vertical Triangle, the upper Angle of which is faſten'd to a Beam rais'd perpendicular from the Center of the ſaid Horizon. Four folded Dragons bow their Heads under the inferior Limb of the Circle, to make it faſt; and two others twiſt round two ſmall Columns, mounted on either ſide Semicircularly, as high as the ſaid Beam, to which they are faſten'd, to keep the Triangle ſteady.

Quadrant.

THE fourth is a large Quadrant of ſix Foot Radius; the Limb is divided into Portions of 10 Seconds each; the Lead, which ſhews its vertical Situation, weighs a Pound, and hangs from the Centre by a very fine Braſs Wire. The *Sights* move eaſily round the Limb. A Dragon folded in ſeveral Ringlets, and wrapt up in Clouds, ſeizes on all Parts of the ſeveral Plates of the Inſtruments to faſten them, leaſt they ſhou'd ſtart out of their due Poſition. The whole Body of the Quadrant hangs in the Air, and a fix'd Axis runs thro' its Centre, round which the Quadrant turns towards any Part of the Heavens: And leaſt its great Weight ſhou'd cauſe it to ſhake, and loſe its vertical Poſition, a Beam is rais'd on each Side, ſecur'd at the bottom by a Dragon, and faſten'd to the middle Beam or Axis, by Clouds which ſeem to come out of the Air. The whole Work is ſolid and well contriv'd.

Sextant.

THE fifth is a Sextant, whoſe Radius is about eight Foot; this repreſents the ſixth Part of a great Circle, born by a Beam, the Baſis of which is concave, made faſt with Dragons, and croſs'd in the middle by a brazen Pillar, on End of which is a Machine, by the help of whoſe Wheels the Inſtrument is made eaſily moveable in any Direction. On this Engine or Machine reſts the middle of a ſmall braſs Beam, which repreſents the Radius of the Sextant, and is faſten'd to it. Its upper Part is terminated by a large Cylinder, which is the Centre, round which the Index turns, and the lower is extended above two Foot beyond the Limb, that it may be graſp'd by the Pulley which ſerves to raiſe it.

Cœleſtial Globe.

THE ſixth is a Cœleſtial Globe of ſix Foot Diameter; this Inſtrument is certainly a very fine, one and well executed. This Globe is made of Braſs exactly round and ſmooth; the Stars well grav'd, and in their true Places, and all the Circles of a proportionable Breadth and Thickneſs: It is beſides ſo well hung, that the leaſt touch moves it, and tho' it is above 2000 *l.* Weight, the leaſt Child may elevate it to any Degree. On its large concave Baſis, reſt in an oppoſite Station, four Dragons, whoſe Hair ſtanding up an end, ſupport a noble Horizon, commendable for its Breadth, its ſeveral Ornaments, and the Delicacy and niceneſs of the Work. The Meridian, in which the Pole is fix'd, reſts upon Clouds that iſſue out of the Baſis, and ſlides eaſily between them, its Motion being facilitated by hidden Wheels, and moves the whole Globe with it, to give it the requir'd Elevation. Beſides which, the Horizon, Dragons, and two Braſs Beams, which croſs at right Angles in the Centre of the Concavity of the Baſis, which ſtill remains fix'd; this facilitates the due placing of the Horizon, whether in reſpect of the natural Horizon, or in reſpect of the Globe. Theſe Inſtruments being moſt of them above 10 Foot from the Ground, have for the Aſtronomers greater Convenience, Marble Steps round them cut Amphitheatrewiſe.

THE *Chineſe* Aſtronomers make Obſervations conſtantly every Night on this Tower; they have five Mathematicians who remark what paſſes in the Heavens; one looks towards the Zenith, another to the Eaſt, and the third to the Weſt, a fourth South, and a fifth to the North, that nothing of what happens in the Heavens may eſcape their diligent Obſervation.

THEY take Notice of the Winds, the Rain, the Air, unuſual Phænomena's, ſuch as are Eclipſes, the Conjunctions or Oppoſitions of the Planets, Firey Meteors, and all that may be uſeful; this they keep a ſtrict Account of, which they bring in every

Morning to the Surveyor of the Mathematicks, to be regiſtred in his Office. If this had been always practis'd by able and careful Mathematicians, we ſhould have a great Number of curious Remarks; but beſides, that theſe Aſtronomers are very unskilful, they take little Care to improve that Science; and provided their Salary be paid as uſual, and their Income conſtant, they are in no great Concern about the Alterations and Changes which happen in the Heavens. But if theſe Phænomena's are very apparent; as when there happens an Eclipſe, or a Comet appears, they dare not be altogether ſo negligent and remiſs.

Diviſion of the City into Diſtricts, &c.

BUT to return to the City: It is divided into four Quarters or Diſtricts, and every one of theſe into leſſer Diviſions; every ten Houſes having an Officer like our Conſtable, who preſides over the other nine, and informs his Superiour if any thing extraordinary happens. If any Robbery happen in the Night, the Neighbourhood are oblig'd to make it good; and in every Family the Maſter is anſwerable for his Children and Servants. In the Night the Guards patrole in the principal Streets, and the Horſe go their Rounds upon the Walls; and if any are taken up who have not a licens'd Lanthorn, they rarely eſcape Puniſhment; for no Maſquerades or nightly Meetings are encourag'd by the *Chineſe*.

City of *Pekin*

THE City of *Pekin* ſtands upon a Plain; there are but two Hills in it, which were thrown up by Hand in the Emperor's Palace. In all the Parts of this City, there are Men and Chairs to be hired, as in *London*, and alſo Horſes; but no Coaches are us'd in this Part of the World. Their Houſes are built upon the Surface of the Ground, and are ſupported by wooden Pillars, without any Foundation: Indeed as they build but one Story high, they need a Foundation leſs; but they take up a great Extent of Ground, having ſeveral open ſquare Courts within their Walls: They have ſuch a Regard to their Privacy that no Windows are made towards the Street, or to look towards their Neighbours; and juſt before their great Gate or Portal, there ſtands a Wall or Skreen to prevent Strangers looking in upon opening the Door: When you are paſs'd the Skreen, there are little Alleys to the right and left, from whence you paſs into the ſeveral Courts which are built on all Sides. Their Entertainments are made in a ſort of Hall or Banquetting Houſe, at the Entrance of the Houſes, which have no other Ornament beſides a ſingle Order of Columns, painted and varniſh'd which ſupports the Building, and the Roofs are often open to the Tiles without a Ceiling. They have no Looking-Glaſſes, Hangings or fine Chairs; and their Beds which are one of the principal Ornaments, are ſeldom ſeen by Strangers, who are not permitted to go farther than the firſt great Hall. The Furniture of the beſt Houſes conſiſt of Cabinets, Tables, varniſh'd Skreens, China Ware, Pictures, and Pieces of white Taffaty, upon which are depicted in large Characters ſome Sentences of Morality: Neither are there any Chimneys to be ſeen in their Rooms, but they make uſe of Stoves of Charcoal to warm them in cold Weather.

Houſes.

Furniture.

THEIR Beds are indeed very fine; in Summer they have Taffaty Curtains, wrought with Flowers, in Gold, Silk and Embroidery; or elſe they have Curtains made of the fineſt Gauze, which ſerve to keep off the Flies and Gnats, but admit a free Paſſage for the Air to cool them: In Winter their Curtains are made of coarſe Sattin, with the Figures of Dragons and other Animals, *&c.* wrought in them: with Counterpanes of the ſame. They have no Feather-beds, but uſe thick Quilts, or Mattreſſes to lie on; and their Bedſteads are adorn'd with Variety of Carving and Figures.

The Great Wall

THE great Wall which ſeparates *China* from *Tartary*, except towards the Eaſt Part, where it divides the Province of *Pekin* from that of *Leaotum*; which our late Accounts informs us lies without the Wall. This is certainly a prodigious Work, in which the *Chineſe* have excell'd both Ancients and Moderns; this Wall begins in the Province of *Xenſi*, which lies in the North Weſt of *China*, in about 38 Degrees of Latitude, and is carried on over Mountains and Valleys; firſt towards the North Eaſt to the Latitude of 42, and then South Eaſterly to the Latitude of 39, and terminates between the *Kang-Sea*, between the Provinces of *Pekin* and *Leaotum*. You muſt not conceive it as a plain Wall, for it is fortify'd with Towers much like the City Walls beforemention'd; and in ſuch Places where the Paſſes might be more eaſily forc'd, they have rais'd two or three Bulwarks one behind another, which might give themſelves a mutual Defence, whoſe great Thickneſs, and the Forts which command all the Avenues, being all guarded by great Numbers of Forces, protect the *Chineſe* from all Attempts on that Side.

THE whole Courſe of it with all its Windings is about 1500 Miles, tho' in a direct Line from Weſt to Eaſt it may not be half ſo many Miles: It is almoſt all built with Brick, bound together with ſtrong Mortar, that it has not only laſted theſe ſeveral Ages, but is ſcarce the worſe. It is about 1800 Years ſince the Emperor *Chihohamti* built it, to prevent the Incurſions of the *Tartars*. This was at once one of the greateſt and maddeſt Undertakings that ever was heard of; for tho' indeed it was a prudent Caution of the *Chineſe* thus to ſecure the eaſieſt Avenues, yet it was ridiculous of them to carry this Wall to the top of ſome Precipices, on which it was impoſſible the *Tartarian* Horſe ſhould aſcend: 'Tis certainly admirable how the Materials have been conveyed and made uſe of there; and indeed it was not done without a vaſt Charge, and the loſs of many more Men then would have periſh'd by the utmoſt Fury of their Enemies. It is ſaid that during the Reigns of the *Chineſe* Emperors, this Wall was guarded by above a Million of Soldiers; but now that Part of *Tartary* belongs to *China*. They are content of manning well the worſt ſituated, but beſt fortify'd Parts of it.

SOME Relations tells us it is many Yards thick, and exceeding high; but by the Embaſſy that was ſent from *Muſcovy* to *China*, and others who have lately ſeen it, we learn that it is but 30 Foot high, and broad enough for eight People to ride a-breaſt; being generally allow'd to be about 15 Foot thick. There are no Breaches in this Wall, except in the Province of *Pekin*, North of the City of *Suven*, where, inſtead of the Walls, are very high and inacceſſible Mountains; and in that where the *Hoambo* or *Yellow River* paſſes thro' it. It is generally of equal Height upon the higheſt Hills and in the loweſt Vallies; ſo that Father *Le Compte* obſerves, when People talk of the wonderful Height of it in ſome Places, it muſt be underſtood of the Height of the Mountain on which ſuch part of the Walls ſtands.

AND for the better clearing of the Hiſtory, we hope one Digreſſion may be pardonable, which is concerning the late Revolution by which *China* and *Tartary* were both united; as we obſerv'd in the beginning of this Work; which Father *Le Compte* relates in this Manner.

Great Revolution in *China*.

" ONE of the Petty Kings of the Eaſtern *Tar-*
" *tary* (for there are not a few) whoſe Subjects, cal-
" led *Mouantcheou*, had ſettled a Trade near the
" Long Wall, having complain'd at *Pekin* of ſome
" Knaveries committed by the *Chineſe* Merchants,
" and having received no Satisfaction, reſolved to
" right himſelf, and entered the Province of *Leao-*
" *tum* with a numerous Army. The Emperor pre-
" ſently ſent ſome part of his Forces to oppoſe him,
" and the War continued ſome time, with equal
" advantage. But one *Li a Chineſe*, took that Op-
" portunity to hatch a Rebellion in the Provinces
" which were moſt remote from Court. Great

" Num-

" Number of Malecontents flock'd about him, who " having made themſelves Maſters of the greateſt " Cities, like a Torrent overflowed the whole " Country, driving all down before them.

" THE Sacred Majeſty of their Emperor could " not ſave *Pekin* from their Fury, the Rebel who " knew the beſt Forces were drawn out of it, march- " ed directly to attack it. There was indeed a " Garriſon of 17000 Men, but moſt gain'd upon by " the Practice of *Li*'s Emiſſaries; ſo that while " ſome with a pretended Zeal perſuaded the Prince " to remain in his Palace, others open'd the City " Gates to the Traitor, who ſolemnized his Entry " by a Cruel Slaughter. The unfortunate Monarch " finding himſelf betrayed, would have marched " out againſt him with 600 Guards who ſtill re- " mained with him, but at the mentioning of this " Heroick Propoſal their Hearts failed 'em, and " they ungenerouſly abandoned him. Then know- " ing no greater Evil than that of falling quick in- " to the Hands of his Enemies, he retired into a " Garden with an only Daughter he had, and ha- " ving wrote with his Blood theſe Words on the " border of his Veſt; *My Subjects have baſely forſa- " ken me, ſpend thy Rage on my Body, but ſpare my " People*, he firſt ſtabb'd the Princeſs, whoſe Tears " muſt needs have rent a Heart of Flint, and then " hang'd himſelf on a Tree; more unjuſt to his " Daughter, and cruel to himſelf, than could have " been the moſt barbarous Foe.

" THE Emperor being dead, all bowed to the " Uſurper except *Ouſanguey*, (whom the late Prince " had intruſted with the Command of the Forces he " had ſent againſt the *Tartars*,) who never would " acknowledge him, and choſe rather to pull down " his Tyranny than ignobly to accept a ſhare in it. " The new Monarch having in vain beſieged him in " the Province *Leaotum*, to engage him to ſurrender " himſelf, ſhewed him his Father loaded with " Irons, proteſting he would put him to Death in " his Sight, if he did not immediately ſubmit. But " that generous Lord, more Faithful to the Memory " of his deceaſed Prince than tender of his Father's " Life, ſuffered the Duty of that of a Subject to " prevail over that of a Son, and ſeeing that Blood " ſpilt of which his once was Part, reſolved to die, " or revenge at once his Father's and his Emperor's " Death. He made his Peace with the *Tartars*, " who having join'd him, no ſooner enabled him to " cope with his Enemy, but he marched againſt " him. But the Tyrant, whoſe Cowardize was " even greater than his Cruelty, durſt not appear " againſt thoſe two Armies. He fled to *Pekin*, " where having burned the Palace, and all that had " not periſhed at his firſt Entry, he retired into " the Province of *Xenſi*, loaded with the ſpoil " of the Empire, and the Curſe of all. He was " purſued, but in vain; for he met with ſo private " a Retirement, that all the Art of Men could ne- " ver find him out.

" IN the mean while the *Tartars* entered *Pekin*, " and ſo impoſed upon the poor *Chineſe*, that of " themſelves they begg'd their new Gueſt to take " Care of their diſtreſſed State. The others, too " Cunning not to improve ſo favourable a Hint, whe- " ther by Force or Policy, are ſince grown abſolute " Maſters of it: And here it is hard to determine, " which is moſt to be wondered at, the Courage " and Conduct of that Nation, which gave them " Succeſs in ſo Noble an Enterprize, or the Supine- " neſs or ill Management of the *Chineſe*, who thus " baſely ſubmitted to a People ſo inconſiderable for " their Number, that they would have been aſha- " med not long before to own them for their Sub- " jects. So true it is, we ought not to look on any " thing as beneath us, ſince all Temporal Grandeur " is ſubject to Change, and that nothing is Conſtant " in this World but Inconſtancy.

" THE *Tartarian* King *Tſuntc* had not the lei- " ſure to enjoy his Conqueſt; ſcarce had he ta- " ken Poſſeſſion but he died, leaving the Admini- " ſtration of the Government, and Care of his Son, " who was then but ſix Years old, to his Brother. " This Brother of his, named *Amavan*, conquered " all the Provinces which had not yet ſubmitted; " a Prince deſervedly admired, not only for his " Valour and Conduct, ever attended with Succeſs, " but alſo for his Fidelity and Moderation. For " the young Prince being come to Age, he diſchar- " ged his Truſt, and took as much Care to ſecure " him in the Empire, as he had done to Conquer it " for him.

" THIS Union of the two Nations has made " one Empire of a prodigious Extent, for tho' all " *Tartary* does not belong to *China*, yet moſt of it is " Tributary to them; inſomuch that the great and " mighty *CHAM*, to whom the *Chineſe* themſelves " paid Tribute, is dwindled away to nothing."

BUT to proceed: *Nankin*, or the South Court, (which is call'd by the *Tartars Kiammin*) was once the Seat of the Empire, till the Emperor thought fit to remove it to *Pekin*, or the North Court, to oppoſe the Incurſions of the *Tartars*. It is nevertheleſs the Metropolis of the Province of *Nankin*, and lies in the Latitude of 32 North, Longitude 137 Eaſt. It was formerly enclos'd by three Walls, the outermoſt of which was 48 Miles in Circumference: The Ruins of them look more like the Boundaries of a Province, than the Walls of a City: And altho' it has loſt much of its former Grandeur, and is leſſen'd, as well in its Buildings as Number of Inhabitants, ſince the removal of the Court to *Pekin*, notwithſtanding it is ſtill eſteem'd more Populous then *Pekin*. The Streets are well-pav'd, but not very broad; the Houſes are low but neat; the Shops are well-ſtock'd with the richeſt Silks, and all the other Manufactures in which this Country abounds. The Mandarins and Doctors retire hither when they are out of Employment, here being the moſt conſiderable Libraries; Printing and all other Arts being practis'd in this City in the greateſt Perfection; the Language alſo is more pure then in any Part of the Kingdom. This City ſtands on the River *Kiam*, one of the largeſt and deepeſt Rivers in *China*: It is about a Mile and a half broad at this Town. Here are alſo ſeveral navigable Canals, with ſtately Bridges over them, conſtantly throng'd with Veſſels going in or out of the Port, and the City is garriſon'd by 40,000 Men.

City of *Nankin*.

WITHOUT the Gates of every Town there are uſually two magnificent Towers erected, and near each Tower a Temple of Idols; beſides which there is a Temple particularly dedicated to the Genius or Guardian Angel of the Place. There are almoſt in every City Triumphal Arches built to the Honour of ſome great Men, who have been Benefactors to their Country; and Colleges or Temples Founded in Memory of their great Philoſopher *Confucius*, where his Doctrines are taught.

Towers and Publick Buildings. Triumphal Arches.

THERE are two Towers without the Gates of *Nankin*; one of them is called the *Porcelane Tower*, of an Octangular Figure, contains nine Stories, and is 200 Foot high; it is rais'd on a very ſolid Baſe of Brick-work, and ſurrounded with a Rail of unpoliſh'd Marble. There are 12 Steps all round it, by which you aſcend to the firſt Room; but there are three large Doors that open into it; and from thence you may aſcend to the ninth Story, by very narrow and incommodious Stairs; each Step being 10 Inches deep. Theſe Towers are all built alike, in the Form of a Cone, or Sugar-Loaf: between every Story there is a Pent-houſe, or Shed, all round, which is leſſen'd all the way up, as the Tower itſelf is; decreaſing in Breadth as the Height increaſes. The Wall at Bottom is at leaſt 12 Foot thick at Bottom, and eight and a half at the Top, and

A beautiful Porcelane Tower.

taſ'd

fac'd with *China* or *Porcelane* on the outside. Each Story is form'd of thick Pieces of Timber laid a-croſs, and on them a Floor; and the Ceiling of every Room is adorn'd with Paintings. The Walls of the upper Rooms have Windows, and there are Niches alſo round them, fill'd with the Images of their Gods. Above the ninth Story there is a Cupola, which riſes thirty Foot higher than the Tower; and on the Top is a very large golden Ball. This Tower has been built above 300 Years, and ſtill appears exceedingly beautiful; and is eſteem'd the beſt contriv'd and nobleſt Structure in the Eaſt.

Bells and Watches.

THEY have likewiſe in every City of *China* very large Bells, by which they diſtinguiſh the five Watches of the Night: They are hung in Towers built for that purpoſe, and begin to ſtrike them at ſeven or eight in the Evening: In the firſt Watch they ſtrike once, which they repeat a little afterwards, and ſo on till the ſecond Watch begins; then they ſtrike two, which they repeat till the third Watch begins, and ſo on. They make uſe of a Drum alſo in their Towers, in the ſame Manner.

Bells at Pekin, 120,000 weight a piece.

THERE are 7 great Bells at *Pekin*, which weigh 120000 Pounds a-piece: They are eleven Foot wide, forty Foot in Circumference on the outſide, and twelve Foot high, beſides the Ear, which is three Foot more. But tho' they exceed our Bells in Bigneſs, ours far exceed them in ſound: Their Metal nor their way of Caſting is not comparable to ours; and having wooden Clappers, they make a very dull Sound. Theſe Bells are almoſt in Form a Cylinder, near as wide at the Top as they are at Bottom, but they leſſen in thickneſs ſomewhat from the Bottom to the Top. The Metal is brittle and very ill caſt, and full of Knots.

Triumphal Arches.

THE Triumphal Arches before-mention'd, conſiſt of three great Arches built of Marble, the middle Arch is higher than the other two: They are ſupported by four Columns, ſometimes round, but oftner ſquare, made of one ſingle Stone, plac'd on an irregular Baſis. The Frize is adorn'd with Inſcriptions, beautiful Figures and Sculptures, with Knots and Flowers finely carv'd, and Birds flying as it were out of the Stone. Theſe are look'd upon as the Maſter-piece of Art. But ſome of their Triumphal Arches are ſo very indifferent, that they are not worth deſcribing.

Windows.

THE Windows of their Houſes, as has been hinted already, neither look into the Streets, nor towards their Neighbours; which obliges them to build about open Courts and Squares to receive the Light. Their Windows are not glaz'd as ours are, but inſtead of Glaſs they have Oyſter-ſhells, or other Shells of Sea-Fiſh, clean'd and ſcrap'd ſo thin, that they will admit the Light to paſs thro' them, tho' they fall ſhort of Glaſs in Tranſparency: In other Places, 'tis ſaid, they have Pieces of painted Glaſs, like Straws glew'd together, which form a Square of the Bigneſs of our largeſt Panes: And in other Places of *China*, their Windows are made of Rattan, or ſplit Cane, and are rather Lattices than Windows, eſpecially in the Southern Provinces: Theſe being much cooler than Shells or Glaſs.

Port of Canton

THE principal Ports of this Empire to which the *Europeans* trade, are, Firſt, *Canton*, the Capital of *Quamtung*, the Southermoſt Province of *China*; it lies under or very near the Tropick of *Cancer*, about fifty Miles from the Mouth of the River *Ta*; and is thought to be the beſt Harbour in *China*. It is defended on that Side next the Water by two high Walls, with Towers upon them, and two ſtrong Water Caſtles; and on the Land ſide by a good Wall, and ſeveral Caſtles. It exceeds all the Cities of *Aſia*, (we are told,) in Idol-Temples, Courts, Palaces, and other Publick Buildings: There are no leſs than thirteen magnificent Triumphal Arches, between the Water-Gate and the Palace. This City could once have vied with the greateſt, in their Shipping, Trade, Riches and Number of Inhabitants, before it was ruin'd by the *Tartars* in the late Wars.

Macao.

THERE was alſo formerly a great Trade to *Macao*, an Iſland that lies to the South of *Canton*, poſſeſs'd by the *Portugueſe*: They have a Fort and Garriſon there ſtill; but are forc'd to ſubmit to the *Chineſe*, and be obedient to their Mandarins: All the Cuſtoms alſo are paid to the Emperor, tho' the *Portugueſe* ſtill retain a Form of Government, as to their own People. The Town is built upon very uneven Ground, on the Point of a ſmall Iſland, which commands a good Road, where the Shipping is cover'd from Storms by ſeveral little Iſlands, which lie to Windward.

Emoui, or Amoy.

TO the North of *Canton* in the Province of *Fokien*, is another Port call'd *Emoui* or *Amoy*, from the Iſland that forms it. Here the biggeſt Ships may ride with Safety cloſe to the Shore; Trading has been much improv'd there of late, which has brought great Numbers of People thither. It has for its Security a Garriſon of 8 or 900 Men.

Nimpo.

NIMPO, the moſt Eaſterly Port on the Continent of *China*: This is a City of the firſt Rank, very Populous, and beautify'd with many Triumphal Arches. It is two Days Sail diſtant from *Japan*, with whom they maintain a conſiderable Trade; exporting their Silks and other rich Merchandize; in Return for which they receive Gold, Silver, Braſs, Japan Cabinets, &c.

Chuſan.

THE *Engliſh* had a Factory in the Iſland of *Chuſan*, or *Cheuxan*, about thirty Miles to the Eaſtward of *Nimpo*, at the Time of the erecting the *New Eaſt-India* Company. This Iſland lies about the Latitude of 30, and is eight or nine Leagues in Length, from Eaſt to Weſt, and four or five in Breadth: There is a good and convenient Harbour at the Weſt End, near the *Engliſh* Factory, which was built cloſe by the Shore, in a low Valley, where there are about 200 Merchants and Tradeſmen's Houſes, who come thither to trade; but their Families reſide at a Town about a Mile farther within the Land, which is ſurrounded by a fine Stone Wall, three Miles in Circuit, defended by twenty-two ſquare Towers, mounted with ſome old Iron Guns, and has a Garriſon of three or four thouſand Men.

Port of Nankin not us'd by Europeans.

THE Harbour of *Nankin* was once accounted the fineſt in *China*, becauſe of the Breadth and Depth of the River *Kiam*, which runs by the Town: But no Merchant Ships, put in there at preſent; whether the Mouth of the River be choak'd up with Sand, or whether the Government intend to divert the Trade from the Place is not certain; tho' the latter is judg'd to be the Reaſon; but certain it is, that the whole Fleet of a noted Pyrate who beſieged *Nankin*, during the late Troubles, paſs'd it without any Difficulty; it may be from hence concluded, that the Government obſerving how much the Place was expos'd to Inſults from abroad, choſe to remove the Trade to other Places that were more ſecure, that by Degrees it might grow out of Knowledge.

THE two Imperial Cities of *Pekin* and *Nankin* already deſcribed, might alone render *China* deſervedly famous; but the Capital Cities in moſt Provinces are ſo large, that each of them is worthy to be deem'd the Metropolis of an Empire. *Sigan*, the Capital City of *Xenſi* is nine Miles in Circumference: The Walls which encloſe it are exactly ſquare; the Ditches are partly dry and partly fill'd with Water; the Walls are thick and tall, as well as the ſquare Towers that defend them; the Bulwarks are very broad, and the Gates of ſome of are them very ſtately. The City is divided into two Parts by a Wall of Earth, which runs almoſt from one End to the other: The one half is inhabited by the *Tartars*, who keep the largeſt Garriſon, tho' in the other Part, where the *Chineſe* inhabit, there is a

Sigan the Metropolis of Xenſi.

good

good Body of Troops. There is ſtill to be ſeen an old Palace, the former Reſidence of the ancient Kings of the Country, who in their Times were very powerful, not only thro' the vaſt Extent of their Dominions, but alſo from the Bravery and Courage of their Subjects; for among all the *Chineſe*, there are not any better-proportion'd, or more ſtrong, ſtout and laborious than theſe. Their Houſes indeed are but low, and but indifferently built; their Furniture is not ſo neat as in the Southern Parts, their Varniſhing not ſo ſmooth, their *Porcelane* or *China* Ware ſo plenty, or their Workmen ſo ingenious.

Hamcheu. HAMCHEU, the Metropolis of the Province of *Chekiam*, is alſo one of the richeſt and greateſt in the Empire. It is twelve Miles in Circumference, and very populous, the Suburbs are very large, and the Canals crouded with an infinite Number of Boats; 'tis thought to be as well-peopled as any of the greateſt Cities in *Europe*. The Garriſon conſiſts of 10,000 Men, 3000 of which are *Chineſe*. The Water of their Canals is not clear, nor their Streets broad; but the Shops are neat, and the Merchants are reputed rich.

EASTWARD from this City, runs a River half a League broad, being near the Sea, but indeed not very conſiderable, for a little higher it is but an uſeleſs Torrent, which runs thro' abundance of Rocks: A Lake lies cloſe to it to the Weſtward, which is about two Leagues in Circumference; the Water is clear but very ſhallow; though deep enough for large flat-bottom'd Boats, which the *Chineſe* keep there, like ſo many floating Iſlands, in which their young People divert themſelves. There is an Iſland in the middle where they uſually land, having built there a Temple, and ſome Houſes for their Diverſion. This City, altho' not ſo eminent for its Buildings, is yet to be eſteem'd for its fine Situation, being one of the beſt ſituated in the Empire, its Inhabitants very numerous, its Canals very commodious, and above all, their Traffick is exceeding great, and the fineſt and richeſt Silks in the World.

Great Traffick in Silks, the richeſt in the World.

WHAT is ſurprizing in *China* is, that having paſs'd thro' one of theſe great Cities, one would ſcarce expect to meet with the like; but you are hardly out of Sight of one but you have another in view. As for Example, going along the great Canal from *Hamcheu*, you come to *Soucheu*, which is not far from it; and if you believe the Inhabitants, is twelve Miles in Circumference: It is alſo the uſual Reſidence of the Vice-Roy, and has a vaſt Trade; but is not quite ſo populous as thoſe before-mention'd, but the Suburbs and Number of Boats amazes New-Comers. Thoſe who have the Curioſity to ſpend a few Minutes on the Water-ſide, and view the Throngs of People that come to cheapen Commodities, would imagine it to be a Fair, to which the whole Empire were crowding; and the Officers there, tho' not over ſtrict, are ſo buſied in receiving the Cuſtoms, that they are oblig'd to put off a great many Traders to the next Day, who come to make their Payments. This continual Hurry in the moſt covetous Nation in the World, (one would think) ſhould occaſion frequent Quarrels; but their Government is ſo excellently manag'd, and the Mandarins Orders ſo punctually obey'd, that beſides abuſive Language, in which the *Chineſe* are very fluent, few other Injuries are ſeldom offer'd.

CHAP. III.

A Deſcription of the Character, Genius, Temper, Stature, Complexion, Shape and Habits of the Chineſe; *with their Entertainments, Diets, Diverſions, Feſtivals, Viſits and Ceremonies; Roads, Manner of Travelling and Carriages.*

Character of the *Chineſe.* THE *Chineſe* Nation from their very Original always eſteem'd themſelves ſuperior to all Mankind; like to thoſe Princes, who as ſoon as they are born almoſt, diſcover a certain natural Loftineſs, that ever diſtinguiſhes them from the Vulgar. Whether that was owing to the Barbarity of the Neighbouring Kingdoms, or their being ſuperior to their Neighbours in Point of Wiſdom, is hard to determine; but at that Time they laid down

Good Maxims. a Maxim of State among themſelves, *To have no Commerce with Foreigners and Strangers, but juſt as much as ſhould be neceſſary to receive their Homage.* Neither did they court and ſeek after theſe Badges of Sovereignty out of a Spirit of Ambition, but thereby to have an Occaſion to preſcribe the Laws and Conſtitutions of perfect Government.

SO that when any among their Tributaries fail'd to appear, they did not oblige him by open Force to ſubmit, but on the contrary had Compaſſion on him. *What do we loſe by it*, (ſay they) *if he ſtill remain barbarous? Since he is ſo averſe to Wiſdom, he needs to blame no-body but himſelf, as often as he ſhall fail in his Duty thro' Paſſion or Blindneſs.*

THIS grave Policy acquired the *Chineſe* ſo great a Reputation, that throughout all the *Indies*, all *Tartary* and *Perſia*, they were eſteem'd the Oracles of the World; and it is obſervable that the greateſt Objection the *Japoneſe* made to the Chriſtian Religion, was, that ſo wiſe a People as the *Chineſe* had not receiv'd it.

BUT this Piece of Policy that induced them to diſtinguiſh themſelves from others, which at firſt might be a profitable Maxim, degenerated into Pride. They valu'd themſelves upon being (as they thought) a choſen and elect People, that were produc'd by Heaven, and plac'd in the Centre of the Univerſe, to be Law-givers to Others; and therefore a People only capable to inſtruct, civilize, and govern Nations. Theſe lofty Thoughts inſpir'd them with a fancy'd Opinion that other Men were defective in their Underſtandings, and deform'd in their Perſons; and believ'd they were caſt into the remote Corners of the World, as the Droſs and Off-Scourings of Nature.

Europeans not allow'd equal to themſelves in Arts and Sciences.

BUT perceiving the *Europeans* well-vers'd in Arts and Sciences, they were amaz'd, and ſaid, *How could this poſſibly be, that a People ſo remote from us, ſhould be endow'd with ſuch Parts and Learning? They have never perus'd our Books; they were never model'd by our Laws, and yet they ſpeak, diſcourſe and argue as we do.* Our Workmanſhip, as Stuffs of various kinds, Clocks, Watches, and Mathematical Inſtruments, with many other Curioſities, ſurpriz'd them ſtill more; for they imagin'd that dextrous and expert Artificers were no where to be met with but in *China*. Then they began to perceive that we were not ſo barbarous as they imagin'd; and ſaid in a joking Way, *We did ſuppoſe all other People blind, and that Nature had beſtow'd Eyes upon none but the* Chineſe:

But it is not universally true, if the Europeans *do not see clearly as we do, they have at least one Eye a-piece.*

Chinese endow'd with rare Qualities.

ABATING this Pride, it must be confess'd that the *Chinese* Nation have been endow'd with rare Qualities, with a great share of Politeness, with a great deal of Sense in practising the World, with good Skill and Regularity in their Business, with much Zeal for the Publick Good, true and just Idea's of Government, with a Genius mean as to Speculative Sciences, but yet right and sure in their Morals, which they have always preserv'd conformable to Reason.

THE People principally apply'd themselves to the Education of Children in their Families; they valued Agriculture above all other Things; very Laborious even to Excess; loving and understanding Trade perfectly well. Judges and Governors of Cities affected an outside Gravity, Sobriety at their Table, Moderation in their House-keeping, and Equity in their Judgment, that gain'd the Love and Respect from all People in general. The Emperor plac'd his chief Happiness in nothing more than to procure it for his Subjects, and look'd upon himself not so much a King of a Grand State, as a Father of a numerous Family.

THIS Character of the *Chinese* is not flattering, but faithfully deduc'd from their own History, that furnishes us with a great Number of Examples of the conspicuous Wisdom that animated their Government. 'Tis true indeed, the Civil Wars, the weak or wicked Monarchs, and Foreign Dominion, have from Time to Time disturb'd this goodly Order: But whether the Fundamental Laws of the State were excellent, or that the People from their Cradles were endued with happy Dispositions, is not material; but true it is, these fatal and troublesome Intervals did not long continue; if so they were left never so little to their own disposal, they betook themselves to their former Conduct again: And we see at this very Day, in the midst of Corruption, which the Domestick Troubles and Commerce with the *Tartars* have introduc'd, some Footsteps of their ancient Probity still remaining.

Of the Manners, Customs, &c. of the Chinese in their Manners, Customs, &c.

I SHALL in the next Place draw out the Portraiture of the present State of *China*, in Relation to the Manners and Customs of the People; which shall be deciphered in a few Words, by telling you that they live there as we do in *Europe*. Avarice, Ambition and Pleasure bear a great Sway in all their Affairs: notwithstanding their boasted Politeness, and the equitable Rules they pretend to be govern'd by, they cozen and cheat in Traffick; Injustice reigns in their Sovereigns Courts, and much of the Time both of Princes and People is taken up in Amorous Intrigues. In the mean time Persons of Quality take so many Measures to conceal Vice, and their Outworks are so well guarded, that if a Stranger be not carefully instructed concerning Affairs to the Bottom, he imagines that every thing is perfectly well regulated. In these Particulars the *Chinese* resemble the *Europeans*: But their Countenance, Air, Language, Disposition, Civilities, Manners and Behaviour, are not only different from ours, but also from all other Nations in the World.

Chinese crafty in their Dealings.

WHEN they have an Interest to manage, no People know better how to insinuate themselves into the good Opinion of those they deal with, or improve an Opportunity when it offers; nor will they decline the most hazardous Undertaking, where they have any Gain in view; Trade and Commerce seems to be the Spring of all their Actions; nor do they much scruple imposing on those they deal with, of which many of them are so far from being asham'd, that they will laugh at those they have bubbled; and have so great a Propensity to Riches, that they leave no means untempted to accomplish it. A Foreigner is always in Danger of being cheated if he trust to his own Judgment, and if he employs a *Chinese* Factor, as is customary, both Factor and Merchant will sometimes combine together to deceive the Stranger.

THEY continually apply themselves to discover the Inclinations, Humours and Tempers of those they deal with, and keep up a fair Correspondence even with their greatest Enemies: However, there does not want Instances of fair Dealing, open and generous Usage, and a Fidelity not to be corrupted.

No Duelling.

THEY have no Duels among them, for all their Revenge is secretly manag'd, and they cannot only dissemble their Malice, but seem patient to an Insensibility, till they have a favourable Opportunity to strike Home. Their Great Men are perpetually engag'd in a continued Pursuit of Places of Honour and Profit, and carry on their Designs by Bribes and Presents, as is Customary in other Courts: Yet as the Laws prohibite these Practices, and refer all to the Merit of the Candidate, the most subtle and designing amongst them ever put on the greatest Appearance of Modesty and Self-Denial: But however the *Chinese* may excel in Cunning, their Courage 'tis observ'd is not very remarkable.

Stature, Shape, and Complexion and Features of the *Chinese*.

THE *Chinese* in general, are squat well-set Men, with broad Faces, black Hair, little dark-colour'd Eyes, short Noses, and thin Beards, which they wear long on the bottom of the Chin and upper Lip; but they pull the Hair off their Cheeks by the Roots with Tweezers; and till they arrive at thirty Years of Age hardly any Beard appears. Learned Men suffer the Nails of their Left Hand to grow two or three Inches longer than their Fingers, to distinguish them from Mechanicks. They like a Man that is tall and fat, a little above the common Size; and if he have a short Nose, great Ears, a little Mouth, and a long Beard, he is look'd upon as a compleat Beauty; a harsh Voice is esteem'd no mean Accomplishment, especially in a Magistrate. The Women who are kept up, and not expos'd to the Sun, are pretty fair; and excepting their little Eyes and short Noses, are in many respects equal to our *European* Beauties: But above, all their Modesty is a considerable Addition to their other Charms; they dress usually in their Hair, part of which is made up into a Roll, and fasten'd with a Bodkin; the rest is divided into Locks, which fall upon the Neck very gracefully. In the Northern Provinces they wear a sort of a Caul of thin Silk over their Hair: And in *Pekin* in cold Weather they wrap a kind of Cornet or black Hood about their Hair: The more they are confin'd the less they like Solitude: The *Chinese* Ladies dress themselves very gayly, and spend the Morning in making themselves fine, altho' it very often happens they are not seen by any one but their own Servants; their Head-dress usually consists of several Locks of Hair buckled up, interlac'd with Flowers of Gold and Silver.

Their Women.

Dress.

THE Ladies wear as Men do, a long Sattin or Cloth of Gold Veil, red, blue or green, according to their particular Fancy; the Elder Sort habit themselves in Black or Purple; they wear besides that, a kind of Surtout, the Sleeves whereof are extream wide, and so long that they would trail upon the Ground if they were not held up: But what is most remarkable is, their little Feet, in which their chief Beauty is thought to lie: They carry their Affectation in this Point to a great Height; the ancient Custom (which in the Business of the Mode constantly prevails over the most natural Idea's) oblige them to follow the Multitude, and comply with the Custom of the Country.

Chief Beauty consists in little Feet.

AS soon as ever the Girls are born, the Nurses take care to tie their Feet extream hard, to prevent their growing; Nature, that seems to be dispos'd for this Torment, does more easily yield to it than one could imagine; nay, it is not perceivable that their

Health

Health is at all impair'd thereby. Their Sattin Shoes, embroider'd with Gold, Silver and Silk are very neat, and tho' they are very little, yet they ſtudy to let them be ſeen as they walk; which they would do all Day long if they had that Liberty allow'd them. Some have thought it was an Invention of the ancient *Chineſe*, who to bring the Women under a Neceſſity of keeping within Doors, brought little Feet in Faſhion: But upon Enquiry of the *Chineſe* themſelves, they deny'd having ſo much as heard of it. "Theſe are idle Tales, "(ſays one of them ſmiling) our Fore-fathers knew "Women but too well, as we do, to believe that "in retrenching half of their Feet, they could be "depriv'd of the Power of walking, and of long-"ing to ſee the World."

Habits of Men.

THE Men's Habits (as every where elſe) are very different from Women's; they ſhave their Heads all over, except behind, where they always leave a Lock: They wear no Hat as we do, but wear continually a Bonnet or Cap, which Civility forbids pulling off: This Bonnet is varied according to the different Seaſons of the Year; that which they wear in Summer is in the Shape of a Cone, lin'd in the inſide with Sattin, and the top cover'd with a very fine Mat, much eſteem'd in this Country; there is alſo a Bunch or Tuft of red Silk that falls round about it and reaches to the Edges, ſo that when they walk this Tuft waves in the Wind, and appears very beautiful at a Diſtance.

Near Winter Caps.

IN Winter theſe Caps are made of Pluſh, turn'd up with Sable or Fox-Skin, lin'd with Sattin, and being very ſhallow, they are faſten'd under their Chins with a String; theſe Caps are very handſome, and are generally ſold for eight or ten Crowns a-piece. When the Mandarins are in their Formalities, their upper Part of the Caps hath a Diamond or ſome other Precious Stone in the Creſt, ill cut, and inchas'd in a Button of wrought Gold, very curious; others have a huge Tuft of Stuff, Agate, Chryſtal, or ſome ſuch like Materials.

Long Veſts.

THEIR Habit is long, their Veſts reach to the Ground, and folds over the Breaſt, and is button'd on the left Side with four or five Gold or Silver Buttons: The Sleeves are wide at the Shoulder, and are narrow at the Wriſt, and cover the whole Hand to their Fingers Ends: The Veſt is tied with a Silk Saſh, which hangs down to their Knees: In Summer their Necks are bare, but in Winter they cover them with a Satrin Cape ſew'd on to the Veſt, or with a Tippet of Sable or Fox-skin, about the breadth of three or four Fingers, which is faſten'd before with a Button, which is very decent, and become Horſemen wonderfully. Over their Veſts

Looſe Silk Coats over them

they wear a looſe Coat or Gown, of a blue, green, or any other Colour, with ſhort Sleeves: This is ſhorter than their Veſt; and thoſe the *Tartars* and Soldiers wear do not come lower than their Knees. When they receive Company or viſit others, they wear another looſe Coat or Gown over that, and every Garment is of different Colours: Under their

Taffaty Shirts.

Veſt both Men and Women wear a Shirt, or rather Waiſtcoats of Taffaty, which wraps over the Breaſt, and is lac'd or ty'd on the right Side, and has cloſe narrow Sleeves; they have alſo a Pair of Drawers of the ſame. In the Winter the Waiſtcoat is of Linnen, and they have Breeches or rather

Silken Trowſers.

Trowſers; for they are wide, and reach down a great part of the Leg: Theſe are made with coarſe Sattin, quilted with Cotton or Raw-Silk: The Men

Boots of Silk

wear alſo a kind of Silk Boots, quilted with Cotton an Inch thick, and Slippers beſides. The Slippers have good ſubſtantial Soles, ſtitch'd with Packthread; the Sole of the Boot is made of Silk or Linnen, and therefore cannot be worn without the Slipper. A Man of Faſhion will never be ſeen without his Boots, when any one comes to viſit him; but at other Times they wear Slippers only in their Houſes.

THEY had retain'd the ſame Faſhion in their Cloaths and Habits above 2000 Years, till the *Tartars* compell'd them to cut off their Hair, and alter their Dreſs in ſome Particulars. The *Chineſe* cannot be reconcil'd to Perriwigs, the drawing on ſtrait Stockings and Breeches; and the diſcovering ſo much Leg and Thigh as the *Europeans* do, looks very odd to them. There is notwithſtanding in all their Modes ſome real Beauty, which Nature in her Innocence has inſpir'd Mankind with, for the Neceſſity and Convenience of Life.

Tartars compell'd the *Chineſe* to alter their Dreſs.

ALTHO' Perſons of Quality obſerve exactly all the Formalities and Decencies ſuitable to their State, and never appear uncover'd in Publick, how great ſoever the Heat be, yet in Private, and among their Friends they aſſume a Freedom even to a Fault; they every now and then put off their Bonnet, Surtout, Veſt and Shirt, reſerving nothing but a ſingle Pair of Drawers of white Taffaty, or tranſparent Linnen: This is the more ſurprizing becauſe they condemn all Nakedneſs in Pictures, and are even offended that our Engravers repreſent Men with their Arms, Thighs and Shoulders uncover'd; they ſeem to be in the right to blame our Workmen in theſe Particulars; but yet they are ridiculous to blame theſe Repreſentations on Linnen or Paper, which they practiſe themſelves with ſo much Indecency in their own Perſons.

Perſons of Quality indecent among their Friends.

AS for the Vulgar, they tranſgreſs all the Bounds of Modeſty, eſpecially in the Southern Provinces; where the Watermen and others, are impudently immodeſt to the higheſt Degree; almoſt all the Artificers and inferior Tradeſmen go along the Streets with ſingle Drawers, without Caps, Stockings or Shirt, which makes them much tann'd, and of a ſwarthy Hue. In the Northern Provinces they are more reſerv'd, and the Cold compels them to be more modeſt, and keep within Bounds.

WHEN the *Chineſe* ride in bad Weather, their great Coats, Caps and Veſts are cruſted over with a ſort of Oil, which looks green when dry, and defends them from the Rain; and their Boots are made of good thick Leather.

Habit of the Miſſionaries.

THE Miſſionaries in *China* at firſt went in the Habit of the *Bonzes* or *Pagan* Prieſts; but they ſoon grew aſham'd of appearing like theſe Idol-Prieſts, and took up the Students Habit of long Gowns. But in the late Revolution of the Empire, theſe Fathers, as well as the *Chineſe*, were compell'd to go in the *Tartarian* Faſhions, and wear ſhort Veſts and Coats of Silk; tho' at home they are cloath'd in Serge, or painted Linnen.

AT their Girdles they hang their Pouch of Tobacco, their Pipe made of Braſs, their Handkerchief, the little Sticks they eat with, and their Knife; for they have no Pockets to put theſe Trinkets in.

IN Winter the Quality wear rich Furs; and others Lamb-skins, or quilted Cotton. Their Swords which are broad, they wear on the left Side, with the Point forward.

Mandarins wear Ornaments of Diſtinction on their Cloaths.

THE Mandarins have ſeveral Ornaments of Embroidery wrought upon their Cloaths, either in Gold or Silver, before and behind, which ſhews the Dignity of their Office: The Civil Magiſtrates have uſually a Bird; and the Military Officers, Dragons, Lions or Tygers wrought upon them. There are no People who affect more publick Magnificence in their Habits and Attendants than the *Chineſe* Nobility, Magiſtrates and Gentry: The Government that does not allow, but in other Matters regulates Expences, does not only approve of this, but contributes to it on ſeveral Occaſions.

State of the Mandarins when they go Abroad

WHEN Perſons of Quality receive Viſits, or make any; when they go along the Streets, or when upon their Journey, but more eſpecially at thoſe Times when they appear before the Emperor, or make their Addreſs to the Viceroys, they are attended

tended with a Train of Shew and Grandeur, that fills one with Aſtoniſhment. The Mandarins, richly habited in a gilt open Sedan, born upon the Shoulders of eight or ſixteen Perſons, accompany'd with all the Officers of that Court of Juſtice that the Mandarins preſide over; they are ſurrounded with Umbrello's and other Marks of their Dignity: There are ſome that walk before them two and two, bearing Chains, Faſces, Eſcutcheons of varniſh'd Wood, upon which may be read in large Gold Characters, all the Titles of Honour annex'd to their Places of Truſt; together with a broken Baſon upon which they beat a certain Number of Strokes, according to the Ranks they bear in the Province; they continually ſpeak loud, and compel the People to make way: Other Officers follow in the ſame Order, and ſometimes four or five Gentlemen on Horſeback bring up the Rear: There is a particular Mandarin that never appears in Publick, without a Train of three or fourſcore Domeſticks.

Officers of the Army how attended.

THE Gentlemen of the Army go commonly on Horſeback, and when they are of any conſiderable Rank, they are at the Head of a Troop of twenty-five or thirty Horſe. The Princes of the Blood at *Pekin* are preceded by four of their Officers, and follow themſelves in the middle of a Squadron that marches without any Order. In ſhort, they wear no Liveries in *China*, but the Domeſticks are habited according to the Quality of their Maſters, in black Sattin or painted Linnen: Their Horſes are neither fine, nor well manag'd, yet their Trappings and Harneſs are very rich; the Bits, Saddle and Stirrops are gilded, or elſe of Silver. Inſtead of Leather, they make Bridles of two or three Twiſts of coarſe Sattins pinkt two Fingers broad; under the Horſes Neck, at the beginning of the Breaſt-Plate, hang two great Taſſels of curious Horſe-hair, which are faſten'd to two huge Buttons of Braſs, gilded or waſh'd with Silver, hung on Rings of the ſame Metal, that a Horſe upon a March looks very Grand, altho' upon a long Journey it is cumberſome, eſpecially upon a Courſe.

NOT only Princes and Perſons of the higheſt Rank appear in Publick with a Train, but even thoſe of a meaner Quality go always on Horſeback along the Streets, or in a cloſe Sedan, follow'd by ſeveral Footmen: The *Tartarian* Ladies do often make uſe of Calaſhes with two Wheels; but they have no Coaches.

THE Grandeur of the *Chineſe* Mandarins principally diſplays it ſelf in the Journies they take by Water; the prodigious Largeneſs of their Barges, that are little interior to Ships, the Finery, Carving, Painting and Gilding of the Apartments, the great Number of Officers and Seamen that ſerve aboard, the different Badges of their Dignity every where diſplay'd, their Coats of Arms, Flags and Streamers; all this I ſay, does abundantly diſtinguiſh them from the *Europeans*, who are never ſo very gaudy in their Appearance, when they Travel.

Diet.

THE *Chineſe* are no *Epicures* in their Diet; they do not only eat all kind of Fleſh, Fiſh and Fowl as the *Europeans* do, but Horſe-Fleſh is in great Eſteem among them; nor are Dogs, Cats, Snakes, Frogs, or ſcarce any ſort of Vermin refus'd: But Rice, Roots, Pulſe, and all ſorts of Vegetables are the common Food. Broths and Soops they have alſo made either of Fleſh or Fiſh, which they mix with their Rice. Salt and Pepper are never brought to Table, the Meat being ſeaſon'd in the Dreſſing: They eat their Fleſh, boil'd, fry'd and broil'd; but it is cut into little ſquare Pieces like Dice before it comes to Table. They uſe neither Cloth, Napkins, Knives, Spoons, or Forks; but two little round Sticks of Ebony, or other Wood, ſometimes tipp'd with Silver at the Ends, with which they take up their Meat very dextrouſly; and for their Rice and Broth they hold the Cup to their Mouths, and lade it in with their little Sticks. They uſe high Chairs and Tables, contrary to all the People of the Eaſt beſides, who ſit croſs-legg'd upon the Floor. Every Perſon almoſt has a little lacquer'd Table to himſelf at an Entertainment, on which his Meat and Rice are ſet in little *China* Diſhes or Saucers, and ſometimes in Plate.

Drink.

TEA is their principal Liquor; Wine they have none, tho' the Country abounds in fine Grapes; neither do they brew Beer of Malt; yet they have ſtrong Liquors of Rice and Wheat; they never drink cold Water, it being generally bad, and unfit to drink till it is boil'd, and corrected by the Infuſion of Herbs, or mix'd with ſpirituous Liquors.

THE two principal Liquors our Seamen drink, are, *Hockſhue* and *Samſhue*: As for *Tea*, the Sailors leave that ſort of Liquor to the Natives. *Hockſhue* is the Colour of brown Beer, but very clear and ſtrong: It is ſaid to be an Infuſion of Wheat in ſcalding hot Water, and taſtes more like Mum than Beer. *Samſhue* is a Spirit diſtill'd from Rice, and either of a Pale or Reddiſh Colour; and is what ſeveral Travellers take for Wine.

Full of Ceremony at their Entertainments.

THESE People generally eat their Meat cold, tho' they drink their Liquors hot; and they uſe ſo much Ceremony at their Entertainments, that it muſt certainly very much leſſen the Pleaſure of eating and drinking. Whenever a Mouthful of Meat is taken up, or a Cup of Liquor drank, it occaſions a hundred Grimaces. There ſtands a Perſon to beat Time, that every one may handle his little Sticks, and carry their Meat to their Mouths at the ſame Time.

THEY begin their Entertainmens with drinking Wine, as it call'd, tho' in Fact it is only made from Rice. This is preſented to every one of the Gueſts at the ſame Time, in a ſmall *China* or Silver Cup; they take hold of it with both their Hands, and lift the Cup as high as their Heads, and then drink it off without ſpeaking a Word: If any of the Gueſts don't care to drink, it is neceſſary to make the Motion however, and hold the Cup to his Head as long as the reſt, and there is no Notice taken whether he drinks or not. After this a Diſh of Meat is ſerv'd up to each Table; when the Maſter of the Feaſt gives the Sign, the two Sticks are taken up and flouriſh'd, after which they put them in the Diſh, and very dextrouſly carry their Meat to their Mouths. They take as much care as poſſible that their Mouths all move together, that one may not have done before the other; for either to be beforehand, or make the reſt wait, is reckon'd a great piece of Rudeneſs, and throw all into Confuſion. When this is done, they flouriſh their little Sticks again, and having taken two or three Mouthfuls of a Diſh, the Maſter of the Houſe gives the Sign to lay down their Arms, which they do exactly in the ſame Order they find them.

None compell'd to drink againſt their Wills.

THE Liquor is next brought in again, which they drink off with the ſame Ceremony as before. They drink or rather ſip, after they have taſted a Mouthful or two of a Diſh, and ſometimes there is not leſs than twenty ſerv'd up; but the Cups are ſmall, and no Man drinks more than he has a mind to; if he only make the Motion and keep Time, as before obſerv'd, it is ſufficient. They ſit ſilent at Table oftentimes three or four Hours; and when the Maſter of the Houſe thinks every one has eaten what he has a mind to, he gives the Sign to riſe. Then they get up and take a walk in the Garden, or ſome part of the Houſe for about a quarter of of an Hour, after which they return to the Dining Room, where they find a Deſert, conſiſting of Sweetmeats and dry'd Fruits which they eat with their *Tea*.

Players brought in at the Concluſion of their Entertainments.

IN the mean Time a Company of Strollers are call'd in to act a Comedy; in doing which they are exceeding dull and noiſy, obſerving no Rules; they

they rather howl than ſing, and make very indifferent Declamations; tho' it is expected however they ſhould cry up the Performance, and admire the Wiſdom of their Anceſtors in inſtituting theſe Diverſions. Their Plays generally contain the Hiſtories of ſome of their imaginary Saints.

THEY have ſeveral Feſtivals, which they celebrate with great Pomp and Charges; the firſt three Days in the Year are ſpent in Rejoicing throughout the whole Empire; they dreſs themſelves in the beſt Manner they can, they viſit one another, they ſend Preſents to their Friends, and to all the Perſons who they are any way oblig'd to obſerve: Gaming, Feaſting and Comedies take up every Body's time. Ten or twelve Days before the Feſtival, there are abundance of little Robberies committed, becauſe they who are deſtitute of Money, furniſh themſelves by this means, being reſolv'd to have ſome at all Hazards, to ſupply them in the enſuing Diverſions.

Feaſt of Lanthorns.

THE fifteenth Day of the firſt Month is ſtill more ſolemn; this is call'd the *Feaſt of Lanthorns*, becauſe they hang them up in all the Houſes, and in all the Streets in ſo great a Number, that it is a Madneſs rather than Feſtival: There is that Day many Millions of them lighted up, they run into very great Extremes in this Ceremony, which otherwiſe might have been tolerable, as ſeveral of their Cuſtoms are; it hath generally become the moſt ſerious Delight of Perſons of Quality to comply with Extravagancies, to pleaſe or rather tickle the Humours of the People. They expoſe to view that Day Lanthorns of all Prices; ſome are ſo vaſtly rich as to coſt 2000 Crowns; and one of their Grandees in particular, retrenches every Year ſomething from his Table, from his Apparel, and from his Equipage, to appear magnificent in Lanthorns. It is not the Materials that make them ſo dear, but the Workmanſhip, which conſiſts in fine Carv'd Work, Gilding, Painting, Silk and Varniſh, which altogether make a fine a Show: As for their Bigneſs it is immenſe; there are ſome of them to be ſeen upwards of twenty-ſeven Feet in Diameter: Theſe for their Largeneſs may be deem'd Halls or Chambers; for three or four of theſe Machines would make very handſome Apartments, inſomuch that they may Eat, Sleep, receive Viſits, act Plays, and Dance in ſome of theſe Lanthorns.

Infinite Number of Lights.

TO illuminate theſe prodigious Lanthorns, they uſe an infinite Number of Wax Candles or Lamps, which at a Diſtance look very fine: There are ſeveral Shows alſo repreſented to pleaſe the common People; and there are Perſons conceal'd, who by the help of ſeveral little Machines, make the Puppets play, which are as large as Men and Women, the Actions of which are ſo natural, that even thoſe that are acquainted with the Contrivance are apt to judge them living Perſons. Beſides theſe great Lanthorns, there are abundance of a middle Size; they are commonly compos'd of ſix Sides, each of which are four Foot high, and a Foot and a half broad, finely varniſh'd and gilt: They hang it on the inſide with a Web of fine tranſparent Silk, wherein is painted Flowers, Trees, Rocks, and ſometimes human Figures. The Painting is very curious, the Colours lively, and when the Wax-Candles are lighted, the Light diffuſeth Splendor that renders the Work altogether agreeable.

Fonfires and fine Fire Works.

THIS Feaſt is alſo celebrated by Bonfires that are kindled at that time thro' all Parts of the City; they have alſo fine Fireworks, and there is no-body but lets off Squibs and Crackers. Some Authors have repreſented them as the fineſt Fireworks in the World: There is repreſented (according to them) whole Trees cover'd with Leaves and Fruit, you may there diſtinguiſh the Cherries, Raiſins, Apples and Oranges, not only by their Figures, but alſo by their particular Colour; every thing is painted to the Life, inſomuch that one would really imagine they were natural Trees illuminated, and not an Artificial Fire, on which they had beſtow'd the Figure of Trees.

Improbable Conjectures of the Origin of this Feſtival.

THE *Chineſe* are very much at a loſs to Account for the Origin of this Pompous Feſtival; it ſeems to be a very difficult Queſtion, to be rightly inform'd of the Occaſion of this Extravagance: As it is very ancient, ſo the Original is very obſcure. The Vulgar aſcribe it to an Accident that happen'd in the Family of a famous Mandarin, whoſe Daughter walking one Evening upon the Banks of a River, fell in, and was drowned; the afflicted Father with his Family ran thither, and the better to find her, cauſed a great Number of Lanthorns to be lighted: All the Inhabitants throng'd after him with Torches, they ſearch'd for her all Night to no purpoſe; and the Mandarin's only Comfort was, to ſee the Readineſs of the People, to aſſiſt him on this melancholly Occaſion; every one of them ſeem'd as if he had loſt his own Siſter, he being eſteem'd as their Father. The Year enſuing they made Fires upon the Shore, on the ſame Day; they continu'd the Ceremony every Year, and every one lighted his Lanthorn; thus by Degrees it became a Cuſtom: The *Chineſe* are pretty ſuperſtitious in that reſpect; but there is no Probability that ſuch a ſmall Loſs ſhould have ſuch a lively Influence upon a whole Empire. There are others that attribute the Occaſion of this Inſtitution to very unlikely Cauſes, which carry in them ſcarely any Appearance of Truth; but waving that, it is certainly the greateſt and moſt expenſive Feſtival they have among them, as well as the moſt ancient.

Ceremonies enjoin'd by the State.

THEIR Ceremonies are part of the Conſtitution; every Man is oblig'd to obſerve them, even Tradeſmen, Servants, Seamen, and Husbandmen have their reſpective Forms and Ceremonies appointed them, which the *Chineſe* imagine contributes much towards civilizing their People; that the uſing theſe outward Condeſcentions and ſoft Expreſſions requir'd by the Government, tend to promote Peace and Order in the State, as well as in every particular Neighbourhood; and that the ſeeming Affection they are taught to expreſs one for another, tends to produce Good-will; that the forbearing ſcurrilous, provoking Language may prevent many Quarrels, or at leaſt they will be ſoon compos'd, where no ſuch Fuel is adminiſtred, and by ſcolding in ſoft Expreſſions, their Fury does not riſe to that Height it would, if vulgar ſordid Language was allow'd of. Oaths and obſcene Diſcourſe, 'tis ſaid, is never heard of amongſt them.

Reaſon of it.

Manner of Salutation.

THE common Salutation is laying the Right Hand to your Breaſt and bowing the Head a little; when they would ſhew the greater Reſpect, they join both Hands together, and bow their whole Body pretty low: When a Perſon of ſuperior Quality is ſaluted in his Houſe, or elſewhere, the Perſon who pays his Reſpects bends one Knee to the Ground, and remains in that Poſture till the Gentleman he ſalutes takes him up, which he preſently does. It would be an Affront to ſalute a Magiſtrate when he appears in Publick, unleſs the Perſon has particular Buſineſs with him; but the People ſtand up while he is carry'd, with their Arms a-croſs, and their Eyes fix'd on the Ground.

Viſits.

FAMILIAR Friends viſit without much Ceremony; but for all others there is a Form preſcrib'd. The Perſon who makes the Viſit ſends a Servant to the Gentleman he deſigns to wait on, with a Letter fill'd with many reſpectful Expreſſions, ſuitable to the Quality of the Perſon he intends to viſit; to which he ſubſcribes his Name. The Meſſage being deliver'd, the Viſiter ſets out, and is receiv'd according to his Rank: If the Perſon he goes to ſee be much above him, the Maſter of the Houſe does not move out of his Chair; ſometimes he waits for his

Gueſt in the Hall, at other times he goes into the the Court; and if the Perſon viſited be much the Inferior, he goes out into the Street to bring in the Stranger; as ſoon as they diſcover one another, they both run and make low Bows. They ſay but little at their firſt Meeting; a Set of ſhort Compliments are preſcrib'd; the one knows what he is to ſay, and the other what he is to anſwer: At every Door they halt, where they renew their Bows and Cringes, and compliment each other to enter firſt. They uſe but two Expreſſions on this Occaſion, the one ſays *Tſin*, which is *Pray walk in*; and the other anſwers *Paucan*, *It muſt not be*. This is repeated four or five Times, and then the Stranger ſuffers himſelf to be overcome, and goes to the next Door, where the ſame Ceremony is renew'd. When the Company comes into the Room where they are to be entertain'd, they ſtand all in a Row, and bow almoſt to the Ground, for they never ſtand oppoſite to one another when they ſalute; then they kneel, after which they ſpend ſome time in offering one another the Right-hand: They proceed to bow even to the Chairs, and every one duſts them with his great Sleeve, which the Maſter accepts very thankfully: then comes the Diſpute who ſhall ſit uppermoſt; but this occaſions no manner of Diſorder, every one knowing what Place belongs to him after all this Cringing is over; and one waits for the other till the Ceremonies preſcrib'd him are perform'd.

The Form of their Compliments.

AFTER a quarter of an Hour's Grimace, they all ſeat themſelves oppoſite to each other. They are oblig'd to ſit upright without Leaning, with down-caſt Looks, their Hands ſtretch'd out on their Knees, and their Feet plac'd even; they are to look grave and compos'd, and muſt not be too talkative, and ſometimes it happens there is not a Word ſpoken beſides the Compliments preſcrib'd. When they ſpeak, it is with all the Submiſſion imaginable, and never in the firſt or ſecond Perſon; for Inſtance, inſtead of ſaying, *I am oblig'd to you for the Favour my Lord has done me*, they will ſay, *the Favour my Lord has done me, who am ſo much beneath him, has Lid his Servant under the higheſt Obligations:* And inſtead of ſaying, *I preſent you with this Curioſity which my Country produces*; they will ſay, *Permit the Servant to offer his Lord this Curioſity which his poor Country affords*: Again, *whatever comes from his Lordſhip's noble Province, is well wrought, or extraordinary fine*. They never ſay, *I or You*, but *your Servant*, or *your Scholar*, did ſuch a Thing; and *the Doctor*, or *My Lord*, ſaid this or that; and not *you* ſaid, or *you* did it, this would be reckon'd the Height of Incivility, and a manner of ſpeaking only to be us'd by Slaves.

TEA is the uſual Liquor drank upon a Viſit; and much Ceremony is us'd in taking up the Diſh, carrying it to the Mouth, and ſetting it down, or returning it to the Servant. When they take leave, they repeat much the ſame Cringes and Compliments, as they did at their Arrival. Ambaſſadors are allow'd Maſters of the Ceremonies to inſtruct them forty Days before they are admitted to their Audience, that they may commit no Blunders, and many of the *Chineſe* will be offended with Strangers if they omit to Cringe and Fawn, according to the Rules preſcrib'd them.

And after dinner is finiſh'd by a Maſter of the Ceremonies.

Ceremonies in taking Leave.

THE *Chineſe* are ſo far from pulling off their Caps when they ſalute one another, that it is reckon'd very indecent to appear before their Betters bare-headed: When a Stranger is about to take Horſe and return Home; it is attended with much Ceremony; for he won't be ſo rude to mount before the Maſter of the Houſe, and he, on the contrary, intreats his Gueſt to mount while he ſtands to wait on him: The Stranger then proteſts he will not be ſo rude, and perſiſts in his Reſolution till the Maſter of the Houſe is out of Sight; but the Stranger is no ſooner in the Saddle, than his Friend appears again, and bids him adieu, which Compliment is return'd by the other: And when the Stranger is gone a little way, a Servant is alſo diſpatch'd after him, to wiſh him a good Journey; for which the other returns him Thanks. Father *Gemelli Careri* tells us, the Gueſts leave Money enough behind them to pay the Expences the Maſter of the Houſe has been at; which, tho' he refuſes it a great while, is at length accepted. But this I meet with in no other Author, and perhaps it may amount to no more than Servants Vails with us; for few would make Viſits where they were oblig'd to pay the whole Expence of the Entertainment.

GAMING is very much practis'd by the *Chineſe*, notwithſtanding it is contrary to their Laws; and there are Inſtances of thoſe that have follow'd it ſo extravagantly, that they have play'd away their Eſtates, Wives and Children; any of which they will ſometimes hazard upon a Card, or the ſingle Caſt of a Die; for there is no degree of Extravagance to which the deſire of Lucre and Riches will not carry them. It is a Diſorder which the *Tartars* have introduc'd among them ſince they have been Maſters of *China*; they take a great deal of care to conceal their Gaming; and conſequently the Law which forbids it is always in Force, and is able to ſuppreſs any Diſorder that ſhall ariſe on that Account.

Gaming forbidden.

THE Civil Government of the *Chineſe* does not only preſide over the Towns, but extends alſo over the Highways, which they are oblig'd to keep in good Order. The Paſſages for their Water are in ſeveral Places ſenc'd in with Stone Walls, for Conveniency of travelling, over which there are a great Number of Bridges, which unite the Towns and the Fields together. Canals are alſo cut for the Water to paſs thro' all the Towns of the Southern Provinces, to make their Ditches more ſecure, and the Towns more pleaſant. In low and marſhy Ground they throw up prodigious long Banks, which keeps their Roads in thoſe Parts good; to perform which they ſpare no Coſt, cutting a Paſſage even thro' Mountains which ſtand in their way.

Civil Government takes Care of the Highways.

THE Road from *Nanquin* to *Hamtcheu* is one of the moſt extraordinary Pieces of Work that ever was ſeen; for upon the Edges of ſome Mountains, which are perpendicular and have no ſhelving, they have fix'd large Beams, upon which they have made a ſort of a Balcony without Rails, which reaches thro' ſeveral Mountains in that manner; thoſe who are not us'd to theſe ſort of Galleries, travel over them in a great deal of Pain, fearing ſome ill Accident or other. But the People of the Place are very venturſome; they have Mules us'd to theſe ſort of Roads, which travel with as little Fear or Concern over theſe ſteep and hideous Precipices as they could do on the beſt or plaineſt Heath.

Galleries which reach from one Mountain to another.

IT is hardly to be imagin'd what care they take in making the common Roads commodious for Travellers: They are near fourſcore Foot broad; the Soil thereof is light, and ſoon dry after it has left off raining. In ſome Provinces there are Cauſeways on the Right and Left Hand for Foot-Paſſengers, which are ſupported on both Sides by long Rows of Trees, and oftentimes terras'd with a Wall of eight or ten Foot high on each Side, to keep Paſſengers out of the Fields. Nevertheleſs theſe Walls have Breaks, where Roads croſs one another, and they all terminate at one great Town.

THEY have alſo ſeveral wooden Buildings, made like Triumphal Arches, ſet up in the Roads about a Mile and a half diſtant from each other, about thirty Foot high, which have three Doors, over which is wrote upon a Frize, in Characters as large as may be read at almoſt the Diſtance of a Furlong,

Buildings with Directions for travelling from one Place to another

how

how far it is from one Town to another; so that you have no need of Guides here; for you may by these Directions see what Place the Road leads to, and from whence you came; how far you have already gone, and how far you have to go. The great Care which they have taken to lay out all these Distances by the Line, makes the Account which these Inscriptions give to be pretty exact, and yet they are not equal, because the Miles in some Provinces are longer than they are in others. It has happen'd likewise that some of these Arches being ruin'd and consum'd by Decay and Time, have not been set up exactly in the same Place; but generally speaking they serve for a good Measure of the Highways, besides that they are very ornamental. At the like Distance on one Side of these Causeways there are little Forts or Redoubts of Earth cast up; on which the Emperor's Standards are erected; and near them are Lodges for Soldiers or Country Militia. These are made use of in any Insurrections that may happen, are a Security to Travellers, and forward all Dispatches that are sent by the Government. These Guards examine every body that goes armed, and they *must* produce their Pass, or they will detain them. There is that Caution us'd, that the Roads are very little infested with Robbers, notwithstanding the Numbers of necessitous People that so populous a Country must be suppos'd to contain, and the rich Booties that are perpetually to be met with upon the Road; one Reason whereof may be, that they are commonly so full of Travellers, and so well guarded, that it would be very difficult to meet with an Opportunity to commit a Robbery; but what contributes much more to this Security, is the natural Industry of the People, and the great Encouragement that is given to Diligence; their Industry is so great, that not a Foot of Land which is fit for Tillage is left unmanur'd, and their Silk Manufactures exceed all the World besides, both in Goodness and Quantity.

Safe Travelling.

Posts.

THEIR Posts were originally design'd for the Service of the Government; and it is the Duty of the Viceroys and Governors of Places, as soon as they have received the Dispatches from Court, to send them away forthwith by their Couriers to the Places where they are directed; but the Post-Masters are permitted to carry private Letters, and do it as punctually, and with less Charge than they are carry'd in *Europe*. All this is manag'd at the Emperor's sole Expence, who maintains a great Number of Horse for that Purpose.

As it is a Matter of Importance that the Emperor's Orders be speedily dispatch'd, so it is a great Part of the Mandarins Care to see that the Roads be good; and the Emperor, to keep them the more strictly to it, gives out that he intends to visit this or that Province; for the Governors of those Provinces he is to pass through spare no Cost nor Pains to repair those Roads, because it not only concerns their Fortunes, but sometimes their Lives, if this Care be omitted.

A remarkable Story.

FATHER *Le Compte* says, that as he pass'd thro' a Village in the Province of *Xensi*, the People of the Place inform'd him, that the Governor had just hang'd himself through Despair, lest he should not have Time enough to repair a Road, through which the Emperor was to pass to the Capital Town. But the Mandarin might have sav'd his Life by a little Patience; for the Emperor never went his expected Journey: But yet all the Care which the *Chinese* can use will never prevent Inconveniencies which happen to those who travel the Roads in dry Weather. The Soil of *China* is very light, and much beaten by the vast Multitudes who travel; some on foot, some on Camels, others in Litters and Calashes; so that the Roads are perfectly ground into a fine Powder: When the Dust is rais'd by Travellers, and carried about by the Winds, it is enough to blind all the Passengers that have not Masks or Veils on them. Through these Clouds you must continually make your Way, and suck in Dust instead of Air through the whole Journey. When the Weather is hot, and the Wind in one's Face, scarce any one but a Native can withstand it. The Chairs People are carried in are made of Cane, and have no Glass; the upper Part of them are usually open before, except the Womens, who must neither see or be seen abroad. A Piece of Wood goes cross from one Pole to the other, which the Chairmen lay upon their Shoulders, and do not carry the Poles in their Hands, as ours do.

Inconvenient Travelling.

Chairs describ'd.

THE *Tartars* usually ride on horseback, both in the Towns and Roads; their Saddles are made after the *Turkish* Manner, and like them they ride, with their Stirrups so short, that their Knees are almost as high as the Top of their Saddles. When they engage an Enemy, they rise up upon their Stirrups, to give the greater Force to the Stroke they make.

Tartarian Manner of Travelling.

THE greatest Part of the Goods and Merchandizes (where they have not the Convenience of Water) is carried by Porters on their Backs, who travel at a great rate; the Roads perfectly swarm with them, and there are little Houses for them to rest and bait at all along the Road-side. Upon the Canals also (as has been already observ'd) their largest Vessels are drawn by Men, even up the greatest Cataracts and Water-falls; they have not many good Horses for Draught or Burden; for which Reason the poor People are usually employ'd in those Drudgeries, and are frequently ill us'd, as we do our Beasts of Burden here.

Porters.

THEIR Chairmen will run with a Chair or Litter at the Rate of five Miles an Hour, and rests but once in ten Miles. They have a Book of Roads, printed by Authority, shewing the Ways and Distances from *Pekin* to every considerable Place in the Empire. In that Book all the Royal Ways are divided into Stages, or Days Journeys. At every Stage there is a House where the Mandarins (Governors of Towns or Provinces) are lodg'd, at the Emperor's Expence, when they go to their Commands.

Chairmen

Inns.

HERE is a Guard and all Accommodations suitable to the Quality of the Person to be receiv'd. An Express sets out a Day before the Mandarin, who carries with him an Instrument containing the Mandarin's Name and Office; to which is also affix'd his Seal; upon producing whereof, the House or Palace where he is to lodge is immediately prepar'd, and Servants, Chairs, Litters, Provision and Boats, if there be occasion, are provided, suitable to the Quality of the Officer who is expected. And other Persons as well as Mandarins, are accommodated in these Houses, who travel upon the Account of the Government, or can procure an Order for it. Expresses are here also furnish'd with Necessaries for their Journey, who, before they come near the House, beat upon a Brass Pan, which they carry at their Backs, to give notice to prepare Horses for them, that they may meet with no Delay.

CHAP.

CHAP. IV.

A Description of their Manufactures, Trade, Shipping and Navigation.

Manufactures. THE Chief Manufacture of this extensive Dominion, is that of Silk; which is justly valu'd and esteem'd by all Nations to be the best in the Universe. They have several excellent Manufactures peculiar to them which are very valuable among the *Europeans*; and as the Woollen Manufacture holds the first Rank with us, and therefore deem'd the Staple Commodity of *Great-Britain*; So likewise the United Empire of *China* and *Tartary*, do with the greatest Reason give the Silken Manufacture Precedence of any other Branch of Trade they are Masters of.

THE *Chinese* have considerable Quantities of Silk, which are wrought in several Provinces; but the best and finest comes from the Province of *Chekiam*, the Soil being there very proper for the cultivating of Mulberry Trees more conformable to the Worms that make it. Every body deals in it, and the Traffick of it is so very considerable, that this Province alone is able to supply all *China*, and the greatest Part of *Europe* besides.

THAT Sort which the Natives account the best is wrought in the Province of *Nankin*, from the *Chekiam* Silk; but the Silks from *Canton* are valu'd above all among Foreigners; and the Silks of this Province are also more saleable, and go off better than those of all the other Provinces of *China*. *Nankin* is the principal Rendezvous of most of the prime Workmen; and it is from this Province the Emperor furnishes himself with the Silks us'd in the Palace, and with those he makes Presents to the Lords of his Court.

THE Sort of Silk that is most common among them is call'd *Touanze*; it is like our Sattin, and is either plain, or wrought with Flowers, Birds, Trees and Houses. These Figures are not rais'd upon the ground by a mixture of Raw Silk, as our Workmen are us'd to do in *Europe*, which makes our Work not so durable; all the Silk of that is twisted, and the Flowers are distinguished only by the different Colours and Shades: When they mix Gold or Silver with it, it resembles our Brocades, or flower'd Silks, but their Gold and Silver is wrought a way that is particular to them alone; for whereas in *Europe* we draw the Gold as fine as possibly it can be twisted with the Thread, the *Chinese*, to save the Materials, content themselves with gilding or silvering over a long Leaf of Paper, which they afterwards cut into little Scrowls, wherein they wrap the Silk.

AMONGST the different Figures they represent, the Dragon is the most common; of which there are two sorts, one is call'd *Lom*, and has five Claws, which is us'd in the Emperor's Silks only; for this Dragon is the Imperial Arms, which *Fohi* the Founder of the Empire first took for himself and his Successors, above four thousand Years ago. They work another Dragon in their Silks, call'd *Mam*, with four Claws, which the Emperor *Youuam*, who reign'd almost three thousand Years ago, ordain'd that every body might wear the same; and since that time the use of it is grown common.

IN Summer they wear another kind of Silk which the *Chinese* call *Cha*; it is not so close, nor hath so good a gloss as the Taffaty made in *Europe*, but much more substantial; it is sometimes wore plain, yet most wear them powder'd with great Flowers pierc'd thro', and cut like *English* Lace. These Summer Garments are extraordinary convenient, and wonderful neat, so that all the Persons of Quality wear them: Besides, the Taffaty is not dear, a whole Piece, enough to make a long Vest and Surtout, may be purchas'd for about two Guineas.

THEY have another sort of Taffaty, which serves them for Waistcoats, Drawers and Linings, they call it *Tcheouze*; this is a very close Silk, and yet so very pliant, that press it or tumble it never so much it won't wrinkle, and they wash it like Linnen, without spoiling its Beauty much; and this they generally sell by Weight. Taffaty.

BESIDES the Gold-Tissue, and several other sorts of Silk, they make Plush, Velvet, Crape, Druggets, Serges and Tammies; but tho' Wool is very plentiful, especially in the Provinces of *Xansi* and *Xensi*, which abound in Sheep, yet they make no Cloth; our *English* Cloth is in great request among them, which is sold dearer than the richest Silks. They make Blankets of their own Wool, and a sort of Russet Cloth, of which they make Students Gowns for their Winter wear.

THEY have a great deal of Cotton Linnen, and another sort made of a Plant call'd *Co*, which is found no where but in the Province of *Fokien*, they call this Linnen *Copon*: It is a kind of creeping Shrub, whose Leaves are not much bigger than Ivy Leaves; they are round, smooth, green within, whitish, and downy on the outside; they let them grow and spread along the Fields: There are some of them which grow as thick as one's Finger, which are pliable, and cottony as its Leaves are. When it begins to dry, they put the Sheaves into Water till they are rotten, as they do Flax and Hemp; they always peel off the first Skin, which they throw away; but of the second, which is much more fine and delicate, they divide by the hand into very slender and very small Filaments, without beating or spinning it, of which they make the aforementioned Linnen: It is transparent, pretty fine, but so cool withal and light, that one would think he had nothing on his back. Cotton Linnen.

THE People of Fashion make Vests of it in Summer, and wear a loose Gown of *Cha* over it. In Spring and Autumn they wear coarse Sattin, or flower'd Silks, and the elder People wear them plain. None are permitted to wear Gold and Silver Brocades in Publick Assemblies, or on solemn Visits, but the Mandarins. The common People generally wear a coarse blue Linnen quilted with Cotton, or lin'd with Sheep-skins in the Winter: And the better sort line their Vests and Gowns with Sables, Fox or Lamb-skins: They only turn up their Sleeves, or border their Vests with Ermins, for they are very scarce in *China*.

THE Mandarins (who are often pretty thick and short) besides their Vests and Gowns, which are made of Furs, in Winter put on also another Gown over all, with the Fur outwards; which makes them very little different from Bears in Appearance; but nothing is more commonly wore than Lamb-skins with the Wool on, which is white, soft and warm, but pretty heavy and cumbersome, having at first a strong rancid Smell, which decreases by degrees; but there is nothing more genteel, nor more convenient for the Winter.

Two Sorts of Raw Silk.

THEIR Raw Silk is of two Sorts; one of which comes from *Quamtum*, and is the Produce of wild Silk Worms which they take in the Woods; but we are not certain that they can breed any of them in their Houſes. The Silk that is made from theſe Worms is of a grey Colour, without any Gloſs; ſo that they who are unacquainted with it take it for Linnen, notwithſtanding which it is very much valued, and ſells for a better Price than their Satin: they call it *Kien-Tcheou*; it is very durable, and tho' it is ſtrong and cloſe, yet does not fret; they waſh them as they do Linnen; and the *Chineſe* poſitively ſay that Spots will not ſpoil them, nor will Oil adhere to it. The other Silks are made from the common Worms they breed in their Houſes; they are fed with Mulberry Leaves for forty Days, and are manag'd in the ſame manner as the *Europeans* do; a particular Account of which ſhall be given hereafter.

Porcelane or *China* Ware.

THE *Porcelane* or *China* Ware is a very conſiderable Manufacture, which is exported to all Parts of the World in great Abundance: It makes a conſiderable Part of the Furniture of their Houſes; the Tables, Side-boards, and even their Kitchens are plentifully ſtock'd therewith; they have large Jars for their Liquors, and beautiful Flower-Pots for their Gardens, vaſtly large and very Ornamental: Their Architects cover their Roofs therewith, which mightily enriches their Marble Buildings.

Three Sorts of *Porcelane*.

THEY have three different Sorts of *China* Ware; one is Yellow, made of fine Earth, yet it has but a coarſe look, becauſe that Colour does not admit of ſo fine a Poliſh; it is us'd in the Emperor's Palace, Yellow being the proper Imperial Colour, and is not allow'd to other People; ſo that we may juſtly conclude, that the Emperor is worſe ſerv'd with *China*, that Sort of Imperial *Porcelane* being not ſo agreeably beautiful as the others.

Imperial *Porcelane*.

Grey *China* Ware very beautiful.

THE ſecond Sort is of a grey Colour, with abundance of ſmall irregular Lines croſſing each other, as if the Vaſe were all over ſtrip'd, or inlaid with *Moſaic* Work; it is admirably fine and curious; one cannot imagine how they form theſe Stripes, unleſs they draw them with a Pencil, which muſt be difficult to do; or perhaps when the *Porcelane* is juſt bak'd, and yet hot, it is expos'd to the cold Air, whereby it may be fill'd with numerous Cracks, or elſe they may ſteep it in warm Water, to open it in that manner on all Sides; after that is done, they lay on a Coat of Varniſh which covers theſe Inequalities, which by means of a gentle Fire into which they again put it, it is made as even and poliſh'd as before. However they manage it, theſe Sort of Veſſels have a peculiar Beauty; and I have reaſon to believe the Curious amongſt us would much value it, tho' it is very rarely brought into *Europe*.

Third Sort of *Porcelane*.

THE laſt and moſt common Sort is white, with divers Figures of Flowers, Trees, Birds, &c. which they paint in various Colours, and often of a fine blue only; this Sort Merchants principally buy up for the *Europeans*: This Ware requires four or five Properties to make it compleatly perfect; that is, the Fineneſs of the Matter of which 'tis made, the Whiteneſs, the Poliſh or Smoothneſs, the Painting and Deſign of the Figures, and laſtly, the Faſhion of the Work. The Fineneſs is diſcover'd by its Tranſparency, which may be judg'd of by the Brims, which are commonly thinner than it is elſewhere; when the Veſſel is large, it is a difficult Matter to determine the Fineneſs, without breaking a Piece out, which ſhews the Colour of the inner Part which they call the Grain. This they can (if it be fine) join together again ſo perfectly that no Crack can be diſcover'd, and this is a ſure Token of the Hardneſs and Fineneſs of the Earth it is made from. The Whiteneſs is not to be determin'd by the outſide Varniſh with which the *Porcelane* is coated, which ſhews like a Mirror; ſo that looking on it when it is near other Objects, it receives a Reflexion from them, having the Images of thoſe Objects painted thereon; and this may make a Perſon paſs a wrong Judgment on its native Whiteneſs; it muſt be carried into the open Air to be able to judge of its Beauty or Defects: Altho' this Varniſh be perfectly incorporated with the Matter, and the Coating laſts for ever, yet it tarniſhes in time, and loſes that briſk Colour it had at firſt, from whence it is to be obſerv'd, that this Tarniſh which their *Porcelane* naturally have, appears more taking and pretty, and always bears a better Price; not but the new Ones are very good, and in time will aſſume the ſame Colour.

The beauty of *China*-ware conſiſts in its being very ſmooth, White and Tranſparent

THE Smoothneſs and Poliſh (which among us is call'd Glazing) conſiſts in the Brightneſs of the Varniſh, and the Evenneſs of the Surface: The Varniſh if laid on thick, will have a Coat which will not incorporate with the Clay or Earth of which the *Porcelane* is form'd; altho' the Furnace in which they are plac'd for that Purpoſe be intenſely hot, cannot take up more than a certain determinate Quantity of the Metallick vitrify'd Particles, which as ſoon as it has aſſimilated, the earthy Parts being ſaturated, ſuffers the remains of the vitrify'd or glaſſy Subſtance to ſubſide, and conſequently the lower Parts will be irregular and rough like Hills and Vallies. When the Metalline Particles that are a Part of the Compoſition for Glazing, are judiciouſly laid on, it will be ſo equally diffus'd and embodied, that when taken out of the Furnace, the *Porcelane* is perfectly ſmooth and equal in every Part, without the leaſt Appearance of any Grain, Riſing or Depreſſion in its Superficies; tho' in large Veſſels they are rarely made without ſome of theſe Faults. There is likewiſe another Defect, which ſometimes happens from its being unequally dry when the Varniſh is laid on, the leaſt Moiſture cauſing a ſenſible Difference therein.

THE Painting is not one of the leaſt Beauties of the *Porcelane*; they make uſe of various Colours for that Purpoſe, the chief of which are red and blue; their Red is not extraordinary lively, tho' ſome of the minute rubicund Particles may perhaps fly off in the Furnace, and therefore leave the remainder flat, and diveſted of its bright Luſtre; they are not deficient of the beſt Reds that are any where to be met with, tho' the different Grounds contribute to the heightning or leſſening the Beauty of the Colours; it is alſo probable that the Colour may receive a Tarniſh from the Heat of the Furnace, which perhaps gives an Aſperity to the ſubtileſt and deepeſt Particles, which may be ſaid to be the Eſſence, or that wherein the Colour exiſts. As to their Blue, it is certainly an exquiſite Colour; however, it is pretty difficult to hit upon that exact Temperature, where it is neither too pale, deep, nor too bright: But what their Workmen chiefly aim at is, to perfect the Extremities of the Figures, that the Colour may not extend or run beyond the Pencil, and thereby give the Parts of the *Porcelane* deſign'd for a white Ground a bluiſh Caſt; for it frequently happens, if great Care be not taken to reduce the Ingredients to an impalpable Powder, and the Matter on which it is laid have not a certain Degree of Dryneſs, a certain bluiſh Liquor will flow from it, and fulley the Ground, much in the ſame manner as Paper if too moiſt will cauſe your Ink to ſpread and blot.

IT would be a conſiderable Addition to their *China*, if the Figures were better deſign'd and more regular, their Flowers pretty juſt, and their Borders neatly variegated; but as to their human Figures they are intoletably monſtrous; a Stranger would imagine the People were as horrible as their Repreſentations; for it is certainly the Cuſtom of all Nations to depict their human Figures in

ſome Sort like the Objects they deſign to repreſent; but the *Chineſe* ſeem to abominate the Practice, for in all their Draughts, either on Paper or *Porcelane*, they take Pains to reverſe Nature; and ſuch are their uſual Ornaments decorated with. The moſt regular and skilful Deſigns would be oftentimes leſs pleaſing to them than theſe Anticks.

In turning and ſhaping their Veſſels, of what Size ſoever, they are very expert and ingenious: The Figure of them is bold, well-proportion'd, and perfectly rounded; ſo that the beſt *European* Workmen, how expert ſoever, cannot poſſibly excel them; they put a great Value upon their large Vaſes for their Antiquity; not but their Artificers are as expert, and the Materials as good in kind now as they were heretofore; but we on the contrary value them becauſe they are fairer: There are ſtill very fine Services of their *China* Ware to be ſeen at ſome of the Mandarins Houſes.

The beſt of their *Porcelane* reſerv'd for the Emperor's Uſe.

The Curious *Porcelane* is very ſcarce, and they give this Reaſon for it; the Emperor has conſtituted in the Province where the Manufacture chiefly is, a particular Mandarin, whoſe care it is to make Choice of the beſt and faireſt for the Uſe of the Court; he buys them at a moderate Price, ſo that the Workmen being but indifferently paid, do not exert themſelves by doing their beſt, being unwilling to take extraordinary Pains for that which will not enrich them: But ſhould a private Perſon ſet them to work, and allow them a good Price, we ſhould ſtill be furniſh'd with as curious Pieces of Workmanſhip, as any the ancient *Chineſe* could boaſt of.

The moſt beautiful Ware made in the Province of *Quamſi*

The *China* Ware that is brought from the Province of *Fokien* does ſcarcely deſerve that Name; being both black and coarſe: But that which is moſt valu'd is made in the Province of *Quamſi*; they have the Clay from one Place, and the Water from another, becauſe it is finer and clearer; and perhaps this Water they make uſe of before any other, is impregnated with ſome particular Salts, proper to purify and refine the Clay, and be a means of cauſing the Particles to attract or cohere more intimately than they otherwiſe would do; for it is commonly obſerv'd in ſlacking of Lime, that there are ſome ſorts of Water will rather harden than ſlack it.

Matter whereof *Porcelane* is made.

There are two kinds of Earths, and as many kinds of Oils or Varniſhes us'd in the Compoſition of *Porcelane*. The firſt Earth, call'd *Kaolin*, is beſet with glittering Corpuſcles; the ſecond, call'd *Petunſa*, is a plain white, but exceedingly fine and ſoft to the Touch: The *Petunſa*'s are brought from the Quarry in the form of Bricks, having been ſo cut from the Rocks, which are very hard. The firſt Preparation of theſe Bricks, is to break and pound them firſt into a coarſe Powder with Iron Mallets; then in Mortars with Peſtles that are headed with Stone, arm'd with Iron, and wrought with the Hand or with Mills. When the Powder is render'd fine, they throw it into a large Veſſel of Water, ſtirring it briskly about with an Iron Inſtrument. After the Water has reſted a little while, they skim a white Subſtance off from the Top, of the Thickneſs of four or five Fingers; and diſpoſe of this Scum or Cream in another Veſſel of Water. Then they ſtir again the Water of the firſt Veſſel, and skim it, and this they repeat till there remain nothing but what is as coarſe as Gravel at the Bottom, which is laid by to be pounded over again.

As to the ſecond Veſſel, wherein are put the Skimmings of the firſt, when the Water is well ſettled, and become quite clear, they pour it off, and with the Sediment collected at Bottom in form of a Paſte, fill a kind of Moulds; whence, when almoſt dry, they take it out, and cut it into ſquare Pieces, which are what they properly call *Petunſa*'s; reſerving them to be mix'd with the *Kaolin* in Proportion hereafter aſſign'd. Theſe Squares are ſold by the hundred, but 'tis very rare to meet with them unadulterated, for they often mix Droſs along with them; ſo that they are commonly oblig'd to purify them e'er they can be us'd.

The ſecond Sort of Earth us'd in *Porcelane* is much ſofter than the *Petunſa* when dug out of the Quarry, yet it is this, by being mix'd with the former, that gives Strength and Firmneſs to the Work: F. *Entrecolles* obſerves that ſome *Engliſh* and *Dutch* having procur'd ſeveral *Petunſa*'s to be bought privately, upon their Attempt to make *Porcelane* at their Return into their own Country, could not ſucceed for want of taking *Kaolin* along with it. Which the *Chineſe* being appris'd of, by way of Ridicule ſaid, "That the *Europeans* were wonder-"ful People to go about to make a Body, whoſe "Fleſh was to ſuſtain itſelf without Bones." The Mountains whence the *Kaolin* is dug, are cover'd with a reddiſh Earth; the Mines are deep, and the Matter is found in Glebes or Flakes, like the Chalk in ours.

The Varniſh how made.

The Oil or Varniſh, which makes the third Ingredient, is a whitiſh liquid Subſtance drawn from the hard Stone whereof the *Petunſa*'s are form'd; that which is whiteſt, and whoſe Stains are the greeneſt, being always choſen for that Purpoſe. The manner of preparing the Oil is thus; The *Petunſa*'s being waſh'd, undergo the ſame Preparations as in making the Squares; excepting that the matter of the ſecond Veſſel is not put into Moulds, but the fineſt Part of it is taken to make and compoſe the Oil. To an hundred Weight of this Matter, they caſt a Mineral Stone call'd *Chekao*, reſembling our *Allum*: This Stone is firſt heated red hot, and thus reduc'd in a Mortar to an impalpable Powder, and ſerves to give the Oil a Conſiſtence; which however is ſtill to be kept liquid.

The Oil of Lime makes the fourth Ingredient, the Preparation whereof is much more tedious. They firſt of all diſſolve Pieces of Quick Lime, and reduce it to a Powder by ſprinkling Water on it; on this Powder they lay a Bed of dry Fern, and on the Fern another of ſlack'd Lime, and thus alternately, till they have a Pile of moderate height; which done, they ſet Fire to the Fern: the whole being conſum'd, they divide the Aſhes that remain on new Beds of dry Fern; ſetting them on Fire as before. And this they repeat five or ſix times ſucceſſively, or even more, the Oil being ſtill the better the oftner the Aſhes are burnt. They formerly us'd the Wood of a kind of a Medlar Tree; and that it was that gave the ancient *Porcelanes*, that admirable Hue, which the Moderns cannot come up to for want of that Wood. However, 'tis certain the Quality of the Fern and Lime contribute very much to the Goodneſs of the Oil.

A Quantity of this Fern and Lime are next thrown into a Veſſel of Water; and to an hundred Pound of Aſhes is added a Pound of *Chekao*, which diſſolves therein. The reſt being done after the ſame manner as in preparing the Earth of the *Petunſa*'s, the Sediment found at the Bottom of the ſecond Veſſel, and which is to be kept liquid, is what they call the Oil of Lime; which the *Chineſe* eſteem as the Soul of the former Oil, and which gives the *China* all its Luſtre. This Oil is eaſily ſophiſticated by adding Water to encreaſe the Quantity; adding at the ſame time proportionably of the ſame *Chekao*, to keep up the Conſiſtence. Ten Meaſures of Oil of *Petunſa* uſually go to one of Lime. To have the Mixture juſt, the two Oils ſhould be equally thick.

Manner of forming Veſſels, and other Works of *Porcelane*.

The firſt thing is to purify the *Petunſa* and *Kaolin*; which for the firſt is done after the manner already deſcrib'd in preparing the Squares. For the ſecond, as its Softneſs makes it diſſolve eaſily, 'tis ſufficient without breaking it, to plunge it in a Veſſel

Veſſel of Water in an open Basket. The Dregs that remain is perfectly uſeleſs.

THE Places where they work are in large Yards, built round with Sheds and other Conveniencies to ſhelter the Workmen, and Buildings for them to live in; it is almoſt inconceivable what Number of Perſons are employ'd in theſe Works; there being ſcarce a Piece of *Porcelane* but paſſes thro' above twenty Hands, e'er it comes to the Painter's Work-houſe; and above ſixty before it be brought to Perfection.

To make a juſt Mixture of *Petunſa* and *Kaolin*, Regard muſt be had to the fineneſs of the *Porcelane* to be made: For the finer *Porcelanes*, they uſe equal Quantities; four Parts of *Kaolin* to ſix of *Petunſa* for moderate ones; and never leſs than one of *Kaolin* to three of *Petunſa* for the coarſeſt.

THE hardeſt Part of the Work is the Kneading and Tewing the two Earths together; which is done in a kind of large Baſins, or Pits, well-pav'd and cemented, wherein the Workmen trample continually with their Feet, relieving one another, till the Maſs be well mix'd, grow hard, and become of the Conſiſtence required to be us'd by the Potter.

THE Earth when taken out of the Pits, is kneaded a ſecond time, but by piece-meal, and with the Hands, on large Slates for that Purpoſe; and on this Preparation, in effect, it is, that the Perfection of the Work depends; the leaſt heterogeneous Body remaining in the Matter, or the leaſt Vacuity that may be found in it being enough to ſpoil the whole. The ſmalleſt Grain of Sand, nay, ſometimes a ſingle Hair, ſhall make the *Porcelane* crack, ſplinter, run or warp.

THE *Porcelane* is faſhion'd either with the Wheel, like Earthern Ware; or in Moulds. Smooth Pieces, as Cups, Saucers, Diſhes, Bowls, Veſſels, *&c.* are made with the Wheel. The reſt, *i. e.* ſuch as are in Relievo, as Figures of Men, Animals, *&c.* are form'd in Moulds, but finiſh'd with the Chiſſel.

Large Veſſels made in two Parts.

THE large Pieces are made at twice; one half of the Piece is rais'd on the Wheel by three or four Workmen, who hold it till it has acquired its Figure; which done, they apply it to the other half, which has been form'd in the ſame manner; uniting them with *Porcelane* Earth made liquid by adding Water to it, and poliſhing the Part join'd with a kind of Iron Spatula: After the ſame manner they join the ſeveral Pieces of *Porcelane*, form'd in Moulds; and after the ſame manner they add Handles, *&c.* to the Cups and other Works form'd with the Wheel.

ALL the Work made in Moulds is finiſh'd by Hand, with ſeveral Inſtruments proper to dig, ſmooth, poliſh, and touch up the Strokes that eſcape the Mould; ſo that 'tis rather a Work of Sculpture than of Pottery. They take great Care to ſhelter all their *Porcelane* Works in general from the Cold; their natural Humidity making them liable to break when they dry unequally.

Porcelane goes thro' a great many Hands.

To make you conceive the Number of Hands each Piece of *Porcelane* goes thro', before it be fit for the Painter, I ſhall give only an Inſtance of a common Cup: The Cup begins with the Potter, who has the Management of the Wheel, where it acquires its Form, Height, and Diameter. This Operator has not above a Farthing Sterling, for a Plate furniſh'd with twenty-ſix Cups; accordingly, they go out of his Hands very imperfect, eſpecially towards the Feet, which are only unform'd Lumps of Earth, to be afterwards cut with a Chiſſel when the Cup is dry. When it comes from the Wheel, the Cup is receiv'd by a ſecond Workman, who fits it on his Baſe. A third takes it immediately from him, and applies it on a Mould, to bring it to its true Form. This Mould is on a kind of a Lathe. A fourth poliſhes the Cup with a Chiſſel, eſpecially about the Edges, and brings it to the Thinneſs neceſſary to make it tranſparent; in doing which he moiſtens it from time to time, leſt its Dryneſs ſhould make it break. When it is of a proper Thickneſs, another Workman turns it gently on the inſide; taking a deal of Care it be done equally, leſt any Cavity be form'd, or it warp. Other Workmen add ſome Ornaments in Relievo; others Impreſſions in Creux; others only Handles, as the Quality of the Cup requires. At laſt they round and hollow the Foot on the inſide with a Chiſſel; which is the Buſineſs of a particular Artiſt, who does nothing elſe.

THIS Multiplicity of Workmen, is ſo far from retarding the Work, that it is found by Experience, to go on the faſter for it, as well as to be better perform'd; each Workman by a continual Attention to the ſame thing, becoming very dextrous at it, beſides ſaving the time of changing Inſtruments, *&c.*

Painting of *Porcelane*, and the Colours us'd therein.

THE Painting Work is diſtributed among a great Number of Workmen, in the ſame Laboratory: To one it belongs to form the Colour'd Circle about the Edges of the *Porcelane*, another traces out Flowers, which another paints: This is for Waters and Mountains alone; that for Birds and other Animals, and a third for human Figures. There are *Porcelanes* made of all Colours, both with regard to the Grounds, and to the Repreſentations thereon. As to the Colours of Landskips, *&c.* ſome are ſimple; ſuch are all Blues, which are thoſe uſually ſeen in *Europe*; others are mix'd up with ſeveral Teints; others again heighten'd with Gold.

Preparation of the Colours.

THE Blue is made of *Lapis Lazuli*, prepar'd by burning it the ſpace of twenty-four Hours in a Furnace, whence it is buried up in Gravel, to the height of half a Foot; when burnt they reduce it to an impalpable Powder in *Porcelane* Mortars, not varniſh'd, and with Peſtles of the ſame Matter.

FOR the Red they uſe *Copperas*, which they call *Haoſan*; they put a Pound of this into a cover'd Crucible, in the Lid whereof is left a ſmall Aperture, thro' which this Matter upon occaſion may be ſeen. The Crucible is heated in a Reverberatory Fire, till the black Smoke ceaſe to aſcend, and a fine red one ſucceeds it. A Pound of *Copperas* yields four Ounces of Red Liquor, which is found at the Bottom of the Crucible, tho' the fineſt Part is uſually adhering to the Lid and Sides of the Crucible.

BESIDE the natural Whiteneſs of the *Porcelane*, which is ſtill heighten'd by the Oil, wherewith they cover it, they have an artificial White, ſerving for the Grounds of ſeveral Colours, and made of a tranſparent Flint, calcin'd like the *Lapis Lazuli*, and mix'd with a powder'd Ceruſs: The Proportion is an Ounce of the latter to a Pound of the former.

THIS Powder of Flints is likewiſe an Ingredient in moſt of the other Colours; *e. g.* for Green, to three Ounces of *Scoria* of beaten *Copper*, they uſe half an Ounce of Powder of Flints, and an Ounce of Ceruſs. Violet is made by adding ſome White to the Green already prepar'd; the more Green is added, the deeper is the Violet. For Yellow, they uſe ſeven Drams of the White, and three of the Copperas Red. There is alſo another Red, call'd blown Red, becauſe it is in reality apply'd by blowing, with a Pipe, one of whoſe Orifices is cover'd with a very fine Gauze. The bottom of this Tube is lightly apply'd to the Colour wherewith the Gauze is lightly ſmear'd; when blowing againſt the *Porcelane*, it becomes all ſprinkled over with little Points. This *Porcelane* is very rare, and bears a great Price.

BLACK *Porcelane*, which they call *Ouman*, has likewiſe its Beauty: This Colour has a leaden Caſt, and is uſually heighten'd with Gold. It is made of three Ounces of *Lapis Lazuli*, with ſome of the common Oil of Stones; tho' that Proportion is varied as the Colour is deſign'd to be more or leſs

deep

deep. The Black is not given the *Porcelane* till it be dry, nor muſt the Work be put to the Fire till the Colour be dry.

THE Gold is not apply'd till after the baking, and is re-bak'd in a Furnace for that Purpoſe: To apply the Gold, they break and diſſolve it in Water at the Bottom of a *Porcelane*, till a gilded Cloud ariſe on the Surface; it is us'd with Gum-Water, and to give it a Body, they add three Parts of Cerufs to thirty of Gold.

Magic *Porcelane.*

THEY have a ſort of *Porcelane* more for Curioſity than Uſe, which they call *Magic Porcelane:* The Colours thereof only appear when fill'd with ſome Liquor. Theſe are made double; the Outſide is white, and all laid out in Compartments; the Inſide is a ſolid Cup of colour'd *Porcelane*; tho' the Cup is ſometimes of Glaſs, which has a better effect than *Porcelane*. The Secret of theſe *Magic Porcelanes*, which the *Chineſe* call *Kratſim*, is almoſt loſt; yet F. *Entrecolles* has furniſh'd us with the following Account.

Manner of Painting them.

THE *Porcelane* to be painted thus muſt be very thin; and the Colours which in other *Porcelanes* are apply'd on the Outſide, are here apply'd on the Inſide: When the Colour is dry, they lay over it a light Couch of a Size made of the *Porcelane* Earth; by which means the Colour is enclos'd between two earthen *Lamina*. When the Size is dry, they throw Oil within the *Porcelane*; and when it is ſaturated therewith, they return it to the Mould and the Wheel, to render it as thin and tranſparent as poſſible. When dry, it is bak'd in the common Furnace. The Colours here us'd are always the fineſt, and the Figures painted are Fiſhes, as the moſt ſuitable to the Liquor put within them, and in which they ſeem to ſwim.

THE ſeveral kinds of *Porcelane* above-mention'd, being quite painted with their ſeveral Colours, and all the Colours dry, are to be poliſh'd, to receive the Oil or Varniſh; which is apply'd with a Pencil of very fine Feathers, moiſten'd with Water, and paſs'd lightly over, to take off even the ſmalleſt Inequalities.

Method of Varniſhing the *China* Ware.

THE Oiling or Varniſhing is the leaſt Preparation of the *Porcelane* before it be carry'd to the Furnace: This is apply'd more or leſs thick, and ſeldomer and oftner repeated, according to the Quality of the Work. For the thin fine Sort, they give two very thin Couches; to others one, but that one is equivalent to the other two. There is a great deal of Art in applying the Varniſh, that it be done both equally, and not in too great Quantity. The Couches on the Inſide are done by Aſperſion, that is, by caſting in as much Varniſh as is neceſſary: The Couches on the Outſide by Immerſion, or by plunging the Pieces in a Veſſel of Oil.

IT muſt be obſerv'd, that the Foot is not yet form'd, but continues in a meer Maſs, till the Work has been varniſh'd: 'Tis at length finiſh'd on the Wheel, and when hollow'd, a little Circle is painted in it, and ſometimes a *Chineſe* Character. This painting being dry, the Foot is varniſh'd, and the Work now carry'd to the Furnace to be bak'd.

Manner of baking *Porcelane*

OUR curious Author omits nothing; not even the Dexterity of the People who carry the *Porcelane* to the Bakehouſe. He has frequently been ſurpriz'd, he tells us, to ſee a Man paſs thro' ſeveral Streets full of People, with two long narrow Boards rang'd full of *Porcelanes* on his Shoulders; conſtantly preſerving an Equilibrium ſo accurately, as not to do any Damage to ſo frail a Commodity.

Form of the Ovens and the Matter of which they are made.

THEY have two ſorts of Ovens us'd in baking of *Porcelane*: Large ones, that are only to come to the Fire once, which is the common way; and ſmall ones for thoſe that require double baking. The large ones are two *Chineſe* Fathoms deep, and almoſt four wide. They are made of three ſorts of Earth; one whereof, yellow and common, makes the Bake; the two others are ſcarcer, and dug out of deep Mines, wherein People can work only in Winter. One of them call'd *Kaolin*, is a very ſtiff Earth; the other *Petuntſe*, is very oily.

THE Sides and Roof of the Ovens are ſo thick that one may lay the Hand on them, when the Fire is at its greateſt Height, without danger of Burning. At the top of the Vault, which is in form of a Tunnel, is a large Opening to give the Flames and Smoke vent, which riſe inceſſantly as ſoon as the Fire is once ſet to the Furnace; beſide the principal Aperture to give vent to the Flames and Smoke, which by being open'd and ſhut, ſerve to augment or diminiſh the Heat, like the Holes in the Chymiſts Furnaces call'd Regiſters. The Hearth, which takes up the whole Breadth of the Furnace, is plac'd in the Front, exactly againſt the opening of the Door, and is two or three Foot deep, and two broad; People paſſing over it on a Plank to go into the Furnace to place the *Porcelane*.

AS ſoon as the Fire is lighted, the Door is wall'd up; only leaving an Opening for the Conveyance of Wood. Laſtly, the Bottom of the Oven is cover'd with Sand, wherein part of the firſt *Porcelane* Caſes are buried. The Furnace itſelf is uſually plac'd at the extremity of a long narrow Veſtible, which ſerves inſtead of Bellows; the cold Air and Wind being by this means driven directly into the Front of each Furnace.

Diſpoſition of the *Porcelane* in the Oven.

EACH Piece of *Porcelane* of any Value is diſpos'd in the Furnace in its ſeparate Caſe: Indeed as to Tea-Diſhes, &c. the ſame Caſe ſerves for ſeveral. The Caſes are made of the ſame Earth with the Furnace: They have no Lids, but ſerve each other mutually, the bottom of a ſecond Caſe fitting into the Opening of the firſt; and thus ſucceſſively to the top of each Column. Each Coffin, which is generally of a Cylindrical Form, that the Fire may diffuſe itſelf equally to the enclos'd *Porcelanes*, has at bottom a little Bed of very fine Sand, cover'd over with the Duſt of *Kaolin*, that the Sand may not ſtick to the Work; and they take care that the *Porcelane* may not touch the Sides of the Caſe. In the large Caſes, which hold the ſmall Pieces, they leave the middle vacant, in regard the *Porcelanes* placed there would want the neceſſary heat.

THE *Porcelanes* are plac'd in Caſes to preſerve their Luſtre from the too violent Effects of the naked Fire; for 'tis to theſe thick Veils, that the Beauty, or rather the Complection of the Ware is not tarniſh'd by the heat of the Fire. As faſt as the Caſes are fill'd, they are rang'd in the Cavity of the Furnace, in Rows of Columns or Piles; thoſe in the Centre being at leaſt ſeven foot high: The Caſes at the bottom of each Pile is left empty, becauſe being partly ſunk in the Sand, the Fire has leſs effect on them; and for the ſame reaſon the uppermoſt is left empty. In this manner the Cavity of the Furnace is fill'd with Piles of *Porcelane*, excepting that part that is exactly under the large Aperture. In diſpoſing theſe Caſes, they always obſerve to place the fineſt *Porcelane* in the Centre, the coarſeſt at the Bottom, and thoſe that are high colour'd, and contain as much *Petunſe* as *Kaolin*, and wherein the worſt Oil is us'd, at the Mouth. Theſe Piles are all plac'd near one another, and are bound together at Top, at Bottom, and in the Middle, by pieces of Earth; in ſuch a manner that the Flames may have a free Paſſage among them, and inſinuate equally on all ſides; in which a great part of the Workman much depends. Another thing is, that a Furnace muſt never be fill'd with all new Coffins; but half one, half t'other; the old ones at the Bottom and Top, and the new ones in the Middle.

THEY heat the Furnace by degrees, for the ſpace of a Day and a Night; after which two Men, who relieve one another, continue to throw in little

Pieces

Pieces of Wood about a Foot long, but very ſlender.

To know when the Porcelane is bak'd enough.

To know when the *Porcelane* is ſufficiently bak'd, they open one of the leſſer Holes of the Furnace, and with a pair of Tongs take off the Lid of one of the Piles. If the Fire appear very briſk and clear, and the Piles equally inflam'd, and eſpecially if the Colours of the *Porcelanes* that are uncover'd dart forth a fine Luſtre, the Coction is ſufficient, they diſcontinue the Fire, and wall up what remain'd of the Door of the Furnace.

If the Furnace be only fill'd with ſmall Ware, they take them out twelve or fifteen Hours after the Fire is extinct: If it be fill'd with larger, they defer opening it for two or three Days; in this the modern Practice differs from the ancient, wherein the Door was not open'd till after ten Days for the large Pieces, and five for the ſmall ones.

Two Remarkables.

There are two things to be remark'd that are very ſurprizing; the one is, that there are never found any Aſhes on the Hearth of the Furnace, what Quantity of Wood ſoever is conſum'd; the other is, that the Workmen employ'd about the Furnaces aſſwage their Thirſt by frequently drinking hot *Tea*, with Salt diſſolv'd in it.

Altho' moſt of the Provinces of *China* make large Quantities of *Porcelane*, yet they continue to bear a good Price; tho' they are not ſo dear as formerly: What chiefly occaſions the Dearneſs of this Commodity, is partly owing to the Damages that often happen in their Furnaces, they having frequently both their *Porcelanes* and Coffins converted into a ſolid Maſs, occaſion'd either by exceſſive Heat, or ſome ill Qualities in the Matter; likewiſe the Ingredients they are made from grow ſcarcer as well as the Wood wherewith it is burnt: They have alſo abundance of new Patterns ſent from *Europe*, frequently very difficult to ſucceed in; which for the ſmalleſt Defects are turn'd on the Maker's Hands.

Reaſons of the Dearneſs of Porcelane.

Thus have I gone thro' the whole Proceſs of making this beautiful Ware ſo much coveted by the *Europeans*; and it is hop'd the length of the Relation will be pardon'd by our Readers; few of whom I believe, have had an Opportunity to meet with it in any Hiſtorical Pieces extant, this Manufacture having long paſs'd for a Myſtery in *Europe*; and in ſpite of all the Endeavours of the Jeſuit-Miſſionaries to penetrate into the Secret, it remain'd unknown till the Year 1712, when the Learned and Reverend Father *Entrecolles* drew the Veil, and tranſmitted the Art of making *Porcelane* in a Letter to Father *Orry*, dated *September* the firſt in the ſaid Year, which has ſince been publiſh'd in *French*; from whence this Abſtract was taken. There are ſeveral uſeful Hints, that poſſibly may be of uſe to many of our Artificers, more particularly *Potters*, *Glaſs-workers*, and *Enamellers*; for the Advantage of ſuch, as well as the Satisfaction of our Readers, this curious Subject has been ſo particularly treated.

Wax.

China is remarkable for a kind of white Wax, not made by the induſtrious Inſects, but produc'd from Trees, from whence they gather it in great Quantities, of which there is ſufficient to ſtock the whole Empire. It is collected chiefly in the Provinces of *Huquam* and *Xantum*. It is produc'd by an Inſect no bigger than a Flea, which is arm'd with a very ſharp Sting, with which they not only pierce the Bark, but the Body of the Tree itſelf. The Country People gather the Eggs of this Inſect in Spring, from whence proceed Worms, which they place at the Foot of Trees proper for them; from thence they creep up and diſperſe themſelves thro' all the Branches, and penetrate to the very Pith, converting their Nouriſhment into Wax as white as Snow, which they work out of the Holes they have made; it hangs in ſmall Cluſters about the Tree, from whence 'tis gather'd by the Country People, by whom it is melted into Cakes for the Market.

Varniſh.

That fine Varniſh which the *Chineſe* uſe about their wooden Ware, is not a Compound, but a natural Gum that diſtils from a Tree, as Roſin does: In the Lump it looks almoſt like Pitch, and is mix'd up with Oil, with which they reduce its different Conſiſtencies according to the Work it is deſign'd for. They varniſh Tables and Chairs three times over, and it is ſo tranſparent that the Grain of the Wood may be diſcern'd thro' it; but if the Matter it is laid on be requir'd to be hid, they lay on ſeveral Coats of Varniſh till it becomes perfectly opaque: When the Varniſh is dry, they paint it with Gold, Silver and various Colours, over which they ſometimes lay on a thin Coat of Varniſh, which gives it a Luſtre. This laſt Coat preſerves the Colours from tarniſhing, beſides giving the Work an additional Beauty. They paint Figures of Men, Mountains, Palaces, Hunting Pieces, Birds, Combats, and ſeveral other Figures, which makes a Baſs Relief in the Work, and renders it extreamly pleaſing and beautiful, ſo that the *Chineſe* in this particular are magnificent at a ſmall Expence. Beſides the Brightneſs and Luſtre which the Varniſh gives it, it hath a certain Property of preſerving the Wood from the Worms; no Moiſture can penetrate it, nor any ill Scent adhere to it; if they drop any Greaſe on it when they are at their Meals, if they preſently wipe it with a wet Cloth, it comes off clean without leaving any Signs thereof.

Art of Japaning.

Paper.

The Paper in *China* is made of the inner Bark of the *Bambou*, which is a large hollow-knotted Cane, which they beat, they make their Paper, ten or twelve Foot long of this beaten Cane. It is very thin and ſmooth, and after they have form'd it into Sheets, they give it a Waſh over with Varniſh, to prevent the Ink ſinking: This Paper is not ſo durable as ours; by reaſon of its being made of the Bark of a Tree, the Worms are apt to get into it; and this makes a great deal of Buſineſs for them, being oblig'd to tranſcribe their Manuſcripts, and reprint their Books in the ſpace of a few Years, to prevent their being loſt to Poſterity; there being no ancient Manuſcripts to be met with.

Indian Ink.

Their Ink is made of Lamp-black, extracted from ſeveral Materials; but the beſt Sort is from Hog's Greaſe, which they burn in their Lamps; this they mix up with Oil and Perfumes, which gives it an agreeable Smell; it is made into a Paſte, and then moulded into little oblong Cakes, with ſeveral curious little Animals and *Chineſe* Characters finely cut on the little wooden Moulds: They are dry'd, and then become fit for uſe, and are ſometimes gilt. When they write, they rub one of theſe Cakes in Water, which will eaſily diſſolve it and make it fit for uſe; it makes a fine ſhining black Ink, and has an excellent Property annex'd to it; that is, it never ſpreads beyond the Stroke of the Pen or Pencil, altho' the Paper is ſo fine that it frequently ſinks through it.

Trade and Navigation.

The *Chineſe* carry on a very great Trade with the *Europeans*, it being one of their State Maxims to encourage trading as much as poſſible, both at Home and Abroad; and as all their Political Maxims are calculated for the Peace and Plenty of their Country, they would be ſoon reduc'd to great Extremities, if their Trade ſhould once fail. It is not only the People's Care, but the Mandarins are requir'd to propagate it as much as they can: They frequently furniſh Merchants with Sums of Money to improve to the beſt Advantage. By this means *Ouſanguey*, a petty King of *Xenſi*, who brought the *Tartars* into *China*, made himſelf ſo rich and powerful, that he himſelf was able to ſupport a War for a long time againſt the Emperor.

To encreate their Commerce, Foreigners have been allow'd to come into their Ports of *China*, a thing till lately never known. Beſides, the *Chineſe* trafick in their own Bottoms to all Parts of the *In-*

Foreign Trade.

dies, where they carry Silks, *China* Ware, Phyſical Drugs, Sugars, and eſpecially Japann'd Ware, Liquors, &c. They go to *Batavia*, *Siam*, *Achim*, *Malacca*, *Japan*, and the *Manilla*'s; from which they [illegible] but a few Days ſail. From all theſe Places they bring Silver, all of which is brought from *Mexico* to the *Philippine* Iſlands, by the *Pacifick* Ocean, and is carried from thence to *Canton*, whence it is circulated thro' the whole Empire.

Home Trade.

BUT the greateſt Part of their trading lies within themſelves, they traffick from one Province to another, which like ſo many Kingdoms communicate their Riches to each other. The Province of *Huquam* ſends Rice; *Canton* Sugar; from *Chekiam* comes good Silk; from *Nankin* fine wrought Silks; *Xanſi* and *Xenſi* are rich in Iron, Horſes, Mules, Camels and Furs; *Fokien* yields Tea; *Leaotum* Drugs; and ſo of the reſt. This mutual Commerce unites the People, and fills their Cities and Towns with Plenty. Altho' they traffick ſo largely both at Home and to ſeveral Parts of the Eaſtern Continent, and the above-mention'd Iſlands, they never were known to make a Voyage to any diſtant Country. They hardly ever heard of any other Part of the World beſides *Aſia*, till the *Europeans* diſcover'd a Paſſage to the *Cape of Good Hope*; tho' we are well aſſur'd they had the Uſe of the Loadſtone and Compaſs long before us.

Shipping deſcrib'd.

THEIR Coaſting Veſſels that ply on their Rivers and Canals have been deſcrib'd already; but their Shipping are much larger; they are ſquare both at Head and Stern, ſome of which have two Maſts, and others three: Their largeſt Ships are above 1000 Tuns Burden; each Maſt is but one Piece of Timber, ſupported on each Side. Their Sails are made of Matting, ſtrengthen'd with ſplit Cane at the Diſtance of two Foot, or thereabouts, aſunder. They lower them upon the Deck, inſtead of going aloft to furl the Sails, which fold up like a Fan, there being no Yards to ſpread them, as the Shipping of all other Countries have. They carry Images of their Gods in all their Veſſels, and have Altars and Lamps burning before them; but their Idols, inſtead of cauſing Reverence, ſeem to be rather intended for the contrary, for they make very frightful Figures. The Hold of each Ship is divided into ſeveral Partitions, which are made ſo tight, that in caſe they ſhould ſpring a-leak at Sea, no other Goods can receive any Damage but thoſe that are ſtow'd in the Partition over that Leak. Theſe Partitions take up a great deal of Room, and pretty much leſſen the Freight. Theſe Cells belong to different Merchants, who by this means can come at their own Goods at any Time without unſtowing the Ship; which is certainly very convenient for them.

CHAP. V.

A Deſcription of the Nature of their Soil, their Tillage, Gardens, Huſbandry, Plants, Animals and Minerals.

Nature of the Soil.

CHINA being of a very large Extent, the Nature of the Soil is different according to its Situation, either to the Northward or Southward; their Lands, like all others, are divided into Hills and Valleys; but the Hills are ſo plain, that one would imagine they had from the Beginning of their Monarchy been wholly employ'd in making them level, and forming them into Gardens; their Manner of meliorating their Grounds being to let Water through it, which is certainly the beſt Method they could make uſe of to diſtribute it equally; otherwiſe thoſe Parts which lie higheſt would continually be dry, and the Plains have always lain under Water: For they cut their Hills into Terraſes or artificial Plains, from the Bottom to the Top, that the Water which they convey through Channels, from one Field to another, may by this Means be equally diſtributed. Theſe Terraſes are leſs and leſs as they increaſe in Height till you come to the Top; and by this Means the Soil of the higheſt Hills is render'd as fruitful as their loweſt Valleys. It is by this Contrivance they prevent the Seed from being waſh'd away with the Ground in heavy Rains, the Force of the Water being broke by theſe artificial ſpiral Windings.

Light Earth.

THUS they have as it were forc'd Nature, by making theſe artificial Plains where ſhe had rais'd Mountains. Their Mould or Vegetable Earth is generally light and porous, and ſo deep, that in many Places you may dig two or three hundred Foot before you come to any rocky or barren Earth. The Mountains of *Xenſi*, *Honam*, *Quantum*, and *Fokien*, tho' they are not fit for Tillage, do nevertheleſs abound with all manner of Timber Trees, which grow tall and ſtreight, and are us'd for all ſorts of Buildings, eſpecially Shipping.

No Art can equal the natural Beauty of their Plains; they are all cultivated, and have neither Hedge nor Ditch, nor ſcarce a Tree, ſo much they are afraid of loſing an Inch of Ground. In moſt Provinces they have Harveſts twice a-year, and between thoſe Seaſons they ſow Rice and Pulſe.

Harveſts twice a Year.

ALL the Northern and Weſtern Provinces, as *Pekin*, *Xanſi*, *Xenſi*, and *Suchuen*, produce Wheat, Barley, Millet, and Tobacco, with black and yellow Peaſe, which their Horſes are fed with, as we do with Oats. Thoſe to the South, eſpecially *Huquam*, *Nankin*, and *Chekiam*, abound in Rice, being low watery Countries. The Soil of their Ground is ſo light, that they plow with a ſingle Buffalo or Heifer: After it is plow'd, they clear the Ground of all the Weeds; this being done, if the Field be deſign'd for Rice, they let in the Water, and moiſten the Earth till it become a perfect Pulp. The Husbandmen at firſt ſow it diſorderly, like other Corn, and when it is grown about a Foot from the Ground, they pull it up by the Roots, and tranſplant it in a ſtraight Line, in ſmall Parcels, like little Wheat-Sheaves, chequerwiſe, that the Ears may ſupport each other, and the eaſier reſiſt the Wind; ſo that theſe Plains look more like ſpacious Gardens than plain Fields. They continually water their Rice Grounds till it is almoſt ripe; the Water then being dry'd up, they cut it down, and thraſh it often in the Fields where it grows. The Rice is ear'd almoſt like our bearded Barley, and grows uſually four Foot, and ſometimes two Yards high.

Corn Ground improv'd by burning.

THE Ground for Wheat and Barley is prepar'd by grubbing up the Grats and Roots, and burning all together with Straw; then having ſifted the Earth fine, they mix and ſow it with Seed in a ſtraight Line in Trenches, and not promiſcuouſly,

as

as our Husbandmen do. They uſe no Dung to meliorate the Land that is ſown with Rice, Water alone being a ſufficient Manure for that Grain; but for other Grain, they uſe all ſorts of Dung, and among the reſt Aſhes and human Excrement.

Chineſe Fruits.

THEY have moſt of the Fruits that are common with us in *Europe*; as Apples, Pears, Plumbs, Peaches, Abricots, Figs, Grapes of all kinds, and eſpecially excellent Muſcadines, Walnuts and Cheſtnuts; they have likewiſe Pomegranates, Melons, Oranges and Olives. Their Olives are different from ours; they make no Oil of them; either they will not yield any, or elſe the *Chineſe* are Strangers to the Art of making it. They have alſo ſeveral Fruits that do not grow in *Europe*; the moſt delicate they call *Letchi*, which grows in the Province of *Quamtum*. It is as big as a Nut, the Stone is long and large, and the Meat on it ſoft and wateriſh, but of a moſt delicious Taſte; there is no Fruit in *Europe* that is comparable to it. This Fruit being dry'd, turns black and wrinkled, like our Prunes; thus being preſerv'd, they are us'd in Tea, to which they give an agreeable Acid, far more pleaſant than Sugar. There is another Fruit peculiar to them, call'd *Louyen*, or *Dragon's-Eye*. The Trees that bear it are as large as our Walnut-Trees. This Fruit is exactly round, the outer Rind being ſmooth and grey, but as it ripens it grows yellowiſh. The Meat is white, foweriſh, and very full of Juice, and is fit for a Deſert, being very cool and wholeſome.

A Fruit call'd Seze.

THE *Seze* is another kind of Fruit, that grows in almoſt all Parts of *China*; there are ſeveral kinds of them: Thoſe in the Southern Provinces taſte like Sugar, and diſſolve in the Mouth. They are bigger and firmer in the Provinces of *Xanſi* and *Xenſi*, and may be eaſier preſerv'd. They have *Anana*'s or *Pine-Apples*, *Goyaves*, *Cocoa*'s, and other Fruits, for which they are indebted to the *Indies*.

Oranges firſt brought from China, Tranſplanted at Lisbon.

THEY have ſeveral ſorts of Oranges, and from hence it was the *Portugueſe* firſt brought the Fruit which are call'd *China-Oranges*; the firſt of that kind was tranſplanted from *China*: The only Tree out of which all the Stock is ſaid to be produc'd, is ſtill preſerv'd at *Lisbon*, in the Gardens of the Count de St. *Laurence*: We are indeed beholden to the Induſtry of the *Portugueſe* for that delicious Fruit; but they brought only of one Sort over: That which is moſt valu'd, and often ſent to the *Indies* as a Rarity, is no bigger than a Billiard Ball; the Rind is of a reddiſh yellow, fine, clear, and very ſmooth. Thoſe of *Canton* eſpecially are very agreeable, both to the Palate and Conſtitution. They are adminiſter'd to ſick People roaſted and ſtrew'd with Sugar, which makes an excellent Syrup, which is judg'd to be very good for diſtemper'd Lungs. Lemons, Citrons, and what the *Indians* call *Pampelmouſes*, are very common Fruits, and therefore not ſo much regarded as they are with us; but they cultivate a particular Sort of Lemon-Trees, whoſe Fruit is no bigger than a Walnut, perfectly round, green and foweriſh withal, they are very good in all kind of Ragouſts; and theſe they often plant in Boxes to adorn their Courts and Halls.

Tallow-Trees.

BUT of all the Trees that grow in *China*, that which produces Tallow is one of the greateſt Natural Rarities that is to be met with any where: It is about the Height of our Cherry-Trees; the Branches are crooked, and the Leaves are ſhap'd like a Heart, of a lively briſk red, its Bark ſmooth, the Trunk ſmooth, and pretty ſhort, and the Head round and very thick. The Fruit is incloſ'd within a Rind divided into three Segments, which open when it is ripe, and diſcover three white Kernels as big as a ſmall Nut. All the Branches are very thick of it; and this Mixture of white and red make a handſome Appearance, for thoſe Trees being planted in ſtraight Lines Chequer-wiſe, make them ſeem as if they were a Parterre of Flower-Pots at a Diſtance: But what makes this Tree valuable is the Kernel, which has all the Qualities of Tallow, both in Smell, Colour and Conſiſtency; they make it into Candles with the addition of a little Oil in the melting, to make it more pliant. If they had the Art of clarifying it as we do our Tallow here, the Candles wou'd be as good as ours; they have a rank Smell, and don't burn ſo clear as ours, which may be attributed to the Wick, which is made of a ſmall long Stick, of a dry light Wood, inſtead of a Cotton Wick which we generally uſe; this Stick is invelop'd with the Inner Part of a Ruſh, which being very porous, and therefore adapted for the Filtration of the fine Particles of the greaſy Matter, by which the Flame is ſupply'd. *Make a fine Appearance.*

Pepper Tree.

AMONG the Trees peculiar to this Country, the *Pepper-Tree* is one of conſiderable Uſe, it is like a *Walnut-Tree*, which bears a *Pepper* not much unlike the *Indian Pepper* that we make uſe of, tho' the Seeds are ſomewhat different, and are about the Bigneſs of a Pea, and of a grey Colour, with little red Streaks. When they are ripe they open of themſelves, and diſcover a little Stone as black as Jet, which caſts a ſtrong Smell very offenſive to the Head, for which reaſon they gather it by Intervals not being able to abide in the Tree any long Time. Theſe Grains being expos'd to the Sun, and the black Stones taken away, the Remainder is us'd for *Pepper*, which is not quite ſo agreeable as ours, but is however good in Sauces.

Great Plenty of Garden Stuff.

THIS Country has not its equal in the World for the abundance of Roots and Pulſe; it is almoſt the only Food of the Inhabitants, who omit no Culture to make them perfectly good. They have certainly the fineſt Kitchen-Gardens, in which they omit making fine Walks, knowing better how to husband their Ground: They have ſeveral different Herbs entirely unknown to us. Among many others, they have an Onion that is pretty remarkable, they do not Seed like ours; but towards the latter End of the Seaſon their Leaves bear ſome Filaments, in the midſt of which is a white Onion. This in time produces Leaves, and thoſe alſo a Head, and ſo on, which grow leſs and ſhorter, as they are farther from the Ground; the Dimenſions are ſo juſt, and the Proportions ſo exact, that one would think them artificially done, and it ſeems as if Nature was willing to ſhew us that even ſporting, it can exceed the Skill of the niceſt Artiſt.

A Tree call'd Outmechou bearing a kind of Nut.

AMONGST the many kinds of Trees they are furniſh'd with, there is one in particular which they call *Outmechou*, it reſembles the Sycamore; the Leaves are about eight or nine Inches in Diameter, faſten'd to a Stalk a Foot long; it is very much tufted, and laden with Cluſters of Flowers, ſo thick ſet that the Rays of the Sun cannot penetrate them: The Fruit, which is very ſmall, notwithſtanding the Tree is one of the largeſt, is produc'd after this manner. About the End of *July* or Beginning of *Auguſt* there ſprings out of the very Point of the Branches, little Bunches of Leaves different from the other, they are whiter, ſofter, and as broad, and are inſtead of Flowers; upon the Border of each of theſe Leaves grow three or four ſmall Grains, or Kernels as big as green Peaſe; that incloſe a white Subſtance, very pleaſant to the Taſte, reſembling that of an Hazel-Nut not quite ripe.

Tea.

TEA or *Teha* is a Plant that grows plentifully in this Country: It is generally found at the Foot of ſome Mountain, a Stony Soil beſt agrees with it, the Root is not much unlike the Root of a Peach-Tree, it flowers like our Wild Roſes. There are ſeveral Sizes of theſe Trees, they grow from two to an hundred Foot high. It is reckon'd but a Buſh or Shrub, tho' there may be ſome very high and large Trees, as Thorns will ſometimes grow to a great Height; So likewiſe tho' there are ſome

few

few of these that are very tall, yet they more generally grow no higher than a Rose-Tree. It is frequently planted upon little Hills, about three Foot distance from each other, and does not commonly grow wild. F. *Le Compte* says, he saw this Plant in the Province of *Fokien*, where it grew upon the side of a little Hill, and the Plant was not above five or six Foot high; that several Stalks an Inch thick a-piece were join'd together, and dividing at top into several little Branches, form'd a kind of a Cluster like Myrtle: The Trunk or Stem seem'd dry, but bore green Branches and Leaves; the Leaves were narrow, tapering to a Point, and were an Inch or Inch and a half long, and indented; that the oldest were white and brittle, and tasted bitter; the young ones were soft and smooth, reddish and transparent, and pretty sweet to the Taste.

The three Sorts of *Tea* describ'd.

Dr. *Cunningham*, F. R. S. Physician to the *English* Factory at *Chusan*, tells us, that the three sorts of Tea commonly brought to *Europe*, are all produc'd from the same Plant, and it is only owing to the Season of the Year when is gather'd, and the Soil that makes the difference; *Bohea* or *Voiij*, so call'd from some Mountains in the Province of *Fokien*, where it grows, is the very first Buds that are gather'd in the beginning of *March*, and dry'd in the Shade; the *Imperial* or *Bing-Tea* is of the second Growth in *April*; and *Singlo* or common *Green Tea*, the last, in *May* or *June*, which are both dry'd in little Pans over the Fire. The *Tea* Shrub is an Ever-green, and is in Flower from *October* to *January*. The Seed is ripe in *September* and *October* following; but for one fresh and full Seed there are a great many bad. Its Seed-Vessels are Tricapsular, each Capsula containing one Nut or Seed; but tho' there are the Vestigies of several, only one comes to Perfection.

Method of distinguishing *Tea*.

BOHEA-TEA is not much valu'd by the Natives; it is a long brown Leaf, and the Water it is infus'd in, high Colour'd: If it be good it has a fine Smell, and is all of a Colour, crisp and dry; small black Leaves and Dirt are Signs of a bad Sort: The best opens always soonest in hot Water. *Singlo* or *Green Tea*, is to be chosen also by its fine Smell and its light Colour; if any of the Leaves appear of a brownish or dark Colour, it is not good. *Imperial* or *Bing-Tea*, is still lighter than *Green-Tea*, of a pleasant Smell, but not so strong as *Singlo-Tea*: If it once lose its Crispness, it is good for little, which it will do, tho' it be never so good when bought, if Care be not taken in Packing.

Manner of Grafting.

The *Chinese* understand Grafting, tho' they perform it in a quite different manner from the *Europeans*; for instead of slitting the Stock as we do, they cut a small Slice off the Outside of the Stock and apply the Graft, which is shap'd accordingly, then they tie up all together and cover it with Straw and Dirt as we do.

Ginger.

CHINA produces likewise large Quantities of *Ginger*, which grows wild in many Places near the Sea; but is not near so good as that which is cultivated. There are two kinds of this Root, Male and Female: The Female has the smaller Leaf, and the Root is not so large as the other: Its Leaf is like that of a Reed, and not easily distinguish'd from it; they dig up the Roots about *Midsummer*, when the Leaves begin to fall; when it is fresh and moist it is not near so hot as when it is dry'd. It is a very pleasant Sweetmeat, preserv'd green, and is much eaten in this Country: It is also esteem'd very serviceable in many Distempers, especially in the Cholick and Flux.

Sugar Canes.

There are Sugar-Canes which grow in great abundance in this Country, they are chiefly produc'd in Marshy Grounds, and have Leaves resembling Reeds, they are about three Fingers thick, and full of Knots, and grow about seven or eight Foot high: A farther Description of the Canes and the Sugar produc'd from them, shall be farther describ'd in those Countries where Sugar is the chief Product.

Rattan Canes.

They have another small Reed or Cane which grows upon the *Chinese* Mountains, call'd a *Rattan* or *Japan Cane*; when dry'd ('tis said) it will produce Fire, if one Stick be rubb'd against another very briskly; and that they are us'd in some Places instead of Flints. These *Rattans* are very tough, and being twisted together they make Cordage of them; the *Javans* and *Japonese* make Cables of them; which will not so easily rot in the Water as those made of Hemp.

They have likewise another small Reed or Knotty Cane call'd the *Bambou*, the Body whereof grows to such a Bulk that they often deem it of the Number of their Trees. It thrives most in Marshy Grounds, and is by Nature both straight and tall; but they bend it in the middle while it is growing, to make Poles for their Sedans. They also frequently make Canoes or Wherries, and being a light Cane they row them along, or rather paddle them, with incredible Swiftness. They are made use of instead of Timber in their Houses and other Buildings.

They have great Woods of Mulberry-Trees, particularly in the Province of *Chekiam*, the Leaves of which is the proper Food for Silk-Worms. They cut down some of these Woods every Year, because the Silk which is produc'd by the Worms, which feed from the Leaves of the younger Shoots, is far the best for the encreasing their Nourishment; by which they are capable of making a greater Quantity of their Webs.

Cinnamon.

In the Province of *Quansi* they have a *Cinnamon*; but being not so good as that of the Growth of *Ceylon*, and the Management of both for a Market being in every respect the same, I shall therefore omit its Description here, and treat of it when the Island of *Ceylon* is describ'd.

Cloves, Nutmegs and Mace.

There grows also, as we are inform'd, Cloves, Nutmegs, and Mace in *China*; but it is in such small Quantities, that they as well as the *Europeans* are supply'd from the *Molucca Islands* with these Spices; and therefore I shall describe them when those Islands are treated of. The Drugs call'd *China-Root* and *Rhubarb*, are also the Product of this Country; and *Coco-Nut* Trees are very common. This is a very useful Plant, which affords both Meat, Drink and Cloathing; of which I shall enlarge when I treat of *India* where they chiefly abound.

Ginseng or the *Human* Plant.

But the Plant which the *Chinese* value most, is call'd *Ginseng*: This (as they say) has the Virtues of all Simples, and is the principal Ingredient in all their Prescriptions to Men of Quality, but is a little too dear for the common People. They make Infusions of both Roots and Leaves, which they often drink instead of Tea: The Dose they order to sick Persons, is the fifth Part of an Ounce; but when taken by way of Prevention, they give only the tenth of an Ounce: They slice the Root into half a Pint of Water, and boil it to the Consumption of about three fourths, and then drink it sweetened with Sugar. It may be fill'd up again, and a single Dish drank Morning and Evening is sufficient. It cannot be drank in such Quantities as they drink Tea, without having ill Effects. They gather it in the Province of *Leaotum*, and the neighbouring Mountains of *Tartary*, it grows in close thick Woods, on the Banks of Torrents, or about Rocks, at the Feet of Trees, and in the middle of all kinds of Herbs. It is call'd *Ginseng*, that is *Man-Plant*, or the *Human-Simple*, the Simple that resembles a Man. The Learned among the *Chinese* bestow abundance of pompous Titles upon it in their Writings, that sufficiently testify how much they esteem it; as the *Spiritous Simple*, the *Pure Spirit of the Earth*, the *Fat of the Sea*, the *Panacea*, and the *Remedy that dispenses Immortality*.

It is a Root as thick as half the little Finger, and as long again. It is divided into two Branches, which ſpreads like a Man's two Legs, it is inclining to a yellow Colour, and grows wrinkled when lain by; the Leaves are ſmall, and terminate in a Point; the Branches are black, the Flowers Violet, and the Stalk cover'd with Hair; this Stalk produces three Branches, and each Branch bears the Leaves by fours and fives; it grows in the Shade, in a moiſt Soil, yet ſo ſlowly, that it is a long term of Years before it comes to Perfection. It is commonly found under a Tree call'd *Kiamchu*, little differing from the Sycamore.

Ginſeng. Of all Cordials, according to the Opinion of the *Chineſe*, there are none to be compar'd to *Ginſeng*; it is ſweet, intermix'd with a Smatch of Bitterneſs: Its Effects are very great; it purifies the Blood, fortifies the Stomach, adds a Motion to a languid Pulſe, excites the natural Heat, and withal augments the radical Moiſture. Phyſicians never know how to make an End, when they deſcribe its Virtues.

Mutang, the King of Flowers. They have a Flower call'd *Mutang*, or the King of Flowers; which they greatly value, its Leaves are broader than our common *Roſes*, but it is not ſo fragrant. It is of a pale Purple Colour, ſtrip'd with white, and ſome are Red and Yellow. It grows on a Shrub like the Birch-Tree; and is planted in all their Gardens; but they abound in nothing ſo little as fine Flowers.

Our Travellers informs us of a Herb in *China*, which they call, the *Herb of a Thouſand Years*; which they would have us believe never fades, or dies.

Husbandry how encouraged. Several of the Emperors and Empreſſes of *China* have promoted Husbandry, not only by allowing it proper Encouragement, but by their own Example, eſpecially the Emperor *VEN*, who condeſcended to hold the Plow himſelf, whilſt his Empreſs planted Mulberry-Trees in the convenient Grounds about the Palace, cultivated them, and bred the Silk-Worms herſelf; which Labour of theirs, though it could not be of great Advantage to themſelves or the Publick; yet it was a Noble Inſtance of Induſtry to their Subjects; and the ſaid Empreſs herſelf was actually ſuch a Proficient, that ſhe wore no Cloaths but what ſhe made herſelf.

The Plow is an Inſtrument of ſo long ſtanding with them, that Hiſtory doth not furniſh us with any Account of the firſt Inventors of it, any further than that ſome of their greateſt Emperors, were actually ſuch Encouragers and Improvers of Husbandry, that themſelves were the firſt that found it out; and after having found that way of opening the Ground to receive the Seed; they afterwards inſtructed their Subjects in the ſowing of Rice, Wheat, Barley and ſuch other Grain, as their Seed, and Land produces; and hence it became ſo cuſtomary to th ir Emperors, and was reckon'd ſuch a Vertue in them to propogate Husbandry, that the Emperor *Haoca*, betook himſelf to Husbandry in his advanced Years, and for three Years before his Death, Plough'd and Sow'd his Ground himſelf, to induce his Subjects to follow his Induſtrious Example; and as for thoſe Parts of his Empire that were more remote from him, he ſent Perſons to them, that were well-skill'd in Husbandry, to ſhow them how to Cultivate and Improve their Ground to the beſt Advantage.

And ſo careful have ſome of their Princes been, that thoſe Improvements in Husbandry ſhould not be loſt, that they have writ Books upon Tillage, of the different Manure proper for the different Natures of the Soil; which Directions, are doubtleſs now become more familiar to the Husbandmen, and retain'd in Memory; though we are told that ſome of them uſe thoſe Books to this Day.

So great a Veneration do they pay to the Improvement of their Husbandry, and the Propagation and Encouragement of their Product and Manufactures, that every Year about the Vernal Equinox, there is a Feaſt Inſtituted, at which, (probably, becauſe it is then a Seaſon for Ploughing their Land, and Sowing their Seed) the reſpective Governors of the Provinces, Towns, *&c.* aſſemble the Inhabitants of Inferior Rank, and march in Proceſſion before them with Streamers diſplay'd, and Muſick diverting the Ear; but their Trophies were rather thoſe of *Ceres*, than *Mars*; their Plows and other Inſtruments of Husbandry being carried before them, heading the Proceſſion.

Of their Animals. The wild Elephants are but ſcarce here, though ſome are to be found; but there are ſometimes ſome of them ſent to the Emperor, as Preſents from Foreign Princes; of which he keeps Fifteen or Twenty, in ſome convenient Place as a Rarity, as the Kings of *England*, keep the Lions in the Tower of *London*.

The Horſes in *China* are but of a ordinary Size and Strength, but they are ſupply'd from *Tartary*, with thoſe that are more ſtrong and ſerviceable; there are alſo other Beaſts of Burden, as Camels, Mules and the like: And other Beaſts of Uſe for Labour, Proviſion or Cloathing, as Oxen, Cows, Buffaloes and Sheep, which laſt have very large Tails like thoſe of *Turkey*, which are of ſeveral Pounds Weight. There are alſo in the Mountainous Parts of the Country, Tygers, Wolves, Bears, and other ravenous Beaſts of Prey.

Their Hogs are Black, and have deep Bellies, reaching even to the Ground, like thoſe we ſee in *London*, ſometimes call'd *Guinea* Hogs; and although one would think the Heat of the Country would make Hogs-fleſh ſeem nauſeous, yet they are eſteem'd very good Victuals. They have great Numbers of Deer or Hares; eſpecially one particular ſort of Stag or Deer, which is found in the Weſtern Provinces of *China*, which ſome diſtinguiſh by the Name of the Odoriferous Stag or Deer, by reaſon of a Bunch or Excreſcence towards his Belly, call'd *Xe* in their Language, almoſt like a Purſe; it is a thin Skin cover'd with Hair, and within it is Musk, from the perfuming Smell of which, this Sort of Deer takes the Name or Diſtinction Odoriferous. The Fleſh of this Deer as well as of the reſt, is reckon'd by the *Chineſe* good Food; as alſo are their Geeſe, Hens and Ducks, of which they have great Plenty and very Cheap; theſe Poultery's Eggs are commonly hatch'd in Ovens or Dunghills.

Strange Serpents. There are ſeveral Sorts of Serpents and pernicious Vermin here; eſpecially Graſhoppers, who are not only very troubleſome, but prejudicial in devouring the Fruits of the Earth, in ſeveral Provinces of that Empire. But there is a Serpent here (though now common in *India*) it is call'd, *Cobra Capela*, it is of ſuch a Poiſonous Nature, that if any Perſon by Accident or Miſtake happen to eat of it, it is immediate Death without any Poſſibility of a Remedy. There are alſo other Sorts of the *Cobra Capella*, one of which is Short and of a Triangular Form, having three plain Sides or Faces, upon one of which they always lie or creep; but there is another of a Shape yet more ſurprizing, they have no Tail, but the two Ends or Extremities, are both alike for Size and Shape, to wit, each End is a Head, having Eyes, Ears, Mouth, Lips, and all the viſible Organs of Hearing, Seeing, *&c.* and yet with this Difference, that while one Head has the uſe of all its Organs of Seeing, Eating and the like; the other is void of any Senſe or Uſe of them; the Ears being ſtopp'd, the Eye-lids over the Eyes, the Lips are cloſed and grow together, ſo that with the Mouth in the live Head only, it eats to feed the other, and with the Ears and Eyes in the ſame, hears and ſees to avoid Danger, and direct the Body.

But what is yet ſtrange, (and almoſt incredible, if it had not been well aſſerted by an *Engliſh* Gentle-

man who kept one of this laſt Sort, and try'd the Experiment) theſe two Heads live and die alternately every ſix Months, at the end of which time, the live Head declines by Degrees, and in the ſame Proportion the Organs of the other Head begin to open, and to act and perform their proper Offices of Eating, Seeing, Hearing, Feeding and Directing the Body, and all the Functions that were perform'd by the other Head when capable of acting; and thus each in his turn had the Maintainance and Direction of the whole.

THEIR Rivers and Canals abound with Fiſh, and their ſport in catching them is as agreeable as the Profit; for beſides Nets and other Contrivances which they uſe, as in *England* and other Parts of *Europe*, to catch them, they train up large Fowls for Fiſhing, and bring them up to be as tractable, and as much under Command as the Hawks and Dogs are to the Sportſmen in *England*; and they are large ſtrong Birds, as large as our Herons. When they go to Fiſh with them, they have them perch'd upon the Sides of the Boat waiting for the Word of Command, which when the Fiſherman gives, they take Flight, and ſeparately look for their Prey, ſpreading themſelves ſometimes the whole breadth of the River or Lake where they are, and when one of them has ſeiz'd a Fiſh, they bring it to their Maſter in the Boat, or if the Fiſh be too big, they help one another to bring it, and when they have deliver'd their Cargo to the Maſter, they fly out for more.

WHAT Fiſhes theſe Birds catch, are ſuch as they are naturally inclined to eat; and therefore it is no more difficult to teach theſe Birds to catch thoſe Sort of Fiſh, than it is to teach a Grey-hound to catch a Hare, or a Cat to catch a Mouſe, which they have by Natural Inſtinct; all that they have to teach them, is, to reſtrain them from immediately devouring them, and to bring them to their Maſters; and in order to this they tie a ſmall String about their Necks, ſo ſlack as to ſuffer them to breathe; but yet ſo tight as to hinder them from ſwallowing their Prey, and when the Maſter thinks fit to leave off Fiſhing, he takes off the String from their Necks and lets them fiſh for themſelves.

THERE are rich Mines of Gold and Silver, but their Gold Mines are not ſuffer'd to be open'd and yet that Commodity is plenty among them, by reaſon of the great Quantities thereof waſh'd down by the Torrents from the Mountains, in the rainy Seaſons, and is ſo fine that it needs no refining. They have alſo Mines of Tin, Iron and Copper; but they have either no Lead-Mines at all, or elſe they are very ſcarce, as appears by our *Engliſh* Lead finding ſo quick a Market in ſeveral Parts of that Country. Of their Mines.

CHAP. VI.

Of the Language, Characters, Learning, Arts and Sciences, and Honours; together with the Hiſtory and Chronology of the Chineſe.

Language. THE Language of the *Chineſe* ſeems to be an Arbitrary Independent Language, as being neither derived from any other Language, nor any other being derived from it; it conſiſts more in Accents and Geſtures than in Variety of Words; for the whole Language is compriſed in in leſs than four hundred Words, (ſome ſay three hundred and thirty,) all Monoſyllables, and theſe Words have different Meanings as they are differently accented, ſo that by the ſame Word you may paſs the higheſt Compliment or give the greateſt Affront; the ſtronger or weaker Inflection of the Voice altering the Signification of the Word, ſo that by reaſon of the fewneſs of the Words they may be ſoon learned, yet by reaſon of the Multiplicity and variety of Tones or Accents, it is very difficult for even one Native to learn to expreſs himſelf in an intelligent manner to another.

THESE three hundred and thirty Words, when rank'd together in their Order, ſtand ſomething like the rows of Monoſyllables in the beginning of ſome of our School-boys Spelling-books; and as every Word hath five Keys or grand Notes to determine and govern its Accents, it may not be amiſs to repreſent it to the Underſtanding by every one of theſe Monoſyables paſſing through, and being ſounded by all the five Vowels, or a Ring of Bells paſſing through their ſeveral Changes in ringing, ſo that this Language, when ſpoken exactly, and every Word has its proper Accent, is in ſome Meaſure Muſical, and expreſſeth a real Harmony, but the Varieties of the Sounds and Tones by which the ſame Word is applied to different Meanings; and underſtood in ſuch various Senſes, is learned with very much Difficulty.

BUT theſe various Words of theirs, which we have called Monoſyllables becauſe they pronounce them as ſuch, yet they are not compoſed of Letters as our Words are, but are each of them expreſt by a Character or Hieroglyphick, for they are entirely ignorant of putting Letters together, to make Words, and thereby communicate their Minds one to another; but every Word, or at leaſt the moſt Emphatical, is expreſt by a different Character, ſo that whereas we in *England* can expreſs all our Thoughts, manage the deepeſt Arguments, and write the largeſt Volumes, only by a right and thorough Knowledge of the Shape and Sound of Four and Twenty Letters, and of the true Accents of the ſeveral Syllables compos'd of them, to make the Millions of Words therein contain'd, the *Chineſe* can uſe no more Words than they can remember different Characters, which in their Language amounts in all to Twenty-four Thouſand; but he is eſteem'd extraordinary Learned that can remember Twenty Thouſand of them; and although a Variety of Twenty Thouſand Words would be but a poor Embelliſhment to a Voluminous Hiſtory, yet even that Number of Characters of a different Shape, are ſo difficult to learn the Shapes of, and afterwards to retain in Memory, that it takes up moſt of their Time and Thought, which is aſſign'd as a reaſon why they are ſo little Proficient in other Sciences. The Words or Monoſyllables above-mention'd, as they ſpeak them, may in ſome Meaſure be communicated to us by our own Letters as *Tchun*, *Lem*, and the like; but each Word having ſo many various Accents to repreſent its different Meanings, and every one of theſe Meanings to be expreſt by a different Character, when they are to be communicated to another by Writing, occaſions a neceſſity for the numerous Characters ſpoken of above.

BUT

But yet it is in *China* as in other Countries; for in the Chief and Populous Towns the People are more Polite, and the Language more proper and intelligible, than in the Parts more remote and illiterate; as it is obſerved at *Nankin*, that the Accent is more regular and correct than in other Places, for by reaſon of the Place being more Populous, and the frequency of Converſation, they learn to pronounce their Tones and different Accents ſo ſmoothly, that although they thereby diſtinguiſh the different Meaning of the ſame Word, yet a Stranger could ſcarce perceive the difference; and what more ſoftens their Language, they never uſe an R; but they have another Sound which is ſomething troubleſome to pronounce; it is expreſt by a double Ll, and is ſounded from the bottom of the *Aſpera Arteria*, but cannot well be expreſt in Writing, and is very difficult to be pronounc'd by a Perſon that underſtands no Language but *Engliſh*; but it is a Sound much us'd in the *Welch* Language, the Word *Llan* ſignifying a Church; and ſeveral Towns in *Wales*, where there is a Church having their Names begin with *Llan*, as *Llantriſant*, a Church dedicated to three Saints; and the double Ll is an Aſpirate, and ſounds moſt like Hl, as *Llan* is ſounded *Hlan* both in the *Welch* and *Chineſe*, and the Aſpirate H before the l requires the expence of ſo much Breath, that it is very harſh and troubleſome for an *Engliſhman* to pronounce, and yet theſe Gutturals and Aſpirates, which to us are thought harſh and troubleſome, are by them thought a Grace and a Beauty to their Language, as ſuppoſing that if they did not maintain that (to us) diſagreeable Harſhneſs, their Language would degenerate into an effeminate Softneſs fit for none but Women and Children.

Their Writing.

The *Chineſe* manner of Writing is different from (I think) that of all other Nations, for beſides the *Engliſh*, *Latin* and *Greek*, and other Methods of Writing from the Left to the Right, and from the Top of the Leaf to the Bottom, and the *Hebrew*, which is alſo writ from the Top of the Leaf to the Bottom, but the Lines begun at the Right-hand and writ to the Left, the *Chineſe* differ from both, for they begin at the Top of the Leaf in the Right-hand Corner and write their Lines downwards, and ſo proceed Line after Line to the Left-hand ſide of the Leaf, ſo that our laſt Page of a Book is their Title-Page, and our firſt Page their laſt.

In Writing they uſe a Pencil inſtead of a Pen, and do not hold it ſloping as we do, but nearly perpendicular, as if they were going to prick the Paper rather than write upon it. Their Paper is ſo thin as to be almoſt Tranſparent, and will not bear Ink on both Sides without the hazard of the Letters running into one another, but if they have a mind to have it appear as if it was writ on both Sides; they fold the Paper which is ſcarce perceived by reaſon of the extraordinary thinneſs and fineneſs of their Paper. A fair Hand Writing is one of the firſt or chief Steps to Preferment, that being a chief Qualification required, in any that puts up for a Degree, and without which he is not capable of any conſiderable Preferment in the State. And hence in Writing, as well as other Improvements, the Emperor is commonly one of the moſt excellent, as not being qualify'd for ſo great a Dignity without theſe valuable Endowments of Mind, proportionable to it.

Printing.

Although Printing is now much more improved in *Europe* than in *China*, yet it was invented and practiſed there long before it was here, but continues to be perform'd there with little Improvement. Their Printing is in ſome reſpects rather like our Rolling-Preſs or Copper-Plate Printing, than our Common or Letter-Preſs; for let the Book be well or ill written or drawn, it is Printed accordingly, for their Letters or Characters which they are to Print are firſt cut or engraved in Wood, which that they may do the more exactly according to the Copy, they paſte the Leaf of Copy upon a ſmooth Board, with the written Side downwards towards the Board, and the Paper being ſo Tranſparent that they can ſee the Characters or Figures through it, they cut the Wood through the Paper, cutting away that Part of the Wood which is cover'd by the White Paper, and leaving that Part cover'd by the Figures or Characters, which done, and the remaining Paper waſh'd from the Board, there is in the Board the exact Shape of the Figures that were upon the Paper, only reverſe upon the Board, which when it comes to be printed is reverſed again, and ſo upon the printed Paper it appears the very ſame as it was upon the firſt Copy; and that is the reaſon why Authors that cannot write ſo well as they would have their Books printed, do firſt write their Copy, and then get it tranſcribed into a better Hand, or fair Characters, by a Maſter Scribe, to have it printed from a better Copy, and in a handſomer manner than they could write themſelves.

Of their Learning.

What has been reported by ſome of the great Ingenuity and Learning of the *Chineſe*, may probably have had its Riſe from their Generoſity in giving ſuch plentiful Rewards and Encouragements to the Propagators and Encouragers of ſpeculative Learning, rather than from any great Proficiency or Advances that they have made in theſe Sciences, or to the Ignorance of their Neighbours, who think every inferior Degree of Learning an Excellency, becauſe it is what they do not underſtand, rather than to any ſuperior Degree that they have really acquired and are Maſters of. They know little Natural Philoſophy, and leſs, if any thing at all, of Logick. They have but ſuperficial Notions of Geometry, what they know of it is generally compriſed under a few, and thoſe probably eaſy, Propoſitions, and ſome few Problems in Algebra. Their Arithmetick is improv'd to a ſomewhat higher Pitch, Numbers being what all Buſineſs depends upon, and without which it is impoſſible in Trade to do Juſtice between Man and Man, and yet in that they do not uſe Figures for the immediate caſting up of any Parcels of Goods, as to the Weight, Meaſure, Price, or the like, as we in *England*, or the more Southerly Parts of *Europe* do; but rather as they do in *Moſcovy*, by a ſmall Board or Frame of about Eighteen Inches long, or leſs at Pleaſure, and more than half as broad, made in an oblong Form like the Frame of a Door, but the Sides and Ends about three quarters of an Inch ſquare; then from Side to Side parallel to the Ends, there are ten or twelve ſmall Wires like the Rounds of a Ladder, upon each of which are Nine or Ten moveable Beads, by the ſhifting of which backwards or forwards with a little thing like a Penknife, made for that Purpoſe, they do without any Pen, Ink or Slate, caſt up any common Sum with incredible quickneſs, ſo far as this Method will reach, but their Arithmetick ſeldom amounts to intricate and exact Calculations.

They aſſume to themſelves the firſt Invention of Muſick, but what they are now Maſters of, when compared with that of other Nations, ſcarce deſerves the Name, ſo little Improvement have they made in it. They have long and diligently applyed themſelves to the Study of Aſtronomy; but for a long time came ſhort of moſt *European* Nations; they applied themſelves to the Obſervations of Comets, Eclipſes, Conjunctions and other Phænomena of the Heavens, but always fell ſhort of Exactneſs till the Jeſuits came amongſt them, who have rectified ſome of their Errors, and reformed their Calendar.

They are generally great Bigots to Aſtrology, as telling Fortunes, Lucky or Unlucky Days to be married, or undertake a Journey, or the like; all which they ſuppoſe and believe the Aſtrologers can fore-

foretel; and this Piece of Credulity we should impute to their Ignorance and Superstition, if we did not find a great many amongst us Christians so weak, as to believe that an Astronomer at this Day, can by his casting Figures or dealing with Familiar Spirits do the same. The *Chinese* are great Observers of Times, and have as much Faith in their Fortune-tellers and Astrologers, as in their Gods. These sort of People have the Direction and Government of all their Affairs; nor will they undertake a Journey, or any Business of Importance, without first advising with them, as to the lucky Day and Hour to begin it. These Astrologers pretend to let a Man know his future Fortune in the World, by only having the Day of his Birth, and calculating his Nativity, and let them fail never so often, as to the Truth of their Predictions, yet if they hit but once, it gives a Sanction to all the rest, and makes Atonement for all former Mistakes; but we need not go so far as *China* for Instances of this ridiculous Credulity; when we have so many both Young and Old, that suffer themselves to be drawn into a Belief that Astrologers can find stolen Goods, and foretel Things to come; and that in a reform'd Christian Nation as this is wherein we live.

Physick. They have but little Understanding in Anatomy, and consequently cannot have much Knowledge in Physick, but pretend to be very expert in knowing the Distemper, by feeling the Pulse; nor doth their Knowledge by the Pulse terminate here, for they also undertake to predict thereby how long the Disease will continue, and whether it will prove mortal; and they have wonderful Skill in this Art: But it is much easier with them to know the Disease, than to find a Remedy. They have no Apothecaries, but every Physician produces his own Ingredients, and prepares his own Remedies, which are frequently made up in Pills, but not of a purging Nature. They never let Blood, probably by reason of the excessive Heat of the Climate: But as they have a Notion that all Distempers generally proceed from the same Cause, they as frequently apply the same Cure; for they think that all Distempers are caused by a malignant corrupt Wind, which they endeavour to dissipate, by applying red hot Irons to the Place grieved. And in the Distemper called *Mordechin*, which is a violent Cholick and Vomiting, occasion'd by Indigestion or Foulness of the Stomach; they cure it by applying red hot Irons to the Soles of the Feet; but in slight Indispositions they commonly prescribe Cordials, extracted from Herbs and Roots, of which they have great Plenty, and those of different Vertues and Temperatures, as in other Countries. The Root *Ginseng* is reckon'd a very good Cordial amongst them; and the Root call'd *Pao China*, is an excellent Sudorifick, Purging the Humours and corrupted Blood. There is no Restraint or Limitation in *China*, as to the Practice of Physick: No Degree is required to be taken up, nor any Qualification required, but a little Knowledge in Physick, and a great deal of Assurance; which is the Cause, that there are so few regular and eminent Physicians there. They are seldom or never afflicted with the Sciatica, Gout or Stone, which some impute to their frequent drinking of *Tea*; but I do not find that *Tea* has that good Effect upon *English* Bodies.

The *Chinese* have learn'd from the *Europeans* to make Pistols, Watches, Glass, Granadoes or Shells for Bombs; but it is said, they had the Invention of Gun-Powder, Printing, and the use of the Mariner's Compass, long before we had in *Europe*.

As for the way of their reckoning Time, they divide the Natural Day, (as consisting of Day and Night) into twelve Hours, and begin to reckon from Midnight; one of their Hours being equal to two of ours; and their first Hour ending at our two a-Clock in the Morning, their second at our four a-Clock, &c.

There were no Clocks in *China*, till they were first carried out of *Europe* to that Country; but before that Time they had Sun-dials, which were divided into a hundred Parts in the whole Circle or Natural Day; but of late they have divided their Dials as they do their Clocks, every two Hours of ours being one of theirs, on their Dials as well as their Clocks.

They have of late been so careful in the Regulation of their Calendar; that there are above a hundred Persons employ'd by the Emperor for that Purpose, and their several Performances, sent by the respective Astronomers to the Viceroys of the different Provinces; that every Man's Performance, when compared with the rest, may contribute towards finding the Truth. They divide their Calendar by Lunar Months (reckoning a Month from New-Moon to New-Moon,) of which there are sometimes Twelve, sometimes Thirteen in a Year; because in Nineteen Years, or Two Hundred Twenty-eight Solar Months, there is Two Hundred and Thirty-five New-Moons or Lunar Months; which causeth some Variation, till once in Nineteen Years they come to near the same; and in their Almanacks or yearly Book, they insert the Eclipses of the Luminaries, and whether visible or not, in the respective Cities, for which they calculate as we do, the different Quantities of Solar Eclipses, for Places in different Latitudes; as *Paris*, *London*, *Edinburgh*, &c. but fall short of that Exactness in Calculation that the *Europeans* have attain'd; however, according to what Progress they have made in Astronomy, they calculate the Equinoxes, Solstices, and the Time of the Sun's Entrance into every intermediate Sign; as also the Planets and their Places in the Ecliptick; their Aspects, their Approximation to, Vicinity with, and Seperation from one another, or from the fixed Stars: And although their Calculations fall far short of Exactness; yet they pretend by these general Calculations, to raise particular Predictions; they believing as some People weakly do in our own Nation; that he that understands Astronomy must be an Astrologer of course; and capable of telling Fortunes: And hence they undertake to prescribe Lucky or Unlucky Times for the undertaking of any Enterprize of Moment; as the Beginning of a Journey, or Marrying, or the like; which the common People are as much bigotted to there, as in any Part of the World; but the wiser Sort there, as well as here, have got more Sense than to be imposed upon, or to be drawn into the Belief of any such Fallacies. Their Calen.

What Notions they have of Astronomical Calculation, they had first from the Jesuits; for till then they could never compose an Ephemeris or Calendar exactly; and their Method of calculating Eclipses were so general and incorrect, that they could scarce foretel about what Time an Eclipse would happen, much less determine exactly the Quantity of it; and it may probably be from their Ignorance, that we have derived the Names of our two opposite Nodes or Points, where the Moon's Orb intersects the Ecliptick, which we call the Dragon's Head, and Dragon's Tail; for they fancied, that there was a prodigious great Dragon in the Heavens, who was a declared Enemy to the Sun and Moon, and always stood ready to devour them; and therefore, when an Eclipse began they beat their Drums and Kettles, in hopes to frighten the Dæmon or Monster from his Prey; and although they have now made farther Discoveries as to the Natural Cause of Eclipses, yet they still retain the same Flavith, Fear when an Eclipse happens; insomuch, that even in so populous a City as *Pekin*, while the Astronomers are making their Observations, the Mandarins belonging to the Court of *Japon*, fall on their Knees in the Palace, and looking towards the Sun, express their Concern for him, and implore the Dragon to have compassion on the World, and not

to

to deprive them of the Light of this glorious Planet the Sun.

Preferments. But however Ignorant this Country may be ſuppoſed to be as to their Aſtronomy, and other Branches of Mathematicks, yet they have this Excellency, which it were to be wiſh'd that all other Nations would imitate; for here it is only Merit that can introduce any Man into any conſiderable Poſt, ſo that here a Man's Fortune in point of Preferment depends intirely upon his Qualifications for and Application to Buſineſs; and therefore it is the chief Care of Parents who have the Preferment of their Children in view, to give them good Education; for we do not find that a vaſt Eſtate or a great deal of Money hath any Share in the Queſtion; and as this Article which they call Education ſways ſo much, their Schools are very numerous, of which we have different Accounts: *Le Compte* tells us, the Towns are full of Schools, whilſt others that take it only upon Truſt tell us, there are no Schools at all; but the two different Accounts are eaſily reconciled, if we conſider that Families of Note take Maſters into their Houſes to teach their Children, and qualify them for Preferment, as Opportunities offer; and if every noted Family have their Children taught at Home, it is indifferent for Travellers either to ſay, *The Towns are full of Schools*, when they ſee almoſt every Houſe is a School, with a Maſter to attend it, or to ſay there are few or no Schools in Town, when they find every Perſon, eſpecially thoſe of Character and Diſtinction, taught at Home.

But wherever or by whatſoever means they acquire their Education, the immenſe Number of Characters they have to learn, before they can either underſtand another Perſon's Writing, or communicate their Thoughts to another that way, takes up ſo much time, as we have hinted before, that it muſt be ſomething more than common Induſtry that can attain it, and hence he that can Read and Write, that can underſtand what another writes to him, and can communicate his Thoughts to another by the ſame means, *i. e.* Writing, is look'd upon as one of an uncommon Genius, and is thought fit then to be preſented to an inferior Magiſtrate, and if he gets his Approbation, he is admitted a Student, in which if he ſucceeds and improves, he riſes from one Degree to another, like our Degrees of Batchelor, Maſter of Arts, and Doctor in our Univerſities.

Degrees of Honour. When they are thought capable of ſtanding Candidate for any of theſe Degrees, they are admitted to the firſt by the principal Magiſtrates of the Province; and if his Capacity therein proves him qualified for a ſecond Degree, he muſt be admitted thereto by an Examination, at which a Commiſſary from the Emperor muſt immediately aſſiſt; and if by theſe Gradations they are thought fit to be recommended to the third Degree, they muſt commence at the Imperial City of *Pekin*; and ſo juſtly is their Encouragement proportion'd to their Merit, without regard to Money, that their Charges are defray'd at the Publick Expence, leſt the Commonwealth ſhould be depriv'd of the Benefit of ſo uſeful a Subject, whoſe Uſefulneſs and Value is eſteem'd in Proportion to his Merit, and not his Riches, and the Emperor is not only the Ultimate Judge, but ſometimes examines the Candidates himſelf, it being always a Qualification previouſly neceſſary in the Emperor, to be Maſter of thoſe Branches of Learning which qualifies others for being perfect'd under him.

When the Election comes, on the Candidates are ſhut up in a room without any Books, or any more Paper than their preſent Exerciſe requires, and have Centinels placed over them, to prevent their having any Correſpondence with other Perſons; and when the Doctors are nam'd, they are preſented to the Emperor, who honours the three that he has made Choice of by ordering them Garlands of Flowers, or ſome other Marks of Favour and Diſtinction; after which ſome of them are advanced to the Royal Academy, which is a fair Step to ſome of the higher Poſts in the Eſtate; for when a Man is once commenced Doctor, he is look'd upon as in the readieſt way to Preferment; every Body endeavours to aſſiſt and oblige him; but yet this Grandeur is conditional, for ſtill their future Advancement depends upon their continued Induſtry; and if after that, they have not made the Progreſs which was expected, they are reprimanded, if not diſcarded; but thoſe that are Induſtrious are advanced in Proportion thereto; and hence it is that all Offices and Places of Truſt are fill'd with the ableſt Men, and thoſe that are beſt qualified for them.

And ſo ſtrictly is Merit made the Condition of Preferment in the State, that even Nobility itſelf is not Hereditary, much leſs any other Quality or Diſtinction. Nor does any Man enjoy any Honour but what the Office or Preferment which he has acquired by his Merit and Induſtry gives him. Their Lands are Freeholds; they have no ſupreme Lord but the Emperor, who can, without Diſtinction of Laity or Clergy, Tax all the Land as he pleaſeth. The Emperor and his Subalterns above-mention'd, are all the Magiſtrates they have; and the reſt apply themſelves to Husbandry, or other Labour; ſo that there are no idle Drones there, who under a pretence of doing Juſtice between Man and Man, maintain themſelves in Idleneſs, by living upon other People's Labour.

Hiſtory. In writing their Hiſtories, they have an excellent Method for having what is written True and Impartial; there being a certain Number of Hiſtorians choſen, whoſe Buſineſs it is, every one to regiſter the Tranſactions of his Time, every one doing the ſame, with that Induſtry and Impartiality, as if no Body was about that Work but himſelf; the Actions, Speeches, *&c.* of their Princes, being the chief Subject of Hiſtory there, as well as in other Places; together with Remarks upon other Facts, as they occur; all which are promiſcuouſly lodg'd in a Publick Office, ſet apart for that Purpoſe, and never open'd during the Life of the reigning Prince; but when he dies the Office is open'd, and the Memoirs of his Reign collected and digeſted into a Hiſtory of his Reign; and this Method muſt certainly contribute very much to the Truth of their Hiſtory and Chronology; every Author of that Collection of Memoirs, doubtleſs, emulating to excel each other, both in Truth of Fact, and Perſpicuity of Language, in Order to their being preferr'd to ſome higher Dignity, which as before obſerv'd, is always the Reward of Merit only.

Chronology. The Chronology of the ancient *Chineſe* is ſaid to bear Date long before ours; ſome ſay it is forty thouſand Years ſince the firſt Foundation of their Empire, which is above ſeven Times as long as we reckon ſince the Foundation of the World; and above five Times as long as is reckon'd by the Tradition of the *Weſtern* Churches; and when this Piece of Chronology comes to be ſtrictly examined into, we do not find that they can produce any Hiſtory, to prove the Truth of the Fact; and at the ſame Time they acknowledge, that all their Records and Hiſtories were deſtroy'd by one of their Emperors, about two thouſand Years ago; ſo that this Opinion is grounded upon bare Tradition only; and as their *Æra* is ſo improbable, and no Authority produced to ſupport it, we ſhall ſuſpend, or rather reject the Belief of it.

The beſt Authors from the Authority of the *Chineſe* Hiſtory do not compute it to be above two thouſand Years ſince the *Chineſe* Monarchy began; which could not the Time elapſed, ſince that Computation was made, will make it out that

their Empire has been eſtabliſhed ever ſince *Noah*'s Flood, or ſoon after it; in which Time the Imperial Dignity has paſt thro' twenty-two Families; and in them, thro' the Hands of two hundred and thirty-ſix Emperors; and it is not at all ſurprizing, that ſo few Reigns ſhould fill up ſo many Years, if we conſider that their Monarchy begun ſoon after the Flood; and ſome of their firſt Emperors were Cotemporary with ſome of the long-liv'd Patriarchs; and give us for Inſtance, that their firſt Founder *Fohi* reigned one hundred and fifty Years; *Chinum* one hundred and forty; *Hoamti* one hundred and eleven; and ſo decreaſing as the Age of Man decreaſed after the Flood.

What Tranſactions they pretend to have upon Record, ſo long before our Account of Time, or of the Creation itſelf, ſeems to have but little Authority, or rather none, as being contradicted by the Courſe of their own Hiſtory; where they attribute the Invention of all their Arts to ſome one or other of their Emperors; the firſt of which, you find by their own Chronology, was not above four thouſand Years ago; and it is not probable, that ſuch a Nation could ſubſiſt above thirty thouſand Years without Ploughing, Sowing, Planting, Building, Manufacture for Cloathing, and ſuch other Neceſſaries of Life. And which is more, it is evident by Calculation (the moſt undeniable Proof of Fact) that ſome of the Eclipſes, Conjunctions, &c. recorded by them, happen'd ſome hundred of Years after the Time mention'd in their Hiſtory. In ſhort they give us no Account of any Wars, till about four thouſand Years ago; any more than of Huſbandry, Building, &c. and it is very improbable that the World ſhould be ſo ignorant, and ſo paſſively contented as to live without Husbandry, Planting, Building, &c. or ſo peaceable as to live without any Quarrelling for thirty-ſix thouſand Years together, when there has been every where ſo much of it the laſt four or five thouſand Years; from whence it is evident, that either their Records and Chronology are loſt or miſtaken, or that for the Time that they reckon before the Foundation of their Monarchy, (which by their Account is thirty-ſix thouſand Years) they had a way of reckoning their Years very much different from our way of reckoning now.

CHAP. VII.

Of the Emperor's Prerogative and Stile, the Succeſſion of the Crown, Courts of Juſtice, Magiſtrates, Laws and Cuſtoms, Revenues and Forces; with the Coins, Weights and Meaſures uſed in China.

Dignity of the Emperor

THE Empire of *China* has been a Monarchy as long as it has been an Empire, which is, as before obſerv'd, above four thouſand Years; and as if he thought all earthly Princes depended on him, he aſſumes the Title of *Holy Son of Heaven, Sole Governor of the Earth, Great Father of his People*, &c. And when one Family is extinct, the ſucceeding one has a Power to give a new Name to the Empire; which continues as long as that Family enjoys the Imperial Dignity, and which if it continues long, meets with the more Difficulty to be changed into another Name by the ſucceeding Family; and hence the Emperor *Chinum*, who reign'd one hundred and forty Years, and ſucceeding Branches of his Family much longer, might probably give the Name of *China* to the Empire; which by a long Series of Time, was ſo rivetted in the Minds and Language of the People, and been ſo much ſpread in Hiſtory, that that Name could never be erazed to this Day, or perhaps never will.

They have no Notion of any Government below Monarchy; they never heard of any ſuch Thing as a State or Commonwealth, till the States of *Holland* ſent an Ambaſſador thither; who when he arrived, found the utmoſt Difficulty to make them underſtand what Sort of Government that of the *United Provinces* was, or what was meant by repreſenting the Dignity of their Government in the Plural Number, *the High and Mighty States of Holland*, till Time and further Information made it more familiar to them.

Succeſſion of the Crown

The Conſtitution of *China* is generally to have the Crown to deſcend in a Hereditary Line, but with this Limitation, that the Emperor has a Power to alter the Succeſſion, and to declare any one of his Subjects his Succeſſor, whether he be of the Royal Family or no, provided this his Choice be approv'd and confirm'd by his great Council or *Calao*, which is compos'd of Princes of the Blood, and Miniſters of State; but if they oppoſe his Choice, the Succeſſion muſt fall upon him that is deem'd the next Heir; but if the Emperor is reſolute, he ſometimes turns out, or alters his Council, till he gets one, the Majority of which are of his Sentiments, and then he carries the Succeſſion according to his own Mind. But in making, altering, or aboliſhing any Laws, he cannot do any thing without the Aſſent and Approbation of his Council, eſpecially in Matters of Religion; for when the Emperor and the *Tartars* in Council were ready to decree any thing in favour of our modern Miſſionaries, that they could in reaſon require, yet when there was a Majority of *Chineſe* oppoſed them, they were oblig'd to ſuſpend that Alteration in Religion which the Emperor propos'd, and act according to the Laws of his Country, rather than run the hazard of another Revolution.

And his Power is yet further limited; for the Emperor never acts but by the Approbation or Mediation of ſome of his ſupreme Courts, and altho' he is the richeſt in Treaſure, as well as the ſtrongeſt in Force, of any Prince in the World, yet he has not the direct Power either to apply the publick Treaſure, or to command his Forces, till his Intentions or Reſolutions be ratified by the proper Courts or Officers in Conjunction with his Authority.

But on the other hand, there is ſuch a Prerogative reſerv'd in the Emperor's hands, that none of his Superior Courts or Officers can paſs a definitive Sentence, eſpecially in Capital Caſes, and cauſe it to be put in Execution, without the Emperor's Ratification, it being abſolutely in his Power to confirm or reverſe any ſuch Sentence. His Retirements are only to give himſelf better Opportunities to conſult Affairs of State, conſider the Grievances of his Subjects, as repreſented to him in their Petitions, which by the Conſtitution of the Empire he is oblig'd to read, and then refers them to the Council, who having conſider'd the Circumſtances of the various Petitions, make their reſpective Reports to the Emperor, who finally determines all thoſe Capital Caſes himſelf, for which purpoſe he appears in Publick only four times a Month.

Of

Of all the Emperor's Titles, he values himſelf moſt upon that of *Great Father of his People*; and to addreſs him under that Denomination, is much more agreeable to him, than to call him *the Great*, *the Powerful*, &c. and according to the ſtanding Maxim of their Government, had rather be diſtinguiſh'd and applauded for his Affection to his People, than for his Authority over them, and to prevent his Subjects being impos'd upon by particular Officers or Magiſtrates, he has ſeveral Courts or Councils, which not only execute their reſpective Branches of Juſtice, but inſpect into one another, to prevent Frauds and Briberies in any one of them.

His Councils are of eight Sorts.

First, The Supreme Council, which conſiſts of Princes of the Blood only, and never aſſemble but upon extraordinary Occaſions.

Secondly, The Council call'd *Calaos*, (mention'd before) compos'd of Princes of the Blood, and great Officers; they are like our Privy Council, and conſtantly attend Affairs of State.

Thirdly, *Lipou* enquires into the Qualifications and Abilities of all Miniſters of State, Governors and Magiſtrates; and as they like or diſlike them, they make their Report to the Emperor, and according to his Orders thereupon they are either continu'd or diſplac'd.

The Fourth keeps an Account of all the Families in the Empire, and what Lands they hold, and of the Duties payable by them to the Emperor; and of this they make new Rolls every Year, and levy the Taxes and Revenues of the Crown, and preſide over the Treaſury or publick Money when ſo collected.

The Fifth has the Care of Arts and Sciences, with the Affairs of Religion, and the Rites and Ceremonies thereof.

The Sixth has the Care of the Affairs of the Army and Navy, takes Account of the Forces in the Garriſons and Fortifications, raiſeth Recruits as Occaſion requires, and repleniſheth the Magazines accordingly.

The Seventh takes Cognizance of all Appeals, eſpecially thoſe relating to Criminal Caſes.

The Eighth takes care of all the Temples, Palaces, and other publick Buildings; as alſo of the Canals, Bridges and Highways, and what other Repairs lie at the publick Charge.

Every one of theſe Courts not only perform their own Function, but are one a Check to, and dependent upon another, and often in Buſineſs of great Importance: The Concurrence of ſeveral Courts is required; as for Inſtance, the Militia is under the Care of the ſixth Court, but the fourth has the Charge of the Treaſury; and it is in vain for one of them to put a Body of Troops in Commiſſion to march, till they firſt conſult the fourth Court for Money for their Pay and Subſiſtence; and ſo in the reſt.

And beſides the Inſpection that one of thoſe Courts have into the other, the Emperor employs an immediate Inſpector into each Court, to give an Account to him of their Proceedings and Failings, if any there be; and even the Princes of the Blood are not exempted from the Cenſure and Obſervation of them; and beſides thoſe, every Viceroy, Governour, or Magiſtrate is oblig'd to tranſmit to the Court an Account of his own Adminiſtration; and if he is known to hide even his own Miſdemeanors, he is ſeverely puniſh'd for it: And yet Bribery and Corruption prevails there, as much as in any Nation in the World, and through all the Offices from the higheſt to the loweſt.

There are ſeveral Orders of Mandarins, and thoſe deputed to different Truſt and Offices, as his various Councils are, viz. ſome are Judges in Civil and Criminal Caſes, ſome attend the Affairs of the Revenue and Treaſury, others have the Command of the Militia, &c. They are Men in ſuch great Power, that though they are ſubordinate to the Viceroy, yet they have an Eye over, and are a Check upon his Actions, ſo that it would be difficult for him to be guilty of any Male-Adminiſtration, except either by Intereſt or Rewards, he firſt ſecure their Connivance, which they often do for him, that he may do the like for them again; *One good Turn deſerves another.*

But to prevent their contracting ſuch a Familiarity as may terminate in truſting mutually to a Connivance at one another's Faults, the Conſtitution orders that none enjoy the Place of a Mandarin above the ſpace of three Years, that by that Time there can be ſuch an Intimacy contracted, as can amount to this Degree of Corruption, their Time of holding the Office is expired, and a new one ſubſtituted; and to prevent this previous Acquaintance, at their Entrance into the Office, a Man is never to be put into this Poſt in his own native Province, but where he is a Stranger, and as Education and other Qualifications (excluſive of Riches and great Parentage) are the Conditions of Preferment, it often happens that Men of mean Extract, are advanced to thoſe high Poſts; and their being promoted in ſome other Province than where they were born, cauſeth more Veneration and Regard to be paid to them, than probably would in their own Province, where their mean Parentage are known.

The Mandarins have Palaces in every City built and endow'd at the Government's Charge; in them they reſide and adminiſter Juſtice: Their Salary is not above a thouſand Crowns a Year, which ſeems but a little to maintain the Grandeur in which they live, and to produce ſuch immenſe Eſtates as ſome of them acquire, and that in a few Years, which ſeems impoſſible to be done without Bribery and Extortion; which altho' the Emperor puniſheth with Severity when diſcovered, yet (notwithſtanding their Care taken to prevent their Confederacy and Connivance amongſt themſelves) they find means by Oppreſſion and irregular Practices, to extort vaſt Sums; the higher from the next lower, and they again from thoſe of an inferior Rank to them, till it is there, as in ſome other Places, the common People pay all at laſt; and theſe great Ones amaſs vaſt Riches to themſelves; and as he that is of a more tender honeſt Conſcience, is leaſt fit to be truſted with their Fraud and Connivance, ſo if he ſhould make a falſe Step, he ſhall be the firſt inform'd againſt, and caſhier'd by the reſt; not becauſe he was guilty of that one Fault, tho' that gave them the Opportunity againſt him, but becauſe he was too honeſt to be truſted with the Scene of Corruption, in which the reſt were involv'd.

It is the Cuſtom here to keep ſome of the Children of the Viceroys and ſuperior Governors at Court to qualify them for Government, and lay them in the way of Preferment; tho' ſome think it is rather to keep them as Hoſtages or Pledges of their Father's Loyalty. The buying and ſelling of Places, is by their Conſtitution abſolutely forbid, and tho' a little Money behind the Curtain may ſometimes have ſome Influence, yet it never can carry an Election to any Place, or Preferment whatſoever, for the Candidates for the meaneſt Employment, (much more thoſe for Places of Truſt and Profit) undergo ſuch ſevere Examinations, that it is impoſſible for any Perſon to be prefer'd, except he be qualified.

For the better executing of Juſtice, and managing the Government of this large Empire, every Province is a petty Empire of it ſelf, reſembling *Peking*, but all dependant upon, and holding their Authority from the Emperor, who reſerves all Capital Caſes to his own Determination: And they

altho' the ſuperior Courts have a Power to pronounce Sentence of Death upon a Criminal, yet they have no Power to execute it, till it is confirm'd by the Emperor; but the Criminal is remanded back to Priſon, and if the Emperor's final Sentence is delay'd, the Priſoner ſometimes lingers out a miſerable Life, and dies for want of Refreſhment, or common Neceſſaries.

Duty to Parents.

THE Authority of Parents, and Duty of Children, is more ſtrictly regarded there than in ſome Chriſtian Countries. It is reckon'd ſuch an odious Crime for a Son to mock a Parent, much more to lay violent Hands upon him; that is thought a Crime above the Cognizance of any, even the moſt ſuperior Court, and reſerv'd to the Determination of the Emperor himſelf; and ſo great is the Authority of the Father look'd upon to be, that if he appears and charges his Son with the Crime, that Teſtimony is thought ſufficient to prove the Guilt upon his Son without any farther Evidence, though it be a Caſe of Life and Death; and ſo ſtrict are they in the obſervance of this Duty of Obedience to Parents, that the Emperor is no more excuſed than the meaneſt of his Subjects; for they look upon him as not qualified to be an Emperor, if he pays not the due regard to his Parents if living: Inſomuch that when one of the Emperors had baniſh'd his Mother, although for ſo great a Crime as Criminial Converſation with one of his Courtiers, yet the People ſetting aſide the uſual dread of the Emperor, and being ſo affected, that he, though an Emperor, ſhould keep his Mother in Diſgrace, they crouded in their Petitions and Arguments to have her recall'd; at ſuch a Rate that weary'd him; and although he put ſeveral to Death for their Impertinence, in pretending to direct him, yet the reſt, regardleſs of the Conſequence, continued their Importunities to that Degreee, that the Emperor began to be apprehenſive, that if he cotinued thoſe Severities to his Petitioners, and did not gratify them in calling his Mother from her Exile, it might cauſe a general Revolt, and therefore he condeſcended to call her Home; ſo tenacious are the People of that great Duty to Parents, that even the Power and Greatneſs of an Emperor, was not ſuffer'd to diſpenſe with it.

Treaſon.

ONE Thing that doubtleſs tends very much to the ſuppreſſing of Treaſon and Rebellion, is, the ſevere Puniſhment inflicted upon ſuch Offenders; for the Sentence is, that they are to be cut in ten thouſand Pieces, and when the Time comes that they are to ſuffer, the Executioner ties the Criminal to a Stake, and firſt fleas his Forehead, from the top downwards to his Eyes, letting the Skin hang over his Eyes, and ſo falls to cutting and mangling the Body, as long as he thinks convenient, leaving the reſt to be torn in pieces by the Mob; and if it be but a common Act of Rebellion, the Puniſhment ends here; but if it be Treaſon or Rebellion of the higheſt Degree, the Family, and even the Children of the Offender ſuffer with him.

Murder

THEY puniſh Murder with Death, but have different Ways of inflicting that Puniſhment, as in *Europe*, yet differ in their Manner of Execution from us in *England*; for whereas we account beheading the moſt honourable Death that our Laws ſentence any Offenders to, and hanging the moſt contemptible, they behead the meaneſt Sort of their Criminals, as reckoning that the moſt ignominious Death, and ſtrangle thoſe of the Nobility or Quality that are ſentenc'd to die, as being an honourable Death, peculiar to them alone.

Adultery and Theft.

ADULTERY or Theft are not puniſh'd with Death, except complicated with Murder, or ſome great Violence, or Barbarity, committed upon the Perſon abuſed; theſe being look'd upon as Crimes of an interior Nature, are only puniſh'd with the Baſtinado, [illegible] common Puniſhm[illegible] Crimes; and is ſeveral Blows of a Cudgel on the Buttocks, as they lie on their Faces on the Ground; the Blows being more or leſs in Number, according to the Heinouſneſs of the Crime; and altho' it is not in the Power of any of the Emperors Courts to execute Sentence of Death upon any Criminal, that being the Emperor's expreſs Prerogative; yet they can execute the Sentence of the Baſtinado, which is by a Number of Blows in proportion to the Nature of the Crime, which ſometimes amounts ſo high, that the Offender expires under the Operation, or ſoon after it.

BUT if it be but a petty Crime, they commonly ſurvive the Puniſhment, which, when over, they are obliged to return Thanks to the Magiſtrate for his kind Correction, which is indeed ſometimes made much eaſier by croſſing the Executioner's Hand with a Piece of Money, which, as ſome Authors tell us, is now become ſo common to have the Puniſhment mitigated by a Bribe, that when a Man of Subſtance is to undergo the Puniſhment, there are thoſe who for a ſmall Reward will let him out, to bear it for him.

BUT for Crimes that do not incur ſuch great Penalties, or ſevere corporal Puniſhment as the Baſtinado, they have a lower Degree of Puniſhment, which may rather be called Shame than Puniſhment; ſomewhat of the Nature of the Pillory in *England*: It is a thick Board hung about the Offender's Neck, with his Crime written upon it; in which he is expoſed every Day for a longer or leſs Time, in proportion to the Nature of his Crime.

THE Priſons in the great Cities are ſo large, that they may almoſt be called Colonies rather than Priſons; for they conſiſt of Streets, Market-places, and Work-houſes: The Criminals are allow'd to work for Bread in the Day-time; by which Means they ſubſiſt more comfortably, the *Chineſe* Charity being very cold, and the Emperor's Allowance very mean. It is ſaid that in *Canton* alone there have been fifteen thouſand Priſoners at a Time or upwards.

THEY have no Lawyers, but every Man manages his own Cauſe; the Plaintiff draws up his own Caſe in Paper, and it is by proper Officers introduced to the Mandarin, who if he thinks it frivolous and vexatious, orders the Plaintiff to be ſeverely baſtinadoed for it; but if it is thought a Matter of Conſequence, it is examin'd by the proper Officer, who reports his Opinion of it to the Judge, the Defendant doubtleſs taking the ſame Steps; and if it is a Matter that comes within the Judge's Province to determine, they muſt ſubmit to his Sentence, or appeal to a higher Court: But if the Cauſe is of ſo high a Nature that it is the Emperor's ſole Prerogative to decide it, he gives the final Sentence, tho' then by the Report of the proper Officer before it was try'd, as in the Caſe of Malefactors in *London* at the *Old Bailey*, yet they are not executed till the Recorder or Deputy-Recorder make his Report to the King, Queen, or Regent, who gives the final Sentence by ſigning the Dead Warrant for ſuch of them as by the Recorder's Report are thought not fit Objects of the Mercy of the Crown'd Head; nor is it poſſible to think that there, any more than here, it can be poſſible for the Emperor to hear all, even the moſt capital Cauſes, himſelf in Perſon, but muſt determine, by the Report of thoſe Officers whom he thinks ſo faithful that he can depend upon, in Matters of ſo great Conſequence.

Receiving Ambaſſadors.

WHEN the Emperor receives a Foreign Ambaſſador, the Ceremony is perform'd with extraordinary State and Grandeur; he ſits upon a ſumptuous Throne, about three or four Foot high; his Poſture croſs-legg'd, attended with a Multitude of great Officers in their Robes, the Princes of the Blood and tributary Kings, who fall proſtrate before him; the Ambaſſador to whom he is to give

Au-

Audience being introduced and conducted by ſome of the Viceroys, or by a Number of the Mandarins, to the Throne where the Emperor is placed to receive him. The Ambaſſador delivers his Credentials to the Emperor, and makes a ſhort Speech; after which he is re-conducted to his Houſe by the ſame Way he came, by the Viceroy or Mandarins appointed by the Emperor to attend on that Occaſion.

Some time after the firſt Audience, the Ambaſſador is invited to a ſumptuous Entertainment, where the Emperor comes in richly dreſt, attended with a Guard of Halberdiers, and a Conſort of Muſick playing; where mounting the Throne, his Guards ſit croſs-legg'd beneath him, and the Muſick ceaſes: The Vice-Roy and other Miniſters of State, ſtand on each Side of the Emperor, and the Ambaſſador on the right Side of the Throne, about four Fathom from it: Being thus plac'd, the Viceroy, by the Emperor's Order, which he receives upon his Knees, brings the Ambaſſador nearer; and after the Emperor has enquir'd after his Maſter's Health, and ſome other formal Ceremonies paſt, a Table which ſtands before the Ambaſſador, furniſh'd with cold Meat Fruits and the like, cover'd up, is uncover'd, and the Ambaſſador alone at that Table, is deſir'd to eat; ſome hundreds of Lords being alſo at the Entertainment, they ſit croſs-legg'd upon Carpets, every two of them having a Table between them.

As a Token of kind Reception, the Emperor from his own Table ſends ſome Diſhes of Meat to the Ambaſſador, with a Gold Cup of Brandy, or ſome ſort of ſpirituous Liquor, his Attendants alſo partaking thereof: After which, the Ambaſſador being call'd, and ſuch Queſtions ask'd as the Emperor thinks fit, the Viceroy leads him again to his Place; where having ſat a ſmall time, he is order'd to ſtand up, and the Emperor having ſaluted him, retires to his Apartment, and leaves him with the Mandarins to be entertain'd with ſuch Diverſion as they think moſt agreeable.

Audience of Leave.

When he has his Audience of Leave, the Emperor is ſeated on his Throne, and a Herald calls aloud to the Lords of the Court, to ſtand up and bow to the Earth, which they do three Times, the Drums beating, the Bells ringing, and the Muſick playing; the Ambaſſador being plac'd at ſome Diſtance from the Throne, makes his Compliment to the Emperor, and is from thence again conducted to his Apartment.

When the Emperor goes to Sacrifice in the Temples of his Idols, he marches in a ſplendid Proceſſion, being preceded, firſt, by 24 Trumpets with golden Coronets, then as many Drums, follow'd by 24 Men with gilded Truncheons, after whom come a hundred Soldiers, with fine Halberds, and then a hundred Serjeants at Mace, who are follow'd by four hundred fine Lanthorns, and as many gilded Flambeauxs; after theſe come two hundred Lances, followed by twenty four Banners, with the Signs of the Zodiack, and fifty ſix more with the Conſtellations painted upon them; then twenty four magnificent Umbrelloes, with a Cupboard of Gold Plate, born by the Officers of the Court; and then comes the Emperor on Horſeback, gloriouſly dreſt, his Houſen and Furniture cover'd with Gold and Precious Stones, and ſhaded with gilded Umbrelloes, held over his Head by the Pages of Honour. He is follow'd by the Princes of the Blood, Viceroys, and Miniſters of State in their Robes; after whom come five hundred young Gentlemen, attended by a thouſand Footmen dreſt in Carnation Silk, work'd with Stars of Gold and Silver; and after them is carried an open Chair like a Triumphal Chariot by thirty-ſix Men, which is follow'd by another, carried by a hundred and twenty Men, large enough to ſerve for an Apartment; after theſe come two Chariots drawn by Elephants, and two more drawn by Horſes, each Chair and Chariot guarded by fifty Men; and the whole Proceſſion is cloſ'd by two thouſand Mandarins, and as many Officers of the Army in rich Dreſſes.

His Women.

The Women which the Emperor keeps, as has been already obſerv'd, are ſelected by the Viceroys and Governors, and are ſome of the *moſt* beautiful Virgins; nor is he marry'd to any of them, ſo as to be confin'd, as to a Wife, in the Senſe we underſtand Matrimony; but has Children by all or any of them promiſcuouſly: Notwithſtanding which there are three in particular call'd Queens, to whom the reſt are ſubſervient; tho' the Sons of theſe Queens have no better Chance to be a Succeſſor to the Imperial Dignity, than the meaneſt of the Ladies Children; for the moſt learned and beſt qualify'd among them are generally made Choice of, according to the Conſtitution of the Empire; the Daughters of the Queens as well as Concubines being utterly excluded; and they, by the way of Ridicule, call *Europe* the Ladies Empire, becauſe the Women are ſometimes veſted with Regal Power in that Part of the World.

The Emperor has an Arbitrary Power in chuſing and nominating his Succeſſor; and whether he chuſeth the eldeſt or youngeſt of his Sons, and whether it be the Son of a Queen, or of an inferior Concubine, all the reſt muſt entirely ſubmit. They have Palaces aſſign'd them to live in, but have no Command in the Cities of their Reſidence, nor muſt they remove from the Cities wherein they are placed, without the Leave of the reigning Emperor, tho' it be their younger Brother that reigns after the Death of the Emperor their Father; but they are maintain'd as private Gentlemen, and have their Revenues punctually paid them by the Treaſurer of the Province; and ſo paſſively ſubmiſſive are they to the Emperor's Authority, that Hiſtory ſcarce furniſheth any Inſtances of the Elder Brother's laying any Claim to the Crown by Birth-right, Intereſt or otherwiſe, after his Brother, though the youngeſt, is either in Nomination for, or Poſſeſſion of the Imperial Crown.

Eſtates.

Their Eſtates are all Free, they not holding them of any ſuperior Lord; but the Emperor has a Power to Levy what Taxes upon them he ſees fit, and as the Neceſſity of the Government Affairs require; but they have one ſtated or ordinary Tax, which is commonly about one tenth of *their* Profits, and ſeldom exceeds. But it is a Cuſtom with the Emperor to exempt one, or ſometimes more of the Provinces of the Empire from paying any Tax, and fixes this Favour upon ſuch Province or Provinces as have been viſited with bad Weather, Sickneſs or any ſuch Calamity, if there happen to be any ſuch. A great many of their Taxes ariſing from the Culture of their Land, are paid in its Produce, ſuch as Corn, Rice, Silks and other Commodities; the Taxes upon which, are computed to amount to the Value of fifty Millions of Crowns; which, with about twenty-two Millions more, makes ſeventy-two Millions of Crowns a Year; which at ſix Shillings for every Crown, amounts to twenty-one Million, ſix hundred thouſand Pound Sterling yearly; a large Sum, but it is an extenſive Empire, both to collect the Money and expend it; and except Proviſion be prodigious Cheap, or there be ſome Additional Taxes, it ſeems next to impoſſible, that they could maintain five Million of Soldiers, beſides their Civil Liſt, with only twenty-two Million Sterling yearly, or little more.

No Collectors.

They have no occaſion for Collectors of the Taxes here, for they have Inſpectors who take an Account of every Man's Family, Eſtate and Subſtance every Year, and what Taxes are due to the Crown thereupon: this Account is enroll'd and kept, and a Tranſcript of theſe Particulars in every Family is fix'd at their reſpective Doors; ſo that neither the Officer nor the Houſe-keeper can plead Ignorance; nor can the Houſe-keeper commit any Fraud, becauſe

cause if he should attempt to craze, or alter any Thing in the Transcript that is left at the Door, he will be detected, because the Original is enroll'd: And besides, every Man is oblig'd to carry in his own Taxes for the Emperor, to the Mandarins of the Towns of the third Rank, on Pain of Imprisonment, and the Baltinado; and the Mandarins pay them into the Treasurer of the Province, who first pays the Governors, Officers and Soldiers of the Province, and defrays other necessary Charges of the Government, and remits the rest to *Pekin* for the Emperor's Use.

Magazines. And lest any Part of the Empire should suffer by Famine, Sickness, or any other common Calamity, they have always three Years Provision of Rice, and other Necessaries laid up at *Pekin* in Storehouses for that Purpose.

Forces and Forts. Their standing Forces in Pay in Times of Peace, consist of five Millions of Soldiers, mostly Horse, of which above one hundred and sixty Thousand are quarter'd in *Pekin* only, arm'd with Scymeters and Lances: The Horse carry no Fire-Arms, and the Foot but few; they still chiefly using Bows and Arrows, and are not very Industrious in Military Improvements and warlike Discipline, having no foreign Enemy to fear since the Union of *China* and *Tartary*, nor scarce any Exercise at Home but to keep the Country quiet, and therefore many of them follow their Trades, and are never call'd out but at certain Times, as our Militia are. They have an Allowance of Rice and other Provisions for their Families, which, with what they can get by their Trades, is probably most of their Income, there not being much Pay to be expected, when we compare the Number of Soldiers with the yearly Revenue of the Crown. They have a tolerable good Train of Artillery in the Field, having been assisted by the Jesuits in Casting them, but the Guns upon their Walls are of little Use.

Their Coin. The current Coin of the Empire are round Pieces of ordinary Metal, like Brass, with four *Chinese* Characters on one side, which compose the Emperor's Name, and two on the reverse, expressing the Name of the City where they were coined. They do not value them by the Coin or Number of Pieces; but having a Hole in the Middle of them, they string them, and count them by strings; for a thousand Pieces are not of more Value than a Piece of Eight, or in Sterling Money eighteen of them is not worth quite a Penny.

Weights and Measures. Their Silver they formerly valued by Weight, it being cut into irregular small Pieces, and weigh'd in little Scales, which they carried about them for that Purpose, but of late they make Use of a small Silver Coin.

Their Pound Weight is divided into sixteen Ounces, as ours is, and every Ounce into ten Parts, and each of these are divided again into ten Penny-Weights; every one of which are again subdivided into ten Parts, called Grains. Their Foot is about the Length of ours, or about one hundredth Part shorter, 100 of their Feet making about 99 of ours.

CHAP VIII.

Of their Religion, Places of Worship, and Superstition.

THE *Chinese* in general worship one supreme God, but they likewise suppose that there are several inferior Deities subservient to that great Being, and to these they impute the first Invention of Arts, Mountains, Rivers, and the like; (it is to be supposed that if their Ignorance extended so far as to impute the Being of Mountains and Rivers to any of their Demy-Gods, and rank the Invention of them amongst their Arts, they deny the Original Geographical Cause of them, which is now evident to every Person that understands the Globe, and the different Elasticity of some Parts of the Surface of it, which will easily account for the Mountains and Valleys, without the Help of their Deities;) but they never encouraged Vice, or sacrificed to such impure Deities as were worshipp'd in other Nations.

There are three sorts of Religion in *China*, every one having an Eye to a God or supreme Being; the first is the *Laokunites*, or Followers of *Li-Laokun*, who lived about five hundred Years before Christ; he taught that God was a Body, and had subordinate Deities under him. His Disciples studied Magick, and pretend to a Composition, which if drank will make a Man Immortal.

The second is the Sect of *Confucius*; he was celebrated for his Morals and Philosophy; his Principle is, that God is the most pure and perfect Being, and the Fountain of all Beings, and yet so much poison'd by Superstition, that he has Temples and Images erected to him, and is now worshipp'd with profound Adoration. He instructed the People in Philosophy, and left many admirable Precepts in Morality, and the mutual Duties between Man and Man.

Idol *Fo*. But there is a third Sort the most numerous of all the three; they worship the Idol *Fo*, and style him the only God of the World. This idol was brought from *India* about two and thirty Years after the Death of our Saviour: His Priests are called the *Bonzes*; they teach Morality, and a future State of Rewards and Punishments; they hold it unlawful to drink Wine, or kill any living Creature. The Priests wisely inculcate to them how much it is their Duty to maintain them well, to build them Temples and Monasteries, and to submit to the Penance they enjoin, or in case of Neglect or Refusal, they threaten them that after Death they shall undergo the greatest Torment, or else the Soul shall be removed into some Vermine or Beast of Burden. They seduced one to believe that his Soul should pass into one of the Emperor's Post-Horses; they advised him to bear it patiently, and eat but little, and God might perhaps be prevail'd upon to remove him the next time into some Person of Quality; but the Man was so affrighted at the Thoughts of Riding Post, that his succeeding Preferment gave him little or no Satisfaction; and hearing that the Souls of Christians were not removed at that rate, he was baptized, and lived and died in that Faith; but the *Bonzes* make their Disciples believe, that they can not only determine what sort of Body, whether Beast or the like, but also what individual Body the Soul shall possess and animate after Death: For one of the Princes of the Blood having lost a Friend he loved very well, enquired of the *Bonzes* into what Body his Soul was gone; who not only told him it was gone into a Boy, but into a *Tartar*'s Boy, and described him to him, who sent for the Boy, and kept him, thinking thereby that he had again recover'd his deceas'd Friend.

Transmigration.

Voluntary Penances. They are very profuse in their voluntary Penances and Mortifications, as thinking that will atone for the Sins of the People, and that they can apply the Merit thereof where they please, but not without a mercenary View; they commonly apply their pretended Satisfaction to some that are most bountiful to their Order. Their way of afflicting themselves is sometimes by dragging heavy Iron Chains through the Street after them, fastened to their Wrists or Legs, and beat their Heads against the Stones till the

the Blood runs down, thinking by that Means to make themſelves Objects of Charity, and extort Alms from the People; ſome of them have a Chair to be carried about in that is ſo full of Nails, that he cannot ſtir without wounding himſelf, and when the bigotted People ſee the ſuperſtitious Devotee in ſuch Torment, they buy the Nails at Sixpence apiece, and have them pull'd out to give him eaſe, thinking that every Nail pull'd out with that charitable Deſign will procure ineſtimable Bleſſings on the Family that purchaſed it, and the Money is paid to the Prieſts, to build a Temple to their God *Fo*, at leaſt ſo much of it as the Prieſts are willing to ſpare, ſo that we ſee there, as well as in other Places, Prieſt-Craft prevails, and finds a Religious Cloak to hide their Covetouſneſs.

Prieſt-craft.

Image of Immortality.

Idol of Pleaſure.

THEY have an Image in Form of a monſtrous fat Man, call'd the *Image of Immortality*; he ſits croſs-legg'd, and has a huge ſwoln Belly. There is another about twenty Foot high, called the *Idol of Pleaſure*; and between theſe is another about thirty Foot high, finely gilded, with a Crown upon his Head, and richly dreſt, called the *Great King Kang*; they mightily adore him. There are abundance of leſſer Images in their Houſes, Ships, and in the Streets, as well as in their Temples, and every Family has its *Jos*, or *Houſhold God*; to whom if they pray, and do not meet the deſired Succeſs, they chaſtiſe him, ſometimes pulling him down, and dragging him about the Streets; and if while they are ſerving him ſo, they happen to obtain the Thing pray'd for, they impute it to the Puniſhment he has ſuffer'd, and ſhew ſome Remorſe, begging Pardon for their ill Uſage of him, and ſet him up in his Place and worſhip him, and then they waſh, paint and gild him, and in all reſpects reſtore him to his former Splendor and Dignity.

Houſhold Gods.

Worſhip the Sun, &c.

THEY alſo worſhip the Sun, Moon and Planets, and the Souls of their Anceſtors, or of the Authors of any notable Invention. Since *China* has been conquer'd by the *Tartars*, the Emperor is always one of that Country and Religion, which is much like the *Chineſe*; except worſhipping a living Man as God, which they call *Lama*, which ſome think to be the ſame with *Fo*, only worſhipped in a different Form. They call him *Eternal Father*; he is ſhewn in a dark Place in the Palace, illuminated with Lamps; he is dreſt in rich Robes, and ſits croſs-legg'd upon the Ground: The *Tartars* pay a great Devotion to him, and when they approach him, they fall upon the Ground and kiſs his Feet; while the preſent *Lama* is alive, the Prieſts chuſe one of themſelves, as like him as poſſible, to be ready to ſucceed him, and when the elective Deity is ſubſtituted in his room, cloath'd, and in all reſpects equipp'd as the other was, which Trick being conceal'd from the Vulgar, finding always, as they think, the ſame Perſon in the ſame Place, they believe he lives for ever: He is of ſuch Eſteem with the *Tartars*, that no King muſt be crown'd till they have made him rich Preſents, and implor'd his Bleſſing. He keeps his Court at *Baramula*, with as much Splendor as a King, but medles not with the ſecular Government. He has Prieſts under him, called alſo *Lama's*, who ſerve as Chaplains to the *Tartar* Nobility at *Pekin*. The Emperor pays a diſtinguiſhing Reſpect both to the *Lama's* and *Bonzes*, and alſo to *Confucius*, and ſacrificeth in the Heathen Temples: And yet ſome would inſinuate, that the Emperor is a Chriſtian in his Heart; but if he was, his Power is ſo abſolute that he need not be afraid to own it; and if he denies it for no other Reaſon but leſt his Subjects ſhould follow his Example, and be Chriſtians too; it is a certain Sign that he has no great reſpect for Chriſtianity.

God *Lama*.

Mahometan Religion.

THERE are great Numbers of *Mahometan* Families in *China*, that Religion having been tolerated there theſe five or ſix hundred Years, and the whole Country abounds with Idol Temples, which ſtand without the City Gates, or in ſolitary Places; where the Religious accommodate Travellers with Proviſion and Lodging. There is generally by every Temple a Tower built to the Memory of ſome great Saint or Hero; perhaps the Builder or ſome great Benefactor to the Temple, in which Towers they place Images, and alſo great Numbers of Lamps, which burn Day and Night.

Temples.

THEIR Temples are built of Timber, containing one long ſquare Room, pav'd with large Stone, and roof'd with ſhining Tiles. There is in the Province of *Pekin* a Temple one hundred and ſixty five Foot high, in which there is an Image in the Form of a Virgin, an hundred and ſix Foot and a half high: There is a great Number of Prieſts belong to each Temple, who offer Rice, Wine, and other Proviſions to the Deities of the Place, and conſult them when any come to enquire of the Succeſs or Event of any thing, or of their future Fortune. Near theſe Temples are generally Cloyſters of thoſe who, as they ſay, have abandon'd the World, and devoted themſelves to Religion; they voluntarily inflict upon themſelves ſuch Pennance as they think will be moſt acceptable to their Gods; they live an abſtemious Life, and undergo their Mortification with an incredible Reſolution.

Immortality.

THEY are very much bigotted to an Opinion that there may be means uſed to make a Perſon immortal; but there are Parties in the Opinion, as to how it is to be done; ſome ſay, it is attain'd by the drinking of a liquid Compoſition, which they make for that purpoſe; but others ſay, it is a ſtrong Faith that preſerves them alive; and altho' both Sorts die like other Men, yet they will not recant their ſilly Notion, but alledge on one ſide, that the Deceas'd had not dy'd, if his Faith had not fail'd: On the other ſide, that there was ſome Ingredient wanting, or ſome other Miſmanagment in making the Liquor, which was the Cauſe of the Perſon's Mortality.

Chriſtian Religion.

IT is generally ſaid, that the Chriſtian Religion gains ground in *China*, and that they have not leſs than two hundred Chriſtian Churches and Chappels well fill'd with Converts; tho' ſome Authors would limit their Chriſtianity to the poorer Sort only, aſſigning as one Reaſon, that the Grandees and rich Men, are covetous and over reaching, by which they acquire Eſtates, and never will be prevail'd upon to make Reſtitution, and therefore no Chriſtians; but if that were the only Proofs, I am afraid we need not go ſo far as *China* to find ſome that are not Chriſtians; but however, another indeed more undeniable Reaſon for their denying their being Chriſtians, is, their denying the very Eſſentials of it; to wit, the Doctrine of the Trinity, and the Incarnation, which doubtleſs whoſoever denies, have no Pretences to Chriſtianity.

Wives ſold or changed.

THEIR Religion will not allow that one Woman ſhould be confin'd to one Man, but that the Man has ſuch an abſolute Property in his Wife, and ſuch a Power over her, that they may ſell, change, or otherwiſe tranſfer their Wives from one to another as they pleaſe.

A Cruel Cuſtom.

THEY have a barbarous and cruel Cuſtom there, tho' it is become ſo common that it is not thought a Crime; for when Parents are in ſuch low Circumſtances, that they find themſelves unable to maintain handſomely the Children they have got, they look upon it as an Act of Piety to deprive them of their Being, rather than ſee them live in Miſery; and yet they are generally ſo tender, if that may be call'd Tenderneſs, that becauſe they cannot ſee 'em die a lingring Death, for want of the Neceſſaries of Life, much leſs butcher them with their own Hands, they turn them adrift into the Streets or Highways, to let them live or die unknown to them; and when the Miſſioners find any of theſe poor miſerable Children near expiring, they think it an exceeding Act of Piety and Charity to adminiſter Baptiſm to them before they depart this Life, which they think gives them an undeniable Title to a State of eternal Happineſs in the World to come.

CHAP.

CHAP. IX.

Treats of their Marriages, Wives, Children, and Slaves, and the Names by which they are distinguish'd.

Marriages. THE Marriages of the *Chinese* are not contracted by the Choice or Application of the Persons concern'd, but by the mutual Agreement and Consent of the Parents, and that commonly before the contracted Parties, if I may so call them, are at Age to chuse for themselves; nor do they ever see one another, except by Accident, after the Contract is made, any more than before; nor is the Woman's Consent ever ask'd; but when the Time appointed by the Parents for the Marriage is come, the two are told of the Contract, the Woman is deliver'd up to the Man upon certain Conditions, previously agreed upon by the Parents, and no more Dispute is made by the Woman than would be made about the delivering up any thing else that was the Parents absolute Property.

In Marriage Contracts, the Man's Parents always purchase the Woman for his Son, without expecting any Dowry with her, and at that Rate, the Females seem to be the most profitable Sort of Children; and yet it will be difficult to reconcile this to some Accounts, which tell us, that next to Barrenness, the bearing of Females is deem'd so scandalous and contemptible, that if a Woman happen to have three or four Girls successively, without a Boy, she will not stick to expose or turn them away to shift for themselves, or sometimes to strangle them with her own hands; one would think it would be more humane, as well as more beneficial, to keep them for a Market against the Time that they are capable of marrying.

They have advantage of the Rich. The Consequence of their purchasing Wives with a Price, is, that Men of slender Fortunes must have the fewer Wives; and for the poorest sort they are obliged to be content with one a-peice, that being as many as they are able to purchase; and in this Case the Wives of poor Men are much more happy than the Wives of the Rich; for the poor Man's Wife has her Husband to herself, whereas the Rich are not content with one, nor perhaps some with a Hundred, if they are able purchase so many; and yet these miserable Creatures, for they cannot be called otherwise, are never permitted to see any other Man but their Lord, nor to be seen of any after they are engaged, and doubtless among so many, some (the ordinariest) have but a small share of Conversation with their Lord, while the poor Country Dame, whose Husband can purchase no more than her, has him all to herself, and can walk abroad to breathe in the open Country Air, a valuable Privilege which the poor Seraglians, the Wives of the Rich, are deprived of.

Amongst all the Wives of the Rich, she that bears the first Child has the Preference, even in the Emperor's Court, as well as elsewhere; and so great a Value do they put upon Propagation, that a Woman, though a Wife, is not thought fit to dine with her Husband's Mother, but must wait at the Table till she has a Child.

[illegible] There is one thing that seems very much to obstruct the Progress of Christianity, and the Propagation of the Gospel in that Part of the World: The Jesuit Missionaries Doctrine is, that it is impossible for a Person to be a Christian, that has more Wives than one, and that may be one great Reason, why most of their Converts are of the poorer Sort, and such as cannot purchase more Wives than one; but by this means the Success of their preaching Christianity is block'd up amongst the Rich; and it seems reasonable, for the better encouraging of the Christian Religion, that there should be a little Dispensation allow'd, at least to those who had a Number of Wives before the Gospel was preached there; for if they would turn Christians, and yet must not be baptized without turning away all their Wives but one, what would become of their Children; must they be kept with the Father, and the Mother be separated from them, or must they go along with the Mother, and lie at her Charge for a Maintenance, without any Help of the Father? 'Tis true, as Polygamy is contrary to the Rules of Christianity, those who are converted before they are married, or have more Wives than one, may confine themselves one Man to one Woman; and by this means, that Evil would be gradually remedied, and in one Age, the Multiplicity of Wives would be extinct; but to divorce Wives, without any just Cause in them for so doing, must create a great deal of Confusion in the Common-wealth.

A Woman that was one of a Mandarin's Wives, and was willing to embrace Christianity, but was told by a Jesuit that she consulted, that she must first renounce her Husband, and not continue one of the many Wives of one Man; to which she answered, A Woman's Answer to a Jesuit. "Sir, I belong to a Mandarin that bought me; if I "go out of his House, he has a Right to reclaim "me, and take me again, and inflict on me the "Punishment of a Slave; and if I could avoid his "Pursuit, whither should I fly, my Kindred who "sold me durst not harbour me, and I shall inevitably fall into the Hands of some other Person, "who will, contrary to my Inclination, engage me "in the State I seek to avoid; I must therefore re"main in the House where I am, and then, how "shall I be able to resist a brutish Fellow, who "consults only his own Lust, and will be justify'd by "the Laws and Example of the whole Empire: It "is to no Purpose to lay before him the Holiness "of Christianity, which I desire to embrace, neither "my Tears nor Entreaties, or even the most obsti"nate Resistance I can make, are able to hinder "him." Thus this poor Woman was deny'd to be initiated into Christianity, for no other Reason, but because she did not perform a Condition that was out of her power.

Marry Young. The Men in *China* marry at about Twenty Years of Age, and the Women about Twelve; an old Batchelor is look'd upon with the utmost Contempt, and it is thought very unfortunate to have no Children to mourn at their Graves; and therefore there is scarce a single Man to be seen amongst them, and some of the Richest of the common Sort have ten or a dozen Wives each; and as the Women are exceeding fruitful, and they seldom have either War or Pestilence, to carry off any Number of their Inhabitants the vast Populousness of the Country is easily accounted for.

Degrees of Kindred. They do not stand much upon degrees of Kindred in their Marriages; especially by their Mother's side but they never marry into the same Name.

The Token for the Marriage being irrevocable, is, the Bridegroom sending to her, and she accepting

ing gold and silver Bodkins, or some particular Present of Value, proportionable to her Quality, which being given and received, confirms the Contract; though still they have never seen one another; nor ever do, till the Bridegroom sends for her; but after the Tokens thus received, she cannot marry to another while he is alive: Yea, though her Spouse go out of the Kingdom, she must wait his Return, or till she has certain News of his being Dead. When the Day appointed for the Nuptials is come, there is here, as in other Parts of the World, great Rejoicing and Feasting at the fetching Home of the Bride, and frequently a splendid Cavalcade from the Wive's Father's House to the Bridegroom's, with Drums, Trumpets, Streamers and Colours, and the Musick playing; but the Bride is carried in a close Chair, because she must not be seen by any Man, though the nearest Relation; and when she is brought to the Bridegroom's Door, he stands at the Gate richly Drest to receive her and opens the Door of the Sedan himself, and this is the first Interview between them, they never having seen each other before, and therefore when it approaches, it must be expected with some Impatience on both sides, to see how each like their Bargain; and doubtless it must create strange Confusion, if either of them is deceived in the Representation made of the other, when they do not appear so amiable as was expected but let the Case be how it will though the Woman upon sight of the Man conceive never such an Aversion against him, she is obliged to stand to him; there is no redress for her, if he will accept of her; but if the Woman be not so agreeable as the Man expected, he may return her back to her Parents that Moment, only losing the Money wherewith he purchased her; but if he once receives her in form, he cannot afterwards divorce her, except for Adultery or some notorious Offence. If he takes any Concubines after he is married, they are accounted as Servants or Subordinates to the first Wife, but their Children are equally entitled to their Shares of the Man's Effects with hers: They look upon it as a great Conveniency for a Man to have many Wives; for, regardless of the Confusion which we in *England* should think would be caused by having many Wives or Concubines, they look upon it with another View, and think that among so many, if some be sullen and out of Humour, yet there is a Chance of finding some of them in Temper to have recourse to, and to converse with.

Allow'd a Gallant.

ALTHOUGH the Women after they are married are not allow'd to converse with any Man, even the nearest Relation; yet, as they are previously apprehensive of it, some of them that are not willing to be so rigidly restrain'd, have it made a Condition in their Marriage Contract to have a Gallant, who in that Case has as free Accets to her, as the Husband himself has; but this Practice is so contrary to their Constitution, that although they are allow'd this way of living by Consent, yet the Children of such Women are reckon'd illegitimate, and for ever excluded from any Place of Trust in the Government.

Be Slaves for Wives.

POOR People that have not wherewithal to purchase a Woman, will give themselves to be Slaves for a certain time, as they can agree, on Condition to have a Female Slave for a Wife; and when these pooreft Sort get more Children than they can maintain or provide Portions for, and not willing to turn them away to starve, as before mention'd, they geld them, if they are Boys, that they may be capable of Preferment in the Seraglio; and no other but those Eunuchs are allow'd to attend in the innermost Courts of the Palace, or to come near the Womens Apartments, nor is any Man, not even the Husband's Father, ever allow'd to come into the Wife's Apartment; and in such a sacred Manner do they keep up this Custom, that if a married Man has committed any Offence, for which his Father would punish him, (for it is the Father's Province to punish for small Crimes after Marriage as well as before,) yet if he can but escape to his Wife's Apartment, his Father dare not approach him to fetch him out or punish him there.

Eunuchs.

Employment

THE Women commonly employ themselves in Painting, Needlework, and other light Employments, fit for their Sex, but never meddle with Trade, buying and selling, and divert themselves with the Company of Dogs, Birds, &c. as we in *England*; and if they are not married before their Father's Death, their Brother, if they have any, are obliged to maintain them.

Diversion.

Names.

EVERY Man has three Names; first a Sir-name common to the Family, as we have in *England*; secondly, a proper Name, by which they are distinguish'd, as we are by our Christian Names; thirdly, a Name that he receives when he enters upon Business, by which his Calling is expreft, and are all three the same as we generally use to distinguish a Man by, his Christian Name, Sir-name and Trade.

THE Daughters of a Family always retain their Father's Sir-name, but have no proper Names given them, but are known by their Order of Birth; as, First, Second, Third, &c. prefix'd to their Common or Sir-name, and do not change their Names, and assume their Husband's Name at their Marriage, but retain that of their Father and Family.

CHAP. X.

Of their Funeral Rites, Tombs, Manner of Mourning, &c.

Burials.

IT is look'd upon as a Badge of Grandeur, to have their Tombs and Coffins provided in their Life-time, and such have also particular Burying-Places for themselves, to which they must be brought when they die, tho' it be at never so great a Distance: But there is a common Burying-Place without the City, where People of the ordinary Rank are buried promiscuously; but they never suffer any Person to be buried within the Walls of a Town or City, nor is any Person that dies in the Country, ever to be suffer'd to be brought into or thro' a Town or City to the Burying-Place, tho' it be on the quite contrary side of the Town.

Coffins.

THEY make their Coffins of the most durable Wood they can procure, and sometimes six or eight Inches thick, but much in the Shape of ours, and have them gilded and varnish'd in a more or less chargeable manner, according to the Dignity of the the Deceas'd or Survivors, who if they be rich will have the Ornaments of the Coffin to cost several hundred Crowns.

Funerals.

WHEN any Person of Note dies, his Son, if he has any, or if not, some of the nearest Relations, acquaint his Friends with it, and in the mean time, they wath and perfume the Corpse, and dress it in the best Cloaths he had, and place it in a Chair, where the Relations in their Order, the Wives first, the Children next, and then the Attendants prostrate themselves before the Corpse and bewail their Loss. On the third Day they put the Corpse in the Coffin,

and cover it with Silk, and place it in a large Room hung with white Linnen; in the middle of the Room is an Altar, with the Image or Picture of the Deceas'd upon it, before which the diſtant Relations again proſtrate themſelves, burning Wax Lights and Incenſe, during the Ceremony, while the Sons ſtand on one Side of the Coffin, cloath'd in coarſe white Linnen, tied about with a Cord, and on the other Side, behind a Curtain, ſits the Mother and Daughters all in ſorowful Poſtures, the Prieſts ſinging mournful Songs; there are Tables ſet, and Diſhes ſerv'd up, but no body eats till Night, and then the Prieſts ſhare it among themſelves: The Name and Quality of the Deceas'd, and an Account of his Virtues, are writ in a large Scroll of Paper and hung over the Gate. They keep them unburied a long Time. The Sons ſleep upon Matts about the Coffin for a hundred Days, during which Time they eat no Fleſh, nor drink ſtrong Liquor; they are not to come at any Entertainment, nor be concern'd in any Buſineſs for three Years, tho' in the higheſt Poſt under the Government; but this is not to be underſtood of the poorer Sort, who have no Eſtates, nor any thing but their Induſtry to depend upon.

Proceſſion at the Burial.

When the Day appointed for the Burial is come, the Relations and Friends of the Deceas'd accompany the Corpſe to the Grave, againſt which Time they prepare Images of Men, Women, and ſeveral Sorts of Beaſts, made of painted Paper, to be burnt at the Grave: They alſo carry Torches and Incenſe-Pots, to offer Incenſe to the Deceas'd; they alſo carry Pageants before the Corpſe, as Caſtles, Triumphal Chariots, *&c.* with Tables of Meats and Perfumes, the Prieſts following with Drums, Wind-Muſick, and little jingling Bells; then follows the Corpſe upon a Bier born by twenty or thirty Men under an arch'd Canopy, follow'd by the Sons on Foot, leaning on Crutches in Token of their Grief and Mortification; next come the Women in cloſe Chairs cover'd with white Silk or Linnen, and act quite contrary to an Engliſh Proverb, that *a Maid ſhould be ſeen and not heard*; for they, tho' they cannot be ſeen, make a prodigious Howling upon that Occaſion, and ſo much does their Mourning conſiſt in this howling Noiſe, that they ſometimes hire Women to howl, to make the Noiſe the greater, and the Mourning more remarkable.

Tombs

The Great Perſons chuſe to have their Sepulchres or Places of Interment in remote ſolitary Places; their Tombs are large Vaults, ſo ſtrongly arch'd that the Moiſture cannot penetrate through them, in which the Deceas'd being interr'd, they erect an Altar and place Lights upon it, their Friends and Relations coming ſometimes to proſtrate themſelves before the Altar, pouring out Wine Offerings, Meats, and burning Incenſe, bringing ſuch Pictures of Men and Animals as they carried at the Burial, thinking that theſe will be converted into the Things they repreſent, and will be uſeful to the Deceas'd in the other World.

Epitaphs.

The Virtues, great Actions, or whatever was valuable in the Deceas'd, are engrav'd in Stone or Marble, and placed in the Vault before the Altar, and from that Time that Tomb and Altar are reckon'd ſo ſacred, that it is deem'd a Crime for the Sons or Succeſſors of the Deceas'd to travel far abroad from the Shrines of their Anceſtors; which Piece of Superſtition may probably be one great Reaſon why ſo few of the *Chineſe* viſit any other Part of the World but their own; and ſo great a Value do they put upon the Memory of their Progenitors, that the great Ones erect Temples, and offer yearly Sacrifices to them. The Emperor ſacrifices to ſeven of his Anceſtors; the Tributary Kings to five, and the Mandarins to three; and the Time of Mourning for a Father or a Husband, is three Years, but a Man mourns for his Wife or Brother but one Year; and theſe Times of Mourning are ſo ſtrictly kept up to, that they are not allow'd to be diſpens'd with hardly upon any Occaſion whatſoever; only the Soldiers and Military Mandarins are not ſo ſtrictly obliged to it, and altho' their Law does not poſitively forbid it, yet it is reckon'd ſcandalous for a Woman to marry another Husband after the Firſt, even after her three Years Mourning is expired.

Time of Mourning

Honours conferr'd on the Dead

When a great Man dies that has done ſome noble Action, or been particularly uſeful, the Emperor either gives him ſome great Title, or confers ſome particular Honour upon his Memory; which he ſometimes does by writing a large Encomium in his Praiſe, and ſends ſome great Perſons with the Writing from his own Hand, to accompany the Corpſe to the Grave, with an Order to read it to the publick Congregation with great Ceremony and Solemnity, and cauſeth it afterwards to be hung up in the Vault by the Corpſe; ſometimes the Lords of the Court or Prime Miniſters do the ſame after the Emperor's Example, while others ſend rich Preſents towards the Charge of the Funeral; ſometimes the Emperor's Encomium is engrav'd in Marble and plac'd near the Corpſe, and if it is a Perſon of extraordinary Merit, the Emperor often beſtows greater Titles upon them at their Death, than ever they bore when they were alive.

CHAP. XI.

Of the Chief Harbours in China *not treated of before, and of the adjacent Iſlands ſubject to it; their Trade, Cuſtoms and Product, Imports and Exports: And concluding the whole Account of* China, *with a ſhort Deſcription of Northern* Tartary.

Canton.

CANTON is a noted Sea-Port upon the Coaſt of *China*, about ninety Leagues to the Weſtward of *Amoy*. It is the much better Port both for Conveniency and Expedition of Loading; but there is great Caution to be uſed in dealing there, for if the Merchants do not ſettle Preliminaries with the Officers of the Cuſtoms, they are ſure to be impoſed upon when they get them in their Power; but to prevent that, thoſe that know them come to an Anchor at *Macao*, an Iſland in the Entrance of the Harbour, belonging to the *Portugueze*, till the Ship be meaſured, and all the Cuſtoms and Duties be ſo well adjuſted, that there is no Room for Diſpute or Impoſition in theſe Affairs: In their Dealing, they have ſo many Ways to cheat and do wrong, by falſe Beams, falſe Weights, falſe Package, and the like, that except a Man ſee his Goods pack'd himſelf, and weigh them with his his own Scales and Weights, it is next to impoſſible to eſcape being greatly wrong'd.

Falſe Beams *&c.*

Canton deſcribe Windo

The Streets of *Canton* are narrow and well pav'd, the Houſes low, the Windows in Summer are wove Cane or Rattan, for Air, but in Winter they have inſtead of Glaſs Oyſter Shells ſcraped thin, as at *Pekin*; and fix'd in Frames in their Windows, but it affords but a dull Light: Their Silk-ſhops are neat, and make

make a handſome Show, ſtanding in the beſt Parts of the Town, and moſtly together; as their other Trades alſo do: Their Fires are of Charcoal, made in Pots or Pans, and ſet in the Middle of the Room: Their Walls are not white-waſh'd, but hung round with white Paper.

Markets. ALMOST every Street is a Market-place for Fleſh, Fiſh, Fowls, Garden-ſtuff, and the like, which is ſold Cheap; but they are not curious in Dreſſing their Fleſh-meat; they will as ſoon eat a Hog that dies in a Ditch, as one that is kill'd and dreſt by a Butcher. Their Frogs, which they account great Dainties, are black and loathſome, like our Toads, but taſte very well; they eat Rats, and a ſort of Broth made of Snakes, which has been in uſe a long Time amongſt them.

Tartars. THE *Chineſe* and *Tartars* are now ſo incorporated together by Intermarriages, that they are not to be diſtinguiſh'd from one another, either by Stature, Features, or Habit: The Common People are ſuch Gluttons, that they eat ſtatedly four Times a Day, and will at any Time leave their Work to go to Victuals; they feed much upon Rice; they ſmoak much Tobacco, but their Pipes are ſo little, and the Tobacco ſo dry, that a Pipe is ſoon ſmoak'd out.

Tobacco

Blind Beggars. THERE are abundance of blind Beggars in the Streets, which ſome impute to their eating ſo much Rice; but others rather think that it is the hot Winds that blow at ſome Seaſons, that is the Occaſion of it. Almoſt every Thing is ſold by Weight, both Meat and Liquids; in which they are ſuch exquiſite Cheats, that before they bring their Poultry to Market; they cram them with ſmall Stones and Gravel, to increaſe their Weight. They make ſo little Difference between a Hog that is kill'd by a Butcher, and one that dies of itſelf, that they will give a live Hog for one that died in a Ditch, if the dead one be the heavieſt. Hiſtories tell us of a young Gentleman who bought ſome live Hogs here for his Ship's Uſe, but they all died, and they threw them over-board, but obſerved the Perſons that he bought them of to come and take them up in their Boats, and carry them aſhore; from whence he concluded, that they had given them ſomething to kill them, and expected the Event, which afterwards happen'd, *viz.* the Death of the Hogs, and watch'd for throwing them overboard that they might get them again for their own Uſe.

Corea deſcribed. WE have already given ſome Account of the Situation of *Corea*, in the general Deſcription of *China*, Chap. I. Page 8. and it being in the ſame Climate with *China*, and a Part of it, or Tributary to it, differs little from it as to Manners and Cuſtoms. It is a fruitful Country, and produces Plenty of Wheat, Rice and other Grain: There are Gold and Silver Mines, and ſome Pearls are found in the Sea of *Corea*. They trade only with their Neighbouring Countries of *China*, on the Weſt, and *Japan* on the Eaſt of them, neither of which are far diſtant from them; there is a Diſpute amongſt Geographers, whether *Corea* be an Iſland, or upon the Main Continent of *China*; but if we conſider the Situation and Shape of it, according to the laſt and beſt Geography, that Diſpute is obviated and undeniable Probability ariſes, of its being a Part of the Continent.

Formoſa FORMOSA is a conſiderable Iſland belonging to *China*; the Middle of it lies under the Tropick of *Cancer*; it is about twenty Leagues South-Eaſt from *Amoy*, in the Province of *Fokien*, and is reckon'd four or five hundred Miles in Circumference. The *Chineſe* neglecting this Iſland till the *Tartars* conquer'd them, the *Spaniards* came from *Manilla*, an Iſland about forty or fifty Leagues to the Southward of *Formoſa*, and ſettled there; and after them the *Dutch*, who held their Poſſeſſion a long Time, notwithſtanding the Attacks of the *Chineſe*, but were at laſt expell'd; and whatſoever State the *Dutch* had form'd while they had the Iſland in Poſſeſſion, it is now reduced to an entire Subjection to the *Chineſe*, and ſubject to their Laws and Cuſtoms.

Earthquakes. THIS Iſland is ſubject to Earthquakes, which ſome impute to the Brimſtone-Mines, or Quarries, which taking fire, are reduced to a Subſtance leſs capable of ſupporting the Surface of the Earth that lies upon it. The Women Plow and Sow, and Manure the Ground, and the Men chiefly exerciſe themExerciſe ſelves in Hunting. Hence it may almoſt be ſaid, that the Women procure Bread, and the Men Fleſh: Their Houſes are low, and built with Cane. As to their Religion, they are Pagans, as the *Chi-*Religion. *neſe* are, only they have Female Prieſts, who ſacrifice Beaſts and Fruits, and are often conſulted as Oracles. The *Dutch* tell us, that the Chriſtian Religion began to prevail under their Government, but late Travellers ſay, there are few or no Chriſtians upon the Iſland.

Aynan. THE Iſland of *Aynan*, by ſome called *Hainan*, lies off of the Southermoſt Point of *China*, and about ten or fifteen Leagues from it. The Middle of this Iſland lies in Latitude 19 North; it is about a hundred Leagues, or three hundred Miles in Circumference; it is a plentiful Country, and has Gold and Silver Mines. Here is alſo a Pearl-Fiſhery, but the chief Pearl-Fiſhing being upon the *Indian* Coaſt, we ſhall enlarge upon it when we come to give a Deſcription of that Part of the World.

Imports from *China*. BESIDES Tea, mention'd Chap. V. p. 32. which is now imported from *China* in great Quantities, our Merchants bring from thence raw and wrought Silks, Vermillion, Quick-Silver, *China* Roots, Camphire, Sugar-Candy, Fans, Pictures, lacquer'd Ware, *China* Ware, called *Porcelane*, Soy, Borax, Lapis Lazuli, Galingal; and of Minerals they bring *Tutanaque*, which is a ſort of coarſe Tin; alſo Copper in Bars, like Sticks of Sealing-Wax, and ſeveral other ſorts of Merchandize are to be had there as cheap as in the Country from whence they came, and where they are firſt produced.

Gold. THEIR Merchants, and even the Magiſtrates themſelves, will privately ſell Gold to our *Engliſh* Merchants, though they are forbid by the Emperor to export it. Their current Silver is of a Fine-Silver. neſs agreeable to their Standard, as our Silver Sterling is with us; and if it is proved of that Fineneſs, it paſſeth by Weight, ſo that let the Pieces be great or little, ſo much Weight of Silver as is agreed upon for any Quantity of other Goods, anſwers the Payment, as we do with our Money by Tale. And when Payments are to be made in wrought Silver, as Tankards, Spoons, Porringers, or the like, they make an Aſſay to know whether it be Touch, or, as we call it, Standard or Sterling; and if it is, it paſſes current by Weight, without any Diſpute; but if it be baſer than Touch, there muſt be the greater Quantity of it to anſwer the ſame Value, as they and you can agree, according to the different Fineneſs or Baſeneſs of the Metal.

Exports. GOODS uſually exported from *Europe* to *China*, are Perpetuano's, Bullion-Cloth, Cloth-Raſh, and Camblets of ſeveral Colours, as blue, black, ſcarlet, violet, and faſt Colour; but they are ſo little valued, and the Duty ſo high, that except you can run them, or get them aſhore privately, they turn to little Account. Lead affords the moſt Profit of any Commodity that can be ſent from *Europe*, there being ſcarce any other ſort of Goods that *Europe* affords that is worth employing the Ship in as a Cargo; but for private Ventures they carry light Toys, as Amber-Beads, Coral, Flint-Glaſs in Cups or Bottles, Horſe-Piſtols, Sword-Blades of about fourteen Shillings a Dozen, Spectacles ſet in Horn, of ſix or eight Shillings a Dozen, good handſome Clocks and Watches, but not of a very great Price; or any of thoſe ſmall portable Toys that can be convey'd

convey'd ashore without paying the Duty, in which if you succeed, it is much better to carry them than Money, or heavy Goods; but if you pay the Duty for them, the Profit you make of them beside will not countervail the Trouble and Charge that will attend the landing them.

Northern *Tartary* described.

NORTHERN *Tartary* was anciently divided into several petty Kingdoms or Dominions, and most of their Princes yet retain the Title of King; but they are all but Substitutes to the great Emperor of *China*.

Cattle and Hunting.

THE Subsistance of these Western *Tartars* is chiefly their Cattle, and what they get by Hunting; and as their Dealing and Dependance is so much in Cattle, they are forced to live in Tents for the Conveniency of removing to another Place when their Pasture fails where they are; but the Eastern *Tartars* live in Towns, and they are neither so numerous nor so regular as in *China*, and of those many of them are now deserted for warmer Seats, and a more fruitful Soil, or by the best Families drawing up to *Pekin* where the Court is kept, in Hopes of Business or Preferment. The *Tartars* indeed set a Prince of their own over the United Empires of *China* and *Tartary*, but he keeps his Court in *China*, and his own Empire of *Tartary* is now become tributary to the Empire that he conquer'd. They are govern'd by a Military Force, and have Garrisons in all their strong Towns; but the Laws and Customs of the *Chinese* prevail and gain ground daily, though as for those who never go out of their own Country, and converse not with the *Chinese*, they in a great Measure retain their own Customs and Exercises, and are not so effeminate as those that live more Southerly; nor do they improve themselves so much in Trade, but apply chiefly to Hunting and Horsemanship, which they think much more Manly, and think it a much greater Honour to be found at the Head of an Army, than to be indulged in Chairs and Horse-Litters; and as it has been an Observation, that People of the most heroick Spirits are generally the least troubled with Jealousy, and use their Women with most Tenderness, so those *Tartars* allow their Women all innocent Liberty, and both Sexes converse together with all modest Freedom.

Not Effeminate.

Hunting.

THEY neglect the cultivating of their Land for the sake of their Hunting, thinking that the best Provision which they get by that Exercise; so that altho' they have some Wheat and other Grain, yet Flesh is much more Plenty with them and depended upon than Bread. The Country affords Abundance of good Horses, which they breed not only for Service, but for Food; Horses Flesh and Mares Milk being esteem'd delicious Food, and besides, they send many Thousands of these fine Horses to the Emperor every Year.

Ginseng.

THE famous Plant *Ginseng*, spoke of before, grows chiefly in this Country; there are ten Thousand Men employ'd yearly to gather it for the Emperor, and when he is supply'd, they are allow'd to gather for their own Use, or to sell, as they think convenient. They have Plenty of rich Furs in this Country.

Laws.

THEY do no not much observe any regular Laws but are passively obedient to the Will of their Prince, which is an absolute Law to them. They do not bury their dead as the *Chinese* do, but burn them, and it was a Custom for the Wife also to burn herself with her Husband's Body; but that Practice has been abolish'd some Time.

A DESCRIPTION OF THE *KINGDOM of* JAPAN.

CHAP. I.

Gives an Account of the Situation and Extent of this Kingdom; alſo of the Cities, Palaces, Manner of Building, and kind of Furniture.

THE Kingdom of *Japan* conſiſts of ſeveral Iſlands; the weſtermoſt part of which lies about fifty Leagues Eaſt from the Eaſt Coaſt of *Corea*; they extend from about 30 to 40 Degrees of North Latitude. The largeſt of theſe Iſlands, which alſo gives Name to the Kingdom, was called *Niphon*; but as it is now commonly known by the Name of *Japan*, we ſhall not ſpeak of it under any other Name.

Niphon now Japan.

THE next Iſland to *Japan*, both in Situation and Magnitude, is *Bongo*; it lies to the Southward of the Weſt End of *Japan*; it contains about one hundred and ſixty Leagues in Circumference: The Capital of this Iſland is called *Bongo*, after the Name of the Iſland; on the Weſt Coaſt of this Iſland is the City of *Nangaſaque*, to the Weſtward of which the *Dutch* have a Factory, upon a ſmall Iſland called *Kiſima*; which has a Communication with *Nangaſaque* by a Bridge, but the *Dutch* are ſeldom allow'd the uſe of it.

Bongo.

Tonſa.

THE next leſſer Iſland is *Tonſa* or *Tokoeſy*; it lies near *Bongo* on the Eaſt, and *Japan* on the South; it is about a hundred and twenty Leagues in Circumference; its Capital City is *Nava*, it lies towards the Eaſt End of the Iſland.

THERE are ſeveral other inconſiderable Iſlands thereabouts, ſubject to the King of *Japan*; as *Barnevel's Iſland*, *Prince's Iſland* and others; but being of ſmall Importance, they are not much taken notice of by Geographers.

Climate.

THESE Iſlands lying in about the ſame Climate with the Straits of *Gibraltar*, and rather in a more Southerly Latitude that *Italy*, it might be expected the Air ſhould be warm, or rather hot, as in thoſe Countries, and yet in the Northern Parts of *Japan* they have very cold Winters, and great Quantities of Snow; but it is accounted a very healthful Air, they having never either Plague, Gout, or Stone, but Small Pox and Fluxes are very common among them; and as the Air is healthful, ſo the Soil is fruitful, producing Plenty of Rice, Millet, Wheat, and excellent Barley, of which they have ſuch Quantities, that they tranſport it to other Places, as they alſo do their Rice.

Product

THEY have moſt Sorts of Trees, Fruits, Herbs and Beaſts, that we have in *Europe*; and of the laſt they have ſome unknown to us: They have Plenty of Fowls, wild and tame; they have ſpacious Foreſts, in which grow lofty Cedars, and the Bowels of the Earth are ſtored with Mines of Gold, Silver, Copper, Tin, Iron and Lead, but not quite ſo good as in the *Indies*, only the Silver, which is excellent good, and very plenty: They have Pearls, and though they are of a red Colour, they are ſaid to be as valuable as the white ones.

Whence Peopled.

SOME People imagine theſe Iſlands were firſt Peopled from *China*; but if we conſider their Situation with reſpect to Eaſtern *Tartary*, the ſmall Diſtance they are from it, and their Conformity to ſeveral Cuſtoms of the *Tartars*, which the *Chineſe* would never ſubmit to, till conquer'd by them, and then only by Compulſion, as burning their dead, ſhaving their Heads, &c. Theſe Things conſider'd, it is much more probable they proceeded originally from Eaſtern *Tartary*.

SOME indeed aſſign as a Reaſon for their uſing the Cuſtoms of the *Tartars*, that the *Japaneſe* were baniſh'd *China* for their Rebellion, about ſix or ſeven hundred Years ago, and that out of Revenge againſt the *Chineſe*, they with Abhorrence abandon'd all their Cuſtoms; but it is improbable that People, originally *Chineſe*, ſhould voluntarily aſſume a Cuſtom of cutting off their Hair, in which the *Chineſe* took ſo much Pride, or that they who had been uſed to ſit in Chairs, ſhould at once condemn themſelves to ſit croſs-legged upon the Ground, for no other reaſon but becauſe the *Chineſe* baniſh'd them: One would think it was Mortification enough to be baniſh'd from Home, and not voluntarily to inflict Penance upon themſelves, which was both contrary to their Inclination, and inconſiſtent with their Eaſe.

Cities.

THERE are three conſiderable Cities in the Iſland of *Japan*; the firſt and Eaſtermoſt is called *Jedo* or *Yedo*; it ſtands at the Bottom of a deep Bay, or Arm of the Sea, and is the Imperial Seat. *Jedo or Yedo*

The Palace ſtands in the Middle of the City, and is a large Square of five Miles in Compaſs; it is ſurrounded by three Walls, between which are Courts, Gardens, and Canals; the Royal Apartments and Seraglio being within the innermoſt Wall, and, by reaſon of its extraordinary Ornaments, as Carving, Gilding, and the like, appears exceeding magnificent.

THE Palaces of the Princes of the Blood and Privy-Counſellors are between the innermoſt and ſecond Walls, and between the two outermoſt Walls are the Palaces of petty Kings, who are obliged to reſide at the Court half the Year. Some Travellers report that theſe Palaces are cover'd with Gold, becauſe they appear at a Diſtance with ſuch a ſhining yellow Luſtre; but it is more probable they are cover'd with ſuch yellow glaz'd Tiles as the Emperor of *China*'s Palace is cover'd with, they looking like Plates of Gold when the Light of the Sun is reflected upon them.

WITHOUT the Palace ſtand the Houſes of the inferior Nobility, who every one endeavour to excel

each other in Sumptuousness and Magnificence of Building, as supposing the Splendor of their Palaces recommend them more to their Prince's Favour, which is another Thing in which they directly differ from the *Chinese*, who (as has been observed before) look upon a House built with more than common Grandeur to be an Insult to their Prince.

Meaco. THE next City for Magnitude is *Meaco*: This City stands upon a River or Arm of the Sea, near about or rather to the Westward of the Middle of the Island; it was formerly the Imperial Seat, when the Family of the *Dairi* was upon the Throne; and it is now the Seat of the *Triumviri*, or three principal Magistrates; the first of which is the *Dairo*, a sort of a Prince who inspects into Civil Affairs; the second is the *Cubo*, or King of *Tenza*, who has the Care of the Militia, and manages the Affairs of Peace or War. The third is the *Zazo* or *Xaco*, who is Chief in Sacred or Religious Matters. It is said this City once contain'd a hundred and eighty thousand Houses, but by reason of the Wars, is reduced to about a hundred thousand, and is about twenty or twenty one Miles in Circumference.

THE Streets of this City are large and well composed, but it is not wall'd, (being a thing little used in this Island;) but the Streets are chain'd up in the Night, and two Watchmen at each End of every Street, to prevent Fires or whatever irregular Transactions may happen in the Night.

Saccai. THERE is another City called *Saccai*, situate on the South Side of the Island, at the Entrance of the River that goes up to *Macao*; it is a large and populous City, it is defended by the Sea on one Side, and by a Wall and a Ditch on the other.

Building. THE Buildings in *Japan* are mostly of Wood for the Middling Trading People, and they are generally but one Room upon the first Floor at the first building of the House, which is afterwards divided into more or less Rooms, larger or smaller, as they have Occasion, by folding Partitions like our Screens, and moveable, that as they would enlarge any of their Rooms they need remove a Partition or two, and so let two or three Rooms into one, or if their Business or Company require it, they can remove all the Partitions, and then all the whole House is but one large Room.

THE poorest sort, or some of the inferior Tradesmen, live in Thatch'd Houses, built with Mudd Walls; but these Roofs being liable to take fire, they have commonly an Apartment built with Stone, to secure their most valuable Goods from that Danger. *Poorest*

BUT the Houses of the Nobility are made much more sumptuous, especially within, they being wainscotted with Cedar, their Floors well paved, and cover'd with fine Matts; their Ceilings are painted or gilded, and their Doors beautifully varnish'd, not only for Ornament, but to enable them to resist the Weather: They have no Glass in their Windows, as we in *Europe*; nor wove Cane, or scrap'd Oyster-shells, as in *China*; their Windows are quite open to the Weather, only defended by Shutters at Nights or other Times, when they have a Mind to secure them. *Nobility.*

THE Ground supplies the Use of Tables, Beds and Chairs to them, and the Matts spread upon it answer the End of Bedding and Table-linnen; for they have Matts spread upon the Ground, upon which they set the Victuals when they go to eat, and sit down round it upon the same Matts to eat it, or when they rest or converse together, and lie down upon the same when they go to sleep; and for other Furniture, the Common People have their Rooms hung round with Pictures, or painted Paper. Their Goods are Cabinets, Screens, *China* Ware, fine Swords, and the like, which they hang up or expose in their Rooms, as Houshold-Goods and Ornaments. *Furniture.*

THEY keep strict Watch every Night; the Gates of every Ward or Division is close shut up, and Lanthorns hung out, and it is said they are so strict in shutting up every Ward, that in case of Fire they are not suffer'd to come at one another. *Watch*

CHAP. II.

Gives an Account of the Genius and Temper of the Japanese, *their Habit, Diet, Diversion, Festivals, Musick, Salutation, Trade, Customs, Manufactures, Husbandry*, &c.

Genius and Temper. THE *Japanese* are of a good Stature, strong and active; their Complexion inclining to an Olive Colour: they are well disposed, judicious, apt to learn, of quick Apprehension, good Understanding, and sound Memories, but very subtle in their Dealings. Some indeed give them the Character of Cruel, Ambitious, Uncharitable, and the like; but was every Person to give a Description of every Country they have travell'd in, by the Usage they have met with in it, their Accounts would be different according to the different Tempers and Interests of the People they converse with; and it is generally observed, that in whatever Country, whether more or less remote, People travel, those that converse with People of the best Figure and Character there, commonly bring the best Account of the Manners of the People of that Country home; and as we see even amongst our selves that the Carriage of the rude Vulgar seldom comes up to that of the more polite Part of our Inhabitants, so we think those that travel abroad ought not to be so partial as to make the unpolish'd Behaviours of the Vulgar to be a general Specimen of the Manners and Customs of a whole Country; which consider'd, I question not but the different Account of the Manners of the *Japanese*, either brought home by different Travellers, or collected by the same Author, might be easily reconciled.

As to their Dress, they wear several Vests one upon another, as the *Chinese* do, with a loose Gown over all; they have Drawers like our Sailors Trowsers, which come down very low upon their Legs, and Slippers without Heels; they go bare-headed, though their Heads are shav'd, but use Fans and Umbrella's to defend them from the Injuries of either Heat or Rain; they wear a short Dagger in their Girdle, and a heavy broad Sword, which they carry on the Right Side, contrary to the Custom of the *English*. *Habit*

THEY do not eat much of the Flesh of any tame Beast, as Beef or Mutton, but love best what they take in Hunting; but some of them are so tender, that they will not eat any thing that had Life, and was killed for their use, nor even what is extracted or drawn from any living Creature, as Milk, Butter, Cheese, *&c.* their most common Food being Rice, Pulse, Herbs, or the like, natural Products of the Earth. *Eating*

THEIR common Drink is a Liquor made of Wheat, like the *Chinese Hocksheu*, or another sort made of *Drink*

Rice,

Rice, like their *Samſhue*; but Tea is very frequently uſed amongſt them: They uſe no Knives, Forks, or Spoons, but eat with two little round Sticks, like the *Chineſe*: Their Diverſions are very remarkable; they delight in Plays, which we in *England* are apt to ſay repreſents the Virtues, and expoſeth the Vices of the Age; but their Plays are generally ſome Part of the Hiſtory of their own Country, and acted by their Miniſters of State, and other great Men. They have alſo Shooting Matches, and other Manly Exerciſes, which ſometimes the King and Quality are pleas'd to encourage with their Preſence; and at the end of every Play or Maſquerade there is always a Noble Entertainment provided at the Charge of the Company.

Diverſions

They hold a great Feſtival every Time that they viſit the Tombs of their Anceſtors, in the Order of which they ſeem to pay a great Deference to the Number Seven, their Viſits and Offerings of Incenſe, and other Devotions, being paid to the Shrines of their deceaſed Parents every ſeventh Day for ſome Time, and more particularly every ſeventh Month, but chiefly every ſeventh Year. At theſe grand Solemnities every Houſe is illuminated, and they march at Midnight in a ſolemn Proceſſion out of the Town to the Graves of their dead Friends, where they eat, drink, and make merry for ſeveral Nights ſucceſſively; and when the Feaſt is over, they march round the Town as if in Triumph, beating upon Braſs Pans, and diſplaying their Flags, Streamers, and Banners before the Temples of their Idols, and at the Doors of great Men.

Feaſts

When a great Man makes an Entertainment, he commonly at the End of the Feaſt calls his Servants together, to ask them which of them will ſacrifice their Lives before the Gueſts for his ſake; upon which they contend who ſhall firſt rip up their own Bowels, and this is common not only at common Feaſts, but at any ſolemn Undertaking, as the laying the Foundation of a Palace or other magnificent Building, or when the Maſter dies to whom the Servant, while the Maſter was living, paid a great Veneration.

Servants ſacrifice themſelves

They keep their main Roads in good Repair, and inform the Travellers of the Diſtances of Places by Trees ſet up in the Road at every three Miles; but there are no Inns or Publick-Houſes upon the Road, but inſtead of Diverſion or Refreſhment, you find now and then upon the Road the Carcaſs of ſome of their Malefactors crucified with their Heads downwards, as a Terror to thoſe that ſee them, and to deter others from the like Offence.

Road

The Trade of *Japan* is not very extenſive; they deal with their Neighbours on both Sides *China* on the Weſt, and *Yedſo*, by ſome called *Jeſſo*, whoſe Deſcription follows in Chap. VI. on the North, till the *Dutch*, by a Piece of religious, or rather irreligious Policy, introduced themſelves into a Correſpondence with them, which was occaſion'd thus:

Trade

The *Portugueſe* Chriſtians, about the Year 1622, being charg'd with forming a Conſpiracy againſt the *Japaneſe* Conſtitution and Government, they were all deſtroy'd, and an Order iſſued out that the Subjects ſhould not have any Commerce or Dealing with any Chriſtian. The *Dutch* to engroſs the Trade with *Japan* to themſelves, denied Chriſtianity; and as a convincing Token to the *Japaneſe* of their Infidelity, they by way of Ceremony, and to convince the *Jews* of their Infidelity, trampled upon the Croſs of our Saviour, which gave the *Japaneſe* ſuch a Degree of Satisfaction, that they were permitted to have a Factory there, which continues to this Day; but the *Japaneſe* perceiving this Hypocriſy or Infidelity in the *Dutch*, (for one of them it muſt be, when a profeſt Chriſtian denies his Religion for the ſake of a Trade,) are yet ſo jealous of them, that when any *Dutch* Ship arrives, they ſend an Officer immediately aboard to take an Account of the Number of their Men; and leſt they ſhould ſail without their Knowledge, they carry aſhore their Sails, Ammunition, Guns, and Rudder, till they are ready to ſail; nor do they allow the *Dutch* Factory any Communication with the City of *Nangaſak*, but when they pleaſe, although they are only ſeparated by a River and a Wall.

Dutch Policy

Japaneſe Jealouſy of the *Dutch*

This Iſland of *Kiſma* or *Diſnia*, where the *Dutch* Factory is, is not above two Miles in Circumference, and only ſeparated from *Nangaſak* in *Japan* as above; and yet ſo great is the Jealouſy of the *Japaneſe*, that they will not ſuffer any *Dutchmen* to come from thence into the City, nor are the *Dutch* allow'd ſo much as to have a lighted Candle in their Houſes in the Night; and if the Centinel perceive any Noiſe, he alarms the Governor by blowing a Horn, and he ſends a Party to enquire ſtrictly into the Reaſon of it, which when they have found the Authors, are threatned or puniſh'd as the Governor thinks the Crime deſerves; and under this ſtrict Diſcipline the *Dutch* continue eight or nine Months in the Year in their *Dutch* Factory in the Kingdom of *Japan*.

Iſland of *Kiſma* or *Diſnia*.

And leſt the *Dutch* Ships ſhould arrive unknown to them, the Governor of *Nangaſak* placeth Centinels upon the Hills to wait the Approach of any Ship; and when any appears, they ſend an Officer off to her, and as ſoon as the Ship is anchor'd, an Expreſs is diſpatch'd to the Court, and no Goods muſt be deliver'd till the Anſwer comes; but the Officers aboard do in the mean time take an Account of the Ship's Cargo, with the Name, Age, Stature, and Office of every Man aboard, all which is regiſter'd in the *Japaneſe* Language; and when the Expreſs returns, they permit the Ship's Company to come aſhore, and they are all muſter'd before a *Japaneſe* Commiſſary, and every Perſon is called and obliged to give an Account of his Age, Quality, and Office, to find if it agrees with the Liſt the *Dutch* gave in; after which, having taken their Sails, *&c.* aſhore, as mention'd before, the *Japaneſe* Officer ſeals down the Hatches; nor can they be open'd any more without an Officer ſent directly from the Governor, to ſee what is taken out, and ſeal the Hatches again; nor are they allow'd to light a Candle aboard of the Ship any more than aſhore, nor any Ship's Company allow'd to converſe with one another.

Every *Dutch* Ship is obliged upon his Arrival to ſend a Preſent to the King at his Royal Seat at *Yeddo*; the Meſſenger who is employ'd upon this Occaſion approaching the King upon his Knees, with his Hands join'd together; and when the King has received the Preſent, the *Dutch* Officer or Meſſenger is conducted back to *Nangaſak*, under a ſtrong Guard, in the ſame Manner as he came thither.

Preſent made to the King.

While the *Dutch* Ships are there, the *Japaneſe* are not allow'd to go aboard of them, or to trade with the Sailors, only thoſe who carry Proviſions aboard, and they are not allow'd to take Ready Money for them till a Permiſſion for Trade comes from Court, and then they bring in their Accounts, and are paid, and ſix Perſons are allow'd from every Veſſel to come aſhore and trade for themſelves for four Days, either in the Iſland *Diſnia* or in the City, and when that four Days are expired, they go aboard, and ſix more are allow'd to come for four Days more, *&c.*

The *Dutch* make a particular Invoice of the Goods they buy here, with their Price, which being tranſlated into the *Japaneſe* Language, is affix'd to that Gate of *Nangaſak* that leads to the *Dutch* Factory, and then the *Dutch* have free Liberty to Trade with the Citizens of *Nangaſak* for ſix Weeks, which being expired, the Ships muſt prepare to return; the Gate of *Nangaſak* is ſhut, all Communication ſtopp'd, and the *Dutch* confined to their little Iſland again, till the next Seaſon for Trade approach: But although they are deny'd all Converſation with the *Japaneſe* after

after the Gate is ſhut, yet they are allow'd, while the Trade is open, to hire as many *Japaneſe* Girls as they pleaſe of the Lords and great Men, and take them to their own Iſland for their own Uſe or Diverſion, during the Abſence of their Fleet; nor do thoſe great Men make any Scruple of this way of Merchandizing with the *Dutch*.

Dutch hire Girls.

Dutch Exports to *Japan*.

THE *Dutch* ſend great Quantities of Raw Silk to *Japan*, as alſo wrought Silk, Cloth, Raw Hides, Deer-Skins, Wool, Linnen, Hemp, Quickſilver, Sugar, Pepper, Cloves, Musk, Camphire, and Borax, Siampan and Brazil-wood, &c. for which they receive Gold, Silver, fine Copper, Cabinets, and other *Japan* and Lacquer'd Ware. Some Authors, ſay they, carry *China* Ware to *Japan*, but it ſeems either very improbable, or that the Quantity is very ſmall, ſince, as was obſerved before, the *Japaneſe* have a Trade with *China*.

Their Cattle.

THEY have much the ſame ſorts of Cattle and Poultry that we have in *Europe*, only their Horſes are very ſmall; Rice is the principal Grain here as in *China*, and managed in much the ſame manner; it grows always in Water till it is ripe; they have good Red Wheat, but not ſo plenty as Rice: Their Husbandmen are little better than Slaves; they cultivate the Ground for their Lords and great Men, but have no Properties of their own.

Gardens.

THEY take more pains with their Gardens here than in *China*, and bring them to much greater Perfection: Where there is a Houſe of any Note, they have commonly a large Court before it, and a Garden behind beautified with fine Mounts, Walks, and Terraſſes, and adorn'd with Greens and Flowers; and as there is commonly a large Viſto from the Court-Gate through the Houſe into the Garden, the Beauty and Order of the Garden may in a great meaſure be ſeen from the Street.

Mountains.

THERE are ſeveral remarkable Mountains in *Japan*, but the higheſt and moſt remarkable is about four Leagues from *Meaco*; it is ſeen above the Clouds, and though it ſtands eighteen Leagues within the Land, it may be ſeen forty Leagues off at Sea; it is called *Figenojama*. There is another called *Juy* or *Juycan*, which vomits out Fire like *Viſuvius* or Mount *Etna*, beſides ſeven or eight other burning Mountains or Volcano's, which at certain Times caſt out great Quantities of Fire and Smoak. There are Medicinal Springs in ſeveral Places in the Kingdom of *China*.

Me... and ...Pond...

THE *Japaneſe* Varniſh and Lacquer being become ſo famous in *England* as to go by the Name of the Place, and when any Cabinet or Tea-Table is Varniſh'd with it, it is ſaid to be *Japan* or *Japan'd*, take the following Account of its Compoſition, as it was taken from the *Philoſophical Tranſactions*.

Japan Varniſh and La...

THIS Varniſh is made of Turpentine mix'd with a curious ſort of Oil which they have, and boil'd to a Conſiſtence; but the *Lac* is the Juice of a Tree, which runs out ſlowly by cutting the Tree, and they ſave it by faſtning Pots to the Tree under the Place where it is cut; it is of the Colour and Subſtance of Cream at its firſt coming out, but being expoſed to the Air, the upper Part of it turns black, and as the uppermoſt Part of it ſoon turns black, ſo the way that they uſe to make it all black is, by putting a ſmall Quantity of it into a Bowl or Platter, and ſtir it about with a Piece of ſmooth Iron for twenty or thirty Hours; it will all by being thus variouſly expoſed to the Air, become black and thickiſh; with this they mix a Quantity of the fine Aſhes of any burnt Boughs, which being well mix'd together, they lay it on with a Bruſh upon the Wood that is to be Lacquer'd; and when it is well dried in the Sun, it will be harder than the Wood itſelf that it was laid on: When it is dry, rule it with a ſmooth Stone and Water, it will be as ſmooth as Glaſs, and black without further Trouble; but if you would have Red, or any other Colour, you muſt mix the Colour in fine Powder with the Varniſh, and the ſmoother it is laid on, the more beautiful it is. When they would *Japan* (as we call it) with Gold Colour, they draw the Flowers, Figures, or Buildings with Varniſh, and when it begins to dry, lay on Leaf Gold, or for a coarſer Colour, they uſe Pinduſt, and having let it lie till it is throughly dry, rub it tenderly, and the Gold Figures or Images will remain where you drew them with the Pencil or Bruſh with the Varniſh, and all the reſt will remain a bright black Ground.

THIS Lacquer is very pernicious to the Hands and Face, and ſometimes cauſeth Swelling or Lameneſs, having an effect in ſome reſpects like that which the Compoſition of white Lead and other Ingredients have upon ſome of our Painters in *England*.

CHAP. III.

Of the Learning, Arts and Sciences of the Japaneſe, *their Government, Forces, Coins, Weights and Meaſures, Laws and Puniſhments.*

Learning.

IT is the general Character of the *Japaneſe*, that they are more inclined to Arms than Letters, and yet ſufficient Proficients in both; they have many Academies and Univerſities, but their chief Learning conſiſts generally in Reading, Writing, and underſtanding the Hiſtory of their own Country; not that they quite omit the Myſteries of Religion and Rules of Morality; and their Cabinets call'd by way of Eminency *Japan* Work, prove them to be excellent Mechanicks, eſpecially if with them and other fine Works in Wood imported from thence, we conſider their Arms, which exceed any made in *Europe*; one of their broad Swords being able to cut one of our Blades in two at one Stroke.

Their Letters.

THEY uſe the ſame Characters as the *Chineſe* do, though their Languages differ, as i. the Caſe between the *Engliſh*, *French* and *Latin*, &c. They do not uſe Figures in the Caſting up of their Accounts, but have a little Frame with parallel Wires in it, and little Beads upon them, which Beads are valued according to the Place or Wire that the Bead is in that is moved, and in that reſpect, not much unlike our *Engliſh* Way of valuing Figures, any Figure with us being removed a place towards the Left Hand, repreſenting ten times its former Value; but as this or the like Method of caſting up Sums by Beads and Wires is of the ſame Nature with what they uſe in *Muſcovy*, we ſhall more fully explain it when we come to the Deſcription of that Country.

Phyſ...

THEY do not underſtand much of Phyſick, nor ever let Blood, but have many hot Springs and Medicinal Waters, which they uſe in common Diſtempers, and if a further Preſcription is thought neceſſary, it is commonly ſalt or ſharp; they uſe Cauterizing much, and apply to ſome Nerve, as they think proper, the Powder of Artemiſia, or Mugwort, and Cotton, which they ſet on Fire; they drink cold Water when they are ill, though they drink it hot or warm when they make uſe of it as common Liquor; and when they adminiſter Phyſick, they never

never give the Sick any thing that is bitter and nauſeous, nor do they deny the Sick any thing that he deſires to Eat or Drink during his Illneſs.

Printing and Gun powder.

THEY aſſume to themſelves the Honour of thoſe great Inventions Printing and Gun-powder; but I rather think this opinion of theirs may proceed from their Ignorance in Hiſtory and Geography; for before the *Europeans* came among them, they thought there was no Land to the Weſtward of *Siam*, but thought of the Weſt Coaſt of that Kingdom as was thought of the Weſt Coaſt of *Spain* before *America* was diſcover'd, that it was the *Ne plus ultra*, and that there was no Land in the World but *Japan*, *China* and *Siam*, which had that been true, and as they had got ſome Notion of Printing, it muſt have been invented in ſome of theſe Countries, and conſequently in their own as well as either of the other; ſo neceſſary is the Knowledge of Geographical Hiſtory, not only for a Gentleman, but even for a Mechanick or Perſon of common Converſation.

Aſtrology.

THEY lay as great a Streſs upon Aſtrology here as in *China*, not caring to undertake any great Enterprize till they firſt conſult ſome of thoſe pretended Oracles, as to their Succeſs, and a proper Day to make a fortunate Beginning.

Government of *Japan*.

JAPAN, with the Iſlands adjacent, which is Part of the Kingdom, is govern'd by one Grand Monarch, who ſubſtitutes fifty or ſixty petty Kings under him, who are every one inveſted with Sovereign Power in his own Dominion; but they all depend on the Grand Monarch, who can call them to Account, puniſh, or even depoſe them at his Pleaſure. He was formerly High-Prieſt as well as King, but now there ſeems to be both a Civil and an Eccleſiaſtical State, but ſtill depending upon one another; for although there is now one that is *Dairo* or High-Prieſt, and another that is Emperor, yet the preſent High-Prieſt muſt be a Deſcendant of the former Kings, and retains the titulary State and Dignity of a King; and notwithſtanding that the Monarch poſſeſſeth the Throne, yet he is obliged to marry into the *Dairo*'s Family, and do him Homage once in three Years, with a Ceremony of acknowledging that he holds the Crown of that Family.

THE King has no particular Prime Miniſter, but he has four called principal Miniſters, and twenty eight Privy-Counſellors; four of which are ſome of the petty Kings, the reſt of which are obliged to attend at Court one half of the Year, and have Palaces at the King's Court for their Reſidence, as hinted before. The Noblemens eldeſt Sons are brought up at Court till they are capable of Preferment under the Government, though, as ſome think, it is rather to keep them as Hoſtages and Pledges of their Father's Loyalty. His Subjects are ſo numerous, that jealous of a Revolt or a Sedition, he adminiſters Oaths of Allegiance every Year, and ſends ſpies into the Country amongſt them to inſpect into their Behaviour and Diſcourſe; and further to prevent and divert them from Conſpiracies againſt him, he employs a hundred thouſand of them by turns to erect or beautify Palaces and Publick Buildings, to caſt up new Highways and Roads, and to mend and repair the old ones.

Forces.

THEY keep up a numerous Army both of Horſe and Foot, though they are ſeldom engaged in Wars abroad, nor invaded or attack'd by Enemies at home. If the Prince goes abroad, he is attended by no leſs than five or ſix thouſand of his Guards; his ſtanding Forces in times of Peace are twenty thouſand Horſe, and a hundred thouſand Foot, but when they happen to be engaged in a War, every petty Sovereign is obliged to ſend his Proportion, which increaſes the Army to thirty eight thouſand Horſe, and three hundred and ſixty eight thouſand Foot; and they being ſo little diſturbed or diverted by Foreign Enemies, and having ſuch a powerful Army at their Command, he thought himſelf able to vie with the Emperor of *China* himſelf, and to conquer his Empire; and in order to put his Vanity in Execution, he levied three hundred thouſand Men, with which he attack'd ſome of the remote Parts of *China*; and although the Emperor was ſufficiently able to guard againſt a Conqueſt, yet the *Japaneſe*, or rather *Rapparees*, brought back a good Booty.

Coins. Gold.

THE *Japaneſe* coin their Gold into two ſmall Barrs of different ſorts; one is called a *Coban*, which is not always of the ſame Value, but is worth ſixty and ſixty eight *Mas* of Silver, every *Mas* worth Sixpence Sterling; ſo that the *Coban* is worth between thirty and thirty four Shillings Sterling. The other Gold Coin is an *Ichebo*, worth fifteen or ſixteen *Mas*, or near eight Shillings Sterling.

Silver.

THEIR Silver Coin is a *Tayl*, a *Mas*, and a *Condereis*; a *Tayl* is ten *Mas*, or five Shillings Sterling; a *Mas*, as above, is Sixpence Sterling, and a *Condereis* is ten *Mas*, or five Shillings.

Weights.

THEIR Weights are the *Pecul* and the *Cattee*; the *Cattee* is near twenty one Ounces *Avoirdupoiſe*; ſome ſay but twenty and two thirds, and the *Pecul* is ten *Cattees*, or near thirteen Pounds *Avoirdupoiſe*.

Cloth Meaſure.

THEIR Cloth Meaſure is the *Tattamy*, which is about our two Yards and half a Quarter.

BUT they have a Scarcity of Gold or Silver Coin, and therefore great Dealers, or the Ships that fetch their Loading there, commonly pay for them in Silver Bullion, or Pieces of Silver of five or ten Crowns Value, or more or leſs; which without any Coin paſſeth according to its Value, and in leſſer Bargains they agree for ſo many *Tayl*, *Mas* and *Condereis* of Silver for ſuch a Quantity of Goods, as we uſe our Coins in *England* and other Places.

Laws and Puniſhments.

THE Manner of Adminiſtring and executing of Juſtice in *Japan* is quite different from that of *China*; for whereas in *China* no Sentence of Death is ever executed till ratified and confirm'd by the Emperor, here in *Japan* the Monarch reſerves no ſuch Power in his own Hands, but ſuffers not only every petty King, but every Lord of a Diſtrict and Father of a Family, to judge, condemn, and execute Delinquents and Criminals that are under his Government, and that according to his own arbitrary Will; for they have few written Laws, and no Courts of Juſtice for the Trial of Malefactors. Every Governor of a Kingdom, Lordſhip, or Family, is a Judge likewiſe in common Crimes, ſuch as a ſmall Theft, an Aſſault, Gaming or Lying, or ſuch petty Offences which are often wink'd at, or perhaps, indeed, too remiſsly puniſh'd in ſome Chriſtian Countries, are often puniſh'd with Death; and where people are found guilty of Crimes of ſo heinous a Nature as defrauding the King of his Revenue, Treaſon, or Murder, the whole Family are involved in the Puniſhment, and the Relations, Parents, and Children all ſuffer, except the Female Relations, who are ſold for Slaves.

IF a petty King offend, he is ſeldom put to Death, but baniſhed, and reduced to ſervile Employment during life. Their uſual Puniſhments for Capital Offences are Burning, Crucifying with the Head downwards, Tearing to Pieces with Horſes, and Boiling in Oyl; and when an Offender flies from Juſtice, and refuſeth to ſurrender himſelf, he is order'd to be cut in Pieces wherever he is found: When a Gentleman or a Soldier is convicted of any capital Crime, they allow him the Favour, as they call it, to die by his own Hands; for it is reckon'd very ignominious and ſcandalous there, for a Man to be ſo cowardly as to ſtand ſtill and ſuffer an Executioner to diſpatch him, if he can be allow'd the Privilege of doing it himſelf.

CHAP. IV.

Gives an Account of their Religion, Temples, and Superstition.

CHRISTIANITY was first preach'd in the Island of *Japan*, about the Year 1552, by some *Portuguese* Priests sent thither from *Mecao* by Father *Xavier*, and gain'd so much Ground that about the Year 1622 three petty Kings, many great Men, and Multitudes of the common People, profest the Christian Religion; but about the Beginning of the seventeenth Century the Cubes or Kings of *Japan* have persecuted the Christians with so much Cruelty and Severity, that the Christian Religion is now generally quite expell'd that Island, by a Decree obtain'd from the Government for that Purpose, and severely put in Execution; so that now the *Japanese* Idolaters. are great Idolaters, and worship the Heavens and Planets, with several monstrous Idols or Pagodes, or little Images made of Wood, of various and monstrous Shapes, to whom they address their Petitions, and bring rich Presents under the Name of Alms, which their Priests, like the Priests of the great *Bell*, and other Priests since that, convert to their own use, though they have a good Subsistence and a great Respect given them; but besides their worshipping the Host of Heaven, the Sun, Moon and Stars, they also worship Wild-Beasts, and the Devil himself; and as they have several Deities, so they have various Sects, and perform their Devotion different Ways; but the Gods whom they prin- Gods. cipally adore, and chiefly depend upon, are *Xaca* and *Amida*, to whom they chiefly apply in their Distress. They give no Account of the Creation of the World, but believe the Immortality of the Soul, though in a different Manner; some believing that the Soul after this Life shall enter into a future State of Rewards or Punishments, others holding the Doctrine of Transmigration of Souls, and believing that the Soul after it departs out of this Body shall pass into and animate some other, either Man, Beast, or other Animal, as was said of a Sect of the *Chinese*, Chap VIII. Page 42.

Cloisters. THERE is a great Number of Cloisters and Nunneries, where it is said their Priests and Devotees live unmarried, and abstain from Flesh *and from Women*. They inflict voluntary Penances upon themselves, and come to Confession as their Religion requires, which is done with so much Strictness, that, as the Priest makes them believe, if they conceal any thing, it is as much as the poor Sinner's Life is worth; and they find it true too, for in that Case they are cast Headlong from the top of the Rocks where their Stools of Confession are placed, to make them Examples, and oblige the rest to be sincere.

Temple. AT *Meaco* there is a stately Temple, all built of Free-stone, as long and as high as St. *Paul*'s Church was before the Fire; it has an arch'd Roof, and is supported by large strong Pillars. In this Temple is an Image or Idol of Copper, which reaches to the Roof of it; his Chair is seventy Foot high and eighty Foot broad; his Head is sufficient to contain fifteen Men, his Thumb forty Inches about, and his Body in Proportion. This Temple stands upon the Top of a Hill, and the Ascent to it has fifty Pillars of Free-Stone on each Side, at ten Paces asunder, which proves the Hill about five hundred Paces high. There is a Lanthorn on the Top of each Pillar, which so ranged, makes a very fine Show in the Night-time.

Other Temples. BUT besides this, there are no less than sixty other Temples in *Meaco*, and above three thousand gilded Idols in them; nor are their Idols confined to their Temples only, for in the Road between *Surunga* and *Jeddo* stands the Idol *Dabis*; it is made of Copper, and in the Form of a Man sitting upon his Legs, and extending his Arms, and is two and twenty Foot high; also at a Place called *Tencheda* the *Bonzes* Superstition. bring a young Virgin every new Moon to the Temple there, and having placed her before the great Image, they illuminate the Place with Golden Lamps, and then burn Perfumes, while they are doing which the Lights are immediately, and no less miraculously extinguish'd, and suddenly their God appears in Human Shape, (or rather one of the *Bonzes* in his own Shape,) and embraces, and sometimes impregnates the young Damsel, who is from that highly honoured, and is entertain'd at her coming out of the Temple with Musick and Singing, and from thence conceits herself so inspired, as to take upon her the Office of an Oracle, and answer the most difficult Questions that can be propounded to her.

NOTWITHSTANDING the great Prerogative of the Prince, yet he pays such Veneration to the *Bonzes* or Priests, that when they come to him, he rises up to salute them, and suffers them to sit in his Presence. They are such great Professors of Humility, that they preach up great Austerities, and teach Morality and Contempt of this World; but the *Romish* Priests, (perhaps unwilling that any of their Fraternity should equal them in blinding and deluding their Devotees) say they, are lewd Fellows, and do not live up to the Doctrine they preach.

SINCE the total Extirpation of the Christian Religion out of the Kingdom of *Japan*, they were so inveterate against any that profest Christianity, that they would not trade nor admit of any Correspondence with any of that Profession, of what Nation soever; so that in this Case both *Dutch* and *Portuguese* (as Christians) are like to be expell'd all Trade and Society with the *Japanese*; upon which they reflect upon and blame each other for the fatal Consequence. The *Dutch* say, that upon the Growth of Christianity in *Japan*, the *Portuguese* Clergy took Liberty to preach up the Independance of the Church, and that it was not subject to any temporal Prince, which alarm'd the King of *Japan* with a Jealousy that they had a Design to dethrone him; to prevent which, he issued out the above-mention'd Decree for the total Extirpation of such a dangerous Religion and Doctrine as he thought it was to him: But the *Portuguese* say (and not improbably, if we consider the engrossing Temper of the *Dutch* with respect to Trade) that the Emissaries of the *Dutch* gave out that the *Portuguese* and the rest of the Christians had form'd a Conspiracy to dethrone the King of *Japan*, chusing rather to have themselves expell'd all Trade and Correspondence with the *Japanese*, than that any other Christian should participate with them of the Benefit of it; and I think the Sequel will confirm the Probability of this last Conjecture; for when by reason of the King's Apprehensions of their Design to dethrone him, he made the Decree as above to extirpate Christianity out of his Dominions, the *Dutch*, who were then Sufferers in the common Calamity, as being Christians, found out a way which no Christian Nation but themselves could in Conscience submit to, to insinuate themselves into their former *Japan* Trade, and that was, since all Trade and Correspondence with Christians was forbid, the *Dutch* affirm that themselves are no Christians, and made no Scruple to give the most evident

and

and convincing Tokens of their Infidelity, denying their Saviour that bought them, that they might more freely be admitted to buy Goods of other Infidels; upon which Account they are now reſtor'd to their Trade with *Japan*, which would not be much more Advantageous to them than it was before, (as having engroſs'd it all to themſelves) if it was not for the ſevere Limitations and Reſtrictions with which they enjoy it, (as we mention'd before,) occaſion'd by the *Japaneſe* Jealouſy of them, who, tho' they are Infidels themſelves, yet have doubtleſs ſo much of what they call Religion, as to think that any Perſon or Nation ought to be abandon'd in Point of Conſcience, who would deny the Saviour he profeſt for the ſake of Trade or temporal Advantage.

When the State of Religion in *Japan* was come to this paſs, there was no living there for any that profeſt Chriſtianity, or if any perſiſt in it, they are ſlain, or ſome way tortur'd to Death, and ſometimes their whole Family, Chriſtians or not, were involv'd in the Ruin, and with ſo much Severity did they proceed, that if a Chriſtian Prieſt was found in any Houſe, the Ruin did not terminate in himſelf or Family, but the whole Neighbourhood ſuffer'd with him, for not diſcovering him, and every Perſon whom they but ſuſpected to be a Chriſtian, were obliged to ſign an Inſtrument, declaring that they were not Chriſtians, but abhorr'd their Religion, as being dangerous to all Government, and repugnant to the good Harmony of every Civil Society whatſoever.

CHAP. V.

Of the Marriages of the Japaneſe; *of their Women and Children; and of their Funeral Rites.*

Mar-riages.

The Marriages of Perſons of Figure and Diſtinction is celebrated by the *Bonzes* or Prieſts in ſome of their Temples, and before ſome of their Pagodes or Images. The two Perſons to be married hold each of them a lighted Torch in their Hand, while the *Bonze* repeats the Marriage Contract; then the Friends and Relations make Preſents to the Bride, and wiſh Happineſs to the new-married Couple; whereupon the Bride, in token of her being arrived at a married State, throws all her childiſh Toys into the Fire; after which they ſacrifice Oxen, and the like, to their Idol, which being done, they return to the Bridegroom's Houſe with the ſame Solemnity as they went to the Temple, which, when they arrive, they find richly furniſh'd and prepar'd for their Entertainment, and hold a Feaſt or Time of Rejoicing for ſeveral Days.

Concubines.

The Men have an abſolute Power over their Wives, to kill or divorce them as they think fit, and can take as many Concubines as they pleaſe, or are able to keep, but they are not allow'd to receive any Portion with their Wives and Concubines. If a Woman is taken in Adultery, ſhe is puniſh'd with Death; but it is accounted no Crime for poor People who have more Children than they can maintain, or unmarried People, who have illegitimate Children, to deſtroy their Females, but their Males are brought up and taken Care of by the Government for the Service of their Country. They waſh their new born Infants in Water, but never put ſwadling Cloaths and Blankets upon them as in *Europe*, and as they grow up, the Care of their Education is committed to the *Bonzes*.

Education.

Burial.

In *Japan* they burn their Dead, which they perform with great Ceremony: On the Day appointed for the Funeral, they cauſe a large ſquare Pile of Wood to be erected without the Town, and when the Friends and Relations of the Deceas'd are aſſembled and ready for the Funeral Proceſſion, the Women move firſt, being cloath'd in White, which is the Mourning Dreſs and Colour here, as well as in *China*, or if they be Women of Quality and Diſtinction, they do not take the Trouble of walking, but are carried in Palanquins, or Litters of Cedar: After the Women, come the Men richly dreſt, and after them follow the *Bonzes*, cloathed in Linnen, one of them carrying a lighted Torch, and he and his Brethren ſinging all the Way as they go; ſome of them alſo beat upon braſs Pans or Baſons, and others carry Baskets of Flowers to throw upon the Ground in the Way, to ſignify that the Soul is gone to Paradiſe. Several Lanthorns full of Lights, and Banners with the Names of their Idols, are carried before the Corpſe, which is ſet upright on a Sort of a Couch, cloathed in Mourning or White, his Hands joined together in a praying Poſture: Next comes the Children of the Deceas'd, the Elder carrying a lighted Torch in his Hand. The whole Proceſſion ſurrounds the Funeral Pile three Times, about which is plac'd Tables with Meat and Drink upon them; then the chief *Bonzes* begin a Hymn, and waves a lighted Torch three Times about his Head, to ſignify that the Soul is without Beginning or End, and ſo flings the lighted Torch away, which one of the Children of the Deceas'd takes up, kindles the Funeral Pile, and then they throw upon it Oil and coſtly ſweet Woods, (probably to ſtifle the offenſive Smell) till the Corpſe is burnt to Aſhes; after which, the Children or Survivors offer Incenſe, and adore the Deceas'd, as ſuppoſing that he is now become one of the heavenly Inhabitants.

The next Day they return to the Place to take Care of the Bones and Aſhes, putting them up in a gilded Urn, which they carry Home and hang up in the Houſe for ſome Time, and afterwards interr'd with great Solemnity; after the Interment, the Children at certain Times viſit their Tombs, and offer Incenſe, and pay their Devotions to their deceas'd Parents.

CHAP.

CHAP. VI.

Of the Land of Yedso *or* Jesso; *with an Essay grounded upon some Natural Probabilities to reconcile the different Opinions of* Geographers, *about its Contiguity to* America.

If *Japan* be an Island.

THE Land of *Jesso* lies to the Northward of *Japan*, but it is disputed by some Geographers, whether the two be one Continent, or whether *Japan* be separated from *Jesso* by a Strait or Arm of the Sea? But the latter is most probable, because the *Dutch* (who are not only a prying People, where they have any View of Advantage, but, under such Views, have been pretty adventurous after such Discoveries) tell us, that the Sea between *Japan* and *Jesso* is two Degrees or forty Leagues over, from the North Coast of *Japan* to the South Coast of *Jesso*; tho' others say, it is not so much as that; but these Opinions are easily reconcil'd if we consider that none of our Geographers, *English* or *Dutch*, mention between what two Points of one Land and the other these Distances were taken or computed; and as it is most likely that different Places of the same Strait might be of different Breadth, one Account doth not at all contradict the other, but both confirm its being a Strait, or that *Japan* and *Jesso* are separated by the Sea, and that the Sea that separates them, is called the Straits of *Sangar*.

Japan an Island.

But we have a more particular Account in Favour of this Opinion from Captain *Savis*; who says, that a *Japanese* that had been twice at *Jesso*, told him, that the *Japanese* Trade with the Inhabitants of *Jesso*, and that the People of *Jesso* are very civiliz'd, and that those of the South Part towards *Japan* understand Commerce, tho' the Inland People are more ignorant, (and indeed the same Difference may be observ'd in *England*, between those who live in Sea Ports and Trading Places, and those who live in Inland Towns and Villages, and have seldom any Conversation but with one another) he says farther, that that Trading Part of *Jesso* is supply'd from *Japan* with Cloaths and Rice, and that they make Payments in Silver and Gold Dust, (probably not having attain'd any Method of Coining,) that at their Chief Town *Matsmay* or *Matsumay*, the King of *Japan* has a Governor and Garrison, and receives his Tribute in Silver, Feathers, or fine Furs; and that the People of *Jesso* trade frequently with the North Part of *Japan*; all which proves a Correspondence between the two Lands: But he farther observes, that in their Trading together, they came over in *Vessels sew'd together with Cordage, without any Iron-work about them*; which proves, that their Communication was by Sea, and gives the strongest Reason to suppose, that *Japan* is an Island, and not a Part of the same Island or Continent with *Jesso*.

A Doubt Answer'd

Some Authors of late yet question whether *Jesso* be annex'd to *Japan*; but the only Reason they assign for this Doubt is, *because vast inaccessible Mountains interpose and hinder the Communication*; but this Reason seems to be but general, and might take place before the foregoing particular Account of their Communication by Sea was known, or much enquired into: A person who had never heard of the Straits of *Gibraltar*, might travel to the Southward in the South Parts of *Spain* so far as to leave the Mountains of *Granada* on the Left, the Land of *Andaluzia* on the Right, and see the Land of *Africa* before him, and yet, by reason of the Height of the Land on both Sides, not expect any Passage by Sea between him and *Africa*, much less such a famous Inlett as that of the Straits of *Gibraltar*: and not to go so far, several of our navigable Rivers in *England* run into the Sea between such high Lands, that in Travelling they do not appear to be Rivers till you begin to descend the Hills that bound them, and from a vast Eminency see the Ships in the River at the Bottom, which may sufficiently convince us that these vast Mountains appearing at a Distance, is no Proof of there being no navigable Rivers between them, but on the contrary, that there may be such Rivers running into that Sea, that is, between *Japan* and *Jeddo*, by which the Communication between these two Places is maintain'd, and further confirms, first, that they are not upon the same Continent, and yet secondly, that they trade together by the Help of the Sea that separates them.

If *Jesso* annex'd to *Tartary*.

Another Geographical Dispute is, or hath been, whether *Jesso* is a Part of the same Continent with *Tartary*; they that assert the Affirmative assign as a reason, that it is three hundred Leagues from the End of the *Chinese* Wall, which is at the Head of the Gulf of *Cang* or *Nankin* to the Southwest Bounds of *Jesso*; and although our late Maps do not make it quite so much, yet they make it two hundred and fifty or sixty, which it is no wonder, if in such a Place as *China* or *Japan*, where Geography has been so little improved, that they might give it out in general Terms, and call it about or near three hundred Leagues.

But admit that our Geographers have made a small Mistake in the Extent of *Tartary*, or Situation of *Jesso* (which by the way I find no Reason to believe,) this contributes nothing to a Proof of *Jesso* being annex'd to, or a part of the Continent of *Tartary*; for *Jesso* is separated from *Tartary* by some Bounds, and whether this Boundary is a Strait or narrow Sea, or else some distinct Tract of Land, it neither confirms nor contradicts the abovemention'd Extent of *Tartary*; but since all allow that *Jesso* is the next Land to the Eastward of *Tartary*, our next Business is to see how their Bounds are determined.

The Inhabitants of *Jesso* affirm, that there is a Strait or Arm of the Sea separates *Jesso* from *Tartary*; and that this is called the Strait of *Tesfoy*, in which Strait they say, are sometimes very rapid Currents, by reason of the great Confluence of Rivers into it, both from *Tartary* and *Jesso*; the largest of which is the great River *Vamour* or *Amour*, which rises above four Hundred Leagues up in *Tartary*, and in its Passage to the Eastward receives a vast Number of Rivers into it, still increasing, till at last it empties itself into the Sea, as is the general Case with all other Rivers; and as it must empty itself into the Sea, it is not likely to be in the Straits of *Tesfoy*, or if any Person should deny it, they will be at a loss to know where to fix the Place of its falling into the Sea; and if possible, more at a loss to Account for the violent Currents in the Straits of *Tesfoy* before mention'd, when the rapid Influx of this River into those Straits, which is most likely to be the Natural Cause of these Currents, is taken away.

This

THIS Opinion is further confirm'd, by an Account of ſome *Hollanders* who were Shipwreck'd upon the Coaſt of *Corea*, a Place where no Whales naturally frequent; and yet they ſay, they ſaw there a Whale with a Harping-Iron of *Gaſcony* ſtuck in her Back, which proves that ſhe muſt have come from *Spitsberg*, or ſome of the Northern Seas, where the Whales are ſtruck and taken; and if ſhe came from thence, ſhe muſt either come through the Straits of *Teſſoy*, or find a Paſſage between *Japan* and *Jeſſo*, or elſe come quite round the South End of *Japan*, and ſwim a hundred and fifty or two hundred Leagues to the Northward, the laſt of which is ſo very unlikely, that it amounts to little leſs than a Certainty of a Paſſage, either between *Japan* and *Jeſſo*, or between *Jeſſo* and *Tartary*; and conſidering what has been ſaid in this Chapter upon that Subject, it amounts to the ſtrongeſt Probability that can be gather'd from the moſt concurring Circumſtances, that the Sea has a Paſſage through both the laſt mention'd Places.

Diſcovery attempted.

Now ſuppoſing that *Jeſſo* is bounded on the Weſt by the Straits of *Teſſos*, which ſeparates it from *Tartary*; and on the South by the Straits of *Sangaar*, which divides it from *Japan*; we are next to enquire into the Eaſt Boundaries of it, the beſt Account of which that I find, we have from the *Dutch*, who in the Year 1652, undertook an Expedition in order to find out a Paſſage through the North Eaſtern Seas, by which, as a much ſhorter Way, the *Europeans* might come from the *Eaſt Indies*; and to compleat this Diſcovery, they ſent out ſome proper Perſons and Ships fit for ſuch an Undertaking, who ſailing by to the Eaſtward of *Japan*, ſail'd to the Northward, till they arrived upon the Coaſt of *Jeſſo* on the Weſt of them, and alſo preſently deſcry'd Land to the Eaſtward of them, finding themſelves in a narrow Sea, Gulf, or Strait; for they had not yet diſcover'd whether it was a Strait, by which they could ſail quite through to the Eaſtern Seas, or only a Gulf, the Bottom of which would ſtop their Progreſs, and oblige them to retreat: However, having Sea-room enough, and ſufficient Depth of Water, they ſail'd up till they came at an Iſland in the Middle of the Gulf, which they called *Staten Iſland*, and the Land to the Eaſtward of them they called *Compagne*, or *Companies Land*, that to the Weſtward of them being ſtill the Coaſt of *Jeſſo*.

Diſcovery over.

AND here they put a Period to their Diſcovery, as conſidering that the Advantage of this compendious Way of Navigation might not defray the Expence of finding it, if it was to be found; and if not the Expence was quite loſt; and beſides this, they had another Difficulty to encounter with, which they thought it next to impoſſible to ſuperſede, and that was, becauſe the Emperor of *Japan* had prohibited all the Navigation of Foreigners to *Jeſſo*, upon the Account of the vaſt Tribute he receives yearly upon the Silver Mines there; and when they found they were not allow'd to make any further Diſcoveries, they gave out that it would not conduce to their Advantage, and ſo deſiſted, and, according to their wonted Generoſity, conceal'd as much as poſſibly they could any thing that they had found out which might have been of publick Advantage.

If *Jeſſo* reach to *America*

AND here we muſt reſt contented, without knowing certainly whether *Companies Land* be ſeparated from *Jeſſo* by a Strait or Sea, or they are both one Continent, and the Place where the *Dutch* ſail'd up was only a Gulf or Inlet into it. The next Difficulty in which Geographers are not perfectly agreed is, whether *Companies Land* extend ſo far to the Eaſtward as to join to the North-Weſt Part of *America*: Some would prove the Probability of it thus:

THEY ſay that Travelling Eaſtward from the Straits of *Teſſos*, or Weſtermoſt part of *Jeſſo* to *Matzumay*, it is ſixty Days Journey, and from thence to the Eaſtermoſt Part of *Companies Land* it is ninety Days Journey, which is in all one hundred and fifty Days Journey, which at eight Leagues, or twenty four Miles a Day, amounts to one thouſand two hundred Leagues; and if this mechanical way of Meaſuring was done with ſo much Care and Exactneſs as to be depended upon, it will give us a great Inſight into the Probability or Improbability of *America* joining to *Aſia*, or will rather indeed confirm the Opinion of thoſe who not without good Reaſon aſſert it to be ſo, and will agree with our modern Geography, which lays down the Straits of *Annian*, or the Northermoſt Part of what is yet diſcover'd on the Weſt Coaſt of *America*, in about the ſame Parallel of Latitude with the Middle of the Straits of *Teſſos*, *viz.* about forty eight Degrees North, and their Difference of Longitude about ninety Degrees, which Difference of Longitude in that Parallel makes one thouſand two hundred and four Leagues, but in the Arch of a great Circle, which is the trueſt Meaſure, it makes but one thouſand one hundred and twenty nine Leagues; and therefore, although by reaſon of the Crookedneſs of their Road, with their Aſcents, Deſcents, and other Irregularities, twelve hundred Leagues in the Road would not carry them ſo far to the Eaſtward as the ſame Space in a Right-line would have done, yet it is probable that that Space travelling upon the Road might carry them as far to the Eaſtward as eleven hundred and twenty nine Leagues in a Right-line would extend, or near it, which gives Reaſon to conjecture that the South Shore of *Companies Land* makes the North Shore of the Straits of *Annian*, and that there is one continued Continent from *Jeſſo* to the North Part of *America*, except interrupted by Bays, Gulfs, Rivers, Straits, or ſuch Irregularities as commonly intervene in ſuch Caſes; and I am rather confirm'd in this Opinion, becauſe I do not find that any of *England* or any other Nation have ever found a Paſſage from the great *South Sea* or *Pacifick Ocean*, along the Coaſt of *California*, towards *Nova Zembla*, and ſo into the Northern Ocean, although we do not find that there is any Land yet diſcover'd to intercept the Paſſage; and I am the rather ſurprized that no Attempts have been made to diſcover a North Paſſage between *Jeſſo* and the Straits of *Annian*, ſince theſe Places lie in a lower Latitude than *London*, or any Part of *England*, and we ſail into above twenty Degrees greater North Latitude than thoſe Places lie in when we ſail about the North Cape to *Archangel*; ſo that whatſoever other Difficulty might attend ſuch an Attempt, it is not the Climate that can render Navigation there impracticable; but ſince no Diſcovery has been made to cotradict this Conjecture, but rather that repeated Experiments have proved by Days Journeys the Length of *Companies Land* and *Jeſſo*, theſe Probabilities give us ſufficient Room to conclude that *America* is either join'd to *Companies Land*, or only ſeparated from it by the Straits of *Annian*.

AND what further corroborates this Opinion is, that even the lateſt Geographers trace a Ridge or Tract of Mountains in Latitude ſixty and upwards, as far as the North-Eaſt Corner of *Moſcovite Tartary*, and there leave them; and inſtead of following them further, conclude, *That it is not known where that Chain of Mountains ends, or whether they are not join'd to ſome other Continent*; from whence there is great Reaſon to believe, that *that Chain of Mountains* may be a Part of the ſame Continent with *Companies Land*, and that that vaſt Tract of Land, of Breadth unknown, may extend from the Eaſt and North-Eaſt Part of *Tartary* to the Weſt and North-Weſt Part of *North America*, and our not having diſcover'd it, is no Proof that it is not ſo, ſince we have not found a way to that Part of the World, either Eaſtward about *Nova Zembla*, nor Weſtward about *North America*, nor Northward out of the great *South Sea*.

If this Communication by Land, or the Continuation of the Land from *Asia* to *America* be allow'd, there will be no Difficulty in accounting for the Peopling of the World from *Asia*, either from the first Creation, or after the Deluge; for, if according to Holy Writ all Mankind was destroy'd at the Flood, all the Human Race now or since that Time subsisting, descended from *Noah* as well as from *Adam*; but which Way soever it is reckon'd, *Asia* was the Scene and Source of both, and all the habitable World must necessarily be peopled from thence.

INDEED some late Authors seem to encourage an Opinion, that the first Inhabitants of *America* were drove from *Asia* by Stress of Weather, since it is proved above, that without a new Creation, they must come from thence; but not to mention the State of Navigation when *America* was first peopled, there must have been a Ship built on purpose for that Expedition, which, like *Noah*'s Ark, must carry Women, and all sorts of Beasts and Fowls, and the like, as well as Men, and it is very unlikely that such an Adventure should be undertaken, considering their great Incapacity at that Time for the Building of such a Vessel, and the little Encouragement they could have to attempt such an Enterprize, especially considering that they must carry along with their Passengers a Sufficiency of Provision for Man and Beast; but if we allow of this Communication by Land, so probable in it self, and never yet contradicted by any Discovery, the Difficulty vanishes of course.

Objection. BUT we find another Objection made by a late Author, which seems to be level'd against the Probability of this Communication by Land between *Asia* and *America*: It is in these words; *If all Parts of the World had a Communication with one another by Land, how comes it to pass there was no such Thing as a black Man to be found in all* America, *in so long a Tract of Time? 'Tis very reasonable to suppose some of that Complexion would have straggled thither as well as the White, if they could have found a Passage.*

Answer'd. *Answer.* IT is doubtless the Climate that alters the Complexion; and for the further Illustration of this Assertion, I would ask what Complexion was *Adam* of, and after him *Noah*, from whence all, both black and white Men and Women, descended, by lineal Succession; and whether we allow them to be black or white, or rather, if we allow them to be white, and if Complexion be absolutely hereditary, all Persons must have been white, and no such thing as a black Man or Woman to be found in the World; but we see there are black Men and Women in the World, therefore their black Complexion is occasion'd by some other Accident, which is most likely to be the Heat of the Climate where they are born; and for this we need go no further than our own temperate Zone, where we find that a Man who is generally exposed to work and sweat in the hot Sun, is much more black, or, as we call it, tann'd, than those who sweat not so much, or at all exposed to the scorching Rays of the Sun.

IF it be objected, that if a black Man and black Woman have Children, though in *England*, yet they will be black, and it is as likely that a White Man and Woman, though in *Guinea*, would have a white Child, and therefore the Climate doth not altogether govern the Complexion; it may be answer'd, that doubtless the Climate doth not immediately visibly affect a contrary Complexion, but in Process of Time, and after some Generations, and especially by Intermarriages, the black would approach near to a white, and the white degenerate into black; and the Duration of Time required for such an Alteration is a further Reason why it was *so long a Time before there was a black Man to be found in all* America, and of *America* being peopled from *Asia*, by the way of *Companies Land*; for if we should allow that no People could produce a black Generation but those who were originally so themselves, (though by the by, we have no Reason to believe that *Noah* and his Wife were of such different Complexions, though their Generations produce both,) but granting that (I say) their Blacks must come from *India*, or *Africa*, or some Place where it is the Native or Customary Colour, and as we are sure there is no Communication by Land between *Asia* and any Part of the West Coast of *America* to the Southward of the Straits of *Anian*, they must come by way of *Companies Land*, if by Land at all, and so through *America* to the Southward, before they could arrive where the Blacks now are, which being such a vast Distance must require a very long Time before they could disperse themselves so far.

BUT as I have proved that Complexions are not hereditary, because both black and white People have descended originally from the same Parents, *viz. Adam* or *Noah*, but that it is caused by the different Climates, the black Colour being confirm'd to the black People, and gradually contracted by the white, in Climates where black is the natural Colour, it will follow, that if *America* was peopled by way of *Jesso* and *Companies Land*, though from *China* or *Tartary*, or those nearer Parts of *Asia*, where the People are white, yet as in Process of Time they spread themselves through *North America*, and so to the Southward, till by degrees they came into a hotter Climate, their Colour degenerated towards a black, and by a long Continuance in that Climate, every Generation is more impregnated with the Natural Blackness of their Complexion, which there is great Reason to believe was the first Original of the Blacks now Inhabiting *America*, and would require a long Time to be brought to that Perfection.

As we proposed to begin with the Eastern Part of *China*, and so in general travel to the Westward, it may perhaps be thought a Digression to come to the Eastward, to describe the Extent of *Companies Land*; but we thought it was necessary, as it is known to be a Part of *Asia*, to give Account of the great Probability of its joining to *America*, to which, from what hath been said, there seems to be the utmost Reason to believe, since after so many Discoveries it could never be disprov'd; and as none will dispute the Contiguity of *Asia* with *Europe* and *Africa*, so if it should now be granted, or afterwards proved, that this Tract of Land, called *Companies Land*, reaches to *America* too, it may be worthy a Remark, that the Scene of Creation and Redemption too being in *Asia*, was fix'd in such a Part of the World as had a Communication by Land with all the other Parts of it; which is what cannot be said of any of the four Quarters of the World besides *Asia*, and from whence then it is no Difficulty to account for the Peopling of all the habitable World, even before Navigation was invented, or at least so much improved, as to venture to launch into the Main Ocean in quest of new Continents; and as we have join'd *Asia* to *America* now, so we shall at the Conclusion of this laborious Work join *America* to *Asia* in the same Place, and having travell'd round the Globe, shall leave off where we began, to make this our Undertaking a compleat *Universal History of the World.*

A DESCRIPTION OF THE *KINGDOM of* TONQUIN.

CHAP. I.

Gives a Deſcription of the Situation and Extent of this Kingdom; the Number of Provinces and their Bounds; as alſo of the Bay of Tonquin, *and the chief Rivers running into it; with a particular Account of the Wet and Dry Seaſons, and of the Tuffoons, and Periodical Hurricanes upon this Coaſt; from whence is deduced, as a neceſſary and evident Conſequence, the natural Cauſe of the Over-flowing of the* Nile *in* Egypt, *hitherto ſo difficult to be accounted for.*

THIS Kingdom is bounded on the Eaſt by the Province of *Canton* and Bay of *Tonquin*, and on the North by the Province of *Yunam*, both in *China*; on the South by the Bay of *Tonquin*, or Gulf of *Cochin-China*, and by the Kingdom of *Laos* on the Weſt: the Northern Part of it lies under the Tropick of *Cancer*, in twenty three Degrees and a half North Latitude; its Length is between four and five hundred Miles; its Breadth is in ſome places a hundred and fifty Miles, but irregular and very unequal.

Pro-vinces. MR. *Blome* in his Geography gives us Account of but ſeven Provinces, but Mr. *Dampier*, whom we ſhall rather adhere to, becauſe he was ſome time in the Country, tells us, there is eight Provinces, which he names and deſcribes as follows:

1. *Tenan.* 2. Eaſt Province. 3. South Province. 4. *Tenkoa.* 5. *Ngeam.* 6. Weſt Province. 7. North Province. 8. the Province of *Cachao*: Whoſe ſeveral Deſcriptions are as follows.

Tenan. THE Province of *Tenan* is bounded by *China* on the Eaſt, by *China* and Eaſt Province on the North, by South Province on the Weſt, and by the Bay of *Tonquin* on the South; it is but a ſmall Province, and produceth little of any Value except Rice.

Eaſt Pro-vince. EAST Province lies upon the Eaſtermoſt Borders of the Kingdom, between *Tenan* and North Province; it is bounded on the Weſt, or rather South-weſt, by *Cachao*, and on the South by the Bay of *Tonquin*, and on the Eaſt or North-eaſt by *Quamſi* in *China*, and on the North by North Province; it is a large Province, but low Land chiefly towards the South Parts of it, where are ſeveral Iſlands; this Province is inhabited moſtly by Fiſhermen; here is good Meadow and Paſture, and abundance of Cattle; it alſo produceth great Quantities of Rice: The chief Town of this Province is *Hean*, where the Governor reſides.

South Pro-vince. SOUTH Province is a triangular Iſland, bounded on the South by the Sea, and on the other two Sides by the Rivers *Domea* and *Rocklo*; this is alſo low Land, and produces abundance of Rice, and is fine Meadow and Paſture Ground.

Tenkoa is bounded on the Eaſt by the River *Rocklo*, on the North with Weſt Province, and with the Bay of *Tonquin* on the South; this is much of the Nature of the other Maritime Provinces, being low Land, and producing great Quantities of Rice, and the Inhabitants, as well as thoſe along the reſt of the Coaſt, driving a great Trade in Fiſhing.

Ngeam is bounded on the Eaſt by *Tenkoa*, on the South and Weſt by *Cochin-China*, and on the North by Weſt Province; this is a large Province, and as it extends to the Frontiers of *Cochin-China*, there is alſo a Body of Troops quarter'd there, conſiſting of about fifty thouſand Men, who are taken from the Southern Provinces, and paid by the Northern, becauſe the latter revolted, and therefore the Southern were thought moſt fit to be truſted with the Safety and Defence of the Kingdom, and the Northern are tax'd to pay them, as a Puniſhment for their Rebellion, and to keep them the better under Subjection: This Province abounds in good Rice, Paſturage and Cattle. *Ngeam.*

WEST Province is bounded on the South by *Ngeam*, on the Weſt by the Kingdom of *Laos*, on the North by North Province, and on the Eaſt by the Province of *Cachao*; this is a large Champion Country, a rich Soil, and abounds in Wood and Paſture Ground. Weſt Pro-vince.

NORTH Province is the largeſt of all the eight, extending over almoſt all the North Part of the Kingdom; it is bounded on the Eaſt with *China*, on the Weſt with the Kingdom of *Laos*, on the North with *China*, and on the South with Eaſt Province, *Cachao* and Weſt Province; this Province is compos'd of a great Variety of Mountains and Plains, Champion Land and Wood Land, and it is in this Province chiefly that the wild Elephants are found: This Province produceth great Quantities of Silk and Lack. North Pro-vince.

THE Province of *Cachao* is in the Heart or Middle of the Kingdom, bounded by the Eaſt, Weſt, North and South Provinces, who, it's reaſonable to think, are ſo diſtinguiſh'd with reſpect to their Situation, from *Cachao* the Capital of the Kingdom: This is an exceeding pleaſant Country, adorn'd with great Variety of Low Lands and Mountains, Champion and Wood Lands; and from a Soil of yellowiſh Earth produceth great abundance of Lack, Silk and Rice, which is not to Plenty in any other Province as in this. *Cachao.*

THE Bay of *Tonquin* is not improperly called ſo, becauſe it is the way by which Foreigners approach Bay of *Tonquin*

the

the Kingdom, but it is by ſome called the Gulf of *Cochin-China*, becauſe the Entrance of it goes in between the Coaſt of *Cochin-China* on the Weſt, or Left Hand, and the Iſland of *Aynan* on the Eaſt; and the Bottom of this Gulf, or ſo much of it as is upon the Coaſt of *Tonquin*, might moſt properly be called the Bay of *Tonquin*, as doubtleſs the Name was ſo intended, though Strangers call the whole Gulf promiſcuouſly by either Name.

Some reckon the Gulf of *Cochin-China* to begin at *Champa-Point* on the Weſt, and that that Point, and the Iſland *Aynan* makes the Entrance of the Gulf, which at that rate is about a hundred and twenty Leagues from Side to Side, but ſailing up till you have the Coaſt of *Tonquin* on the Left, and the Iſland of *Aynan* on the Right, which may properly be called the Entrance of the Bay of *Tonquin*, it is not above forty Leagues, and in the Middle of it there is forty ſix Fathom Water, and good Anchor Ground; and as we had this, and what follows relating to the Mariner's Buſineſs, from the Account of Mr. *Dampier*, who was there for ſome Time, it may not be amiſs to give the following Abſtract of it.

Dampier's Account of the Bay, Rivers and Ports of Tonquin.

There are two great Rivers come out of *Tonquin* into the Sea, at the Bottom of the Bay, but they are but one above, and ſeparate themſelves in the Country, and run into the Sea at about twenty Leagues Diſtance from each other, thereby forming the triangular Iſland called *South-Province*. The Weſtermoſt of thoſe Rivers is called *Rockbo*, it lies in twenty Degrees ſix Minutes North Latitude, and the Eaſtermoſt, which is much larger and deeper, is called *Domea* River, from a Town ſo called that ſtands upon the Banks of it; the Mouth of this River lies in twenty Degrees forty five Minutes North Latitude; there are many dangerous Shoals upon the Coaſt, between the Mouths of theſe Rivers, which ſtretch two Leagues or more into the Sea: The *European* Ships enter the Kingdom of *Tonquin* by the Eaſtermoſt River *Domea*, at the Entrance into which there is a Bar of near two Miles broad; the Channel is about two Miles over, having Sands on each Side. When Ships come hither they wait for a Pilot to conduct them in, but they will not come off except in Spring Tides: For a Mark to the Sailors for this River, there is a great high Ridge of Mountains, called the *Elephant*, which muſt be brought to bear N. W. by N. and then ſteering towards the Shore, till you come into ſix Fathom Water, you will be about two or three Miles from the Foot of the Bar, and about the ſame Diſtance from a little Iſland called *Pearl Iſland*, which will then bear N. N. E. there is good Anchoring, where you may be ſafe, and if you fire a Gun, there will a Pilot come off if the Tides anſwer.

The Bar of Domea.

In paſſing over the Bar of *Domea* there is fourteen Foot Water or more, and deeper when you are within, and ſoft ouzy Ground; the River at the Entrance is about a Mile over, and about five or ſix Leagues up in the Town of *Domea*, on the Starboard or Right Hand Side. The *Dutch* Ships that trade hither never go higher than *Domea*; but the *Engliſh* go three or four Miles higher, by which, for a little Trouble, they have two Advantages, for they are nearer to *Cachao*, from whence their Goods come, and the Tide there runs not ſo ſtrong as below. When the *Dutch* come to an Anchor at *Domea*, they are very intimate with the Natives, teaching them Gardening and other Things, in which they are ignorant, and in Return have the Uſe of their Wives, as if they were at Home; and for the *Engliſh*, or any other that go up higher, they have as great an Advantage, for when any Shipping comes up, they build a Number of Huts in the Form of a Village or ſmall Town, where the Seamen may be ſupply'd not only with Proviſion, but Women too, if the Money holds out.

But the City of *Cachao* is the chief Place of Trade, and from whence they have the Manufactures of the Country, becauſe at that City are both the *Engliſh* and *Dutch* Factories. It lies about a hundred Miles up the River, but as we are now upon the River the City ſhall be deſcribed by-and-by. There is a delightful Proſpect all the Way up the River, of a large Level, a fruitful Country being generally either Meadow, Paſture, or Rice Fields; for the moſt of what we call Arable Land, as Wheat, Rye, &c. is Rice Fields with them; but there are no Trees to be ſeen, unleſs about their Villages, which are always encompaſs'd with them, except thoſe Villages which ſtand upon the Bank of a River, to which they always lie open. The Villages are very numerous, and theſe Varieties make the Country exceeding pleaſant in the dry Seaſons. *Cachao.*

About twenty Miles below *Cachao* is the Town of *Hean*, on the Eaſt Side of the River, about eighty Miles from the Sea; and it is a little below this that the two Rivers *Domea* and *Rockbo* part into two Streams. The Town of *Hean* is about eighty Miles from the Sea; and hence the Triangular Iſland called *South Province* is near eighty Miles on each Side, that is bounded by the Rivers, and ſixty Miles on that Side bounded by the Sea. The Town of *Hean* has about two thouſand Houſes, one of the Streets of which is moſtly inhabited by *Chineſe* Merchants, who formerly lived at the Capital of *Cachao*; but being too over-reaching to the Natives in their Dealing, were expell'd the Town, and there being no conſiderable Trade in any other Place, they moſt of them left the Kingdom, only ſome few ſettled at *Hean*, who are ſtill allow'd to go to *Cachao* now and then, but not to ſettle there, or reſide for any conſiderable time; but ſome of the *China* Merchants that remain at *Hean* trade to *Japan* with Silks, both raw and wrought, and moſt commonly bring back Bullion in return. *Hean.*

The Ships that come from *Siam* and *China* often come up as high as *Hean* upon the River *Domea*; but the *Engliſh* or *Dutch*, or any *European* Ship, ſeldom if ever comes up ſo high, nor does any go up higher, for the Stream runs down ſo very ſtrong, and the Tide not flowing up ſo high, they are forced to fetch the Goods down in Boats or ſmall Veſſels, which are commonly two Days in going up from *Hean* to *Cachao*, by reaſon of the rapid Current that meets them.

The Kingdom of *Tonquin* is ſituate in a very healthful Climate and very pleaſant, eſpecially in dry Weather; but the Seaſons that may be call'd Summer and Winter are diſtinguiſh'd by Wet and Dry, rather than by Hot and Cold here, as well as in other Places, between or eſpecially near the Tropicks. *Health Country*

But even here the Weather alters not all at once, but at the End of the dry Seaſon, as the wet Seaſon approacheth, there are now and then gentle Showers and Intervals of fair Weather between them, before the violent Rains come on, and towards the End of the Rains there are wet and dry Days intermix'd; and ſo the dry Weather gradually comes on, and the Rain entirely ceaſeth, and it is obſerved, the Seaſons are much alike in all Places between the Tropicks on the ſame Side of the Line, and in the ſame Latitude, except within two or three Degrees of the Equinoctial, where the Weather as well as the Wind is always uncertain and variable. But as to Heat and Cold, thoſe Places under the Tropicks, or within three or four Degrees of them, are much hotter than thoſe under the Equinoctial, and that with the greateſt Reaſon, if we conſider, firſt, under the Equinoctial the longeſt Day (and the ſhorteſt too, for they are always alike there) is but twelve Hours, and the Night the ſame; ſo that there the Earth *Always dry at ſome Seaſons. Hotter near the Tropicks.*

has

has but twelve Hours Time of the Sun's Preſence to heat, and his Abſence juſt as long to cool it; but under the Tropicks, or near them, the Day is thirteen Hours and a half long, and the Night but ten Hours and a half; ſo that here the Earth has three Hours longer Time of the Sun's Preſence to heat it, than of his Abſence to cool it; and the Sun's Heat is full as intenſe, he being perpendicular to them under the Tropick at their longeſt Day, as well as to thoſe under the Equinoctial when the Sun is there, and their Day but twelve Hours.

But, ſecondly, The Sun's Declination when near the Tropicks, alters not ſo faſt or ſo much in twenty four Hours, as when near the Equinoctial, ſo that admit a Place be within three Degrees of the Tropick of *Cancer*, viz. in the Latitude of twenty Degrees and thirty Minutes North, the Sun when his Declination is ſeventeen Degrees thirty Minutes North, is within three Degrees of their Zenith at Noon: When his Declination is twenty Degrees thirty Minutes, he is in their Zenith at Noon; and when he is in the Tropick, with twenty three Degrees thirty Minutes North Declination, he is then but three Degrees to the Northward of their Zenith at Noon; and ſo in his Receſs towards the Equinoctial, he comes (at Noon) to their Zenith again, and is not above three Degrees from it, till his Declination North be leſs than ſeventeen Degrees and a half; ſo that during all the Time that the Sun's Declination is more than ſeventeen Degrees and a half (which is from the latter End of *April* to the latter End of *July*, which is near three Months) the Sun comes every Day to their Zenith or within three Degrees of it, which continual Heat makes theſe Latitudes hotter than under the Equinoctial.

And beſides theſe general Reaſons for Places near the Tropick being ſo very hot, there is a particular Reaſon for *Tonquin* (moſt of which Kingdom lies as above, within three or four Degrees of the Tropick) being a hot Country; and that is becauſe it lies in a Bay where they have not the Benefit of the cool Breezes, that frequently blow in more open Places.

Wet Seaſons.

The heavy Rains or wet Seaſons commonly begin about the latter End of *April* or the Beginning of *May*, and continue till about the latter End of *Auguſt*; in which Time it often rains for many Hours, ſometimes ſeveral Days without Intermiſſion, and theſe ſudden heavy Rains muſt needs cauſe great Land Floods in the lower Grounds, to which thoſe Rivers deſcend that receive thoſe exceſſive Rains.

And it may not be amiſs (tho' it is a ſmall Digreſſion) to take Notice here, that if we allow theſe almoſt perpetual Rains in the Summer from *April* or *May* till *Auguſt*, in Places lying near or between the Tropicks, it will not be difficult to account for that hitherto ſurprizing Prodigy, the annual Overflowing of the River *Nile*, which, according to ſome Geographers, riſes in about fourteen or fifteen Degrees of North Latitude, which is about nine Degrees to the Southward of the Tropick of *Cancer*, and in its Courſe to the Northward, toward the *Mediterranean*, it croſſeth the ſaid Tropick, and runs into above thirty Degrees North Latitude, before it falls into the *Levant*; and as it is ſo large a River, and runs thro' the low Grounds of *Egypt*, it muſt be ſupply'd by a great Confluence of Rivers, and receive all thoſe heavy Rains that fall in or near its Paſſage, and having no Way to diſgorge itſelf till it empties itſelf into the *Mediterranean*, it is no more difficult to account for its Overflowing the low Lands of *Egypt*, in its Paſſage thro' it, (tho' a Thing look'd upon by the Ancients as ſupernatural) than it is to account for a Land Flood after a ſudden heavy Rain in *England* or elſewhere. This Conſideration makes the Overflowing of the *Nile* ſo far from being a Wonder, that it would be a much greater Wonder, and more difficult to be accounted for, if all theſe exceſſive and durable Rains that fall in the River *Nile*, and that from the adjacent Country deſcend into it, within or near the Tropick where theſe Rains fall; I ſay, it would be a much greater Wonder, how theſe Rains and prodigious Quantities of Water could be conveyd to the Sea, and yet the River *Nile* not be affected by them; nor is *Egypt* the only Place that depends upon thoſe Floods for moiſtening the Earth, (though the River *Nile* is taken Notice of in ſuch a particular Manner, of its annual Overflowing, as if it was a Property peculiar to it only;) but *Tonquin*, which we are now deſcribing, has ſuch a Dependance upon thoſe Rains, that if they happen to come later, or in leſs Quantities (for tho' they come generally alike, yet not always exactly ſo,) in that Caſe, they ſometimes have not Rain ſufficient to manure their Rice; for *Tonquin*, as well as *Egypt* and other Places, depend upon theſe annual Floods and Rains to moiſten and enrich their Ground; inſomuch, that if thoſe Rains chance to fail, they have ſcarce any Crop, and the Poor are reduc'd to a ſtarving Condition, and often forc'd to ſell ſome of their Children, to purchaſe Bread for the reſt and themſelves; but this Caſe is more frequent at *Malabar* and *Cormondel*, than at *Tonquin*.

Natural Cauſe of the Overflowing of the Nile.

About *Auguſt* or the Beginning of *September* both the Rain and Heat abates; but during the Months of *Auguſt*, *September* and *October*, are theſe violent Storms of Wind, call'd Tuffoons, which at that Time of the Year blows ſo fierce, that the *Chineſe* dare not ſtir out of their Harbours till they are over; but when that Seaſon is paſt, there is no Danger of Storms till the Seaſon returns; and while it laſts, theſe Storms are moſt violent about the New and Full Moon, and they can partly predict their Approach, they being commonly preceded by very fair Weather, little Wind, and a clear Sky; and although the Trade-Winds at that Time of the Year is South-weſt, yet when theſe ſmall ſoft Winds come on that preſage the Approach of the Tuffoons, they commonly ſhuffle about to the North, or North-Eaſt; after which, there appears a dreadful Cloud, very frightful to behold, which comes ſometimes twelve Hours before the Storm begins, but when that Cloud begins to move apace, the Storm may be ſuddenly expected: It commonly holds about twelve Hours, the Wind at North-Eaſt, blowing very hard, and attended with Thunder, Lightning, and exceſſive Rains, and when it is over, it abates on a ſudden, and falls quite calm, which continues near about an Hour, and then the Wind comes Trade at the South-Weſt, where it was before, and blows as violently from that Quarter as it did from the other. Tuffoons.

There is commonly very pleaſant, dry, and healthful Weather in *November* and *December*, and there is not much Rain in *January*, *February*, and *March*, but often thick Fogs in the Mornings, which ſometimes turn to cold drilling Rain, and a ſharp Air, eſpecially if the Wind be North-Eaſt; but in *April* the Weather is moderately dry and temperate for Heat; but tho' what is ſaid above be the general Conſtitution of the Climate, yet the Seaſons are ſometimes more or leſs cold than other, the Rains more or leſs violent, and the various Seaſons wet or dry, or the like, ſometimes begin ſooner, and ſometimes continue longer by a Fortnight, or perhaps a Month, ſome Seaſons than others.

The Lands in *Tonquin* which lie towards the Sea Coaſt, ſometimes ſuffer very much by the Rains; eſpecially if they happen unſeaſonably, or before they are provided for them; but theſe Rains improve their mountainous Land; ſo that they ſuffer more by a great Drought, than by heavy Rains, and their Poor, who are very numerous, undergo greater Hardſhips for want of Employment than for want Proviſions, if they have wherewithal to purchaſe it.

CHAP. II.

Deſcribes their Towns, Fortifications, Palaces, and other Buildings, with their Furniture; with an Account of the Genius, *Temper, Stature, Complexion and Habit of the* Tonquineſe; *alſo of their Diet, Liquor, Feſtivals, Diverſions, Roads, and Method of Travelling.*

Cachao deſcribed.

THE City of *Cachao* is the Capital of *Tonquin*; it is ſituate on the Weſt Side of the River *Domea*; it is no way defended either by Wall or Ditch, it contains about twenty thouſand Houſes, ordinary and low, built with Mud Walls and Thatch'd Roofs, but there are ſome, tho' very few of them, built with Brick, and cover'd with Tiles; their principal Streets are wide, but for want of Paving, they are very dirty in wet Weather; and what makes the City leſs pleaſant, there are ſeveral Ditches and Ponds full of black Mud, which in hot dry Weather gives a very offenſive Smell, and yet the City is generally look'd upon to be healthy.

As the Houſes are cover'd with Thatch, and ſo liable to take Fire, every Houſe has in its Yard, or ſome convenient Place, not far from the Houſe, a ſmall arch'd Brick Building like an Oven, about ſix Foot high, wherein to ſecure his moſt valuable Goods in Caſe of Fire; and beſides, the Government enjoins every Houſe-keeper to keep a Jar of Water at the Top of his Houſe, with Buckets ready to quench the Fire, in Caſe any ſhould happen, or if the Fire has prevail'd ſo much that that Means is inſufficient, the Thatch is ſo contrived in large ſquare Panes, that they can throw it all off at once, and they alſo keep Hooks to pull down a Houſe when it is on Fire; and if any Perſon neglect to keep theſe Things conſtantly in readineſs, he is puniſhed for ſuch Neglect as their Law directs.

To prevent and extinguiſh Fire

Palaces.

THERE are three Palaces in the City of *Cachao*, the firſt and handſomeſt is for their *Boua* or King, who reſides in it; it is about three Leagues in Circumference, it has a Wall about fifteen Foot high, and as much in Thickneſs, fac'd on both Sides with Brick, and within the Walls of the Palace there are Parks, Gardens and Canals, ſomething like the Palaces in *China*; beſides the inner Buildings and Apartments reſerved for the Entertainment of the King and his Courtiers.

THE other two Palaces are meanly built, one of them is the Reſidence of the *Chuua* or General; there is a large ſquare Parade before this Palace, with a Building running along one Side of it; here the Generals and Mandarins ſit to ſee the Soldiers perform their Exerciſe: There is alſo another low Building oppoſite to this, where the Train of Artillery is kept, which conſiſts of about fifty or ſixty Iron Guns, from Faulcon to Demiculverin, with two or three whole Culverins, and ſome Iron Mortars, but the Guns and Carriages are neglected, and much out of Repair.

Stables.

AT a ſmall Diſtance from this Palace there is a Stable for two hundred Elephants, kept for the War, or to carry the Generals or their Baggage; there is alſo another Stable for the keeping of about three hundred Horſes.

THE next Buildings worth Obſervation, or indeed all that are worth taking any notice of, are the *Engliſh* and *Dutch* Factories: The *Engliſh* Factory are at the North End of the City fronting the River; it is a low built Houſe but ſtrong, and one of the beſt Houſes in the Town; the *Dutch* Factory join to it on the South Side, but it is not altogether ſo large.

THERE are no Cities of any Note in *Tonquin*, beſides *Cachao* and *Hean*, both upon the Banks of the River *Domea*; *Cachao* is the Capital, and higher up the River, and *Hean* is lower down, but the next Place for Trade; it contains about two thouſand Houſes, but lies open without any Defence of Wall or Ditch. They have no eſtabliſh'd Market-Towns, but meet ſometimes at one Village, ſometimes at another, and hold their Markets at them ſeverally by turns. Their common Villages conſiſt of thirty or forty Houſes each, and are pretty near to one another, all over the Country.

IT is obſervable that all thoſe Villages which ſtand in the low Champion *Grounds*, are encompaſſed by large Groves of Trees, and ſurrounded with large Motes and Banks, thrown up very high beyond the Groves, to prevent their Houſes and Gardens from being overflow'd in the wet Seaſons, for all the low Land at theſe Times lie near two or three Foot under Water, ſo that the richer ſort of People that have Boats, row from one Village to another, as Occaſion requires, and thoſe who have no Boats, go to their Knees in Water, or higher, according to the Wetneſs of the Seaſon, and when the dry Weather comes on, the Water that was in the Motes which ſurrounded their Houſes, ſerves to fill the Canals or Ditches which ſeparate their Ground.

IN the hilly and mountainous Part of the Country they have no occaſion for Ditches and Banks about their Houſes, becauſe they are in no danger of being overflow'd, and doubtleſs this more airy and dry Situation muſt be more healthy than where they are ſurrounded with Water for ſo long a Time together. The Partitions in their Houſes are only made of ſplit Cane, and their Windows are only little ſquare Holes to let in the Light, without any Glaſs or other thing in ſtead of it, to keep out the Weather. *Wind-doors.*

FOR Furniture they have Tables, Cabinets and Stools, and ſometimes a Bed or two in their inner Rooms, which, as in other Places, are of more or leſs Value, according to the Ability or Circumſtances of the Family, but every Man has a little Altar in his Houſe, with an Image and two Incenſe Pots upon it, and before that he performs his Devotions: In dry Weather they commonly dreſs their Meat in their Yards, or before their Doors, but in rainy Weather they are obliged to make uſe of ſome of their outward Rooms for a Cook-room, which not being provided with a Chimney, makes the Office of a Cook very troubl ſome and offenſive, by reaſon of the Smoak. *Furniture.*

THE *Tonquineſe*, eſpecially the better Sort and Trading Part of them, that are uſed to Converſation, are courteous and obliging to Strangers, and fair Dealers, not given to Sharping and Tricking like the *Chineſe*; but their Mandarins are proud and imperious, their Soldiers inſolent, and the vulgar Poor ſo given to Thieving, that Strangers when they are amongſt them are forced to keep a very ſtrict Watch over their Goods. *Cuſt. and Temp.*

THEY are ſaid to be both ingenious and induſtrious; they are good Mechanicks, very faithful and diligent, when employ'd as Servants, and ſubmiſſive to Superiors, even to a Fault, which makes their paſſive Temper look rather ſervile than ſubmiſſive, and to be the Effect of a mean Spirit, rather than an humble

ble one; tho' ſome impute this ſlaviſh Diſpoſition to the Tyranny of the Government under which they live: They are patient in Labour, but dejected in Sickneſs; but let their Circumſtances or Abilities be what they will, they are univerſally given to Gaming, inſomuch, that thoſe who have not Money to advance, will venture their Cloaths, rather than be diſappointed of their Game.

Gaming.

Complexion.

THE Natural and Native Complexion of the *Tonquineſe*, is a kind of Tawny, but not ſo black as the *Indians:* They are of a middle Stature, clean-limb'd; they have long black Hair, growing very thick, and hanging down upon their Shoulders; they are not ſo thick-lipp'd as ſome of the downright Blacks, but their Faces are a little flattiſh, and of an oval Form; when they are about twelve or thirteen Years old, they dye their Teeth of a black or a very dark Colour; becauſe, as ſome ſay, they are aſham'd to have white Teeth like the Brutes, but whatever has given the firſt Riſe to this Invention, I ſuppoſe many do it now who know no Reaſon for it, but that it is the Cuſtom of the Country: This Operation for dying their Teeth, takes up three or four Days, during which Time, they dare ſcarce take any Thing inwardly, by reaſon of the Compoſition which they apply to their Teeth being ſo nauſeous, or, as ſome ſay, poiſonous; but be it what it will, they muſt undergo it, or be made the Laughing-ſtock of the Country, for having white Teeth.

Habit.

THEIR Sex is not ſo diſtinguiſhable by their Habit, as their Quality is, for Men and Women are cloathed much alike; but the Habits of the Rich are much more coſtly than that of the Poor; the better Sort wear Silk, but that being common amongſt them, they never think themſelves finer than in a Suit of *Engliſh* Broad Cloth, either Red or Green, with Caps of the ſame Stuff with their Gowns; the Manner of the Dreſs of the common People is a long Gown, bound about with a Saſh; the Gown is made of Cotton Cloth dy'd of a dark Colour for Soldiers or common inferior People, only Soldiers are diſtinguiſh'd by their Gowns being ſhort, and reaching no lower than their Knees, but they have long Drawers under them, which reach down to their Mid-leg; the poor People commonly go bare-headed, except in the rainy Seaſons, and then the Fiſhermen, and others that are expos'd to the Weather, have ſtiff broad-brim'd Hats made of Reeds or Palm Leaves, and ſome of the very pooreſt Sort content themſelves with only a Doublet and a Pair of Drawers, without either Shirt, Shoes or Stockings: The better Sort have Couches or Benches, raiſed about a Foot from the Ground, and cover'd with fine Matts, and theſe go all round the Room where they make their Entertainments, and upon theſe their Friends ſit under an Alcove, having one Cuſhion under them, and another at their Backs during the Viſit, and they are upon ſuch Occaſions very ſociable and generous.

Eating.

RICE is ſo plenty with them, that they boil it and ſerve it up as their moſt common Diſh; and next to that, they eat Pork in little Bits and ſpit them together, and roaſt them; they alſo eat Beef, Fowls, Buffaloes Fleſh, and the Fleſh of Goats and domeſtick Cattle; ſuch as Horſes, Dogs, Cats and Locuſts; with all Sorts of Eggs, Fiſh, Roots and Herbs, they ſometimes cut their raw Pork ſmall, like Meat for Sauſages, and make it up in little Balls, and ſo eat it without any other dreſſing: They ſinge the Hair off their Bullocks, as ſome in *England* do with Hogs, and ſteep raw Slices of it in Vinegar for three or four Hours, and this they eat or treat a Friend with as a great Rarity: They look upon Horſe-fleſh to be as good as Beef, and the poor People will eat the Fleſh of Elephants, tho' they die a natural Death; the Trunk of the Elephant is ſo much valued, that it is often preſented to ſome Mandarin or great Man, as a delicious Diſh; they alſo eat Sea-Turtle, Crabs, Craw-Fiſh, Shrimps and Prawns; alſo Frogs is a Diſh much in Vogue with them; they have likewiſe a ſmall Fiſh like an Anchovey, which they pickle before they uſe it; they throw their ſmall Fiſh and Shrimps into a Jar of ſalted Water, made very weak, which after ſtanding a little Time, is reduc'd to a Math or Pap, which they call *Ballachaun*; and when the Compoſition has ſtood a while, they draw the Liquor off, as we do our Wort in Brewing; this Liquor they call *Neuknum*, which both the Natives, and alſo the *Europeans*, when there, eſteem very good Sauce; the poor People mix their boil'd Rice with *Ballachaun*, to give it a Reliſh, for it is ſo inſipid of it ſelf, without ſomething of that kind, that when they have no *Ballachaun*, they mix their boil'd Rice with dry'd Fiſh, or ſalted Eggs inſtead thereof, for the ſame Purpoſe.

THE People of Faſhion or Quality have generally Fleſh, Fiſh or Fowl at their Tables every Day, which is ſerved up in little Plates of lacquer'd Wood; a Number of which Plates, proportionable to the Quantity of Gueſts, or the Number of the Family, are laid on the Table; and the Meat being firſt cut into little Pieces, they eat it with their Chop-Sticks, as in *China*, and uſe no Knives, Forks, Spoons, nor Linnen at the Table.

Keep Eggs ſeveral Years.

THEY have a way of encloſing Eggs up in Balls made of Salt, Brine and Aſhes, and keep them in a earthen Pot ſtopp'd cloſe; and by this means, they will keep ſeveral Years, and are very commodious for Fiſhermen and others, that are much upon the Water, to take along with them to eat with their boil'd Rice, inſtead of the *Ballachaun*, which they cannot ſo conveniently carry abroad; and when they go to Victuals, (which amongſt the Fiſhermen when upon the Water, is boil'd Rice) they break one of their Eggs, and take about the Quantity of a Hazle Nut with every Mouthful of Rice, which ſerves inſtead of Sauce to give it a Reliſh.

Drink.

THE Liquor which they moſt commonly drink is Tea; it is ſold by the Women in the Markets, or Places of Concourſe and publick Reſort; they have alſo a Spirit call'd *Arrack*, which they ſometimes drink with their Tea, and ſometimes alone; but it has the moſt diſagreeable Taſte of any that is found in *India*, but it is look'd upon as a great Cordial, eſpecially when they have infuſed Snakes and Scorpions in it, for then they reckon it an Antidote againſt Poiſon; and none but particular Friends, or thoſe to whom they bear the greateſt Reſpect, are treated with this Sort of Dram.

Betel and *Arek*.

WHEN a Perſon happens to pay a Viſit to a Friend, the firſt Entertainment is *Betel* and *Arek*: *Betel* is a Leaf, and *Arek* is a Sort of Nut; and their Manner of eating it is, to wrap up ſeveral little Slices of the *Arek* Nut in the *Betel* Leaf, and daubing it over with *Chunam*, a Thing like Lime made into Mortar, they put the little Balls in their Mouths, and chew it as the *Engliſh* do Tobacco, and ſo much is it uſed in this Manner, that the common People keep Boxes in their Pockets, or about them, like our Tobacco Boxes, with ſeveral of theſe little Balls of *Betel* Leaves and *Arek* Nuts, made up as above, to be ready to chew upon any Occaſion, and the better Sort have commonly finer Boxes, finely gilded or lacquer'd, furniſh'd with theſe Balls, which they commonly offer to a Stranger at his firſt coming in; and there is a great Ceremony in accepting or receiving the Favour, which muſt be done with the Right Hand; it being reckon'd ill Manners either to deny it, and not receive it at all, or to receive it with the Left Hand, that Hand not being to be imploy'd finely, except in the moſt ſervile Offices; they have ſuch an Averſion to a Left-handed Man here, that he can never gain any Reſpect amongſt them, tho' he were poſſeſs'd of ever

ſo

so many the most excellent Qualifications; but setting aside this, and some other little Ceremonies and Prejudices, they are so kind to Foreigners, that after once they have contracted an Acquaintance, it is customary with them once in two or three Days to send the Foreigner a Present of *Betel*, and enquire after his Health; in Answer to which Favour, the Master expects that the Foreigner should make the Servant some grateful Return.

An Opiate. THIS Composition of *Betel* and *Arek* is reckon'd a Sort of an Opiate, but whether its sleepy Effects be peculiar to one or the other, or whether neither of them has this Effect till they are incorporated together, is uncertain; however, the Nature of it is (not only to Strangers, but to the Natives that are us'd to it) to draw People to sleep, or cast them into a pleasant Dream, which makes them delight so much in it, and besides that, they are mighty fond of the red Colour that it gives their Lips while they are chewing it, tho' the red Stuff they spit at the that Time, is very nauseous to Strangers, and of a disagreeable Smell; the better Sort of People have a Servant to attend them wheresoever they go, whose sole Business is to carry a Pot after them, to spit in when they chew *Betel*, but whether it is to save the Spittle for the Value of it, for some Use they can make of it, or to prevent their spitting such nauseous Stuff upon the Floor, to be seen by the People they converse with, and be offensive to them, we cannot determine.

Festivals. THEY have two annual Feasts, which are publickly and strictly observed, the first or chief of them is The New Year. held at the beginning of their New-Year; this Feast begins at the first New Moon after the Middle of *January*, (which is the first Day of the Year with them) which Feast continues for ten or twelve Days together, during which Time there is a general Cessation from all Business; every Body dresses in their best Cloaths, and Gaming, Drinking, and other Diversions, are so much their Exercise during this Time, that the poor People at their own Expence, or perhaps assisted by the Generosity of the Rich, will be exceeding generous upon this Occasion.

Harvest Festival. BUT another great Festival with them, is after their getting in of the first Harvest, which is celebrated with great Rejoicing upon that Occasion, the first and fifteenth Day of every Moon (by which is doubtless intended the New Moon and Full Moon) are great Holidays, in which they perform their Devotions with a more than common Zeal: At the Times of these Feasts they bring Victuals and Drink to the Sepulchres of their deceas'd Friends, with which the *Bonzes* or Priests (more cunning than superstitious upon that Account) regale themselves when the People that brought it are gone: Many of their Quality and great Men solemnize their Birth-day with feasting and rejoicing, as is common in *England*, and upon that Occasion are complemented by their Friends and Relations.

Comedies. THEY excel in the Acting of Comedies, which is one grand Part of their Entertainment at their Festivals; they are commonly acted in the Night-time, and last from Sun-set to Sun-rise, there are Victuals upon the Table all the Time the Play is acting, that all the Audience may chuse whether they will eat or hear, and amongst the Generality the former is as much if not more minded than the latter.

Other Diversions. THEY have no great opportunity for the Exercise of Hunting, the Country not being so proper for that Sport, by reason that there is little Cover for the Game, and the Frequency of Rivers and large Canals hinders the Chase; but they abound with good Fish, and hence Fishing is their chief and most profitable Diversion.

Travelling. THEIR many Rivers and Canals gives them a great Opportunity of Travelling by Water, and for that reason it is much practised; but their Highways and Bridges are in very good Repair, and though they have no publick Inns upon the Road, yet for a small Journey they can support themselves with a Box of *Betel* and *Arek*, and if they are Travelling further, they may take a little raw Meat along with them, and they are sure to find Fire and Water, and other Conveniences for dressing it, at or near the Road.

THE great Convenience of Water Carriage, makes less occasion for Carriage by Land, but yet when that is required, as when their Generals and great Men enter the Field, and their Baggage is required to be carried, this is generally perform'd by Elephants, and as they have few other Beasts of Burden, they make use of Porters for smaller Burdens, especially in the upland Country, where they have not such an opportunity for Water Carriage.

CHAP. III.

Gives an Account of their Manufactures, Trade and Navigation; as also of their Soil, Husbandry, Plants, Animals and Minerals.

Manufacture of Silk. THE Kingdom of *Tonquin* produceth abundance of Silk, of different Sorts, as Soolees, Pelongs, Hawkins, Peniascoes and Gause, the Gause and Pelongs are sometimes flower'd, and sometimes plain; together with several other sorts of Silks, of which the *English* and *Dutch* buy up great Quantities.

Lacquer'd Ware. ANOTHER great Manufacture of this Kingdom, is their Lacquer'd-Ware, which is accounted the best in the World, except that of *Japan*, which Difference is occasion'd more by the Wood, than by the Paint or Varnish, the *Japan* Wood being much better than that of *Tonquin*.

THE Lack of *Tonquin* is of the same Nature, and produced in the same Manner as that of *Japan*. (*See Chap.* II. *of our Description of the Kingdom of* Japan.) The Cabinets which they lacquer, are made of Pine-Trees, a Wood something like Fir, but not so good, and their Joiners are but indifferent Mechanicks: The Lacquer Houses are reckon'd very unwholsome, by reason of the poisonous Quality of the Ingredients there used and manufactur'd; but for that and other Particulars peculiar to the Lack, and the Method of laying it on, *&c.* we shall refer the Reader to Chap. II. of the Description of *Japan*, both the Lack and Manner of using it being much the same there and in *Tonquin*. Reference to *Japan*.

Earthen Ware. IN *Tonquin* they make great Quantities of a coarse Earthen Ware, of a grey Colour; which, besides what they use themselves, they export to the *Malayan* Countries, and other Parts of *India*: From hence also they export Turpentine, Musk, Rhubarb, Drugs and several other Sorts of Drugs; but these are not so much the Product of *Tonquin*, as of *China*, from whence they come to *Tonquin*; nor do the *Tonquinese* work any Mines of Gold, Silver, or any other Gold and Silver. Metal themselves, if they have any such Thing; but are chiefly supply'd with them from *China*, but have

have conſiderable Quantities of Silver from *Japan*: In this Country are Lignum Aloes, in the Goodneſs of which there is ſo great a Difference, that if it be cloſe and oily, a Piece as big as a Pea will perfume a Room, as much as a Piece as big as one's Fiſt that is dry; and the Price is proportionable to its Goodneſs; it being ſold from three Crowns a Pound to a Thouſand, and other Quantities in Proportion; they have alſo in this Country a Sort of Red-wood of uſe in Dying, and is ſomething like the Log-wood brought from the Bay of *Campeachy*, but it grows not quite ſo large.

Tonquin abounds in Silk, but by reaſon of the ill Conduct of the Natives, they have not the Advantage of ſelling it to the *Engliſh*, nor the *Engliſh* of buying it of them, that might be procur'd to both; for the great Lords Proprietors of the Land keep the common People ſo miſerably poor, that tho' the Silk is ready for Manufacturing, yet the labouring People are kept in ſuch a ſtarving and ſlaviſh Condition, that they cannot go to Work, for want of Money to purchaſe Materials to work with, and Stock to work on, till the Foreign Merchants advance Money to ſupply them, and ſet them to work, and then are forc'd to wait ſeveral Months till their Goods are wrought and ready: Indeed the *Dutch* who trade here, not ſticking at Conſcience where Intereſt is concern'd, have found out a Way to contract a temporary Marriage with Women of the Country, and put them in full Commiſſion to buy up Goods and Materials at the dead Seaſons, when Goods are cheapeſt, and employ the Poor when they can have no Employment from their own Grandees and Maſters, for the Reaſons abovemention'd; by this means, the *Dutch* taking advantage of their Poverty and want of Buſineſs, have not only their Work done cheaper, but have their Goods ready againſt their Ships arrive, and hence not only the *Dutch* themſelves acquire good Eſtates, by that quick Diſpatch and cheap Management in Trade, but alſo their Female Factors and Quondam Wives enrich themſelves, and ſome of them have been Matches for their greateſt Lords, when their *Dutch* Husbands have done with them and quitted them.

Ill Management.

The *Tonquineſe* have no Ships fit to encounter with a long Voyage, nor export little in their own Veſſels, except Fiſh and Rice, and ſuch common Things in a neighbouring Trade; but moſt of their Trade in Silks and other valuable Commodities is carried on by foreign Shipping, who fetch thoſe Goods away, and in their way bring Goods from other Places to *Tonquin*, as *Engliſh* Broad-Cloth, Cloth-Raſhes, Sulphur, Salt-Petre, Pepper and other Spices; alſo Lead and great Guns, of which the Long-Saker is moſt valued.

Lank Trapping.

They are fair in their Dealings, and ſtrict to their Contracts, for though the Merchants (except the *Dutch* as before obſerved) are forced to advance Money, and ſtay for their Goods, yet when the Poor get to Work, they are very induſtrious and punctual in point of Performance: The Guns and *Engliſh* Broad-Cloth may in one reſpect be reckon'd the worſt ſort of Goods to carry there, and eſpecially the Guns, becauſe the King is the only Perſon to be depended upon to purchaſe them, and his Pay is worſe than any of his Subjects, and the Broad-Cloth may come into this Article, which being ſo much eſteem'd, is not to be purchaſed but by the King, Nobles or great Men, and their Pay is reckon'd the worſt, in proportion to their Grandeur and Dignity.

Fair Dealers.

Besides their Fiſhers Boats, they have a ſort of long Galleys, but they are fit only for a Coaſt or River Trade, and even that but in good Weather; but as they have a great deal of both Coaſt and River Fiſhing, that Trade employs a great number of Hands, and ſome of them make it ſo conſtantly their Buſineſs, that many of them, with their whole Families, live altogether upon the Water. Their Shore abounds with Torroiſes, which by the Sailors are commonly called Sea Turtles.

Torroiſes or Turtles.

There are no Vines in this Country, nor much of any Grain except Rice, in which they abound; they have two Crops of it every Year, if the Rains are ſeaſonable, for it depends very much upon that, becauſe here (as in *China*) it delights in Ground that is ſo wet, as to be reduced to a Mire, or Pulp, and growing even in the Water till it is Ripe, and if their Ground be overflow'd in the Harveſt, yet they do not loſe their Crop, but reap their Rice, and make it up in little Bundles and hang them up till they are dry, which will ſoon be in this hot Country, and the Rice not damaged. For Roots and Garden-Stuff they have Yams, Potatoes and Onions, alſo Plantons, Bonanoes, Mangoes, Cocoa-Nuts, Limes, Guava's and Pine-Apples, and two ſorts of Oranges, larger and ſmaller; the larger Sort have a fine Smell and a good Taſte, and may be eaten without Danger, and are accounted by ſome Travellers the beſt in the World, but the other, which has a ſmooth thin Rind, and is a deep Red within and without, is reckon'd a very unwholſome Fruit, and cauſeth the Flux, though it taſtes almoſt as well as the other; the Oranges are in Seaſon from *October* till *February*; their Limes are as big as ordinary Lemons, they are round and have ſmooth Skins, they are full of Juice, but not ſo ſharp as leſſer Limes, that grow in other Countries.

Roots and Garden-Stuff

The *Betel* Leaf before ſpoken of and ſo much valued, is very plenty here: They abound in Mulberry-Trees, but make little uſe of the Fruit, they account the Leaves of moſt Advantage to them, for the nouriſhing of their Silk-Worms; they plant new Slips of Mulberry-Trees every Year, and reckon the Leaves of thoſe tender Plants to be much better for the Silk-Worms than the Leaves of the full grown Trees; they have the Fruit called *Li-chee* here, which being the ſame that was deſcribed in Chap. V. of *China*, we refer the Reader to it there; here is good Timber for Shipping as well as Houſes, and the Pine-Tree will ſerve for Maſts.

Timber.

They have Elephants of an extraordinary Size, in the woody and mountainous Part of this Country; there is abundance of Cows, Buffaloes and Hogs; they have but few Horſes, no Lions nor Aſſes, nor any Sheep, but ſome few that is kept for the King's Uſe, there are but few Deers or Hares, but great Plenty of Hens, as alſo of Geeſe and Ducks, both wild and tame; they had no way of taking wild Fowl but by their Nets, till the *Engliſh* and *Dutch* taught the Natives to ſhoot them; there is a ſort of a Locuſt which the Natives eſteem as good Food, it breeds in the Banks of Rivers and Ditches, and is about the Bignets of a Man's Finger; there are very few ſmall Birds in the Country, but ſwarms of Gnats, which are very troubleſome; their Ants are ſo numerous and miſchievous, that ſome Travellers tell us they will eat thro' a Bale of Silk in twenty four Hours, and will do it ſo ſmooth as if it had been cut with a Saw.

Animals.

There are no ſweet Flowers in their Gardens but one, which they call Bangue; it grows upon a Shrub that creeps upon the Ground, and is as broad as a large Noſegay.

CHAP. IV.

Of the Learning of the Tonquineſe, *their Language and Characters, Arts Liberal and Mechanick; their Government, Forces, Magiſtrates, Laws and Puniſhments.*

Learning. LEARNING is ſo much valued in *Tonquin*, that it is made the Condition of Preferment, for no Perſon can be prefer'd to any Poſt in the Government, except he have gone through a Courſe of Studies, and taken his Degrees; but their Conditions of Preferment, Degrees of Learning, and Manner of Examination being generally the ſame as in *China*, we ſhall refer the Reader to our Deſcription of that Empire, Chap. VI.

Characters. THEY uſe the ſame Characters with the *Chineſe*, though their Dialect differs from them; their Language comes neareſt to the *Chineſe*, or may rather be ſaid to be a Branch of it, than a Language Writing. of itſelf; and in Writing they begin at the Top, and proceed to the Bottom; their Phyſicians do not much ſtudy Books, but are very inquiſitive into the Nature of Simples, and truſt more to the beating of the Pulſe, than to any other Means, to find out the Nature, Cauſe and Effects of the Diſeaſe; they never let Blood, but uſe Cauterizing, of all which we need not repeat the Deſcription, they being the ſame as in *China*, for which ſee the Chapter of *China* above-mention'd.

Handy-Crafts. THEY have generally all kind of Handy-Crafts and Mechanicks amongſt them, as Smiths, Carpenters, Weavers, Turners, Taylors, Potters, Paper-Makers, Painters, Bell-Founders, *&c.* they have a ſort of Paper made of Silk, but the beſt is made of the Bark of a certain Tree; it is pounded in large Troughs with wooden Peſtles, and is much preferable to the other for writing upon: The changing of Money is a great Buſineſs here amongſt the Women, who are as dextrous at it as our Stock-Jobbers in *Exchange-Alley*, one finding out as artful ways to riſe and fall the Price of their Cath, as the other do to raiſe and fall their Stocks, when they ſee occaſion.

Government. THE Conſtitution of this Government differs from moſt of what we have heard of; the Prime Miniſter has the Command of all the Forces and Treaſure of the Kingdom, and he it is that receives the Compliments and other Applications of all Men, eſpecially for about a hundred Years laſt paſt, ſo that the rightful Prince enjoys little more than the bare Title, or elſe looks upon it as a Privilege, to eaſe himſelf of the Fatigues of Government; for if the King or *Boua* have Sons, he is ſucceeded in his Title by one of them, and the next Heir of the *Choua* or Prime Miniſter, ſucceeds him in the Adminiſtration of the Government; at the firſt of this Uſurpation of the Prime Miniſter to the Dignity and Authority of King, the Prince was in a great meaſure depoſed from his Power, but ſuffer'd to enjoy his Title of King or *Boua*, that the Uſurpation of the Prime Miniſter might make the leſs Noiſe, and not be ſo much taken notice of; but before this Revolution, the King of *Tonquin* was alſo King of *Cochin-China*, keeping the ſupreme Authority in his own Hand, and with an almoſt abſolute Power, ſubſtituted a General under him in each Kingdom.

Uſurpation. BUT theſe Generals proved at laſt too powerful for their Monarch, though not by Combination or joint Appointment, but ſeparately; the General of *Cochin-China* firſt breaking the Ice, threw off his Allegiance, and ſet up for himſelf, and the General of *Tonquin*, animated by the other's Succeſs, follow'd his Example, took all the Forces and Revenues of the Crown into his own Poſſeſſion, making the King or *Boua* a Priſoner of State in his own Houſe; nor can he command either Privilege or Diverſion, but what the *Choua* allows him; he ſuffers him to have his Title continued to him as above, and to divert himſelf with his Women and Children, and ſometimes to receive a ſort of Homage from the Mandarins and the People, who continue to be devoted to him, to pray for him, and to think it is a great Affliction to them if he ſhould die without Iſſue, the *Choua* as well as the People paying him, ſeemingly, the moſt profound Reſpect, affirming that he only takes upon him the Adminiſtration of the Government, to make the Life of his Prince the more eaſy, and his Enjoyments the leſs interrupted; the Foreign Ambaſſadors addreſs themſelves to the *Boua* or King as if he was ſtill inveſted with Royal Dignity; but this is but at certain Seaſons, when the *Choua* pleaſeth to ſuffer it, nor is he ſuffer'd to have any Attendants, but ſome few, and thoſe choſen by the *Choua*, and ſuch as are in his Intereſt, nor muſt any of his Subjects approach him, but ſuch as are ſo, nor has he any Guard allow'd him,

Guards. THE *Choua* has his Guards in readineſs, both of Horſe and Foot, and Elephants, to the Number of two or three hundred, and an Army of thirty thouſand Men quarter'd in and about *Cachao*, beſides ſeventy or eighty thouſand Men which he keeps in Pay in other Parts of the Kingdom; for all the Forces, Civil and Military, as well as the Revenues, are at his Diſpoſal; thoſe that are quarter'd in the more remote Parts of the Kingdom, are moſtly Foot, arm'd with Broad Swords and Match Locks; they make their own Gun-powder in little Hand-Mills, but they cannot corn it as we do in *England*; every Soldier has his Cartouch-Box, and inſtead of Cartridges, they have little Canes filled with Powder, every one of which holds juſt a Charge, and thus accoutred, they will load and fire with great Dexterity and Quickneſs.

Soldiers choſe by Eating. IN order to their Soldiers being able Men, every Village is obliged to ſend the ſtouteſt they can pick out, and leſt the *Choua* ſhould be deceived in his Choice, he tries them by their Stomachs, as ſuppoſing, the greateſt Eaters are the beſt Soldiers, and fitteſt to be employ'd in his Service as Guards.

FOR the better Improvement of their Soldiers in Shooting, there are frequent Shooting-Matches, and for their Encouragement, every one is rewarded according to the Nearneſs and Goodneſs of his Shoot, and he that makes the worſt in the File, is, as a Mortification, obliged to do double Duty next Time that he mounts the Guard.

THE greateſt part of their Forces, except thoſe quarter'd in and about *Cachao*, are upon the Frontiers of *Cochin-China*; for ſince the Diviſion of theſe two Kingdoms into their preſent Conſtitution, as being under two diſtinct Generals or Governors, there are continual Bickerings and frequent Skirmiſhes between the Out-Guards of each, but they ſeldom amount to any thing material.

WHEN the Armies have occaſion to take the Field, they are obliged to do it in the dry Seaſon, it being impoſſible to march or encamp during the

the heavy Rains; and when the Army marches, the Generals and principal Officers are carried upon Elephants, where they have little Apartments; and when they take the Field, they never carry any Field-Pieces, nor but little Baggage, but they have Guns about six or seven Foot long in the Barrel, which being too heavy to be managed without something to support them, they have Crutches to rest them upon when they fire them, and then they are soon pitch'd or removed, and serve chiefly to clear a Pass, or fire cross a River, and seem adapted to light Skirmishes rather than pitch'd Battles.

No Men of War

THEY have no large Men of War, but some light Galleys of sixty or seventy Foot long, and very narrow, the Head and Stern very high, as ten or twelve Foot above the Water, and the Middle not above two or three; the Residence for the Captain or Commander is at the Stern, as in *Europe*, having their Cabbins or Apartments gilded or painted; the Soldiers row, but have an Awning or Covering over them, to keep them from the Rain; they row with their Faces forward, and push their Oars from them; they strike all at once, having a Person that keeps Time and gives the Word, which the Rowers answer; they draw but between two and three Foot Water, and are only fit to venture to Sea in calm Weather.

As they have not much martial Exercise for their Soldiers, they find another Employment for them; for besides their Rowing in the Galleys, they employ them as Custom-house Officers, both upon their Rivers and Roads, to prevent the running of Goods; they also serve for Watchmen in their Cities and Towns, in which Office they are often rude and troublesome, and there is seldom any Redress obtain'd by complaining to their Officers, but rather a Fine for Complaining; the easiest way to get quietly past them, is to give them a little Money, and then they will generally use a Person civilly.

No Courts of Justice

THEY have no publick Courts, crowded with Lawyers, Attorneys and Solicitors; but a single Magistrate, which may be supposed to be of the Nature of one of our Justices of the Peace, hath a Power to cause any Offender to be brought before him, and to inflict upon them any Punishment, which according to the Laws of their Country is justly proportionable to their Demerit, (from whence it is natural to infer, that a Person cannot be qualified as such a Magistrate, without a through understanding of the Laws of the Country;) there is no formal Process, nor Time allow'd for an Appeal, but what Sentence he pronounceth is executed immediately.

Manner of Execution.

PERSONS guilty of Capital Crimes, as Murder and the like, are commonly beheaded, and the more to expose them, and terrify others from the like Offences, the Execution is generally perform'd before the Person's own Door, or elsewhere the Fact was committed; the Criminal stands upon the Ground with his Legs stretch'd out, and the Executioner with a Back-Sword strikes off his Head at one Blow; they never hang People for Stealing, but punish that Crime with cutting off some part of the Body, in proportion to the Nature of the Crime; for petty Thefts they cut off one Joint of a Finger, and for higher Crimes the whole Finger, or the whole Hand, *&c.* according to the Nature of the Offence; but Adultery is deem'd such a heinous Crime, that if a Woman be taken in it, or convicted of it, she is thrown to an Elephant, who though he doth not eat her as if he was a Beast of Prey, yet he tosseth her up in the Air and then treads upon her, till he tramples her to Pieces and kills her. Adultery punish'd.

THEY punish other Offences of a less heinous Nature with slighter Punishments, as loading them with Iron Chains and wooden Clogs, and in such Cases the Punishment consists more in being exposed than in any corporal Suffering; sometimes they have a great heavy Board made with a Hole in it, to shut about their Necks like a Pillory, and this they wear a Week, two or three, or sometimes a Month, according to the Nature of the Offence; again, some Offenders are punished with a certain Number of Strokes upon their naked Bodies with a split Bambou, and when any Person has suffer'd any of those inferior Punishments, he is look'd upon as infamous and contemptible: They do not confine their Debtors in Gaols, where they can neither pay their Debts nor maintain themselves, nor have they large Fees or Civility Money to pay to any Body, when they cannot pay their Debts; but when they are taken into Custody, they become Prisoners to the Creditor only, and work for him till the Debt is either paid, or so far satisfied, as the Creditor is content with, he at the same Time allowing the Prisoner a poor Subsistence of Rice and Water during his Confinement, which, though doubtless it is a miserable penurious Life, yet it is better than Starving in a Gaol, without any Opportunity of Working themselves out of Debt, or any hopes of its ever being paid.

THE Mandarins, though they are most of them Eunuchs, and have no Children to succeed them, yet they are excessively covetous, and guilty of Oppression and Extortion; and yet if any Complaints are made to the Government, they are seldom regarded or redress'd, because as they generally die without Issue, all their Wealth falls to the Government, and it is supposed it is with this covetous View that the Government allows none but Eunuchs to be prefer'd to the Dignity of Mandarin; and yet these Mandarins keep young Girls to toy and divert themselves with, and sometimes lend or recommend them to the *Europeans* that trade thither, to make use of as they please, and thank them for their Trouble too.

Oaths.

THEY administer an Oath of Fidelity to the Subject every Year, which Ceremony is perform'd by drinking a Cup of the Blood of some Fowls mix'd with Arrack, which they reckon the most solemn Tie that they can lay themselves under.

THEY have little or no Coin of their own, but some foreign Money, especially *Spanish* Reals, go current amongst them; their other Money, if it may be so called, is little Bits of Silver, which they pay by Weight, having always Scales about them for that Purpose.

CHAP.

CHAP. V.

Of their Religion, Temples and Superſtition.

Religion. TONQUIN having been formerly a Province of *China*, their Religion is much the ſame, (ſee Chap. VIII. of the Deſcription of *China*) yet differ in ſome Particulars; they have a great Variety of Images, but the Elephant and the Horſe are the moſt common; their Temples, called by them Pagodes, are ſome of them, eſpecially in the Country, very mean wooden Buildings, with no better Roof than Thatch, and ſo little as to have but juſt Room to contain the Image that is to be plac'd in them, but in the great Towns they are ſomething better; their Prieſts live a very auſtere Life, which ſeems rather to be the effect of Neceſſity than Choice; for they have but little Subſiſtence except the Offerings of the poor People, which ſeldom amounts higher than two or three handfuls of Rice, or a little *Betel*, or ſome ſuch Trifle, and their Houſes are as poor as their way of Living; they commonly live near their Temple, to be ready to offer up the Petitions of their People, which they deliver to the Prieſts in Writing, and they read it aloud before the Idol, and afterwards burn it in the Incenſe-Pot, the Petitioner proſtrating himſelf upon the Ground all the Time that the Ceremony is performing.

How the Rich offer their Prayers. AND it is no wonder that the Prieſts are poor; for the richer ſort of People, that might be able to make them better Preſents, do not employ them, they do not go to the Pagodes or Temples, but chuſe ſome open Court about their own Houſes, to offer up their Prayers in, and one of their Servants or Attendants ſupplies the place of Prieſt, in reading the Petition, the Maſter in the mean Time lying proſtrate upon the Earth; the Paper conſiſts of Prayers and Thankſgivings, and contains an Account of the Bleſſings the Perſon has received, as Health, Riches, Honour, the Prince's Favour and (if he be old) long Life, and concludes with a Prayer for the Continuance and Increaſe of them, which being done, he that read the Paper ſets it on Fire with the Ruſhes that ſtand burning in an Incenſe-Pot, and with it they throw ſome little Parcels of gilded Paper into the Fire, which all conſume together, and this they do before their Houſhold Gods, before whom an Altar is erected for that Purpoſe; upon ſuch Occaſions they dreſs great Plenty of good Proviſions, and when the reading is over, and the Maſter riſes from the Ground, he orders his Servants and other poor People that are about him, to fall to and make their Hearts merry; ſo that their Religion and Piety produceth that agreeable Effect Charity, in feeding the Poor and Hungry.

Superſtition. THEY are great Bigots to Aſtrology, and conſult the Pretenders to this Art upon every Occaſion of Moment, to know lucky or unlucky Days and Hours to begin a Journey, or to undertake any Enterprize; they call every Hour of the Day by the Name of ſome Beaſt or living Creature, as the Horſe, the Tyger, the Elephant, and the like, and as every Hour has ſome Beaſt or Creature apply'd to it, every Body muſt be born under ſome of them, and though this ſeems ridiculous at firſt, yet I cannot ſee that it differs much from the Method of our Aſtrologers in *Europe*, who divide the Heavens into twelve Signs, and call them the Ram, the Bull, the Twins, the Crab, the Lion, *&c.* and by them undertake to foretel depending Events; however, the uſe that the *Tonquineſe* make of this Application of the Beaſts to the Hours is, that they look upon that Beaſt which governed or repreſented the Hour under which the Perſon is born, to be ominous and dangerous to him, and are careful to avoid them, leſt it ſhould ſome time or other prove fatal to them, nor do they care to go about any Buſineſs of Importance in the Hour which is govern'd by that Beaſt under which they were born: Hiſtory gives us an Account of a Prince in this Country that was born in the Hour of the Horſe, and therefore would never give Audience nor ſtir out of his Palace in the Hour of the Horſe, for fear of ſome ill Conſequence attending it; they reckon it very unlucky to meet a Woman at the firſt going out in the Morning, and ſome are ſo ſuperſtitious, that if that happens they will go directly home again, and not ſtir out for ſeveral Hours.

Chriſtianity. THE Chriſtian Religion is not encouraged by the Government, but great Numbers of the poorer ſort encline to embrace it, although ſome People would inſinuate that theſe poor People were induced to it only for the ſake of the Rice that was diſtributed amongſt them by the Miſſionaries; but this ſeems not to be the Caſe, but that there are probably many of the richer ſort converted, for it is very unlikely that the ſeveral Chriſtian Churches now in that Kingdom could be built by ſuch poor Objects of Charity as were glad to receive an Alms or Charity at the Hands of the Miſſionaries, and that of ſo mean and trifling a Nature as a little Rice, a thing ſo common and cheap amongſt them; the Miſſionaries formerly indeed durſt not publickly propagate the Chriſtian Religion, but reſided as Merchants, and were not ſuffer'd to dwell at *Cachao*, but when they were ſent for to the Mandarins to teach them Mathematicks, or to do any Mechanical Performance for them, as mending their Clocks and Watches, they took the opportunity of this Converſation to promote the Chriſtian Religion.

CHAP. VI.

Of their Women, Marriages, Funeral Rites and Mourning.

Wives. THEY purchaſe Wives here as in *China*, (ſee Chap. IX. of *China*) nor are they any way limited as to their Number of Wives, except as their Pockets or Abilities limit them; for every Man may have as many as he can purchaſe or maintain, and if a Man happen to purchaſe more Wives, or have more Children than he can maintain, he is allow'd to ſell ſome to maintain the reſt; it is common there, and thought no Crime, to let their Daughters out to *European* Merchants and Mariners

Mariners who Trade there, and this is common, not only with the poorer Sort to raiſe Money, but with the Rich, who think thereby to have the Complexion of their Poſterity of a fairer Hue; for though it is ſaid of the right Blacks, that the blacker they are, the handſomer they look upon themſelves to be, yet amongſt theſe Tawnies they value themſelves the nearer they come to white, and that is the Reaſon that they chuſe to have their Women to co-habit with white Men, and though the Men are to ſtay but a ſhort Time, they may go when they pleaſe, they are never called to account for the keeping of the Child; and if Women by this means get more Children than they can well maintain, they ſell what they can ſpare and keep the reſt, as we do with any ſort of Cattle or Merchandize, ſo that Children are ſo far from being a Charge, that they are an Advantage; for whereas in *England*, the more Children a Man has the more he has to maintain, and the greater his Charge, but there the more Children a Man has, the more Money they will fetch, if he have occaſion to ſell them.

Marriages. They are very Prodigal in celebrating their nuptial Feaſts, and yet obliged to be governed by their Ability; the Feaſts of the pooreſt Sort ſeldom laſt leſs than three Days, and the Rich longer, according to their Pleaſure or Circumſtances: A Divorce. Man may divorce his Wife for a ſmall Offence, but a Woman has not that Privilege, except for a notorious Crime; all the Ceremony that is uſed when a Man puts away his Wife, is, they take one of each of their Chop-ſticks, ſuch as they eat with, and break them both in two, the Man keeping one half and the Woman the other half of each of them, and ſo they part; but if the Man had any Goods with his Wife he is obliged to reſtore them to her, and if they have any Children he is obliged to keep them.

Funerals. In *Tonquin* they do not burn their Dead as in *Japan*, but bury them in their own Ground, for they have no common Burying-Places, and within a Month after the Burial they make a great Feaſt at the Grave, and the Prieſt attends, and if the Deceas'd was a Perſon of Quality, there is a Tower of Wood built ſlightly over his Grave, about ſeven or eight Foot ſquare, and five and twenty Foot high, and about twenty Yards from the Tower on every ſide of it are little Huts or Sheds ſet up, and ſtored with all ſorts of Proviſions: When the People are aſſembled, the Prieſt mounts the Tower, and makes a Speech ſuitable to the Occaſion, and then comes down, which done, the People ſet Fire to the Tower, which being but ſlightly built, as above obſerved, is ſoon reduced to Aſhes, and then the People fall to Eating and Drinking, and are very merry. Mr. *Dampier* gives an Account of one of thoſe Funerals that he was preſent at, agreeable to the Account above, and adds in particular, that at that Solemnity there were fifty or ſixty Hogs cut out, and the greateſt Quantity of Oranges for the Entertainment of the Gueſts that he had ever ſeen together while he was at *Tonquin*.

Burial of a King. But when the King of *Tonquin* dies, he lies in State threeſcore and five Days, during all which time the Meat is ſerved up at his Table every Day as if he was alive, all which Victuals the *Bonzes* and poor People conſume or divide amongſt them; when the lying in State is over, the Corps is interr'd in the Burying-Place of the Royal Family with great Funeral Pomp; the Ground is cover'd all the Way with violet-colour'd Callico, which is the King's Colour; the Journey to the Burying-Ground generally takes up ſeventeen Days, by reaſon of the State and Solemnity with which they walk, though otherwiſe it is not above two Days Journey; the Mandarins upon this Occaſion wear Mourning for three Years, thoſe of the Houſhold nine Months, the Nobility ſix, and the common People three Months, but there are no Diverſions, ſuch as Shows or the like uſed for three Years, except at the Coronation of the ſucceeding Prince.

The Reader may obſerve, that through the whole courſe of this Univerſal Hiſtory, where two Kingdoms are Contiguous, as their Religion, Language, Cuſtoms, &c. are the ſame, we ſhall refer to the Deſcription of the former; as for Inſtance, in the foregoing Chapter, ſpeaking of the Religion of Tonquin, *which is the ſame with that of* China, *we only refer to Chap.* VIII. *of the Deſcription of* China, *where you have the Religion of* Tonquin *deſcribed in the Religion of* China, *as being the ſame, and by this means we avoid needleſs Repetitions, reſerve room to clear up any Doubts, as to the Situation of any Places in Diſpute, or the like, and alſo to give a full and ample Deſcription of our own and neighbouring Nations.*

S A

A DESCRIPTION OF THE Kingdom of *Cochin-China*.

CHAP. I.

Treating of its Situation, Extent and Diviſions; alſo of their Buildings, Cuſtoms, Habit, Diet, Animals and Manufactures; the Temper of the People, with their Arts, Sciences and Language, and a particular Account of the Deſtruction of the Engliſh *Settlement at* Pulo Coudore.

Bounds. *COCHIN-CHINA*, if we take in *Chiampa*, which may well be ſaid to be the Southermoſt Part of it, is bounded on the Eaſt by the Sea of *China*, and on the Weſt by the Mountains of *Kemois* and Kingdom of *Cambodia*; on the North it is bounded by *Tonquin*, and on the South by the

Name. *Indian* Ocean; it is called by the Natives *Anam* or *Onam*, which ſignifies the Weſt Country or Weſtern Part of the Empire, it having once belonged to *China*, and been a Part of that large Empire, as the Name *Cochin-China* alſo imports, which ſignifies Weſt *China*; *Chiampa* is the Southermoſt part of *Cochin-China*, and taken together, it is about one hundred and ſixty Leagues in Length, and about

Dimenſions. fifty or ſixty Leagues in Breadth, its joining upon

Clime and Soil. *Tonquin*, the Climate is much the ſame, and ſubject to the ſame Rains, upon which they depend for moiſtning the Ground and enriching it by the Mud and Slime that it leaves behind it.

Diviſion. IT is divided into five Provinces, whoſe Names are: *Sinoa*, *Cachiam*, *Quangum*, *Pulozambi* and *Reoan*; the King keeps his Court in *Sinoa*, which is the Northermoſt Province, and joins to *Tonquin*; the Capital of this Province is called by the ſame Name as the Province, *Sinoa*, and doubtleſs takes its Name from it, the other Provinces, as *Chiampa*, *Cachiam*, &c. bearing the ſame Name with their Capitals, and for the ſame Reaſon.

Building. THEY build their Houſes two Story high, the Floor of the Upper being as high as the Floods riſe in the rainy Seaſons, that they may retire to them when the lower is over-flow'd, and then maintain their Communication with one another by little Boats made for that Purpoſe. The common Sort, in Eating or Converſing together, ſit croſs-legged upon the Floor, which is cover'd with Mats, but the better Sort have Seats ſtanding againſt the Wall, as our Benches or Forms do, and are two or three Foot high; theſe they ſit upon in common Converſation, and have Tables ſtanding before them when they Eat: their Stature, Feature and Complexion is much like the *Chineſe*, (*for which ſee Chap.* III. *of* China,) but they wear their Hair long like the *Tonquineſe*; their Dreſs is of Silk Veſts and Gowns of divers Colours, one upon another, and inſtead of Stockings and Breeches they wrap Silk about their Legs and Thighs, and have a Sort of Slippers or Sandals for their Feet inſtead of Shoes; their Diet and manner of Eating and Drinking is the ſame as in *Tonquin*, (*Chap.* II. *of* Tonquin,) only they have a particular Sort of Sauce, which we have not elſewhere deſcribed; there are moſt Birds like Swallows which frequent the Rocks upon the Sea-Coaſts, which build their Neſts much in the Form of our Swallows Neſts, but inſtead of Clay they uſe a Compoſition made of Sea-froth, and a ſort of a Moiſture which proceeds from the Birds Stomach, which little Parcels they ſtick to one another, as the Swallows do their Clay, and by the Heat of the Sun they ſoon become a dry hard Subſtance, almoſt tranſparent; theſe they gather in great Quantities at the proper Time of the Year, (probably when the Birds have done with them and forſaken them,) and being ſoftned in warm Water, it is very Nouriſhing to be put into Broth, and is of ſo delicious a Taſte that it is eaten as Sauce with all ſorts of Meat.

Dreſs.

Sauce made of Bird-Neſts.

Animals. THEY have Animals both Wild and Tame, the ſame Sorts as in *Tonquin*, as Beaſt, Fowls, and the Sea produces excellent Fiſh; they have great ſtore of Rice, Fruit and Herbs, and plenty of good Silk, and the ſame Sort of Trees and Plants as in *Tonquin*; but they have one ſort of Timber which we do not find in *Tonquin*, it is ſo ſolid that it ſinks in the Water, and ſerves them for Anchors; they are of two different Sorts, but both the Kinds go by the Name of *Thins*, the Wood of one is Black almoſt like Ebony, the other is near the Colour of Yew, but both equally heavy, and it is ſaid that they will not corrupt neither in Earth nor Water; they make Pillars of them, on which they erect their Buildings, to have the Floors of them high enough above the Surface of the Water, in the Time of the Floods, as before hinted; but in the dry Seaſons they fill the Space between the Pillars with Planks, or wind them with Reeds like a Wall or Cieling, and make themſelves commodious Rooms on the Ground Floor, but at the Approach of the rainy Seaſons they are forced to demoliſh all the lower Part, except the Pillars themſelves which ſupports the Building,) to let the Water more freely paſs amongſt them, under the Houſe, to prevent its carrying all away.

Anchors made of Wood.

Lignum Aquila. THEY have alſo the Lignum Aquila or Aquila-Tree; it is a Wood of a fine Scent, and grows always in moſt Plenty upon the Mountains of *Kemois*; there is alſo another Tree called Calamba, if it may be

Calamba. called another Tree, for the Aquila and Calamba are the ſame Tree, only the Aquila is the Tree when young and the Calamba is the ſame Tree when grown old, and is eſteem'd much more valuable; the King reſerves ſo much of this for himſelf as he thinks convenient, and the reſt is tranſported to *Japan*, or other Places at a great Diſtance, and is ſold for an incredible Price; the Calamba is of the much more fragrant Smell, and ſome think it to be the ſame with Lignum Aloes, ſo much valued

in

in *China* and *Japan*, and the rather becauſe the Columba, when tranſported thither, fetcheth ſuch an exorbitant Price among thoſe Nations, who burn their Dead; they expend great Quantities of this fragrant Aquila-Tree in their Funeral Piles.

THE People of *Cochin-China* are reported to be very courteous to Strangers, and indeed ſo much of this Kingdom lying open to the Sea, and their having ſo many good Harbours, gives them a great Opportunity of converſing with Foreigners and Strangers that trade with them, and of becoming more familiar with them; 'tis true ſome Authors pronounce them a barbarous ſavage People, and prove it by a flagrant Inſtance of their Cruelty in their Manner of deſtroying the *Engliſh* Settlement at *Pulo Coudore*, of which we ſhall give an Account towards the Concluſion of this Deſcription of *Cochin-China*, and leave every impartial Reader to judge for himſelf, when he conſiders who were the firſt Proprietors, and how the Invaders uſed theſe undiſciplined Inhabitants when they had it in their Power.

SOME report that they excel in Arts and Sciences, and as an Inſtance produce Gunnery; affirming, that they can hit a Mark with a great Gun or Field-Piece as well as the *Europeans* can with a Hand-gun or Fire-lock; but this does not ſeem to be confirm'd by the Sequel, for had the *Cochin-Chineſe* been ſuch able Soldiers and expert Gunners as the Jeſuits repreſented them to be, they would ſcarce have ſuffer'd the *Engliſh* to have taken the Iſland, and founded and eſtabliſh'd the Settlement, or to defend it when in Poſſeſſion by a ſmall Redoubt garriſon'd with forty or fifty Men, and thoſe none of the beſt experienc'd in Military Affairs; but that our Account may be Impartial and Intelligible, we ſhall give the following Narration, which is

A particular Deſcription of the Iſland of Pulo Coudore, *and of the Erecting and Deſtroying the* Engliſh *Settlement there.*

THE largeſt of the Iſlands of *Coudore*, which we here call *Pulo Coudore*, and which is the only one that is Inhabited, lies about South by Eaſt from the River *Cambodia*, and about twenty Leagues from the Shore, in between eight and nine Degrees of North Latitude; it is but a ſmall Iſland, between four and five Leagues Long, and three Leagues broad where wideſt; this, with the next to it, which is about three Miles long, and half a Mile broad, forms a very convenient Harbour;

Trees. upon theſe Iſlands are great Quantities of Timber fit for Building or any other Uſe; here is alſo a Tree of three or four Foot Diameter, called the Damar-Tree, from whence ſuch Quantities of a kind of Turpentine or Tar is drawn, that it furniſheth a great deal of Employment for the poorer Sort of Peo-

Fruits. ple; they have a Kind of a Fruit like a Grape, which they call a Mango, it grows upon Trees; there is alſo a ſort of wild Nutmeg, anſwering the Purpoſes of the New, but different in Shape; there is alſo a Tree like the Cabbage-Tree, ſuppoſed by ſome to

Animals. be only a wild Cocoa; there are Hogs, Guana's and Lizards, alſo Pigeons, Parrots, Parakites, wild Cocks and Hens about the bigneſs of a Crow; there are alſo Limpits and Muſcles, and Plenty of green Turtle or Tortoiſes.

THE wet and dry Seaſons are the ſame as at *Tonquin*, (*ſee Chap.* I. *of* Tonquin) ſo that towards the latter End of the dry Seaſons the Springs are ex-

Brooks. hauſted and the Brooks dry, but at the latter End of *April* or beginning of *May*, when the Rains fall, they are ſupplied and fill'd with Water, and ſo continue during the Rains, the Floods, and ſome Part of the dry Seaſon, in all about ten Months.

Product. THE chief Product of theſe Iſlands is the above-mention'd Tar, drawn from the Damar-Tree, and a ſort of an Oil, which they make of the Turtle, and ſell to *Cochin-China*; the Inhabitants of this Iſland, as in *Tonquin* and other Places, bring their Women aboard, and offer them to the *European* Sailors to make uſe of during their ſtay there; being ſo willing to encreaſe their Number and mend their Breed, that they are not afraid of the Conſequence, but think it an Honour as well as an Advantage to have their Stock increaſed by *European* white Men.

THEIR Religion is the ſame of *Tonquin*; for when Mr. *Dampier* was at this Iſland, he tells us, he obſerved a little Idol Temple or Pagoda with the Image of an Elephant about five Foot high on on one Side, and the Figure of an Horſe not quite ſo high on the other Side, the Temple was a low wooden Building as deſcribed, Chap. V. of *Tonquin*. Religion or Superſtition.

FROM what Mr. *Dampier* obſerved, as to the Situation of the Place and commodiouſneſs of the Harbour, he recommended theſe Iſlands, as a convenient Place for the *Engliſh* to eſtabliſh a Factory in; and whether by his Recommendation only, or by concurrent Encouragement; however in the Year 1702, the new *Eaſt-India* Company built here a Fort of Earth, fenced it in with Palliſadoes, inſtead of a Ditch, and mounted ſome great Guns to defend their Factory from the Inſults of Enemies.

BUT what Terms the *Engliſh* made with the Inhabitants, to get this Iſland in Poſſeſſion, is left to Conjecture; whether by Treaty or Storm, or by what other Means; but by the Sequel it ſeems probable, that the Natives not being apprehenſive of any Invaſion, nor capable of making any Reſiſtance, the Company might come into peaceable Poſſeſſion, without any Oppoſition from the Inhabitants.

ABOUT two Years after the Foundation of this Settlement, Mr. *Lockyer* in a Voyage to *Canton* in *China* touch'd here, and found but forty five *Europeans* there, which were Soldiers or Servants to the *Eaſt-India* Company; there were alſo ſeven or eight *Topazes* which is a kind of a Tawny mingled Breed, and Strangers; probably, the ſpurious Iſſue of *European* Men and *Tonquin* or *Cochin-Chineſe* Women before ſpoken of; there were likewiſe fifteen *Bugoſſes*, who are Natives of *Macaſſer* or *Celebes* which reckon'd all together make but between ſixty and ſeventy in all, and though the *Macaſſers* were the beſt Soldiers, yet they were the moſt Treacherous to the *Engliſh*, and leaſt to be depended when occaſion required.

THERE are two or three ſmall Villages on the Iſland where the Factory was, of which the *Engliſh* were ſo jealous of, that they diſarmed all the Inhabitants, who, (according to the Jeſuits) are a brave and warlike People; but this I think was but a ſmall Proof of their Bravery to ſuffer themſelves to be plunder'd and diſpoſſeſs'd by ſo inconſiderable a Body of Men, and not to make the leaſt Attempt upon their Redoubt which had not above ſeventy to defend it.

BUT however they meditated Revenge, and reſolved, that what they could not effect by Force of Arms, they would if poſſible compleat by concerted Barbarity and Cruelty without the leaſt Compaſſion or Remorſe; and in order to this, the Burgeſſes ſet the Factory on Fire, and Maſſacred the *Engliſh* in their Beds, the third of *March* 1705, when the Factory had not continued above three Years, and the *Cochin Chineſe* taking the Advantage of the Diſtreſs and Confuſion of the *Engliſh* that ſurviv'd, murder'd them or expell'd them the Place, and put a fatal Exit to the *Engliſh* Factory at *Pulo Coudore*.

Our Authority for this Account, as well as the Particulars of it, we have in a Letter from Mr. *Cunningham* at *Pulo Coudore*, to the *Engliſh* Supercargoes in *Chuma*, which to do Juſtice to the Account, we inſert *verbatim*; as follows.

Gentlemen,

" BEFORE this comes to your Hand, you " may have heard of the Overthrow of the " Settlement at *Coudore*, whereof I ſhall give you " a farther Account, and what relates thereto, that " you may impart the ſame to our Honourable

Maſters.

" Maſters. Our *Macaſſer* Soldiers had been threat-
" ned, for letting two of our Slaves eſcape from
" Cuſtody; whereupon, it ſeems, they did medi-
" tate a cruel Revenge: For on the ſecond of
" *March* at Midnight, they ſet Fire to the Fort,
" and at the ſame Time kill'd the Governour Mr.
" *Lloyd*, Capt. *Raſhwell*, Mr. *Futler*, and others, to
" the Number of Nineteen; Dr. *Pound*, Mr. *Chetty*,
" and the Captain, with Eight or Nine more,
" made their Eſcape in a Sloop to *Malacca*, (I ſup-
" poſe) and from thence to *Batavia*; thoſe that re-
" main'd were ſo diſpers'd, that there were ſcarce
" two together. I took to the *Cochin-Chineſe* for
" their Aſſiſtance, but their Fear was ſo great, that
" they only went about to barricado themſelves.
" The *Macaſſers* having perpetrated this Villany,
" got into a *Cochin-Chineſe* Prow, to put to Sea,
" but were aſſaulted by the People of a *Cambodia*
" Veſſel, which was then at the Iſland, with the
" Aſſiſtance of our Armourer, who kill'd one of
" them, and mortally wounded two more, which
" made them put to Shore again, and make their
" Eſcape into the Woods: In the Morning be-
" times, the *Cochin-Chineſe* took Poſſeſſion of the
" Fort; fearing, I ſuppoſe, we ſhould have join'd
" with the *Cambodians*, to carry away what the
" Fire had not deſtroy'd; for being got together,
" we were ſixteen *Engliſh*, (four of which were
" dangerouſly wounded) ſix *Topazes*, and about
" twenty Slaves, too ſmall a Number to cope with
" them, who were above two Hundred; the *Chi-*
" *neſe* being like ſo many Cyphers, and the *Madraſs*
" Sloop in *Cochin-China* obliged us to deſire their
" friendly Aſſiſtance; whereupon the Money was
" put all into Cheſts, and the moſt Part weigh'd
" and carried into their Cuſtody; during which
" Time the *Macaſſers* thought to have ſeiz'd ano-
" ther Prow to eſcape in, but were frighted away
" by the *Cochin-Chineſe*, who promiſed in a few
" Days to bring them all dead or alive; moſt of
" us were dubious of their Friendſhip, but did not
" know how to anſwer it to our Honourable Maſ-
" ters, to leave ſo much Money while they pre-
" tended to be our Friends, and we had not de-
" ſerved otherwiſe at their Hands; for we could
" have got away in the *Cambodia* Veſſel, which
" ſail'd the Seventh following, being unwilling
" to ſtay any longer; in which went Mr. *Baldæus*
" and Mr. *Wingate*, to make the beſt of their Way
" to *Batavia*. The next Day after they went away,
" the *Cochin-Chineſe* caught one of the *Macaſſers*, and
" that very Night cut off his Head, whereby we
" thought their Friendſhip had been ſecure to us;
" yet on the Tenth, without any Provocation, but
" to make ſure of their Prey, they barbarouſly mur-
" der'd all the *Engliſh*, of which were Mr. *Pottinger*,
" Mr. *Townſend*, Mr. *Joſ. Ridges*, Mr. *St. Paul*, with
" 4 *Topazes* and ſix Slaves, only me they ſav'd alive,
" after they had given me two Wounds, one ſlight
" in the Arm, and the other more dangerous in my
" Left Side, whereof I am now well, God be thank-
" ed, with two other *Topazes* and fifteen Slaves:
" on the eighteenth arrived there from *Borea*, four
" *Cochin-Chineſe* Galleys with Prows, which a-
" mounted in all to ſixty five, and in them about
" three hundred Soldiers, the other *Cochin-Chineſe*
" making about three hundred more, wherewith
" they embark'd every thing worth carrying away:
" During their ſtay there they went three or
" four Times in ſearch of the *Macaſſers*, and ſight-
" ing on them at laſt, killed four: on the ſeventh of
" *April* I was order'd aboard one of their Galleys;
" not having leave to go any where without a
" Soldier along with me; I law and underſtood
" that all the People belonging to the *Madraſs*
" Sloop were under Confinement, in ſeparate
* She ſhe ſhes " Houſes, and alſo in * *Conga's* except Captain
" *Ridley*: I deſired ſeveral times to wait upon the
" Governor but could not; he was taken up in
" overhalling the Goods that came from *Pulo*
" *Condore*, and weighing the Money, which was
" found to amount to twenty one thouſand three
" hundred Tael. At laſt, upon the twenty eighth
" I was obliged to appear as a Criminal in *Conga's*
" before the Governor and his grand Council, at-
" tended with all the Slaves in *Conga's* alſo; there
" I was charged with three Crimes; the firſt, that
" the *Engliſh* when they arrived at *Pulo Condore*
" ſaid that they would ſtay there whether the
" King of *Cochin-China* would or not; the ſecond,
" that there were no *Engliſh* ſent along with the
" Preſent to Court laſt Year; the third, that we
" ſent a Ship to *Cambodia*, and did not acquaint the
" Governor of *Borea* therewith; to the firſt I
" replied, that we had never heard of any ſuch
" thing, for at our arrival there we did not know
" that any Body lived upon the [illegible]ed that
" as ſoon as our Governor had diſpatch'd the Ships
" to *China*, he preſently diſpatch'd an Embaſſy to
" *Cochin-China*, whereby he had his grant to ſtay
" there; to the ſecond, that all the *Engliſh* were
" ſo ſickly that we had not one of any Port to
" ſend, and therefore ſpoke to a *Chineſe* Captain
" then preſent, who agreed to go, but that the
" † *Cafſon* did take it upon himſelf to carry the
" Preſent, and excuſe us to the King, whereto they
" reply'd, that ſending a *Chineſe* was all one as
" ſending the *Cafſon*, and that an *Engliſhman* would
" have done better; I anſwer'd that was the *Cafſon's*
" Fault, who ſhould have inform'd us better; then
" further, why we did not get ſome out of the
" Ships to ſend, where there were ſo many, to
" which I reply'd that it was not in our Power to
" demand them out of their Ships; to the third,
" that never any Body told us we were to acquaint
" the Governor of *Borea* before we ſent any Ships
" to *Cambodia*; then he inſiſted there did not any
" *Engliſh* come aboard the Ship to him at the
" Mouth of *Cambodia* River, when he ſent thither
" by one to ſpeak with them; to which I reply'd,
" that the Ship had not return'd to *Pulo Condore*,
" and therefore could not poſitively tell the Reaſon
" for ſo doing; then I was diſmiſs'd, and return'd
" home, where I had the *Conga's* taken off again;
" the next Day I was at the Governor's Son's
" Houſe, by which the Governor paſſing acciden-
" tally ſaw me, whereupon he ſent for me to his
" Houſe; he asked me nothing of Moment, but
" why I ſent two *Engliſhmen* to *Cambodia*, and
" how much I had given them; having anſwer'd
" this, I deſir'd to know what he reſolv'd to do with
" us; he anſwer'd, that we muſt ſtay here till he had
" a Return from Court, which would take up two
" Months, and having ask'd for Capt. *Ridley*, who
" was ſick at *Damaan*, about twenty Leagues
" from hence, and to take his People out of the
" *Conga's*, he only reply'd he would ſee to it ſhort-
" ly, and thus Matters ſtand at Preſent, and what
" will the Reſult thereof be God knows; I know
" not what our Honourable Maſters will be wil-
" ling to do, and therefore cannot tell how to ad-
" viſe them herein. I am with Reſpect,

SIRS,

Yours, *&c.*

† Interpreter.

Thus far Mr. *Cunningham* gave account in his Letter, which being writ before he was diſcharg'd from his Confinement, it was impoſſible for him therein to give any Relation of his ſucceeding Adventures; however, he was afterwards ſet at Liberty, and made Preſident of *Banjar*, on the South Coaſt of the Iſland of *Borneo*; but his Preſidentſhip there was ſhort-liv'd, for the Settlement was ruin'd by the Natives before he had been ten Days there; but this not being the Place we are now treating of, we ſhall give a further Account of it when we come to give a Deſcription of the Iſland of *Borneo*.

A

A DESCRIPTION OF THE *KINGDOM of* SIAM.

CHAP. I.

Of the Situation and Extent of Siam, *with its Diviſion into Provinces, alſo of their principal Rivers, Monſoons, Winds and Tides, and the Nature of the Climate.*

UNDER the Deſcription of *Siam*, may properly be comprehended *Malacca*, *Cambodia*, and *Laos*, as well as what is commonly known by the Name of *Siam*, not only becauſe they were lately Provinces of this Kingdom, and are yet tributary to it, but chiefly becauſe their Religion, Laws, Cuſtoms and Complexions are much the ſame, ſo that to treat of them ſeparately would in a great Meaſure be only repeating the ſame Thing, which we always take care to avoid, only it will be proper to give an Account of the Situation of the abovemention'd Kingdoms or Provinces, with Reſpect to *Siam Proper*, or what goes more particularly by the Name of *Siam*.

Situation of the Provinces.

LAOS lies to the Northward of *Siam*, *Cambodia* to the Eaſtward, and *Malacca* is a Peninſula, lying to the Southward of *Siam Proper*; but if we look upon *Siam*, *Laos*, *Malacca*, and *Cambodia* as all one Kingdom, it is bounded on the Eaſt by *Tonquin* and *Cochin-China*, and on the Weſt by the *Indian* Sea or Bay of *Bengall*, by the Kingdoms of *Pegu* and *Ava* on the North and Weſt, and on the South by the Gulf of *Siam*, and the Straits of *Malacca* or *Sincapore*.

Bounds.

Extent.

THE Kingdom of *Siam* (in which we ſhall always include the abovementionn'd Provinces of *Laos*, *Malacca* and *Cambodia*,) extends from the Southermoſt Point of *Malacca*, in Latitude one Degree North to the northermoſt Part of *Laos*, in about the Latitude of twenty-five Degrees North, which is four hundred and eighty *Engliſh* Leagues, or one thouſand four hundred and forty Miles; the City of *Siam* is in the fourteenth Degree of North Latitude, but Authors differ with reſpect to its Situation, as to Longitude, ſome affirming it to be in one hundred twenty one Degrees, while others will have it in one hundred and forty five Degrees, *viz.* twenty four Degrees Difference in the Account; and the late Mr. *Moll* lays it but in about one hundred Degrees, which is the moſt agreeable to ſome of our late Maps and Globes; and although we have not yet been ſo happy as to find out a Method to correct the Longitude by Obſervation, yet theſe different Accounts are more reconcileable than at firſt ſight they appear to be, if we conſider that different Geographers have reckon'd their Longitude from different Places; they formerly reckon'd the Longitude from *St. Michael's*, one of the Iſlands of the *Azores*, whereas of late, the *Engliſh* Geographers reckon from *London*, and as *St. Michael's* Iſland lies in above twenty one Degrees of Longitude Weſt from *London*, it will evidently follow, that a Place that lies a hundred Degrees Eaſt from *London*, will be a hundred and twenty one Degrees Eaſt from *St. Michael*; ſo that theſe different Accounts are reconciled, and probably both true; and ſince theſe two Teſtimonies naturally concur, we ſhall look upon them as Authentick, and recommend them as ſuch; and as for thoſe who lay *Siam* in Longitude one hundred and forty five Degrees Eaſt from *London*, we muſt either allow their Account to be erroneous, or ſuppoſe they placed their firſt Meridian about forty four or forty five Degrees Weſt from that of *London*, but ſhall rather believe the former, as having never heard of any Geographer that placed the firſt Meridian there.

Longitude of *Siam*.

Name.

ALTHOUGH the *Portugueſe*, and the reſt of the *Europeans*, call this Kingdom *Siam*, yet the Natives call it the Country of *Tai* or of *Freemen*, from their ſtoutly oppoſing all Encroachments upon their Liberty.

Provinces. *Upper Siam.*

UPPER *Siam* is divided into ſeven Provinces, and are diſtinguiſh'd by the Names of their Capital Cities, *viz.* *Porſelouc*, *Sangueloue*, *Louantai*, *Campenggpet*, *Cocomrepina*, *Pechebonne* and *Pitchia*; and theſe Provinces are again divided into Diſtricts or Counties, of which *Porſelouc* contains ten, *Sangueloua* eight, *Louantai* ſeven, *Campenggpet* ten, *Cocomrepina* five, *Pechebonne* two, and *Pitchia* ſeven, in all forty nine, beſides one and twenty other Diſtricts or Counties not ſubject to the former, but are under the Juriſdiction of the Capital City and Province of *Siam*.

Malacca or *Lower Siam.*

IN *Malacca* or *Lower Siam*, there are alſo ſeven Provinces, *viz.* *Tchai*, *Petelong* or *Bordelong*, *Chantebonne*, *Tenaſſerim*, *Ligor*, *Patana* and *Jor*; the Province of *Tchai* contains two Counties or Diſtricts, *Petelong* eight, *Chantebonne* ſeven, *Tenaſſerim* twelve, *Ligor* twenty, *Patana* eight, and *Jor* ſeven, in all ſixty four.

Cambodia.

CAMBODIA is bounded on the Eaſt by *Cochin-China* and *Champa*, on the Weſt with the Gulf or Bay of *Siam*, on the North with the Kingdom or Province of *Laos*, and on the South with the *Indian* Ocean; its Extent from North to South is about one hundred and forty Leagues; the chief Town or City is *Cambodia* on the Bank of the River *Mecon*, in between twelve and thirteen Degrees of North Latitude; *Tatsek* or *Ravena* is higher up the River, but the Ports of *Cural*, *Tarama* and *Langor*,

are

ar upon the South-west Coast, in eleven or twelve Degrees of North Latitude.

Laos. The Kingdom or Province of *Laos* is the Northermost of all the rest, and is bounded on the East by *Tonquin*, and by *Cambodia* on the South, on the West by *Pegu* and *Siam Proper*, and is but a small Province, some say not above fifty Miles in Breadth from East to West, though six hundred Miles from North to South; the Capital City of *Laos* is called *Langone* or *Lanchang*; it is about a hundred and sixty Leagues to the Northward of the Town of *Cambodia*, and upon or near the same River *Macon*, the greatest River in all the Kingdom of *Siam*, except the River *Menan*, upon which the Capital City of *Siam* is situate; both those Rivers are supposed to rise in *Tartary*, and run to the Southward into the Sea; *Menan* falls into the Gulf of *Siam*, at the very Bottom of it, and *Macon* having past through *Laos* and *Cambodia*, dischargeth itself into the *Indian* Sea, near the Island of *Pulo Cundore*, in about nine Degrees of Latitude; there is also another River of less Note, called *Tenasserim* which empties itself into the Sea, in the Bay of *Bengal*, in about twelve Degrees of North Latitude; but though the River be inconsiderable of itself, yet in its falling into the Sea, it forms an Island called *Mergay*, and makes one of the best Harbours in all *India*.

Rivers.

The Country is very mountainous, and overrun with Wood, except in the low Lands, between the Mountains and where the Rivers run, so that there are few Towns of any Note, except near those Rivers or the Sea, the rest being either so woody as to be uncapable of Tillage, or so barren and burnt up that it will not produce any Thing worth the Trouble; it is especially unfit to bear Rice, which delights in wet Ground, and which is their chief Dependance for Food.

Rain, Seasons, Winds, and Tides.

The rainy Seasons here continue longer than in *Tonquin*, beginning about the latter End of *April* or Beginning of *May*, (as there) but continuing till *September*; the Trade Winds here are very constant; in *March*, *April* and *May*, it blows from the South, in *April* the Rains begin, and it rains almost continually all *June*; the Winds blow from the West, and the Rains continue all *July*, *August* and *September*, during which Time the Rivers overflow their Banks, for the space of nine or ten Miles, and for above a hundred and fifty Miles up the Rivers; and yet notwithstanding these vast Rains, and the prodigious Confluence of Water out of the Country, the Tides are so strong, especially in *July*, that they flow up as high as *Siam*, which is about sixty Miles up the River, and sometimes as high as *Louvo*, which is fifty Miles higher; In *October* the Wind shifts more to the Northward, and the Rain abates, and in *November* and *December* the Wind blows from the North, and the Weather is fair, and so by degrees the Floods are exhausted, and the Rivers reduced to their former Channels, and then the Tides are so weak, if any at all, that the Water is fresh and sweet even at the Mouth of the River; In *January* the Wind blows from the East, and in *February* it begins to shift more to the Southward, and whether it be from the Force of the Winds, or from the natural Propensity of the Sea to tend that way, and to be acted upon as the Wind is, however it is observed, that which way soever these settled Trade Winds blow, the Current sets the same Way, *viz.* if the Wind be West, the Current sets East and the contrary; it is to be observed, there is never more than one Flood and one Ebb in twenty four Hours at *Siam*. There are also many other small Rivers and Artificial Cuts and Canals, whereby they maintain a Communication with one another by Water; and if to this we add the Situation of the Country for Correspondence and Commerce with other Places by Sea, and the many convenient Harbours that are here, it might, if the Government would encourage it, be as likely a Place for Trade as any in the *Indies*.

Climate.

When we consider the Situation and Extent of this Kingdom, *viz.* almost from the Equinoctial to the Tropick, the Nature of the Climate may be easily determined, and that as the Sun is almost Vertical every Day, while he has North Declination, the Heat should naturally be very intense, and yet they are so screen'd from it by the cloudy Weather, and the Air is so cool'd by the excessive Rains and the Overflowing of the Rivers, that the Heat is not so intolerable as might be expected, and as it would otherwise be; and although their Summer and Winter may rather be distinguish'd by wet and dry Weather, rather than by Heat and Cold, yet they being on the same Side of the Equinoctial with us, they have the coolest Winds in *December* and *January* as well as we.

CHAP. II.

A Description of their Cities, Towns, Fortifications, Palaces, Princes, Courts, Guards and Seraglio; as also of the Buildings, Houses, and Furniture of the private People.

Siam.

The City of *Siam* is the Metropolis of the Kingdom; it was formerly called *Odiaa*, and by the Inhabitants *Siyothiya*, situate upon the River *Menan*, about sixty Miles from its Influx into the Sea; it may be almost said to stand upon an Island, because it is surrounded with several Branches of the River *Menan* on all Sides except the East; it is three Leagues in Compass, and fortified with Walls and Towers; there is a Causeway or Pavement out at the East Side of the Town, where People may go out without crossing the Water; the Town is not so large as the space of Ground which is contain'd within the Walls, but besides Dwelling Houses, there are within the Walls between two and three hundred Temples or Pagoda's, encompassed with as many Convents of *Telapoins*; their Burying-places are also about their Temples, and have Pyramids erected upon them, which with their Spires and the Spires or Towers of the Temples are very pleasant to behold.

The Streets are broad, and generally straight; some of them are paved with Brick, and have Canals cut through them; over which are several ordinary Bridges, which has given occasion to some People to compare it to the City of *Venice*; the Houses are mostly built upon Bamboo or over-grown Cane, and stand upon Pillars of the same, about thirteen Foot above Ground, upon which the first Floor is laid, that Place below it, amongst the Posts the House stands upon, being of no use; their Houses do not join to one another as ours do, but as every Man knows his own Ground, he has it paled in with Bamboo,

Bambou, and within that there are ſeveral ſmall Houſes erected on Pillars, according to the Dignity of the Perſon and the Numerouſneſs of his Family, Slaves or other Dependants; for if they are many of them they have ſo many the more little Habitations in proportion, and do not all lodge under the ſame Roof; the common People keep their Cattle alſo in upper Rooms, eſpecially upon the Approach and during the Continuance of the Inundations; there are ſome few Houſes built of Brick by the Foreigners, and ſome of the ſame which the King has erected for the Reception and Entertainment of Foreign Ambaſſadors.

Palace. Of this laſt ſort is the King's Palace; it is built with Brick on the North Side of the City, and encompaſſed by a triple Incloſure, having large Courts between each Wall, and the King's Apartment, which in their Language is called *Vang*, is within the innermoſt Wall, within which is likewiſe encloſed Gardens, Groves, Canals, and the like, for Pleaſure or Ornament; the whole including all within the outermoſt Wall is called by the general Name of *Praſſat*; when the *Siameſe* go in and out of the *Vang* they proſtrate themſelves, and when they paſs by the Gates of the outer Palace it is at a great Diſtance from it.

Higher they lodge the more Honour. Although neither the Palace or Private Houſes are built any more than one Story high, yet in a Houſe of any Faſhion there is a Difference in the Height of the Rooms, both as to the Floors and Roofs; the firſt or outward Room is always the loweſt, and having paſt that they aſcend two or three Steps to the next, and ſo on right forward, aſcending higher the further they go, and the Roof on the Outſide riſes in the ſame Proportion, and the Roof of the King's Palace being cover'd with ſhining Tiles, looks very magnificent; when a Perſon is either introduced to the Palace or to a Perſon of Quality's Houſe, the greater his Dignity the further, and conſequently the higher he is conducted, the higheſt Room being always reckon'd the moſt honourable, and no Man cares to lodge under another's Feet, ſo that at *Siam*, though their Houſes are built upon Pillars, yet they will not make any uſe of that Part which is under the firſt Floor; we have an Inſtance of this in an Ambaſſador that was ſent from *Siam* to the *French* Court, who when he with his Retinue arrived, ſome of his Attendants were lodg'd in the upper Rooms or Chambers nearer the Top of the Houſe than their Maſter, which when they underſtood, they were in the utmoſt Conſternation, and ran down tearing their Hair like Mad-men, for being guilty of ſuch an unpardonable Crime, as lying above their Maſter.

There are uſually in the Palaces of the Officers of State three Floors and Roofs, every one higher than the other; and in the King's Palace at *Siam* there are ſeven ſuch Floors and Roofs, aſcending gradually, as before deſcribed.

There is alſo a Palace at *Louvo*, about ſixteen or ſeventeen Leagues above *Siam*, on the Eaſt Side of the River *Menam*, but ſome diſtance from the main River; and we are inform'd by the Report of a *French* Ambaſſador that reſided there, that when he had an Audience either at *Siam* or *Louvo*, it was always in the firſt Room, and when he was entertain'd at the Palace, it was in an open Room, encompaſſed with a Wall no higher than a Man's Breaſt, and the Roof ſupported by Pillars fix'd on the Wall, and ſhaded by Trees; and that at both Palaces there were a great many ſuch Rooms about the Gardens, where the Mandarins and other great Officers and Perſons of Quality uſually attended.

Hunting Palaces. The King has ſeveral Palaces built in the Woods, for his Conveniency in Hunting, which is a Sport he delights much in; they are but ſlightly built, and painted red, and are for his Lodging in the Hunting Seaſon only. The Room of Audience at *Siam* is wainſcotted, and cover'd with a red Varniſh, and ſome Panels of Looking Glaſs; the Floor is cover'd with Carpets, the Diſhes, Baſons, Drinking Veſſels and other Utenſils are all Plate.

The Gates of the Palace are kept ſhut, and if any Perſon deſires Admittance, they acquaint the Officer who commands the Guard with it, and if they are admitted they are not ſuffer'd to enter arm'd, nor if they have drank any Arrack or Spirits, for the preventing of which they ſmell at every Man's Breath before he enters.

Guards. There ſtands a Guard of about ſix hundred unarmed Soldiers between the two firſt Walls of the Palace, they ſerve the King as Executioners; there are always Arms lodg'd in the Palace for them, but they are never truſted with them but upon ſpecial Occaſions; the King had a Guard of ſix hundred *Japoneſe*, but he diſmiſs'd them, leſt they ſhould prove too many for him.

The King has a Guard of Horſe, conſiſting of one hundred and thirty Gentlemen, two Troops whereof, conſiſting of thirty each, are *Moors* or *Mahometans*, born in the *Mogul*'s Country; another Troop conſiſts of twenty *Chineſe-Tartars*, arm'd with Bows and Arrows, and two other Troops of *Raſboots*, Natives of *India*, and of Pagan Principles, containing twenty five each: they are habited like the *Moors*, and famous for their Courage, but (as if it was not poſſible for another Nation to have as much Courage as a *Frenchman*, without being intoxicated, or rather infatuated into it) Mr. *Loubiere*, a *French* Author, who agrees to their being courageous, would depreciate the Value of their real Courage, by imputing the Cauſe of it to their taking of *Opium*: The King at his going abroad is attended by all his Horſe Guards, but none of them are ſuffer'd to enter within the Gates of the Palace; every Trooper is furniſh'd with his Horſe and Arms at the King's Charge, and every *Moor* has fifty four Stivers a Year, beſides a red Stuff Veſt; their Captains and *Raſboots*, whoſe Pay is alike, have eight hundred and forty Livres each; the *Chineſe Tartars* have forty five Livres a Year each, and every Captain one hundred and twelve Livres ten Sols for his annual Pay. Their Pay.

Note, As there is no ſuch current Money as Livres in *Siam*, and we have this Account from Mr. *Loubiere*, a *French* Author, it is to be ſuppoſed that he reduced the *Siameſe* Money abovemention'd to its Value in *French* Coin; but as we have *Engliſh* Readers to oblige, the abovemention'd Pay in Sterling Money is as follows:

The Pay of the Moors was by the Year	04	01	00
Their Captains and the *Raſboots*	63	00	00
The *Chineſe Tartars*	03	07	06
Their Captains	08	08	09

For the Coins, Weights and Meaſures of *Siam*, ſee the ſixth Chapter following of the Deſcription of this Country.

Stables for Elephants and Horſes. Within the firſt or outermoſt Wall of the Palace there are Stables for Elephants and the King's beſt Horſes, to every one of which the King gives a particular Name, and every Elephant is treated with Honour or Dignity ſuitable to the Name the King has beſtow'd upon him, and his Number of Servants or Attendants is alſo in the ſame Proportion; they never go out but in their proper Dreſs of Trappings or Ornaments; and as this People hold the Doctrine of the Tranſmigration of Souls, and find the Elephant to be not only ſtrong and majeſtick, but alſo very docible, and, as ſome expreſs it, quick of Apprehenſion, they imagine that every Elephant is animated by a Soul that has formerly poſſeſs'd ſome great and illuſtrious Man, and that the white Elephant, which is very ſcarce, and, as they affirm, never to be found but in the White Elephant.

King-

Kingdom of *Siam* is poſſeſſed and acted by the Soul of ſome great Prince, for which reaſon the King only keeps him for his ſuppoſed Dignity, but never puts him to any ſervile Uſe, nor ſo much as rides upon him himſelf; but though this Elephant is called by way of Diſtinction and Eminency the white Elephant, yet he is not quite white, but a ſort of a Fleſh Colour, for which reaſon ſome call him the white and red Elephant; the white Elephant (for there is ſeldom more than one) is ſerved in Gold Plate, and treated as Sovereign of all the reſt.

White Horſe. Next to the white Elephant, they pay a great Veneration to a white Horſe, an Inſtance of which we have in the King of *Siam*'s Concern for one of them that was ſick: when one Mr. *Vincent* a *European* Phyſician was at *Siam*, a white Horſe being ſick, the King deſired the ſaid Mr. *Vincent* to aſſiſt with his Advice concerning him, and being apprehenſive that Mr. *Vincent* might ſcruple to take upon him the Office of a Farrier, the King, to obviate this Objection, told him that he was no ordinary Horſe, but that he was deſcended from a Sire and a Dam who were not only both white themſelves, but their Anceſtors had been ſo for at leaſt four Generations, without any Mixture: Next to the White they eſteem the Black, becauſe they are the ſcarceſt except white, and ſo much do they admire that Colour, that they uſe artificial Means to blacken the Colour of thoſe who are not naturally ſo black as they would have them to be.

Barges &c. The Barges and Galleys that are kept for the King's own Uſe are lodg'd in a Houſe on the other Side of the River, oppoſite to the King's Palace.

Through the Hall of Audience there is an inner Palace, advanced ſeveral Steps above the ſaid Hall; there is a Window out of this Palace into the Hall, where the King uſually ſhews himſelf upon occaſion; in at this Window the *French* Ambaſſador deliver'd the King a Letter, for which purpoſe there were three Steps placed under the Window to raiſe him high enough to reach it, by reaſon of the advanced Height of the inner Palace where the King was; every thing that is deliver'd to him by his Officers or Foreign Ambaſſadors is preſented to him in a Golden Cup.

Pages. There are forty four Pages or young Gentlemen to wait in this Hall, they are divided into four Companies under their proper Officers; theſe proſtrate themſelves one half on the Right Hand, the other on the Left in the Time of Audience, till called to diſpatch the King's Orders to his Officers, but at other Times they are differently employ'd within Doors, ſome to read to the King, and take care of his Books, if he is ſtudious and delights in it, ſome are employ'd to take care of his Arms, ſome to ſerve him with *Betel*, &c. The King of whom the *French* Ambaſſador above-mention'd had his Audience, was ſo ſtudious, that he order'd *Quintus Curtius*, and ſeveral other Hiſtories to be tranſlated into the *Siameſe* Language, and by ſuch means underſtood the Conſtitution of ſeveral *European* Governments, and never thought that the Art of Governing could be attain'd without the help of Reading and Experience.

Palace Officers. He has one of his Officers immediately in his Preſence to receive his Orders, which the King delivers by certain Signs, which the Officer without proſtrating himſelf receives, and inſtantly communicates to thoſe that are waiting without, only by Signs alſo.

Officers of the Bed Chamber. Two Officers of his Bed-Chamber are his Women, none elſe being admitted there to make his Bed and dreſs him but the Women only, and they are not allow'd to put on his Cap, he reſerving that Office for himſelf, becauſe no Body is allow'd to touch his Head or put any thing over it; the Proviſions for his Table are brought to the Eunuchs, but they deliver it to the Women, who both dreſs it and wait on him at the Table; and they are ſo ſtrict in juſtly proportioning the Ingredients with which they ſeaſon or reliſh his Victuals, that all the Salt, Spice, and the like, is put in by Weight.

Queen. Amongst the many Women the King keeps, there is but only one that is honoured with the Title of Queen, and ſhe is commonly one of the Royal Family; but they are ſo far from being careful as to their Legitimacy, that the *French* Ambaſſador that was there in the Year 1688 tells us, that ſhe who was then Queen was the King's Daughter, which he had by his own Siſter, and that all the reſt of the Women ſubmitted to her, and reſpected her as Queen, that ſhe had the Command of the Eunuchs, both black and white, which were not above twelve in Number; and ſhe had alſo the Command of the reſt of the Women, with a Power to puniſh both if ſhe pleaſed; ſhe has alſo her Elephants and Barges to attend her when ſhe goes abroad, as occaſion may require, and when ſhe goes abroad in her Chair ſhe is ſo incloſed with Curtains, that ſhe can ſee without being ſeen, but when ſhe comes, they get out of the Way, or elſe proſtrate themſelves as ſhe paſſes by.

Her Trade. Her Magazines, Ships and Treaſure is her own, ſeparate from that belonging to the King, and if ſhe thinks fit ſhe carries on a Trade for herſelf, but the *French* Ambaſſador tells us, that when he was there the King and Queen were at ſome Difference, becauſe he had engroſs'd to himſelf all the Foreign Trade, whereby ſhe was deprived of the Advantages in Trade, which had formerly been reckon'd the Queen's Right; it is no wonder if where there is ſuch inceſtuous Co-habitation, Love and Unity ſhould decline when private Intereſt takes Place.

Seraglio. They take the Daughter of any Subject into the Service of the Vang or Seraglio, and that without conſulting the Conſent of either the Woman or her Parents, or rather they chuſe to do it againſt the Conſent of both, that they may extort a ſmall Sum from the Girl or her Parents for her Redemption; for the King keeps not above a Dozen Miſtreſſes in his Seraglio, and even them but for Cuſtom or State more than any thing elſe, that one would think there were no great occaſion to preſs Women into his Service.

Succeſſ. If the King have Children by more Women than one, and if one of theſe be Queen, yet the Queen's Son, although her eldeſt, doth not always ſucceed to the Crown, but the King's eldeſt Son, by the firſt Woman that brings him a Child is deem'd the natural and lawful Succeſſor, yet not indiſpenſibly ſo, for if the King ſees any private Reaſon for ſuſpending him from the Succeſſion, or does not look upon as qualified to ſucceed him, it is in his Power to nominate another; and notwithſtanding that in moſt of the Eaſtern Countries they generally affect being govern'd by one of the Royal Family, yet they do not inſiſt upon the eldeſt Son, if any Objection occurs againſt it, nor do they ſeem much to regard whether it be the Son of a Wife or a Concubine.

Wardrobe. He keeps Gentlemen of the Wardrobe (tho', as above obſerved, his Women dreſs him;) the Chief of his Officers of the Wardrobe is he that has the Care of the Kings Cap, any thing belonging to his Head being deem'd ſo ſacred that it muſt be a Perſon of Dignity that muſt preſume to handle it; and as the preſent Succeſſion of the Kings of *Siam* are of the *Cambodian* Line, they having uſurp'd it ſome time ago, and cannot pretend to any relation to the antient Kings of *Siam*, hence it has been lately, if it do not continue to this Day, that the great Office of being Keeper of the Cap of the King of *Siam* was one of the Princes Royal of the Blood of *Cambodia*.

Perſon keeps the King's Cap

Be-

For Strangers here.

BEFORE the King engrofs'd the Foreign Trade to himſelf, all Nations had the freedom of Commerce at *Siam*, which encouraged People of all Nations to come and ſettle there, and ſo numerous were the People of all Nations here, that Strangers converſed and contracted Acquaintance with their reſpective Countrymen, inſomuch that Numbers of People from ſeveral Countries inhabited ſeveral Parts or Quarters of the Town, forming themſelves into Communities, and chuſing Conſuls or Chiefs over them, the King appointing a Mandarin to tranſact Affairs with the ſaid Conſuls; but in matters of greater Conſequence there could be no Determination without the Barcalon or Prime Miniſter.

The Siamese Religion prevails.

ONE of the Barcalons or Prime Miniſters happen'd formerly to be a *Moor* of the Great Mogul's Country, and a *Mahometan* by Religion, and by this Means the *Moors* or *Mahometans* got then the beſt Eſtabliſhment; for by his Means the principal Eſtabliſhments were in the *Moors* Hands, and inſinuated themſelves ſo far into the King of *Siam*'s Favour and Intereſt, that he cauſed ſeveral Moſques or *Mahometan* Temples to be erected at his own Expence, and ſtill continues to ſupport the Charge of the Feſtival kept in Memory of *Haly*; and for the further encouraging of the *Mahometan* Religion, the Government of *Siam* order'd that all the *Siamese* who embraced that Religion, ſhould be exempt from the ſix Months perſonal Service; but this ſudden Proſperity ſoon met with a Blaſt, the late exalted Barcalon fell into Diſgrace, and with him as ſuddenly ſunk the Credit and Intereſt of his Nation; all the *Mahometans* were turn'd out of Employment, and forced either to perform the ſix Months Service, or to pay for their exemption from it; but ſo far had *Mahometaniſm* prevail'd in *Siam*, that they are yet allow'd their Moſques and the Exerciſe of their Religion; but they are not ſo numerous now as they were in the time of the above-mention'd *Mahometan* Barcalon, yet now there are computed about four thouſand *Moors* at *Siam*, and as many *Indian Portugueſe* or the mix'd Breed propagated by both, which are very numerous all along the *Indian* Coaſt: there continues ſome *Chineſe* and *Malays*, but the richeſt Merchants are withdrawn from *Siam*, ſince the King engroſſed all the beſt of the Foreign Commerce to himſelf.

Other chief Towns.

BESIDES *Siam*, there are other conſiderable Towns, though of leſs Note than *Siam*, but they are the Capitals of the ſeveral Provinces of the Kingdom, and generally give Names to them; their Situation is as follows, 1. *Menagſang*, the Northermoſt Town in *Siam Proper*, in twenty two Degrees of North Latitude; 2. *Lacontai*, about twenty one of North Latitude; 3. *Porſelouc*, in Latitude twenty North; 4. *Campenggpet*, in eighteen Degrees; and 5. *Prabat*, in ſixteen Degrees of North Latitude; all theſe five are ſituate upon the Banks of the River *Menam*; 6. *Lovvo*, about fifteen and a half North Latitude; here the King has one of his Hunting Palaces for his Reſidence in the Hunting Seaſon; it lies on the Eaſt Side of the River *Menam*, upon a ſmall Branch that runs into the ſame; 7. *Bancock*, ſituate upon the ſame River *Menam*, but about fifty Miles below *Siam*, towards the Sea, and ſo near, it may properly be called the Port of *Siam*, becauſe here was held the Cuſtom-houſe or Place to receive their Commiſſion to trade, and their Diſcharge when they leave the Country; 8. *Martaban*, in the Bay of *Bengall*, in about ſixteen Degrees of Latitude; this City is the Capital of a Kingdom or Province contiguous to that of *Pegu*, and was formerly Subject to *Pegu*, as it is now to *Siam*; it hath many convenient Ports for Trade, and produceth Grains, Fruits, Oil and Medicinal Herbs; here are alſo rich Mines of Gold, Silver, Iron, Lead and Copper; here are alſo Rubies, Lacques, Benjamin, &c. here they make a ſort of large Earthen Veſſels, called by the Name of the Place *Martabans*, ſome of which are ſo large as to hold a Buſhel; they are made of a kind of *Porcelane*, varniſhed black; they are eſteem'd very uſeful to keep Water, Wine, Oil, and all ſorts of Liquors in all over the Eaſt; 9. *Tenaſſim* lies alſo in the Bay of *Bengall*, at the Mouth of a River of the ſame Name, and is a good Harbour; it lies in Latitude thirteen Degrees North; 10. *Ligor*, on the Weſt Side of the Gulf of *Siam*, upon the *Iſthmus* that lies between *Siam* and *Malacca*, in the *Engliſh* Degree of Latitude; 11. *Chantebon* or *Liam*, in twelve Degrees of Latitude, upon the Mouth of a River of the ſame Name, which comes into the Sea in the North-eaſt Part of the Gulf of *Siam*; 12. *Patane*, it lies on the Eaſt Side of the Peninſula of *Malacca*, in between ſix and ſeven of North Latitude; this Province has a great Trade with ſeveral Foreigners, eſpecially the *Chineſe*, who bring *Porcelane*, Inſtruments of Husbandry, and divers Manufactures, and carry from thence Timber for Building, Cordage, Rice, and various ſorts of Skins; here is excellent good Pepper, but it is cheaper at *Bantam*; (of which more when we come to treat of *Java*;) they put a great Value upon *Saray Boura*, or the dried Birds-Neſts, which we ſpoke of in the Deſcription of *Cochin-China*; the Soil about this part of *Malacca* is very rich, producing Fruit every Month; their Hens, Ducks and Geeſe, of which they have plenty, often lay Eggs twice a Day, they have great Quantities of Fowls, they have white Herons and Turtles of divers Colours, like Parraquets; 13. *Queda* lies on the Weſt Side of *Malacca*, in between ſix and ſeven Degrees of Latitude; 14. the Town of *Malacca*, which gives name to the Peninſula in which it is, it lies in about two Degrees and a half North Latitude, and is the Capital of the Kingdom of *Malacca*, which takes its Name from it; this Kingdom is tributary to *Siam*, and was once a Part of that Kingdom; it had once a particular King of its own, till in the Year 1511 the *Portugueſe* took it, and kept it in deſpight of all the neighbouring Kings, till the *Dutch* took it from them in the Year 1640; but while it was in the Poſſeſſion of the *Portugueſe* it had the greateſt Trade of any Place in the *Indies* except *Goa*, it being the Rendezvous of all the Shipping from *China*, *Japan* and the *Spice Iſlands*; and to add to its Strength and Splendor, they built the Caſtle, and fortified the Town with a Wall, and built ſome Churches; but the *Dutch*, as if equally concern'd for the Ruin of other People's Intereſt, and the promoting of their own, took it from the *Portugueſe* in the Year 1640, and when they had got in Poſſeſſion, they (like the Dog in the Manger, who would neither eat the Hay himſelf nor let the Ox eat it,) in a great meaſure deſerted the Place, and removed the chief Trade to *Batavia*; the Town of *Malacca* being now Inhabited by a mix'd Multitude of *Dutch*, *Moors*, *Portugueſe*, and *Chineſe*, and a few *Malays*, in all not exceeding two or three hundred Families, and has a Garriſon of about the ſame Number of Soldiers, the *Dutch* ſtill keeping the chief Poſſeſſion, over-aw not only all the reſt of the Inhabitants of *Malacca*, but all the little Princes on theſe Coaſts; but as this relates rather to Trade than to the Situation of the Place, we ſhall handle it more largely in Chap. IV. following, when we ſpeak of the Article of Trade, and now proceed to the Deſcription of the next Capital in order, which is, 15. *Singapore*, it is ſituate at the Southermoſt Point of *Malacca*, and of all the Continent of *Aſia*, and gives name to the Strait or narrow Sea contain'd between *Malacca* and the Iſland of *Sumatra*; this Strait is called by ſome the Straits of *Malacca*, as being bounded by the Eaſt by that Continent, but by others the Straits of *Singapore*, the Capital upon that Part of the Coaſt of *Malacca*.

Lastly *Johr* lies in a Bay on the South Coaſt of *Malacca* to the Eaſtward of *Sincapore*; this City was taken and ruin'd by the *Portugueſe* in the Year 1603, they took from thence fifteen hundred Braſs Cannon; the King of *Johr* in Revenge three Years afterwards beſieged *Malacca* with ſixty thouſand Men, but was forced to raiſe the Siege and quit the Place; this Town and Province lying ſo remote from *Siam*, the Capital of the Kingdom, and the *Dutch* having got firm Footing here (like ſome other Animals who when they once get their Heads in do make the whole Body follow,) this Province has thrown off all Allegiance to the King of *Siam*, and are entirely govern'd by the Laws of the *Dutch*, and are ſo paſſively ſubmiſſive to them, that the *Dutch* do not find themſelves under any neceſſity to keep a Garriſon here to keep them in Subjection.

This Account of the Situation of theſe ſixteen Provinces and their Capitals may ſuffice at preſent, referring our Reader for a more particular View of them to a Map of *China*, *Japan*, *Tonquin*, *Cochin-China*, *Siam*, and the *Oriental Iſlands*, which ſhall immediately follow the Deſcription of the abovemention'd Kingdoms and Iſlands.

Fortifications and Buildings.

Their Fortifications are but weak, being either a ſlight Wall and a Ditch, or ſometimes only paliſadoed in with Bambou; their common Buildings through the whole Kingdom is much the ſame with thoſe deſcribed towards the Beginning of the Chapter, in the Deſcription of the Town of *Siam*; they uſe no Glaſs, but have a Shutter to let down like a Shop Window when they have Occaſion; their Roofs are ſloping like our common Thatch'd or Tiled Houſes, only inſtead of Tiles they uſe Palmeto Leaves laid one over another like our Slates, and as their Houſes all ſtand upon Poſts, as before deſcribed, they uſe Ladders to go up to them; they have no Iron Nails, but all their Beams, Rafters, Boards and other wooden Work are faſtned together with wooden Pins; they have ſeveral Brick Buildings, eſpecially thoſe of the better Sort, as Temples, Pyramids, &c. their Bricks are pretty good, and their Cement or Mortar better than ours, inſomuch that a Wall plaiſter'd with it looks like poliſh'd Marble; but their Buildings are but of a ſhort Continuance, becauſe they do not lay a good Foundation, or elſe the Softneſs of the Ground, by reaſon of the annual Inundations and ſoaking of the Ground, will not bear the Superſtructure: Every Houſe has a Boat ready againſt the Inundation, and has it tied at his Door to maintain a Communication with their Neighbours as Occaſion requires; the Climate is ſo hot that they have little occaſion for Fire but only to dreſs Victuals, and therefore they have no Hearths, but only a Basket of Earth to make the Fire upon, nor do they need any Chimney, becauſe they dreſs their Victuals without Doors.

Furniture.

The better Sort have Bedſteads or Couches to lie upon, but only broad enough for one Perſon, and cover'd with a Matt, and have no Curtains round the Bed, only one drawn before him when he ſleeps; ſome of them go ſo high as a Mattreſs ſtuff'd with Cotton, and a ſheet upon it to lie on, and a Coverlid to throw over them, with a Pillow under their Head, but they uſe no Feather-Beds; the pooreſt Sort have no Bedſteads, but pig all together on the Floor, having only Matts under them.

They ſit upon the Ground at Victuals, and have every one a little lacquer'd Table without Feet, and a Border round it; they have alſo Cheſts of Drawers, Cabinets and *China* Ware, with Veſſels of Copper and Earth; and as they have not Men of particular Trades, every Man has his own Set of working Tools to do his Work for himſelf or aſſiſt one another.

CHAP. III.

Of the Genius, Temper, Stature and Complexion of the Siameſe; *alſo of their Shape and Habit, together with their Ceremonies, Viſits, Entertainments, Diet, Diverſions and Feſtivals.*

Genius.

The *Siameſe* have a ready Conception, their Repartees ſmart, their Apprehenſion ſo quick that they can imitate any Thing at firſt ſight, and become tolerable Workmen in one Day's time by looking on and Imitating what they ſee, but they reſt in a certain Pitch of Acquirements, and are not ambitious to excel, and although *Loubiere* aſcribes this to their Indolence, yet it ſeems to proceed from Prejudice rather than Fact, an indolent Temper being almoſt inconſiſtent with ſuch a quick Genius as all Authors, and he amongſt the reſt, allows them to have; but they have other more probable Reaſons to make them ſlacken their natural Ingenuity, for the King employs half his Subjects ſix Months in the Year to do any Buſineſs indifferently, and thoſe that excel he retains in his Service during Life, ſo that to excel in Ingenuity here is to purchaſe Slavery for ever, which the Generality prudently endeavour to avoid, and which is as diſcouraging as the former, if a Man is ingenious, and eſcaping this Slavery, acquires a competent Fortune, it is ſeized for the King as ſoon as it is known; and if this was the Law in *France*, I queſtion not but it would make the *Frenchmen* as lazy as Mr. *Loubiere* reports the Subjects of the King of *Siam* to be.

Virtue

The *Siameſe* hate Intemperance and Laſciviouſneſs, and excel ſome Chriſtian Countries in ſuppreſſing looſe and frothy Diſcourſe, which never paſſes for Wit amongſt them, but is deſpiſed in Converſation: their People, eſpecially the better ſort, are ſo far from being Drunkards, that it is reckon'd ſcandalous among them to drink Arrack or Brandy; and ſo modeſt are the People, that Adultery is ſcarce ever heard of amongſt them, which *Loubiere* imputes to the Women's Induſtry and continual Exerciſe in the Care of their Families, which indeed is one good Step towards expelling of Vice and Debauchery out of a Family, but I rather take the chief Cauſe to be the entire Love the Men and Wives bear to one another and to their Children, which ſo much prevails there in all Degrees of People, that the King himſelf makes it a great Part of his Diverſion to play with his Children till they grow old enough to out-grow their childiſh Actions, and turn their Thoughts to ſomething more material.

Love their Wives

They are averſe to the ſhedding of Blood, but if their Reſentments amount to a deſign of Revenge, they ſeldom come to Blows, but if Words will not do, Poiſon or Aſſaſſination ſometimes puts an end to the Tragedy; but they will ſmother their Reſentment

ment a long Time, and will not put their Revenge in Execution till by the Provocation they are exasperated beyond the Bounds of Reason or Humanity; they are not readily provoked or reconciled, but when they would profess the most sincere Friendship, it is done by drinking in the same Cup.

Stature and Complexions. They are small of Stature and well proportion'd, but the Women's Breasts hang down to their Girdles; swarthy complexion'd, broad Faces, high Cheek-Bones, their Fore-heads tapering upwards, and ending at the Top as narrow as their Chins; they have small Eyes, hollow Jaws, large Mouths and thick Lips; Large Ears, short Noses and long Nails is deem'd beautiful and ornamental, and they so much admire black Teeth, that they dye them black, as in *Tonquin*, (*see Chap.* II. *of* Tonquin,) they have thick lank Hair, which both Sexes cut so short as to come no lower than their Ears, the Men shave their Beards clean, and leave not so much as Whiskers.

Teeth

Hair

Bathing. They never make a Visit till they first bathe, although it should happen two or three times a Day or more, some times they go into the Water, and other times have it pour'd over them for an Hour together, after which they perfume their Bodies, and use a sweet Pomatum to anoint their Lips, which makes them look rather more pale than their natural Colour; they sometimes swim and bathe in the Rivers, which the Women do as frequently as the Men, but never without a Pagne about their Middle, which is a Cloth round their Middle and coming down to the Calves of their Legs, for they are said to be strictly modest, and avoid every thing that has the least Appearance to the contrary, even smutty Songs being prohibited by a Law.

Habit. The Quality, Men as well as Women, wear Pagnes, and they wear them fine according to their Dignity; those that are made of fine Linnen or embroider'd Silk, or any other way gay and splendid, are only wore by those to whom the King presents them, but the Pagnes of the vulgar People are made of common Cloth, according to the Inclination or Ability of the Wearer; the Men bring up the Corner of the Pagne between their Legs, and tuck it into their Girdle, making it like a Pair of Breeches: The Women have also a Cloth to cover their Breasts, and throw the Ends over their Shoulders, (besides the Pagnes before spoken of,) but the rest of their Bodies are naked; they have no Shift as the Men have, nor any Covering for their Heads but their Hair; the poorest People of all go almost naked, and wear neither Shoes, Stockings nor Slippers; the Women wear as many Rings on the last three Fingers as they can keep on, if they can purchase them, and Bracelets or Rings of Gold upon their Wrists and Ankles, with Pendants in the Ears fashioned like a Pear: The Men of Quality have a Muslin Shirt without a Collar, with wide Sleeves and no Ribbons, and the Bosom open; in Winter they wear a Breadth of Stuff or painted Linnen over their Shoulders like a Mantle, and wind it about their Arms; the King wears a Vest of Brocaded Sattin, with strait Sleeves down to his Wrists under such a Shirt as above described, but no Subject is allow'd to wear such a Vest except he to whom the King presents it; they use no Stockings, but they have Slippers with picked Toes turning up; the King sometimes presents his Generals with a Military Vest, button'd before, and reaching to his Knees, having short wide Sleeves reaching only to the Elbows, and either in the Field of Battle or Riding a Hunting the King and all his Retinue are cloathed in Red; the King wears a Cap in form of a Sugar-loaf, with a Coronet or Circle of precious Stones about it; his Officers have also such Caps with Circles of an inferior Value, as Gold, Silver, or gilt Vermillion, according to their respective Dignities; these Caps are fastned with a Stay under the Chin, and are never worn but in the King's Presence, or upon some extraordinary Occasion; their putting off their Slippers when they enter a Person's House is a Token of Reverence or Respect, as our putting off our Hats are.

Behaviour. They are in their Infancy and Minority impregnated with and brought up under the strictest Rules of Modesty and Submission, always to learn rather than speak before their Betters, except they be call'd to give their Opinion; in addressing a Woman they commonly prefix the Epithet *Young* to what other Titles is due to her, as the King's Daughter is called *Young Heaven*, and those of a lower Quality *Young Jewel*, *Young Flower*, &c. one cannot affront a Woman worse than to call her Old, and indeed it is ill Manners enough to omit the Epithet of *Young* when you address them, let their Age be what it will.

It is reckon'd a Piece of Insolence for a Man to stand before a Person of Quality, or a Slave to stand before his Master, but they most sit upon their Heels, their Heads inclining forward, their Hands join'd and lifted up to their Forehead; or when they meet a Superior, they join their Hands and lift them towards their Heads; the greater Veneration or Respect they pay the higher they lift their Hands, insomuch that if any receives a Commission, or but a Letter from the King or a Nobleman, they hold it up to their Heads, and sometimes as a Token of more profound Reverence they lay it upon their Heads, as *Loubiere* tells us he did when he received the King of *Siam*'s Letter to his Master the King of *France*. When one visits a Superior, he comes stooping into the Room, then puts his Knees upon the Ground, and sits upon his Heels, and continues in this Posture till the Person he visits speaks to him, for always between any two of different Dignity the Superior speaks first, the contrary being deem'd unpardonable ill Manners in the Inferior; when a Person visits his Inferior, he walks upright, and the Master of the House receives him at the Door, and conducts him to the same Place at his Departure, but never further; at a Visit the Master of the House gives his Visitor *Betel* and Arrack, which he gives, and the Visitor receives with both Hands together, they also treat with Tea, Rice, and Fish, as the Person thinks convenient, and as Opportunity permits.

Position or Places. In Walking the Right Hand, and in Entertainments that Part of the Room over against the Door is always esteem'd the most honourable, and therefore if a Person comes in of a Dignity superior to all that were there, he that had the Head Place before must take the next lower, and so on, that every one is obliged to remove a Place lower quite round, or at least half round the Room, and with their Places they must also alter their Postures, sitting upright or leaning less or more, according as they are to pay the greater or less Respect to the Person last come in, but if he that came last in is inferior to all the Company, he takes the first Place, next the Door, and if he is much below them, he continues sitting upon his Heels with his Knees upon the Floor; when they approach the King's Presence, they fall upon their Knees and bow their Faces to the Ground.

They have an uncommon Respect for their Heads, and it is a heinous Affront to touch or stroke them; nay, even the Cap must not be used too familiarly, for when a Servant carries it, it is put upon a Stick with a Foot to it, that when the Masters walks, the Cap may be carried along with him, and when he stands still the Servant sets it down: When they return an Answer to the King in person, it is introduced with, *High and Mighty Lord of me thy Slave, suffer me to take thy Royal Word, and fix it in my*

all

Hand, and preserve it on the Crown of my Head: In their Addresses to high or low, they always speak in the singular Number.

HUNTING the Elephant is a Diversion as well as an Exercise, a Pleasure as well as a Profit; when they hunt a Male Elephant, they lead a tame Female one into the Wood, who with her Noise entices him into a narrow Strait between two Banks of Earth, fortified with bodies of Trees for that Purpose; it grows narrower the further he goes in, till at last he gets in so far that he cannot turn himself, and then they secure his hinder Legs with Ropes, and (likely by some Convenience at that narrow End for that purpose) let him out, and make him march home with two or three tame Elephants, and so by Discipline suitable to his Capacity, they bring him to be serviceable; sometimes they surround them with Fire to drive them to the Trap; but that being more practised in the Island of *Ceylon*, we shall enlarge upon it when we come to treat of that Place.

Elephant Fighting Cock-fighting

THEY formerly had Mock-fights of Elephants, and also Cock-fights; but of late they exceed many other Countries in Tenderness in that Respect; for they will not allow of exposing the Life of either Man or Beast for the sake of Sport: And although they yet divert themselves with these Mock-fights of Elephants, yet they always take Care to keep them at too great a Distance to hurt themselves or any body else; and the Priest have got an Order against Cock-fighting, alledging that thus killing the Cocks, or, which is the same, causing them to kill one another, is a Degree of Murder; and that those who are guilty of promoting this Sport, shall be bastinadoed with Bars of Iron in another World: However erroneous or superstitious their Religion may be, there seems to be more Humanity and Tenderness in them than in some whose Knowledge and Profession very far exceeds theirs. They have Comedies, Rope-dancing, and Tumbling, which last they say is excellently perform'd.

Paper Kite

THEY are so fond of that Boyish Diversion of Flying the Paper-Kite, that the King himself will come abroad, during the two Winter Months, to fly the Kite with a Lanthorn at its Tail, his Mandarins who attend him, taking it by Turns to hold the String. There is also the Diversions of the *Cone*, the *Layeome*, and the *Rabam*: The *Cone* is a Figure-Dance after Musick; the Dancers are arm'd and masked, and seem to fight rather than dance. In the *Layeome*, the Actors sing Verses of the Histories of their Country; the Actors are all Men. The *Rabam* is a Dance perform'd by Men and Women, who sing in the Dance; and as long Nails are looked upon as an Ornament, those that have not natural Nails long enough, have artificial ones made of Copper upon such Occasions; the Dance is slow and stately, and requires various Postures and Distortions of the Body and Limbs; the Actors in the Cone and Rabam have Caps like flate Caps, in the form of a Sugar-loaf, as mention'd before in the Dress, and perform at Funerals; but the *Layeoms* act at the Dedication of their Temples, at the Ceremony of setting up their *Summonacodom*, when they have Wrestling, Mock-fights, and Races of Oxen that run round a Ring; sometimes one Ox runs against another, being each of them led by a Man on Foot, but more commonly two Yoke of Oxen run one against another with a Plough fathned to each Pair or Yoke, but held up so that it does not plough as it goes; they do not start at the same Place of the Circle, but at opposite Points, and the Pair that overtakes the other wins the Race: *A good Way to prevent their Justling one another.*

Races of Oxen

Rowing for Wagers

THEY row for Wagers in their Barges upon the Rivers, which makes them very great at that Exercise; they are so addicted to Gaming, that when they have lost all else, they will stake their Children, and when they have lost them will stake themselves, and if they lose, become Slaves, and lose their Liberty when they have no more Money, Goods, or Children to lose; their chief Play is like our Play at Chess.

Festival

THEY have an Annual Festival; when the dry Weather comes on, and the Waters begin to retire, they go out of their Barges in the Evening, and the River seems to be cover'd with floating Lanthorns made of painted Paper, and with these Tokens of Rejoicing they continue several Nights together, returning Thanks for the hopeful Prospect of succeeding Plenty, occasion'd by the Floods; they also rejoice and return thanks in the same Manner for the Fruits of the Earth, after they have gather'd it in, and with this addition, that not only the Barges but the Houses and Streets are illuminated, and curious Fire-works play'd upon this occasion.

Holy-

THE New and Full Moons are also Holidays, but they are as Fast-days not Festivals, for neither Priests nor People eat any thing in the Afternoons of those Days, nor are the People allow'd to fish, though other Labour is not altogether forbid on those Days; the People then make offering to the Priests in their Convents of Money, Cloth, and Cattle; if the Cattle be dead, the *Telapoins* eat them; there are other Feasts which *Loubiere* observed when there, and supposed them to be the Feast of the Dedication of their respective Temples; the People attend every Holiday in their best Cloaths, and release some wild Animal, which they buy of those that have taken them, and set them at Liberty, which they look upon as a great Act of Charity; their offerings are presented to the Idol by the Priest, who either holds it in both his Hands before the Shrine, or lays it upon the Altar, and afterwards it is applied to the Priest's Use; they sometimes offer lighted Tapers, but never any bloody Sacrifice, the killing of Animals being entirely prohibited.

Offeri

Rice

RICE and Fish is their chief Food, and is very cheap; Rice is a Farthing a Pound, and they can have as much Fish for a Farthing more as together is sufficient for a Man a whole Day, there are also great Store of Oysters, Turtles, and Lobsters, with some excellent kinds of Fish not known to us in *Europe*; they have Plenty of fresh Water Fish, and *Baladaun* is in great Esteem with them; (*for the making of it in Chap.* II. *of* Tonquin;) they like their Fish better dryed and salted, though it stink, than fresh; they eat Rats, Mice, Lizards, Locusts, and almost all kind of Insects whatsoever; they seldom eat Flesh, but of what they do eat they like the Guts and Entrails best; their Land Fowls and Butchers Meat is so dry and insipid that the *Europeans* do not like them, but leave them off, and conform to the Country's Way of Eating; their Sauces are made of Water with a little Spice, Garlick, and sweet Herbs; they use also *Nukemum*, described Chap. II. of *Tonquin*; they have neither good Grapes, Olives nor any Oil worth Eating; the Milk of the Female Buffaloe affords more Cream than Cows Milk, but they only eat it, and never make either Butter or Cheese.

Dri

RIVER Water is their chief Drink, but it is so thick and muddy after the Inundation, that they are obliged to take it up beforehand, and let it settle three Weeks or a Month, if it is immediately after the Floods, or else it causes Dilenteries to those who drink it fresh taken up; the King has a large Cistern in the Fields to keep fresh Water in for his own Use; he has also a great Eafon near the Palace at *Longo*, about three Miles in Circumference, called the Fish Sea, where the Rain Water is preserved and settled, and accounted very wholesome.

The

Tea.

THE Citizens of *Siam* drink Tea both as Food and Phyſick; for beſides their common uſe of Tea, they drink it as a Remedy againſt the Head-ach; they reckon that drinking five or ſix Diſhes, and going to Bed to ſweat upon it will carry off an ordinary Indiſpoſition, for Sweating is their common Remedy for moſt Diſtempers; when they drink Tea they do not put Sugar into it to ſweeten it, as we do in *England*, but put Bits of Sugar-candy in their Mouths, and let it diſſolve with the Tea as they drink it; they often make it with cold Water, and think it is the beſt Tea that is made in this manner.

Strong Liquor.

THEIR Religion forbids them to drink Wine, or ſtrong Drink, but they can diſpenſe with that if they can come at it; the Country affords no ſtrong Liquor but Arrack, which they diſtil from Rice, and alſo Toddy, which is drawn from the Cocoa-Tree.

DIFFERENT Foreigners drink different Liquor at *Siam*; the *Portugueſe* drink Chocolate, the *Moors* Coffee, the *Engliſh* Arrack Punch; there are but few of the Sorts of Fruit here that are known in *England*, except Oranges, Lemons, Citrons, and Pomegranates; there are alſo Bonanoes or *Indian* Figs, which with one ſort or other of the Oranges continue all the Year, but other Fruits are only to be had at their proper Seaſons.

CHAP. IV.

Gives an Account of the Trade and Manufactures of the Siameſe; *alſo of their Mechanick Arts, their Coins, Weights, and Meaſures, the Nature of their Shipping, and of their Navigation abroad.*

SIAM was a Place of good Trade when the Commerce was free and open both to Foreigners and to the Natives amongſt themſelves, but now the King has engroſs'd all the beſt Trade to himſelf, not only by Wholeſale, but carries on a Retale Trade in Shops by his Factors, and ſells to his Subjects all their Cotton-Cloths, which is the chief Wear of the common People; he monopolizeth to himſelf all the Trade in Ivory and Arrack. What the Subjects have to diſpoſe of, of theſe ſort of Goods, as alſo Salt-Petre, Lead, and Sapan-Wood, they are not allow'd to trade with Foreigners in, but are obliged to ſell all to the King, and even at his own Price too, and having all the Trade in his own Hand, he makes his own Price with Foreigners in the Selling as well as with his own Subjects in the Buying, ſo that there is little got on either Side by Trading with him, which has reduced the Trade of *Siam* to a very low Ebb; he ſometimes agrees with the *Dutch* by Wholeſale, to ſell them all the Skins and Furs that the Country affords at a certain Price, as they can agree, but his Subjects muſt provide them, and ſell them to him firſt at a Price to afford him Profit, whatever they have for their Labour or Property; indeed he allows his Subjects to deal with Foreigners in Trading with Brown-Sugar, Sugar-Candy, and Amber-Greeſe, which they may ſell to Merchants or Foreigners without any Reſtriction.

Trade diſcouraged.

THIS Practice of engroſſing the Trade to himſelf has been ſo fatal to all Commerce, and eſpecially with Foreigners, that whereas there was not leſs than a thouſand Veſſels yearly traded to *Siam*, there are now ſcarce any but a few ſmall *Dutch* Barks, for no Body cares to deal with the King becauſe he is arbitrary, and will make his own Terms, ſo that few care to carry Goods there for a Market, becauſe the Seller has no ſhare in making a Bargain for the Price, and this Country not affording ſo much for Exportation as to create a Trade, and what there is being all in the King's Hand, (except as above,) you muſt either give his Price or one Word, whatever it is, or go without, that few care to go there either to carry Goods for a Market, or buy Goods to bring Home, and if the Subjects had a free Trade either with Foreigners or amongſt themſelves, yet they are tax'd even to the laſt of what they are known to be worth, or if a Native happens to have ſaved a little Money, he is forced to hide it, or hoard it up, and dare not let it appear in Trade or in any publick Manner, leſt it ſhould be ſeized for the King's Uſe.

Handicrafts.

HERE are but few Mechanick or Handicraft Trades carried on, every Man generally has his Set of Tools, and underſtands ſomething of the Uſe of them; the King employs half his Subjects one half of the Year in whatſoever Mechanical Exerciſe he thinks fit, in which they dare not be lazy or quite ignorant, for fear of the Baſtinado, nor do they care to excel the reſt, leſt the King without making any Terms with them keep them in his Service like Slaves for their Ingenuity; *(ſee Chap. III. near the Beginning;)* ſome of them do Carpenters Work tolerable well, but they have no Nails, but faſten their Work together with Pins inſtead of them; they can burn Bricks, make Cement or Mortar, and do Maſons Work; they can caſt Metals to cover their Idols, which at firſt are nothing but monſtrous Figures compoſed of Brick and Lime or Cement, which they cover with Plates of Gold, Silver, or Copper; they can cover Sword Hilts, or the like, but their Work is but rough, for they do not underſtand Poliſhing or ſetting of Precious Stones; they can beat Gold, and gild tolerable well; they have no great Art of forging of Iron, but caſt it into the Forms they want; they never ſhoe their Horſes, nor have the Art of Tanning Leather; they make an ordinary Cotton Cloth, and paint it inſtead of dying it; they make no Stuffs either of Wool or Silk; they underſtand not Painting in Oil, but in the way of Painting that they do uſe, they affect extravagant Figures of Men, diſtorted and out of Proportion, or of Animals that the World never produced; they will encourage a *European* Artiſt or Handicraft when there, but take care he ſhall not bring much out of their Service.

Employment

THEY that have got a little Stock, follow Merchandizing in ſuch Things as the King allows them to Trade in, but the chief Exerciſe of the common People is Fiſhing; they are not curious in admiring Rarities or Superfluities, but either in Building, Wearing, or Furniture are content with barely what is neceſſary, for which reaſon Mechanicks or any ingenious Exerciſe is little or not at all improved amongſt them.

Simply Honeſt

AND as their Simplicity keeps them from aſpiring after Superfluities, ſo it keeps them from any Inclination or Neceſſity to be Covetous or Tricking in their Dealing, which is what they are ſo far from, that one of them will ſcarce count the Money that he receives after him that paid it to him, and they

laugh

laugh at the Carefulneſs of the *Europeans*, who dare not truſt to the Perſon they receive any thing of, without examining it after them.

Their Markets begin at five in the Evening, and continue till eight or nine at Night.

The better ſort buy their Muſlin by the Piece, taking one another's Word for the Quantity, and the meaner Sort that buy by Meaſure, have only their own Cubit, or from their Elbow to their Finger's End to meaſure by; but they have a Fathom which they uſe in Building, and in meaſuring their Canals, and their Roads, in which there is a Stone ſet up at the End of every Mile.

For a Meaſure for Grain or Liquor, they uſe a Cocoa-Nut Shell; but as they are of unequal Bigneſs, they determine the different Capacities of them by the Number of Cories that they will hold: Theſe are little Shells, which we call Black-a-moor's Teeth, which ſerve for ſmall Money at *Siam*: Some Cocoa's will hold a thouſand, and ſome five hundred of them, or more or leſs. They have alſo a kind of Wicker-Meaſure for their Corn, called a Sat, and a Pitcher to meaſure their Liquids; but they have no particular Standard, but compute them by their Cocoa-Shells; and they being ſo uncertain, as above mentioned, their Liquid, as well as dry Meaſure, cannot be eaſily determin'd: And their Weights are as uncertain as their Meaſures, they being govern'd by their Pieces of Money, which are as uncertain as the reſt; but they have other Weights that are more certain, as the Cattee, Bahar, and Peeul. There are two Sorts of Bahars; the great Bahar is two hundred Cattees, or three Pices; a Cattee is twenty ſix Tails, and one Tail is an Ounce and a Half *Lisbon* Weight; and by this they weigh Spices, Drugs, and other Commodities.

Meaſures.

Weights.

The ſmall Bahar is alſo two hundred Cattees; but the Cattees differ as our Ounces *Troy* and *Avoir-dupoiſe* do. This Cattee is but twenty two Tails, and the Tail is near an Ounce and a half, and half a Quarter; by this they weigh Quickſilver, Silk, Musk, Aloes, Copper, Lead, Tin, Ivory, Amber, Vermillion, &c. The Peeul is a hundred Cattees of *China*, or a hundred and thirty two Pound *Engliſh*.

Mr. *Lockyer* gives us alſo an Account of another ſort of Weight called a Mace, of which there are ſixteen to one Bunkal of one Ounce nine Penny Weights twelve Grains *Troy*, and that a hundred Cattees make one Peeul of one hundred and thirty ſeven Pounds and a half, being five Pounds and a half more than the common *China* Peeul above-mention'd.

Coins.

Their current Coins are Tails, Tycals, Maſſes, and Copans; a Copan is three Pence Farthing Sterling; four Copans is a Maſs, or thirteen Pence Sterling; four Maſſes is a Tycal, or four Shillings and four Pence of our Money; and four Tycals is a Tail, worth our eighteen Shillings. They have no Gold or Copper Money; theſe are only reckon'd merchantable Commodities, as our Lead and Tin is, and are ſold by Weight, any Weight of Gold being reckon'd of ten times the Value of the ſame Weight in Silver. The little Shells called Cories, found about the *Maldiva* Iſlands, (of which hereafter,) are current for the Purchaſe of ſmall Things; they pay them by Tale, and are of more or leſs Value, as they are ſcarce or plenty; but their general Value at *Siam* is eight hundred for a Penny.

Trade at *Malacca*.

The chief Trade that the *Engliſh* have in this Country is at *Malacca* with the *Dutch*, who are in Poſſeſſion of that Port: To this Place the *Engliſh* ſend two or three Ships every Year from the Bay of *Bengall*, and Coaſt of *Cormandel*, with Callicoes, Opium, ſlight Silks, and the like, and bring back Canes, Rattans, long Pepper, Sugar, Sugar-candy, Benjamin, Sapan-wood, and ſometimes Gold; but this Trade is prohibited by the *Dutch*, though ſometimes carried on by the Connivance of the Governor, Council, or Fiſcal; for moſt of the chief Officers of the *Dutch* Settlement are Friends of thoſe who compoſe the State, and ſent abroad to make their Fortunes; ſo that they are wink'd at in their trading even with any People, becauſe it is to enrich their Families; and indeed this Connivance contributes conſiderably to the Advantage of the *Engliſh* Trade; for the *Dutch* have engroſſed all the chief Trade of the *Indies* to themſelves by building Forts and planting Garriſons, where it is worth the Charge; and where it is not, they fix Guard-Ships to prevent the Natives trading with other People; and ſo cunning are they, that where they have neither Guard-Ships nor Garriſons, they give out that they have bought up all the Pepper and other Commodities that ſuch a Place produces, to prevent other Peoples going there to buy, and ſo to monopolize and engroſs the Market to themſelves, at a cheaper Rate, though there is no ſuch Contract ſubſiſting; ſo that a great Part of the Trade we have, and the Goods we receive, is either from the *Dutch* at ſecond Hand, or if from the Natives, it is what the *Dutch* reject, and think not worth their while to meddle with.

And as we are treating of the Trade, it may not be amiſs to give a Deſcription of the Town of *Malacca*. It ſtands upon a low level Ground, cloſe to the Sea-ſide, on the Weſt Side of a ſmall River, which at Spring Tides has Water enough for ſmall Veſſels. On the Eaſt Side of this River ſtands a ſtrong Fort built at the Foot of a little ſteep Hill, and maintaining a Communication with the Town of *Malacca* by a Draw-bridge: The Walls are thick and high, and founded upon a Rock. Cloſe on the River, on the other Side of the Hill, ſtands a little Church; for the *Dutch*, who 'tis probable, as they have Poſſeſſion of the Place, may ſuppreſs the Religion of the Natives, there being no Temples for the Exerciſe of their Way of Worſhip.

The Native *Malayans* poſſeſs the leaſt Share of the Town, there being between two and three hundred Families of *Dutch*, *Portugueſe*, *Chineſe*, and *Moors*. The *Chineſe* have the beſt Shops fill'd with the Manufactures of their own Country, and ſuch other Goods as there are any Demand for. The Houſes are moſtly built with Stone, the Streets are wide and ſtraight, but not pav'd. The Natives are generally expelled the City, and live in poor mean Cottages in the Suburbs, and are kept in great Subjection, and although they have frequently not only meditated, but executed Revenge upon the *Dutch* for their Tyrannical Government, yet the *Dutch* keep the Trade of the Natives under ſuch Reſtraint, with their Guard-ſhips at Sea, and their ſevere Government aſhore, that it is next to impoſſible for them to deal with any but the *Dutch* themſelves.

Malacca is a very healthful Place, though ſo near the Line; it has not a great Trade; but as the *Dutch* are Maſters of the Straits of *Sunda*, between the Iſlands of *Sumatra* and *Java*,) and the Town of *Malacca* gives them the Command of the Straits between *Malacca* and *Sumatra*, called the Straits of *Malacca*, or by ſome the Straits of *Sincapore*, and theſe two Paſſages command in a great Meaſure all the Trade from *Europe* to *China* and *Japan*: 'Tis true they may paſs the Straits of *Malacca*, and not come within the Reach of the *Dutch* Guns from the *Malacca* Fort; but they have their Guard-ſhips out to intercept that Paſſage, if they pleaſe; and they now make Reprizals of the *Portugueſe*, making them pay a Toll or Acknowledgment for every Ship that paſſes

paſſes, as the *Portugueſe* formerly ſerved them, when it was in their Power.

Shipping. THE *Siameſe* have not much Shipping, the King has five or ſix ſmall Veſſels, which he mans generally with *Europeans*, and ſends them out ſometimes to trade, and ſometimes to make Repriſals upon his injurious Neighbours, but the Commiſſions of his Captains either by Sea or Land never extend ſo far as to kill any Body; he has alſo about forty or fifty Galleys, with about ſixty Men each, but they are of little uſe except in the Gulf or Bay of *Siam*, and then only in a ſmooth Sea and good Weather.

Barges. THEY have fine Veſſels called Ballons or Barges, for uſe in the Rivers, they are ſixteen or twenty Foot long, the lower Part of them is made out of one ſingle Tree, which they firſt cut hollow, ſomething like a Canoe, as large as the Tree will admit, or the Barge requires, and then raiſe the Sides with Boards to what Height they think fit; the Head and Stern is very high, and in the Middle is a Place for the Reception and Accommodation of Paſſengers, or the Gentleman to whom it belongs; they have ſometimes forty Rowers in one of them, who as the Barges are ſo narrow and long, will row them with incredible Swiftneſs, even againſt the Stream; the Mandarins Barges are diſtinguiſh'd by their Colour or Workmanſhip, according to the Dignity or Order of the Mandarin whoſe it is, and if any of them are upon the Water when the King comes by, the Mandarins proſtrate themſelves in the Barge, and not a Barge moves till the King be out of Sight.

CHAP. V.

Of the Nature of the Soil of Siam; *their Method of Husbandry and Gardening; alſo of their Plants, Animals, and Minerals, and of their Manner of Travelling.*

Soil. THEIR Soil has been form'd, and is annually encreaſed and thicken'd by the Clay and looſe Earth that is annually waſh'd down from the Mountains by the Floods in the wet Seaſons, and has now cover'd the lower Grounds to ſuch a Thickneſs that they have but very little ſtony Ground, nor ſcarce a Flint to be found in the Country; it is this rich Soil that makes the Land fruitful where it lodgeth, while the high mountainous Ground from whence this Soil is waſh'd is left rocky and barren, and ſometimes even the lower Lands, which is otherwiſe naturally fruitful, are ſo ſcorch'd with Droughts, and ſubject to Inſects and the like, that they are deprived of their Harveſt for ſeveral Years together, and theſe Years are generally ſucceeded by peſtilential and Epidemical Diſeaſes.

Plowing. THEY prepare their Land for Tillage when the Floods have ſufficiently moiſtened the Earth, and then plow it with Plows without Wheels, like our Foot Plows, with a Share and a Staff to hold it by, but inſtead of Nails they are only faſtned together with Thongs and Pins, and are drawn by Oxen and Buffaloes, which they guide by a Rope run through their Noſe; it was formerly a Cuſtom for the King of *Siam* to ſet his Hand to the Plow on a certain Day once in a Year, as his Neighbours of *China* and *Tonquin* did, but it is now thought ſufficient that one of his Majeſty's Officers perform the Ceremony for him, and upon this Occaſion a great Sacrifice is offer'd to *Sommono Codom* their God, and he is implored to be propitious to their Labours. They ſometimes ſow Wheat on the higher Lands, but Rice is the chief Grain, which they plant before the Waters riſe to any great height, and then as the Waters riſe very ſlowly, and the Rice delights in wet Ground, it grows as faſt as the Water riſes, and always keeps the Ear above Water, and if the Rice be ripe before the Water retires, they go in Boats to reap it, or if not, they reap it not till the Water is gone: but the beſt reliſh'd Rice and what will keep the longeſt is that ſown in higher Ground, which is never over-flow'd, but then they are at a vaſt Trouble to water theſe Fields while the Rice is growing, for it will not grow without abundance of Moiſture.

INSTEAD of Threſhing their Rice, they tread it out with Cattle, and for Winnowing they pour it gradually from ſome high Place, and in its falling the Wind ſeparates the Rice from the Duſt and Chaff, but there is ſtill a thick Skin upon it like the Skin or Bran of our Wheat or Barley, and this they wear off by beating it in a wooden Mortar before it is fit for Boiling.

Gardens. THE *Siameſe* cultivate their Gardens as well as their Fields; they have in them Pulſe and Roots, as Garlick, Potatoes, and Radiſhes, but no Onions, Carrots, Turnips, or Parſnips, nor any Colworts, Lettice, or any of our Sallad Herbs; they have Cucumbers leſs offenſive than ours, and their Garlick is not ſo rank in this hot Country; when the Inundation is over they cover the Plants in their Gardens from the Heat, as we cover ours in the Winter to keep them from the Cold.

Fruits. THEY have Oranges, Lemons, Citrons, and Pomegranates; they have Oranges of one kind or other all the Year, but the other Fruits are limited to their proper Seaſons, as ours generally in *England*; they have ſcarce any other ſorts of Fruit known in *Europe*, but there is *Indian* Figs, Bonanoes, Goyvaes, Jacques, Durions, Mangoes, Mangoſtans, Tamernids, Annanaes, and Cocoa-Nuts; they have Plenty of Pepper and Sugar-canes; a great Part of their Food is what their Gardens produce; their Fruits in general have ſo ſtrong a Taſte and Smell that it requires ſome Time before a Foreigner's Appetite can be reconciled to them.

Flowers. OF Flowers they have the Tube-roſe, Gilly-flower, and ſome few Roſes; they have ſome Jaſſamine, Amaranthus, and Tricolets, but no others *European* Flowers, but ſeveral others peculiar to their own Country, agreeable enough both for Beauty and Smell, but they only ſmell in the Night, for the exceſſive Heat of the Sun deſtroys the Smell in the Day-time.

Wood. MOST of the hilly and uncultivated Part of the Country is cover'd with Woods, but the Bambou is the moſt uſeful to them, it delights in marſhy Ground among Reeds and Sedges, and ſeems when young to be one of the ſame Species, and is ſo tender when it is green and young, that they pickle it for Sauce, but in time it grows to a prodigious Bigneſs, and ſo hard as to be fit for any common Uſe, as Timber, (*ſee their building Houſes with it Chap.* II. *of the Deſcription of* Siam;) it is hollow, ſave only for a Sugary Pith that fills up the

the Middle of it, the Shoots are separated by Knots; it has Branches and Thorns that our Reeds have not, and each Root sends out several Stems; it is easy to cleave, but so hard that a Knife will scarce penetrate it, and it is said the *Siamese* strike Fire with it; they have other Timber fit for building Ships and making Masts, but their Cordage is made of the Skin or Husk of the Cocoa-Nut, spun and twisted together; they have Timber also for all other Uses, as Wainscoting, *&c.* there are also Cotton-Trees, which yield the Wool very fine, but so short it cannot be spun, and serves only to stuff Pillows, or the like; there is a Tree from which they extract an Oil which they mix with their Cements, and others that afford Lacquer and Gums; here are Cinnamon-Trees, also Sapan-Wood and other Woods proper for Dying; here is Lignum Aloes, but not so good as in *Cochin-China*, and very scarce, being only in the rottenest Part of the Tree, and those very little Pieces, and difficult to be found.

Cordage.

Cotton.

Beasts. THERE are Oxen, Buffaloes, Sheep, and Goats, the two former not good to eat, but kept for Tillage, their Hogs are small but fat, and the wholsomest Food of any Beast they have; there are no Rabbits, and but few Hares; their Cows are not nice Victuals any more than their Oxen; a Sheep is worth more than a Goat, and either of them is worth more than a Cow. They have a pretty Store of Venison, though the wild Beasts destroy a great deal of it, yet they have so much Deer, that the Natives kill them only for their Skins, to sell the *Dutch*, who trade with them to *Japan*.

Fowls. HENS are sold under Two-pence a-piece; Ducks are cheap, and very good Peacocks and Pigeons are plenty and wild; both Pigeons and Partridges perch upon Trees, to avoid the Floods. They have excellent Snipes, Turtle Doves and Parrots, and Plenty of wild Fowl, because the Natives will neither kill nor take them, but the *Moors* have Faulcons, which they bring from *Persia*, to fly at the Game. Most of the Birds of *Siam* are more grateful to the Eye than to the Ear: They are beautiful to look upon, but have no harmonious Voices. Their Sparrows are so tame, that they come into the Houses, and do some Service in picking up the Insects, which are very numerous and troublesome, (of which below;) their Crows and Vultures are so tame that the People feed them for Pity or Charity. Mr. *Lonbiere* before-mentioned tells us, that the Children that die before they are three Years old, are given to the Crows and Vultures for Food, thereby killing two Birds with one Stone, *viz.* Feeding those Birds of Prey out of Charity, as they call it, and at the same Time giving their Children a Burial, (if it may be so called;) that they deem the most honourable of any other, except Burning itself.

Children devoured by Birds.

Insects. THERE are Abundance of Insects in *Siam*, as Lizards, Scorpions, Millepedes, *&c.* And the Ants, and Gnats, which the Sparrows help to destroy, are exceeding troublesome; for they will penetrate through the Covers of Books, which obliged the Missionaries to wash them over with Varnish to preserve them: These Ants, by Foresight or natural Instinct, to avoid the Inundations, make their Nests, and lay up their Stores in the Tops of Trees, and thereby secure their Stores and Magazines in the Time of the Floods. They have many Water Insects unknown to us, amongst the rest a shining Fly, that casts a Light in the Dark; but they are killed or driven away by the North Wind, after the Rains.

Mines. THIS Country, thought by some to be the antient *Chersonese*, as having been formerly rich in Mines: The great Number of Idols, and other Cast-Works that are found there, as well as the old Pits that are daily discovered, shew, that there have been more wrought formerly than are at present. Their Images, and the Roofs of their Temples could not have been so well adorn'd with large Quantities of Gold, if it had not been taken up in greater Plenty formerly than it is now; but there has been no considerable Vein of Gold or Silver found lately; though Mr. *Vincent*, an *European* Physician, lately discovered a Steel Mine at the Top of a Mountain; also a Mine of Chrystal, one of Antimony, one of Emerald, and one of white Marble; and he further adds, that he had found a Gold Mine, which he believed to be very rich; but he would not acquaint the King with it. The *Talapoins* brought him Specimens of very rich Ore. They have plentiful Mines of Tin and Lead; but their Tin is but poorly refined; however it serves to make the Tea-Boxes and Canisters, which come from *India*.

Loadstone. THERE is a Mountain of Loadstone near *Louvo*, and another in the Island of *Jansalan*, on the West Coast of *Malacca*, in the Bay of *Bengall*; but this latter soon loseth its Virtue. There are also some Diamonds, Agates, and Sapphires in the Mountains of *Siam*; but as fast as they are found they are seiz'd for the King's Use; so that People have no Encouragement to search after them.

Travelling. THEY use in Travelling the Elephant, the Buffaloe, and the Ox to ride upon; but they do not ride upon either Horses, Asses, or Mules. The *Moors* have some Camels of their own, brought from other Countries. They seldom use the Male Elephant for Carriage, he being trained up to the War, and the Female is used for Carriage or Travelling. Elephants are common for any to hunt, and take for their own Use; but none are allow'd to kill them.

Chairs. THEIR Travelling Chairs are placed upon a Bier, and carried by four or eight Men on their Shoulders, one or two at each End of a Pole, and spare Men to change them when weary; those Chairs are sometimes in the Shape of a Dressing-Chair with Back and Arms; but some have only a Rail and Ballister about half a Foot high. They are commonly open at the Top, and the *Siamese* generally sit cross-legg'd in them; but Chairs are not allow'd to every Body; they must be Persons of Dignity and Quality that are carried in them. The *Europeans* are allow'd to use a Kind of Coaches called *Palanguins*: They have a Canopy over them to screen the Person that is in them from the Sun, and are carried upon Mens Shoulders like the Chairs.

CHAP.

CHAP. VI.

Of their Education, Learning, Preferments, and Honours; also of their Language, Characters, History, and Chronology.

Education. FOR the Education of their Children, they fend them to a Convent of *Talapoins*, or Prieſts, as ſoon as they are ſeven or eight Years old, and when they enter there, they put on the *Talapoins* Habit, but are not obliged to continue to wear it but as long as they pleaſe. Their Friends ſupply them with Food, and a Slave or two to attend them, if their Dignity require it, and their Abili-
Learning. ty will afford it. There they learn Reading, Writing, and Arithmetick; as alſo the Balie, or Court Language, ſome Principles of Morality, and the Myſteries of their Religion, but do not read Law or Hiſtory, or ſtudy any ſpeculative Science.

Writing. THEY write from the Left Hand to the Right, as we do, but the Alphabet for the Balie, or Court Language, and that common to the *Siameſe*, are not the ſame altogether; for the *Siameſe* Language has thirty ſeven Letters, and the Balie but thirty three; and theſe are all Conſonants. But of this by-and-by, when we come to ſpeak of their Language.

Numbers. THEY have Characters to expreſs their Digit-Numbers, and a Cypher; ſo that by altering the Places of their Figures or Characters, or placing Cyphers, they alter their Value, and count by Units, Tens, Hundreds, &c. as we do.

Orators. THEY need no Orators, for every Man pleads and manages his own Cauſe without an Advocate: What he aſſerts or proves is regiſter'd, and the Magiſtrate from thence determines the Merit of his Cauſe; nor is any Perſon ſuffer'd to harangue his Superior, nor indeed to ſpeak at all, till ſpoke to, and then nothing but Matter of Fact, or direct Anſwers to Queſtions propoſed; or if there is any Compliment or Addreſs to paſs from an Inferior to a Superior, the Words are preſcrib'd beforehand; ſo that there is more Need of Memory than Elo-
quence in their Addreſſes; as alſo in their being qualify'd for the Law; for they none of them ſtudy the Laws of their Country, till they are advanced to ſome Poſt, and then a Copy of Inſtructions, relating to that particular Poſt is put into their Hands; according to which they muſt ſtrictly act; and when they are preferr'd higher, they have other Inſtructions, &c. ſo that they never know all the Law, till they have been employ'd in all the Poſts and Places in it.

Phyſick. THEY are but ordinary Phyſicians or Surgeons; they have ſeldom uſed letting of Blood till of late, and then ſome *European* Surgeon is employ'd in the Operation; and yet the *Siamefe* will ſometimes open dead Bodies, as if they would learn ſomething, but we do not hear of any Improvement they make in Anatomy; but they ſometimes pretend to pull a Lump of Fleſh out of the Stomach of the Deceaſed, of eight or ten Pound Weight, which they make the Survivors believe was occaſion'd by Witchcraft, and indeed this is their Salve for all Sores; for although they ſeldom vary their Receipts, let the Diſtemper be what it will, yet if the Patient die, the Phyſicians give out, that he was inchanted or bewitched. In moſt Diſtempers they rub and work the Body with their Hands; and that not only the Sick, but the Healthy are ſerved ſo by way of Precaution. Some will employ their Servants or Slaves in this Operation upon their Backs for Hours together; and by this Means, and their one Receipt, as above-mentioned, it is ſaid they cure many Diſtempers; but whether this Receipt be a univerſal Specifick for all Diſeaſes, or ſomething that fortifies Nature ſufficiently to withſtand, and expel them, or whether this Friction and Rubbing of the Body, add freſh Vigour and Motion to the Blood and Spirits, or whether the Temperance of the *Siameſe* do not contribute much to a Cure, along with theſe ſeeming ſimple Means: If all theſe Suppoſitions be allow'd probable, it would not ſeem ſtrange that the Concurrence of them all together ſhould often have the deſir'd Effect.

BUT beſides what is above-mention'd, they ſometimes give a Purge, but never a Vomit; they take Sweats for moſt ſlight Indiſpoſitions, and often carry them off by that Means; they adviſe Bathing in Fevers, but reſtrain the Patient from eating any but Congee, or Water-gruel made of Rice, which ſlender Diet may doubtleſs contribute very much to their Recovery.

Diſeaſes. THE Diſeaſes which affect Foreigners moſt at *Siam*, is, Diſenteries and Fluxes, which 'tis moſt likely may proceed from the Alteration of the Climate or Diet, becauſe the Natives are not ſo ſubject to thoſe Diſtempers; they ſeldom have any Agues in theſe hot Countries, neither Gout, Stone, Pthiſick, Scurvy, or Dropſy, but the Small-Pox is reckon'd Epidemical, and is as much dreaded as the Plague in other Countries; and although they reckon burning the dead Bodies more honourable than the common way of Burying, yet if even Perſons of Figure die in the Small-Pox, they bury them quickly to prevent Infection; and after they have lain three Years, when they think that Danger is over, they take them up and burn them, to give them an honourable Funeral.

Aſtrono-my. THEIR Aſtronomy is very imperfect; they have no true Notion of the Syſtem of the World, nor of the Eclipſes being occaſion'd by the Interpoſition of one of the two dark Bodies, the Moon and the Earth, between the other and the Sun; but they think the Eclipſes are cauſed by ſome Dragon who is endeavouring to devour the eclipſed Luminary, and during the Conflict, as they take it to be, they make a Noiſe with Kettles and Pans to frighten the Dragon away; they ſuppoſe the Earth to be an extenſive Square, and that the Sky is ſupported and reſts upon the four Corners of it.

Aſtrology. THEY have ſuch an Opinion of Aſtrology and Magick, that they think the Profeſſors of thoſe Arts are never miſtaken, except by Neglect or Careleſſneſs, and as ſuch, they ſometimes ſuffer for what is really their Ignorance; for if they foretel to the King what doth not really come to paſs, they are baſtinado'd for Neglect, and not for Ignorance, though that be really the Caſe; and he ſerves his Phyſicians in the ſame Manner, for if their Phyſick has not the Effect upon him for which they adminiſter it, they are drubb'd for the Miſcarriage; none will undertake any Enterprize without firſt conſulting the Aſtrologers or Magicians, nor will they ſtep out of their Houſes, if they tell them it is an unlucky Hour; they give a great Regard to Omens, as the Howling of Wild-beaſts, Omens. or a Smoke croſſing the Way, or any thing falling, when there is no viſible Cauſe for it; theſe and

ſome other ſuch like things are look'd upon as ſo ominous, that if they happen the Perſon will not proceed upon his Enterprize, let the Conſequence be what it will; one way of foretelling Events is, after having a Queſtion propoſed to be anſwer'd, they perform a ſort of a Ceremony, and then go out into the Town or firſt Concourſe of People, and out of the firſt Words they hear ſpoke, they by ſome Application form an Anſwer to the Matter in doubt, whether the Perſon they hear ſpeak be expreſſing Joy or Paſſion, or whether ſpeaking of ill Succeſs or good Succeſs, *&c.* this they apply to their Queſtion, and look upon the Anſwer form'd from thence as an infallible Oracle; they are very ſuperſtitious, in pretending to drive away evil Spirits, inſomuch that when they prepare a Medicine they faſten a Paper to the Brim of the Cup, and in it is written ſome myſterious Words to prevent the Fairies running away with the Virtue of the Medicine, or when at Sea in a Storm, they fix one Charms. of theſe Papers to the Maſt to charm the Wind and the wicked Spirit which they ſuppoſe occaſions it, and is the Cauſe of all other Diſturbance and ill Luck; for the Doctors never miſcarry in their Preſcriptions, but that they always impute the Misfortune to a wicked Spirit, which the Ignorant as readily believe, and doubtleſs thoſe Impoſitions ſo much prevailing, is owing to the Superſtition of thoſe pretended Conjurers, and the Credulity of the People.

THEIR Women lie in a Month as in *England*, during which time they are kept continually before a great Fire, (though in that hot Country,) and this they call Purifying, though it might more properly be called Smoak-drying, for the Smoak has no vent but at a little Hole in the top of the Room and when this Month's Purgation is finiſh'd, the Woman returns Thanks to the Fire for her Purification, and then treats her Friends with Meat, which by way of Ceremony ſhe firſt offers to the Fire; they do not ſuffer their lying-in Women to eat or drink any thing but what is hot.

Muſick THEIR Skill in Muſick doth not exceed that of other Sciences; they underſtand nothing of either Singing or Playing by Notes, nor are their Inſtruments ſo nice as to be tuned to them; they have very ordinary Drums, and worſe Trumpets and Hautboys, and a little ſort of Violin with three Strings, they alſo beat upon Braſs-Baſſoons, and ſometimes uſe all theſe together when the King goes out, or upon any ſolemn Occaſions; that Jargon of Muſick ſounds beſt upon the Water, and at a Diſtance.

Language THEIR Language (as obſerved towards the Beginning of this Chapter) is of two ſorts, the *Balie*, or Court Language, whoſe Alphabet conſiſts of thirty three Letters; and the *Siameſe*, whoſe Alphabet contains thirty ſeven Letters, and thoſe all Conſonants; for Vowels and Dipthongs, of which there are great Numbers in both Languages, have particular Characters, ſome of which are placed before the Conſonant, ſome after it; ſome above, and ſome underneath it; but however they be placed, they are always pronounced after the Conſonant, ſo that in every Word the Conſonant is firſt, but if a Word begins with a Vowel, there is a mute Character placed before the Vowel, which repreſents a Conſonant, to keep up their way of Spelling; but its Sound is omitted, to make way for the Vowel that begins the Word to be firſt pronounced.

IT is very difficult for a Stranger to learn the *Siameſe* Pronunciation, becauſe their Language depends ſo much upon the Accent, like the *Chineſe*, in whoſe Language the ſame Word may expreſs two Meanings directly contrary, only by differently accenting them, *(of which ſee more in Chap.* VI. *of* China;) ſome ſuppoſe they firſt writ without Vowels, and afterwards learned to mark the Conſonants with different Daſhes or Marks, according to the different Sound that was to follow them, as we diſtinguiſh by our Vowels, one or more of which we always find neceſſary in the Pronouncing of any Note or Syllable; their Language conſiſts chiefly in Monoſyllables; the *Balie* is known only to the Learned, but in their proper way of writing the Terms of their Religion, the Names of their Offices, or whatever is elegant or ornamental to the common vulgar Language, or adds any Beauty to it, is borrow'd from the *Balie*.

THE *Siameſe* have not made themſelves Maſter, No Print- of the Art of Printing, which makes Books very ing. ſcarce among them, and what Hiſtories they have, obtain but very little Credit; their Calendar has been twice corrected, and two new Epocha's taken to reckon from, as we do, from the Birth of our Saviour; one of them commences five hundred forty five Years before the Birth of our Saviour, which they believe was the time that their God *Sommono-Codom* was tranſlated to Heaven, but their laſt *Æra* takes date almoſt twelve hundred Years after that, *viz.* at the Year of our Lord ſix hundred thirty eight, and thoſe Aſtronomers have form'd Tables for the Calculation of a Planet's Place, but they amount no higher than their mean Motions, and do not account for the Excentricity or Obliquity of their Orbs, nor determine their Latitudes or the Inequality of their Motions; they begin their Year with the firſt Moon in *November* or *December*, and divide it into three Seaſons, *viz.* the Winter or coldeſt Seaſon is when ours is, being both on the ſame Side of the Equinoctial; and their coldeſt is in our *December* and *January*; their little Summer is when the Heat approaches, and continues till the Rains come on in *April* or *May*, and from thence till *November* again; the Weather would be exceſſive Hot if it was not for the Rains that cool the Earth, and the Clouds that ſcreen them from the violent Heat of the Sun.

ALL Honours here are acquired either by Fa- Honours. vour or Merit, none are hereditary, but made by a Man's obtaining a Place in the Government; it is no ſtrange Sight there to ſee the Son or Grandſon of a Miniſter of State labouring at an Oar; though it is ſaid that all Offices or Places of Truſt were formerly hereditary; but now the King's Power is ſo abſolute, that very few Families can long maintain themſelves ſucceſſively for any conſiderable Time in any Place of Truſt, eſpecially near the Court, nor are they ſuffer'd to ſell their Places, but are diſcarded at the King's Pleaſure.

WHEN any Perſon enters into an Office or Place of any conſiderable Truſt, inſtead of an Oath of Allegiance to the Prince, one of the Prieſts take a Cup of Water and pronounces certain dreadful Imprecations, if the Perſon to whom it is given fails in his Duty to the King, the Perſon repeating them, or aſſenting to them, and this is the Method uſed to ſecure the Perſon's Fidelity to the King, let him be of what Country or Religion he will.

THE Court of *Siam* appeared more grand and Court of *Siam* not ſplendid formerly than at preſent, attended with ſo great a great Number of Lords richly dreſt, and attend- aſformerly. ed with Slaves and Elephants; but the King finding his Courtiers ſo numerous and ſo great, and being conſcious of his own Uſurpation of the Throne, and jealous of thoſe about him, leſt they ſhould be too powerful for him, he cut off moſt of the conſiderable Families that were great and powerful, and that without any Regard to common Juſtice or Gratitude, but ſerved all alike, as well thoſe who aſſiſted in his Uſurpation, as thoſe who oppoſed him, ſuppoſing this was the beſt way to ſecure his illegal Poſſeſſion; and as Uſurpation is commonly ſucceeded by Tyranny, ſo it was in the King above-mentioned (who reign'd ſo lately, as to be the Father of the King that reign'd in 1688.)

1688.) he had not ſo much Pretence of Right to the Crown as to be of the Royal Family, yet his Uſurpation ſucceeded, and his Tyranny ſucceeded that: For when he had dragged his Predeceſſor out of the Temple, whither he was fled for Refuge, he firſt cauſed him to be declared unworthy of Royal Dignity, and then barbarouſly ſtrangled him; and to colour his Cruelty with a Shew of Juſtice, he gave out that what he had done, was becauſe the King had deſerted his Palace and Government when the Rebel was at the Gates, and upon the Point to force an Entrance.

After this Uſurper had reign'd thirty Years, his Brother ſucceeded him, excluding his Son from what was his juſt Right, (if the Kingdom had been the juſt Right of his Father;) his Son therefore retir'd to a Cloyſter till he found himſelf in a Capacity to diſpute with, and diſpoſſeſs his Uncle, which he did, and poſſeſs'd the Throne himſelf, but continued the ſame Caution that his Father had uſed, and would not ſuffer his Courtiers to enjoy that Grandeur that uſed formerly to be ſeen at the Court of *Siam*.

This Race of Uſurpers are not only barbarous to Strangers but to their own Families, ſometimes ſtarving them, or putting them to cruel Deaths, or ſometimes put their Eyes out or cripple them, to render them uncapable of Government and maintain their Authority; chiefly rendering themſelves formidable and terrible to their Subjects, governing them by Fear, and not endeavouring to gain their Affections: He makes his Government ſo burdenſome that his Conſciouſneſs of his own Tyranny makes him jealous of his Subjects Fidelity, and ſo perpetually apprehenſive of their revolting, that if any fire a Gun he thinks it is an Inſurrection, and if the Perſon that did it is diſcover'd, it is deem'd a capital Crime ſo to alarm the King, and he is puniſhed for it accordingly.

The King uſed to ſhew himſelf four or five times a Year in all his Grandeur, but now he ſhews himſelf but twice a Year, at which times he diſtributes his Alms to the *Telapoins*; he formerly alſo perform'd the Ceremony of holding the Plough with his own Hand once a Year, as alſo of commanding the River to return into its Channel after the Rains, but now theſe Ceremonies are perform'd by a ſuperior Officer, deputed for that purpoſe.

Ceremonies

When the King goes abroad it is either in a Chair or upon an Elephant; when he uſes the latter he is not lifted upon it, nor is he ſeen on Foot coming to it, but has a Room whoſe Door is the ſame Height with the Elephant, from whence he conveys himſelf into his Seat upon the Elephant, which has no covering, and is open before; and when he ſtands ſtill, all his Attendants proſtrate themſelves except one Man, who with a high Umbrella ſhelters him from the Heat of the Sun; the Perſon that guides the Elephant ſits upon his Neck, and governs him by pricking him upon the Head; when he goes to hunt at *Lonvo*, his Concubines run on Foot by him, and he has a Guard of two or three hundred Men to march before him, to drive People out of the Way.

The King's riding abroad.

The Day is twenty four Hours, as in *England*, they divide the Night into four Watches, the laſt of which ends at Day-light; they have no Clocks, but truſt to a Sight of the Sun for knowing the Time of the Day, but in the Palace they have an Invention to determine an Hour, which is a Copper Veſſel with a Hole in its Bottom; this is ſet upon a large Veſſel of Water to ſwim in it, and the Water comes in through the Hole, (as it would into a Boat when floating upon the Water with a Hole in her Bottom,) and the Bigneſs of the Hole is ſo exactly adjuſted to the Weight of the Veſſel, that juſt at the End of an Hour the Hole will have let in ſo much Water as ſinks the Veſſel, and then the Watch, eſpecially in the Night, give Notice that the Hour is expired, by beating upon Copper Veſſels made to give a Sound for that Purpoſe.

Water Hour Glaſs.

They hold their Councils twice a Day, *viz.* at ten a-Clock Morning and Night, when any Member who has had a Buſineſs referr'd to him by the King, reads his Inſtructions, and tells them what he has done upon it, and ſeveral Members deliver their Opinions upon it to one another, the King being abſent; afterwards the King preſent in Council, the former Reſolutions are reported to him, and he either determines the Affair, or if it be attended with Difficulty, he re-commits it to their Conſideration, and if at laſt it is too difficult, he conſults the *Telapoins*, or higheſt Order of Prieſts.

Councils.

But the Determination is chiefly the King's; for although he asks the Opinions of the Members of his Council, yet if he diſlike their Sentiments, he not only rejects them but puniſheth any that gives him Advice which he doth not like, and therefore his Miniſters deliver to him ſuch Opinions as they think may pleaſe him, rather than declare their own.

He frequently calls his Officers to account about their Proficiency in the *Balie* Language, and in their Religion, and baſtinadoes the Negligent for their Ignorance; no Officer is permitted to come into his Majeſty's Preſence without his previous Permiſſion, nor are the Officers allow'd to viſit one another but at Weddings and Funerals, and then no two are allow'd to converſe without the Preſence of a Third, and then to ſpeak aloud, and all this Precaution is uſed to prevent Conſultations againſt the Government, and every one that is proved to over-hear any thing that may endanger the Government, and doth not immediately give Information of it, is ſentenced to Death, ſo that they are not only obliged to inform, but to do it with all Expedition, leſt a Charge be brought againſt them for their Neglect before they arrive with their Information; there are Spies alſo appointed in all Companies, to inform the King of what Diſcourſe paſſeth, and yet this is to be done with as much Caution as the other; for if it is News that is diſagreeable to the King, it muſt be told ſoftly, and by degrees, and not without a Certainty of Truth; for if it ſhould prove falſe, they are puniſhed with the utmoſt Severity, and where an Accuſation is brought againſt another, and the accuſed Perſon diſputes it, and the Truth is doubtful, he ſometimes cauſeth both Parties to be thrown to the Tygers, who are ſometimes both deſtroy'd, or if one eſcapes, he is thought the innocent Perſon; they have alſo other ways of trying to find out the Guilty and the Innocent, of which more hereafter in this Chapter, when we ſpeak of the Tryal of Criminals; but from what hath been obſerved it appears, that the common People are much more happy and ſafe here than the Courtiers; it is dangerous for a Perſon to give a falſe Information, and equally ſo to neglect to inform when they hear any thing ſpoke that requires it, and therefore the Vulgar are the moſt ſafe who *meddle not with State Affairs*; for though the Miniſtry uſe all poſſible Means to prevent Accuſations againſt themſelves reaching the Prince's Ear, yet the Terror of neglecting to inform, makes them very induſtrious that way againſt Oppoſition, when they know the Charge is juſt.

Informers and Spies.

This Tyranny in the Prince and Want of Affection in the Subjects, is often the Cauſe of their Kings being depoſed; for the People are in no great Concern who be King, ſince they know they cannot depend upon having their Properties ſecured; if they are induſtrious and thrive, they know it will be ſeized for the King's Uſe, (*ſee Chap.* IV. *of* Siam,) and better be idle than work for nothing.

Thoſe

those who are taken Prisoners by the King of *Pegu* never attempt an Escape to *Siam*, but contentedly cultivate the Land he gives them within twenty Miles of their own Country; and although they look upon their Kings as the Sons of Heaven, and that their Souls are as much exalted above those of their Subjects as their State is, yet they think it is the actual Possession of the Crown, and not his Right to it, that makes this exalted Difference; for if a Rebel usurp the Crown and succeed, his Soul is then thought as much refined as his Predecessor's was before him.

Revenue. His Revenue upon all cultivated Land is a Quarter of a Tycal for every forty Fathom Square, which reduced to *English* Money and Measure, is something more than Six-pence three Farthings an Acre, by the Year; but the Hereditary Governors of the Provinces have the Half of it. He has a Duty upon all the Boats, according to their Length, a Tycal a Fathom. He has the Customs of all Goods exported and imported; besides a Sum upon the Ship itself, according to its Bigness. He lays a Duty upon Arrack or Spirits made of Rice, and a yearly Tax upon every considerable Fruit-Tree, as the Durion, Mango, Coco-Tree, Orange, and the Trees that afford Betel, or the Arrack-Nut. His Gardens or Demain Lands are cultivated by his Subjects in the six Months that he commands their Service, and they supply the Court with Provision. The numerous Presents he receives from his Subjects, and what falls to him upon the Death of his Officers, the Fines, and Confiscations upon the Condemnation of Criminals, and the six Months Service that he takes Money for of the Rich, who seldom serve in Person, are large Additions to his Revenue, and to this we might add his Engrossing all the most beneficial Part of the Trade to himself, (*but for that we shall refer the Reader to Chap.* IV. *of* Siam, *towards the Beginning, where that is largely treated of under the Article of Trade.*) There is another Advantage which he enjoys beyond most other Princes, which is, that all the Officers which compose the Civil List, as well as his Troops, maintain themselves; and the like do all his Subjects, during their six Months Service. He also levies other Taxes for the Support of the Dignity of Ambassadors, erecting publick Buildings, and other extraordinary Occasions.

Besides all this, his Court is not very expensive to him, he allows his Officers of State no Sallaries; only a Lodging, a Barge, and some few Moveables are allow'd them by the Crown, with Horses, Elephants, and Slaves suitable to their Rank, but nothing to maintain them on, but only as much Land as will supply the Family with Rice, and that reverts to the Crown as soon as the Officer dies or is removed; but what they have more they must extort from the People by Oppression; indeed they are allow'd to take Money or Presents of those under their Command, nor is it deem'd any Crime to take a Gift or Bribe of Persons between whom they have (as Magistrates) determined a Difference, except it can be proved that they have been guilty of Injustice for the sake of the Reward.

Govern ment. Every Province has its proper Governor, who has the sole Command both Civil and Military, he gives the final Determination in all Cases, and those that sit in Court with him are only to advise with; and as his Power is so absolute, it is easy for the Governors of those Provinces which are remote from the Court, to call off their Allegiance, and make a Government of their own, as *Ihor* (the Southermost Province of *Malacca*, and most remote from *Siam* of all the other Provinces) has already done, and may now be said to be govern'd by the *Dutch*, which the King of *Siam* perceiving, has dismembered several hereditary Governors of Provinces, and substitut d temporary ones in their Room, which he can dismiss upon Dislike or Suspicion at his Pleasure.

The hereditary Governor (called in their Language *Tchaou Meuang*) has half the Rents of all the Lands in his Province, (the King the other Half, as mention'd before, under the Article of his Revenues;) he also receives several Presents, and has the Profits of all pecuniary Penalties incurr'd, and of all Confiscations, and in some Provinces they have the Customs also, and sometimes levy new Taxes upon extraordinary Occasions. The temporary Governor of *Pouran* has his Commission generally for three Years; his Authority is like that of the other, but not his Profits; if he be only appointed in the Absence of the hereditary Governor, he has half his Profits; but where there is no Hereditary, the Temporary shares none of the Profits with the King; it is therefore neither for the King's Profit nor his Safety to have hereditary Governors, if he could help it. Of the Governors.

The Province of *Patani* (next to the Northward of *Ihor*) is a temporary Province, with the Privilege of chusing their own Governor (or rather Governess) every three Years, and they always elect some old Maiden Gentlewoman of one certain Family; some of the most eminent Persons in the Province is her Privy-Council, by whose Advice she governs, and at the three Years End (or every three Years, if she is re-elected,) she sends the King of *Siam* two small Trees, one of Gold, the other of Silver, loaded with Flowers and Fruits, and this is a Tribute by way of Acknowledgment, and is all the Subjection that she thinks she owes to the King of *Siam*.

The Laws of *Siam* give an absolute Authority Laws. in Parents over their Children, and requires an unlimited Obedience and Subjection; on the other Side, they that contradict their Parents are look'd upon as Monsters: They pay a profound Reverence to old Age. If a Lie is told to a Superior, it is in his Power to punish the Offender, and the King punisheth it as severely as any other Crime. If it was so in other Places, it might probably prevent some of those fatal Consequences that attend it, and some of the many horrid Crimes that are shelter'd and excused under the Protection of it, which must come to light if that Subterfuge were removed.

Stealing is reckoned so odious, that when a Theft. Person is convicted of it, no Friend will appear in his Behalf; and indeed the Crime is greater, because it is so easy to get a Living here, that there is no Temptation to it, for one Day's Labour will purchase Provision for many: but when by the Tyranny of the Government they are drove into the Woods, they are obliged to rob and plunder for a Subsistance, that upon this account the Roads are not very safe for Travellers. Their civil and criminal Laws are confused together, their Laws being mostly employ'd in criminal Cases, and even in civil Cases the Person that is cast is punish'd as a Criminal; no Person is allow'd to exhibit a Charge against another without giving Security to prosecute it, and answer the Damage that the accused Person may sustain in his Character if the Charge proves false.

The first Step towards a Prosecution is, the Proceedings in Law. Plaintiff draws up his Charge in Writing, in which he represents his Grievance, and delivers it to the Head of the Band he belongs to, who transmits it to the Governor, and if it appears frivolous and vexatious, the Prosecutor renders himself liable to be punish'd, (though that is often wink'd at, because the Magistrate's encouraging Prosecutions, produceth one of their best Perquisites; but this way of getting Money is not limited to *Siam* only,) but if it is thought worth proceeding upon, the Governor orders his Associates to examine it: They

order

order their Clerks to examine the Witneſſes at their own Houſes, and when they have heard what each Party has to ſay, they write it down, and if a Perſon cannot ſo well ſpeak for himſelf, he is allow'd any Relation, provided he be not more remote than a firſt Couſin, to ſpeak for him; and thus all matters being prepared for hearing, the contending Parties are call'd into Court, (and by way of Form or Ceremony,) adviſed to agree, though they are not aiming to reconcile them. When the Aſſeſſors are prepared to deliver in their Opinions in Writing, the Governor appoints a Day for both Parties, and their Witneſſes to attend, and he being there in Perſon, the Clerk reads the Proceſs, and the Opinions of the Aſſociates, and the Governor examines into the Foundations of their Opinions, in which if he is ſatisfied, he proceeds to Judgment.

How they find out the Truth

But when the Witneſſes contradict one another ſo much that the Governor can form no Judgment from what is depoſed, they have recourſe to various other Methods to find out the Criminal and the Innocent; ſometimes they make both Parties walk upon hot burning Coals, and he that comes off without Damage is judged to be innocent, and ſometimes the like Tryal is made, and Judgment given by putting their Hands in boiling Oil; another way is by Diving, making both Parties go under Water, and he that can ſtay the longeſt (if he comes up at laſt) is deem'd innocent; another way of finding out the Truth, as they think it, is, by Vomiting Bills adminiſter'd by the Prieſt with ſevere Imprecations, and he that holds them longeſt in his Stomach without feeling or diſcovering the Effect of them, is concluded to be in the Right: But it is ſaid that they being apprized of thoſe being the ways of examining the Parties, they have ways to prepare their Feet to reſiſt the Fire, their Hands to reſiſt the boiling Oil, and to reconcile their Stomachs to the nauſeous Potion that they take upon ſuch Tryals, that they evade their natural, and otherwiſe expected Effects to Admiration, and yet if in any or all of theſe both Parties come off unhurt, they have recourſe to other Tryals, ſometimes throwing both Parties to the Tygers, if they are both devoured the Tryal is over, if both eſcape they are tried by ſome other Means as ridiculous, and if but one eſcapes, the Sentence is given in his Favour as an innocent Man.

Diving.

Vomiting.

Tygers.

Appeals.

But they allow of Appeals from a lower Court to a higher, ſo that there, as in other Places leſs remote, a rich Man may lead a poor Man a Dance, which he not being able to hold out to follow, is forced to drop it, and loſe all at laſt; but in Caſes of Life and Death, that Sentence is never executed without the King's immediate Order, or a ſpecial Commiſſion from him, but the Governors of their reſpective Provinces can both ſentence and execute the Baſtinado, with that Barbarity that Death frequently enſues.

Robbers how puniſhed

But there is one Piece of Juſtice, in which we have not many Inſtances in Hiſtory of Places that exceed *Siam*, and that is, he that unjuſtly poſſeſſes another Man's Land is deem'd as much a Robber as he that robs upon the Highway, and the Perſon convicted thereof not only reſtores the Land, but forfeits the Value of it, one half to the Party diſpoſſeſs'd, and the other Half to the Governor, but then the King has half the Governor's Share, (though a hereditary Governor;) and if it be a Temporary one the King has one entire half, and the Party aggrev'd the other, and his Land again. The King has a particular Officer or Inſpector in every Province, to inform him of what paſſes in their ſeveral Courts of Juſtice, but there is generally ſuch Connivance between them and the Governors, that they can wink at each other's Extortions, and the King know little of the Matter, nor Subjects be much the better. Every Officer gets what he can out of his Inferiors, and the Commander of a Band, to make a Perquiſite to himſelf, and yet have all the Duty of thoſe under his Command perform'd, excuſeth thoſe who bribe him well, and makes thoſe do double Duty that have nothing to give him.

Puniſhments.

As for the Puniſhment of Criminals, it is generally adapted to the Crime; for Robbery or Extortion they pour melted Gold or Silver down their Throats; for Lying they ſow up the Man's Mouth; they ſometimes behead, ſometimes baſtinado to Death, but for petty Crimes they have proportionable Puniſhments; ſome have a Pillory-board about their Necks, for a longer or ſhorter Time, according to the Nature of the Crime, but the moſt mortifying Indignity that can be put upon a *Siameſe* Man is, to ſet him in the Ground to the Shoulders, and let a Woman buffet him about the Head; but let the Puniſhment be what it will, it is reckon'd honourable to undergo them with Reſolution, and a Man is never reckon'd infamous for them after they are over, but rather boaſts of his Courage, and is look'd upon as the better Man, and fitter for Preferment when he has overcome his Sufferings; ſuperior Officers are often puniſh'd for the Crimes of inferior ones under their Juriſdiction, and Parents and Maſters of Families frequently ſuffer for the Faults of their Children, Servants, or Slaves, to make them more circumſpect in the Government of thoſe under their Charge.

All enroll'd.

Every Perſon in *Siam*, Male and Female, are enroll'd when young, that they may not eſcape the ſix Months Service in the Year due to the Prince; for though the *Telapoins* or Prieſts, and alſo the Women, are exempted from the ſix Months Service, yet they are enroll'd, becauſe the *Telapoins* may return to a ſecular Life again, and then they are called to the ſix Months Service, and by their being enroll'd it is readily known what Band they belong to; and if a Woman ſhall have Children, they belong to the ſame Band that ſhe is enroll'd in, and the Males are called to ſerve there as ſoon as capable, and every Commander of a Band is obliged to furniſh the King with ſo many Men out of his Band as he requires, either for War, Tillage, Building, or what elſe he thinks fit to employ them in; if a Soldier wants Money, the Commander of his Band will readily lend it him, or pay his Debts to a certain Sum, becauſe if a Soldier becomes inſolvent, his Governor does not drag him to a Goal, and extort more Money from him for Charges than his Debt amounts to, but takes him as a Slave to Work for him till he is out of his Debt, as in *Tonquin*, (*Chap.* IV. *towards the latter End.*)

Titles figurative.

The Commander of a Body of Men has commonly ſome figurative Title annex'd to him, which expreſſes much greater Dignity than he really poſſeſſes; as if a Man commands five hundred Men, he is ſometimes entitled Captain of ten Thouſand; and this Hyperbolical way of ſpeaking in *Aſia* being ſometimes not underſtood or foreſeen by the *Europeans*, has cauſed great Errors in our Hiſtories of *Aſia*; and when we obſerve theſe two Cuſtoms, *viz.* their enrolling all their Natives, and calling them all Soldiers, becauſe liable to be called to Duty at the King's Pleaſure, which muſt needs amount to a prodigious Number in fact; and ſecondly, their figurative way of magnifying their Numbers, calling five hundred by the Name of ten thouſand, as above, no wonder that our Hiſtories of *Aſia* give Account of their being able to ſend ſuch incredibly numerous and formidable Armies into the Field; but as the Greatneſs of the Number of ſuch un-diſciplined Armies tend only to their Confuſion, and even the Number of thoſe, ſuch as they

are, is so vastly short of what they give out, as above, it is no Wonder, on the other Side, that we seldom read of so much Execution done by them, as by some European Armies, which consist not of one Tenth the Number which they give out. The ten thousand Elephants that some Histories report that the King of *Siam* keeps is as absurd, especially if we consider how improper that Place is for the Breed of Elephants, where the Ground is so low, and cover'd with Water every Year. But if we allow this also to be a Hyperbola, and that by their way of speaking we are for a certain Number to understand an uncertain; and for a great one, always to understand a lesser, their Expressions may thus be reconciled to Reason and Probability.

Artillery. They have some Artillery, which the *Portuguese* cast for them, but they have no Carriages for them; they are carried to the Field in Waggons drawn by Oxen and Buffaloes; for they have no Horses but what are in the King's Stable, for his own Use; their Army consists chiefly in Elephants, and poorly equipp'd Infantry; they commonly begin the Fight with their heavy Artillery, and sometimes end with it too, not caring to come nearer together.

But when they draw up, it is in three Lines, each Line consisting of three square Battalions, and the General posts himself in the Center of the Middlemost, which is compos'd of their best Troops. The other commanding Officers are placed in the Centers of their respective Bodies. If these Battalions are thought too large, they are sub-divided into lesser Bodies; each Battalion has sixteen Male Elephants, every one of which has two She-ones, without which they would not be easily govern'd. If their Artillery do not conclude the Battle, but they must come to a close Engagement, the following Instance of the manner of Fighting between the Kings of *Siam* and *Pegu* may serve as a Specimen of their Method of doing it.

Manner of Fighting. When the two neighbouring Kingdoms of *Siam* and *Pegu* are at War, their Armies seldom face one another in the Field, but make Excursions upon each other, to carry off Prisoners and Plunder, and retire with all Expedition with their Booty; but if the Armies do meet, they do not shoot at one another directly, except when put to Extremity, or that one cannot manage his Attack, or the other his Defence, without it; for when the King of *Siam*'s Troops take the Field, his Orders are, *Kill not*, viz. till they try what can be done without it; but when the Bullets or Arrows fly in earnest, they seldom hold it long, but one Side or the other retreats and disperses. In one Engagement the King of *Siam*'s General (by his Master's general Order, *Kill not*) commanded his Soldiers to fire over the Enemy. A *French* Engineer being then employed in the King of *Siam*'s Army, and not knowing the Custom, supposed the General did not sufficiently exert his Commission, but that he was going to betray his Master by his fighting so remissly, and finding he had not Liberty to do what Execution he could have done, he went one Night into the Enemy's Camp, surprized them, and brought off their General Prisoner; which put an End to the War.

Sieges. We seldom read of a Town taken by Storm in this Country. They sometimes starve a Place; or, if the Inhabitants be treacherous, may find an Opportunity to surprize it by their Means; or otherwise a slight Work will bid Defiance to a numerous Army.

Forces. The King of *Siam*'s Forces (besides the six Months Service yearly due from every Subject) are a Guard of eight hundred Men at *Louvo*, taught the European Discipline by an *English* Serjeant at *Fort St. George*, and four hundred more at *Bancock*, at the Mouth of *Siam* River. No other Service is required of them but to remain in the Garrison in these Places. But the chief Defence of *Siam* is the Woods, Mountains and Sea, with which, some on one Side, and some on another, it is encompassed, which renders it tolerable safe from Invasions; or if an Enemy should land, it is difficult for them to penetrate far into the Country, by reason of the Canals interspersed every where being fill'd by the Inundations, when the Water is so far above its common Bounds; which Canals they can let out, and drown the Land and the Invaders with it, if they are attack'd; as was the Case when the *Pegutns* invaded *Siam* with a powerful Army; and as they do not need strong Forts for their own Defence, so they build none, lest Invaders should get them in Possession, secure themselves, and employ them against them, and by that Means run themselves needlessly into both a Charge and a Hazard, when the annual Inundations sufficiently protect them. Their Defence.

When a Foreign Ambassador arrives, he is not look'd upon as his Master's Representative, but barely as his Messenger; the Letter he carries has much more Honour paid it than he has, as supposing that the Letter rather than the Man represents the crown'd Head from whence it comes. The *Siamese* never send any Ambassador to reside at any Court, except to dispatch some particular Business, and then they send Three, who are all privy to the Affair, but of three different Ranks; the first has the Direction of the Affair, the other are his Attendants; only if he dies in his Passage, the second succeeds him in his Embassy; and so the third in the like Case. But the Eastern Princes seldom send any Ambassadors to other Courts, as looking upon the crown'd Head that does that to be a kind of a Petitioner to it; and therefore look upon it as beneath them to send any any where; as on the other hand they deem it a great Condescention in themselves to receive Embassies, and a Favour done to the Prince from whom they receive them. For this Reason the Emperor of *China* and the Great Mogul send none, as thinking that their Emperors have no need of Foreign Assistance, and at the same time, that all the World have a Dependance upon them for the Produce of their respective Empires. Ambassadors. Princes seldom send Ambassadors.

It is true, the King of *Siam* sends People abroad under the Name and Title of Ambassadors, but it is more to trade for his own private Interest, than to transact publick Affairs; and under such honourable Titles they are easier admitted to trade. He also furnisheth them with large Quantities of Gold, but it is not for Presents, but Purchases; and so strictly does he call them to account, that if they have not improved their Talent according to his Expectation, the poor Ambassadors are severely bastinadoed at their Return. Ambassadors go to trade.

But when a Foreign Ambassador arrives at *Siam*, he is introduced and received with great Ceremony. The King being first apprized of his coming, the *Siamese* Ambassador (or some proper Person appointed for that Purpose) accompanies him towards the Court, and then goes up to Court first to acquaint the King with his Arrival, but he is not allowed to enter the City till he is to have his publick Audience, which is always in the Metropolis; but private Audiences are often given at *Louvo* and other Places, where the King appears in less Grandeur, and with fewer Attendants.

At a publick Audience the Court appears in all its Splendor, and the Ambassador being introduced, he must not use any Words of Compliment till the King speaks first, asking him some Questions, which are usually to the same Purpose; which answer'd, the Ambassador is order'd to address him- Publick Audience.

himſelf to the Barcalon or Prime Miniſter; and in all Addreſſes, either to the King or Miniſter of State, few Words and to the Purpoſe is accounted the beſt Eloquence; for they reckon it too much Familiarity to attempt to detain them with a long Diſcourſe, and look upon it as an Inſult, if they do not as much as poſſible contract their Meſſage or Addreſs. When the King has ſpoke to the Ambaſſador, he preſents the Ambaſſador with a Sabre, a Chain of Gold, and a Veſt, which he immediately puts on. Sometimes the Ambaſſador's Retinue is preſented with ſome things of the ſame kind, and the King ſometimes ſuffers the Ambaſſador to approach him in his Garden-houſe, and converſe with him by anſwering Queſtions which the King propoſes.

FROM the Ambaſſador's firſt Audience to his Audience of Leave he is lodg'd and maintain'd at the King's Charge, and allow'd to trade during that Time; but as they are not allow'd to enter the City till they are introduced to have their firſt Audience, ſo they are not ſuffer'd to ſtay in it after they have had their Audience of Leave, being look'd upon from that Time as diveſted of the Dignity of an Ambaſſador.

As the King engroſſes the chief Trade to himſelf, and it is a conſiderable Branch of his Revenue, he not only allows the Foreign Ambaſſadors to trade, but expects they ſhould; ſo that in ſhort they are Merchants under a more honourable Title; and as he that comes as an Ambaſſador, comes alſo as a Trader, he even expects conſiderable Preſents at their firſt Addreſs, which he values and honours in a Manner ſuitable to the Nature of the Preſent; as, if it be any thing to wear, he puts it on immediately in their Preſence; if it be Horſes, he immediately builds Stables for them; and ſo in other Caſes ſhews his Value of it by his Manner of receiving and uſing it, though chiefly for its real Value, and his Hopes of Gain by trading with the Donor.

CHAP. VII.

Of the Religion, Temples and Superſtition of the Siameſe.

Pagodes. IN *Siam*, as in *Tonquin* and other *Aſian* Countries, they call their Idol-Temples, or rather their Temples of Idols, Pagodes. Theſe Pagodes or Temples ſtand each of them in the middle of a ſquare Piece of Ground encompaſs'd with Pyramids, and the whole incloſed with a large Wall, which is again encompaſs'd with another large Square. Here are all the Cells or Apartments of the Prieſts and Nuns or *Telapoineſſes*. Theſe Cells ſtand in Rows, but not contiguous; they are erected (as many other of their Buildings) on Bambou Pillars, and the whole is incloſed with a Fence of Bambou, and a Garden is belonging to every Convent. The *Telapoins* or Prieſts, and the *Telapoineſſes* or Nuns, are in the ſame Convent, and as they have free Converſation together, and the Females are not admitted in till they be arrived at Years of Maturity, we may ſuppoſe that (except the Severity of their Laws reſtrain them, which make it burning to Death for a *Telapoin* to have criminal Converſation with any Woman) they live as chaſte there as ſome of our *Telapoins* in *Europe*, who to avoid the Sin of being confined to one Woman, allow themſelves as many as they pleaſe; and yet Mr. *Salmon* in his *Modern Hiſtory* obſerves three Particulars in which *a Pagan Convent ſeems much to be preferr'd to that of a Catholick Cloyſter. Firſt, Neither Sex is forced into a Cloyſter againſt their Conſent. Secondly, Young Girls are not admitted there at all. Thirdly, Liberty is given to any Perſon to return into the World when that State of Life becomes uneaſy to them.*

Pagan Convent better than a Catholick Cloyſter.

Lay Brothers like Servants.

ALL Youth are educated by the *Telapoins*, and every one has two or three Nens under his Charge, who ſerve him while they continue in the Convent, to do any Work that he ſets them about. Theſe Nens are ſometimes Pupils; but ſome of them do not go in for Education, but are a ſort of Lay-Brothers, and have their Habits made like the *Telapoins*, only white. Theſe ſubmit to weed the Gardens, and other ſervile Offices, which a *Telapoin* would think it a Sin to put his Hand to. There is one Room in the Convent for the Nens, and another where the People bring their Alms; then the Temple is ſhut, and the *Telapoins* aſſemble in the Alms-Room, and have their Conferences.

THE Steeple of the Pagode is of Wood, and is not joined to the Temple, but is a Tower ſtanding by itſelf; it has a Bell in it without a Clapper, which inſtead of ringing they beat upon with a wooden Hammer.

THERE is a Head or Maſter to every Convent, but their Order and Privileges are different; the higheſt Order are called *Sancrats*, and 'tis only they that can admit a Perſon into the *Telapoins* Order, and inveſt him with the Habit, which is all the Juriſdiction they have over the *Telapoins*; nor are their Convents diſtinguiſh'd any otherwiſe than by ſome Stones planted round. The King gives a Name to ſome of the principal *Sancrats*, and with that he gives an Umbrella and a Chair, and Slaves to carry it, but the *Sancrats* never uſe them but when they attend upon the King. *Sancrats.*

THE *Talapoins* are by their Inſtitution appointed to lead holy auſtere Lives, by which they think they attone for the Sins of the People. They live by Alms, and muſt not eat in common, but every Man ſeparately lives upon what he begs, and have commonly ſo much to ſpare, as to enable them to be very hoſpitable to Strangers, which they think is ſo great a Duty incumbent upon them out of the Overplus of what they receive by begging, that they do not deny it even to Chriſtians who come into their Convents; and they have Lodgings for the Entertainment of Travellers on each Side of their Gate.

BUT beſides theſe *Telapoins* that live in the Convents near the Temples, called *Telapoins* of the Towns, there is another ſort that live in the Woods, and lead much more auſtere Lives than the former, but both are obliged to Celibacy, on pain of being burnt, for as they enjoy great Privileges, and are exempt from the ſix Months Service and other Duties, ſo they are compell'd to ſtrict Auſterities under the ſevereſt Penalties, and the King himſelf takes care to ſee them put in Execution; for if their Privileges were ſtrictly continued, and yet their Duties allow'd to be remiſsly perform'd, it might induce the greateſt *Telapoins of the Towns.*

Part

are, is ſo vaſtly ſhort of what they give out, as above, it is no Wonder, on the other Side, that we ſeldom read of ſo much Execution done by them, as by ſome European Armies, which conſiſt not of one Tenth the Number which they give out. The ten thouſand Elephants that ſome Hiſtories report that the King of *Siam* keeps is as abſurd, eſpecially if we conſider how improper that Place is for the Breed of Elephants, where the Ground is ſo low, and cover'd with Water every Year. But if we allow this alſo to be a Hyperbola, and that by their way of ſpeaking we are for a certain Number to underſtand an uncertain; and for a great one, always to underſtand a leſſer, their Expreſſions may thus be reconciled to Reaſon and Probability.

Artillery. THEY have ſome Artillery, which the *Portugueſe* caſt for them, but they have no Carriages for them; they are carried to the Field in Waggons drawn by Oxen and Buffaloes; for they have no Horſes but what are in the King's Stable, for his own Uſe; their Army conſiſts chiefly in Elephants, and poorly equipp'd Infantry; they commonly begin the Fight with their heavy Artillery, and ſometimes end with it too, not caring to come nearer together.

BUT when they draw up, it is in three Lines, each Line conſiſting of three ſquare Battalions, and the General poſts himſelf in the Center of the Middlemoſt, which is compos'd of their beſt Troops. The other commanding Officers are placed in the Centers of their reſpective Bodies. If theſe Battalions are thought too large, they are ſub-divided into leſſer Bodies; each Battalion has ſixteen Male Elephants, every one of which has two She-ones, without which they would not be eaſily govern'd. If their Artillery do not conclude the Battle, but they muſt come to a cloſe Engagement, the following Inſtance of the manner of Fighting between the Kings of *Siam* and *Pegu* may ſerve as a Specimen of their Method of doing it.

Manner of Fighting. WHEN the two neighbouring Kingdoms of *Siam* and *Pegu* are at War, their Armies ſeldom face one another in the Field, but make Excurſions upon each other, to carry off Priſoners and Plunder, and retire with all Expedition with their Booty; but if the Armies do meet, they do not ſhoot at one another directly, except when put to Extremity, or that one cannot manage his Attack, or the other his Defence, without it; for when the King of *Siam*'s Troops take the Field, his Orders are, *Kill not*, viz. till they try what can be done without it; but when the Bullets or Arrows fly in earneſt, they ſeldom hold it long, but one Side or the other retreats and diſperſes. In one Engagement the King of *Siam*'s General (by his Maſter's general Order, *Kill not*) commanded his Soldiers to fire over the Enemy. A *French* Engineer being then employed in the King of *Siam*'s Army, and not knowing the Cuſtom, ſuppoſed the General did not ſufficiently exert his Commiſſion, but that he was going to betray his Maſter by his fighting ſo remiſsly, and finding he had not Liberty to do what Execution he could have done, he went one Night into the Enemy's Camp, ſurprized them, and brought off their General Priſoner; which put an End to the War.

Sieges. WE ſeldom read of a Town taken by Storm in this Country. They ſometimes ſtarve a Place; or, if the Inhabitants be treacherous, may find an Opportunity to ſurprize it by their Means; or otherwiſe a ſlight Work will bid Defiance to a numerous Army.

Forces. THE King of *Siam*'s Forces (beſides the ſix Months Service yearly due from every Subject) are a Guard of eight hundred Men at *Louvo*, taught the European Diſcipline by an *Engliſh* Serjeant at *Fort St. George*, and four hundred more at *Bancock*, at the Mouth of *Siam* River. No other Service is required of them but to remain in the Garriſon in theſe Places. But the chief Defence of *Siam* is the Woods, Mountains and Sea, with which, ſome on one Side, and ſome on another, it is encompaſſed, which renders it tolerable ſafe from Invaſions; or if an Enemy ſhould land, it is difficult for them to penetrate far into the Country, by reaſon of the Canals interſperſed every where being fill'd by the Inundations, when the Water is ſo far above its common Bounds; which Canals they can let out, and drown the Land and the Invaders with it, if they are attack'd; as was the Caſe when the *Pengums* invaded *Siam* with a powerful Army; and as they do not need ſtrong Forts for their own Defence, ſo they build none, leſt Invaders ſhould get them in Poſſeſſion, ſecure themſelves, and employ them againſt them, and by that Means run themſelves needleſsly into both a Charge and a Hazard, when the annual Inundations ſufficiently protect them. Their Defence.

WHEN a Foreign Ambaſſador arrives, he is not look'd upon as his Maſter's Repreſentative, but barely as his Meſſenger; the Letter he carries has much more Honour paid it than he has, as ſuppoſing that the Letter rather than the Man repreſents the crown'd Head from whence it comes. The *Siameſe* never ſend any Ambaſſador to reſide at any Court, except to diſpatch ſome particular Buſineſs, and then they ſend Three, who are all privy to the Affair, but of three different Ranks; the firſt has the Direction of the Affair, the other are his Attendants; only if he dies in his Paſſage, the ſecond ſucceeds him in his Embaſſy; and ſo the third in the like Caſe. But the Eaſtern Princes ſeldom ſend any Ambaſſadors to other Courts, as looking upon the crown'd Head that does that to be a kind of a Petitioner to it; and therefore look upon it as beneath them to ſend any any where; as on the other hand they deem it a great Condeſcention in themſelves to receive Embaſſies, and a Favour done to the Prince from whom they receive them. For this Reaſon the Emperor of *China* and the Great Mogul ſend none, as thinking that their Emperors have no need of Foreign Aſſiſtance, and at the ſame time, that all the World have a Dependance upon them for the Produce of their reſpective Empires. Ambaſſadors. Eaſtern Princes ſeldom ſend Ambaſſadors.

IT is true, the King of *Siam* ſends People abroad under the Name and Title of Ambaſſadors, but it is more to trade for his own private Intereſt, than to tranſact publick Affairs; and under ſuch honourable Titles they are eaſier admitted to trade. He alſo furniſheth them with large Quantities of Gold, but it is not for Preſents, but Purchaſes; and ſo ſtrictly does he call them to account, that if they have not improved their Talent according to his Expectation, the poor Ambaſſadors are ſeverely baſtinadoed at their Return. Ambaſſadors to trade.

BUT when a Foreign Ambaſſador arrives at *Siam*, he is introduced and received with great Ceremony. The King being firſt apprized of his coming, the *Siameſe* Ambaſſador (or ſome proper Perſon appointed for that Purpoſe) accompanies him towards the Court, and then goes up to Court firſt to acquaint the King with his Arrival, but he is not allowed to enter the City till he is to have his publick Audience, which is always in the Metropolis; but private Audiences are often given at *Louvo* and other Places, where the King appears in leſs Grandeur, and with fewer Attendants.

AT a publick Audience the Court appears in all its Splendor, and the Ambaſſador being introduced, he muſt not uſe any Words of Compliment till the King ſpeaks firſt, asking him ſome Queſtions, which are uſually to the ſame Purpoſe; which anſwer'd, the Ambaſſador is order'd to addreſs Publick Audience.

him-

himſelf to the Barcalon or Prime Miniſter; and in all Addreſſes, either to the King or Miniſter of State, few Words and to the Purpoſe is accounted the beſt Eloquence; for they reckon it too much Familiarity to attempt to detain them with a long Diſcourſe, and look upon it as an Inſult, if they do not as much as poſſible contract their Meſſage or Addreſs. When the King has ſpoke to the Ambaſſador, he preſents the Ambaſſador with a Sabre, a Chain of Gold, and a Veſt, which he immediately puts on. Sometimes the Ambaſſador's Retinue is preſented with ſome things of the ſame kind, and the King ſometimes ſuffers the Ambaſſador to approach him in his Garden-houſe, and converſe with him by anſwering Queſtions which the King propoſes.

From the Ambaſſador's firſt Audience to his Audience of Leave he is lodg'd and maintain'd at the King's Charge, and allow'd to trade during that Time; but as they are not allow'd to enter the City till they are introduced to have their firſt Audience, ſo they are not ſuffer'd to ſtay in it after they have had their Audience of Leave, being look'd upon from that Time as diveſted of the Dignity of an Ambaſſador.

As the King engroſſes the chief Trade to himſelf, and it is a conſiderable Branch of his Revenue, he not only allows the Foreign Ambaſſadors to trade, but expects they ſhould; ſo that in ſhort they are Merchants under a more honourable Title; and as he that comes as an Ambaſſador, comes alſo as a Trader, he even expects conſiderable Preſents at their firſt Addreſs, which he values and honours in a Manner ſuitable to the Nature of the Preſent; as, if it be any thing to wear, he puts it on immediately in their Preſence; if it be Horſes, he immediately builds Stables for them; and ſo in other Caſes ſhews his Value of it by his Manner of receiving and uſing it, though chiefly for its real Value, and his Hopes of Gain by trading with the Donor.

CHAP. VII.

Of the Religion, Temples and Superſtition of the Siameſe.

Pagodes. In *Siam*, as in *Tonquin* and other *Aſian* Countries, they call their Idol-Temples, or rather their Temples of Idols, Pagodes. Theſe Pagodes or Temples ſtand each of them in the middle of a ſquare Piece of Ground encompaſs'd with Pyramids, and the whole incloſed with a large Wall, which is again encompaſs'd with another large Square. Here are all the Cells or Apartments of the Prieſts and Nuns or *Telapoineſſes*. Theſe Cells ſtand in Rows, but not contiguous; they are erected (as many other of their Buildings) on Bambou Pillars, and the whole is incloſed with a Fence of Bambou, and a Garden is belonging to every Convent. The *Telapoins* or Prieſts, and the *Telapoineſſes* or Nuns, are in the ſame Convent, and as they have free Converſation together, and the Females are not admitted in till they be arrived at Years of Maturity, we may ſuppoſe that (except the Severity of their Laws reſtrain them, which make it burning to Death for a *Telapoin* to have criminal Converſation with any Woman) they live as chaſte there as ſome of our *Telapoins* in *Europe*, who to avoid the Sin of being confined to one Woman, allow themſelves as many as they pleaſe; and yet Mr. *Salmon* in his *Modern Hiſtory* obſerves three Particulars in which *a Pagan Convent ſeems much to be preferr'd to that of a Catholick Cloyſter. Firſt, Neither Sex is forced into a Cloyſter againſt their Conſent. Secondly, Young Girls are not admitted there at all. Thirdly, Liberty is given to any Perſon to return into the World when that State of Life becomes uneaſy to them.*

Pagan Convent better than a Catholick Cloyſter.

Lay Brothers like Servants. All Youth are educated by the *Telapoins*, and every one has two or three Nens under his Charge, who ſerve him while they continue in the Convent, to do any Work that he ſets them about. Theſe Nens are ſometimes Pupils; but ſome of them do not go in for Education, but are a ſort of Lay-Brothers, and have their Habits made like the *Telapoins*, only white. Theſe ſubmit to weed the Gardens, and other ſervile Offices, which a *Telapoin* would think it a Sin to put his Hand to. There is one Room in the Convent for the Nens, and another where the People bring their Alms; then the Temple is ſhut, and the *Telapoins* aſſemble in the Alms-Room, and have their Conferences.

The Steeple of the Pagode is of Wood, and is not joined to the Temple, but is a Tower ſtanding by itſelf; it has a Bell in it without a Clapper, which inſtead of ringing they beat upon with a wooden Hammer.

There is a Head or Maſter to every Convent, but their Order and Privileges are different; the higheſt Order are called *Sancrats*, and 'tis only they that can admit a Perſon into the *Telapoins* Order, and inveſt him with the Habit, which is all the Juriſdiction they have over the *Telapoins*; nor are their Convents diſtinguiſh'd any otherwiſe than by ſome Stones planted round. The King gives a Name to ſome of the principal *Sancrats*, and with that he gives an Umbrella and a Chair, and Slaves to carry it, but the *Sancrats* never uſe them but when they attend upon the King.

Sancrats.

The *Talapoins* are by their Inſtitution appointed to lead holy auſtere Lives, by which they think they attone for the Sins of the People. They live by Alms, and muſt not eat in common, but every Man ſeparately lives upon what he begs, and have commonly ſo much to ſpare, as to enable them to be very hoſpitable to Strangers, which they think is ſo great a Duty incumbent upon them out of the Overplus of what they receive by begging, that they do not deny it even to Chriſtians who come into their Convents; and they have Lodgings for the Entertainment of Travellers on each Side of their Gate.

But beſides theſe *Telapoins* that live in the Convents near the Temples, called *Telapoins* of the Towns, there is another ſort that live in the Woods, and lead much more auſtere Lives than the former, but both are obliged to Celibacy, on pain of being burnt, for as they enjoy great Privileges, and are exempt from the ſix Months Service and other Duties, ſo they are compell'd to ſtrict Auſterities under the ſevereſt Penalties, and the King himſelf takes care to ſee them put in Execution; for if their Privileges were ſtrictly continued, and yet their Duties allow'd to be remiſsly perform'd, it might induce the greateſt

Telapoins of the Towns.

Part

Part of his Subjects to become *Telapoins*, and thereby (as an Author upon that Subject obſerves) *become uſeleſs to the State.*

Telapoins diſmiſs'd for their Ignorance.

In order to prevent this, their Ignorance of or Remiſſneſs in their Duty, he ſometimes cauſeth them to be examin'd as to their Skill in the *Balie* Language, becauſe in it the Precepts of their Religion is written, and if he finds them ignorant diſmiſſeth them, and ſends them into the World again, that they may be uſeful in another Capacity.

The *Telapoins* not only educate the Children, but explain the Precepts of their Religion to the People in the Temples every New and Full Moon, and during the Inundation, till the Waters abate,

Preaching.

they preach every Morning from ſix till Noon, and every Afternoon from one till five. The Preacher ſits croſs-legged upon a high Bench or Couch, taking it by turns, one beginning when the other is weary, the People expreſſing their Aſſent to his Doctrine by ſaying *Right*, or *it is ſo*, &c. after which they preſent their Alms to the Preacher, which they beſtow ſo liberally, that many of the *Telapoins* become rich by this Bounty. The Time

Faſting.

of the Inundation thus ſpent in Faſting as well as Preaching, the *Europeans* call the Lent of the *Telapoins*, for they eat nothing after Noon except ſometimes a little Fruit; it is ſaid of ſome of them that they will faſt thirty or forty Days together, ſaving that they take now and then ſome ſmall Liquor with a ſort of a Powder infuſed in it, and although this ſeems almoſt incredible, yet it is certain it may be better endured there than in thoſe colder Climates, where the Stomach is hotter, and Digeſtion ſtronger, and conſequently an empty Stomach more pernicious.

After the Rice Harveſt the *Telapoins* of the Towns go for three Weeks together to watch every Night in the Fields, in little Hutts, and return to their Cells; they encamp in the Field in much the ſame form as their Cells ſtand in Town, with their Superior's Cell in the Middle, as their Pagodes in the Towns; they make no Fires in the Night to drive away Wild-beaſts, making the

Telapoins deceive the Credulous

Credulous believe their Sanctity preſerves them; but we may rather impute it to their Policy in encamping further from the Woods than the Wild-Beaſts generally ſtray, and likewiſe encamping in ſuch Numbers and Order that it can ſcarce be expected that any wild Beaſt would care to attack them; and for thoſe *Telapoins* who inhabit the Woods, they uſe the common Means of making Fires, to keep the Wild-Beaſts off, and although they give out that a Tyger will not fall upon a *Telapoin*, though he ſhould find him ſleeping, and come with a Deſign to devour him, yet by the Smell he can know him to be a *Telapoin*, and will only lick his Hands and Feet; and the better to confirm the Ignorant in this Opinion, if they happen to find the remains of one that has been kill'd and partly devoured, they will deny that it was a *Telapoin*, except ſome Circumſtance, as a Part of his Garment, or the like, being found, prove it beyond diſpute that it was one; yet they have a Salvo for this alſo, and allege that he has tranſgreſs'd the Rules of his Order, and forfeited the Protection that his former Sanctity entitled him to, which was the Occaſion of his Suffering.

Habit of the *Telapoins*

The *Telapoins* go bare-headed and bare-footed, but have a yellow Linnen Cloth round their Middle, (that being the Royal Colour here as in *Siam*;) they have no Veſt or Shirt of Muſlin like the Laity, but a yellow Linnen Cloth thrown over their Left Shoulder, like a Shoulder-Belt, and over all another large yellow Cloth, compoſed of Rags and Patches, from whence it takes its Name: This hangs down before and behind, and is girt about with a Saſh of four or five Inches broad; they ſhave their Heads, Beards, and Eye-brows, and have a broad Leaf or Talapat, which they hold by the Stalk, and uſe it as a Fan or Umbrella; the Superior is forced to ſhave his Head himſelf, becauſe no other Perſon is worthy to touch it, and for the ſame Reaſon a young *Telapoin* muſt never ſhave an old one, but an old one may ſhave a young one; and yet when a *Telapoin* grows ſo old as to be paſt ſhaving his own Head, another may do it; but he muſt firſt make an Apology and ask Pardon, and profeſs his own Unworthineſs of ſo great an Honour as touching a Senior *Telapoin*'s Head. — Their Razors are made of Copper.

The *Telapoins* waſh their Hands betimes in the Morning, but not in the dark, or before they can ſee, leſt they ſhould drown ſome Inſect and not perceive it, ſo ſtrictly do they keep up to their Principle, *not to take away Life*, though they let others do it for their Uſe. When they are dreſt they go to the Temple, and ſpend about two Hours at their Devotion: Their Hymns or what they ſing at their

Book of Devotions.

Devotions are engraved on thoſe long Leaves before mention'd, tack'd together at the End to make a Book, but the common People have no Book, or if they had they might not underſtand it, their Devotions being in the *Balie* Language, which the Vulgar are ſeldom Maſters of; the *Telapoins* ſit croſs-legged while they ſing, and keep Time with their Talapat or broad Leaf, as if they were fanning themſelves; but when they go in or out of the Temple they proſtrate themſelves three times before their great Idol, with their Heads to the Ground.

The Begging.

After the Evening Devotion the *Telapoins* go into the City to beg, if it may be called begging; for they neither ask any Thing, nor do they take any Thing in their Hands that is given them, for they only ſtand at the Gate of the Houſe, having an Iron Bowl or Diſh in a Linnen Bag hung over their Shoulders by a Rope, and the People knowing what they want, ſeldom let them go away empty, but put their Benevolence, whatever it is, into the Iron Bowl, the *Telapoin* not touching the Alms or Money that is given them, thinking it is a Sin for the Prieſt himſelf to touch that Mammon with his Hand, but brings it home to one of his Nens or Lay-Brothers (mention'd at the Beginning of this Chapter,) who receives it at his Hand, and lays it out, and tranſacts ſuch matters as it is thought unlawful for a *Telapoin* to be concern'd in.

Admiſſion into the Order.

It is an eaſy matter for any that deſire it to be admitted into a Convent, for none are ever oppoſed in it, it being deem'd a Sin to hinder it, nor are the Parents of young People often againſt it, becauſe it is the ſureſt way to be rich, nor are they obliged to remain there longer than they pleaſe: There are ſo many Advantages accrue to thoſe that can ſubmit to thoſe ſevere Reſtrictions, that their Friends are ſeldom againſt it, and when they are reſolved to undertake it, they apply to the Head of the Houſe or Convent, who ſeldom repulſes them; and when they go to take on the Habit, they are generally accompanied by their Friends and Relations, who not only ſing and dance themſelves, but hire People for that Purpoſe, when they lead their Son to take the Habit; but neither the Muſick nor the Women are admitted to enter with him; he has his Head, Beard, and Eye-brows ſhaved, and then the Sancrat, after pronouncing ſome pious Sentences on his devoting himſelf to Religion, gives him the Habit, after which he is ſhut up in the Convent, never to ſee a Dance or hear Muſick afterwards, except they firſt quit the Convent.

The Nuns or *Telapoineſſes* are cloath'd in White, and may, like the young Nens, receive a Habit from any Head of a Houſe, without the Leave of a Sancrat, and after their Entrance, if a Woman is taken

in criminal Converſation with a Man, it is not Burning, as it is with a Man in the ſame Caſe, but ſhe is deliver'd to her Relations to be baſtinadoed, the Prieſts never performing the Execution, much leſs flogging them, as is reported of ſome nearer Neighbours, from whom, according to the Title of their Religion, more Modeſty might reaſonably be expected than from Heathens and Infidels.

Their Penance.

Their Tranſmigration.

THEY all hold Tranſmigration of Souls; which Doctrine they apply to all things Animate and Inanimate, and think them to be acted and inform'd by a rational Soul, even Fire, Water, Earth, *&c.* as well as Men, Beaſts, and other living Things; they think that every Soul that now poſſeſſes a human Body has poſſeſs'd and actuated an innumerable Number of Bodies before it came into that; and ſome of the *Telapoins*, the better to confirm this Opinion, pretend to remember their ſeveral Tranſmigrations.

BUT this Tranſition of the Soul from one Body to another they do not hold to be immediate, but that they remain diſpoſſeſs'd of any Body for ſome Time, during which Interval they think the Soul hath Occaſion for ſuch Things as was neceſſary for the Perſon in a State or Mortality; for which Reaſon they burn their moſt valuable Moveables, and even Animals, and Slaves with the Bodies of the Deceas'd, as ſuppoſing that they may have Need of them in their State of Separation; and there are Inſtances in Hiſtory, that between Man and Wife the Survivor offer'd to be burnt; and that it has been practis'd, but not beyond the *Ganges* where we are now ſpeaking of; and for other Neceſſaries or Moveables they make gilded Paper in the Reſemblance of them, and burn them; imagining that they will be real Goods in the next State of the Deceas'd.

BUT though they think they contribute to the Wants of the Deceas'd, yet they believe that they can make reciprocal Returns to them again; and therefore, to lay their deceas'd Relations under all poſſible Obligations, they do them all the Honour they can contrive at their Funerals, and then pray to them, eſpecially to their direct Anceſtors, the Father, Grandfather, and great Grandfather, but not any further back, ſuppoſing that thoſe beyond them have undergone ſo many Tranſmigrations, that they are loſt as to them, and can no longer hear them. But this Doctrine of believing that the Deceas'd can help them, and the Practice of praying to them ſeems to contradict another Part of their Belief, *viz.* that every human Soul is removed into another Body Animate or Inanimate; and that it ſometimes actuates a Beaſt of Burden, as an Elephant, *&c.* ſometimes a Tyger, or other Beaſt of Prey; ſometimes a Serpent, or other venomous Beaſt; ſometimes a Tree, a Stone or the like; and that it is condemn'd or confined to this Place or State for ſome Miſdemeanor committed in the human State, and as a Puniſhment for it; and how this departed Soul ſhall or can aſſiſt its Survivors, when it cannot aſſiſt itſelf, or obtain its Liberty, is contrary to Reaſon, and to the Capacity of that Being which is liable to Confinement, as by this Doctrine the Soul of Man is in ſeveral Bodies ſucceſſively.

Praying to the Dead.

THEIR Principles ſeem to be grounded upon Humanity and Morality; they are forbid to kill any Thing, not only Men or Animals, but Vegetables too, and in that they are ſo ſtrict, that they will not eat the Seed of any Plant while it is capable of propagating its Species; ſo that though they will eat the Fruit, that not affecting the Life or generative Faculty, yet they preſerve the Kernel or Stone, that being the Seed, which being deſtroy'd the Propagation is extinct; and for the ſame Reaſon they will not eat Fruit before it be ripe, leſt they ſhould deſtroy the Seed; they will not deſtroy any thing which we call Inanimate, becauſe they think every thing is animated by a Spirit or Genii, and that in deſtroying it, they diſpoſſeſs a Soul of the Happineſs it was to enjoy, or diſcharge it from the Confinement it was ſentenced to ſuffer. It is contrary to their Principles to open a Vein to let out the Blood, becauſe they think that to be the reſidence of the Soul; nor will ſome of them wound a Plant to let out the Sap or Juices, for the ſame Reaſon, but though theſe be their Precepts, they find Ways to evade the ſtrict Obſervance of them, and to diſpenſe with the Breach of them in ſome Caſes; for though the *Telapoins* will not eat or deſtroy the Seed that is capable of producing its Species, yet they will ſuffer it to be done for them, as for inſtance, Rice is a Seed, but when it is boil'd it is no more capable of any ſuch Action, and therefore they let their Servants boil it, and then they think it no Sin to eat it themſelves. They will not kill a Beaſt leſt they ſhould violently diſpoſſeſs a Soul, but when it is ready kill'd they think no further Violence can be offer'd to the Soul, and therefore they make no ſcruple to eat the Body, and as for their Reluctancy to deſtroy Men, the King of *Siam*'s Watch-Word, *Kill not*, ſeems to be a ſufficient Proof, and the *Siameſe* alledge in their own Defence, againſt Murder in a Battle, that they firſt fire ſhort of the Enemy, and if then they will preſume to approach within Shot, it is their own Faults if they are killed.

Their Principles not to kill.

THEIR ſecond Precept prohibits Stealing, but this is not ſo ſtrictly obſerved as the former, and as for the Third and Fourth againſt Immodeſty and Drunkenneſs, they think any Enjoyment of a Woman is equally ſinful in a ſingle or married State, only the ſtrict Religion of the *Telapoins* attone for the Sins of the Laity who cannot pretend to that Perfection; and they look upon faſting, or any Degree of drinking ſtrong Liquor to be equally criminal with being drunk with it.

IT is not lawful for the *Telapoins* to hear Muſick, ſee Plays or Dancing, touch Gold or Silver, or meddle with any thing but the Affairs of Religion, he muſt not borrow of a Lay-man, nor lend upon Uſury; he muſt keep no Arms, nor eat, drink, or ſleep immoderately, nor whiſtle, ſing, or play on any Inſtrument, or uſe any Sport or Diverſion; they muſt live on what they begg'd that Day, and keep none till the Morrow; but if any is left, give it to ſome Animal; they muſt not ſpeak freely to, or ſit near a Woman, nor receive any thing at her Hand, but if their Alms are brought them by a Woman ſhe muſt lay it down for him, or put it in his Iron Bowl; they are to wear Yellow, not to eat in Gold or Silver, and ſeveral other ceremonious Reſtrictions they are obliged to obſerve; and if they keep up to them, live reſerved, ſeldom laugh, and never aloud, carry always an auſtere ſtern Countenance ſuitable to the Homage they expect, they are admired as Demi-Deities by the Vulgar.

Their auſtere Lives.

THEIR grand Deity they call by the Name of *Summono-Codom*, who, as they imagine, was Son to the King of the Iſland of *Ceylon*, (to be deſcribed afterwards,) he beſtow'd all his Eſtate in Charity, pull'd out his Eyes, kill'd his Wife and Children, and gave them to the *Telapoins* to feed upon, and they expect that another *Summono-Codom* will ariſe, and alſo kill his Children for the ſame Purpoſe, (*However inoffenſive the* Telapoins *may deem it to eat another Man's Wife and Children when kill'd to their Hands, it would ſeem* Summono-Codom *was no* Telapoin *becauſe he butcher'd his Wife and Children himſelf,*) and that this Charity will bring them to the higheſt Pitch of Virtue; and as this ſeems to be a Piece of the greateſt Stupidity, Mr. *Loubere* imagines that the chief Happineſs of the *Siameſe* conſiſts in attaining to a great Pitch of Inſenſibility, and that

Summono-Codom

it was *Sommono-Codom*'s ſtupid Superſtition in giving his Wife and Children to be eat by the *Telapoins*, that exalted him to the Dignity of a Deity; but whatever Conſtruction Mr. *Loubiere* may put upon the Practice of the *Siameſe*, it is certain they do not look upon *Sommono-Codom* to be a ſtupid unactive Deity, when they pray to him in their Diſeaſes, and return him Thanks for Favours received, which (except they were more infatuated than he) they would not do, if they thought he was not capable of hearing them and able to help them.

His Diſciples.

THEY believe that *Sommono-Codom* is now in a State of Bliſs, and that before he entered into it he acquired a prodigious Strength of Body; that he could enlarge his Body to any Size, from a Point to any Magnitude; that his two principal Diſciples *Pra-Mogla* and *Pra-Scarabout*, whoſe Images they place with his, the former on his Right Hand, the other on his Left, on his Altars; and behind theſe they place others repreſenting his Officers; there are alſo other Images round the Galleries of the Cloyſters adjoining to the Temples.

IT is very difficult to convince the *Siameſe* of any Errors in their Religion, nor do they meddle with the Religion of Foreigners, from a Belief that every Country has a Religion peculiar to itſelf. They erect Temples to the Memories of ſome whom they believe to have been great and virtuous Men, which even the *Portugueſe*, as well as they, have called the Gods of the *Indies*, and pay a ſort of Adoration to them, for which Mr. *Loubiere* the *French* Ambaſſador at *Siam*, would charge them with Atheiſm; but if they pay divine Honour to them, and worſhip them as God, they cannot be juſtly charged with Atheiſm, becauſe they believe there is a God, and are only miſtaken in what God is, as to his Attributes, *&c.* but if they worſhipp'd thoſe Images or God by thoſe Images, we will give Mr. *Loubiere* leave to charge them with Idolatry, and ſuppoſe he might find Inſtances enough of that kind at home, though in a Chriſtian Country, and it's probable, as the *Siameſe* are not prejudiced againſt any Religion, they might ſoon have been brought to embrace Chriſtianity, if it had been offer'd to them in its Purity, according to the reform'd Church, and not encumber'd with the Dregs of Popery and Superſtition, as it was by the Popiſh Miſſionaries, when ſent to propagate Chriſtianity in thoſe Parts, as it is known not only to thoſe that read the Hiſtory of thoſe Times and Places, but by the Advice of Mr. *Loubiere* to the Miſſionaries, when aiming at the Converſation of the *Indians*, who adviſes them that they ſhould *with great Caution preach up the Worſhip of Saints*, as ſuppoſing thoſe *old Birds would not be catch'd with ſuch Chaff.*

CHAP. VIII.

Gives an Account of their Marriages, Women, Children, Slaves, and Funeral Rites.

Marriage.

THE Father has the chief diſpoſing of his Child, and when he thinks fit to marry his Son to any Woman, he employs ſome Woman to propoſe it to her Relations, and if they agree to it, they have Recourſe to ſome Conjurer or Aſtrologer to have both the young Peoples Nativities calculated, and conſult him if it is likely to prove a happy Match; but principally each enquires into the other's Fortune, to know whether they are rich or poor; for no Body dare be known to be rich, becauſe if it is diſcover'd, the King ſeizes it to his own Uſe; and from the Conjurer's Sentiments both Parties form their Reſolutions; and if the Parents agree, the intended Bridegroom is allow'd to viſit his Miſtreſs three Times, and make her a ſmall Preſent of *Betel* or Fruit; at the laſt of which Viſits, the Bride's Portion is paid down, and now the Couple are look'd upon as married, and have Preſents ſent them by their Friends and Relations.

Conſummation.

THEY proceed next to Conſummation, without any Form or Ceremony preceding, to be perform'd by the *Telapoins*, for the Weddings are attended with Mirth and Feaſting, and Perſons are hired to dance, and make the Company merry; but neither the young Couple, or any of their Relations dance upon that Occaſion; the Entertainment is kept at the Bride's Father's Houſe, where the Bridegroom builds an Apartment for that purpoſe, which is ſoon done after their ſlight Way of Building; but the *Telapoins* are prohibited to be preſent at any of theſe Entertainments, but afterwards they come to the Houſe and ſprinkle the new married Couple with holy Water, and repeat ſome Prayers for their Happineſs. The young Couple remain ſome Months at the Bride's Father's, and then adjourn to a Settlement of their own.

Mandarin's Daughter's Marriage.

WHEN a Mandarin's Daughter is married, ſhe is diſtinguiſh'd by a particular Dreſs; ſhe wears ſuch a Coronet or Circle of Gold, as the Mandarin wears on his Cap of Ceremony; her Cloaths are finer, and her Pendants of greater Value than ordinary, and ſhe has more Rings upon her Fingers than uſual: The greateſt Fortune at *Siam* ſeldom exceeds five thouſand Crowns, and they commonly endeavour to match Men and Women of equal Fortunes together; it is deem'd lawful to have more Wives than one, but it is ſeldom practiſed by the Common People, though ſometimes the great Men have more, becauſe it is look'd upon as a Piece of Grandeur; but with thoſe that have it ſo, there is a Difference in Dignity, one is called the great or chief Wife, and the reſt are purchas'd, and Attendants on her, and the Children of the great Wife call the Man only Father; whereas the Children of the reſt call him Lord as well as Father.

Degree forbidd.

MARRIAGE in the firſt Degree of Conſanguinity is prohibited to the Subjects, but the Princes think it beneath them to marry any but what are of their own Blood; nor do they ſtick at Degrees, nor regard what we call Inceſt; for the preſent King marry'd his own Siſter, and having a Daughter by her, he married her.

Chief Wife's Children only in heir.

THE Husband's Eſtate paſſes to the Children of the chief Wife, the reſt being ſo far from having any Share, that they are accounted Slaves; and when the Man dies, both the inferior Wives and their Children are at the Diſpoſal of the next Heir by the chief Wife, who inherits the Eſtate, and may ſell them all if he pleaſes. Their Eſtates conſiſt moſtly in Money and Goods; for if they have Eſtates of Land, either hereditary, or by Purchaſe, the King ſeizes it for himſelf, if he pleaſes, although he ſold them to them himſelf, and that without returning the Value; ſo that few care to purchaſe, but rather to let their Eſtates conſiſt of Money or Goods, which they can conceal; for if the King finds them out, he ſerves them

them in the ſame Manner, and that makes Diamonds be much valued, becauſe they are eaſily conceal'd.

THE Wives of the *Siameſe* are remarkably faithful to their Husbands, and as the Husbands are ſenſible of it, there is no Room for Jealouſy. They maintain their Husbands not only during their ſix Months Service to the King, which is required of every Man; but ſometimes he detains them two or three Years, their Wives maintaining them all the while. Their Laws allow of Divorce, but it is ſeldom practiſed, except amongſt the poorer Sort; and then their Children are equally divided between them, only with this Difference, that when they ſhare them, the Woman takes the firſt, the Man the ſecond, *&c.* and thereby if there be an odd one, the Woman is ſure to have it; and after they are divorced, they are at Liberty to marry again immediately.

Divorce.

THE Husband is abſolute Lord of his Family; he may ſell his Wives and Children, except the Chief, and ſhe has the ſame Power over the Children after his Deceaſe, but with this Limitation, that as the ſecond, fourth, *&c.* and every even Number is deem'd the Father's Right, as above, ſo his Relations may oppoſe the ſelling of them, if they pleaſe.

THE Women of *Pegu* who live at *Siam* will commonly offer themſelves to Foreigners, and be as faithful as Wives to them while they remain in the Place, and value themſelves upon being with Child by a white Man. The Women of *Siam* are not ſo familiar with Foreigners, but chuſe to deal with white Men rather than others, in hopes to mend the Complexions of the ſucceeding Generations.

Chuſe white Men

THE Law here is ſuch, that if a Son commits a Crime, and makes his Eſcape, his Father, Mother, or the next Relation, are thought chargeable with it, and taken up accordingly; but it is likewiſe as common, that however the Criminal may eſcape or abſcond, yet if he hears of his Relation's being apprehended, and likely to ſuffer for his Crime, he ſurely ſurrenders himſelf, rather than let them ſuffer wrongfully.

THEIR Husbands have an entire Confidence in their Chaſtity, and do not reſtrain their Liberty at all; but on the other hand the Women are ſo tenacious of their own Honour and Chaſtity, that they will not admit of any Indecent Familiarities with Men, or any Freedom that ſhould be ſuſpected as ſuch; and ſo abſolutely do they think themſelves united to their Husbands, that they had rather die by the Hand of the Husband, than to be taken from him by the Hand of an Enemy; nor can any thing grieve the Husband more, than to have his Wife taken Priſoner; and yet tho' this be the general Cuſtom of *Siam*, yet there are ſome that will go aſtray; but this happens chiefly among the Royal Concubines, or Wives of Great Men, who are ſo very numerous, that ſome of them are hardly known to the Husband, and likely not to be admitted to his Embraces: And the ſame with reſpect to the King, and ſome of his Concubines; and yet when any of them are found falſe to his Bed (if it may be ſo call'd) he puniſhes them with the utmoſt Severity. We have an Inſtance in one of the King's Concubines, that being charged with the above-mention'd Crime, the King order'd her to be caſt to the Tygers, who would not meddle with her, which the King taking to be a Token of her Innocency, offer'd her a Pardon, but ſhe rejected it, alledging, that ſhe had rather die than live the Life ſhe had liv'd in the Seraglio; whereat the King was ſo exaſperated, that he cauſed the Tygers to be again ſet upon her, himſelf ſtaying to ſee the Execution done. But the Puniſhment of the Man that is guilty with her is more mild. Sometimes they allow the Baſtinado to be deem'd a ſufficient Puniſhment for his Crime. But if a Perſon of Quality's Daughter offends in this Kind, ſhe is ſold to an Officer, and proſtituted, to puniſh them for the Crime, as well as ſhame them out of it.

Chaſtity of their Wives.

King's Cruelty.

THERE are but few Beggars here; for if they marry, and have more Children than they can maintain, they will ſell one to maintain the reſt, or if that will not do, even ſell all, Wife and all, to maintain themſelves, as has been before obſerved; but if they have neither Wives nor Children to ſell for a Maintenance, their Relations adviſe them to be Slaves rather than Beggars, as thinking the former the leaſt reproachful; and therefore there are very few Beggars except thoſe who have no Wives or Children to ſell for Subſiſtence, nor Relations to introduce them into that preferable Penury, Slavery: And altho' the very Name of Slavery is terrible to us, yet their Slaves are not ſo entirely ſo; for they are allowed to work for their Maſters to maintain themſelves, only paying to their Maſters from four Tycals to eight yearly out of their Wages; ſo that he that pays moſt, pays not above one Pound four Shillings yearly out of his Wages to the Maſter to whom he is a Slave.

Beggars

BUT beſides thoſe Slaves for Debt or Poverty, as above, People may become Slaves by being taken captive from the Enemy in Time of War, or a free Subject may be condemn'd to Slavery for a petty Crime, which is not deemed worthy of Death; or laſtly, a Perſon may be born a Slave, as is the Caſe when his Parents are Slaves on any of the above-mention'd Accounts, at the Time of his Birth, and in this Caſe ſuch Children are perpetual Slaves, though the Parents work out the Debt, and recover their Freedom; or if but one of the Parents be a Slave, the Maſter may mitigate the Sentence, and take but one half of the Children, *viz.* if it is the Mother, he takes the Firſt-born, the Third, Fifth, *&c.* and if it is the Father, he takes his, *viz.* the ſecond, fourth, *&c.* but it is in his Power to take them all if he pleaſes.

Other Slaves.

THE King perpetually employs and maintains his own Slaves; but thoſe called Freemen, that give the King Six Months Service yearly, maintain themſelves during that Time; but the Slaves of particular Men are not employed in the King's Work, nor does the King ſuppreſs any body from becoming a Slave, that is willing to exchange his Liberty for an indolent Life, and ſlender Maintenance.

WHEN one of the *Siameſe* dies, they ſometimes endeavour to conſume the Bowels within the Corps with Mercury, to prevent any offenſive Smell; ſometimes they are put into leaden Coffins, but moſt commonly into wooden Coffins laquer'd and gilded, and place them upon a Bedſtead or Table, where it remains till they make the neceſſary Preparations for the Funeral, and the Head of the Family can attend the Solemnity. In the mean time they burn Perfumes, and ſet up lighted Tapers before the Corps, the *Telapoins* ranging themſelves round the Room every Night to entertain the Family with Hymns and Diſcourſes adapted to the Occaſion; and we muſt not forget the grand Spring that puts the *Prieſts* Performances in Motion, for they are rewarded with good Proviſion and MONEY too, tho' by their Profeſſion they are forbid to touch the latter.

Funerals.

DURING this Ceremony, they cauſe a ſquare Spot of Ground to be incloſed with Bamboo Pales near ſome Temple; this is hung round with ſuch painted and gilded Papers as the Family makes upon that Occaſion, repreſenting Houſes, Goods, Animals, and ſuch other Things as they think the Deceas'd may have Occaſion for in a future State:

In the Middle of this Square they build a Funeral Pile of Earth and common Wood interſperſed with Lignum-Aloes, yellow Sanders and other fragrant Combuſtibles, of which they put a greater or leſs Quantity, according to the Ability of the Family. The Pile is built to a great Height.

Funeral Proceſſion.

They always carry the Corps to the Pile in the Morning, attended by the Family of the Deceas'd, with the Sound of ſeveral ſorts of Inſtruments; both Sexes are cloathed in white and have white Veils, lamenting and bewailing themſelves; after them come the Friends and Relations of the Deceas'd; they generally chuſe to go by Water, as far as they can, towards the Burying-Place.

They take the Body out of the Coffin, and lay it upon the Pile, and the *Telapoins* having ſung melancholy Hymns for about a Quarter of an Hour they retire, becauſe then the Shows and Plays, and the Feſtival begin, at which the *Telapoins* are forbid to be preſent; but the Relations continue there Mourning, and do not ſuffer themſelves to be affected by the Diverſion.

Burn the Pile.

About Noon the *Telapoin*'s Servant ſets fire to the Pile, and when it has burnt about two Hours, they give out that the Corps is burnt to Aſhes, though it is not; while the Fire is burning, or rather when it is beginning to burn, the ſacrilegious *Telapoins* ſteal the painted Papers, which ſhould by the Heat of the Fire have been melted into Houſes, Goods, Animals and the like for the Uſe of the Deceas'd in his future State, and keep them to ſell at the next Funeral, where they can ſteal them again, and ſell them again; and ſo their Trade goes round, while the poor Deceas'd is left to ſhift for himſelf in the other World, for the Goods and Neceſſaries which they were to have been converted into, for his Uſe.

The Family entertains the Company for three Days, and beſtows Alms upon the *Telapoins* of that Convent where the Funeral is ſolemnized, the whole concluding with Fire-works and ſuch other Diverſions, as upon a different Occaſion would be look'd upon as Demonſtrations of Joy; and after all this is done, they take the Remains of the Corps which is yet un-conſumed, and put it in the Coffin, and bury it under one of the Pyramids which ſtand about the Temple; and ſometimes they alſo bury Treaſure and Precious Stones under the Pyramid with the Corps; but all this formal Pomp and Solemnity is underſtood of the Rich and Great, for People in lower Circumſtances are forced to diſpenſe with the Want of ſome of the Charge and Grandeur above-mention'd and, as in *England*, ſuit their Expence to their Ability; but then, if a Son is but in a low Capacity at the Death of his Father, and Makes his Funeral in Proportion, if afterwards the Son is advanced in the World, he cauſeth his Father's Corps to be taken up, and beſtows upon him a more noble and ſplendid Funeral to pay that reſpect to the Memory of his deceas'd Father, which his ſtraiten'd Circumſtances would not ſuffer him to pay before. Burn.

The Perſons of Quality in this Kingdom of *Siam* uſually chuſe or pitch upon a Piece of Ground for a Burying-Place for the Family, and build a Temple as near it as conveniently they can; but thoſe of a next inferior Degree that cannot afford to build a Temple, preſent ſome Idol to a Temple already built; they that are poorer ſtill bury their Parents without the help of a Funeral Pile; but the pooreſt of all who are not able to hire the *Telapoins* to ſing the burial Hymns, and perform the Funeral Rites; (for *no Penny no Pater-Noſter*,) the next greateſt Honour that they can pay to their deceas'd Parents, is to expoſe them on a Scaffold to be devour'd by Birds of Prey, which they look upon as the moſt honourable Interment except that of burning them upon a Funeral Pile.

They allow no Funeral Rites to ſuch as die an untimely Death, amongſt whom they reckon not only executed Criminals and Self-Murderers, but alſo Women dying in Child-bed and ſtill-born Infants, alledging as a Reaſon, that ſuch People have brought the Judgment of Heaven upon themſelves for their Crimes. I could eaſily fall in with this Opinion as to the two former, but can ſcarce think that any Perſon endued with common Humanity could have ſuch an uncharitable Opinion of the two latter.

THE HISTORY AND DESCRIPTION OF THE *Oriental* ISLANDS.

CHAP. I.

Of the first (European) Discovery of the Ladrones *and* Philippine Islands.

WHAT is here meant by the *History* of these Islands is chiefly to be understood as relating to the first Discovery of them by any *European*, the Substance of which shall consist of the following Particulars: First the Person for whom. Secondly, by whom. Thirdly, Manner how. And lastly, Time when they were first discover'd.

Ferdinandus Magellans in his first Design to sail round the Globe (he being the first that ever attempted a Voyage of that Kind) was the first Discoverer of these Islands, of which Expedition and the Person take the following Account.

Birth of *Magellans.*

HE was born in *Portugal*, and had served his Country both in the *African* and *East-Indian* Wars, and chiefly under *Albuquerque*, the great *Portuguese* General, who reduced *Goa* and *Malacca* to the Subjection of the Crown of *Portugal*, for which Success, when he desired but a Ducat a Month Advance in his Pay, the Government of *Portugal* denied it. Such is too often the Case when a faithful and successful Servant is employed by a covetous ungrateful Master; but he endeavoured that *Portugal* should get nothing by it, and so quitted their Service, and engaged himself in the *Spanish* Interest under *Charles* V. then Emperor of *Germany* and King of *Spain*.

WHEN *America* was discovered by *Christopher Columbus*, there was a Bull in Force granted by Pope *Alexander* VI. to the King of *Spain*, bearing Date the 3d of *May* 1493, granting to him and all his Heirs and Successors for ever all the Countries and Islands discovered or to be discovered within one hundred Leagues Westward and Southward of the *Azores* and *Cape de Verde* Islands. But the *Portuguese* thought this interfered with a former Grant, which they had obtained in the Year 1442, upon account of their having discovered a Passage round *Cape Bona Esperanza*. This Grant made over to them all Lands discovered or to be discovered to the South and East of *Cape Bajadon*, on the West Coast of *Africa*, in about Lat. 27 North. Thus made the *Portuguese* dispute the *Spaniards* Right; but they adjusted the Difference between themselves, by agreeing that a Line should be supposed to be drawn through the *Azores* and *Cape de Verde* Islands, and another parallel to it, and two hundred and seventy Leagues to the Westward of it, and that all Land that should be discovered to the Westward of this last Line should belong to the *Spaniards*, and all to the Eastward of it to the *Portuguese*; and that neither should trade in the others Territories. This Agreement was made *June* 7. 1493, ratified by the King of *Spain* the second of *July*, and by the King of *Portugal* the 27th of *February* following, and then each Party applied themselves to the making of further Discoveries in his own Limits.

BUT *John*, then King of *Portugal*, dying *Anno* 1495, King *Emanuel*, his Successor, resolving to pursue his Predecessor's Design, fitted out three Ships in the Year 1497, under the Command of *Vasco di Gama*, who having got about the Cape of *Good Hope*, arrived at *Calicut* on the West Coast of *India*, where having made his Remarks, he returned to *Portugal*, *Anno* 1499, and gave account how easy and profitable it might be to establish a Trade with *East India* by way of the Cape of *Good Hope*.

WITH this Encouragement the aforesaid King *Emanuel* of *Portugal* in the Year 1500 fitted out another Fleet of thirteen Sail, and fifteen hundred Men for the same Voyage, who in their Passage stood so far to the Westward, that they made the Land of *Brazil* in *South America*; but then altering their Course, they pass'd round the Cape of *Good Hope*, and came to *Calicut* as before, but when they attempted to land and settle there, they were repulsed by the *Moors* or Mahometans of *Arabia*, who had got Possession of the Place, and engross'd the Trade to themselves, and transported the *Indian* Goods to *Turkey*, which is the Reason that *Europe* was formerly supplied with them from thence.

HAVING met with this Disappointment, they adjourn'd to *Ceylon*, a Port upon the same Coast,

about twenty Leagues to the Southward of *Calicut*, where they met not with so much Opposition, and having got Footing there, they were immediately reinforced with Ships and Men to maintain and enlarge their Possession; so that in a short time the *East India* Trade was transferr'd from *Turkey* to *Portugal*, and the Goods with which we were supplied by the former, we are now supplied with by the latter.

They having got such sure Footing in *Asia*, soon extended their Possessions to the Eastward as far as *Malucca* (*of which see more in the Account of* Malacca *under the Head of the Description of* Siam) of which they were no sooner in Possession of, but they discover'd the *Molucca's* or Spice Islands. But here *Magellans* thought fit to put a stop to his Adventures, and return Home to know how he should be rewarded for what he had already done, and whether his Reward answered his Expectation is uncertain, but it is certain it fell far short of his Merit; for being denied the Advance of one Ducat a Month in his Pay, he deserted the *Portuguese* Service, and engaged with *Charles* the Fifth, Emperor of *Germany*, and King of *Spain*, as has been observed before.

Magellan began now to use some Geographical Policy in the Interest of his new Master; for by the before-mention'd Contract any Discovery made amongst the *Philippines*, *Molucca's* or Spice Islands would seem to belong to the *Portuguese*; for if we suppose a Meridian drawn two hundred and seventy Leagues to the Westward of the Meridian, passing through *Cape de Verde* Islands or the *Azores* (for their Longitudes differ not much) it is customary to reckon that one hundred and eighty Degrees (or half the Globe) East Longitude from that Meridian is to be deemed *Eastward*, and the other half, or one hundred and eighty Degrees West Longitude from the said Meridian should all be called *Westerly*; and if that be granted, the *Molucca's* or Spice Islands lying within the one hundred and eighty Degrees East Longitude from the said proposed Meridian, must in that Sense be an Easterly Discovery, and belong to the *Portuguese*, exclusive of any Pretensions of the *Spaniards*.

But *Magellan*, nettled at the Ingratitude of the *Portuguese*, and studying to resent the Indignities he had received from them, soon contrived a Way for his Master, the King of *Spain*, to evade that Contract; for as all Eastern Discoveries did belong to the *Portuguese*, so did all Western to the King of *Spain*; he therefore advised the King of *Spain* to furnish him with Ships and Men proper for such an Expedition, and he would sail West so far round the Globe, as to come to the *Molucca's* or the *Philippine* Islands, and if then he could make a Discovery and a Conquest too, it was no Infringement upon the King of *Portugal's* Property, as being a Western Discovery, and belonging to the King of *Spain*.

The King of *Spain* approving of the Project, immediately order'd five Ships to be fitted out, and mann'd with three hundred Men, of whom thirty were *Portuguese*, and made *Magellan* Admiral of the Fleet. He set sail from *Seval* the 10th of *August* 1519, and arrived at *Cape de Verd* on the Coast of *Africa* the third of *October* following, from whence he steer'd South-west till he made the Coast of *Brasil* in *South America*, where he only took in some fresh Provisions, and so proceeded without any remarkable Adventure to the Southward along the *American* Coast.

Coming into Latitude Fifty-two South, he discovered the Streight that separates *Terra del Fuego* from the main Continent of *South America*, which Streights he called by his own Name, *The Streights of* Magellan, now sometimes called the *Magellanick Streights*. This Streight is about a hundred Leagues in Length, but the Breadth very uncertain and irregular, being in some Places several Leagues, and in others not half a League broad, the Land on both sides rugged and mountainous, and cover'd with Snow, which being in *November*, almost the Height of their Summer, it is to be supposed they wear that Livery all the Year round. In these Streights they found Plenty of fresh Water Fish, Herbs, Wood, and very good Harbours. On the 28th of *November* 1520 they past out of the Streights of *Magellan* to the Westward into the Great South Sea or Pacifick Ocean, and sailed North-westward for about three Months, without making any Land, having a fair brisk Gale and a smooth Sea, which is common in all Seas, as well as this in these Latitudes, the Wind always blowing to the Westward. On the 6th of *March* following, when they had by their Reckoning run down an hundred and forty six Degrees of Longitude to the Westward, they discovered the *Ladrones* Islands, in about Latitude twelve Degrees North. Here he went ashore and refresh'd his Men; but as neither the Peoples Behaviour nor his own Inclination induced him to stay there, he made the best of his way for the *Philippines*, where he was kill'd in a Skirmish with the Natives; but he and some of his Officers having (before his Death) had Intelligence that the *Molucca* Islands which they were in quest of were not far off, the Ships pursued their Voyage, and arrived at one of the *Mollucca's* called *Tidore*, a small Island in the first Degree of North Latitude, a little to the Westward of the Island *Gilolo*. Here they arrived on the 8th of *November* 1521. In this and some other of the Spice Islands they were kindly received by the respective Governors, and suffer'd to build a Fort and erect a Factory at *Tidore*. They also left one of their Ships there, which was leaky, to be refitted; and now they began to think that their Conquest, or rather, the other's Surrender, had confirmed their Title beyond all Dispute, and that all the Spice Islands, as well as the *Tidore*, was now their absolute Property.

Streig of M gellan discov'd

But notwithstanding the Cunning of the *Spaniards* in calling this a *Western Discovery*, and so to quit themselves from any Imputation of infringing upon the depending Contract, the *Portuguese*, who were the first *Europeans* that traded thither, would not take it so, but ruin'd their Factory, and took their Ships as a Prize. This created continual Bickerings between the *Spaniards* and *Portuguese*, but the King of *Spain* soon put an End to the Dispute, by borrowing of the Crown of *Portugal* three hundred and fifty thousand Ducats, and Mortgaging all his Property in these Islands as Security, which Sum the King of *Spain* never repaying, his Security was forfeited, and the King of *Portugal* kept quiet Possession till the Year 1564, in the Reign of *Philip* the Second King of *Spain*, when *Don Lewes de Valasco*, Vice-Roy of *Mexico*, sent *Michael Lopez de Legaspes* with a Fleet thither, imagining that by planting a Colony there he might establish a Trade between *Mexico*, *China*, and *Japan*.

So much for the History of these Islands; the next is the Description of them, in which, for Order's sake, we shall step back to the Easternmost of them again, and so proceed Westward.

CHAP.

CHAP. II.

A Description of the Ladrones Islands.

THE *Ladrones* are a Number of small Islands lying between twelve and twenty two North, the largest of which is, 1. *Guam*, in 13 Degrees 21 Min. North, according to Mr. *Dampier*'s Observation, and is seven thousand three hundred and two Miles to the Westward of Cape *Corientes*, in the Kingdom of *Mexico* in *America*; but besides this, there are others to the Northward of this, and much in the same Longitude; as, 2. *Sarpanta*, in Lat. 14. 3. *Buena Vista*, in Lat. 15. 4. *Saespara*, in Lat. 1540. 5. *Anatan*, in Lat. 17 20. 6. *Sarigan*, in Lat. 17 25. 7. *Guagam*, in Lat. 18. 8. *Almaguan*, in Lat. 18 18. 9. *Pagon*, in Lat. 19. 4. 10. the Burning Mountain *Griga*, in Lat. 19 33. 11. *Tina*, and 12. *Manga*, in Lat. 20 45. 13. *Urrac*, in Lat. 20 55. 14. *Isle de Patos*, in Lat. 25 30. 15. *La Disconocida*, in Lat. 25 50. 16. *Malabriga*, in Lat. 27 40.

Guam. OF all these Islands *Guam* is the most frequented; here the *Spaniards* have a small Fort mounted with a few Iron Guns, and garrison'd with thirty or forty Soldiers; it lies North and South, twelve Leagues long, and four broad, high Land and steep Rocks to the Eastward, against which the Sea in its perpetual Westerly Current beats continually with great Violence; but the Land declines to the Westward, that the West or Lee Side of this Island is low Land and sandy Bays, separated by rocky Points, which makes very good Anchoring; the Soil is dry and reddish, but indifferently fruitful in Pine Apples, Melons, Oranges, Limes, Cocoa-Nuts, and a Fruit which our Sailors call Bread-Fruit; they have also some Rice, but neither good nor Plenty, because the Soil is too dry; the Cocoa-Nut-Trees grow by the Sea Side, on the West Part of the Island, in large Groves of three or four Miles long, and a Mile or two broad.

Bread Fruit.

Bread Fruit how used. THE Bread-fruit grows upon a Tree the Bigness of a Large Apple-Tree; it has a spreading Head, full of Branches and dark; the Fruit grows as Apples do on the Branches of the Tree, as big as an ordinary Foot-Ball; it is round, and has a thick tough Rind, the Fruit when ripe is yellow and soft, and of a sweet Taste; the Natives gather it when it is green and hard, and bake it till the Rind is scorch'd black, and then scraping off that Outside, there remains a thin tender Crust; the Inside is white and soft, like the Crumb of a Penny-Loaf; there is neither Stone nor Seed in it, but a pure fine Substance like Crum of Bread, but it will not keep above twenty four Hours till it eats harsh and choaky, and thus order'd, it continues in Season for Bread eight Months in the Year, and the Natives have no other Bread during the Season of this. The Bread-Fruit and Tree on which it grows is peculiar to the *Ladrones* and *Philippines* only, and not to be found any where else in the World: They have not much Fish, but they have Hogs-Flesh very good, being fed with Cocoa-Nuts.

Natives Complexion &c. THE Natives have strong well-shaped Bodies, large Limbs, long black Hair, tawny Complexion, small Eyes, thick Lips, and white Teeth; their Visage is long, Countenance stern, yet courteous, if not provoked; there is seldom any reigning Distemper, except one like a Leprosy, but otherwise the Country is tolerable healthy, especially in the dry Seasons, which lasts from *November* till *May*, but during what is called the wet Seasons, the Rains are neither perpetual nor violent, as in some other Places between the Tropicks; and as these Islands lie so far to the Eastward of the *Philippines*, or any other considerable Land, the Westerly Winds either do not reach so far, or if they do they do not hold so long.

THEY are very dexterous in building a Sort of a small Sailing Boat, which for the Excellency of the Construction, and uncommon and ready way of Working, a Description of them will not be amiss. The Bottom is sharp at both Ends alike, like that of a Canoe, and is commonly about twenty eight Foot long; this is what may be called the Keel; the under Part of it is like a Wedge, but inclining to be roundish; the upper Part is almost flat, or very little hollow, and is about a Foot broad; from hence both sides are carried up to about five Foot high, with Planks of about five Inches broad; but what is most remarkable in their Structure is, that one side is flat, and the other rounding or bulging, like other Boats; they are four or five Foot broad a-loft, and the Mast just in the Middle, because both Ends must be exactly alike; they have a Yard with a Sail fix'd to the Mast, and when they are to turn to the Windward, they turn the flat Side to the Wind, the bulging or bearing of the other Side supporting her from being overset, and thus having sailed as far as they think convenient upon one Tack, or making one End the Head, they do not ware or tack, but trim the Sail so as to stand full, when the other End is to be the Head, and she is to stand the contrary Way, and by this means all Loss of Time and Stern-way, which unavoidably attends our *English* Method of turning to Windward, is entirely avoided, and doubtless between any two *English* Vessels equally qualified in all respects for turning to Windward, only with this one Difference, that one at every time of staying lost time, and made Stern-way, and the other was not clogg'd with either of these Incumbrances, it is not difficult to conceive how the latter would spring out a-head of the former in a few Trips to Windward.

WHAT is most difficult to be accounted for in these sort of Demi-Vessels is, how they sail large or right before the Wind; for if then they should sally towards the flat Side, where there is no bearing to support them, they must overset of course. —It may be answer'd that the bulging Side that has all the Bearing carries likewise all the Loading, so that she will naturally heel so much to that Side that a small Breeze would not righten her, much less overset her, but the most safe Way is, suppose the Wind is East, and the Course West, keep the Wind a Point or two upon the flat Side, which suppose it is now made the Starboard Side, she would then instead of West lie West by North, or West-North-West, and after having finish'd about half your Voyage, turn the other End forward, make the flat Side the larboard Side, and let her lie West by South or West-South-West, and so have they the flat Side always to Windward, and the same Course with a mere Trifle, more Distance made good, as if she had sailed all the Way upon a right Line; and this I take to be the Method of managing the Boats they send expres's to *Manila*, one of the *Philippines*, which lies directly West from *Guam*, near four hundred Leagues off; the Trade Winds (except when the Westerly Winds reach so far to the Eastward,) blowing always East;

to

ſo that from *Guam* to *Manila* is right before the Wind, and turning to Windward back, excepting in caſe of a Weſterly Wind, if it happen at that Seaſon, ſo that it is evident they can ſail before the Wind, or at leaſt fetch a Place that is right to Leeward of them, as in this Caſe from *Guam* to *Manila*; and this Voyage, *Dampier* tells us, was perform'd going and coming in four Days time by one of theſe Veſſels, though the Places be near, or as he ſays, above four hundred Leagues aſunder.

Mr. *Dampier* gives us an Account of one of them that he made trial of, that ſailed twenty four Miles an Hour, which is what I have not heard that any of our *Engliſh* Galleys have done upon a Wind cloſe hawl'd.

The Natives of *Guam* have neat little Houſes built with Wood, and cover'd with Palmeto Leaves; they live together in Villages by the Sea Shore, on the low Land on the Weſt Side of the Iſland; the Religion they profeſs is what they learned of the *Spaniſh* Prieſts, whom the *Spaniards* ſent over to inſtruct them, they being under the *Spaniſh* Government at this Day.

CHAP. III.

Gives an Account of the Name, Situation, and Extent of the Philippine Iſlands *in general, and of* Mindanao *in particular; together with an Account of the Winds, Monſoons, Rivers, and Harbours in the ſaid Iſland of* Mindanao.

Number. SOME ſay the *Philippine Iſlands* are a thouſand in Number, but that is only a figurative Way of ſpeaking, a certain Number for an uncertain; however, there are a vaſt Number of ſmall ones, beſides thoſe more remarkable ones, which are diſtinguiſh'd by proper Names, of which the

Names. moſt remarkable are, 1. *Luconia* or *Manila*, 2. *Tandaga* or *Samar*, called by ſome *Philippina*, 3. *Maſbate*, 4. *Mindoro*, 5. *Luban*, 6. *Paragua*, 7. *Panay*, 8 *Leyte*, 9. *Bohol*, 10. *Siba*, *Zebu*, or *Sogbu*, 11. *Negroes*, 12. *St. John*, 13. *Xollo*, 14. *Mindanao*; theſe are the moſt remarkable of them, they lie in about Latitude 5 to 19 Degrees North, and as Mr. *Salmon* obſerves, they extend from Longitude 134 to 147 Eaſt, but he reckons his Longitude from *Ferro*; but if we reckon from *London*, as it were to be wiſh'd all *Engliſh* Geographers did, they lie in Longitude from 115 to 128 Eaſt from *London*, to the Southward of *China* and the Eaſtward of *Cochin-China*,

Why ſo called. They were called *Philippine Iſlands* by the *Spaniards*, in honour of their King *Philip* the Second, in whoſe Reign the firſt *European* Colony was planted there, which Name they retain to this Day.

Firſt peopled. It is probable theſe Iſlands were firſt peopled from the Continent of *China*, becauſe they were under that Government till he voluntarily deſerted them, on Account of their being too remote from the Bulk of his vaſt Dominions; but their Religion and Cuſtoms, when the *Spaniards* firſt went amongſt them plainly proves that they were of *Chineſe* Extraction.

Mindanayans. Mindanao, the Southermoſt and biggeſt of all theſe Iſlands, except *Manila*; it is ſixty Leagues in Length, and in ſome Places forty, ſome fifty over; it is not all ſubject to one Prince, nor is the Religion, Language, or Manners, of the People the ſame in all Parts of it, but may rather be rank'd under three Heads or Names, the *Mindanayans*, the *Hillaloons*, and the *Sologues*: The prevailing Religion of that Place is *Mahometaniſm*; their ſupreme Governor is called the Sultan of *Mindanao*, he governs with an arbitary Power, and gives no written Laws for the Direction of his Subjects Obedience, and thoſe moſt directly under his Religion and Government are in a particular Manner call'd *Mindanayans*, and inhabit near the Sea Coaſt, and have a free Trade for themſelves with any Strangers or Foreigners that reſort thither.

But there are another ſort of a People who live in the Middle and retired Parts of the Country, in the Woods and Mountains, and from that Choice of a Reſidence are called *Hillaloons*. They have rich Mines of Gold Ore, and Plenty of Bees-Wax, but they have no further View in Trading than in trafficking with the *Malayans* for Cloathing, and ſuch other Neceſſaries as their preſent Occaſion requires. *Hillal*

There are alſo another very obſcure ſort of People called *Sologues*, who converſe very little with either of the two former; they are ſettled moſtly at the North-Weſt Part of the Iſland, and trade much to *Manila* and the interjacent Iſlands. *Sologu*

In this Iſland are ſeveral fine Harbours and Roads for Ships; there are alſo Navigable Rivers well ſtored with Fiſh as well as their Seas; eſpecially they have Plenty of Bonetoes, Cavallies, Breems, Mullets, Sea-Turtle or Tortoiſe, and ſmall Maratee. *Harb*

The Weather is not ſo hot as might be expected from its Situation ſo near the Line, becauſe it is conſtantly refreſh'd by Sea Breezes; the Wind blows Eaſterly one half of the Year, and Weſterly the other; they begin to blow from the Eaſt in *October*, but are not ſettled till the middle of *November*; this Wind is attended with fair Weather; the Wind begins to come about to the Weſt in *May*, but ſettles not till *June*, and then comes Rains, Storms and Thunder, Showers which comes againſt the Wind; when the Wind firſt veers to the Weſtward, it blows faintly, and there is ſeldom more than one or two Hurricanes in a Day, and after the Storm is over the Wind ſhifts about to the Eaſt, and the Sky becomes clear, than by degrees thoſe Hurricanes come more frequently and oftner a Day, with violent Guſts of Wind, and very terrible Claps of Thunder, and at length they come on ſo thick, that the Wind continues in the Weſt, from whence the Hurricane comes, and in that Quarter it remains till *October* or *November*, during all which time they have dark thick cloudy Weather, dreadful Thunder and Lightnings, and violent Rains, the largeſt Trees torn up by the Roots, and the Rivers overflow their Banks and drown the Country, ſometimes not ſeeing Sun, Moon, or Stars for a Week together; but the worſt of the Weather is generally the latter End of *July* or Beginning of *Auguſt*, then it is cool and chilly; in *September* both Wind and Rain abate, and the Air ſometimes clear, but commonly thick Fogs till about Noon, and then the Sun breaks out; in *October* or *November* the Wind comes about to the Eaſt again, &c.

Hindu nayans.

CHAP.

CHAP. IV.

Contains a Deſcription of the City of Mindanao, *alſo of the People; the Genius, Temper, Perſons, Habits, Cuſtoms, and Diverſions of the* Mindanayans.

THE City of *Mindanao* is the Metropolis of the Iſland, and ſtands about two Miles from the South Shore, and near the Middle of the Iſland; it is ſituate upon a ſmall River, which runs into the Sea about two Miles below; their Houſes are like thoſe of *Siam*, built on Bambou Poſts, fourteen, ſixteen, or ſome twenty Foot above Ground; they have but one Floor, but it is divided into ſeveral Apartments as they pleaſe, to which they go up by a Ladder on the Outſide of the Houſe; the reaſon of their building thus, is the ſame as at *Siam*, to be above the flowing of the Deluge in the wet Seaſon; their Buildings are very ſlender and weak, being made only with ſplit Cane or Bambou, and the Roofs cover'd with Palmeto Leaves; the People keep their Ducks and Poultry in the empty Place, amongſt the Poſts under the firſt Floor; they alſo make their Dunghills there, and throw down any ſtinking ſtuff, that their Houſes can ſeldom be ſaid to ſtand in a ſweet Air, except during the Inundation, or ſome ſmall time after it, when the freſh Deluge carried away all the Filth and Corruption that the dry Weather had collected together.

THE Sultan's Houſe is very large and ſtrong, ſtanding upon one hundred and eighty great Bambou Pillars, and is much higher than the common Buildings, and has a large Pair of broad Stairs to go up to it; in the firſt Room of the Palace there are twenty Iron Guns mounted upon Carriages, ſeveral others of the Grandees having alſo Guns in their Houſes; at a ſmall Diſtance from the Sultan's Palace there is a Houſe built on Purpoſe for the Reception of Ambaſſadors, and Merchant Strangers, and to hold their Councils in; the Floor is neatly matted, becauſe the People ſit croſs-legged, and uſe no Chairs.

Mindanao deſcribed. THE City of *Mindanao* is about a Mile in length, and but narrow, it poſſeſſing only the Bank of a winding River, on the Right or Starboard Side going up, but there are ſome few Houſes on the other Side; the Bar has not above ten or eleven Foot at Spring Tides, and therefore the River is not navigable for Ships of any conſiderable Burden.

Genius and Temper. THEY are an ingenious witty active People, and yet a *French* Author, who probably thinks no Country ſo bright as his own, calls them lazy, and affirms that they will not work till Hunger compels them; the Caſe is true as to their not being willing to work more than needs muſt; for it is here as in *Siam*, if a Man is ſo induſtrious as to procure to himſelf a Competency beſides Food and Raiment, (that is expended as faſt as it comes,) if it comes to the King's Ear that the Man has acquired a Fortune or ſmall Subſiſtence, the King immediately ſeizes it for himſelf, without any Queſtions aſk'd, and they think it is better to lie idle than work for Nothing. (*See the ſame Caſe in* Siam, *the Beginning of Chap.* III.)

Perſons. THE *Mindanayans* Men have ſtrait Bodies, ſmall Limbs, little Heads, oval Faces, ſmall black Eyes, their Noſes ſhort, their Foreheads flat, their Lips red and thin, their Mouths large, their Hair black and ſtrait, and they black their Teeth as in other Parts of *India*; thier Complexions are tawny, but of a brighter Hue than ſome of their Neighbours; they reckon long Nails an Ornament, eſpecially that on the Left Thumb to be look'd upon as a Piece of Dignity; they never cut it, but ſcrape it ſmooth, and clean and nouriſh it with great Induſtry.

Mein. THEY have a Mein or Carriage ſo ſtately, that Strangers think it the Effect of Pride, but as their other Behaviours are civil and complaiſant, it may rather be imputed to their genteel Air; indeed if they are inſulted and affronted, they are ſo implacable that it is next to impoſſible to perſwade them to a Reconcilation till they have had their Revenge, which they are continually meditating till 'tis perpetrated, and terminates in Poiſon, Aſſaſſination, or ſome mortal Tragedy upon the Perſon's Life.

Habit THE Men wear a kind of a Linnen Shirt or Frock, which comes down almoſt to their Knees; they have a Pair of Drawers, but have neither Stockings nor Shoes; they have a little Cloth or Turbant upon their Heads, which they tie once round, and let the fringed Ends hang down. The Women have long black Hair, which they plat or make up in a Roll on the hinder Part of the Head; their Faces are rounder than the Mens, and their Complexions better; their Features are very proportionable and agreeable, only their Noſes are ſmall and low, and their Foreheads flattiſh, which makes them appear beſt at a ſmall Diſtance; they wear a Frock or Shift like the Men, but with the upper Part of the Sleeve very wide, and gather'd at the Wrist; they have a Cloth or Petticoat once about their Middle: The common People wear the Cloth made of the Plantain-Tree, but the better Sort are cloath'd in Silk or Callico; they have very ſmall Feet, but wear no Shoes or Stockings more than the Men.

Women not reſtrained. THEIR Women are allow'd to converſe with Foreigners, and to entertain them at their Houſes, but are not allow'd to uſe any further Familiarities, nor are they ſuſpected of deſiring it, ſo that their Husbands do not think it neceſſary to lay them under any Reſtraints. It is cuſtomary when any Ship comes to *Mindanao* for the *Mindanayans* Men to come aboard, and enquire if any of the Ship's Company want a Comrade or male Companion, or a Pagally or Female Companion, and it is very common for almoſt every Stranger that comes to contract ſuch Acquaintance, which being done, he comes aſhore, eats, drinks, and ſleeps at his new Companion or Bed-fellow's Houſe, but they muſt pay for every Thing they have, except a little Tobacco, or *Betel*, or the like. The Men of the beſt Quality allow their Wives the Freedom of Converſing with their Pagallies in publick. They wear Rings upon their Fingers, and Bracelets on their Wriſts made of Gold or Silver.

Eating. THE better ſort of People eat Buffaloes Fleſh and Fowls, with their Rice; but their Cookery is as naufeous as their manner of Eating. They never uſe any Spoons, but take up a handful of Rice out of the Diſh, and ſqueeze it together into a hard Lump as big as their Mouths will hold, and cram themſelves with it till they almoſt choak themſelves. They waſh after Meals, and after touching any thing they deem unclean, which conſumes a great deal of Water in their Houſes, and when they have got a Quantity of dirty Water toge-

ther, they only pour it upon the Floor of the Houſe, which Floor is made of ſplit Bambou, like Lath wove together, and when the People are ſick, they have only a Hole in the Floor like a Cloſe-ſtool, which they uſe as ſuch, letting all lie underneath for every body to ſee that comes, which makes their Lodgings be very filthy and loathſome; but the healthy People of both Sexes go to the River Side on theſe Occaſions, as alſo to bathe their Bodies and waſh their Clothes, there being frequently abundance of People in the River from Morning till Night, both Sexes taking great Delight in ſwimming, and waſhing themſelves, which they uſe from their Infancy; it is accounted very wholeſome in hot Countries, and eſpecially where the Flux is predominant.

Swimming.

Liquor.

They have a Liquor made of Rice ſteep'd in Water, ſo ſtrong, that they can drink themſelves merry with it; but when they invite Foreigners, they will not drink out of the ſame Veſſel with them, looking upon that as defiling themſelves, and a Thing that is by no Means to be done.

Diverſions.

At any Wedding, or Occaſion of ſolemn Rejoicing, they have Women who are brought up to it, to ſing and dance before them, if it may be called Dancing: For they do not make much uſe of their Feet in jumping from the Ground, the Excellency of their Dancing conſiſting chiefly in extending their Bodies into odd diſtorted Poſtures, and to ſhew the Suppleneſs of their Limbs in twiſting and ſcrewing themſelves, as if they had no Bones in their Skin, and all this is done to the Noiſe of Singing only, they having no Inſtruments of Muſick here. Sometimes at theſe Entertainments, a Man is introduced, intended it is ſuppoſed in their Way, to repreſent a Hero or Champion. At his firſt Appearance he puts on a dreadful ſtern Look, gives a Shrick or two, and ſtrides croſs the Stage with the utmoſt Grandeur, having a Lance in one Hand, and a great broad Sword in the other, and having taken ſeveral Turns in a frightful menacing Manner, he ſtamps, ſhakes his Head, throws his Lance, and draws his Crice, and falls to cut and flaſh the Air like a Madman. At length, as if he had got his Enemy in his Mercy, gives two or three Blows on the Floor with his broad Sword, as if he was cutting off his Head, and then withdraws, as having done a great Feat, and ſometimes they are ſo diverted with his frantick Exerciſes, that another ſucceeds him to repeat the Diverſion; ſometimes their Generals, nay, the Sultan himſelf, will expoſe themſelves in theſe Mock-Fights; but if the Sultan acts at all, he always comes laſt, and concludes the Droll, being actually dreſs'd in Armour as if a going indeed to engage.

Horſes.

Besides theſe Diverſions, they hunt wild Cows and Buffaloes, like Deer or other Veniſon, for they have great Store of thoſe, and commonly take their Women with them to the Sport, but their Way of Hunting ſcarce deſerves the Name of Hunting, for they only incloſe a Piece of Ground in with a ſtrong Fence, and then drive their Game in and take them, which affords very poor Diverſion to the Sportſmen; they have no Dogs, nor do they underſtand much of the Uſe of Fire-Locks, that they have no Chance for a diverting Chace.

CHAP. V.

Gives an Account of their Trade, Shipping, Manufactures, Coin, Soil, Plants, Animals and Minerals.

They build very ſerviceable Ships at *Mindanao*, both for Trade and Pleaſure, and have ſome Sorts of Ships of War. Their Trade is chiefly to *Manila*, to which Place they carry their Gold and their Bees Wax, and bring back *Chuna* Silks, Calicoes and Muſlins. They alſo maintain a Trade with the Iſland of *Borneo*. The *Dutch* come hither in Sloops from *Ternate* and *Tidore* to purchaſe Tobacco, Rice and Bees Wax. Tobacco grows more plenty in this Iſland than in any in all the *Indies*, except *Manila*, and is reckon'd of an excellent Sort; but they have not the Art of managing it ſo well as the *Spaniards* do at *Manila*. The *Mindanao* Tobacco is a deeper Colour than that of *Manila*, and a much larger Leaf, which ſome impute to the Fatneſs of the Soil. The *Manila* Tobacco is of a bright yellow, and the Leaf of a moderate Size, and is not ſtrong to ſmoke, but very pleaſant. The People of *Manila* have a great Trade all over *India* with this Tobacco, and ſell it at a very great Price, while that at *Mindanao*, which is really as good in itſelf, is ſold exceeding cheap, and all the Difference of the Value put upon theſe Tobacco's is only owing to different Ways of ordering, in which the *Manilans* excel the *Mindanayans* as much as the Price of their Tobacco excels theirs.

Gold.

The Rate of *Mindanayan* Gold is fourteen *Spaniſh* Dollars the *Engliſh* Ounce, and eighteen Dollars the *Mindanao* Ounce. *Spaniſh* Dollars are current Coin in the *Philippine* Iſlands.

They puniſh Theft ſeveral Ways, for they are arbitrary in their Sentence, and if it is paſt, there is no Repeal or Mitigation. Mr. *Dampier* relates a Story of a Captain who had been robb'd of ſome Goods by one of the General's Men, who after he had done made his Eſcape to the Mountains, but being purſued and taken after the aggrieved Captain was gone, they were ſo ſtrict in bringing him to Juſtice, that they brought him bound to Captain *Swan* (who commanded the Ship *Dampier* was in) to know how he would pleaſe to have him puniſh'd, but the Affair being foreign from his Buſineſs, he declined it; whereupon the General himſelf order'd the Criminal to be ſtript naked, and bound Hand and Foot to a Poſt from Morning till Night, with his Face towards the Sun, which was a ſevere Puniſhment, if we conſider not only his ſtanding ſo long in that one Poſture, but being expoſed to the intenſe Rays of the Sun's Heat, and which was yet the worſt Part of his Puniſhment, the Musketoes and Gnats, creeping biting, and preying upon his Body, himſelf not having a Hand at Liberty to drive them away, or to rub himſelf under that tormenting Itch. The General would have kill'd him after all, but Captain *Swan* would neither deſire it, nor conſent to it. For other Puniſhments, they lay them ſometimes on their Backs for a long time in the Sands, which are ſo exceſſive hot, they are not to be touch'd with the Hand, or walk'd upon with the bare Feet.

Worms.

The Rivers and Seas too near the Shore about this Iſland are ſo infeſted with Worms, that they will

will ſink a Ship in a very ſhort Time, to prevent which, when the Natives come from Sea, they hall up their Ships upon the Shore or dry Land, as they do their ſmall Craft, their Canoes and Barges, and never let them lie long in the Water; theſe Worms are chiefly in the Bays and Creeks near the Shore, or in the Mouths of Rivers, but ſeldom far off at Sea, except ſo far as they may be brought off by other Ships that have got them when they were in with the Shore.

Jealous of the *Dutch*.

THE *Mindanayans* are very jealous of the *Dutch*, as knowing their barbarous as well as covetous Temper, eſpecially where there is any view of their beloved Mammon Intereſt, they know their Tenderneſs is firſt Conquering, and then Tyrannizing over their Victims, and reducing them to a ſtate of Slavery; and their Apprehenſions that they will in time invade them, or put ſome Reſtraint to their Trade, makes them wiſh that the *Engliſh* would ſettle a Factory there, and defend them from their Encroachments; they have obſerved that the *Engliſh* wherever they ſettled, never endeavour'd to oppreſs or enſlave any Place or People: though the *Dutch*, *Spaniards*, and *Portugueſe*, wherever they come, have plunder'd and divided the Spoil, claiming the Property of every Country or Iſland where they have but ſet their Foot athore, though they have been at the ſame Time govern'd by Princes of their own. There is hardly a conſiderable Iſland in *India* but what the *Dutch* have by Force or Fraud uſurped the Government of all or ſome of it, and form'd Pretences to depoſe Princes to make room for themſelves, and where they could not pick a Quarrel with any Pretence of Juſtice or Reaſon, have nevertheleſs fallen upon them in Peace and cold Blood, and ſo reduced them under their Government. Several of the Eaſtern Nations, who think themſelves ſtrong enough to vie with the *Dutch*, and defend themſelves from them, will not trade with them upon any Account, nor ſuffer them to come into their Dominions: And what makes it more remarkable is, that the *Dutch* who groan'd under their poor diſtreſſed Condition, made it a Pretence for even Rebellion itſelf, and caſting off their Allegiance to their lawful Sovereign, that they ſhould become the greateſt Tyrants or Oppreſſors that ever were known in the Eaſt, or perhaps in the World. It is to be ſuppoſed that the *Dutch* would very well reliſh the *Engliſh*'s accepting the Propoſals of the *Mindanayans*, in enjoining them to renew their Claims to *Amboina* and other of the Spice Iſlands, which they were ſo unjuſtly and inhumanly deprived of by them; but we ſhall have Occaſion to ſpeak more of this under *Amboina*.

Soil.

THE Country towards the Middle of it is Mountainous and Woody, but has ſeveral pleaſant Valleys; the Soil is a deep black Mould, and very fruitful, and though the Hills are ſtony, they produce tall Timber, and in ſome of them are Mines of Gold.

Gold Mines.

THERE are fine Rivers and Brooks run down the Valleys, which are beautifully cloathed with great Variety of Trees and Plants, which are green and flouriſhing all the Year, but moſtly unknown to us, but the Natives call one of them the *Libbu*, and the *Europeans* call it the Sago-Tree; they grow wild in large Woods five or ſix Miles in length by the Rivers Side; they make Sago of the Pith of theſe Trees, and the Natives eat it inſtead of Bread four or five Months in the Year; the Tree is ſomething like the Palm-Tree, the Bark and Wood is hard and thin, but the Inſide is full of a white Pith like Eldar; they cut down the Tree and ſplit it down the Middle, and ſo take out the Pith, and beat it in a Mortar with a wooden Peſtle, and then pouring Water to it, they ſtrain it through a Cloth, which carries all the Subſtance of the Pith through the Cloth, leaving nothing but a light husky Subſtance behind in the Bag; that which comes through the Cloth has a Settlement at the Bottom like Mud, which when the Water is drawn from it, is made into Cakes and baked, and proves what they call very good Bread.

THIS Sago is exported from *Mindanao* into other Parts of the *Indies*, in order to which they make it up in dry hard little Bits; it is reckon'd good againſt the Bloody Flux, it being a great Aſtringent if eaten with Milk and Almonds.

IN the Ground that is hilly, and fit for that Purpoſe, they plant Potatoes, Yams, and Pumpkins; they have alſo Melons, Plantains, Bonanoes, Guavoes, Jacks, Cocoa-Nuts, and Oranges.

Plantain deſcribed.

MR. *Dampier* cries up the Plantain above all other Fruit of that kind; perhaps by reaſon of his reſiding ſome time in the Country, it was become natural to him, for otherwiſe Travellers do not commonly give it that Character; the Tree on which it grows is about ten Foot high, and three Foot in Circumference, and is not raiſed from the Seed but from Slips and Suckers taken from the old Tree, which will bear in a Twelvemonth's time after they are tranſplanted into their native Soil, but it will be fifteen Months or more before they will bear if removed into other Ground; the Tree bears but once, for as ſoon as the firſt Fruit is ripe the Tree decays, but the young Shoots grow up yearly, and ſupply more Fruit, and die likewiſe. It has two Leaves at its firſt ſpringing out of the Ground, but when it is a Foot high, it has two more between theſe two, or a little lower, and in a ſhort Time it produces more Leaves, and ſo on, till by that Time it is a Month old the Stem or Body is near as big as a Man's Arm, and then the uppermoſt Leaves are about a Foot long, and half a Foot broad, and as the Tree grows higher, the Leaves are larger, and when it is full grown, the Leaves are ſeven or eight Foot long, and a Foot and a half broad at the Bottom, but towards the upper End they are ſmall, and end in a round Point

THE Stalk of the Leaf is almoſt as big as one's Arm, and about a Foot from the Body of the Tree to the Bottom of the Leaf; when it is full grown there ſprings out of the Top a ſtrong Stem harder than any other Part of the Body, about as thick and as long as a Man's Arm; the Fruit grows in Cluſters round it, in Cods about ſix or ſeven Inches long, and bigger than one's Wriſt; the Cod is yellow and ſoft when ripe, and the Fruit not much unlike a Bologna Sauſage for ſhape; the Pulp on the Inſide is ſweet, and ſofter than Butter, and of much the ſame Colour and Texture, melting in the Mouth, and has no Seed nor Stone in it; it will never thrive but in a rich Soil: They ſometimes roaſt it and boil it when it is green, and eat it inſtead of Bread; the *Engliſh* make Bread-Pudings with it, by taking the Pulp of five or ſix of them and boiling them in a Bag till 'tis enough, and ſo eat it. They often gather ripe Plantains, and dry them in the Sun and preſerve them, they make tolerable Sweet-meats: This Fruit is uſed for both Meat and Drink in the *Weſt Indies*; when they make drink of it, they take the Pulp of ten or a dozen ripe Plantains, and maſh them together in a Tub, into which they put about two Gallons of Water, and in two Hours time will work and have a Head like Barm or Yeaſt, and in four Hours it will be fit to drink; then they bottle it, but it will not keep much above twenty four Hours, ſo that they who depend upon this Drink muſt brew every Day; it drinks brisk and cool, but it is very windy, as the Fruit itſelf is when eaten raw, though when it is roaſted or boil'd it has no ill Effects. This Drink as it grows four in twenty four Hours, if it be ſet in the Sun it will make very good Vinegar.

Cloaths. But there is another Use of the Plantain-Tree, for it not only furnisheth them with Victuals and Drink, but Cloaths too; for as the Tree is rather a Weed than Timber, it never bears but once, and if it is let stand, after that it only decays of itself, and never revives more, but if as soon as they have gather'd the Fruit they cut the Tree close to the Ground, which may be done with one Blow of an Hatchet, (the out Rind of Wood is so thin,) then having pull'd off the Bark, they split the Body into four Quarters, which being dried two or three Days in the Sun, the Women divide it into small Threads with their Fingers, which Threads they spin up, and make into a sort of a Cloth, but it is very stubborn while it is new, and soon wears out; they make about seven Yards in a Piece; the Warp and Woof are both alike.

Bonano. The Bonano-Tree is much like the Plantain for Shape and Bigness, but the Fruit is not half so large; it is less luscious, and of a more delicate Taste, and is oftner used in making Drink than Plantains.

Cloves. Dampier tells us there are good Cloves at *Mindanao*, and in great abundance, and affirms that himself saw a Ship Load of Cloves there, and that the Natives assured him that if the *English* would settle a Factory there, they might bring home a Ship Load of Cloves every Year; there are also Nutmeg-Trees upon this Island, which is a fair large Fruit, but they dare not cultivate them, lest the *Dutch*, who have always a Mouth open for what is made ready to their Hand, should for the sake of their Improvements endeavour to make a Conquest of them, and reduce them to Slavery; for so covetous are the *Dutch*, that they not only monopolize to themselves all this sort of Commodity, as Cloves, Nutmegs and other Spices, but when themselves are served, they send their Mohawks in whole Gangs every Year to several uninhabited Islands thereabouts, to cut down and destroy all the Spice-Trees they can come at, lest any other *European* should fetch away any of the Spices to hinder their Market.

Beasts. They have almost all sorts of Beasts here, as Horses, Cows, Buffaloes, Deer, Goats, Hogs, Monkeys, Guanoes, Lizards, Snakes, and a vast Multitude of Wild-Hogs in the Woods, with great Bunches hanging over their Eyes; there are no Beasts of Prey, but several sorts of venomous Insects, as a Scorpion, whose Sting is in her Tail, and turns up in a Ring upon her Back; there is a Serpent or venomous Insect called a Centapes, from its many Feet; it is four or five Inches long, reddish on the Back, and the Belly whitish; they are flattish like a Leech, and about as big as a Goose's Quil, and are full of Feet; their Bite is reckon'd more dangerous than the Sting of a Scorpion; they are not amphibious, but breed in old Timber in the Ruin of old Houses, and among dry Timber and Rubbish; there are also several other kinds of Serpents and Snakes, some of whom are so tame that they will come into the Houses and aboard of the Ships, and that frequently without doing much harm.

The most common Fowls here are Ducks and Hens, but they have also wild Pigeons, Parrots, Parrakeets, Turtle-Doves, and abundance of small Birds, and also Batts as big as Kites.

CHAP. VI.

Treats of the Language, Mechanick Arts, Diseases, Religion, Women, and Superstition of the Mindanayans.

Language. They speak two Languages in the Island of *Mindanao*, one peculiar to the Island, and may be called the *Mindanayan* Language, and the other, called the *Malayan* Language, is common to all the *Oriental Islands*, and is spoke in several Countries on the Continent, as at *Malacca*, *Cambodia*, *Cochin-China*, &c. which by-the-by gives reason to believe that these Islands were first peopled from that Continent.

Schools. There are several Schools in the Island of *Mindanao*, where they teach their Children to write and read; and it is observable that most of their Words used in their Devotion are *Arabick*, and their Forms of Salutation are in the *Turkish* Language, from whence it looks like no false Inference to suppose they had their Religion from one, and their Morals or good Manners from the other; there are also several antient People of both Sexes that speak the *Spanish* Language, for the *Spaniards* formerly inhabited most of the Island, and made several Fortifications in it, but they were obliged to be drawn from hence to reinforce their Countrymen at *Manila*, when threatned with an Invasion from the *Chinese*; and as soon as the *Spaniards* embarked from *Mindanao* to assist their Countrymen at *Manila*, the then Sultan of *Mindanao* demolish'd their Forts, seiz'd their Guns, and sent the *Spanish* Missionaries to *Manila* after them; nor have the *Spaniards* ever since been allow'd to settle in that Part of *Mindanao*, which is immediately in Possession and under the Care of the Sultan.

No Accompts. They do not understand Accounts, but when they have to deal with Foreigners, both Parties leave their Accounts to be adjusted by *Chinese* that reside among them. They have no Clocks, but they have in the Mosques a great Gong or Drum with one Head, upon which they strike at certain Times; some say at every three Hours, but we are not told by what Instrument or other Means they divide their Hours, or know when an Hour is expired. No Clock

There are but few Handicrafts in this City; the chief are the Goldsmiths, Blacksmiths, and Carpenters; there are but two or three Goldsmiths, and they keep no Shops; but if you can meet with them they will make any little Toy in Gold that you will give them the Pattern of: The Blacksmiths are very ingenious, considering the small Tools and Conveniences they have; their Bellows is made of the Trunk of a Tree, about three Foot long, and when they have made it hollow like a Pump, they set it upright on the Ground, and make their Fire on the Top of it, near the lower End of the Tree or Pump; they bore a Hole in the Side of the Pump, in which they put a Pipe, and through this Pipe they drive the Wind to the Fire by a Bunch of Feathers fastned upon the end of a Stick; their good Fuel makes amends for their bad Bellows, for they burn mostly Charcoal; they have neither Vice nor Anvil, but hammer upon a great Stone, or he is well provided for that has got a Piece of an old Gun to beat upon instead of an Anvil, and yet one would admire, all these Inconveniences consider'd, to see what tolerably handsome Work they will make, both as to Ship Work and Utensils for the House; and as for Carpenters Work, almost every Man is Master for himself, for they can all handle Hammers, Adzes, and Axes, but

but they have no Saws, but ſplit their Planks, and plain them with Axes and Addſes; and although this is very tedious, and waſtes a great deal of Wood, yet it is in ſome meaſure accounted for by the Goodneſs of their Plank, which by this Means is cut according to the Grain of the Wood.

Diſeaſes. THEY are much afflicted with a Leproſy or dry Scurf, which ſpreads all over the Body, and creates an intolerable Itching in the Skin, which makes them ſcratch perpetually, which ſome of them do with that violence as to tear their Skin ſo that after it be whole again, there will remain great broad white Spots; and yet as troubleſome as it is, it either is not catching, or however, they that have it not, do not ſeem to avoid the Company of thoſe who have it; they have alſo Small Pox, Fevers, and Fluxes, the laſt of which is very dangerous, and occaſions great Pain and griping in the Bowels. The Country affords good Drugs and Medicinal Herbs, but the Natives underſtand not much of the Uſe of them.

Religion. THEIR Religion is that of *Mahomet*, but as theſe are but a few ſcattering Iſlands, we ſhall decline giving any Deſcription of that Religion here, and defer it till we come to the Deſcription of thoſe main Continents, where that is the prevailing Religion, and moſt generally practiſed.

THESE People allow of Plurality of Wives or Concubines, as other *Mahometans* do, and the Sultan allows himſelf about thirty, with which he ſpends moſt of his Time, but they are not kept up ſo ſtrictly as in *Turkey*, but ſuffer'd to walk the Streets at their Pleaſure, and converſe with Strangers.

THE Religion of the *Mahometans*, which forbids them to touch Hogs-Fleſh, is a good Protection to that ſort of Cattle, and by that means they multiply prodigiouſly in this Country, and come down into the very Towns from the Woods to ſeek for Food; their never killing them makes their Numbers increaſe, and makes them become more familiar, and the People dare not kill them for fear of being defiled with touching them, but the *Europeans* will do it for them for Sport, and make no bones of it; but the Natives are ſo ſtrictly ſuperſtitious, that they think that to touch any thing belonging to a Hog is defiling; an Inſtance of this we have in one of their Generals, who had a Pair of Shoes made him by one of the Ships Crew, which Shoes he liked very well, but upon a ſecond Conſideration finding that the Threads, with which they were ſew'd, had been pointed with Hogs Briſtles, which paſſing through every Hole in ſewing the Shoes together, had ſo defiled his Shoes that he would not wear them, but deſired his Workman to make him another Pair: They have ſuch an Antipathy againſt Hogs-Fleſh, that they will not ſuffer an *European* to come near them after he has touch'd Hogs-Fleſh, let his Buſineſs be of what Conſequence it will.

WHEN *Dampier* recites the Hiſtory of his being here, he obſerves that he had loſt a Day; indeed he could not really loſe a Day with making only this part of a Revolution round the Globe, but if when he by ſailing Weſt came to *Mindanao*, if he had there met with any that had ſail'd from *England* at the ſame Time that he did, they would have differ'd juſt a Day, but in this Caſe *Dampier* having ſail'd Weſt round ſo far, and the *Mahometans* which inhabited *Mindanao* coming from the Weſt, *Friday*, which was their Sabbath, was but *Thurſday* by *Dampier*'s reckoning, and upon this Account it is, that there is a Day's Difference between the *Spaniards* at *Manila* and the *Mahometans* at *Mindanao*, though both Places lie near the ſame Meridian, namely, becauſe thoſe *Spaniards* came Weſt from *Mexico* or *New Spain*, and the other came from the Eaſtern Continent.

THIS Difference will appear better, if we ſuppoſe three Perſons at the Land's-End of *England*, one ſailing Eaſt, the other Weſt round the World in the ſame Time, and the third to remain there till they both return, the two that went away would each of them differ a Day from him that ſtaid at home, and ſuppoſe when they arrive it is *Thurſday* the 10th of *Auguſt* at Noon by his Account that ſtaid at home, it will be *Wedneſday* the 9th of *Auguſt* to him that ſail'd Weſt about, and *Friday* the eleventh of *Auguſt* to him that ſail'd Eaſt.

CHAP. VII.

Of the Government, Revenues, and Forces of the Sultan of Mindanao, *and of their Wars, and Arms.*

THE Sultan of *Mindanao* is an arbitrary and powerful Prince, but has not found thoſe ways to enrich himſelf that ſome of the Eaſtern Princes have done. The *Hillaloons* are in Poſſeſſion of all the Gold Mines, and the Country affords little other Merchandize except Sago, Rice, Tobacco, and Bees-Wax, and this laſt comes alſo from the Woods and Mountains. The King expreſſes a mean Spirit in what Attempts he makes to enrich himſelf, for if he knows of any of his Subjects that have got Money by them, he immediately ſends to borrow it, and troubles not himſelf to make any return; this makes the People indolent, not caring whether they have any more than common Neceſſaries, as being aſſured that what they have over will be borrow'd, which is the ſame as being ſeiz'd by the King, if once it is found out.

WHEN he goes abroad he is carried on a Couch or open Palakin on four Men's Shoulders, attended by eight or ten of his Guards: When he goes upon the Water he carries his Women in the Barge with him, where there is an Apartment big enough to entertain fifty or ſixty People; this is built with ſplit Cane or Bambou about four Foot high, with little Windows in it, and the Roof is neatly cover'd with Palmeto Leaves; in this Apartment is three Rooms, one for the Sultan himſelf, having its Sides and Floor neatly matted, and he has a Carpet and Pillows to ſleep on; the next Room is for his Women, which is much like the former, and there is a third for Servants, who wait on them with *Betel* and Tobacco, for they are ever chewing *Betel* or ſmoaking Tobacco; the Head and Stern of the Veſſel is for the Watermen to ſit and row: Theſe Veſſels have Out-layers or Lee-boards, like the *Dutch*, and are made like *Engliſh* Veſſels, and not round on one Side and flat on the other, like thoſe of the *Ladrones Iſlands*.

THE Sultan has one grand Favourite Miniſter, in whom he repoſes his chief Confidence, both as to Civil and Military Affairs: Natives as well as Strangers muſt apply themſelves to him for a Permiſſion to trade, and this ſame Prime Miniſter is alſo General of all his Forces. When the Women

dance before him at any solemn Rejoicing, they make their Monarchs great Actions in the Field the Subject of their Song; and when any of the *Indian Princes* call in their Players to entertain Strangers, their Songs and Speeches are chiefly employ'd in expressing the Valour and Wisdom of their great Men, and particularly of those before whom they act; and something like this we have in sacred History, where the Women sung in their Dances, that Saul *had slain his Thousands, and David his ten Thousands.* The Sultan of *Mindanao* is seldom at War but with his Subjects the Mountaineers of the inland Country. Their Weapons are a Sword, and a Lance, and a Crice, which they wear in their Girdles both in Peace and War: This Crice is a short Dagger like a strait Trowel, broad at the Hilt and sharp at the Point, with two sharp Edges; the Hilt is much like the Prongs of a Pitchfork reversed, with the Points toward you, between which they clap their full Hand when they push, for that is mostly the Way of using them. They seldom come to a close Engagement, but if the Armies advance near one another, they begin to dig Entrenchments, throw up Redoubts, and disturb one another with their great Shot, and thus they will sometimes lie sculking for two or three Months, sending out small Parties, and skirmishing every Day; they seldom take Prisoners or give any Quarter, but will fight it out to the last, if they cannot gain their Point without it.

CHAP. VIII.

Gives an Account of the Situation and Extent of the Island Manila *or* Luconia, *and of their Buildings and Fortifications; with an Account of the Air, Winds, Earthquakes, Baths, Rivers, and Lakes in that Island.*

Manila. THE Island *Manila* or *Luconia* extends from about thirteen and a half to nineteen of North Latitude, and is somewhat like an Arm bended in the Elbow, or rather like a Boot, the Leg lying North and South, from the Northermost Part of the Island to *Manila* Town, and the Foot from thence to the Eastermost Part of the Island; it's breadth is unequal, being in some Places twenty, thirty, or forty Leagues over; that Part of the Island which is subject to the *Spaniards* is divided by them into eleven Provinces, every one of which has its *Spanish* Alcade or Governor; *Manila* is not only the chief Province, but the Capital of all the Island, and from that Capital it is that the whole Island takes the Name of *Manila*, and this City of *Manila* is the Seat of the *Spanish* Viceroy. The City of *Manila* stands on the Southwest Part of the Island; a little below or Southwest from it there is a spacious Harbour called *Cavite*, but the Entrance is difficult, by reason of the Rocks and Shoals that lie at the Mouth of the Bay; the City is about two Miles round, encompassed with a good Wall and a Ditch, and fortified with Bastions and Outworks; there is also a Fort stands on a Point of Land between the Sea and the River, and commands the Entrance of the River. Besides the Viceroy, there are two Alcades or Governors under him, one of whom has the immediate Command of the *Spaniards*, and the other of the *Chinese* and other Foreign Nations

Seat of the Viceroy.

Cathedral. ONE of the principal Buildings in *Manila* is the Cathedral, which is large, but not very well adorn'd within, the Walls being black and the Altars out of order; this Cathedral has twelve Chapels and Altars besides the high Altar; the Roof is supported by two Rows of Pillars, six in a Row on each Side, twelve in all; here are also several Convents and Religious Houses, Churches, Chapels, and Hospitals endow'd in the Church of *Misericordia*, dedicated to St. *Elizabeth* the Orphan, Daughters of *Spaniards* or *Mustees*, half *Spanish* half *Indians* are received, and have a Portion of three or four hundred Pieces of Eight paid for them, and if they chuse to be Nuns they have a yearly Allowance

Churches. suitable: The Insides of their Churches and Chapels are exceeding rich, that of St. *Austin*'s especially, which has fifteen well gilt Altars, some of them with Antipendiums of beaten Silver, but the Structures are mostly Wood, because of the Earthquakes: The College of Jesuits is very large, adorn'd with fine Arches, and has spacious Dormitories; this College is of the Invocation of St. *Ignatius*, and was founded upon the Arrival of the first Bishop of *Manila* 1581; adjoining to it is the College of St. *Joseph*, where are forty Collegians studying Humanity, Philosophy, and Divinity, for all Degrees are given in it; it has particular Revenues besides the King's Allowance; the Collegians are cloathed in Purple, and have red Cloth Gowns; the Graduates are distinguish'd by wearing a thing like a Collar of the same Cloth. *Habit.*

THE Streets are wide and handsome, having Galleries all along the Front of their Houses, but the Frequency of Earthquakes destroying what they build, dispirits them very much from building sumptuous handsome Houses, most of their Buildings above the first Floor being now only built slightly with Wood.

Mixt Inhabitants. THERE is a Medley of Inhabitants in *Manila* from *Spain*, *China*, *India*, &c. and every sort so numerous that they even contend among themselves who was the first Inhabitants, and though they have been mixed so many Years, yet they in a great measure retain their respective original Complexions of Black, White, and Tawny; it is computed there are about three thousand Souls in *Manila* within the Walls, and as many more without in the Liberty called the *Chinese* Suburbs, and besides this distinguish'd by the Name of the *Chinese* Suburbs, there are other large and numerous Buildings without the Walls, built on wooden Pillars near the Rivers Sides, like the Houses of *Siam*, and beyond these Suburbs on both Sides of the River are Country Houses, Farms, and Gardens, for a long Way into the Country, which makes the Prospect very agreeable.

Their Houses. THE wild sort of People that inhabit the Mountains live under the Shelter of the Trees, or if they think not that sufficient, they cut down the Trees, and make little Hutts; but these are but temporary Habitations, for they only live in them till they have eat up all the Fruits and Roots and what else is useful to them round about them and at a considerable Distance, and then they transplant themselves, and pitch in some more fruitful Place.

Air. THE Air of the *Philippines* is not so excessive hot as might be expected, considering the Latitude and Climate, and this is occasion'd by the many Lakes

and

and gliding Livers which water the Country, the Rivers by their gentle Motions creating a murmuring Breeze, which gently cools and refreſhes the Country, and to this we may add the great Rains which fall annually at their Seaſons, and overflow and cool all the low Lands; another Reaſon is, theſe being a certain Number of Iſlands, they are continually on one Side or another refreſh'd by Sea Breezes, and render the Heats much more tolerable than they would otherwiſe be, but the Damps occaſion'd by the Rain, and the heavy Dews that fall even in fair Weather, make the Country very unhealthy to *European* Conſtitutions, but the Natives here live to as great an Age as in other Climates of the World: It is common with *Europeans* at their coming here to ſweat after their Meals and when they are aſleep, and this brings a great Faintneſs or Weakneſs upon them, but they are leſs ſubject to it in the hilly and open Countries, whither the better ſort of People for that Reaſon retire, from the Middle of *March* to the End of *June*, which is the Time of their greateſt Heats; but in *June*, *July*, *Auguſt*, and part of *September*, the Weſt and Southweſt Winds blow, and bring ſuch Deluges of Rain that the Fields are all overflow'd, and they are forced to uſe Boats always in going from home. During this Time there are very frequent Storms and Tempeſts with terrible Thunder and Lightning: The North Winds blow from *October* to the Middle of *December*, and from thence till *May* the Eaſt and Southeaſt Winds blow; that is the drieſt as well as the cooleſt and moſt healthy time of the Year.

Monſoons.

Cauſe of Earthquakes.

" Theſe Iſlands are very ſubject to Earthquakes, " for which Mr. *Salmon* aſſigns as a Reaſon, the " Subterraneous Fires which give a violent Motion " to ſeveral Minerals, and having no room to di- " late and vent themſelves, puſh forward with great " Force againſt thoſe ſolid Bodies which ſurround " them, and are ſo ſhaken that the Motion is com- " municated to all that is over it, even to the Super- " ficies of the Earth, and this (he adds) is confirm'd " by Experience, which ſhews us, that thoſe Places " are moſt ſubject to Earthquakes which abound " moſt in Minerals and ſubterraneous Fires, as is " obſerved of *Campania*, *Calabria*, and *Sicily*, ſo fa- " mous for burning Mountains." *So far Mr.* Salmon.

I anſwer (ſo far with Mr. *Salmon*,) that ſubterraneous Fires is certainly the Cauſe of Earthquakes, which ſeems to be fully proved by Earthquakes being moſt frequent where Volcanoes and other ſubterraneous Fires are moſt common, but how theſe *ſubterraneous Fires ſhould give a violent Motion to ſeveral Minerals*, is difficult to account; 'tis true an artificial Exploſion made of common Gunpowder will ſplit prodigious ſtrong Rocks, but we do not find that the Nature of Powder or any denſe Air firſt confined, and afterwards infinitely expanded by Heat, ever inclines to a horizontal Motion, but upon the Exploſion it flies upwards, and not horizontally, as Mr. *Salmon* obſerves, where the *ſubterraneous Fires give a violent Motion to the Minerals, and they again puſh forward with great Force againſt the ſolid Bodies which ſurround them*, &c. which Motion muſt be horizontal by that way of thinking; but certainly if any Quantity of Air was ſo ſtrongly pent up in the Bowels of the Earth, and ſo near the Surface as to affect it with a Trembling or Earthquake, and if that confined Air was ſo ripe for Exploſion as to drive the ſolid Mineral Rocks horizontally, as above, the Surface of the Earth would much ſooner break above, and give it vent with a Violence proportionable to its Quantity and Confinement.

I do not find that in any Earthquakes there is any horizontal Motion, or any other but a Shrinking or Sinking directly downwards, but no ſhaking up and down, or horizontally, and this ſhrinking is cauſed by the ſubterraneous Fires above-mention'd, which are occaſion'd by Veins of Sulphur or other combuſtible Matter, being lodg'd within the Surface of the Earth, and at ſome conſiderable Depth, and theſe Veins taking Fire are conſumed or reduced to Aſhes, or to ſome Subſtance leſs capable of Reſiſtance than at firſt, and not being able to ſupport the Surface above, it muſt ſink or ſhrink, and this ſhrinking of the Surface and its breaking in, and ſometimes burying Houſes and People alive, with different Circumſtances, according to the different Cavities that the ſubterraneous Fires have made, is what we call an Earthquake, and (if the Compariſon be not too familiar) it cannot be better illuſtrated than by a Lime-Kiln, at the firſt filling of which they lay a great Quantity of Wood in the Bottom, and then fill it up with Coals and Stone to the Top, where it is firm and ſolid; but ſetting fire to the Wood below, it moulders away to Aſhes, no longer able to ſupport the Weight of the Stone above, the Stone ſhrinks down and tumbles together, and acts in every thing proportionable to an Earthquake.

THERE is one thing more in favour, or rather in confirmation of this Opinion, and that was an Obſervation I made in my Travels in *Italy*; the great Volcanoe *Veſuvius*, lying Southeaſt from *Naples*, and one either ſmaller or leſs known, lying towards the North-weſt from it, and I obſerved that theſe two Volcanoes could ſcarce ever be perceived to burn with equal Fury; but when the Wind was Southerly or Southeaſt, *Veſuvius* burnt the moſt violently, and the other when the Wind was North or North-weſt, (why the Weſtermoſt ſhould burn moſt is a Queſtion beſide our preſent Purpoſe,) from whence I concluded that there was a ſubterraneous Communication between them. *Old Naples*, or the ancient *Pharthenope*, was ſituate nearly between thoſe two Volcanoes, in the Bay of *Baya*, a little to the Weſtward of where *Naples* now ſtands; and by a dreadful Earthquake *Old Naples* with its Foundation, and the Hill whoſe ſide it ſtood upon, was buried ſo deep in the Sea, that an *Engliſh* Firſt Rate Man of War may now ride at Anchor where *Old Naples* once ſtood, and it could not have been poſſible that ſuch a vaſt Maſs of Earth could have ſunk without a proportionable Cavity to receive it, which Cavities I think it is moſt reaſonable to believe are occaſion'd by the ſubterraneous Fires above-mention'd.

IN the Iſland of *Manila*, which we are now treating of, there was a terrible Earthquake in *September* 1627, ſo violent that it level'd one of the *Carrallo Mountains*; and in the Year 1645 a third Part of the City of *Manila* was ſunk or overthrown, and no leſs than three thouſand People periſhed in the Ruins; another Earthquake not much leſs dreadful happen'd the Year following, and the old *Indians* give out that this Iſland of *Manila* was much more ſubject to Earthquakes than it is now, and this they aſſign as a Reaſon for their building their Houſes ſo ſlightly with Wood above the firſt Floor, the Loſs or Damage being leſs if they ſhould happen to be demoliſh'd by an Earthquake. The Burning Mountains in theſe Iſlands have all the ſame Properties that thoſe noted ones of *Italy* and *Sicily* have, as recorded by *Pliny*; they caſt out their Flames, ſhake the Earth, &c.

Hot Baths.

THERE are a great many hot Baths proceed from theſe ſubterraneous Fires, and ſome of their Brooks and Streams are ſo hot that no Animal can live ſcarce a Moment in them, but theſe Waters, tho' Mineral, are as clear and well taſted as any other, and when they are cool they are reckon'd wholſome Drink: about half a Mile from one of theſe hot Rivers is another exceſſive cold, and yet eſteem'd equally wholſome with the former for common drinking.

Bahia Lake.

THERE are ſeveral Lakes in this Iſland, but the Principal is that of *Bahia*, not far from *Manila*; it

is about ninety Leagues in Compass, and almost half as much in Length, being long but very narrow, and affords great Plenty of Fish; Crocodiles abound there very much, and do abundance of Mischief, devouring both Men and Cattle, which come near the Banks; there is another small Lake not far distant from this great one; it is upon a Mountain, and the Natives believe it has no Bottom, because they never could yet sound it to find the Depth of it; the Water is blackish, and has some sort of Fish in it, but they are so ill tasted they are not fit to be used; there is also a Spring of hot Water in the Mountains, which petrifies every thing living and dead, Animal or Vegetable, that falls into it.

The *Spanish* Fathers report, that when it thunders in these Islands, there falls a Thunderbolt in the shape of a Cross, being a kind of a greenish black Stone, to which they ascribe mighty Virtues; but there happens to be some honest People amongst them to detect the Fraud, who tell us that these Crosses are made by Art, and made use of by the Priests to impose upon the Credulity of the Ignorant. Thunderbolts like Crosses

CHAP. IX.

Of the several Nations that inhabit these Islands, their different Complexion, Stature, Make, and Habit; also of their Diet, Diversions, Salutations, and Ceremonies.

AMONGST the Inhabitants of these Islands may be reckon'd four or five different sorts of People: 1. the Blacks; these frequent the Woods and most Desart and inaccessible Places; 2. the *Chinese*, who once had the greatest Part of their Sea-Coasts and Places of Traffick; 3. the *Malayan Moors* or *Mahometans*, who came from *Malacca*, *Sumatra*, *Borneo*, *Macasser*, and the neighbouring Islands; 4. the *Portuguese*, *Spaniards* and other *European* People; and 5. the *Mustees* or mixt Breed, compounded of all the rest.

First Inhabitants.

The Opinions of Authors are various as to the Place from whence these Islands were first peopled, some affirming that their first Inhabitants came from *China*, the nearest Continent to these Islands, and what adds to the Probability of this Conjecture is, that these Islands were under the *Chinese* Government till the Emperor of *China* voluntarily deserted them, as being too remote from the rest of his Dominions, but, as we observed before, their retaining several Religious Rites and other Customs of the *Chinese*, is a strong Inducement to believe they had their Original from thence.

But we have some Authors of Opinion that the *Blacks* were the first Inhabitants of these Islands, because they are possess'd of all the Inland Parts of the Country, having probably been driven up to the Woods and Mountains by their succeeding Invaders, who having reduced the *Blacks* themselves, took possession of all the Sea-Coasts and trading Places, and became Masters of the whole.

But here is a grand Difficulty to account for, and that is, from whence these *Blacks* came to inhabit these Islands, and which way they came to them, Black not being the natural Complexion of these Islands; those of that Colour inhabiting there must have their Original from some where else, which a certain Author answers thus:

It is plain they could not descend from the *Blacks* in *Africa* for two Reasons, first, because the Country of *Africa* is so very remote from these Islands; and secondly, because the Hair and Features of the *Blacks* of *Africa* and of these Islands are quite different. The *African Blacks* have thick Lips, flat Noses, and short woolly Hair; and the *Blacks* of these Islands have regular well-proportion'd Features, and fine long black Hair, from whence the said Author concludes, that the *Blacks* that now inhabit these Islands came originally from *India* on this Side the *Ganges*, because they exactly resemble those *Indians* in their Hair and Features, and are the nearest them of any *Blacks* upon the Continent.

But against this it may be objected, if the *Philippine Islands* were first peopled from *India*, why did not the same *Indians* people *Siam* and *Malacca*, and the Islands of *Sumatra* and *Borneo*, which lies between them and the *Philippines*; but it may easily be answer'd, that as *Siam* and *Malacca* are upon the main Continent, and formerly a Part of the Empire of *China*, there was no Reason to think that the *Blacks* from *India* should ever attempt to inhabit these Places which were so populous before; it may rather be question'd how they got a Passage through that Country with so little Resistance, and with so little Opposition took possession of those Islands.

And here a very curious Observation occurs upon this Subject, *viz.* What is the original natural Cause of the various Features and Complexions that we meet with in the several different Climates of the World? as we see the *African Blacks* have flat Noses, thick Lips, and short woolly Hair; and these sort of *Blacks* are peculiar to the hottest Climates in *Africa*, and not to be found naturally any where else, or in such other Countries as have been peopled from thence; the only Nation of natural *Blacks* in the World beside, are those before mention'd in that Peninsula in *India* which lies on this Side the *Ganges*; these, though come from their native Place to inhabit the mountainous Parts of these Islands, are of as deep a Black as those in *Africa*, but their Features quite contrary, the *Indians* having very comely Features, though hid under such a black Complexion; their long black Hair adds to their Beauty, and indeed, except for the very Colour itself, an *African Black* is no more like an *Indian Black*, than a *European* is like either of them.

But as for the original Cause of this black Complexion, various have been the Conjectures of both Divines and Philosophers about it; some of the former have thought it the Effect of *Noah*'s Curse upon his Son *Cham*, whose Posterity they say inhabited *Africa*; but to this these Objections arise; first, it appears that *Canaan*, one of the Sons of *Cham*, possess'd the Land of *Canaan*, and we find no Reason from Scripture or History to believe that any of those people were black, any more than they are at this Day; secondly, the Inhabitants of the Coast of *Barbary*, which makes a considerable Part of *Africa*, and are supposed to be the Posterity of this curs'd Son, never were black; thirdly, the Inhabitants of *India*, who are supposed to be the Posterity of *Shem* the favourite Son, are quite as black as those of *Africa*, and therefore if this Blackness be the Effect of the Curse, *Shem*'s Offspring was as much curs'd as *Cham*'s was, and indeed it would be a very difficult Question to resolve, why black should be any more an Effect or a Token of

God's

God's Anger than any other Complexion; for my part I would willingly put that Article of God's Anger quite out of the Queſtion, and endeavour to aſſign more probable Reaſons for the different Complexions.

But as the *Blacks* in theſe Iſlands may rather be ſaid to be accidental than natural, a Diſcourſe of the Cauſe of the different Complexions of black and white, or of the quite different Features between ſome Country *Blacks* and others among themſelves, may not be ſo proper; we ſhall therefore defer any further Conjectures upon that Subject till we come to *India*, where black is the original native Colour, and in the mean Time, to avoid too long Digreſſions, ſhall purſue our Deſcription of thoſe Iſlands we are now treating of.

Some of the tawny Breed that inhabit theſe Iſlands, paint or ſtain their Bodies, from whence they are called *Pintadoes*; when they go about this painting Work, they prick and wound the Fleſh in ſuch Forms and Figures as they would have repreſented, and afterwards rub the Part over with a certain Powder, which gives it the Colour they deſire. And becauſe the Popiſh Miſſionaries cannot well finiſh their Accounts without ſomething miraculous, and even incredible, they give us account of a People with Tails; but the Thing being very improbable and ridiculous in itſelf, and the Credit of the Authors ſo ſuſpicious, as to be no way able to ſupport the Truth of the Fact, we ſhall quite ſuſpend our Belief of it till we have it from more credible Authors, and in the mean Time leave every Body to judge for themſelves.

The native Inhabitants of theſe Iſlands are of a middle Stature, well ſhap'd, and handſome Features, both Men and Women, both black and white; ſome affect wearing their Hair long, ſome cut it to a moderate Length; the *Mahometans* wear but one Lock upon their Heads, and ſhave all the reſt cloſe; inſtead of a Cap they have a Cloth, which they tie about their Heads, letting the Ends hang down behind as an Ornament; the Women tie up their Hair in a Roll upon the hinder Part of their Heads, adorning it with Jewels, or what elſe they can afford, to make a ſplendid Show; they wear alſo Necklaces and Ear-rings, and have Bracelets both upon their Arms and Legs, and Rings on their Fingers; the more Civilized wear a kind of a Waiſtcoat, and a Cloth about them, which reaches below their Knees, but the *Blacks*, and thoſe that live in the Mountains, have only a Cloth about their Loins, and the meaner Sort are generally without Shoes or Stockings. The *Chineſe*, *Spaniards*, and *Maſſacs* retain each their own reſpective Faſhions.

Those who are the moſt ſociable of them, and live near the Sea-Coaſt, ſit upon their Legs like other *Indians*, both at Victuals and in Converſation; their moſt common Food is boil'd Rice and Fiſh, Fleſh being a Rarity, and ſeldom eat but at Feſtivals; their uſual Liquor is Water, which they drink hot, but they have ſome ſorts of ſtrong Liquor made of Palm, Wine, and Toddy, which they draw from the Palm and Cocoa-Trees, from a Compoſition of which they diſtil a Liquor ſomewhat like Brandy or Arrack; they have alſo a Liquor called *Chiham*, which is made of the Juice of the Sugar-Cane boil'd. Their Arrack is diſtill'd from Rice.

The wilder Sort which inhabit the Mountains, live chiefly on Roots and Fruit, having little Fleſh but that of Wild-Beaſts, which they take in hunting; they eat ſeveral ſorts of Vermin, but do not at all apply themſelves to the Sowing of Rice, or any other kind of Husbandry, and probably no fault of their own, for, as the Reader may obſerve through all the Courſe of this Hiſtory, where we had occaſion to treat upon the growing of Rice, it never thrives but in low wet marſhy Ground, and theſe Mountaineers being confin'd to the high dry Land, it would be in vain for them to attempt to ſow any Rice there. Thoſe of the *Spaniards* that are reckon'd good Houſekeepers, frequently eat Fleſh at Noon, and Fiſh at Night.

The more civilized Natives who inhabit near the Sea-Coaſt have Variety of Diverſions, as Plays, Muſick, Dancing and Singing, and in their Songs one ſings a Verſe, and another repeats it, attending to the Sound and Time of a Gong or metal Drum; their dancing repreſents a Fight, and all their Actions and Motions therein are very regular; ſometimes they aſſault each other with a Spear, and then retire very graceful: 'tis ſaid by thoſe that ſay they underſtand them, that their Compoſitions are very elegant; but as theſe are not to be compoſed, perform'd, or perhaps underſtood by the Vulgar, their chief Diverſion is Cock-Fighting. Diverſions. Cock-Fighting.

They ſeldom neglect to bathe both Morning and Evening, and this is ſuppoſed to be a Reaſon why they build their Houſes ſo near the River Side; Bathing is thought ſo eſſential to their Health, that even lying-in Women and new-born Children are dipt in the cold Water, and never find any Inconvenience attend it. Both Sexes ſmoak much Tobacco, and chew *Betel* and *Arrek*. Bathing.

Their way of ſaluting formerly was by pulling off the Cloth that was wrapp'd round their Head, but whether what they uſe now be a more polite Way, derived from the *Spaniards*, or ſome Improvement of their own, we know not, but in ſaluting they now bow the Body, and bend the Knee, and when they would pay a profound Reſpect, it is diſtinguiſh'd by joining both Hands together, and lifting them to their Head. Saluting.

They commonly in any Addreſs or Application to Superiors ſpeak in the third Perſon, that when a Perſon wants to petition for a Favour, he does not ſay *I humbly crave*, but *he humbly craves*, and the like; in the plural Number, where two or more are concern'd in the Addreſs or Requeſt, they do not ſay *we*, but *they*, modeſtly repreſenting the Petitioners as abſent, though preſent and ſpeaking; but the Inferior never ſpeaks firſt, but when introduced, waits to receive ſuch Queſtions as ſhall be propoſed to him, and delivers his Addreſs when required or commanded to do it. Addreſs.

These *Philippine Iſlands*, eſpecially *Manila*, is ſo well ſituated between the Riches of the Eaſt and Weſt, that it was reckon'd the beſt Place for Trade in the whole World, when that and the *Moluccа's* were both under the ſame Government, to wit, the *Spaniards*, for then the *Spaniards* might be ſaid to have the beſt Share of both Eaſt and Weſt *Indies*; Silver was then brought Weſtward to *Manila*, from *Peru* and *New Spain*; Diamonds and other precious Stones from *Golconda*, a Kingdom in *India*, on this Side the *Ganges*, Cinnamon from the Iſland of *Ceylon*, near the South Part of the Coaſt of *Cormandel*, Pepper from *Sumatra* and *Java*, (which Iſlands will be deſcribed by and by,) Cloves and Nutmegs from the *Moluccа's*, Silk from *Bengall*, Camphire from *Borneo*, Benjamin and Ivory from *Cambogia*, Silk and *China* Ware from *China*; this Place might then be called the Center of Trade and Mart of the World; there came formerly every Year two or three Ships from *Japan*, freighted with Silver, Amber, Silks, Cabinets, and other varniſh'd Wares, in exchange for Hides, Wax, and the Fruits of the Country; two Veſſels ſail'd yearly to *Acapulco* in *New Spain*, loaded with the Riches of the Eaſt, and return'd freighted with Silver, making four hundred *per Cent.* Profit, and this Trade they carry on at this Day. *Manila* is a fruitful Soil, and produces the Neceſſaries of Life in a ſufficient Plenty, as appears by the Multitude of its Inhabitants that *Manila* well ſituated for Trade.

are to be found in the Woods and Mountains, ſubſiſted only by the Fruits of the Earth and the Veniſon they take; and for a beautiful and delectable Proſpect it can ſcarce be excell'd, for there is a perpetual Verdure all the Year round; Buds, Bloſſoms, and Fruits are always to be found upon the Trees, as well upon the Mountains as in the Gardens and other cultivated Grounds.

But beſides theſe Excellencies of the *Philippine Iſlands*, they alſo abound in Pearls, Ambergreaſe, Cotton and Civet, and are very rich in Gold Mines, but they are ſeldom wrought, either becauſe the Mountaineers keep them ſo cloſely in Poſſeſſion that they will not let the *Spaniards* work them, or becauſe of the Indolence of the *Spaniards*, who will not be at that Pains; but I rather think the former, and that the Mountaineers repulſe the *Spaniards*, and will not ſuffer them to dig the Gold out of the Mountains, though the great Plenty of it is evident from the vaſt Quantities of Gold that are waſh'd down the Hills by the Rains, and after the Floods are over, is found mixt with the Sand of the Rivers; beſides Gold there are rich Mines of ſeveral other Metals found here, and excellent Loadſtones.

Buffaloes. Here are ſuch Numbers of Wild Buffaloes in theſe Iſlands, that a Sportſman that underſtands the hunting of them, and only arm'd with a Spear, may kill ten or twenty in a Day; the *Spaniards* take them, and uſe only their Skins, which they ſell to the *Chineſe*, but the Mountaineers uſe the Carcaſſes for Food; there is abundance of Deer in their Woods, as alſo of Hogs, but eſpecially Goats, which abounded ſo in one of theſe Iſlands that the *Spaniards* gave it the Name of *Cabras*; they have alſo imported Horſes and Cows from *New Spain*, *China*, and *Japan*, and they multiply conſiderably; but the Sheep they import comes to nothing, 'tis ſuppoſed, becauſe they are not able to bear the Heat and Moiſture of the Climate.

Wax and Honey. They have ſuch abundance of Honey-Combs, that Bees-Wax is exceſſive cheap; the Natives have the way of making Candles of it, and do not uſe Lamps, as in ſome other Parts of *Aſia*. They have ſeveral ſorts of Bees that produce Honey, one ſort is called *Pocoytan*; they are bigger than our *Engliſh* Bees, and make their Combs not leſs than four Spans long, and of Breadth proportionable; theſe they fix under the Boughs of high Trees, ſometimes ſix or ſeven together, and they continue whole during the heavy Rains; there is another ſort called *Liquam*, about the Bigneſs of *Engliſh* Bees; they make their Neſts and fix their Combs in old hollow Trees; there is another ſort of a Bee, no bigger than a Fly, called *Locot*; it has no Sting, it makes ſour Honey and black Wax, it is a thieving Bee, and plunders others; there is another ſort called *Camomo*, which, like thoſe called *Pocoytan*, ſettle in high Trees: Doubtleſs the Spicineſs of the Soil and Product of thoſe Iſlands contributes to the Production of theſe various ſorts of Bees.

Gums. The Trunks of their Trees put out ſeveral ſorts of Gums all the Year; there is one the moſt common kind called *Brea*, they uſe it inſtead of Pitch; there are ſeveral other ſorts for various uſes, ſome odoriferous, ſome medicinal, and ſome for other uſes; theſe Gums are ſo vaſtly Plenty, that not only the Trees, but the Ground is cover'd with them, and it falls ſo plentifully from the Trees at ſome Seaſons, that it is found upon the Leaves of the Plants under them.

There are Monkeys and Baboons in theſe Iſlands of ſo monſtrous a Size, that it is ſaid they will defend themſelves againſt Men if attack'd by them; ſome of them go upon two Feet, they ſometimes live upon Fruit, and what the Mountains produce, but when that fails, or they are weary of it, they have recourſe to the Sea-ſide, to catch Crabs and Oyſters, and when they open an Oyſter they are ſo wary, leſt the Oyſter ſhould cloſe and catch their Paw, that they always take care to have a little Stone ready to clap in to prevent its ſhutting cloſe till they can fetch a better Purchaſe, and ſo get the Oyſter out, and ſave their Paws; when they would catch a Crab, they thruſt their Tails into the Hole where the Crabs lie, and ſo provoke them till ſome or other of the Crabs lays hold of it with his pinching Claws, which the Monkey feeling, pulls the Crab out of the Hole, and ſeizes him for his intended Prey. There are great Numbers of Civet-Cats, which abound ſo in Civet that if it is not taken away every Month, it makes them ſo uneaſy by the Heat that it occaſions, that they tumble themſelves about upon the Ground till the Bladder breaks, and then they get immediate eaſe. There is alſo found in theſe Iſlands a Cat of a Fox's Colour, having Wings like a Batt, by the help of which they will leap from one Tree to another, though above ſeven Yards diſtance. There is alſo in the Iſland of *Leyte* an Animal like a Mouſe, only its Head is twice as big as all the Body.

Cunning of Baboons getting out an Oyſter. Their cunning in catching Crabs.

Large Serpents. Here are Serpents of a prodigious Bigneſs, one ſort is called *Ibitin*; this Serpent can hang himſelf by the Tail on the Arm of a great Tree, and draw in a Deer, a Wild-Boar, or even a Man, into his Mouth, and ſwallow him whole; after which he winds himſelf about the Tree till he digeſts his Prey; there is another ſort of a Snake called *Aſangua*, which eats nothing but Hens, and another called *Olopong*, exceeding venomous; but the biggeſt Sort is called *Boles*, which is twenty or thirty Spans long; there is alſo another Creature which devours Poultry; it is called *Iguana*; it is like an Alligator, the Skin Purple ſpeckled with yellow Spots, the Tongue cloven, but the Feet cloſe, having Claws; though it is a Land Creature, it paſſes very ſwiftly over the Rivers; the *Indians* and ſome of the *Spaniards* eat it, and ſay the Fleſh taſtes much like that of a Tortoiſe.

Croco-diles. Of the Crocodiles of theſe Iſlands they give us the following ſurprizing Account, *viz.* That the Females bring ſometimes fifty at a Time, and that the Rivers and Lakes would ſoon be full of them, to the great Detriment of Mankind, if they did not deſtroy their own Brood; theſe Crocodiles have no Paſſage for Excrements, but vomit up what remains upon the Stomach after Digeſtion; by this means the Meat remains upon the Stomach a long Time, and the Creature is not hungry every Day, which if they were, it would require an infinite Number of Men, Beaſts, *&c.* to ſupply them; there have been ſome of them taken and open'd, and in them have been found Mens Bones and Skulls, and Stones, which laſt the *Indians* ſay they eat to pave their Stomachs; the Female lays her Eggs out of the Water, that they may hatch; they are white, and as hard as a Stone, and about twice as big as a Gooſe's Egg; the Yolk is but ſmall, like that of a Tortoiſe's Egg; not only the *Indians*, but the *Spaniards* too, will eat the young Crocodiles.

Alligators. There are Alligators which ſome call another ſort of a Crocodile; they are moſtly found in the Lakes: The Difference between them and the above-mention'd Crocodiles is, the Alligators have no Tongue, and for want of it can make no Noiſe, or ſwallow in the Water, and therefore they eat their Prey upon the Banks. There are abundance of Sea-Horſes and large Whales in the Seas of *Mindanao* and *Xolo*; the Horſes are much like thoſe on the Shore, but have no Feet or Tails.

Sea-Horſe.

Tortoiſes. There are found in theſe Seas two ſorts of Tortoiſes, the great ones are eatable, and the Fleſh taſtes like Beef, but the Shell is of no uſe; the leſſer is only valuable for the Shell, the Fleſh being of no uſe.

But there is one thing ſo very extraordinary, that it is almoſt beyond the reach of Credit, and

I think we cannot do juſtice to the Relation without giving up our Author, that the Reader may judge of his Integrity as well as we: it is the Popiſh Miſſionaries that give us Account, that in ſome of the *Philippine Iſlands* there are Trees whoſe Leaves become living Creatures, with Wings, Feet, and Tails, but remain after this Metamorphoſis of the ſame Colour and Shape with the other Leaves; but, by our Author's Leave, it is difficult to underſtand how any Thing can retain the ſame Shape, after it has undergone a Metamorphoſis, that it had before, or whether a Fowl that has Wings, Feet, and Tail can be ſaid to be of the ſame Shape with the Leaf of a Tree that has no ſuch thing; the Colour indeed it may retain, but we ſee how cautious we had need to be in believing what is reported by theſe Wonder-makers, except confirm'd to us by Perſons of better Credit; ſome that are not ſo biggotted to Popiſh Miracles, more probably conjecture, that theſe Creatures proceed from a Worm which may be dropt in theſe Leaves by ſome Inſect or living Cereature, and there hatch'd by the heat of the Sun.

Leaves produce live Birds.

HERE are ſeveral ſorts of Parrots; there is alſo a *Cocato*, larger than a Parrot, with a Tuft of Feathers on his Head. The *Spaniards* try'd an Experiment to carry ſome Turkeys to the *Philippine Iſlands*, but they could not keep them alive; but there is a Hen called *Camboxa* natural to the Country, whoſe Legs are ſo ſhort that their Wings trail upon the Ground; they have alſo a ſort of Fowl called *Xolo*, which hath long Legs, and eats like a Turkey; they have a ſort of a Hen whoſe Fleſh and Bones are black, but the Meat is well taſted; they have great Plenty of Fiſh, particularly one which the *Spaniards* call *Perimuger*, or *Woman's Fiſh*, it having Breaſts and Private Parts like a Woman; ſometimes by chance they ſee a large Sword-Fiſh in theſe Seas, of fifteen Foot long, but they are not very common.

Woman-Fiſh.

Sword-Fiſh.

THERE is a black Sea-Fowl called *Tavan*, ſomething leſs than a Hen, but has a long Neck; this Bird lays her Eggs in the Sea Sand, forty or fifty in a Trench, and then covers them, and the heat of the Sand hatches them; their Eggs are as large as the Eggs of Geeſe, but they have very little white in them; when the Chickens are hatch'd, the Yolk appears whole and ſweet, and the *Spaniards* frequently eat the Chickens and the Yolk of the Egg together in the ſame Diſh; the Chickens feed upon the Yolk till they have Strength to work their way through out of the Sand, and then the Hen, who keeps near them, calls them out; when people go to ſeek theſe Neſts, they go along the Shore, and where they find the Sand to have been thrown up or open'd, they open it again, and ſometimes find Eggs and ſometimes Chickens, either of which they will take away, and uſe for Food. There are alſo a ſort of Turtle-Doves, grey on the Back, and white on the Breaſt, and in the Middle of that white there is a red Spot like a Wound, with freſh Blood upon it. There is alſo a Bird called *Colin*, black and aſh colour'd, as big as a Black-bird; it has no Feathers upon it's Head, but only a Crown of Fleſh. Here is alſo the *Saligan*, which builds her Neſt in the Sides of Rocks, as the Swallow does againſt the Wall; theſe are the Birds-Neſts that are applied to ſo many Uſes: (*See the Deſcription of* Cochin-China, *towards the Beginning.*) The Green-bird, called *Herrero*, is as big as a Hen, and has a Beak ſo hard and ſo ſtrong that ſhe can make a Hole in the Body of a Tree to build her Neſt in, and from the Noiſe it makes with picking this Hole, the *Spaniards* call it *Herrero*, or the *Carpenter*. There is another Bird called *Colo-Colo*, black and almoſt as big as an Eagle, ſaid to be half Fiſh half Bird; it flies, but preys chiefly upon Fiſh; here are no Pheaſants nor Partridges, but there are Heath-cocks, which are very good Food, and Quails about half as big as ours, with red Beaks and Feet, and in all theſe Iſlands there are the Green-birds called *Volanoes*.

Tavan.

Doves.

Colin.

Saligan.

Herrero

Colo colo

Quails.

THERE is a Fruit called Santer, which the *Spaniards* put a great Value upon; it grows wild in the Woods; the Fruit is in Bigneſs, Shape, and Colour like a ripe Peach; it has five Kernels, like the Seeds of an Orange: the *Spaniards* preſerve it as they do Quinces, and it is good pickled with Vinegar when about half ripe; the Tree is like a Walnut, with large Leaves, which they uſe in ſome Caſes as a Medicine: They have another Fruit called Magol, it is ſomewhat bigger and downy, like a Peach, but about the Colour of an Orange, but it is not well taſted, nor eaſily digeſted; the Tree is as tall as a Pear-Tree, and has thick Boughs and large Leaves, like Laurel; the Wood is little inferior to Ebony; they have alſo Mangoes, Durions, and moſt other *Indian* Fruit; they have no Olives, but there is a Fruit called Paxo's, which differ but little from them; they have Oranges of ſeveral kinds, bigger than thoſe of *Europe*; they have Lemons both large and ſmall, but they are generally ſweet: there are ſeveral ſorts of Fruits brought hither from *New Spain*; but the Trees which produce them the moſt Profit are, their Palm-Trees; it is thoſe that enrich the Eſtates in the *Philippine Iſlands*, and of theſe they enumerate about forty various Sorts; but amongſt them all the Sago is the Principal, (*of which, to avoid Repetitions, ſee the Deſcription and Uſe in Chap.* V. *beforegoing*,) a ſecond Sort of Palm-Trees are thoſe that yield Wine, but they may rather be called Shrubs than Trees; they are commonly found in Salt Water Marſhes; the Fruit is like the Date, but they never ſuffer it to come to Perfection, becauſe they cut off the Boughs as ſoon as it bloſſoms, to let the Liquor run into the Veſſels which they place under the cut Branches for that Purpoſe; the Leaves of thoſe Trees, woven with ſmall Cane, ſerve to cover the Roofs of the Houſes. They make Vinegar of the Palm and Cocoa Wine when it grows ſtale, and draw an Oil alſo from the Cocoa Nut. There is another ſort of a Palm called Yonola, which produceth a kind of Wool, which ſerves them to ſtuff Quilts and Pillows withal; it alſo furniſheth them with a ſort of a black Thread, of which they make Cables for Ships; its Flakes or Threads are like thoſe of Hemp for Length and Thickneſs, and when ſpun and made into Ropes, will laſt longer in the Sea-Water than being kept dry. They have divers other Uſes for the Leaves of the Palms, beſides covering their Houſes, for they make Hats, Mats for Rooms, and Sails for their Ships, beſides ſeveral other Ways they have of making them up into Baskets and other things uſeful about their Houſes.

Quails.

Santer.

Magol.

Mangoes

Durions.

Oranges

Palm

THEY have Tamarinds or Sampalo's growing wild in Cods like Green-Peaſe; they have a ſharp Taſte, and are commonly preſerved with Sugar; they are reckon'd extraordinary uſeful for allaying the Heat and Thirſt in Fevers; the Tree is tall and thick, with ſmall Leaves; the Wood is much like Ebony, and ſerves for the ſame Uſes.

Tamarind.

THERE is alſo Caſſia grows in theſe Iſlands, the Tree is not ſo thick as the Tamarind, but the Branches much bigger; the Leaves are bigger than thoſe of the Pear-Tree, and of a beautiful Green, and being boil'd with the Bloſſoms, in the Nature of a Conſerve, it has the ſame Effect as the Fruit, and more palatable, alſo the young Fruit made into a Conſerve is a good Laxative; there is ſuch vaſt Plenty of Caſſia in the mountainous Part of *Mindanao*, that in *May* and *June* they fat their Hogs with it.

Caſſia.

THE Mountains produce very good Timber of all ſorts, fit for building either Ships or Houſes; they

Timber.

They have very good Black Ebony, and a Tree call'd the *Red Blayong*. There is the *Calambac*, which has an Aromatick Bark, also divers sorts of Wood for Dying; which cannot be cut without a Saw and Water, as we cut Marble, it is so hard; for which Reason the *Portugueſe* call it *Ferro*, or the Iron-Tree. There are in the Island of *Manila* abundance of Nutmeg-Trees, but they are but of a Bastard Kind, and the Fruit is seldom made use of.

The Cacao Plant which was brought hither from *New-Spain*, is so improved and increased, that they have no occasion to import any more of it from *America*. They have some Cinnamon, but much inferior to that at *Ceylon*, the Tree called *Amet*, or the Water-Tree, so called because when the Natives want water they need but cut a hole in that Tree, and a great Quantity of Water issues out. There is also a Kind of a Cane which the *Spaniards* call *Vaxuco*, which if cut, yields a Quantity of Water sufficient for a Man to drink at a Time; and this Reed is most Plenty in the Mountains where Water is most wanted. This Reed creeps up the Trees, and winds about them like Ivy; but some of it is so straight, they make Pikes and Halberds of it, and with such is the Royal Armoury at *Manila* furnish'd. Plantains are very Plenty here, with Leaves so long and so broad that two of them would be almost sufficient to make a Man a Cloak. The *Indians* Plant them about their Houses, for the Benefit of having the Leaves to use instead of Napkins, Plates, and the like; and the Leaves, as they grow, serve for Shelter from the scorching Heat of the Sun: They sometimes make Vinegar of the Fruit; the best Sort of them are called *Tundques*, which are a Span and a half long, and as thick as a Man's Arm: These roasted, and eat with Wine and Cinnamon, they reckon a delicious Dish. There are other Sorts of Plantains, of which those called *Dedoes de Dama*, or *Lady's Fingers*, are the best, and grow so Plenty that a Hundred, or sometimes two Hundred of them hang by a Twig, which weighs so heavy upon the Trees that they are forced to prop them up.

Water-Tree.

Water-Cane.

Plantain.

Potatoes are very Plenty, and much used both by the *Indians* and the *Spaniards*; and there are several Kinds of them: The *Camotes* are like great Radishes; they smell and taste very pleasant. The *Glabis* are like Pine-apple Nuts, and when boil'd the *Indians* use them instead of Bread, and the *Spaniards* instead of Turneps. The *Ubis* is as big as a Pompion, and the Plant like Ivy. It would be tedious to the Reader to give a Detail of all the Roots growing in these Islands, and made use of by the Inhabitants as Food: Here are Garlick, Onions and Pine-apples, called by the *Portugueſe*, Anana's; they are reckoned one of the finest Fruits of the East, and are found here. Here is also Plenty of Tobacco, Sugar-Canes, Ginger, Indico, *&c.* also great Plenty of all Manner of Odoriferous Herbs and Flowers, which are peculiar to the Place, and grow naturally without any cultivating; which plentiful natural Growth of these most useful Things, makes their Gardens be very much neglected. There is a Flower called *Zamaga*, which is one of the finest the Place produces; it is like a little White Rose, with three Rows of Leaves, and much excells the Jessamin in Smell. The Fields abound with the *Dasa*; it has an Aromatick Root. The *Tala* is also an Odoriferous Herb, very Fragrant.

Many Sorts of Potatoes.

Tobacco

Medicinal Herbs also abound here; for besides Sage, St. Mary's-Wort, Baulm, Houseleek, and others known to us, they have many peculiar to the Country. There is an Herb like Purslain called *Del Pollo*, grows very common, they give it that Name because by proper Application, it in a short Time cures any Wound their Game Cocks receive. The Herb *Pausipan* is taller, with a white Flower like a Bean-Blossom, which being pounded and laid on a Wound, draws out any Poison or Corruption, and cleanseth the Wound. There is the Herb *Del Sapo*, and others of great Virtue in *Mindanao* and *Xolo*, some of which the Natives use as the *Turks* do Opium, to stupify them, and suspend the use of their Reason, and make them void of Fear when they engage an Enemy. There are also Accounts of Wonders done by Herbs, but they smell so strong of the Popish Missionaries, that I look upon it as best not to relate them, lest the Credulous should believe them.

Medi... inal Herbs

But after all these Excellencies and Varieties which these Islands afford, we must not forget that the Heat and Moisture of these Islands cause them to produce Abundance of venomous Creatures, as the Soil does poisonous Herbs and Flowers, which not only kill those that touch or taste them, but so infect the Air, that many People die in the Time of their Blossoming; but those Places are as well furnished with Antidotes against these dangerous Poisons, particularly the Bezoar-stone, which is found in the Belly of a Creature much like a Deer; also the Root *Dilao*, which is like Ginger, heals Wounds made by any venomous Beast, being bruised and boil'd with Oil of Cocoas.

Veno... mous C... atures... poiso... Quali...

The Orange and the Lemon Tree, and several others, bear twice a Year; or if they plant a Sprig it will become a Tree, and bear Fruit in a Year's Time.

Was we to affect relating Things so miraculous as to appear incredible, we might tell our Readers of a Kind of a Nut or Kernel, that Cures as many Distempers as a Quack or Mountebank can name, under the Pretence of being cured by some of his Grand Specificks; especially, they say, it is such an Antidote against Poison, that it not only preserves him that carries it about him from being poisoned, but destroys him that was designed to poison the Person so wearing it: But these coming from no better Authority than the Popish Missionaries, we must suspend our Belief of them till we have them better attested. However, from what hath been said from the most unquestioned Authority, and the Report of Men of the most undoubted Integrity, that have been upon the Spot, the perpetual Verdure and Spring of some of those Islands, the Bud, Blossoms and Fruits being found all the Year, not only upon the Trees in the Gardens, but in the uncultivated Ground; the Woods being so full of Trees, not only the hardest of Wood for curious and particular Work, but their Plenty of common Timber of all proper Sizes, for Building either Ships or Houses, besides such prodigious Numbers of Trees, whose Fruit yield Nourishment and Sustenance for the Inhabitants, it is much to be questioned whether we shall meet with any Place in all Respects equal to some of the *Philippine Islands*, in all the rest of our Travels upon the Terrestrial Globe.

CHAP.

CHAP. X.

Gives Account of the Language, Government and Forces, of the several Nations which now inhabit the Philippine Islands.

Language. THE Language most commonly spoke in the *Philippines*, and the rest of the *Oriental Islands*, within or beyond the Straits of *Malacca*, is the *Malayan* Language; the *Spanish* and *Chinese* Colonies retain their own Language, as do the *Indian* Blacks theirs of *Malabar* or *Jentoo*, spoke in the Peninsula from whence they came: Nor do we hear of any Writing amongst the Mountaineers, but the Tawnies that live upon the Plains near the Sea Coasts write upon Paper if they can have it, or if that is not to be had, they write upon large Cocoa Leaves, or sometimes with an Iron Pencil on the smooth Part of the Cane. In their writing they begin at the bottom Corner on the Left-hand, and carry the first Line up the Left-hand side of the Page to the top, and so begin at the bottom again, and proceed up, till the Page be full.

Writing.

No Mechanicks. THE Natives of those Islands are no Mechanicks, nor do they understand Numbers like the *Chinese*, but in that Suburb or Out-part of the Town of *Manila* where the *Chinese* live, are almost all Sorts of Workmen to be found, and Trades exercised by the *Chinese*, the *Spaniards* or *Indians* seldom applying themselves to any Handicraft Business but when they cannot help it, which makes them poor Proficients. The Natives are so ignorant of the natural Cause of an Eclipse, that when any happens, they beat upon their Drums and Brazen Vessels, and make all the Noise they can, as some other of the ignorant *Asiaticks* do, thinking thereby to frighten away the Dragon which they think is going to devour the Sun or Moon.

Government. THE Civil Government of these Islands is in the Hand of a *Spanish* Viceroy or Captain-General, who keeps his Court or chief Residence at *Manila*: This is a very profitable Post, only the Benefit of it could not induce every body to go so far from their native Country as from *Spain* to the *Philippines* for the sake of it. The Viceroy has two and twenty Alcades under him, those are Governors of Towns and Provinces, two of them reside in the City of *Manila*, one of whom have the Government of the *Europeans*, the other of the *Asiaticks*. There is also a Tribunal of three or four Judges, wherein the Viceroy presides, but has no Voice, not even if the Opinion be equally divided; but when it so happens, he appoints some Doctor to give the casting Voice.

THE Viceroy has no Power to turn out those Judges or Solicitors for the Crown; their Places are during Life, but all military Employments and Preferments are in his disposing, as are also the Places of the Alcades or Governors of Provinces; he has also the choosing of the Captains of the Galleons which sail every Year to *New Spain*, which Post alone is worth Fifty thousand Crowns a Year. He has a Garrison of about eight hundred Soldiers in *Manila*, and three or four hundred more in other Parts of the Country: Their Pay is two Pieces of Eight, and fifty Pound of Rice a Month for every Man.

WHEN there are supposed any Reasons for recalling a Viceroy or Captain-General, or whether there are Reasons or not, if it is thought fit to be done, Proclamation is made for all Persons to come and exhibit their Complaints against him for sixty Days, the intended Successor sitting as Judge through all the Tryal, who having his own Preferment in View, and no body called in to speak of the old one but only Complainants, it is easy to see how the Matter will terminate, which is commonly in the Disgrace of the old Captain-General, who is thereupon sent back to *Spain* with an Account of his Conduct, and of what has been alledged against him.

THE Ecclesiastical Government is in the Hand of an Archbishop, chosen by the King, and also some Suffragan Bishops: The Archbishop resides at *Manila*, and determines all Appeals from his Suffragan Bishops, as well as all Matters in his own Diocese, but they may Appeal from him to the Pope's Delegate, who also resides in one of the *Philippine Islands*. The annual Income of the Archbishop is six thousand Pieces of Eight, which he has from the Crown; and the Bishops of *Sibu*, *Camarine*, and *Caguayan*, five thousand. There is besides these a Coadjutor or Titular Bishop, who officiates in the first vacant Church that there may be no Intermission in the Cure of Souls, during the six Years before a new Prelate can come, and for the Management of the Inquisition here, there is a Commissary appointed by the Court of Inquisition at *Mexico*.

NOTWITHSTANDING that the *Chinese* abandoned the Government of these Islands, either for their Remoteness, or for some other Reason, as has been before hinted, yet there were such Numbers of *Chinese* found upon these Islands, that in the City of *Manila* there was found not less than forty thousand since the *Spaniards* arrived there. They found themselves so numerous that they contended with the *Spaniards* for Superiority, but the *Spaniards* not brooking that, reduced them, and banished them all from the Island, except three or four thousand, whom they suffer'd to remain because they were useful to the Government, for they were the best Artisans and Mechanicks in the Country; insomuch that it was scarce possible for the *Spaniards* to subsist without them; so that notwithstanding the Bigottry of the *Spaniards* to their own Religion, yet for the sake of the Assistance of the *Chinese*, they suffer'd them the free and open Exercise of their Religion at *Manila*, rather than want their Help. There is an Alcade and other Officers appointed over the *Chinese* by the King of *Spain*, whose Salary they are obliged to pay; and such Bigots they are to a simple Sort of Gaming, that they pay no less than ten thousand Pieces of Eight yearly for the Liberty of Gaming some few Days at the Beginning of every new Year. The Game they use they call *Aletua*, it is only a Chance of even and odd, one laying a Heap of Money down, the other Gamester guesses odd or even; if he guess right, he has all the Money, but if he guess wrong, the other keeps his own Money, and the guessing Man gives him as much to it. The *Spaniards* will not suffer the *Chinese* to remain in any Christian House in the Night-time, nor to have any Fire or Light in their own after it is dark.

It is obſerved that in all the *Philippine Iſlands* there are about two hundred and fifty thouſand People ſubject to the Crown of *Spain*, and yet it is computed that theſe are not a twelfth Part of the Inhabitants of thoſe Iſlands, ſo that by that Computation the Inhabitants of theſe Iſlands amount to above three Million of People. The *Spaniards* exact a Duty of ten Ryals a Year from every Maſter of a Family under their Government, and from every ſingle Man who is above eighteen, and under ſixty Years of Age, they demand five Ryals, and the ſame from every Maid between twenty four and fifty Years of Age. The *Spaniards* ſubdivide their Territories into Diſtricts, impoſe other Duties upon the Subjects, making their Taxes ſtill more grievous.

Government. They have no Records to give account of their antient Form of Government; what account we have of that is from the *Spaniards* now inhabiting there, who tell us that they firſt came over under ſeveral Captains and Leaders, and that when they ſettled every one ſtill retain'd the Government of their own People, and were never united into one Government ſo as to be ſubject to one Monarch, and that ſeems very ſeaſible to have been the Caſe, becauſe at this Day almoſt every Mountain is poſſeſs'd by a particular Tribe, which has a Governor of its own, independant on all the reſt, and that they ſometimes make Deſcents upon one another, when they think they have provocation to it.

Laws. The Natives are regulated by Laws and Cuſtoms of their own, though the *Spaniards*, becauſe they will not ſubmit to their Inſtitutions and Impoſitions, would make the World believe they are under no Regulation at all, with reſpect to Cuſtoms or Morals, whereas they ſtrictly enjoin the profoundeſt Reſpect to Parents and Governors; they are tender of taking away Life, and puniſh Theft only with Fine or Impriſonment; the eldeſt Son ſucceeds to the Father's Honour and Eſtate, but if there be no Son, the Effects are divided among the Daughters. Their way of ſwearing is in the Preſence of a lighted Torch, or before ſome Wild-Beaſt, wiſhing they may be conſumed like the Torch, or devoured by ſuch Wild-Beaſt, if they do not perform what they are by this Form obliging themſelves to.

Slaves. Those that are in Debt either ſell their Children and pay their Debts, or themſelves become Slaves to their Creditors till they work it out; thoſe they take in the Wars are alſo Slaves to the Great Men, to cultivate their Lands and perform any ſervile Offices they require of them.

Arms. The Arms they uſe are Bows and Arrows, and a Lance either headed with Iron or hardned in the Fire; they have alſo broad Daggers with two Edges; they have hollow Tubes made of Ebony or other fine Wood, through which they ſhoot little poiſon'd Darts, and the ſlighteſt Wound made by theſe is mortal, without immediate Application. They have for Defence a Shield and Helmet, alſo a Back and Breaſt, but theſe laſt are only Cane cover'd with Buffaloes Hide, to reſiſt the little poiſon'd Darts.

The *Blacks* of the Mountains have ſuch an Averſion to the *Spaniards*, that they will neither be govern'd by them nor ſcarce converſe with them; there is ſuch an Enmity betwen them, that if the *Blacks* catch a *Spaniard* and kill him, they invite their Family or Neighbours to rejoice three Days ſucceſſively, drinking out of the *Spaniard*'s Skull while the Entertainment continues; and well may the *Spaniards* expect ſuch Treatment, if they conſider how they uſe the *Blacks* when they fall into their Hands.

But although the Antipathy is ſo great between the *Blacks* of the Mountains and the *Spaniards*, yet for the ſake of Trade there is a mediate Correſpondence between them, by Means of the *Indians* who inhabit the flat Country, for to theſe the *Spaniards* ſell Tobacco and ſeveral other Things, which they exchange with the *Blacks* of the Mountains for Bees-Wax, Gold, and what other Commodities the Mountains afford, and theſe they ſell to the *Spaniards*, who are by that Means furniſh'd with what the Mountains afford, as if they were ſupply'd by the Mountaineers themſelves.

CHAP. XI.

Of the Religion, Marriages, and Funeral Rites obſerved by the Inhabitants of the Philippine Iſlands.

Tranſmigration. They are ſo bigotted to the Doctrine of Tranſmigration, as well as their neighbouring *Aſiaticks* before ſpoken of, that they cannot be prevail'd upon even to cut down an old decay'd Tree, becauſe they ſuppoſe they ſhall thereby diſturb or perhaps diſlodge the Souls of ſome of their Anceſtors; for them they worſhip as far back as the Great-Grandfather, believing, as as the *Siameſe* do, that their Anceſtors farther back than the Great-Grandfather has undergone ſo many Changes, and their Souls been tranſplanted into ſo many different Bodies (animate or inanimate) that they are beyond their Notice. (*See Chap.* VII. *of* Siam.)

Marriage. When a Marriage is propoſed, the Man is not to expect a Fortune with his Wife, but the Huſband is to pay a Sum of Money to the Woman's Father or neareſt Relation for his Wife, ſo that it is a Purchaſe before it is a Marriage. The Marriage is celebrated by a Prieſteſs, after which the Man and Wife are enjoin'd both to eat out of the ſame Diſh, in token that they are for the future to participate equally of all the Viciſſitudes of Life; they then ſacrifice ſome Beaſt, and then the Ceremony is finiſh'd, and the whole is concluded with ſuch Entertainments as they think proper; they always marry in their own Tribe, and the neareſt Kin they can conveniently, except the firſt Degree; Divorces are allow'd, but no Man is allow'd to have two Wives at a Time, except the lawful Wife have no Children, and then he may take one of his Slaves to his Bed, and if he has Children by her it is deem'd no Crime.

When a Perſon of Diſtinction dies, not only his Relations mourn, but alſo Strangers are hired for the ſame Purpoſe to lament the Departure of the Deceas'd; the Body being waſh'd and perfum'd, and wrapt up in Silk, it is put into a Coffin, cut out of one ſolid Piece of ſome precious Wood, and cover'd ſo cloſe as to keep out all the Air, and ſo placed upon a Table, the Cloaths and Arms of the Deceas'd being laid on a Cheſt by the Coffin, or if it be a Woman, her Utenſils for Work, and all ſorts of Meat are ſet before the Corps; afterwards the Body is interr'd in the Burying-Place of the Family, and a Feaſt is made for thoſe that attended the Funeral, but if it is a Man, the Widow and Children faſt for ſome time afterwards, and abſtain from Fleſh and Fiſh, and live only upon Rice and Herbs; ſome mourn in black, others in white, ſhaving their Heads and Eye-brows. They pay a particular Veneration to thoſe who die in the Defence of their Country, by offering Sacrifices to them after their Deceaſe.

CHAP.

CHAP. XII.

Of the Island Celebes *or* Macassar.

Situation. THE Island of *Celebes* or *Macassar*, lies under the Equinoctial Line to the Eastward of *Borneo*. It is divided into six Provinces or petty Kingdoms, the chief of which is *Celebes*, on the North-West, lying under the Equinoctial, and *Macassar*, which takes in all the South Part of the Island; all the rest of the Provinces being under one or other of those two, is the occasion of the Island going by one of those two Names.

Division.

Air. THIS Island lying under the Equinoctial, the Air is hot and moist, subject to great Rains; it is most healthy during the Northern Monsoons; if they fail, as it sometimes happens, the Island is sickly, and a great Mortality ensues.

THEY have Gold, Tin and Copper Mines, but do not work them, most of the Gold this Island produces being found in the Sands of the Rivers and the Bottom of the Hills, being wash'd from the Mountains by the Torrents occasioned by the violent Rains.

THEY have Pepper and Sugar, Betel and Arrek, but no Mace, Cloves, or Nutmegs; these they Import from the Spice Islands in Quantities sufficient to supply themselves and to sell to Strangers.

Cotton. THEIR Fruits are of a more delicious Taste than those of other Countries: The Cotton Shrub grows very Plenty here upon the Plains, it bears a red Flower, and when that falls it leaves a Head about as big as a Wallnut, which contains the Cotton; that which grows in this Island is reckon'd the best in all *India*.

Opium. OPIUM grows wild at the Bottom of Mountains, or in stony Ground; it is a Shrub whose Branches afford a Liquor which they draw out much in the same manner as they do Palm Wine, and being close stopp'd up in a Pot, it thickens to a Consistency, till they can make it up in Pills; and when they would impregnate their Tobacco with Opium, to make it inroxicating, they dissolve one of these Pills in Water, and then sprinkle their Tobacco with the Water; or sometimes they will take the Quantity of two Pins Heads of the Opium Pill in a Pipe of Tobacco, which elevates them, or rather stupifies them, beyond all Sense or Apprehensions of Danger, till its Effect wears off, and then they are more dull and stupid than before, till they renew their Stupefaction with more Opium; but these repeated Operations burthens Nature, preys upon the Spirits, and shortens Life.

Poison. THEY are famous for compounding mortal Poisons out of their venomous Drugs and Herbs, of such a malignant Nature, that if their Darts, Criees or Daggers have their Points dipt in it, and if afterwards a Person be wounded with the said poison'd Weapon, though in a remote Member, yet the most immediate Application cannot save his Life, as was proved upon a condemned Criminal, upon whom the Experiment was tried, by wounding him in the Toe with one of these little poison'd Darts; and although there were Surgeons ready to cut off the Toe as soon as the Wound was given, yet all the means they could use could not preserve the wounded Person's Life.

An Experiment.

Monkeys. THEY have very large Cattle at *Macassar*, and also such Numbers of large Monkeys and Baboons, that they are dangerous to Travellers; some of them go upon all four, and some walk upright on two Feet, like a Man, never using their Fore-Feet but as Hands: The white ones are as big as an *English* Mastiff, and are the most dangerous, but they are more inveterate against Women than Men: The Serpents sometimes make War upon them, pursuing them to the Tops of the Trees, and destroying them there. The Bezoar-stone is sometimes found in these Monkeys, and is much better than those found in the Goats.

Horses. HERE are no Elephants bred, but Plenty of little Horses for riding only. The Natives in riding use no Saddle, but a painted Cloth thrown over the Horse's Back, and no Stirrups; and for a Bridle, they have a Piece of Wood for a Bit, and a Cord for a Rein, which they tie to each End of the Bit; their Horses are never shod, being never put to drawing; their Oxen and Buffaloes are put to that Part of their Labour.

Macassar River. THERE is but one large River in the Island, it is about half a League broad, and washes the Walls of *Macassar* City; it is deep enough to carry the largest Vessels in some Places, but its Depth is so uncertain, that in other Places there is not Water for a Vessel of fifty Tun; but there is a Port called *Jompadan* on the South-West Part of the Island, now in Possession of the *Dutch*, and is a very commodious Harbour.

Macassar. THE City of *Macassar* is situate upon the Bank of the great River above-mentioned, where the *Dutch* have a strong Fort, and a Garrison of seven or eight hundred Men. The Streets of the City are wide, but not paved, but have Trees planted on each Side of the Street. The meaner Sort of Houses are Wood, but the Palaces, Mosques, and great Houses are of Stone: The wooden Houses are built upon Pillars as in *Siam*, and the Roofs like theirs, covered with Palm or Cocoa Leaves. (*See* Chap. II. *of* Siam, *near the latter End.*)

Market. THEY have Shops and Market-Places; their Market times are before Sun-rise and after Sun-set, for Flesh, Fish, Rice, Fowls, and all sorts of Provisions, except Hog's-flesh, which their Religion forbids. The Market, both Buyers and Sellers, consists only of Women, insomuch that it is reckoned ridiculous to see a Man amongst them.

Genius. ALTHOUGH abundance of People have deserted *Macassar* and the adjacent Villages, since the *Dutch* have tyranized over them, yet the remaining Natives have their Faculties of Memory and Apprehension so quick, that they can either remember or imitate any thing they see, and might improve with little Assistance. They are strong and industrious, and so addicted to Arms and martial Enterprizes, that they are hired out to Fight, as the *Swiss* in *Europe*.

THEY have flat Noses, shining black Hair, tied up or cover'd with a Turbant when they are dress't, but at other times they only wear a Case or Hat with a small Brim. They take great Pains to rub and supple the Limbs of their Infants, and that is assign'd as a Reason why few or none are lame or crooked amongst them. Their Male Children are taken from the Mother at six or seven Years of Age, and put to some distant Relation, to prevent their being too much indulged by their effeminate Caresses. They are sent to School to Read and Write, and learn the Precepts of the Alchoran, and then brought up to some Handicraft Trade,

Sports

Sports and martial Exercises if they be of the Quality; but the meaner Sort are brought up to ordinary Trades, Fishing, Husbandry, or the like.

Wives. The Women here are under severe Restraints; the least Smile in the Woman to any Man but her Husband, being thought a sufficient Reason for her Husband to Divorce her; nor does their Law look upon the Man as Criminal that kills a Man that he finds alone with his Wife; but the Man may have as many Wives and Concubines as he pleases, nothing being look'd upon with greater Ridicule and Contempt than to have no Children, or to have but one Wife; the Man's Honour and Happiness being always supposed proportionable to the Number of Women and Children that the Man possesses.

Children are commonly matched by their Parents in their Infancy, and when the young Man is arrived at sixteen or seventeen, and has gone through his Exercises of Riding, drawing the Bow, discharging a Fuzil, handling his Scymiter and Criee, and shooting little Darts out of Trunks of Ebony, *&c.* he is allow'd to visit his Mistress, consult about the Marriage, and marry soon after, if they agree upon it. The Girls are also brought up to Write, Read, Spin, Sow, Embroider, and make their own and the Mens Cloaths, for Men are not Taylors nor Cooks here, but the Females

Diet. dress all the Victuals; but they have no great Variety, their ordinary Food being Rice, Herbs, Roots, Fish, and Fruit: But they have also Beef, Kid, and Poultry, but this is rather for a Relish than a Meal, for they boil it and season it high with Pepper and Spices, and cut it in small Pieces to eat with their Rice, to give it a Relish. They eat but twice a Day, once about eight or nine in the Morning, and the other about Sun-set; this last is the set and heartiest Meal; the rest of the Day they chew Betel and Arek, or smoak Tobacco with

Drink. Opium. They have variety of Liquors to drink, as Water, Sherbet, Coffee, Tea, Chocolate, Palm-Wine, Arek, and other Spirits which they mix, though their Law forbids it.

Men's Dress. The better Sort have a Vest down to their Knees of brocaded Silk, or fine Scarlet Cloth, with Gold Plate Buttons, a strait Sleeve and button'd at the Wrist: They wear a rich Sash, the Ends of which reach down to their Knees; they wear their Criee, Dagger, Knife and Purse in their Sash. The poorer Sort have their Cloaths made of Cotton, and wear no Stockings or Shoes; their Turbants are not close at the Crown, but is only a Piece of Stuff or Linnen wrapp'd about their Heads. They frequently dye their Nails red, and their Teeth red or black.

Women's Dress. The Women have Shifts of fine Muslin to their Knees, the Sleeves strait and come but to their Elbows, the Neck and Breast close, that their Breasts cannot be seen. They have Drawers of Silk or Cotton reaching down to the middle of the Leg, and some have them richly embroider'd; for that, as well as the making of their Cloaths, they learn in their Youth, as before observed, that they may dress themselves rich with their own Labour: This is their Home Dress, but when they go Abroad they throw a loose Linnen Cloth or Piece of strip'd Muslin over all. For a Head-dress they only tie up their Hair in a Roll on the hinder Part of the Head, leaving some Curls hanging down to adorn the Neck. They perfume and oil their Hair, which makes it look still blacker than otherwise it would. The Men wear Jewels in their Hair, but the Women have none, nor have they any additional Ornaments but only a Gold Chain about their Necks. They are very neat and clean in their Houses.

Govern-ment. The Government is Monarchial, and the Crown Hereditary, the eldest Brother succeeding in the Kingdom, to prevent the Government's falling into the Hands of an Infant that is not able to manage it, and protect his People. The Prime Minister is entrusted with almost all Places of Trust in the Civil Government, and has the disposing of most, if not all, the Places of Trust or Profit therein. The Houshold and the Revenues the King looks after himself, and musters his Troops twice every Month, but leaves the Civil Government almost entirely to the Prime Minister.

No Fees. Common Justice is obtained here at a cheaper Rate than where whole Shoals of Lawyers, Attornies, and Pettifoggers are to be fee'd, for there are no Lawyers, Attornies or Bailiffs here, but every one exhibits his Complaint in Person, as being the most capable of understanding his own Grievance, and Justice is immediately executed according to the Merit of the Cause, without further Delay or Expence. They are so severe against Criminals, that whosoever takes a Murderer, Robber, *&c.* in the Fact, is allow'd to execute him himself without any further Trial.

Divorce. When a Man takes such a Disgust at any Behaviour of his Wife, that it amounts in his Opinion to a just Cause of Divorce, he need only acquaint the Priest with his Case, and charge his Wife with Levity or unregarded Conduct; and if the Priest finds the least Reason to believe that the Charge is just, the Divorce is pronounced by the secular Judge, and both Parties are at Liberty to marry again.

Funerals. They are very prodigal and expensive in their Funerals: When a Person dies his Corpse is wash'd and perfum'd, and cloath'd in a white Robe, with a Turbant on his Head. The Chamber the Corpse is set in is hung with white, and perfumed with Incense and Aromatick Gums: When the Corpse is to be buried he is carried by his Slaves to the Burying-place on a Couch or Palanquin, follow'd by the Priests, Perfumes and Incense being burnt all the Way as they go. The Corpse is buried without a Coffin, and only cover'd with the Plank on which it lay, and the Earth thrown in upon it; and some Time afterwards there is a Tomb erected according to the Quality of the deceas'd, adorn'd with Flowers, and having Perfumes burning for forty Days, which concludes with a costly Entertainment for those who come to pay their last Respects to the Memory of the deceas'd.

CHAP.

CHAP. XIII.

Of the Molucca Iſlands, *with thoſe of* Banda, *and the Iſland of* Amboyna, *commonly called the* Spice Iſlands.

THE Iſles of *Banda* take their Name from one of the Southermoſt of them, which goes by that Name *Banda*, but is as much known by the Name of *Lantor*, that being the Name of the chief Town upon the Iſland. Theſe Iſlands lie in the fourth or fifth Degree of South Latitude, on the South of *Ceram*, and on the Eaſt of *Celebes* or *Macaſſar*. The Names of the chief of them are, 1. *Banda* or *Lantor*; 2. *Poolowaj*; 3. *Pooloroon*; 4. *Nero*; 5. *Roſinging*, and 6. *Gonapi*; amongſt which are ſeveral ſmall Iſlands, not known by any particular Names, but only by that general Name of being ſome of the *Banda Iſles*. Theſe Iſlands are as famous for Nutmegs as the *Moluccas* were, and *Amboyna* now is for Cloves. The Nutmeg-Tree is like a Peach-Tree, only its Leaves are rounder and ſomething leſs: The Fruit is encloſed in a thick Rind, like a Walnut, and between that Rind and the Nutmeg is a thin Rind or Shell, which is what we call Mace; and in the Middle of all lies the Nutmeg, like the Stone in the Middle of a Peach or Apricot. All the above-mentioned Iſlands, with that of *Amboyna*, are now in the Poſſeſſion of the *Dutch*, in all which (except *Amboyna*) as alſo in the *Moluccas*, the *Dutch* have rooted up all the Cloves, becauſe theſe Iſlands lay remote from them, and conſequently expoſed to the Attempts of other Nations; and their High Mightineſſes, as generous as the Dog in the Manger, becauſe thoſe Iſlands were too far diſtant for them to reap the Fruit of them, deſtroy'd all the Cloves, that becauſe they could be no better by them, no body elſe ſhould; and after they had barbarouſly (as will appear by and by) got *Amboyna* into their own Poſſeſſion, they planted Cloves there, which ſucceeded ſo well, that it is ſaid that Iſland alone is ſufficient to ſupply the whole World with Cloves. The Clove-Tree bears within eight Years after it is planted, and is ſomewhat like the Bay-Tree; the Fruit grows in Cluſters at the End of the Branch, where it hangeth like a Bunch of Grapes; the Bud is firſt white, then green, afterwards red, and when it is ripe it turns brown; and after they are gather'd they dry them in the Sun, which makes them ſtill of a darker Colour. This Tree dries up all the Moiſture near it, inſomuch that no Graſs will grow under its Branches.

Amboyna. ON the South or South-Weſt Side of the Iſland of *Amboyna*, there is a deep Bay, which makes a good Harbour for Ships. It has Plenty of Fruit, Fiſh, and freſh Water, and ſufficiently ſtored with Fleſh; they have alſo Oranges, Lemons, Sugar-Canes, Cocoas, and other Fruit: They have alſo Potatoes and Tobacco, but the *Dutch* endeavour to keep the Iſland as barren of Proviſion as poſſible, that the Natives may have their entire Dependance upon them for Supplies; and that if a Stranger ſhould attempt to ſurprize them, they may find nothing in the Iſland ſufficient for their immediate Subſiſtence; for which Reaſons they chooſe rather to ſend their Proviſions from *Batavia* to *Amboyna*, than to have them grow upon the Iſland.

Moluccas. THE *Molucca Iſlands* lie near the Line on both Sides of it, on the Weſt of the Iſland of *Gilolo*, which lies under the Equinoctial; the Chief of them are *Bachian Machian*, *Motyr Ternate*, and *Tydore*; they all lie to the Northward from *Amboyna*, and are all in Poſſeſſion of the *Dutch*.

Diet. IN the *Moluccas* they have no Rice nor Corn, and but little Fleſh, except that of Goats. Their Bread is made of Sago, which is a Sort of a Pith of a Tree, from whence they make Cakes, which they uſe as Bread. Their common Drink is Water, but they have a ſtrong Liquor which they draw from the Bambou and Cocoa-Tree; they have Almonds, Oranges and Lemons: But the chief Produce of theſe Iſlands was Cloves, till they participated of the common Fate of the reſt of the Clove Iſlands, their Ruin and Deſtruction by their *Dutch*.

THERE are four other Iſlands near the Spice Iſlands, larger, but of leſs Value, for what they Produce; as, 1. *Gilolo*, or *Batochina*, lies under the Equinoctial, to the Eaſtward of *Tydore* and *Ternate*: It is above two hundred Miles long, but narrow: It has ſeveral deep Bays on the Eaſt Side of it, which makes good Riding for Ships. 2. *Ceram*, to the Northward of *Amboyna* and *Banda Iſles*. It lies Eaſt and Weſt, and is about fifty Leagues in Length. 3. *Bouro*, between *Ceram* and *Celebes*, about twenty Miles long and ten broad. 4. *Bouton*, near the South Eaſt Corner of *Celebes*, about twenty five Leagues long, and ten broad. The chief Town is *Callaſuſung*, a handſome Town, with ſpacious clean Streets, and fortified with a Stone Wall.

CHAP. XIV.

Of the several Discoveries made by the Portuguese, Spaniards, English, *and* Dutch, *in order to promote a Trade to the* East Indies *in general, and the* Spice Islands *in particular; with an Account of the several Steps taken by the* Europeans *to engross the* East India *Trade; and of the first Settlement of the* English *and* Dutch East India *Companies.*

OF above two thousand Years that *Europe* has been supplied with those delicious Spices of the East, it is not above two hundred Years since we have been acquainted with the Islands where they grew, they being sent from *Persia*, *Arabia*, and *Egypt* to the several Ports in the *Mediterranean*, whither the *Venetians*, *Genoese*, and *Catalons* used to resort to buy the *Indian* Spices and Silks, with which they supplied all the other Parts of *Europe* at a prodigious Profit.

THE *Moors* of *Arabia*, willing to engross the Spice Trade to themselves, planted Colonies in the *Oriental Islands* upon the Sea Coasts, driving the Inhabitants up to the Mountains, obliging them to abscond, or submit to their Government, and in this Condition were most of the *Oriental Islands* when the *Portuguese* first discover'd a Passage to *India* by the Cape of *Good Hope*, which probably they had never attempted if it had not been in hopes of making themselves Masters of the Spices and other Riches of the East, which Design they begun and prosecuted as follows:

PRINCE *Henry*, third Son of *John* King of *Portugal*, sent out Ships about the Year 1418 to discover the West Coast of *Africa*, which Enterprize they pursued till the Year 1486, when King *John* the Second sent out a Ship, which discovered the Southermost Point of *Africa*, now called by us the Cape of *Good Hope*.

IT having been agreed upon between the *Spaniards* and *Portuguese*, that the *Spaniards* should have all the Western Discoveries, and the *Portuguese* the Eastern, the (then) King of *Portugal* sent three Ships to find a Way to the *East Indies* in the Year 1497, and passing safe round the Cape, arrived at *Mosambique* in *Zanguebar*, on the East Coast of *Africa*, in about Latitude 14 Degrees South, where they found seven Ships mann'd with *Arabians*, who they observed had Mariners Compasses, Sea-Charts, and Quadrants aboard, so that the *Arabians* had the Use of those Instruments before that Time.

Sails to *Melinda.*

FROM *Mosambique* he sail'd Northward along the same East Coast of *Africa*, till he arrived at *Melinda* on *Easter-Day* 1498; this Place is in about the third Degree of South Latitude; here he found some Christians, who used him well, though the *Mahometan* Religion is establish'd there; however, here he got a Pilot for *India*, and arrived within two Miles of *Calecut* in *Malabar*, *May* 19, 1498, and was kindly used by the King of *Calecut*, till by the Instigation of the *Moors* or *Arabians*, the King was set so much against the *Portuguese*, that he seized some of their Men, and detain'd them; *Gama*, the *Portuguese* Commander, finding no hopes of establishing a Trade there, return'd home in the Year 1499, bringing with him only a *Tunis* Merchant which he found at *Calecut*, who gave the *Portuguese* some Insight into the Nature and Advantages of the *East India* Trade.

Thirteen Ships more.

THE King of *Portugal*, willing to pursue so advantageous a Prospect, sent thirteen Ships and fifteen hundred Soldiers under the Command of *Peter Alvarez Capralis*; he sail'd from *Lisbon March* 8, 1500, made *Porto Seguro* in *Brazil*, on the East Coast of *South America*, in Latitude about 15 Degrees South; here he staid till the fifth of *May*, and then sail'd about the Cape, and arrived at *Calecut* the 22d of *August* following, but upon his Arrival met with the Fate of *Gama* his Predecessor, being at first kindly received by the King of *Calecut*, but the *Moorish* Faction again prevailing, though the King had order'd the *Portuguese* a House for a Factory, yet the People set upon the *Portuguese* in that very House, and kill'd above fifty of them; *Capralis* resenting this unjust and dishonourable as well as barbarous Treatment, attack'd a *Moorish* Ship, kill'd six hundred of their Men, made Slaves of the rest, seiz'd all their Merchandize, and sail'd away to *Cochin*, about an hundred and seventy Miles to the Southward of *Calecut* upon the same Coast; here he settled a Factory, and then return'd to *Lisbon*, *July* 31, 1502.

Thirteen more, a fifteen Frigats.

BUT before *Capralis* return'd, the King of *Portugal* fitted out three Ships more, and after them ten more, which last were commanded by the first Admiral *Gama*; he also sent out fifteen Frigats to suppress the *Moors*, and command the *Indian* Seas; and this was easily done, the *Moors* having no Ships of Force, nor had they occasion for any, having no Enemies to encounter with till the *Portuguese* found a Way to them by sailing about the Cape of *Good Hope*.

THE *Portuguese* having met with this Success, were animated to advance farther East, and attempted the settling of a Trade at *Malacca*; but the Natives, incited by the *Moors*, endeavour'd to repulse them, surprizing forty of their Men ashore, and attacking their Ships in the Road, but were repell'd with Loss; not long after the famous *Albuquerque* besieged *Goa*, and took it, as he afterwards did *Malacca*, in the Year 1511, whose King *Mancudias* was kill'd in defending it; this success of the *Portuguese* made several *Indian* Princes court their Favour and Alliance, as not being able to resist or withstand them.

They seek the Spice Islands.

THEY having penetrated so far to the Eastward, their next Enterprize was in quest of the *Spice Islands*; upon which Expedition *Antonius Ambreus* was dispatch'd, who fell in with a very favourable Opportunity; for the Kings of *Ternate* and *Tidore*, the most powerful Princes of the *Moluccas*, were then at War, and most of the Islands in these Seas were engaged in the Interest of one or other of those Princes, and when the *Portuguese* arrived there, each of those Princes courted their Friendship; the *Portuguese* taking the Advantage of this Difference between those two leading Princes, found no great Difficulty to settle a Trade, establish Factories, and build Forts for their own Advantage and Security, the Inhabitants of both Parties in the different Interests of the contending Princes above-mention'd being each willing to oblige and encourage the *Portuguese*, in hopes of their Alliance and Assistance if occasion required.

THUS Success of the *Portuguese*, with their Agreement with the *Spaniards* that all Eastern Discoveries should

ſhould belong to *Portugal*, and all the Weſtern to *Spain*, made them now think themſelves Lords of the Navigation, Conqueſt and Commerce of *Ethiopia*, *Arabia*, *Perſia*, and *India*, and accordingly they built themſelves Forts and Cities where they thought convenient, upon the *African*, *Arabian*, *Perſian*, and *Indian* Coaſt, but more particularly upon the Spice Iſlands.

Spaniards attempt the Spice Iſlands.

THE *Portugueſe* now thought themſelves ſecure in Poſſeſſion of the Spice Iſlands, and although the *Spaniards* would have been glad to have had a Fellow-feeling with them in the Sweets of their Profit, yet they could not in Honour attempt it, becauſe it had been mutually agreed between them that all Weſtern Diſcoveries was to belong to the *Spaniards*, and the Eaſtern to the *Portugueſe*, till (as we have obſerved before) *Magellan*, prejudiced againſt the *Portugueſe* for the Slights he had received from them, thought he had found out a way whereby the King of *Spain* might be entitled to the *Philippines*, notwithſtanding the ſaid Contract, which was by ſailing Weſt to them, thereby making them a Weſtern Diſcovery, and conſequently including them in the Contract, as the Property of the King of *Spain*.

Magellan's Expedition to the Spice Iſlands.

THE King of *Spain*, glad to take the Advantage of this Pretenſion, diſpatch'd *Magellan* upon this Weſtern Diſcovery of the Spice Iſlands, who ſail'd through the Straits of *Magellan* (ſo called after his Name) to the *Ladrones*, and ſo to the *Philippines*, where he was kill'd; but his Ships arrived at *Ternate* about ten Years after the firſt Arrival of the *Portugueſe* here. The King of *Tidore* ſuffer'd the *Spaniards* to eſtabliſh a Factory in his Country, and they left a Ship there to be refitted, or to attend the Buſineſs of the Factory; but notwithſtanding the cunning of the *Spaniards* in making this a Weſtern Diſcovery, the *Portugueſe* did not think they had any Right to trade to thoſe Iſlands, but look'd upon them as Treſpaſſers upon their Property, and as ſuch they ſeiz'd their Ship, deſtroy'd their Factory, and ruin'd their Trade. The King of *Spain* at the ſame Time having occaſion for a little Money, and ſuppoſing that would do him more ſervice than all his pretended Property in the Spice Iſlands, he mortgaged all his Property in and Right to the Spice Trade, to the *Portugueſe*, for three hundred and fifty thouſand Ducats, in the Year 1529; which Money being never ſince repaid, the *Spaniard* has hitherto forfeited all his ſuppoſed Right to the Spice Trade.

The Engliſh Expedition.

THE *Engliſh* were the next that viſited the Spice Iſlands, under the Command of Mr. *Drake*, (afterwards Sir *Francis Drake*) who ſail'd from *Plimouth*, *December* 13, 1577, with five Ships and a hundred and ſixty four Men; he arrived at Fort St. *Julian* on the Coaſt of *Brazil* in South *America*, and ſail'd thence *July* 17, 1578, and on the twentieth entered the Straits of *Magellan*, through which he paſs'd, and enter'd the Great *South Sea*, *September* 6, but meeting with bad Weather, they were driven in Latitude 57 South. In this Storm Captain *Winter* being ſeparated from him, made the beſt of his Way for *England*, but Mr. *Drake* proceeded, and arrived at *Lima* in *Peru*, on the Weſt Coaſt of South *America*, on the thirteenth of *February*, where he found twelve *Spaniſh* Merchant Ships, which he plunder'd of what Treaſure they had, (for they were not prepared to reſiſt him, having never ſeen an Enemy in theſe Seas before.) From thence he ſail'd in Purſuit of a Ship called the *Cacafogo*, all whoſe Loading was Treaſure, and came up with her about a hundred and fifty Leagues from *Panama*, and ſhe not being able to make much Reſiſtance, he took out of her thirteen Cheſts of Rials of Plate, fourſcore Pound Weight of Gold, and twenty-ſix Tun of Silver, beſides a great Quantity of Jewels and precious Stones.

Nova Albion.

FROM thence he ſail'd to *Nova Albion*, in the North Part of the Iſland of *Californea*, ſo called becauſe the King reſign'd his Crown into Mr. *Drake*'s Hands, and deſired that his Country might be taken into the Protection of the Queen of *England*, (then Queen *Elizabeth*;) but whatever was the Reaſon, *England* never formed any Colony there, nor ſeem'd much to regard the Mines of Gold and Silver which *Drake*'s Men ſuppoſed to be in *Nova Albion*.

To the Moluccas.

FROM hence Mr. *Drake* ſail'd to the *Molucca Iſlands*, where he arrived *November* 14, 1579, and upon his Arrival ſent a Preſent to the King of *Ternate*, with a Meſſage that he was come to trade in his Country, which was very acceptable to the King, who being weary of the inſolent Behaviour of the *Portugueſe*, who debarr'd his Subjects from Trading with any Nation but themſelves, choſe rather to have reſigned to the Crown of *England* than live under the Reſtraints and arbitrary Power of the *Portugueſe*; and as a Teſtimony of ſuch Submiſſion or Reſignation, gave Mr. *Drake* his Signet. If this formal Surrender could be called a Title, doubtleſs the *Engliſh* had the moſt indiſputable Right to *Ternate*, and all its Appendages, which is ſaid to be above ſeventy Iſlands more, all under this ſame Prince; but we do not find that ever the *Engliſh* purſued their Claim, only Mr. *Drake*, after he had been ſplendidly entertain'd, took in a good Quantity of Cloves, and ſail'd for *England*, where he arrived (after an almoſt three Years Voyage) *November* 3, 1580.

Engliſh go by the Cape of Good Hope.

AFTER all theſe Voyages, both Eaſtward and Weſtward to the *Eaſt Indies* and *Molucca* Iſlands, the *Engliſh* attempted an Eaſtern Paſſage to the *Eaſt Indies*, about the Cape of *Good Hope*, in the Year 1591, with three Ships, *viz.* the *Penelope*, Admiral; the *Merchant Royal*, Vice-Admiral; and the *Bonaventure*, Rear-Admiral; commanded by Captain *Raymond*, Captain *Lancaſter*, and Captain *Kendall*. They ſet Sail *April* 10, croſt the Line *June* 6; and meeting with South Eaſt Winds, ſtood for the Coaſt of *Brazil*, in about Latitude 26 South; where meeting with the Wind Northerly, they ſtood for the Cape, where they arrived the 28th of *July*.

AT their firſt Landing, the Negroes were afraid of them, but becoming more familiar, they ſold them as much Beef and Mutton as they wanted, an Ox coſting a Couple of Knives, and the Sheep one Knife a-piece. The Cattle were large, and not poor, nor very fat,

BUT having loſt many Hands by Sickneſs, occaſioned by croſſing the Line and Alteration of the Climate, they mann'd two Ships out of the three Companies, putting only Hands enough aboard the *Royal Merchant* to be ſufficient to work her, and ſo ſent her Home, the other two purſuing their Voyage, till *September* the 14th, when they met with a Storm that parted them, and the *Penelope* was never heard of more; and four Days afterwards they had a terrible Clap of Thunder and Lightning, which ſplit their Main-maſt, kill'd four of their Men, and diſabled others, who all recover'd except the ſaid four.

Thirty two kill'd

AT *Camora* on the Coaſt of *Africa* they took in freſh Water, and were civilly uſed at firſt, but ſo little were thoſe ſavage Brutes to be truſted to, that they deſtroy'd two and thirty of the *Engliſh* in Sight of their Ship, who having no other Boat but what the Men had aſhore, could not go to their Relief. Hence they ſail'd to *Zanzibar*, a *Portugueſe* Factory; but the *Portugueſe*, not willing that the *Engliſh* ſhould find any Trade there, gave it out, that they were Canibals or Man-eaters, and affrighted the Natives from having any Converſation with them.

IN

In *May* 1592 they sail'd about Cape *Comorin*, which is near *Zeylon*, and is the Southermost Point of the Continent of the *Indies*, and sail'd Eastward from thence towards *Malacca*, till they arrived at the *Nicobar Islands*, and thence to *Poolo Pisang*, in the seventh Degree of North Latitude, and near the West Coast of *Malacca*, where they continued till the End of *August*, when they were so weakened by the Loss of their Men, that they were not capable of any considerable Enterprize, but making Prizes of some *Portuguese* Ships that they met on the Coast of *Malacca*, they set sail for *England*, arriving at *St. Helena April* 3, 1593, and proceeded thence to *St. Domingo*, where the Captain and most of the Men going ashore to find Provision, the Ship went adrift, with only five Men and a Boy aboard, and the Captain got his Passage in a *French* Ship to *England*, where he arrived *May* 24, 1524.

Captain gets his Passage home.

There were afterwards three Ships more fitted out from *England*, intended for *China*, but not so much as one Man ever return'd to give any account of the Success of the rest.

But although these Disappointments might have been supposed sufficient to have deterr'd the *English* from ever attempting a Trade to the *East Indies* any more, yet it is so far from that, that they again undertake it more vigorously and regularly than ever. A Society of Merchants forming themselves into a Body, rais'd a Stock of seventy two thousand Pounds, and were incorporated into a Company by Letters Patent, dated *December* 30, 1600, in which they were stiled, *The Governor and Company of Merchants of* London *trading to the* East Indies; they had a Governor, Deputy-Governor, and twenty four Directors to be elected every Year; the Right of trading to the *East Indies* being invested in that Company only, and all other *English* Subjects attempting to trade thither to forfeit Ship and Goods, the Company at the same Time engaging to bring in as much Gold and Silver and foreign Coin every Year as they carry out.

The most regular Attempt.

The first *East India* Company.

In the first Expedition the Company sent out four Ships under the Command of Capt. *James Lancaster*, who bore the Queen's Commission, with a Power to exercise military Discipline, the Queen at the same Time sending Letters by him to several of the Princes of *India*, desiring that her Subjects might be well used, and be freely allow'd to trade. Admiral *Lancaster* went aboard the *Dragon*, a Ship of six hundred Ton, the other three, *viz.* the *Hector*, the *Ascension*, and the *Susan*, were commanded by *John Middleton*, *William Brand*, and *John Hayward*; these four Ships carried in all four hundred and eighty Men; they set sail from *Dartmouth April* 22, 1601, and arrived at the Cape of *Good Hope Sept.* 9. following, from whence they set sail *Nov.* 1, and arrived in *Achen* Road in the North Part of *Sumatra June*, 5, 1602, where the Admiral delivering Queen *Elizabeth*'s Letter and Presents to the King, obtain'd very advantageous Conditions of Trade, as we shall shew more at large when we come to speak of *Sumatra* in the Description and Trade of the *Sunda Islands*.

Their first Voyage

At *Achen* he took in what Pepper, Cinnamon, and Cloves he could get, and sail'd to *Priaman* on the West Coast of *Sumatra*, and having taken in more Pepper and Cloves there, he sail'd to *Bantam* in *Java*, where he arrived *December* 16, 1602, and having had Audience of the King, and deliver'd the Queen's Letter and Presents, settled a Factory there, disposed of his Goods he had left, and took Pepper in return for them, and so sail'd for *England Feb.* 22, and arrived in the *Downs Sept.* 11 1603.

Another Voyage

Captain *Henry Middleton* set sail from *Gravesend* on the 25th of *March* 1604, for the *East Indies*, with four Ships under his Command, and Queen *Elizabeth* being now dead, he had a Letter and Presents from King *James* I. to the young King of *Bantam*, which he deliver'd upon his Arrival there *Dec.* 20, 1604, and dispatching two of his Ships for *England*, he sail'd with the other two, to wit, the *Dragon* and *Ascension*, to *Amboyna*, where was a Fort built by the *Portuguese*, but the *Dutch* having taken it, and the Island would not suffer the *English* to trade there, and therefore he sent the *Ascension* to *Banda* or *Lantor*, about thirty Leagues Southeastward from *Amboyna*, where they took in Nutmegs and Mace without any Opposition from the *Dutch*, and the Admiral in the *Dragon* sail'd for the *Moluccas*, where he found the Kings of *Ternate* and *Tidore* at War, the former assisted by the *Dutch*, and the latter by the *Portuguese*; but the Admiral not being concern'd on either Side of the Quarrel, sail'd first to *Tidore*, and then to *Ternate*, whose King was inclined to encourage a Trade with the *English*; but the *Dutch* being his *dear Allies*, threaten'd that if he encouraged the *English*, they would desert him, and join the King of *Tidore*; at the same Time calling the *English* by such degrading and opprobrious Names, as none but the ungrateful *Dutch* would have used to the *English*, especially considering the Obligations they were under to them at the same Time.

The *Dutch* not suffering the Inhabitants of *Ternate* to trade with the *English*, Admiral *Middleton* sail'd to *Tidore*, where he took in great Part of his Loading of Cloves, and sail'd from thence to *Bantam*, where joining the *Ascension*, he set sail for *England*, where he arrived the 6th of *May*, 1606, and finish'd that Voyage.

Hitherto of the *Portuguese*, *Spaniards*, and *English* finding out a Trade to the *East Indies*; next of the *Dutch*.

The first Voyage of the *Dutch* to the *Oriental Islands* was in the Year 1595, above a hundred Years after the *Portuguese* had found the Cape of *Good Hope*, and ninety eight Years after they had found a Way about the Cape to the *East Indies*, seventy five Years after *Magellan* had discover'd the *Oriental Islands*, and eighteen Years after Sir *Francis Drake*'s Expedition to the *Moluccas*; so that they were the last, though they have since proved themselves the most tyrannical of all the *Europeans* that have made any Discoveries there, and by their unparallel'd Cruelty, where other Means would not answer their Purpose, or rather where there was no Provocation to such Barbarity, have got the largest Trade, and the most numerous Possessions of Factories and Garrisons in the *East Indies* of any Nation in *Europe*.

The *Dutch* attempt an *India* Trade.

Their first Expedition was four Ships fitted out at *Amsterdam* for the *East Indies*; they arrived at *Bantam* in *Java* in *June* 1596, where they were at first well used, and had a House assigned them for a Factory; but they of *Bantam*, by the Instigation of the *Portuguese*, began to take the *Dutchmen* Prisoners, but the *Dutch*, by way of Reprisal, seized three or four of their Vessels in the Harbour, and began to batter the Town, and then sail'd to *Batavia*, to the Eastward of *Bantam*, where they took in a Cargo of Spices, and what other Goods they could get fit for their Purpose; and without going any further Eastward, return'd to *Holland*, where they arrived *August* 11, 1597.

The *Dutch* sent eight Ships more to the *East Indies* in the Year 1598, commanded by Admiral *Neecus*; they sail'd to *Bantam*, where four of them loaded with Pepper, and the other four sail'd for the *Moluccas*, and arrived at *Amboyna*, *March* 3, where two of them loaded with Cloves there and at *Ternate*, at which latter Place they settled a Factory; and the other two took in Mace and Nutmegs at *Banda*, and all four return'd to *Holland* in the Beginning of the Year 1600.

But

But before the Arrival of theſe four Ships, the *Dutch* had ſent out three more, and after them the above-mention'd four, as ſoon as they were unloaded, and although the Trade was hitherto confined to *Amſterdam*, or the Province of *Holland* only, yet this Proſpect of Succeſs and Profit put other Companies upon raiſing ſeparate Stocks, and ſending Ships to the *Eaſt Indies* too, inſomuch that *Dutch* Veſſels ſwarm'd in the *Indian* Seas; but the States ſeeing them ſo numerous, thought it was beſt to unite them into one Company, that they might unanimouſly reſiſt any Oppoſition of the *Spaniards*, *Portugueſe*, &c. which accordingly they did, raiſing a Capital Stock of Six Millions of Florins; in which *Amſterdam* had one half, *Middleburgh* a Quarter, *Rotterdam*, *Delf*, *Enchuyſen* and *Hoorn*, each of them a ſixteenth Part. This Company was incorporated in the Year 1601, the next Year after the *Engliſh Eaſt India* Company was eſtabliſhed.

A Dutch Eaſt India Company began.

And now they began to be in earneſt; fitting out Fleets for the *Eaſt Indies* ſtrong enough to over-match the *Portugueſe*, ſeizing their Ships wherever they found them, and taking from them one Fort and Factory after another, till they had hardly any left; of which we ſhall give a larger Account as we come to the Hiſtory of the ſeveral Coaſts or Iſlands where the *Portugueſe* had got thoſe Poſſeſſions.

In 1602 the *Dutch* ſent a Fleet, which arrived at *Bantam* in *March*, and ſail'd to the *Molucca's* to attack the *Portugueſe* Fleet, but the *Portugueſe* proved too many for them, and obliged them to retire: The *Dutch*, nettled at this, fitted out a Fleet of twelve Ships in the Year 1605, routed the *Portugueſe*, and took *Amboyna*; and then Part of their Fleet ſailing to *Tidore*, attack'd a Fort the *Portugueſe* had in that Iſland; and the Magazine of Powder happening to blow up, deſtroy'd a Part of the Wall, and very much facilitated the *Dutch* Conqueſt of *Tidore*.

The *Spaniard*, who by his Contract with the *Portugueſe*, thought himſelf reſtrain'd from attacking them in any of their Eaſtern Poſſeſſions, as the *Molucca's* was, yet thought that they were diſcharged from their Contract as ſoon as the *Portugueſe* were diſcharged from their Poſſeſſions; and conſidering that though they were under Contract with the *Portugueſe*, yet they were not with the *Dutch*, they were reſolved to try their Fortune for a Trade to the *Molucca's*; and fitting out a ſtrong Fleet from the *Philippines*, fell upon the *Dutch* in the *Moluccan* Forts, beat them, and retook the Forts before they had had them a Year in Poſſeſſion; but the *Dutch*, aſſiſted by the King of *Ternate*, ſoon diſpoſſeſſed the *Spaniards*, upon which a War commenced between the *Spaniards* and *Dutch*, and in their different Intereſts the King of *Tidore* ally'd to the *Spaniards*, and the King of *Ternate* to the *Dutch*; and this War continued many Years.

In the Year 1609 the *Dutch* ſent out a ſtrong Fleet with Land Forces aboard, and arriving at *Banda*, demanded leave to build a Fort at *Nero*, (one of the *Banda* Iſles) to defend themſelves from the *Spaniards* and *Portugueſe*, as they pretended, but the *Bandaneſe* deny'd them; whereupon the *Dutch* fell upon them with a Body of Troops, and ſlew great Numbers of them. The *Bandaneſe* finding themſelves too weak to reſiſt them, had recourſe to Policy when Strength would not do, and under a Pretence of treating with the *Dutch* about excluding all other Nations from any Share of Trade with them, (the beſt Bait they could lay for the inſatiable *Dutch*) they drew ſeveral of the Officers into a Wood, where by an Ambuſcade they were all cut in Pieces: But the *Dutch*, exaſperated at this, made continual War upon the *Bandaneſe*, whoſe laſt Shift to ſave their expiring Liberties was to make a formal Surrender of their Country to King *James* the Firſt; but how much we were the richer, or they the ſafer, for that Surrender, muſt be referr'd to the Sequel of the Hiſtory to be determined.

Dutch ſend a Fleet to Banda.

CHAP. XV.

Of the illegal Practices of the Dutch *to exclude all other Nations from trading to the Spice Iſlands, and other Parts of the* Eaſt Indies. *Their unjuſt Uſage of the* Engliſh *in thoſe Places; and particularly of their barbarous torturing and maſſacreeing the* Engliſh *in the Iſland of* Amboyna, *and that not only in a Time of Peace, but after a ſolemn Agreement between the* Engliſh *and* Dutch Eaſt India *Companies, ratified and confirmed by the Sovereigns of both Nations.*

The *Engliſh* (as well as *Dutch*) purſued the *Eaſt India* Trade, and ſent the *Hector* and the *Dragon*, under the Command of Captain *Keeling*. The *Dragon* anchored in the Road of *Priaman*, on the Weſt Coaſt of *Sumatra*, *July* 26, 1608, and when they had taken in what Pepper they could get, came to *Bantam* the fourth of *October* following; and the *Hector*, having been at *Surrat*, arrived at *Bantam*, *December* 2; and *December* 23 the *Dragon* ſet ſail for *England*, and Captain *Keeling* in the *Hector* ſail'd for *Banda*, where he arrived *February* 8, 1608-9; and having deliver'd King *James's* Letter and Preſent to the States of *Nero*, (one of the *Banda* Iſles) he agreed to ſettle a Trade with them, and built a Fort there, and had of them 225 Cattees of Mace, and 1357 Pound of Nuts.

Arrives at Banda.

The *Dutch* at the ſame time thinking to make the *Banda* Trade all their own, ſent their Admiral *Vanhoof*, who arrived in the Road of the above-mentioned Iſland of *Nero*, *April* 9, 1609, and produced a Writing to the States of *Nero*, importing, that the States of *Holland* would confirm any Agreement that he (as Admiral) ſhould make with any of the States in the *Eaſt Indies*; and thereupon, as if all had been his own, he propoſed to build a Fort in the Iſland of *Nero*, but the *Bandaneſe* refuſed it; whereupon he, regardleſs of Juſtice or Humanity, landed 1200 Men, and kill'd a great Number of the *Bandaneſe*; and when they had weaken'd them ſo as to make them unable to reſiſt, they went about building their Fort.

Dutch Fort at Nero.

The *Dutch* having got this Footing, began to

inſult the *Engliſh*, and as if now all the Trade had been their own, interrupted them in getting their Goods aboard which they had purchaſed of the Natives; which the States of *Nero* ſeeing and reſenting, and not able publickly to revenge it, drew the *Dutch* Admiral and his Council into an Ambuſcade, and cut them to Pieces, and had ſerved more of the *Dutch* in the ſame manner, if Captain *Keeling* had not diſcover'd and prevented it; as a Reward for which the ungrateful *Dutch* again reſtrain'd the *Engliſh* Trade, and the better to perform that, ſearched their Boats under pretence of preventing their carrying Ammunition and Proviſion to the *Bandaneſe*; at the ſame Time they took the Town of *Lubataca* from them, burnt ſixteen Veſſels belonging to the States of *Banda*, and commanded Captain *Keeling* to be gone out of the Reach of their Guns, which they had planted upon their Fort of *Naſſau*, as they called the Fort they had built in the Iſland of *Nero*, and afterwards order'd him to quit all that Coaſt; but he had Courage enough to deſpiſe their Orders, and ſtaid in the Road to take in his Loading.

Dutch Ingratitude.

Engliſh Factory at *Bantam.*

On the 10th of *Auguſt* 1609, Captain *Keeling* ſail'd for *Bantam*, ſettled a Factory, and then ſail'd for *England*, *November* 3, and arrived in the *Downs May* 10, 1710.

After this Captain *Middleton* in the *Expedition*, ſail'd from the *Downs* to *India*, *April* 24, 1609, and arrived at *Bantam*, *December* 7; from whence he ſail'd for the *Moluccas*, and touch'd at the Iſland of *Bouton* near *Macaſſar*, thinking to load with Spices there; but the Warehouſes having been conſumed by Fire, and the Wind not ſerving for the *Moluccas*, he went for the *Banda* Iſlands, where the Natives would have been glad to trade with him, but the *Dutch* would ſuffer none to trade there but themſelves.

The Governor of the *Dutch* Fort *Naſſau* commanded Captain *Middleton* to come under his Guns, which the Captain refuſing, the *Dutch* intended to clap a Fireſhip on board of him, and if that ſhould not ſucceed, to ſend two Ships of a thouſand Tun each, with ſome Frigates, to ſink him; but Captain *Middleton* underſtanding their Deſign, went aſhore to know why they uſed him ſo; to which they anſwer'd, that the Iſlands of *Lantor* and *Nero* were theirs, and that no other Nation ſhould trade thither, nor would they ſell him any Spices; therefore he ſail'd to *Pooloway*, which Iſland, with that of *Pooloroon*, held out ſtill againſt the *Dutch*, and preſerved their Liberty. Here he purchaſed his Lading of Mace and Nutmegs, and arrived in *Bantam* Road *October* 9, 1610.

The envious *Dutch* knowing that he had got his Lading in *Pooloway*, though it was an Iſland to which their Tyranny or Dominion had not extended, yet they follow'd him with two great Ships, and ſeveral Frigates, deſigning to ſink or take him; but by reaſon of contrary Winds or Calms, they never could come up with him to put their unjuſt Deſign in Execution.

Many more, and even innumerable Inſtances might be given of the Avarice of the *Dutch*, and of their Endeavours to block up and intercept the Trade of the *Engliſh* with any of the *Indian* Natives, eſpecially in the Spice, or any other profitable Branches of Trade, and this in a Time of profound Peace between the *Engliſh* and *Dutch*; but the *Bandaneſe* being willing to trade with the *Engliſh*, and the *Dutch* oppoſing it, the Inhabitants of *Pooloway* and *Pooloroon* put on a Reſolution, rather than run the Hazard of falling under *Dutch* Tyranny, to make a formal Surrender of the ſaid two Iſlands, with the Country of *Wayre* and Iſland of *Roſingin*, to King *James* the Firſt of *England*, by Inſtruments in Writing, ſign'd by the Kings or States of the reſpective Iſlands, bearing Date *December* 14, 1616, and deliver'd by their own Hands to Mr. *Nathaniel Courthop*, Mr. *Thomas Spurway*, and Mr. *Sephon Cozoke*, to the Uſe of his Majeſty King *James*. They alſo deliver'd them a Nutmeg-Tree, with its Root, and alſo the Fruit upon it as it grew; alſo a live Goat, and deſired to have the *Engliſh* Colours planted on the Iſland of *Poolorcon*, and thirty ſix great Guns fired in Memory of this Surrender; all which was done accordingly.

Surrender of Pooloway, &c

The *Engliſh* being now in Poſſeſſion of *Pooloroon*, and their Ships being in the Road, ſeveral *Dutch* Ships appear'd in Sight, one of which ſtruck her Enſign, and hoiſted a bloody Flag, which made the *Engliſh* apprehend they ſhould be attack'd, and therefore they landed ſeveral Pieces of Ordinance, and threw up a Redoubt on the Iſland of *Pooloroon*, whereby they had the Command of the Road.

Dutch come to attack the Engliſh.

On the third of *January* came three *Dutch* Ships from *Nero*, one of eight hundred, one of five hundred, and another of one hundred and ſixty Tuns, full of Men, with a deſign to attack the *Engliſh*, who thereupon ſhew'd them the Surrender of *Pooloway* and *Pooloroon* to the King of *England*, and demanded the Iſland of *Pooloway*, which the *Dutch* ſtill kept in Poſſeſſion, as if it had been their own. The *Dutch* ſeeing the Redoubt, and the Artillery aſhore, which cover'd the *Engliſh* Ships in the Road, durſt not engage them; but ſeeing Captain *Davis* in the *Swan* ſailing over to *Wayre*, (a Place in the Iſland of *Lantor*) two *Dutch* Ships from *Nero*, without War or Provocation, pour'd their Broad-ſides into him, and eaſily took him, he not having above thirty able Men on board, Mr. *Stephen Cozoke* being kill'd in the Engagement by a Cannon Ball.

Dutch take the Swan, though no War

Captain *Courthop* ſeing the illegal Actions of the *Dutch*, regardleſs of Juſtice or Humanity, he yet bravely reſolved to defend the Iſlands lately ſurrender'd to the Crown of *England*, and in order thereto built a Fort upon a little Iſland near *Pooloroon*, took his Guns out of his Ship the *Defence*, and planted in the ſaid Fort, thereby being able, as he thought, to command the Road, and defend theſe Iſlands from the Power of the *Dutch*, till he ſhould be relieved from *England*; but the few Men that he left in the *Defence*, either for fear of the Hardſhips they might undergo in that barren Iſland before they could be ſupplied from *England*, or rather being bribed by the *Dutch*, run away with the Ship to them, who broke open the Cabbins and Cheſts, and plunder'd them of every Thing they valued, and threw the reſt overboard; and although the Uſage of the *Dutch* to the *Engliſh* Renagadoes, not intended as an Act of Juſtice but of Cruelty in the *Dutch*, yet it may be ſaid the Men were juſtly uſed for their Treachery and Villainy in running away with the Ship to the *Dutch*, who may now be called profeſt Enemies; for they laid the Men in Irons, threw them into Dungeons, and voided their Excrements upon them by way of Contempt; others they carried about the Country in Triumph, giving out that ſuch Slaves were the *Engliſh* to the *Dutch* in *Europe*; and thus they treated not only Men who belonged to the *Defence*, (who might in ſome Reſpects be ſaid to deſerve it,) but all other *Engliſh*, where ever they could get them; and this not only in a Time of full Peace between *England* and *Holland*, but when the *Dutch* were under the greateſt Obligations of Gratitude to the *Engliſh* for their very Beings which they then enjoy'd.

Engliſh men run away with their Ship; the Du

Captain *Courthop* ſent to the *Dutch* at *Nero* to demand the Reſtitution of the Ship *Defence*, but they refuſed that, except he would quit all Pretenſions to the Iſland of *Pooloroon*, and all the reſt of the *Banda Iſles*; they alſo exhibited ſeveral falſe

Com-

Complaints againſt the *Engliſh*, to juſtify the inhuman Uſage wherewith they had and were reſolved to ſerve the *Engliſh*, as they found opportunity.

Much intolerable.

CAPTAIN *Courthop* ſeeing the *Dutch* obdurately prepoſſeſs'd of a Reſolution to make all their own as much as poſſible, and as they had no regard to Juſtice, all treating and reaſoning was in vain, he diſpatch'd Mr. *Spurway*, ſeveral of the States and great Men to the *Engliſh* Factory at *Bantam* in *Java*, to acquaint them with the State of their Affairs, and ſeek redreſs; but the *Dutch* gave chace to the Veſſel that carried them, and would have ſunk her had not they put into *Bouton*, where the King protected them, ſent them to the further part of the Iſland, and furniſh'd them with another Veſſel to carry them to *Bantam*, where they arrived *June* 3, 1617.

FROM thence they diſpatch'd Letters to the *Eaſt India* Company in *England*; acquainting them that *Pooloroon* not only afforded Store of Mace and Nuts, but would afford more if well cultivated; and that *Lantor* and *Roſinging* had great Plenty of them; and that if the Factory at *Pooloroon* was not ſpeedily ſupplied and re-inforced, it would be an irretrievable Loſs to *England*, as well as a Diſgrace to them in that Part of the World, if we ſhould ſuffer the *Dutch* not only to rob us of our Trade, but to inſult us under the Loſs of it.

Dutch Ravages increaſe.

TWO *Engliſh* Ships, called the *Solomon* and the *Attendance*, arrived on the 25th of *March* 1618, in Sight of the *Engliſh* Fort at *Pooloroon*, but were intercepted and attack'd by the *Dutch*; and although they held out ſeven Hours, yet were at laſt taken, and carried into *Nero* Road under their Fort *Naſſau*; nor could they two be expected to defend themſelves againſt four, eſpecially when the *Solomon* was ſo deep laden with Rice and other Proviſion for the *Bandaneſe*, that ſhe could not uſe her lower Tire; ſo that it had been cowardly and diſhonourable for an Enemy to have engaged two Ships, and one of them ſo deeply loaded, with double their Number of fighting Ships; much more for a dear Ally to do it in a Time of Peace, and that under Pretence of a Commiſſion from the States of *Holland*, of which there was the greater Probability of Truth, becauſe the *Dutch* Commanders were never called to account for all this their barbarous Uſage to the *Engliſh*, in not only taking their Ships without any open War, but maſſacreing the Men in cold blood that they found aboard.

THE *Dutch* thus taking all Opportunities to weaken the *Engliſh*, did alſo form falſe Reports to alienate the *Bandaneſe* from the *Engliſh*, by telling them, *That Captain* Courthop *had loſt all his Men*; *that he had no Proviſions*; *that this Iſland, or the other, (naming ſome one of the* Banda *Iſlands) had agreed to ſurrender to them*, and other ſuch Arguments; but all could not prevail with the *Bandaneſe* to make them deſert the *Engliſh* Intereſt, ſo long as the *Engliſh* ſtood by them; in which reſpect Captain *Courthop* was faithful to his laſt Breath; but the Hardſhips he had to encounter with were almoſt inſupportable, by reaſon of his Scarcity of Proviſion and Reinforcements, he not being ſupplied either from *England* or *Bantam*, as he requeſted and expected; and on the other Side, the Petitions and Importunities of his *Engliſh* Sailors, now periſhing in Priſons by the Cruelty of the *Dutch*, begging of him to make Peace upon any Terms, to releaſe them from their miſerable Tormentors and Tormentors, and he in Compaſſion ſent them what Proviſions he could ſpare under that Scarcity.

BUT *January* 27, 1618, Captain *Courthop* received an Expreſs, that Sir *Thomas Dale* was arrived at *Bantam* with an *Engliſh* Fleet, and that he had expell'd the *Dutch* from the Coaſt of *Java*, and would ſpeedily ſail for *Banda*, and correct the *Dutch* for their Inſolency; adviſing him to continue with the utmoſt Reſolution to defend the Iſlands of *Banda*, and eſpecially to encourage the People of *Pooloroon* and *Lantor* to perſiſt in their Loyalty, *&c.* but notwithſtanding all this Encouragement, he waited a whole Year, and had neither Supplies nor Intelligence from *Bantam*.

AND what was a further Mortification to Captain *Courthop*'s almoſt expiring Hopes was, that he heard that Sir *Thomas Dale*, the aforeſaid Commander of the *Engliſh* Fleet, was dead, and that the ſeveral Commanders differing amongſt themſelves, the Fleet was diſperſed to ſeveral Parts of *India*, by which means ſeven of them was fallen into the Enemy's Hands. Captain *Courthop* now deſpairing of any Supply from them, writ once more to the *Engliſh* Preſident at *Bantam*, in theſe Words. *God grant me well out of this Country, for the People have ſpent their Gold and Eſtates, and many of them have loſt their Lives and Liberties in expectation of* Engliſh *Succours.—Can every other Nation ſail into theſe Seas, and are the* Engliſh *only afraid to venture hither*, &c.

BUT although Captain *Courthop* was thus deſerted by the Factory at *Bantam*, he would not give up his Cauſe nor quit his Poſt, but ſent ſome Country Veſſels to *Macaſſar* for Rice, he in the mean time keeping himſelf in a Poſture of Defence againſt the *Dutch*, by repairing his Fort, in which they never durſt attack him, though they often threaten'd it; but after all his Diſcouragements and Diſappointments, his fatal Deſtiny unfortunately overtook him, for going over to regulate ſome Abuſes, he was attack'd by two *Dutch* Ships, whom he fought bravely till he was ſhot in the Breaſt, whereupon ſitting down a little, after a ſhort Pauſe, he threw himſelf over-board, rather than fall into their Hands, and was never ſeen or heard of more.

THUS died this brave Man, in the midſt of his ſteady Endeavours to put a Period to the Encroachments of the avaricious *Dutch*; a Man, who though diſappointed, and even neglected by his own Fellow-Subjects at *Bantam*, would never ſhrink from his Loyalty and Reſolution, till it may rather be ſaid he was murther'd by a Neighbour than ſlain by an Enemy, the *Dutch* and we not being at War at that Time.

WHEN Captain *Courthop* was dead, Mr. *Hayes*, with the unanimous Conſent of the *Engliſh* and *Bandaneſe*, took upon him the Command of the Fort, to whom the States of *Lantor*, purſuant to their Promiſe formerly made to Captain *Courthop*, made a formal Surrender of the Iſland of *Lantor* to the King of *England*, delivering the Inſtrument to Mr. *Hayes*, ſigned *November* 24, 1620.

IMMEDIATELY after the Surrender of *Lantor*, Mr. *Hayes* intercepted a *Dutch* Packet, by which he underſtood that a Treaty was concluded between *England* and the States of *Holland*, in Relation to the Spice Trade; which as ſoon as he perceived, he diſpatch'd it to Fort *Naſſau* in the Iſland of *Nero*, ſuppoſing that now all the Diſpute had been over between the *Engliſh* and *Dutch* reſiding or trading in the *Eaſt Indies*, about the Spice Trade; but neither would this ſatisfy the *Dutch*, for though they at firſt began with fair Means, and courted the *Lantor* Men to break with the *Engliſh*, and let them have their Spices, yet when the *Lantor* Men refuſed, the *Dutch* form'd the Town of *Lantor*, and the *Bandaneſe*, in return, kill'd a great many of their People in the Iſland of *Nero*.

AND notwithſtanding the Treaty between *England* and the States of *Holland* above-mentioned, the *Dutch* ſent a great Fleet with Land Forces aboard; and as Mr. *Hayes* ſuſpected that their

Deſign

Deſign was to make an entire Conqueſt of all the *Banda Iſlands*, he to prevent Hoſtilities, acquainted the *Dutch* Admiral by a Letter with the Surrender of thoſe Iſlands to the King of *England*, but he rejected it, and would make no anſwer to it, and order'd the Meſſenger to be gone immediately at his Peril; he alſo ſent an Order to the States of *Lantor*, to quit the *Engliſh*, and ſurrender to the States, which when they refuſed, he ſtorm'd *Lantor* again, and then took the Town, and ſet it on fire, and what *Engliſh* Factors were there they ſtripp'd naked, beat, and abuſed, ty'd them Hand and Foot, and carry'd them aboard of the Admiral, where they laid them in Irons; they alſo ſeiz'd the Company's Goods, amongſt which was twenty three thouſand Weight of Mace, and a hundred and twenty thouſand Weight of Nutmegs, beſides Treaſure, Cloth, and other Effects.

On the 6th of *March* the *Dutch* came with 1500 Men to attack *Pooloroon*, demanding a Surrender, or if they refuſed, they would ſerve them as they had ſerved them of *Lantor*; to whom the States of *Pooloroon* anſwer'd, that as there was then Peace between *England* and *Holland*, and as they were Subjects to the King of *England*, they preſum'd the *Dutch* would not attempt any Thing againſt them; but all their Arguments were in vain to the obdurate *Dutch*, who took poſſeſſion of the Iſland, and cauſed the Natives to demoliſh their Walls and Forts, the *Engliſh* in the mean Time looking on, without offering to defend their new Fellow Subjects, pretending, that becauſe *England* and *Holland* were at Peace together, they muſt not uſe any Hoſtilities againſt the *Dutch*; though they had both pull'd down the Houſes of the *Engliſh* about their Ears, plunder'd their Factories, and in the baſeſt Manner abuſed their Perſons, and amongſt the reſt of their Ravages demoliſh'd the *Engliſh* Battery, and applied the Guns to their own Uſe; and on the 26th of *April*, the *Dutch* ſent to the States of *Pooloroon*, commanding them to ſell the *Engliſh* no more Spice; and on the 28th, the *Dutch* General maſſacred forty two of the head Men of the Country in cold Blood, pretending they were guilty of ſome Conſpiracy againſt their High Mightineſſes; and theſe Outrages were committed after the Peace between the *Engliſh* and *Dutch* was known and proclaim'd at *Banda*.

The *Dutch* thus inſulting the *Engliſh*, and tyranizing over them and their Property, and the *Engliſh* on the other hand ſo paſſive under all the Injuries they ſuſtain'd from them, the two Nations being at perfect Peace at the ſame Time, there was at laſt Terms of Accommodation propoſed and agreed upon between the *Engliſh* and *Dutch Eaſt India* Companies, expreſt in particular Articles, and ſign'd by both Parties, *July* 7, 1619: And that the Reader may ſee as well the advantageous Terms the *Dutch* had, as their Fidelity in keeping to their Contract, we ſhall inſert the Articles and Conditions of their Agreement, which are as follow:

Articles of Agreement between the Engliſh *and* Dutch, *relating to the* Eaſt India *Trade, ſign'd and agreed upon* July 7, 1619.

I. That there ſhall be a perpetual Amneſty of all Offences and Injuries before that Time committed in the *Eaſt Indies*, either by the Subjects of his Majeſty, or the Subjects of the ſaid Lords the States; and accordingly all Priſoners on either Part ſhould be ſet at Liberty, and all Ships, Goods and Merchandize taken before the Publication of this Treaty in the *Eaſt Indies* ſhould be reciprocally reſtored.

II. That Officers, Agents, and Servants, as well on the Part of one Company as the other, ſhall entertain a friendly Correſpondence, and afford each other mutual Aid whenever they meet, as becomes Neighbours and Friends engaged in ſo ſtrict an Alliance; and if either Party ſhall find the other in Diſtreſs at Sea, they ſhall afford them all friendly Aſſiſtance to the utmoſt of their Power, and faithfully deliver any Letters or Accounts that ſhall be ſent by them.

III. The Trade and Commerce of the *Eaſt Indies* ſhall be free as well for the *Engliſh* Company as for that of the *United Provinces*, and each of the ſaid Companies ſhall be at Liberty to raiſe and employ ſuch ſeparate Capital Stock and Funds as they reſpectively ſhall think fit.

IV. And for the general Good and Advantage of Trade, they ſhall mutually endeavour to regulate and leſſen the exceſſive Duties and Impoſitions lately exacted in the *Indies*, and leave off the Practice of giving Gratuities and Preſents over and above.

V. They ſhall by common Conſent agree to fix a reaſonable Price in the *Indies* on all Merchandize, and at publick or private Sales made either in *England* or *Holland* of *India* Goods, they ſhall agree upon a ſtated Price for a certain Time, during which Time it ſhall not be lawful for either Party to ſell under that Rate.

VI. And for the avoiding all manner of Jealouſies and Differences for the future, the Agents or Factors on both Sides ſhall conſult and agree together upon a moderate Price for purchaſing Pepper at *Bantam*, and other Places in *Java Major*, (nevertheleſs there ſhall remain a Freedom of Commerce in other Parts of the *Indies*, and alſo in *Java Major*, as to other Merchandizes, agreeable to the third Article;) and to this End skillful Agents or Factors ſhall be appointed to buy Pepper, which when bought ſhall be divided and ſhared equally.

VII. The *Engliſh* Company ſhall enjoy a free Trade at *Paliacate*, and bear half the Charge of maintaining the Fort and Garriſon there, to commence from the Time of publiſhing this Treaty in thoſe Parts.

VIII. In the Iſles of the *Moluccа's*, *Banda* and *Amboyna*, the Trade ſhall be ſo regulated by common Conſent, that the *Engliſh* Company ſhall enjoy a third Part of that Trade, as well for the importing and ſelling of Goods in thoſe Iſlands, as of the Fruit and Merchandize, the Growth of thoſe Iſlands, which ſhall be exported from thence; and the *Dutch* Company ſhall enjoy the other two Thirds.

IX. As to buying and ſharing the ſaid Fruits and Merchandizes, the principal Factors of the two Nations ſhall buy them at a current Price, and divide them by Lot, to each their reſpective Share; and for that End it ſhall be lawful for either Party to have acceſs to, and abide in the Forts and Magazines of the other.

X. And conſidering that a Trade ſo remote and important cannot be ſecured but by a conſiderable Force, this ſhall be done by furniſhing out and maintaining twenty Ships of War, *viz.* ten by each Company, the ſaid Number to be increas'd or leſſen'd by common Conſent, as Occaſion ſhall require; and every one of the ſaid Ships ſhall be of the Burden of ſix or eight hundred Ton, and carry an hundred and fifty Men, and thirty Pieces of Cannon, which will carry Bullets from eight to eighteen Pound Weight, with Ammunition, and all other Neceſſaries ſuitable thereto.

XI. And the Council of Defence ſhall order what Number of Frigats, Galleys and other ſmall Veſſels ſhall be further neceſſary for the ſaid Defence.

XII. The Forts and Garriſons in the Iſlands of the *Moluccа's*, *Banda*, and *Amboyna*, ſhall be maintain'd out of the Duties and Impoſitions to be levied on the Fruits and Merchandizes exported from the ſaid Iſlands, which Duties and Impoſitions

ſhall

ſhall be aſſeſs'd by Order of the Council of Defence, and received by the Agents of both Parties, and by them be tranſmitted from Time to Time, as it ſhall be neceſſary, to the Treaſurers of both Companies, for the Payment of the Soldiers.

XIII. For the better ordering and eſtabliſhing the ſaid Defence, a Council of Defence ſhall be erected, conſiſting of eight Perſons of the principal Officers there, and an equal Number to be elected out of each Company, and they to have the Precedency by Turns.

XIV. This Council ſhall order all Things which ſhall concern the common Defence by Sea, and diſtribute the Ships of War to ſuch Stations as they ſhall judge moſt neceſſary.

XV. They ſhall alſo regulate the Duties and Impoſitions which ſhall be neceſſary for maintaining the ſaid Forts and Garriſons, and ſhall have Power to call the Collectors of the ſaid Duties to Account.

XVI. The Ships of War ſhall continue in the Stations appointed them, and purſue the Orders of the Council of Defence, and not be employ'd in importing Merchandizes into theſe Kingdoms or Provinces.

XVII. Provided that the ſaid Ships of War may be ſometimes employ'd in tranſporting Merchandize from Place to Place in the *Indies*, for the Service of their reſpective Companies, if the ſaid Council approve of it, and if it be not prejudicial to the Defence.

XVIII. And in Caſes of Neceſſity the ſaid Council are impower'd to employ ſuch Numbers of Merchant Ships as they ſhall judge proper in the ſaid Defence.

XIX. The Loſſes and Damages that ſhall happen in any Engagement for the common Defence, or in going to or returning from the ſaid Defence, ſhall be born equally, and defray'd at the common Charge, and the Gains and Prizes which ſhall be made ſhall redound to the common Profit.

XX. The ſame Rule ſhall be obſerved as to Merchant Ships employ'd on the like Occaſion, and during ſuch Service the Soldiers and Proviſions for the Seamen ſhall be made at the common Charge of both Companies; and in Conſideration of the Interruption their Commerce may ſuſtain by ſuch Service, they ſhall receive ſuch Recompence as ſhall be adjudg'd them by the Council of Defence.

XXI. But if any Ship of War being in his own Road or Fort, or in going or returning thither ſhall receive any Damage by Tempeſt or other Misfortune, ſuch Lots ſhall not fall on the Community, but be born by the Company ſuch Ship ſhall belong to.

XXII. And for the avoiding all Diſputes that may ariſe concerning the Value of Ships loſt or endamaged, the Council of Defence ſhall make an Eſtimate of all the Ships of War and others before they be employ'd in the common Defence.

XXIII. The Forts, as well on one Part as the other, ſhall remain in the Hands of thoſe who poſſeſs them at preſent.

XXIV. And whereas a Queſtion has been moved concerning the building certain new Forts, which the *Engliſh* Company have judged neceſſary for the Security of their Men and Goods, it is agreed that the ſaid Queſtion ſhall remain undecided for the Term of two or three Years, to the End that having duly view'd and conſider'd how many Forts, of what Nature, and in what Places the ſame will hereafter be neceſſary, the ſaid Queſtion may be reſum'd, and determined in ſuch manner as may tend to the mutual Satisfaction of both Parties.

XXV. As to ſuch Forts as ſhall be taken in the *Moluca's* or any other Part of *India*, by the Intereſt and joint Forces of both Companies, they ſhall be equally poſſeſs'd, garriſon'd, and maintain'd by each Company, who ſhall have there equal Numbers, or they ſhall be divided equally between the two Companies, according to the Direction of the ſaid Council of Defence.

XXVI. They ſhall jointly endeavour to open and eſtabliſh a free Trade to *China*, and other Places in the *Indies*, by ſuch Ways and Means as the Common Council ſhall judge expedient.

XXVII. The ſaid Companies ſhall not prevent or exclude each other from trading, either by Force or by any ſeparate Contracts which they ſhall make in the *Indies*, but the Trade ſhall be free and open, as well for the one as for the other, in every Place, as well within the Forts and Towns either Party ſhall be poſſeſs'd of, as elſewhere.

XXVIII. And it is agreed that without the Conſent of both Companies no other Perſon, not being of their reſpective Bodies, ſhall partake of the Benefit of the preſent Treaty; and if any Subject of either Nation, not being of the ſame Body, ſhall undertake any Thing in prejudice of the ſaid Companies, they ſhall jointly and ſeverally oppoſe the ſame, and maintain their reſpective Privileges; and his ſaid Majeſty, and the ſaid Lords the States ſhall be addreſs'd not to authorize any other Companies to intermeddle in the Traffick or Navigation of the *Indies*, while the preſent Agreement ſhall remain in force.

XXIX. If in any Part of the *Indies* the one or the other Company ſhall have a Factory, Trade, or Effects, and it happen by the Death of the Factors, or ſome other Misfortune, that the Goods or Eſtates of either remain without any Perſon legally entitled to adminiſter them, the ſurviving Factors and Officers of the other Company ſhall take the ſaid Goods and Eſtate into their Poſſeſſion, and honeſtly keep them for the Owners, to whom they ſhall reſtore them in convenient Time.

XXX. This Treaty ſhall be in force for twenty Years, and if during that Time there ſhall happen any Diſputes which cannot be terminated by the ſaid Council abroad, nor on this Side by the ſaid two Companies, ſuch Differences ſhall be referr'd to the King of *Great Britain* and the ſaid Lords the States General, who will graciouſly be pleaſed to determine ſuch Differences to the Satisfaction of both Parties.

All which Articles ſhall be faithfully and inviolably obſerved by both Parties, according to the true Intent and Meaning of this Treaty; and the above named Lords do engage, that as well his ſaid Majeſty of *Great Britain* as the ſaid Lords the States, and both the ſaid Companies, ſhall approve, confirm, and ratify the ſaid Treaty, and reciprocally deliver Inſtruments of Ratification in due Form.

Done at London *the 7th of* July, 1619, O. S.
Sign'd by the Lords and the Commiſſioners of the reſpective Companies;
Ratified by King James *the Firſt at* Weſtminſter, July 16, 1619.

One would think the *Dutch* had made their Bargain with the *Engliſh* as advantageous to themſelves as they could deſire, and ſuch as none but the *Engliſh* would ever have agreed to, when the *Engliſh* was to bear half of all Charges, as by Article 7, 10, 19, 20, and yet to have but one third of the Trade to thoſe material Places *Banda*, *Amboyna*, and the *Molucca's*, by Article 8, and I think the Reaſon why the *Engliſh* ſhould be content with one Third, as by Article 8, when the Iſlands of *Banda* was their Propetry, and why the *Dutch* were not content with two Thirds (as the Sequel proves they were not,) is equally difficult to determine. Our next Buſineſs is to obſerve how our

dear Allies ſtood by their Contract with the *Engliſh*, as it was agreed upon by both Parties, and expreſt in the above-mention'd Articles.

WITHIN leſs than a Year and a half after the Signing of the above-mentioned Agreement, *viz.* in *December* 1620, the *Dutch* General prepared and mann'd ſixteen Ships, declaring to our *Engliſh* Preſident, *that he intended an Exploit for the Good of both Companies, but not mentioning any particular Deſign.* The *Engliſh*, however, not apprehending any Danger from their lately contracted Allies and Fellow-Traders, had no thoughts of raiſing any Force to reſiſt him; and he the better to carry on his Deſign, did not deſire them to join him, but ſaid *he would attempt the Enterprize alone*, and accordingly ſet ſail from *Batavia January* 3, and making the beſt of his Way to the *Banda Iſlands*, arrived there *February* 3, and made Preparation againſt the Iſland of *Lantor*, which (as we obſerved before) had been ſurrender'd to the *Engliſh* in *November* before, and our Governor of *Pooloroon* had it now in Poſſeſſion, and had ſettled a Factory there.

The twenty-third Article broke by the *Dutch*.

WHEN our chief Factor of *Lantor* underſtood the Deſign of the *Dutch* againſt that Iſland, he ſent a Letter to the *Dutch* General, aſſerting the King of *England*'s Right to the Iſland of *Lantor* by Surrender, and that it would be a Breach of the late Agreement to offer any Violence to it; but the *Dutch* General, ſcarce reading the Letter, threw it from him in the higheſt Diſdain, and cauſed the Meſſenger to be thruſt out of Doors, and bid him tell the *Engliſh* Factor at *Pooloroon* immediately to fetch from *Lantor* all the People and Goods belonging to the *Engliſh*; for whoever he found there he would look upon them as utter Enemies, and treat them as ſuch; and in a few Days he landed his Forces, and took Poſſeſſion of the Iſland, ſack'd the *Engliſh* Factory, took all their Goods, murther'd three of the *Chineſe* Servants, bound the reſt (*Engliſh* or *Chineſe*) Hand and Foot, binding them ſeveral times to ſeveral Stakes. They put a Halter about the *Engliſh* Factor's Neck, and pulled up his Head, and ſtretched his Neck ready to kill him, and yet did not, but tumbled him and others (bound as they were) over the Rocks, as if they intended to daſh them to Pieces, and then carried them aboard of the *Dutch* Ships, and put them in Irons, *&c.* ſo that if it may be once ſaid the *Dutch* were true to their Promiſe, it was in executing their threaten'd Barbarity.

Dutch take Lantor.

WHEN he had taken *Lantor*, he demanded the principal of their Children for Hoſtages, which they deliver'd: He took away all their Boats and Veſſels, and demanded all the *Bandaneſe* that had aided the *Lantor* Men, to be brought with their Wives and Children aboard of his Ships, but they fearing his Tyranny, retired into the higheſt and ſtrongeſt Places of the Land, where they ſecured themſelves as well as they could, but they purſued them, ſlew many of them, and took twelve hundred Priſoners (moſtly Women and Children) which they ſent to *Batavia* and other Places.

HAVING thus reduced *Lantor*, he ſent to demand the Iſland of *Pooloroon*, but the *Engliſh* Factor refuſed, alledging that it belonged to the King of *England* by Surrender, and that it would be a Breach of the late Agreement between the two *Eaſt India* Companies, if he ſhould offer any Violence to it; but he, regardleſs of all Obligations, ſent twenty-ſix Prows and one Ship, with a great Number of Men, who landed upon the Iſland, and demanded of the Inhabitants to ſurrender the Iſland to them; they refuſed, and expected that the *Engliſh* ſhould defend and protect them, but the *Engliſh* not being prepared for ſuch a Surprize, could not defend themſelves, and ſo the *Dutch* ſtruck the *Engliſh* Colours, and hoiſted their own. Nor were they ſatisfied with the Poſſeſſion of the Iſland, but commanded the Inhabitants to bring them all their Weapons, to demoliſh their own Walls, and to take all the Ordnance out of the Fort, which laſt when they refuſed to do, the *Dutch* brought ſome Soldiers aſhore, and forced the Inhabitants to throw all their Ordnance (being nine Pieces) over a Rock; four of them broke with the fall, but all, both broken and whole, were carried by the *Dutch* aboard of their own Ships.

Dutch take Lantor.

THESE Ravages and Outrages, not to mention any more, are ſo inconſiſtent with the foregoing Articles, and committed with ſo little Remorſe, and on the contrary with ſo much Inſolence and Cruelty, that they ſeem to make it evident that they never were intended for any other Deſign but to tie up the Hands of the *Engliſh*, while they were plundering their Property, and maſſacreeing their Men. Indeed if the *Dutch* had been deluded into an Overſight, or ſomething to their Diſadvantage, they might have had ſome Pretence for finding Fault, but it is evident that if theſe Articles had been drawn up by the *Dutch*, and only conſented to by the *Engliſh*, they could not well have been calculated more to the Advantage of the former, nor could it have been thought that any (but the *Dutch*) would ever have broke through ſuch a ſolemn and (to them) beneficial Contract; but there is Reaſon to believe, that as much as this Agreement was in their Favour, they had higher Views for their own ſeparate Intereſt, and never intended to ſtand by their Contract with the *Engliſh*, any further than Self-Intereſt govern'd them.

WHAT unprejudiced Reader can obſerve the twenty-fourth Article, but may ſee they had a Reſerve in ſuſpending for two or three Years the determining the Places where the *Engliſh* were to build Forts for their own Security; might not this as well be underſtood that the *Engliſh* ſhould build no Forts till the *Dutch* had got the *Banda Iſlands* and the Chief of the Spice Trade in their Poſſeſſion. Did not the Practice of the *Dutch* prove this in their attacking and taking *Lantor* and *Pooloroon*, when in Poſſeſſion of the *Engliſh*, directly contrary to the twenty-third Article, and alſo to the twenty-ſeventh, not to mention their other Barbarities, which are but faint Specimens of their ſucceeding Inhumanities.

HOWEVER, the *Engliſh* thinking themſelves ſafe (after the Signing the Contract with the *Dutch*) as to what they had agreed upon, ſettled Factories at *Amboyna*, *Banda*, and the *Molucca's*, for carrying on their Trade in the Proportion ſpecified in the Agreement, aſſuring themſelves that whoever might oppoſe them, they were now to expect no Diſturbance from their dear Allies, their contracted Friends the *Dutch*; but alas, when the *Engliſh* thought themſelves moſt ſecure, they were in moſt Danger; for when the *Dutch* could find nothing of Fact to charge them with, and being reſolved to have ſomething whereof to accuſe them, they invented a Plot in the Year 1622, and fix'd it upon the *Engliſh* and *Japoneſe*, as being guilty of a Conſpiracy to ſurprize their principal Fort at *Amboyna*.

IT may be obſerved, that this Plot was charged upon the *Engliſh* three Years after the Contract between the *Engliſh* and *Dutch* was ſign'd, at the Expiration of which Time the *Dutch* were obliged by Article twenty-four to ſettle and determine where the *Engliſh* were to build their Forts for their own Security, *&c.* but they being previouſly reſolved that the *Engliſh* ſhould never have that Opportunity, trifled with them for that three Years, and then to evade the Performance of that and other Articles, firſt charged them with a Plot,

Plot, and then maſſacreed them under that falſe Charge, as follows:

Tra-
of
oyna.

ON the 11th of *February* 1622, a *Japaneſe* in the *Dutch* Service at *Amboyna* being upon the Guard, enquired of a *Dutch* Centinel concerning the Strength of the Caſtle, and the Number of the Garriſon; the Centinel inform'd his Officer of the Queſtion, who pretending thence to form a Suſpicion of a Deſign in the *Japaneſe*, jointly with the *Engliſh*, to ſurprize the Cittadel, cauſed the *Japaneſe* to be apprehended, and put to the Torture, and with him ſeveral other *Japaneſe*, and a *Portugueſe* who took care of the *Dutch* Slaves, thereby if poſſible to extort from them a Confeſſion of their being guilty of the Deſign above-mention'd; but they being quite ignorant of any ſuch thing, deny'd it; but being tortured four Days together, and finding no hopes of being releaſed, they ſubmitted to confeſs what their mercileſs Tormenters dictated to them.

WHEN they had brought the *Japaneſe* to this Confeſſion, they call'd up one *Abel Price*, an *Engliſh* Barber-Surgeon, and ſhew'd him the *Japaneſe* whom they had tortured, and told him that they had confeſs'd that the *Engliſh* were Confederates in the Conſpiracy of ſurprizing the Caſtle, and that if he did not confeſs the ſame, they would uſe him worſe than they had uſed them; and although he underwent ſome of their Cruelties before he would confeſs any Thing ſo much againſt his Conſcience or Knowledge, yet by their Tortures they brought him to confeſs what they order'd him, and that the *Engliſh* were concern'd in a Deſign to ſurprize the Fort of *Amboyna*; and then made uſe of him and the *Japaneſe* to be Evidences againſt the *Engliſhmen*, who were afterwards examined by various Tortures, the Barber and the miſerable *Japaneſe* not daring to deviate from what they ſaid, for fear of another Inundation of *Dutch* Cruelty.

THEIR different Methods of Torturing by Fire and by Water were as follow:

Way, of
Torture
by Water.

WHEN they torture by Water, they firſt hoiſt him up by the Hands with a ſtrong Cord upon a large Door, and having ſtretch'd his Hands as far aſunder as they could, they faſtened them to two Iron Staples fix'd in the Door-Poſts; his Feet about two Foot from the Ground were likewiſe ſtretch'd, and faſtened to Staples below in the ſame Poſts, his Head being no way confin'd or ſupported; then they ty'd a ſtrong thick Cloth, the lower Edge about his Neck, and the upper Part, growing wider in the Form of a Funnel, about his Head and Face; then they pour'd Water gradually upon his Head till the Cloth fill'd up to his Mouth and Noſtrils, and ſo higher, that (his Hands being confin'd) he muſt ſuck in the Water, or be ſuffocated for want of Breath, they ſtill pouring Water till his Body ſwell'd; the Water guſh'd out at his Ears and Noſe, and his Eyes almoſt ſtarting out of his Head; and when almoſt expiring, they let him down, let him diſgorge the Water; and if then he confeſs'd whatſoever they order'd him to confeſs, he was put aſide as an Evidence againſt thoſe who were next to be examin'd by Torture; but if he would not confeſs, he was hoiſted up again, and again, till if poſſible the Tortures extorted a Confeſſion from him, and then he was put aſide.

y Fire

BUT Fire being a more exquiſite Torment than Water, they had recourſe to that when Water Tortures would not prevail. It was thus: The Perſons being hoiſted up, and extended as before, they put lighted Candles to the Soles of their Feet, the Palms of their Hands, and to their Arm-pits, till the Fat dropt out; ſome they ſplit their Toes, or tore off their Nails one after another; they cut the Breaſts of others, and ramm'd in Gunpowder, and ſet it on Fire, that by theſe continued Tortures they might bring them to confeſs their being guilty of what they were unjuſtly accuſed of.

Greater
Cruelty.

AND what was yet more inhuman, when they had mangled and tormented two particular Gentlemen, Mr. *Clark* and Mr. *Thomſon*, in ſuch a barbarous Manner that it was thought impoſſible they ſhould ſurvive the Cruelty they had undergone, or that any thing but Death could relieve them, yet then they would not be ſo merciful as to execute them, but threw them into a Dungeon for five or ſix Days, in which Time their Wounds (not being ſuffer'd to be dreſt) putrified, and bred Maggots; and when they were ſo loathſome that the Stench could ſcarce be endured, they were fetch'd out and executed; *this being the only Way by which thoſe unfortunate Gentlemen could then be deliver'd from* Dutch *Barbarity*.

AFTER theſe two Gentlemen were in the Dungeon, they proceeded to examine *Griggs*, *Frido*, and ſome *Japaneſe*; the *Japaneſe* were firſt examined, and being cruelly tortured, accuſed *Griggs*, who having ſeen what the *Japaneſe* had ſuffer'd, confeſs'd all that the Fiſcal demanded of him, to avoid the Torture; then was *Frido* examined, but not confeſſing any thing, they brought him to the Torture by Water, which he endured very courageouſly; but being brought to the Torture by Fire, and feeling the Candles, he confeſs'd every thing they ask'd him, and ſo was remanded back to Priſon to accuſe the next.

THEN they brought Captain *Towerſon* to Examination, and ſhew'd him what others had confeſt of him, but he proteſting his Innocency, *S. Colſon* was ſent for to accuſe him, who was told that unleſs he would make good his former Coſeſſion againſt Captain *Towerſon*, he ſhould be tortured again; but between Conſcience and the Dread of Torture, he re-affirm'd what he had formerly ſaid as to Captain *Towerſon*, but did it with ſo much Horror that they ſent him back to Priſon, and brought out *Griggs* and *Frido* to accuſe Captain *Towerſon* to his Face, according to their Confeſſion when under Torture; but when they came before Captain *Towerſon*, his Conſcience atteſting his own Innocency, and he being ſenſible their Accuſation of him was extorted from them by Torture, he ſeriouſly charged them, *as they would anſwer at the dreadful Day of Judgment, that they ſhould ſpeak nothing but the Truth*, at which they both fell down upon their Knees before him, *begging him for God's ſake to forgive what they had ſaid againſt him*, and ſpeaking openly before them all, *that what they had confeſt againſt him was very falſe, and ſpoke on purpoſe to avoid the terrible Torments with which they ſaw others tortured*; whereupon the Fiſcal order'd them to be put to the Torture again, which they being affrighted at the Thoughts of, reſumed and corroborated their firſt Confeſſion againſt Captain *Towerſon*; and the Fiſcal, leſt they ſhould recant again, order'd them to ſet their Hands to their Confeſſion, which they not being willing to do, one of them boldly ask'd the Fiſcal *upon whoſe Head will this Sin lie, whether upon theirs who conſtrain'd them to confeſs what was falſe, or upon thoſe ſo conſtrain'd to confeſs*; the other, without waiting the Fiſcal's Anſwer, added, *you make us accuſe ourſelves and others of what is as falſe as God is true, God is witneſs that we are innocent as the Child unborn*.

THE next that was examined was Mr. *Witheral*, to whoſe Accuſation Captain *Towerſon* was called as an Evidence; but inſtead of accuſing he encourag'd him, and even to endure the Torture; ſaying, *O Mr.* Witheral, *ſpeak the Truth, and nothing but the Truth, as God ſhall put into your Heart.* Upon Captain *Towerſon*'s encouraging Mr. *Witheral* in ſuch a reſolute Manner, he was thruſt out, and *Witheral* brought firſt to the Water Torture, and then to that of the Fire; he by Reaſon of the

ex-

exquiſite Torment, ſubſcribed his Name to a Confeſſion againſt Captain *Towerſon*, in hopes to mitigate his own Suffering, though they both ſuffer'd together at laſt.

SEVERAL others were examined, but to expreſs what was laid to their Charge would be needleſs, ſince they were all condemned for the ſame (pretended) Crime, and upon the Evidence of thoſe whoſe Confeſſions had been extorted from them by unparalell'd *Dutch* Cruelties, and yet this arbitrary Sentence of Death was pronounced againſt the following twenty, *viz.*

Captain *Gabriel Towerſon*, Agent of the *Engliſh* at *Amboyna*.
Samuel Colſon, Factor at *Hitto*.
Emanuel Thomſon, Aſſiſtant at *Amboyna*.
Timothy Johnſon, Aſſiſtant there alſo.
John Witheral, Factor at *Cambello*.
John Clark, Aſſiſtant at *Hitto*.
William Griggs, Factor at *Larica*.
John Frido, Steward of the Houſe.
Abel Price, Surgeon; and
Robert Brown, Taylor.
Beſides a *Portugueſe* and nine *Japaneſe*.

THESE were ſentenced *to be puniſhed with the Sword, in ſuch ſort as Death may enſue, with the Confiſcation of all their Goods*, &c. and ſign'd by *H. Van Speult*, being then the *Dutch* Governor of *Amboyna*.

SENTENCE being pronounced, the Execution ſucceeded, and the Condemn'd were brought out of their Confinement along by the Chamber where the Pardon'd ſtood, to take their laſt Farewel of them; they who were now going to ſuffer deſiring their Survivors to bear witneſs of their Innocency to their Friends in *England*, Mr. *Colſon* crying, *If I am guilty, more or leſs, of what I am charged with, may I never be a Partaker of the Joys of Heaven*; at which every one of the *Engliſh* ſaid, *Amen for me good Lord*; and being brought to the Place of Execution, they were all beheaded.

Seize Goods and Factories.

It might be expected after all this Barbarity, that we ſhould now ſay, Here ends the Tragedy of *Amboyna*, and all the *Dutch* Cruelty; but it is not ſo, for after they had thus ſacrificed the Lives of the *Engliſh*, they ſeized the *Engliſh* Goods and Factories at *Amboyna*, to the Value of four hundred thouſand Pounds, and ſent what *Japaneſe* they found to be Slaves in their own Iſlands.

WHEN they had thus plunder'd and murder'd the *Engliſh* at *Amboyna*, they went to the *Banda Iſlands*, and forcibly took Poſſeſſion of ſuch of them as they had not already, although they had been made over to the King of *England* by a voluntary Surrender of the Inhabitants and legal Proprietors; and thus without any Regard to Juſtice, or the ſolemn Contract expreſt in the foregoing Articles, and ſign'd but three Years before both by the *Dutch* and *Engliſh*, they, as if now reſolved to become Maſters of all the Spice Trade, have got into their Poſſeſſion the Iſlands of *Nero*, *Pooloroon*, *Pooloway*, *Lantor*, *Roſinging*; and the *Molucca Iſlands*, *Ternate*, *Tydore*, *Motyr*, *Machian*, *Bachian*, and ſeveral other Iſlands where the *Engliſh* had Goods and Factories, which they alſo ſeiz'd, making all their own before them, together with *Amboyna*, which they had made their own of courſe, by murdering and expelling the *Engliſh* that had Poſſeſſion, ſo that now all the Spice Trade is their own.

CAPTAIN *Welden* finding it in vain to pretend to hold out or contend any longer againſt the barbarous *Dutch*, whom no Law could govern, Contract bind, or Reaſon perſwade, he did not think it conſiſtent with the Honour and Profit of his Maſters the *Engliſh* Company, for him to ſtruggle any longer to hold a Reſidence at *Ambyna*, brought the poor Remnant of the *Engliſh* along with him that were yet left, and landed them at *Batavia*, from whence they were ſent to *Banda*, and by the firſt Opportunity ſent to their native Country *England*, to bewail their broken Fortunes, and the inhuman Treatment of their dear Allies the *Dutch*.

ſent
Eng

The Molucca's *and* Spice Iſlands *above-mentioned, lie near and to the Southward of the Equinoctial, to the Eaſtward of the Iſland of* Celebes *or* Macaſſar; *but we need not enlarge upon the Situation of them, that being beſt underſtood by the Map of* China, Japan, *the* Philippine Iſlands, *&c. which will be inſerted within a few Pages following.*

A

A

DESCRIPTION

OF THE

SUNDA *ISLANDS.*

CHAP. I.

A Deſcription of the Iſland of Borneo, *as to its Situation, Trade and Product; and alſo of the Manners and Cuſtoms of the Inhabitants.*

THESE Iſlands are call'd *Sunda Iſlands* from the Straits ſo called, which is the Paſſage between *Sumatra* and *Java*. The chief of the *Sunda Iſlands* are *Borneo*, *Sumatra* and *Java*; and firſt of *Borneo*.

BORNEO extends from about the eighth Degree of North Latitude to the fourth Degree South, it lying under the Equinoctial, and the Middle of it being in about 112 Degrees of Longitude Eaſt from *London*. It lies between *Malacca* and the Iſland of *Celebes* or *Macaſſar*, having *Java* on the South, and the *Philippine Iſlands* on the North Eaſt.

Air. THIS Iſland is not ſo exceſſive hot as might be expected, conſidering that it lies under the Equinoctial, for all Places in that Situation, eſpecially Iſlands, are frequently refreſhed with Showers and Breezes, which helps to allay the exceſſive Heat proceeding from the perpendicular Rays of the Sun; and if with this we conſider that the Days under the Equinoctial is no more (nor leſs) than twelve Hours, the Sun is abſent as long as it is preſent, which gives the Earth a great Opportunity to cool, which is a Reaſon why this Climate is not ſo exceſſive hot as might otherwiſe be expected.

THE vaſt Multitude of Frogs and Water Inſects which the Water leaves behind it, and which the Heat of the Sun immediately kill, cauſeth ſuch a Stench that it makes the Air unhealthy, eſpecially to *European* Conſtitutions; but the Views of Advantage makes even Death itſelf not appear ſo terrible.

Monſoons. THE Monſoons or periodical Winds here are Weſterly from *September* to *April*, during which Time their wet Seaſon continues, which conſiſts of heavy Rains, and violent Storms of Thunder and Lightning, and then the Rains are ſo perpetual, that there is ſcarce two Hours together of fair Weather, eſpecially on the South Coaſt of the Iſland, whither the *Europeans* chiefly reſort; and what they call the dry Seaſon begins in *April*, and continues till *September*; but yet in this Seaſon they ſeldom miſs of a Shower every Day, which cools the Air, and refreſhes the Earth, making it more wholſome than it would otherwiſe be: This Shower commonly comes on with the Sea Breeze.

Harbours. THE principal Harbours in *Borneo* are *Banjar Maſſeen*, *Borneo* and *Succadana*, but *Banjar Maſſeen* is a Place of greater Trade, and more frequented by *Europeans* than either, or even both the other two, the greateſt Quantities of Pepper growing in that Part of the Iſland, which is the Reaſon that it is call'd by ſome the *Pepper Country*. The Town of *Banjar* formerly ſtood about twelve Miles up the River, and was built partly upon Pillars, and partly upon Floats, to ſecure them from the Inundations in the wet Seaſons, but now there is no appearance of a Town there, the Inhabitants being removed further up into the Country.

THE City of *Borneo* is the Capital, and was the Reſidence of the King or Sultan of *Borneo*; it is ſituate on the North Weſt Coaſt of the Iſland, and is a good Harbour, though a Place of no great Trade. *Succadana* is on the Weſt or South Weſt Part of the Iſland, and was formerly the chief Place of Trade in the Iſland.

Banjar River. THE River *Banjar*, near the Mouth of it, is about twice as broad as the *Thames* at *Graveſend*; here the Tides ebb and flow but once in twenty four Hours, and flow only in the Day-time, which ſome impute to the Land-winds blowing much ſtronger in the Night than in the Day.

Houſes. THE Towns whither the *Europeans* Trade are moſtly built upon Floats of Timber upon the River, and form one long Street; their Partitions are ſplinter'd Cane or Bambou, and their Roofs cover'd with Palmeto Leaves; ſome of the Houſes are built upon the *Ouze*, and ſtand upon Pillars to prevent their being drown'd by the Tides or Land-floods, and at low Water they go from one to another upon Pieces of Timber, ſo that both the Floating Houſes, and thoſe built upon Pillars, are ſecured from the Inundations, except when the Currents are ſo ſtrong that the former break from their Moorings, and then they ſometimes drive to the Sea.

Their Forts. UPON *China River*, or *Tatas River*, ſtands a City called *Caytongee*, the Reſidence of one of the Kings or Sultans of the Iſland; and about eighteen Miles below *Caytongee* there is a Wooden Caſtle, with about twelve Guns pointed down the River; but it is ill contrived, and out of Repair, as moſt of the reſt of their Forts are, and contributes but little to the Strength or Security of the Place.

Mahometans. THE Sea-Coaſts and Places of Trade are moſtly inhabited by *Mahometans*, and the *Byaos* or *Pagans* poſſeſs the Inland Country. The *Popiſh* Miſſionaries tell us, that the *Pagans* are the moſt docible of the two, and readier to embrace the Chriſtian Religion. The *Byaos* inhabit the Woods and *Byaos.* Mountains, and neither apply themſelves to Art

nor Trade, but employ and divert themſelves with keeping Cattle and Hunting, but are otherwiſe an unpoliſh'd Sort of People, compared to the *Banjareens* or *Moors*, who living upon the Coaſt, and by that means converſing with People of other Nations, are more Polite, and apt to learn what they ſee, and are of a peaceable Diſpoſition naturally; but if exaſperated, ſeldom leſs than the Life of their Enemy will ſatisfy their Revenge, and that in any private, baſe and malicious Manner, without any Regard to what is commonly call'd Honour, or genteely reſenting their Affronts.

Habit. The *Byayos* commonly go naked, except ſome light Thing caſt about their Middle, but they paint their Bodies of a bluiſh Colour, which at a Diſtance looks ſomething like Cloathing: They beſmear themſelves with a ſtinking Oil, and that, with the natural Smell of their Bodies, amounts to a nauſeous Stench, very diſagreeable to Strangers.

Food. The *Banjareens*, or thoſe who live by the Sea-Side, have long, ſhining, black Hair, low Stature; and the Men have but ordinary Features, but the Women much better; they are little, but well ſhap'd, and very engaging Carriage. The Dreſs of the common People is much like that of the *Byayos*. They live in a very hoſpitable and friendly Manner amongſt themſelves. Their Food is chiefly boil'd Rice, Fowls, Eggs, Fiſh and Venniſon. The Diſhes or Bowls uſed at Great Men's Tables are commonly Gold or Silver; but the Poor uſe Braſs or Earthen Ware. Their common Way of Sitting is croſs-legg'd, whether at Victuals or not: They are perpetually chewing of Betel and Arek, as in other Places in *India*, except when eating, drinking, or ſmoaking; for both Men and Women ſmoak, having their Tobacco mix'd with Opium thus: They boil Opium in Water till it comes to a Conſiſtency, and make it up in Pills as big as a Pea, and put it into the Pipe amongſt the Tobacco; all the Company uſe but one Pipe, which the Maſter of the Houſe lights, and ſo it paſſes round the Company from one to another, as we do in drinking.

Drink. Their uſual Drink is Water or Tea, their Religion prohibiting ſtrong Liquor; but they will ſometimes grant themſelves a Diſpenſation, and drink both Wine and Arrack among the *Europeans*, as freely as they will themſelves.

Diverſion. They divert themſelves with Dancing and Comedies, as in ſome other Eaſtern Countries, (*See Chap. II. of* Japan; *Chap. II. of* Tonquin, *and Chap. III. of* Siam.) And beſides, their moſt manly Diverſions are ſhooting at a Mark and Hunting, the latter of which they do not take ſo much Pains in as ſome of our *Europeans* do; for having rouz'd the Game, they ſurround it and wound it on every Side, that it is ſoon diſpatch'd by the multitude of Wounds, it being reckon'd ſo great an Honour to be ſaid to have given the Game one Wound, that ſome of them rather than fail, will dart a Spear at him after he is dead.

Travel by Land. The *Banjareens* travel moſtly in cover'd Boats, and moſtly in the Night, for the coolneſs of the Air; and theſe Veſſels, being built ſharp and narrow, ſail with an incredible Swiftneſs; but when they travel by Land they uſe Elephants or Horſes, but the Poor, who cannot procure them, do, as in other Places, walk on Foot.

Trade. The *Engliſh* Factory at *Borneo* having affronted the *Banjareens*, by ſome Indignity offer'd to the Sultan of *Cayongee*, they rejected the *Engliſh Eaſt India* Company, and would not trade with them as a Company, though they allow'd a Commerce with ſeparate Traders; ſo that what Ships went in the Company's Service never durſt own, when in the Country, that they were employ'd by the Company. They had no Quarrel with the *Engliſh* Nation, but reckon'd them a brave, generous People, and fair Dealers; but for the Affront they charged the Company with, they could not be reconciled to them.

Pepper. The chief Goods which this Country produces to maintain a Commerce with our Merchants, is, Pepper, Gold, and precious Stones; beſides other valuable Commodities brought thither from other Places, of which we ſhall give Account in its Place.

Goods. Goods proper to be carried to *Borneo* (beſides Dollars, which paſs as Money) are Guns, from one to two hundred Weight, Sheet-Lead, Calimanco, Knives, and moſt other Cutler's Ware, except Forks, which they never uſe; alſo Iron Bars, ſmall Steel Bars, Hangers, ſmall Spike-Nails, Twenty-penny Nails, Graplings of about forty Pound Weight, Red Leather Boots, Spectacles, Clock-Work, ſmall Arms mounted with Braſs Piſtols, Blunderbuſſes, Gunpowder, and Looking-glaſſes.

Gold. The Goods that are to be had there to the beſt Advantage, is Pepper, Gold, and Diamonds, if good ones are to be had, but they are very ſcarce at *Banjar*: The moſt advantageous Way of purchaſing Gold, is to agree for a certain Number of Dollars in Silver, for the Weight of one Dollar in Gold.

It is ſuppoſed by ſome, that it would be very much to the Advantage of the *Engliſh* if the Iſland of *Borneo* was made the Mart or Center of Trade, for there we may meet the *China* Ships, and be ſupplied with the Goods of that Country almoſt as cheap as at *China*, and is a ſhorter Voyage; and as for Cloves, Nutmegs, Mace, Gumbouge, Lignum, Aloes, Caſſia, and abundance of other valuable Commodities, the *Macaſſar* Prows bring great Quantities of them to *Borneo* about *September*, every Year, in Spite of what the *Dutch* can do to prevent it; and therefore if a Ship was there about the Beginning of *Auguſt*, he is there Time enough to purchaſe Pepper that is left of the laſt Year's Crop, which is reckon'd better than the new, and then is ready there againſt the coming of the *Macaſſar* Prows with the above-mention'd rich Goods, and alſo to treat with the *Chineſe* that live there, about ſuch Goods as they can furniſh you with, which you cannot have of the Natives.

Dragon's Blood. The Iſland of *Borneo* affords the beſt Dragon's Blood in the World: It is a Gum which iſſues from a Tree that bears a Fruit as red as a Cherry, and that which appears of the brighteſt Colour when rubb'd upon Paper is the beſt. The Country People expoſe it to Sale in ſmall Drops about an Inch long.

Gold. The Natives can ſo artificially cover baſe Metal with Gold, that though you cut a Bar, that is ſo cover'd, quite in two with a Chiſſel, to ſee the inſide of it, to prevent being cheated, yet the Gold is ſo cunningly laid on, that the Chiſſel will draw the Gold after it, and the baſe Metal cannot be diſcover'd; but the ſafeſt Way to detect the Cheat is to cut it half through and break it, and then the baſe Metal will appear.

When there is Iron Duſt among ſmall Gold, they ſeparate them by rubbing a Load-ſtone in a Diſh, or large Shell, amongſt the Metals ſo mix'd; the Particles of Iron ſtick to the Stone, but the Stone will not affect the Gold.

Bezoar. The fine *Monkey Bezoar* is worth about five times its Weight in Silver in *Borneo*: The beſt is of a greeniſh Colour, but the largeſt are thought to be Goats Bezoar; but they have a Cheat in this alſo, for they can make a Compoſition ſo like the true Bezoar, that it is hard to diſtinguiſh it; but the beſt Way to try it is by rubbing White-Lead, Lime, or Chalk, on a White Paper, and afterwards rub the Bezoar on the Paper, and if it

it be right it will turn the Lime, Chalk, &c. to a greeniſh Colour.

Navigation. Boats.

They have no great skill in Navigation, neither have they any large Ships nor undertaking any far diſtant Voyages. They have a ſort of Boat call'd a Prow, made of the Body of a tall Tree hollow'd, and made ſharp at both Ends, like the Stern of a Wherry; ſome of them are thirty Foot long, and not above two Foot broad; they have no Keel or Rudder, but ſteer with a Paddle; the Sail is made of a Matt, and is pretty large; they have Out-layers or long Pieces of Wood laid croſs at each End of the Boat from Side to Side, and reaching over without the Boat on both Sides; and when it over-blows, the Watermen run out to the Weather-end of thoſe Out-layers, or as far as there is occaſion, and by poizing her with their Weight, keep her from overſetting; theſe Veſſels being ſo narrow and able to carry ſo much ſail, will run at the rate of four and twenty Miles an Hour.

The only Grain they eat here, as in many other Places, is Rice; the Manner of cultivating has been deſcribed in the Hiſtory of ſome of the foregoing Countries; they have alſo Plenty of Cocoa-Nuts, Lemons, Oranges, Citrons, Plantains, Melons, Banana's, Pine-Apples, and other *Indian* Fruit; they have alſo the Cotton-Shrub, Canes, and very good Timber; but the chief Trade of the Iſland is in Pepper.

Pepper of four ſorts.

There is three ſorts of Black-Pepper in this Iſland; the beſt is called *Moluca* Pepper, the middle Sort is *Caytongee*, and the worſt is *Negaree*; but beſides them, there is another Sort called White-Pepper, from its being that Colour; this laſt is gather'd by poor People under the Pepper-Trees: this is accounted the beſt of all the four Sorts, perhaps becauſe it is not tore from the Tree when green, but hangs till it is full ripe, and its falling and lying under the Tree may occaſion its Whiteneſs; but if the Whiteneſs be occaſion'd by that Means, perhaps it might be as good with its own natural Colour.

Animal.

The Country affords Elephants, ſmall Horſes, Oxen, Buffaloes, Deers, and Goats, alſo ſeveral ſorts of Wild-Beaſts; as Bears, Tygers, and Monkeys, of which laſt there are vaſt Numbers and great Variety; but the moſt remarkable is the *Orang Outan*, or Man of the Woods; he is ſix Foot high, and walks upright like a Man; his Arms are ſomething longer than a Man's, he is not hairy but as other Men are, he is very ſtrong and nimble, and will throw Stones or any Thing that comes in his Way at any that provoke him. Captain *Beckman* had one of theſe Animals, and affirm'd that it would drink Punch and Brandy very heartily; he grew ſo faſt, that although he was but a Year old when he died, yet when alive and well, he was ſtronger than any Man in the Ship.

Man of the Woods.

Birds.

This Iſland affords ſcarce any of the Birds that *England* produces, except the Sparrow, but Parrots and Parrakeets of all ſizes. The *Lanee* is a beautiful Bird the bigneſs of a Parrot; his Feathers are a lively red, intermix'd with blew and green, and finely ſhaded; the *Engliſh* Captains often purchaſe ſome of them, but they ſeldom live to come into *England*.

Flying Cat.

There is another flying Animal in Colour, Shape, and Smell like a Fox, but leſs; ſome call it a Flying-Cat; when its Wings are extended it is five or ſix Foot from the Tip of one to the Tip of the other; theſe Bats or Flying Cats, during the Weſtern Monſoons, fly to the Eaſtward for two or three Hours in ſuch Shoals that they darken the Sky.

Fiſh.

They have ſtore of Sea and River Fiſh, and ſome that are known in *England*; but there is a Fiſh called the Cat Fiſh, becauſe it has a Head and Whiskers ſomething like thoſe of a Cat, the Fiſh is ſometimes five or ſix Foot long, but they have no Scales. There are Prawns in *Banjar* River ſix or eight Inches long, and large Rock-Oyſters.

Aſtronomy.

They underſtand but little of Mechanicks or Handicraft Trades, nor do they much ſtudy Phyſick or Aſtronomy; if they find the Sun or Moon eclipſed, they look upon them as being attack'd by ſome Celeſtial Dragon, and (as has been ſaid of other Eaſtern Countries) they never ceaſe beating and ſounding their Brazen Veſſels till the eclipſed Luminary recovers Light, and then they think the Dragon that encounter'd it, and deſign'd to deſtroy it, is expell'd.

Language

The Language ſpoken by the *Banjareens* and other *Moors* who inhabit the Coaſt is the *Malayan* Language, but the inland Country People, not having much Correſpondence with Foreigners, or the trading Part of the World, have a Language which few underſtand but themſelves.

Govern-ment.

Borneo is divided into ſeveral petty Kingdoms, but ſeldom content with their own Territories; their continual Encroachments upon one another, and their Succeſs therein, occaſions the enlarging of their Dominions to depend more upon Power than Property, ſo that ſometimes a King or Prince that can by any means over-power the reſt, is often call'd the Sultan of the whole Iſland.

Giving Audience.

The following Inſtance may ſerve as well as many more, as to the Method of giving Audience. When Captain *Beckman* had Audience of the Sultan of *Caytongee*, he was order'd to ſit croſs-legg'd on a Carpet before the Throne, but at a Diſtance from it; when the Sultan came in, there was brought before him two beautiful Children finely dreſt, carried in Arms, guarded by twelve Men arm'd; and upon the Approach of the King, the *Engliſh*, to do him the greater Honour, roſe up, which proved an Affront to him, becauſe his Subjects, as a token of Reverence, lifted up their Hands to their Heads, and fell upon their Faces, and when they approach their Prince, they creep to him upon their Knees, and retire in the ſame Poſture.

Weights and Meaſures.

Their current Money is chiefly Dollars, Half-Dollars, and Quarter-Dollars; but as common Caſh, or to purchaſe Things of ſmall Value, they have Strings of Rings of baſe Metal, which they give in proportion to the Value of what they purchaſe.

Their Weights are the Cattee and the Peeul, the Cattee is about two and twenty Ounces; their uſual Meaſure is the Ganton, which is about a *Winchester* Gallon.

Religion.

The *Byajos* or Mountaineers are Pagans, but the *Banjareens* which inhabit near the Sea-Coaſt are generally *Mahometans*, deſcending from thoſe who tranſported themſelves from *Africa*, *Arabia*, *Perſia*, and the *Oriental Iſlands*, ſome hundreds of Years ago, to form Colonies, and trade in the rich Spices that theſe Iſlands afford; they are very ſuperſtitious as to lucky and unlucky Days, telling Fortunes, and conſulting Conjurers, uſing Charms, believing the bewitching and unbewitching of People, as alſo of Apparitions, and the like; all which are ſo firmly believed and obſerved among them, that they who deny or queſtion the Truth of ſuch Things are deem'd as bad as Atheiſts.

Charms.

They impute their Sickneſs or Diſtempers to the Anger of ſome incenſed Demon, to pacify whom, and cure the Diſtemper, they make a little Pageant in form of a Boat, and fill it with various ſorts of Meat, as an Offering to their afflicting Demon, and then they launch the little Veſſel, and let it go adrift down the Stream, imagining that with it all the Diſtempers of the Sick are carried away; and that if any Perſon take up the Boat, or take any thing out of it, the Demon to whom it was devoted will either ſtrike them dead, or inflict the Diſtemper of the ſick Perſon upon them, for their Preſumption and Sacrilege.

I am

Marriages

THE Women marry at about eight Years of Age, and have Children soon after, and seldom have Children after five and twenty. Single Fornication is not much taken Notice of, nor is a Woman liked much the worse for having had a Gallant before Marriage, if she is but faithful to her Husband afterwards, as they most generally are, however they may have transgress'd before. Mr. *Beeckman* gives us the following particular Account of a Mahometan Wedding that he was invited to at *Borneo*.

A Wedding at *Borneo*

ALL the Partitions of a very large House was pull'd down, and the House all laid into one Room; the Sides were hung with the richest Cloaths, and the Floor cover'd with fine Cane Matts. At the upper End was a large Throne erected, with a Canopy over it, and Cushions and Pillows to lean upon.

ALL the Night before the Wedding, they kept beating upon their Brazen Drums, and other Brass Vessels, which made a Noise something like our rough Musick of Frying-pans, Gridirons, &c. and inferior to our Marrow-Bones and Cleavers: Next Morning Flags and Streamers were hung at the Door, and the Vessels in the River put out their Colours, and fired their Guns, (for their Houses being built upon Floats of Timber upon the River, were in the Neighbourhood with the Ships.) About the Middle of the Afternoon there was a handsome Dinner, and when they had eat plentifully, every one had a Basket given to carry Home what was left, and then Betel, Arek, and Opium went round, as strong Liquor and Tobacco does here upon such Occasions.

TOWARDS Evening a large Float of Timber came down the River, with a Pageant upon it, in Form of a Ship, and in the Middle of the Quarter-Deck was the Bridegroom upon a Throne. When this Machine came to the House where the Bride was, twelve young Virgins descended from it, each having a large Bowl of Gold, Silver, or Brass, in her Hand, in which were Presents from the Bridegroom to his Bride. She sat upon a Throne to receive them, and return'd Presents to him again.

WHEN the Bridegroom came to the Door of the House, the Priest met him, and after some Words speaking, he strew'd some Rice upon his Head, as a Ceremony of blessing him with future Plenty; at which the People gave a great Shout, and fired a Volley of Small-shot: Then he was led to the Bride, and seated on her Right Hand; and now they are married; and in a small Time the Company withdrew. The Men value themselves upon having a great Number of Wives and Concubines; but (as in some other Eastern Countries) he never has a Portion with her, but gives a Purchase for her to her Father, or who has the disposing of her.

Funerals

THEIR Funerals are solemnized as those of other Mahometans, retaining some Pagan Customs; as burying several Necessaries with the Deceased, for their Use in the other World: The Mourners are cloathed in white, and the Company usually carry lighted Torches in their Hands when they attend their Friend to the Grave. Their Burying-Places are generally up the River, on the Shore, out of the reach of the Floods; and they always lay the Head of the Corpse to the Northward.

CHAP. II.

A Description of the Island of Sumatra; *its Situation, Trade, and Product, with the Manners, Religion, and Customs of the Inhabitants.*

Sumatra.

THE Island of *Sumatra* extends nearly North West and South East, about three hundred Leagues in Length, and where broadest (which is towards the South Part of it) about sixty Leagues in Breadth; it is separated from *Java* only by the Straits of *Sunda*, and from *Malacca* by the Straits of *Malacca*, or the Straits of *Sincapore*. The Middle of it lies near the Equinoctial, from whence it extends to about five Degrees and a Half North Latitude, and as much South.

THE *English* Settlement at *Bencoolen* is reckon'd as unhealthy a Place as any in the Island, though at *Achin* (the Northermost Place of Note in the Island) Fevers are very common. The Monsoons here are much the same as in other Places to the Northward of the Line, only the wet Seasons begin rather sooner here than further towards the North, and are full as violent; but the Heat is not so intense here as near the Tropicks, for Reasons given in the Description of *Tonquin*.

IN this Island are good Roads, but few Harbours. *Achin* was the first Port where the *English* fix'd a Trade in this Island; Captain *Lancaster*, with the *English* Fleet under his Command, arriving here *June* 5, 1602; who, upon the first Opportunity, dispatch'd Captain *Middleton* to the King of *Achin*, desiring to be admitted to an Audience, and to have the Honour of delivering the Queen of *England*'s Letter to his Majesty.

THE King received Captain *Middleton* very kindly, and order'd him to assure his General (Captain *Lancaster*) that he might come ashore with as much safety as if in the Queen of *England*'s Dominions; and presented Captain *Middleton* with a Dress, or Suit, according to the Habit of the Country, as a Token of his Promise. Captain *Lancaster* went ashore accordingly, and was invited to a *Dutch* Factor's House, from whence six Elephants, with Drums, Trumpets, and Streamers, and a vast Retinue, fetch'd Captain *Lancaster* to Court. The largest Elephant was about fourteen Foot high, and carried a Machine upon his Back, by some call'd a Castle; it was somewhat like the Body of a Coach, cover'd with Crimson Velvet, and in the Middle of it stood a Gold Bason, in which the Letter from the Queen was put. Captain *Lancaster* was mounted upon another Elephant, some of his Retinue upon others, and the rest walked on Foot.

WHEN he was admitted to the King's Presence, he attempted to deliver his Charge or Message with an elegant Speech, forgeting, or not knowing, the Aversion those Eastern Princes have to long Harangues; but the King interrupted him, and, as if he knew what he designed to request, told him, that *he might depend upon all the Favours he could reasonably demand in Behalf of that Noble Prince's from whence he came, of whom Fame had spoken such great Things*.

THEN

THEN Captain *Lancaſter* deliver'd the Queen's Letter to the King, who gave it to one of his Officers that ſtood by; the Queen's Preſent was ſet before the King, conſiſting of a large Silver Baſon, with a Fountain in the Middle of it, weighing above two hundred Ounces, a great ſtanding Silver Cup, a fine Looking-Glaſs, a Head-piece with a Plume of Feathers, an embroider'd Sword-Belt, a Fan made of Feathers, and a fine Pair of Piſtols; he ſeem'd moſt pleas'd with the Fan, and immediately made one of his Women fan him with it.

The Queen's Preſent.

THE King was ſeated in a Gallery about ſix Foot above the Audience; he drank frequently to the Captain in a Glaſs of Arrack, who having pledg'd him once in that Liquor, drank what Liquor he pleaſed afterwards; after Dinner the King's Women dane'd after the Manner of the Country.

A Dance.

THE King then order'd Captain *Lancaſter* to be preſented with the Country Habit, with which he dreſt himſelf in his Majeſty's Preſence, and then they all withdrew, and went aboard their Ships.

THERE were two Noblemen order'd to treat with Capt. *Lancaſter* about ſettling an Alliance between Queen *Elizabeth* and the King of *Achin*, with Articles of Commerce, which were as follow: 1. That the *Engliſh* ſhould enjoy a free Trade in the King of *Achin*'s Dominions. 2. The *Engliſh* ſhould pay no Cuſtoms for Goods either imported or exported; and that the *Engliſh* ſhould be aſſiſted in caſe of Shipwreck, and the Goods reſtored to the Owners 3. That when an *Engliſhman* dies he ſhall have Liberty to bequeath his Effects as he pleaſes. 4. That all Bargains and Contracts with the King's Subjects ſhould be punctually perform'd. 5. That they ſhould have Power of doing juſtice and determining Differences among their own People. 6. That in caſe the *Engliſh* receive any Injury from the Natives, the King ſhall do them juſtice. 7. That no Seizure or Arreſt ſhould be made of the Perſons or Goods of the *Engliſh*. And, 8. that the *Engliſh* ſhould enjoy the free Exerciſe of their Religion; which Articles thus ſettled, the *Engliſh* began to buy up what Pepper they could get at *Achin*, and other Places in *Sumatra*.

Articles of Commerce.

WHILE the *Engliſh* were at *Achin*, the *Portugueſe* had their Spies out among them, and endeavoured as much as poſſible to obſtruct their Trade, which Captain *Lancaſter* being appriz'd of, and *England* being at War with *Portugal*, he reſolved to cruiſe upon them in the Streights of *Malacca*; where on the 3d of *October* 1602, he took a *Portugueſe* Carrack of nine hundred Tuns Burden; ſhe had on board, (beſides above ſix hundred Men, Women and Children,) nine hundred and fifty Bales of Chints or Callicoes, plain and painted, and abundance of other rich Merchandize.

Takes a Portugueſe Ship.

CAPTAIN *Lancaſter* return'd into *Achin* Road with his Prize, and made the King a Preſent of ſome of the moſt valuable Things he had taken in her. The King received the Preſent very graciouſly, congratulating him upon his Succeſs over the *Portugueſe*, who were then as troubleſome Neighbours almoſt as the *Dutch* are now where they come. The Captain having diſpatch'd his Affairs, ſettled Factors at *Achin*, and had his Audience of Leave of the King, who ſent by him a Letter to his Miſtreſs, our renowned Queen *Elizabeth*; he alſo ſent to her Majeſty a Preſent of a Habit of rich Embroider'd Silk, and a Ring with a fine Ruby ſet in it; and alſo preſented the Captain with a Ring of the ſame ſort, aſſuring him that when any of the *Engliſh* arrived in his Ports, they ſhould meet with the ſame kind Uſage as he had met with; the fulfilling of which Promiſe is experienc'd to this Day, by the *Engliſh* trading to any Port of that Kingdom, but eſpecially to the Port of *Achin*.

Preſent to Queen Elizabeth.

CAPTAIN *Lancaſter* having diſpatch'd the *Aſcenſion* and *Sufan* for *England* from *Sumatra*, laden with Pepper, made the beſt of his Way for *Bantam* in *Java*, where he arrived the 5th of *December*, and ſent Vice-Admiral *Middleton* aſhore to acquaint the Court at *Bantam* with his Arrival, and being invited to Court, he found the King a Boy of ten or eleven Years of Age, ſitting in a large Room among his Nobles. At his Approach the young King bid him welcome, and ſmiling, received her Majeſty's Letter and Preſents, and referred him to the Protector of *Bantam* to treat with about Articles of Commerce, which being ſettled and agreed upon, Captain *Lancaſter* took a Houſe, and landed his Goods, and expoſed them to Sale; but the Cuſtom being here as in ſome other Eaſtern Countries, that the King is to have the firſt Refuſal, accordingly the King's Officers came and purchas'd what they liked beſt, and in leſs than five Weeks they diſpoſed of ſo much Goods that they purchaſed Pepper and other Spices ſufficient to load both their Ships; and having ſettled a Factory at *Bantam*, he took his Leave of the young King, who gave him a Letter and a Preſent of ſome fine Bezoar Stone for his Miſtreſs Queen *Elizabeth*; and then the Captain in the *Dragon*, in Company with the *Hector*, ſet ſail for *England*, arriving in the *Downs* the 11th of *December* 1603, having made a profitable Voyage for the Company.

Comes to Bantam.

Returns to England.

ACHIN is the Metropolis of *Sumatra*, and ſituate on the North-Weſt End of the Iſland, in a Plain ſurrounded with Woods and Marſhes near a pleaſant River, and within half a League of the Sea; the Town lies open without Wall or Moat; but the Palace, which is in the Middle of it, is encompaſs'd with a Moat of twenty five Foot broad, and the ſame in Depth; about the Palace, inſtead of Walls, are caſt up great Banks of Earth, planted with Canes or Bambou, ſo prodigious numerous and high, that it makes the Palace inacceſſible, except by the Gates and Avenues, and theſe Bambou's being always green, are not eaſily ſet on fire.

Achin the Metropolis.

Palace.

IN the City of *Achin* is ſeven or eight thouſand Houſes, which makes the City very ſpacious, becauſe the Houſes are not contiguous, every Perſon of Note ſurrounding his Houſe with Paliſadoes at ſome diſtance from it; but in the Market-Places, or in any Street inhabited by any particular Set of Strangers, whether *Chineſe*, *Europeans*, &c. the Houſes join, or are near to one another, the better to defend themſelves from Thieves, with whom this City is much infeſted.

IT is needleſs to ſpend time in the Deſcription of their common Building, the Country being ſubject to the ſame ſort of Inundations, and therefore the Houſes built on Pillars, as deſcribed in *Chap.* II. *of the Deſcription of* Siam, exactly anſwers this.

THEIR Moſques or *Mahometan* Temples, of which there are a great many, are built with Stone, and roof'd with Tiles; they are not tall nor have any Steeples. There are Traders from ſeveral Nations inhabit here, as from *England*, *Holland*, *Denmark*, *Portugal*, *Guzarat*, and *China*, the Inhabitants of which laſt Place are moſt numerous, and drive the greateſt Trade.

THERE are ſeveral other once conſiderable Places of Trade, but now of little Note, and the following Map will beſt diſcover their Situation; *Jambe* or *Jambe* is a conſiderable Settlement now belonging to the *Dutch*; *Palimbam* alſo was once the Metropolis of a flouriſhing Kingdom, but falling a Victim to the deſtructive Torrent of *Dutch* Cruelty, they were reduced, but revolted (as thoſe Uſurpers call'd it,) and regain'd their antient Liberties.

BENCOOLEN is the next, and indeed the moſt remarkable Place to us; the Town is almoſt two Miles in Compaſs, the Houſes moſtly built upon Bambou Pillars to guard againſt the Inundations, that this as well as other Eaſtern Countries are ſubject to; it ſtands upon a ſtinking Moraſs, very unhealthy to

Bencoolen.

English Conſtitutions; nor were the *Engliſh* ſafe in this low Situation againſt the Inſults of the Natives, ripe for Rebellion againſt them, and therefore they mark'd out a Fort upon a riſing Ground, two or three Miles to the Southward of *Bencoolen*, and call'd it *Marlborough* Fort, which they had rais'd in Brick and Mortar a Foot or more above-ground; but the Country combined ſecretly againſt the *Engliſh*, and form'd a Plot with a Deſign to put it in Execution, while the *Engliſh* had no Ship in the Road to aſſiſt them.

Deſtruction of the Settlement at *Bencoolen.*

On the 23d of *March* late at Night, Capt. *Gibbs* inform'd the *Engliſh* Deputy-Governor that the Governor of *Bantam* had muſter'd between four and five hundred Men in his own Territories, which created a Suſpicion that they intended to attack the *Engliſh*, whereupon the ſaid Deputy-Governor ſent Orders to him immediately to diſperſe the Men he had ſo aſſembled, and to come himſelf to the Fort next Morning, and if he had any juſt Complaints they ſhould be redreſs'd; but if he rejected this Propoſal, he would no longer eſteem him as a Friend, but treat him as an Enemy; next Morning he ſent a civil but trifling Anſwer, but not diſcarding his Men, which continued and increas'd our Suſpicion, and not without good Cauſe; for while this was a doing our Sugar Plantations were ſet on fire about ſix in the Evening.

Upon this a ſtrong Party were ſent out to engage the Enemy where ever they met them, and to deſtroy as many as they could; but the *Malayan* Kings not furniſhing them with Boats according to their Promiſe, they could only fight croſs the River, but could not do much Execution; the *Engliſh* therefore muſter'd all their Forces of *Engliſh*, *Macaſſars*, *Blacks*, and *Chineſe* againſt thoſe Invaders; but when they came to *Bencoolen*, the *Macaſſar* Soldiers having another Deſign on foot, refuſed to fight without preſent Pay, a ſtrong Party of them at the ſame Time lying in Ambuſh to fall upon the *Engliſh*.

Ambuſh

Being thus involved, and finding it in vain to contend, when even our own Forces, as we call'd them, betray'd us, we conſulted an Eſcape rather than a Victory, and how to ſave ourſelves rather than to hurt our Enemies; and ſent the Company's Treaſure aboard the *Medlapatam*; the *Malayans* at the ſame Time deſerting us, or thoſe of the *Malays* that ſtill remain'd at *Bencoolen* had riſen and join'd the *Macaſſars*, and been guilty of barbarous Murders. Thus Meſſage was fearce deliver'd till Fires were obſerved breaking out at *Bencoolen*, another at a Houſe behind the Fort belonging to the Company, and in ſeveral other Places about the ſame Time, which we ſuppoſed was done by our own *Malays*, becauſe no publick Enemy then appear'd againſt us; and thus our Fort and Buildings being moſtly deſtroy'd by Fire, every one endeavoured to ſave himſelf; thoſe that could not get the help of a Boat, ſwam aboard the *Medlapatam* (or drown'd by the Way) We loſt near half of our People by drowning or the Enemy; and near three hundred and fifty black and white Men, Women, and Children got ſafe on board, and from thence made the beſt of our Way for *Batavia*.

Eight come from Batavia to England

The *Engliſh* being thus expell'd from *Bencoolen*, the Natives and *Malayans* begun to apprehend their Caſe worſe than before, fearing that becauſe the merciful *Engliſh* were expell'd, the tyrannical *Dutch* would inſult them more than ever, and lay Iron Yokes upon their Necks which they were not able to bear; and therefore they ſoon laid aſide all Animoſity, and encouraged the *Engliſh* to ſettle among them again; whereupon they finiſh'd *Marlborough* Fort without Oppoſition; and for the wholſom Air and Soil in which it is ſituate, though but three or four Miles from *Bencoolen*, they chuſe it as well for a Habitation as a Defence, but it anſwers both, for *Marlborough* Fort is much more defenſible as well as much more healthy, than *York* Fort at *Bencoolen*.

Inhabitants.

This Iſland of *Sumatra* is peopled from different and diſtant Nations; the Inland Mountaineers are generally Pagans, and deſcended probably from the *Chineſe*; but thoſe near the Sea Coaſt, from *Arabia*, and *Perſia*, and other Nations, profeſſing the Religion, and retaining the Manners and Cuſtoms of the *Mahometans*.

Genius and Temper.

The *Malayans* that inhabit this Coaſt are generally, like the *Spaniards*, proud and lazy, and have moſt of their Buſineſs done by Foreigners; they have no Genius for Arts or Sciences, and either through Ignorance or Indolence, they do not delight in cultivating their Ground, or improving in Mechanick Arts.

Complexion.

They are of a ſwarthy Complexion, middle Stature, ſtrait and well-limb'd, flat Faces, little Noſes, ordinary Features, ſtrait black Hair, and black Eyes; they black their Teeth as in ſeveral other Eaſtern Countries, and beſmear themſelves with ſtinking Oil as in *Borneo*. They wear red Woollen Caps without Brims, but moſt commonly tie a piece of blew or white Linnen about their Heads, letting the Ends hang down, having no covering for their Crown but their Hair, which is pretty long, and hangs upon their Shoulders; the poorer Sort wear only a narrow Cloth about their Middle, but People of Figure have cloſe Drawers or Breeches, and a Piece of Silk or Callico thrown looſe about their Bodies; they wear a kind of a Wooden Clog or Sandal about home, but when they go abroad every one, both Rich and Poor, go barefoot.

Habit.

Food.

Here, as in other Parts of *India*, the common Food for the middling People is Rice and Fiſh, but the better Sort have Fowls, Mutton, Goats-Fleſh, Buffaloes-Beef, and Veniſon; they ſeaſon their Meat very high with Pepper, Onions, and Garlick, and colour their Rice yellow with Turmerick; their Fowls and Mutton are dry and inſipid, and for Pork, which is the beſt Meat in hot Countries, they have but little of; their Veniſon is pretty good, eſpecially the Hog-Deer, which is ſomething bigger than a Rabbet, and his Fleſh is very white; their Ducks are much better than their Land Fowls; they have a liquid Butter like Oil brought from *Bengall*, made of Buffaloes Milk and Hog's Fat mix'd; they have very good Pickles of Mangoes and other Fruit, pickled green.

Veſſels.

Their Meat is ſerved up in Silver, Brazen, or Earthen Veſſels, according to the Quality of the Perſon that is Maſter of the Houſe, and is boil'd or broil'd, and cut in little Pieces; they ſqueeze the Rice between their Fingers into Balls or Morſels, as big as their Mouths will hold, and ſo cram them in, putting a little piece of their Meat or Fiſh to reliſh it; they uſe no Knives or Linnen at their Meals, but waſh both before and after.

Liquors.

Their moſt common Liquor is fair Water or Tea; they drink alſo Toddy, (drawn from the Branches of the Cocoa-Tree when cut;) alſo Arrack, a Liquor drawn from Rice and Sugar-Canes, is very common; and the *Chineſe* bring their Hockſhue and Samſhue, which the *Europeans* love almoſt as well as they do Arrack Punch.

The Cuſtom is here, as in others of thoſe Eaſtern Countries, to chew Betel and Arek, or take Opium, Bang or Tobacco between Meals; Bang raiſes their Spirits almoſt as ſoon as Opium; it is like Hemp, and when they intend to take it, they infuſe it in their Liquors, and drink it: they ſeldom uſe Pipes to ſmoak Tobacco, but roll up a Leaf about the bigneſs of a Man's Finger, and lighting it at one End, they ſmoak it at the other, till it is beſt half out, and then throw it away; they ſeldom drink when they ſmoak.

Their

THEIR manner of Salutation is much the ſame with that of the *Siameſe*, to which the Reader is referr'd for a further Deſcription of it.

FOR Gaming they deviſe Cards, Dice, and Cock-fighting; but they do not trim their Cocks as the *Europeans* do, but think it an Ornament to bring them out in their gayeſt Plumage, with murdering Inſtruments fix'd to their Heels, about the Shape and Length of a Penknife-Blade, ſo that one advantageous ſtroke often determines the Battle. They will ſtake very high upon a Cock-fight; but the Cuſtom is, the Battle is not allow'd to be won, nor the Conqueſt allow'd, except the Victor will peck or ſtrike his Enemy after he has diſpatch'd him, for if he does not the Stakes are drawn.

Game. STAG-HUNTING is one of their chief Sports. The Game is firſt rouz'd by ſome little yelping Curs; and the Huntſmen, who are almoſt naked, run it down on Foot, darting their Launces, when they come within a proper Diſtance, and ſo killing it; ſo that there is no great Diverſion in their Way of Hunting.

Carriages. THEY ſometimes uſe Elephants, Horſes, and Buffaloes for Carridge, but more commonly Porters, where they have not the Advantage of a Navigable River; and they travel for the moſt part on Foot.

Trade. THE Port of *Achin* is the chief Place of Trade in the Iſland. When the *Engliſh* arrive they apply to the Governour for Liberty to Trade. At their firſt going aſhore they are examined at the great Quala, or River's Mouth, whiat Country, or Buſineſs, they are of: of which they give Notice to the proper Officers that are appointed to ſettle Commerce with all Foreigners. The *Engliſh* are only ſworn to obſerve the Articles formerly made between the King of *Achin* and Captain *Lancaſter*, as before expreſs'd. They muſt alſo bring a Letter from the Chief of the Place from whence they came, to the Sabandar, to certify him that they belong to the *Engliſh* Company. They alſo ſwear to be faithful to the Government while they remain at *Achin*, which Oaths are taken before the *Sabandar* by the principal Officers of the Ship, with a Ceremony of lifting up a ſhort Dagger in a Gold Cafe, three times to their Heads; and this is performed with great Gravity and Seriouſneſs, to make it have the greater Impreſſion.

THE *Engliſh* Supercargoes (till very lately) have enjoy'd the Privileges mention'd in the foregoing Articles of Trade, paying no Duties, but only making the uſual Preſents, *viz.* two Pieces of fine Cotton Cloth to the King at firſt coming aſhore, and two more at coming away, and ſomething to the Eunuch that delivers the Preſents: There is alſo a Piece of Silk or Callico preſented to the Sabandar, and another to the chief Miniſter of State, at the ſame time when the firſt Preſents are made to the King; and as ſoon as that is done, the Supercargoes hire Houſes to lodge the Goods they purchaſe as they come in. There are no Boats to be hired at *Achin* for loading or unloading of Goods, but every Ship makes uſe of her own Boats. There are two things previouſly neceſſary to be ſettled in order to trade with them, *viz.* what Cattee you intend to buy and ſell by, for they are different, as our Pounds are, and if in *England* a Perſon ſhould intend to buy by *Avoirdupoiſe*, but not naming it, as perhaps not knowing of any other, they ſell by *Troy*, they have but three of their intended Pounds inſtead of four, and a Remedy would be difficult to be obtain'd, becauſe they have the Number of Pounds agreed for, and the Kind of Pound was not mentioned. The ſecond thing to be agreed upon is, at what Rate you are to receive or pay untold Gold (which is oftner uſed than Coin) for if that is not pre-determined you will be as much at a loſs to know how much Gold to give for any Quantity of Goods bought, as if the Price of the Goods had not been ſettled; for if a Man buy a Tun of Sugar at Six-pence a Pound to be paid for in Broad-cloth, it is eaſy to know what the Sugar will come to, but impoſſible to know how much Broad-cloth will pay for it, till the Price of the Cloth, by ſome certain Meaſure, be firſt determined.

IN order the better to underſtand what has been or may be ſaid as to the Way of Trade, it may not be amiſs here to give an Account of their Coins and Weights reduced to the *Engliſh*; and firſt of their Coins, which are the Cattee, the Tael, the Maſs, and the Cupan; a Cattee is eight Tael, or ſix Pound eight Shilling Sterling; a Tael is ſixteen Maſſes, or ſixteen Shillings Sterling; and conſequently a Maſs is four Cupans, or one Shilling Sterling, every Cupan being Three-pence. Coins.

THE common Weight is the Bahar, of two hundred Cattees, every Cattee twenty nine Ounces *Avoirdupoiſe Engliſh*, which is three hundred and ſixty two Pound and a half *Engliſh*, but reckon'd three hundred and ſixty ſubtle. Weights.

THE Inhabitants of *Sumatra* are ſhy and cautious with all *Europeans*; ſince the *Dutch* have ſerved them ſo ill, they will not trade with them at all. The *Engliſh* are moſt encouraged, but their Trade precarious upon any Alteration of Government, and eſpecially of late the Miſunderſtandings between the Government of *Achin* and the *Engliſh* Company has very much interrupted their Trade.

THE chief Product of *Sumatra* is Pepper and Gold Duſt; the latter is moſtly near the Equinoctial. Here is alſo good Camphire, the beſt is in ſmall Bits, white and tranſparent. The Bezoar-ſtone is alſo found here; it is taken out of the Hog-Deer before deſcribed, and is valued worth ten times its Weight in Gold; it is a dark brown, and ſmooth on the Outſide, and when the firſt Coat is off, it appears ſtill darker, and will ſwim on the Water. The Porcupine Bezoar is reddiſh; the Monkey Bezoar is a light Green and ſhining. Product.

THE Pepper Plant not being able to ſupport it ſelf, but like a Vine creeping at what is next to it, they plant a Thorn-Tree by it, along whoſe Branches it runs; the Berries grow in Cluſters about the Form and Size of a Bunch of Grapes. The Vine (for ſo they call the Pepper-Tree) bears no Fruit the firſt three Years, but the fourth it bears, and increaſes till the eighth Year, and then declines the ninth and tenth, and ſeldom bears more. The Leaf is like Ivy, but larger; their beſt Crop is ready in *September* or *October*, and they have a ſmall or ſecond Crop in *March* or *April*. Pepper Plant.

RICE is the chief Grain upon which they depend for Food; but the Country doth not produce enough to ſupply it ſelf, without importing from other Places. Next to Pepper and Rice, their moſt conſiderable Plantations are Sugar Canes, which they improve chiefly for the ſake of the Arrack and Spirits they extract from them. They have in their Gardens, Peaſe, Beans, Raddiſhes, Yams, Pumpkins, and Potatoes of three or four Inches long, red without, and white within, as ſome in *England*. They have alſo Limes, Plantains, Pine apples, Cocoa-nuts, Citrons, Oranges, Pump noſes, Mangoes, Pomegranates, and the Mangoſteen, a moſt delicious Fruit, like a Pomegranate, but leſs. Rice. Fruit.

THE Silk Cotton-Tree grows about *Achin*, the Fruit hangs down at the Ends of the Twigs like Purſes, three or four Inches long, and when they are ripe, they drop off, and they gather them, and take out the Cotton for Uſe or Sale. Silk-Cotton.

THE

Minerals. THE Minerals that *Sumatra* chiefly produces is Gold and Tin. The Gold Mines are in Poſſeſſion of the Mountaineers; they exchange it with the Inhabitants of the Coaſt or flat Country, for Rice, Cloaths, Tobacco, and other Neceſſaries, and they ſell it to the *Europeans*.

THE Beaſts that are moſt common here are ſmall Horſes, Buffaloes, Goats, Hogs, Elephants, Deer, Hog-Deer, and a few Bullocks, ſeveral Kinds of Tygers, Monkeys, and wild Hogs; alſo Guanoes, Lizards, Crocodiles, Snakes, Serpents, Ants, Musketoes, and other troubleſome Inſects: They have Plenty of Fowls and Ducks, and in the Woods are wild Pigeons, Parrots, and ſeveral other Birds, beautiful to look upon, but none that excel for Melodiouſneſs of Voice.

Laws and Puniſhments. THEY have no written Laws but what relates to Religion, and are recorded in the Alchoran; otherwiſe the moſt antient Cuſtoms are look'd upon as Laws, and the moſt antient People are conſulted in the moſt difficult Caſes. If a Precedent can be remember'd, it is thought ſufficient to form a Judgment from in the Caſe depending. Murder and Adultery are puniſh'd with Death, in which Caſe they have no regular Executioner, but all, under the higheſt Reſentment of ſo heinous a Fact, fall upon the Criminal, and ſtab and mangle him with their Crices or Daggers; yet they ſhew ſo much Tenderneſs to female Offenders, that they ſtrangle them at once, and do not expoſe them to ſuch a cruel, and ſometimes lingering Death. For Theft they cut off one Joint or more from the Criminal's Fingers or Toes, according to the Nature of the Crime. The third Offence is always Death. Civil Cauſes are judged by Precedents of the like Kind, produced by antient Men, and when compared with them, are finally determined by the Opinion of the Magiſtrate before whom it is brought. Civil Cauſes.

THE Religion of this People being generally Mahometiſm, we ſhall defer any further Deſcription of it till we come to treat of thoſe Places where it is the eſtabliſhed Religion. This Government allows Concubines and Plurality of Wives; they alſo allow of Divorce, if the Crime be thought ſufficient to deſerve it, of which the Prieſt is the Judge: he that join'd them together being thought the propereſt Judge as to the Caſe of a Divorce. The Prieſt alſo attends the Funeral Rites, which being perform'd in much the ſame Manner as at *Macaſſar*, we ſhall refer the Reader to that for further Satisfaction.

CHAP. III.

Of the Iſland of Java; *its Trade and Product; the Monſoons and Currents in the adjacent Seas; the Cuſtoms and Manners of the People,* &c.

THIS Iſland is by ſome call'd *Java Major*, to diſtinguiſh it from a little Iſland call'd *Baly*, and by ſome *Java Minor*, which lies near the Eaſt End of it. *Java* is ſeparated from *Sumatra* on the North Weſt of it, only by the Straits of *Sunda*; it has *Borneo* on the North, the Iſland *Baly* or *Bally* on the Eaſt, and the *Indian* Ocean on the South. It is about ſix hundred Miles in Length, and an hundred Miles in Breadth, or in ſome Places more.

Air. THE Air of this Iſland is not very wholſome, by reaſon of the abundance of ſalt Marſhes, from whence pernicious Fogs ariſe; and it is obſerved, that if the Sea Water be taken up and kept twenty four Hours, it will corrupt ſo as to ſtink and be very nauſeous; therefore when the Salt Water overflows the Meadows, and afterwards ſtands to corrupt there, it makes the Air very unhealthy.

Monſoons. THE worſt Weather upon the North Coaſt of *Java*, and as far Eaſt as the Iſlands of *Sola* and *Timor*, is with the Weſterly Winds, which commonly begin the firſt Week in *November*: In *December* the Wind and Rain increaſes, and ſo continues till *January*, when it is at the worſt, and continues ſo till *February*, after which time the Wind and Rain abates till the latter End of *March*. In *April* the Weather grows fair, with variable Winds and Calms, and about the Beginning of *May* the Wind ſettles Eaſterly, and in *June* and *July* often brings Rain; but the Eaſterly Monſoons blow hardeſt in fair Weather, and continues till the latter End of *September*, and in *October* the Winds are variable, and in the Beginning of *November* the Weſterly Monſoon ſets in again, &c. but the Monſoons happen ſometimes ten or fifteen Days ſooner or later than the Times above expreſſ. Currents. THE Currents always ſet along the Shore the Way the Wind blows.

THE Capital of this Iſland is a City called by the ſame Name *Java*, or by ſome *Mataram*, and its King is the moſt potent in all the Iſland. And next to *Java* was *Bantam*, the chief Place of Trade for moſt *Europeans*. Here the *Engliſh* ſettled their principal Factory, and the *Dutch* had another, till the King of *Bantam*, not able longer to bear the inſolent Encroachments of the *Dutch*, expell'd them to *Batavia*, where they fortified themſelves ſo ſecurely, that when the King of *Batavia* was alſo weary of them, they bid defiance to his Forces, nor have all the united Powers of the *Javan* Princes ever ſince been able to expel them.

Bantam *BANTAM* is the weſtermoſt Place of Note in the Iſland, and was once the Metropolis; it was a populous City, not leſs than twelve Miles in Circumference; the King's Palace was a ſtrong Fortification; it was one of the greateſt Ports in the Eaſtern Sea, and of great Concourſe for Trade; but ſince it became a Prey to the deſtructive Tyranny of the *Dutch*, it is become a wretched poor Place, the King depoſed, the fine Buildings demoliſh'd, the principal Inhabitants remov'd, and little to be ſeen but Ruin and Deſolation.

Batavia *BATAVIA* is about forty Miles to the Eaſtward of *Bantam*, on the North Coaſt of *Java*; it is about the bigneſs of *Briſtol*, and regularly built with white Stone, the Streets wide and ſtrait, and in ſeveral of the principal of them are Canals faced with Stone, and planted with Ever greens; over the Canals are fifty-ſix Stone Bridges. It is ſurrounded with a good Wall, with two and twenty Baſtions well furniſh'd with Cannon. They have ſeveral handſome publick Buildings, as the great Church, the Stadt-Houſe, &c. There are two Churches for the reform'd *Portugueſe*, and one for the *Malayans*; but neither *Papiſts* nor *Lutherans* are allow'd the Exerciſe of their Religion in Publick.

Fort THE Fort ſtands on the Weſt Side of the Town, and by that Situation has both the Command of the Town and the Road: It has four Baſtions faced with Stone, but no Moat except the Canals, which

which are about twenty five Foot broad, and generally fordible. Within the Fort are the Houſes of the General and other principal Officers, and Companies Servants; there are in the City ſeveral large Market-Places, and other Places of publick Courſe, *&c.* But beſides what may properly be call'd the City, the Suburbs extend almoſt half a League into the Country, and form a Town larger than the former, but not ſo compact, becauſe Kitchen-Gardens and other Conveniences are interſperſed among the Houſes. In theſe Suburbs the *Chineſe* live, and have their Temples and Burying-Grounds, and have the free Exerciſe of their Religion; here live alſo the *Malayans* and *Javans*, (for the *Dutch* have expell'd the Natives of *Java* out of *Batavia* City into the Suburbs and remote Parts;) here alſo live the *Bandaneſe*, the *Amboyneſe*, and who ever elſe the *Dutch* have collected here to anſwer their Purpoſe, or indeed to be their Slaves.

The *Dutch* Houſes are built after the Manner of *Holland*, and the *Chineſe* after their Country Method, and the Natives on Bamboo Pillars, like the *Malayans*, as deſcribed when treating of that Country.

The ſeveral Foreigners (allowing the *Dutch* to be the Inhabitants,) have their reſpective Settlements and Employments in the Suburbs; the *Chineſe* are ſome of them good Mechanicks; they farm the Rulers Exciſe and Cuſtoms, and apply themſelves to Husbandry and Gardening, to cultivate Rice, Cotton, Sugar, *&c.* The *Dutch* are the greateſt Merchants, keep the greateſt Taverns, and in ſhort, trade for themſelves what brings them the moſt Money: the *Malayans* live moſtly upon Fiſhing, and ſupplying the reſt with that ſort of Commodity; the *Malayneſe* have a Suburb to themſelves, and are the beſt Carpenters, and are the moſt dexterous at building their Bamboo Houſes, and making Windows of ſplit Cane, ſomewhat like the Work of our Cane Chairs; the *Javaneſe* have alſo their particular Suburb, their Buſineſs is chiefly building the Country Boats and Fiſhing-Boats; the *Topaſſes* or *Mardikers* are a mix'd Breed of *Dutch*, *Portugueſe*, *Chineſe*, and other Nations promiſcuouſly intermarried; ſome of them live in the City, and have handſom Houſes, and follow Merchandize, the poorer Sort practiſe Husbandry, Gardening, and Mechanicks; the *Macaſſers* and *Bugaſſes*, whoſe Anceſtors were Natives of *Macaſſar*, they live in the Suburbs: And thus the City Suburbs of *Batavia* are inhabited by ſuch as the *Dutch* chuſe to make their Slaves, and anſwer their purpoſes, and out of whom they have form'd a Body of ten or twelve thouſand regular Troops to garriſon *Batavia* and the Neighbouring Forts, about a thouſand of them being upon the Guard every Day.

The *Javans* are of a Moderate Stature, tawny Complexion, their Hair of a ſhining Black, partly tied up or put under a Turbant, and the reſt falls upon their Shoulders; they have thin Beards, and to make them ſo, they pull up the Hair of their Beards when they are young, as it firſt begins to grow; they go naked to their Middle, but wrap a Piece of Silk or Callico about their Loins, reaching down to their Knees; they eat very ſparingly Fruit, dry'd Fiſh, and drink Water and Tea, but no ſtrong Liquors, keeping ſtrictly up to that Precept of their Prophet, wich forbids it.

It cannot be amiſs, by way of Reflection, to look back and take a ſummary View of the ſeveral Steps the *Dutch* have taken to get ſuch firm Footing as they now have in *Batavia*, and indeed all *Java*, for they never thought themſelves ſafe or ſatisfied as long as they had any Competitors in Trade, or any Body had a Share, though they had more than they could diſpenſe with. It would have been difficult for them to have engaged againſt the united Powers of all the Princes of *Java*; but they contrived an eaſier Method, and that was to ſeparate their Intereſt, foment Differences, and join the Malecontents, at other Times aſſiſting them one againſt the other, till in the End they ſwallow'd up both; and if the Subject of any *European* Prince had a conſiderable Factory in any of the *Indian* Dominions, they were ſure to pick a Quarrel with that Prince, and if ſtrong enough for him, would never make any Peace with him, without making the Expulſion and Deſtruction of that *European* Settlement the Condition of it. This appear'd evidently in their Reduction of *Bantam*, and that the flouriſhing Trade that the *Engliſh*, and other *Europeans* enjoy'd there was their chief Inducement to the Enterprize againſt that Port, which was thus:

Ruin of *Bantam* contrived and compleated by the *Dutch*.

When the *Dutch* were ſettled at *Batavia*, the *Engliſh*, *Danes*, *Spaniards*, and *Portugueſe* had a flouriſhing Trade at *Bantam*; the envious *Dutch* unwilling to ſee any Thing eſcape them, contrived to pick a Quarrel with the King of *Bantam*, alledging that he had made ſeveral Attempts upon them, and then concluded that they apprehended him a dangerous Neighbour, and thus meditating ſome pretence to fall upon him, it happen'd there was a Quarrel between the old and young King of *Bantam*, and the old King weary of the fatigue of Government, reſign'd to his youngeſt Son, who having been at the Court at *Conſtantinople*, and a new-fangled of what he had ſeen, deviated from the original Conſtitution of the Government of *Bantam*, and model'd his Government by that of the Grand Seignior and the *Turkiſh* Empire; the Subjects diſcontent under theſe Innovations, depoſed him, and ſet up his elder Brother, who till now had retired from Buſineſs and devoted himſelf to Religion; the old King not willing his eldeſt Son ſhould reign, reſumed the Government again himſelf, and beſieged his Son in the Caſtle of *Bantam*. In this Diſtreſs the young King ſent to the *Dutch* for Aſſiſtance; ſuch an Opportunity as this they wanted; they did aſſiſt him indeed, as *Jupiter* aſſiſted the Frogs, when they deſired a King, and he ſent them a Crane, who eat them all up alive; in ſhort, the *Dutch* having, at the young King's Requeſt, defeated the old King; they then depoſed the young one, and made him their Vaſſal, and having thus ſeized the Sovereign Power, they alſo ſeized the Port and Kingdom, and therewith alſo all the Goods and Merchandize of the *Engliſh*, and other *European* Merchants, totally expelling them from that Coaſt, and entirely engroſſing the Trade and Property to themſelves.

But to proceed with the Deſcription of this Iſland and People; their Salutation and manner of Sitting are much the ſame with thoſe of the *Malayans* and other *Indian* Nations, to the Deſcription of which we refer the Reader. Their Diverſions are Cock-fighting, in which they very much delight; alſo Buffaloes-Baiting; but as the Beaſt is never ſtak'd, nor the Place rail'd in, he often breaks out, and does a great deal of Damage. Tyger-Hunting is ſtill worſe; for they firſt prepare their Traps and Pit-falls, and with a great Number of armed Men ſurround the Place he haunts, thinking by their Noiſe to drive him into the Snare, but he ſometimes takes a different Rout, and when enraged ſpares none that comes in his Way.

Cuſtoms.

Diverſions.

Since *Batavia* has been ſo populous, their Conveniencies for travelling are very much improved; Coaches are as common as in ſome great Towns in *England*; they have fine Horſes from *Perſia*, and the Iſland produces a ſmall-ſized Horſe very ſerviceable. The Princes or great Men are ſometimes carried in a kind of a Litter or Couch on Men's Shoulders, but the moſt common way of Travelling is on Horſe-back.

Way of Travelling.

View of *Dutch* Policy.

The Shipping of *Batavia*, or indeed of the whole Iſland of *Java*, was but inconſiderable; they had

ſmall Veſſels that ſail'd quick, but of ſmall Burden, few of them exceeding fifty Tuns; but the *Dutch* finding good Timber upon the Iſland, built ſome Men of War, and by Degrees encreaſed their Number to twenty or thirty, with which they are able to inſult all their Neighbours, and by which they have acquired the Poſſeſſions they now enjoy, and maintain them by their Care in maintaining Carpenters, Ropemakers, and other Mechanicks, to repair and improve their Shipping, which they employ as they think fit, either for Merchandize, Conqueſt, or Defence, no *European* being ſuffer'd to trade where they have made an entire Conqueſt, except to trade with them, or (which is the ſame) to have the Goods at ſecond Hand.

Batavia is now a Place ſo populous for Trade, that other Nations apply to them; as from *China* there comes fifteen or twenty Junks every Year, three, four, or five hundred Tun each; they commonly arrive in *November* or *December*, and furniſh the *Hollanders* at *Batavia* with ſuch Goods as *China* affords, at an eaſier Rate than if they fetch'd them in their own Ships, and the like, with reſpect to Merchandize imported from any other Place; ſo that it may be ſaid that *Batavia* is now become the Magazine for Goods, or the Mart for Trade of all the *Eaſt Indies*; for hither they import the Merchandize of *Japan*, the *Spice Iſlands*, *Perſia*, *Surrat*, *Bengall*, and the whole Coaſt of *Malabar* and *Bormaudel*, beſides whatever *Europe* affords. They barter one ſort of Goods for another till they have engroſs'd to themſelves the moſt valuable Goods the Eaſt affords, which they tranſport into *Europe*, and change into ready Money, and by this means engroſs to themſelves more Treaſure than any *European* Nation, the whole Spice Trade being their own; for though there are other Iſlands capable of bearing the ſame valuable Commodity, yet the Natives dare not cultivate them, as knowing that if they are once brought to Profit, the *Dutch* will either ſeize them for themſelves, or entirely deſtroy them; and hence there can be no readier way for any *European*, *Engliſh*, or other, to make the *Dutch* their Enemies, than to acquire the Poſſeſſion of ſome profitable Place of Trade in the *Eaſt Indies* that the *Dutch* have a fancy for, for then 'tis likely rather than fail, they will ſerve them *as they ſerved the* Engliſh *at* Amboyna.

Manufactures are promoted here as much as in *England* or *Holland*, in Proportion to the Trade and Number of Inhabitants. At *Batavia* are Printing-Houſes, Paper-Mills, Powder-Mills, Sugar-bakers, Spinners, Cotton-Weavers, Ropemakers, Carpenters, Bricklayers, Shipwrights, Smiths, Braziers, and all manner of Iron-ware is forged at *Batavia*; but we do not find that any good Watches are made at *Batavia*, which they do not impute altogether to the Deficiency of the Workmen, but to the Climate, it being obſerved that Watches carried from *England*, or other Parts of the temperate Zone, do not keep true Time, the Heat of the Climate ſoftening their Springs, and by that means (if proper Means be not uſed to avoid it) they loſe their Elaſticity, or it is ſo much impair'd that the Motion of the Watch is uncertain.

The *Dutch* have founded Schools in *Batavia*, where the learned Languages and liberal Arts are taught, but there is no great Perfection in any Language to be attain'd here, becauſe this City is compoſed of Inhabitants from almoſt every *Indian* Nation, and hence all their Languages are ſpoken here; but notwithſtanding what is taught in the Schools, the moſt current Language is the *Malayan*, and a kind of Baſtard *Portugueſe*, which is the only Language with which a Man may travel through this Part of the World, if he know no other.

The Iſland of *Java* is very mountainous towards the Middle, and all cover'd with Woods, and the low Lands near the Shore are generally marſhy, and abound with Reeds and Bambou, but nearer *Bantam* and *Batavia* the Land is clear'd and drain'd, and made fit for Tillage; their Rice-Fields and Kitchen-Gardens being well ſupply'd with Water by Rivulets running through them out of the Country. Up theſe Streams the Gentry and Citizens of *Batavia* go in their Pleaſure-Boats to their Farms or Country Seats, as either Pleaſure or Buſineſs may give them an Invitation.

They have no Corn grows here but *Rice*, but it is very good; they begin to ſow it in *March*, and cut it in *July*; they import pretty good Wheat from *Bengall*, and tolerable cheap, but yet ſo much inferior to the beſt *European* Wheat, and the Rice is ſo good, that after a little Practice, the *Europeans* conform to eat boil'd Rice as the Natives do, rather than Bread made of that Wheat. They have about *Batavia* ſeveral conſiderable Sugar Plantations, and ſome Tobacco, and in their Gardens they have plenty of Beans, Peaſe, Roots, and Herbs, which next to Rice, are the principal Food of the Inhabitants. They have alſo for variety, great Plenty of Seeds from *Europe*, *Perſia*, and *Surrat*, which generally thrive at *Batavia* with Increaſe. From *Holland* they have Cabbages, Purſlain, Aſparagus, Lettice, Water-creſſes, Parſley, Fenrel, Pompions, Water-mellons, Cucumbers, Raddiſhes, Potatoes, &c. in great abundance, and ſeveral Aſtringents good againſt the Bloody-flux, the predominant Diſtemper of the Country. The greateſt Plenty of Fruit is about *October*, but they have ſome ſort or other all the Year round.

Their Paſtures afford but a long, rank, four Graſs, which produceth but coarſe Fleſh upon their Cattle. The *Dutch* have planted Vines about *Batavia*, which thrive ſo well as to bear ſeven times in two Years; but whether by reaſon of the ſmall Quantity, or the contrary Quality of the Grapes, the *Dutch* have no Wine but what comes from *Europe* or *Perſia*, which makes it very dear. They have lately planted the Coffee Shrub at *Batavia*, and it thrives tolerable well, but is not near ſo good as that that grows in *Arabia*. They have almoſt all manner of *Indian* Fruit in great Plenty, as Cocoas, Bonanoes, Plantains, Anana's or Pine-Apples, alſo Mangoes, Mangoſteens, Durions, Oranges, and Lemons, with their beloved Betel and Arek. There are alſo Benjamin, and other Gums found here. They have Cedar and Oak, the latter ſaid to be not inferior to the *Engliſh*, but the Bambou is of the moſt uſe for building their Houſes, &c. as has been obſerved before.

There are good Stone Quarries about *Batavia*, and alſo good Earth for Bricks, but we do not find that the *Dutch* have yet got any Mines in what they aſſume as their Dominions; if there are Mines, they are either where their Uſurpations have not reach'd, or if they have, they have not found them out; and if the Natives know of any, perhaps they are ſo wiſe they will not diſcover them.

There are Hogs wild and tame, alſo Buffaloes; there have been alſo Bullocks, Cows, and Sheep imported hither, but they do not thrive nor increaſe as in colder Climates. There is Deer, wild Hogs, Rabbets, &c. whoſe Fleſh is much more preferable to that of the tame Cattle for eating; they have a ſmall ſort of Horſes very ſerviceable, and abundance of wild Beaſts, as Monkeys, Tygers, and the like; alſo Porcupines, Crocodiles, Snakes, Scorpions, Millepedes, Locuſts, Caterpillars, and all ſorts of Inſects, very prejudicial

to

to the Fruits of the Earth, if the Rains do not drown them or waſh them away. The Crocodiles are ſome of them twenty or thirty Foot long, for which reaſon they are not quick to turn about, and may eaſily be eſcaped if ſeen in time, and one turn aſide from them, for they take moſt of their Prey lying among the Reeds, like the Body of an old Tree, and ſo ſeize the unwary Traveller, or other Prey, for want of their taking care to avoid him: When they would take them either for Diverſion, or to rid the Country of ſuch pernicious Vermine, they bait a large Iron Hook with a Dog, which is the Crocodiles favourite Morſel, and fiſh for them at the Mouth of ſome Rivulet or Creek, where they uſually lie to catch what is driven down to the Sea. The Back of it is ſo hard that a Musket Ball will not penetrate it; but he is eaſily kill'd if you can come at his Belly. Theſe Creatures are ſo pernicious and terrible to the Inhabitants, that the Government allows a Reward for taking or killing them.

Revenues. The Revenues of the Government at *Batavia* is very large, the Inhabitants of the City being rich, and a Duty laid upon almoſt every thing. The *Chineſe*, who are not leſs than eighty thouſand Men, under the *Dutch* Government, pay a Crown a Head for a Permiſſion to wear their Hair, and for them that are Rich and wear a Silver or Gold Bodkin in their Hair, they pay a Crown more, and was they to impoſe a Tax upon every Tooth in a Man's Head, there is no Remedy, it muſt be paid, nor are they ſuffer'd ſo much as to diſpute it.

Javaneſe Women. The *Javaneſe* Women are ſaid to be very amorous, nor can their Husbands oblige them more than by being kind and faithful to them by way of return, in which if they fail, or alienate their Love, or if there is but juſt Cauſe to ſuſpect ſuch a thing, their amorous Careſſes are turned into the moſt inveterate Hatred; and if the Husband's Affection to ſome other put an End to his Love, the Wife ſoon finds a Potion to put an End to his Life, ſo highly do the Wives reſent the ſlighting of that conjugal Love in which they think their chief Virtue conſiſts: But where they conceive no Jealouſy of being ſlighted, they uſe all modeſt and chearful Freedoms in Dancing and other Diverſions, which as they have very agreeable Features, they perform with a Grace entirely engaging, nor do their Husbands confine them as in ſome other Eaſtern Countries, but they have the full Freedom of Converſation and going Abroad as in *Europe*.

Poligamy. The Men nevertheleſs are allow'd Poligamy, beſides She-ſlaves or Concubines. The *Dutch* alſo allow their Men to marry the native Women, provided they turn Chriſtians, which their Women are eaſily induced to do, for the Sake of having every one a whole Husband to herſelf, the *Dutch* not allowing Plurality of Wives, and ſo ſtrictly oppoſing it, or Concubinage, or any falſe Steps with any of their She-ſlaves, that if the Wife finds it out, ſhe eaſily obtains a Divorce. The Manner. Method uſed when a *European* is to marry a *Javan* Woman, is, the Contract is drawn up by a Publick Notary, and they appear before a proper Magiſtrate, who (the Conditions being ſettled) gives them Licence to marry, which Licence being Regiſter'd, they may ſolemnize the Nuptials when they pleaſe, and in what manner the *Dutch* Church requires. The Children of thoſe mixt Marriages uſually wear the *Javan* Habit to the third and fourth Generation, and thoſe Wives and Children are what the *Dutch* call their Converts; but though their Women are ſometimes thus converted (if marrying a *Dutchman* may be called Converſion) yet few of the *Javan* Men are converted by this or any other means, for few or none of the *Dutch* Women care to marry into the *Indian* Tribes purely to make Chriſtians, or to forego the Priviledges they enjoy at *Batavia* purely for the Sake of making Proſelytes to their Religion; for when the *Dutch* firſt ſettled at *Batavia*, *European* Women were ſo ſcarce, and conſequently ſo much valued, that it made them intolerable proud, which Pride they retain to this Day, without any great regard either to Trade or Religion, and are now got to that Height of Pride and Revenge, that the Men had rather put up a ſmall Affront than provoke them.

Funerals. The *Dutch* as well as the *Javans*, and other their Proſelytes by Intermarriages, &c. bury as in *Europe* and the other Natives bury, but do not burn their dead. The *Chineſe* here have a Burying-place aſſign'd them about half a League out of the City of *Batavia*, where they bury their Dead with much the ſame Form and Ceremony as in *China*. (*See Chap.* X. *of* China.)

We have been the larger in treating of *Bantam* and *Batavia*, the Ruin of the former, and the Riſe of the latter, becauſe they were, or are, the chief Scene of Trade, Commerce, and Concourſe of Shipping in the whole Iſland. There are ſeveral other Towns in the Iſland, as *Caraban*, *Japara*, and alſo *Java* City, or *Mattaran*: The two former, ſince the Encroachments of the *Dutch*, and picking and chooſing where they pleas'd, retaining little more than the bare Name of being Capitals or Metropolizes of Kingdoms; but *Java*, or *Materan*, remains a Kingdom independant of any other, and is ſaid by ſome to contain all that Part of *Java* to the Eaſtward not yet poſſeſs'd by the *Dutch*; but as theſe are Places of little or no Trade, and their Manners and Cuſtoms common with thoſe of the Natives of the other Parts of *Java*, we ſhall not enlarge upon them, but proceed to a brief Deſcription of the moſt remarkable of the adjacent Iſlands, becauſe they are uſeful to the *Engliſh* in furniſhing them with Refreſhments at an eaſier Rate than they can have them at *Batavia*. Other Iſlands.

Madura. The firſt is *Madura*, it lies upon the North Coaſt of *Java*, and near the Eaſt End; the chief Town of this Iſland is *Arabaya*. This Iſland is called by ſome Sailors *Carimon Java*, and lies between *Bava* and *Borneo*. The *European* Ships frequently touch at it in their Voyage to *Borneo*.

Bally Iſland. A little to the Eaſtward of the Eaſt End of *Java* is the Iſland of *Bally*, or leſſer *Java*, from whence the great Iſland of *Java* is diſtinguiſhed by the Name of *Java Major*. Between theſe two Iſlands is form'd a narrow Paſſage, call'd *The Straits of Bally*, which where it is narroweſt is not much broader than the *Thames*; the Mountains on each Side of a prodigious Height, and ſeem as if they lean'd over, and ready to fall upon you, which afford a frightful Proſpect; and what adds to the Dread is the hollow Noiſe the Sea makes in beating againſt the Rocks where it is ſo much confin'd; and what makes this Paſſage really dangerous is the ſudden Squalls and Gulls of Wind that comes down from theſe Rocks upon all Points of the Compaſs in a very ſmall Time, which with the whirling Eddies of the Water occaſioned thereby, makes ſailing through theſe Straits very hazardous.

To the Eaſtward of *Bally* are the Iſlands of *Lomboc*, *Cumbava*, *Flori*, *Solo*, and *Timor*, in every one of which the *Dutch* have Forts or Settlements; of the firſt four there is nothing remarkable, but that from their Inhabitants the *Dutch* recruit their *Indian* Forces at *Batavia* when they have occaſion. To deſcribe all theſe Iſlands would be needleſs, for as they all lie adjacent one to another, and near the ſame Latitude, &c. in deſcribing one as to their Complexions, Product, &c. I ſhall deſcribe them all.

Timor

Timor. TIMOR, the largeſt of them, is about two hundred Miles long, and fifty broad; the Middle of it is in about nine Degrees of South Latitude, and 124 Degrees of Longitude Eaſt from *London*; there are no navigable Rivers, but ſeveral Bays, where Ships may Anchor to ſhelter them from the Monſoons; but the Bay of *Babao* is the ſafeſt riding for Ships in the whole Iſland, having the Land on every Side from Weſt by South to Eaſt-North-Eaſt; but in riding here Care ought to be taken to avoid the Worms, which will deſtroy a Ship's Bottom in a ſmall Time if not carefully prevented.

Concordia Fort. THE *Dutch* have a Fort upon this Iſland towards the Weſt End of it, in a Bay on the North Shore, and before the Bay lies the Iſland of *Ambo*; the Fort is of Stone, and built upon a Rock by the Sea Side, having a freſh Water River falling into the Sea; on the Eaſt Side of it, near the Fort, are Gardens both for Greens and Roots belonging to the Kitchen Garden, and alſo for *Indian* Fruit. There are about threeſcore Houſes in the Town, and fifty or ſixty Soldiers in the Garriſon.

Laphao ABOUT fifty Miles to the Eaſtward of the *Dutch* Fort, and on the ſame North Coaſt, is *Laphao* a *Portugueſe* Settlement; they have no Fort or Garriſon, but have penetrated ſo far into the Country, and are ſo incorporated with the Natives by Intermarriages and the like, that the *Dutch* give them little Diſturbance; but whether their quiet Poſſeſſion be owing to the Greatneſs of their Strength, or the little Value of what they enjoy, or laſtly to the Equity and Integrity of the *Dutch*, who, for Conſcience ſake, will not covet their Neighbours Property, we cannot determine; but the laſt is leaſt probable, when we think of the *Banda Iſlands* and the Tragedy of *Amboyna*.

IN the Town of *Laphao* there are not above forty or fifty Houſes, all low and meanly built, and cover'd with Palmeto Leaves; there is a ſmall Church, but it is all open to the Air where the Walls ſhould be, except at the Eaſt End; there are ſix old Iron Guns upon a Platform under a Shed, but their Carriages are rotten, and in ſhort, they ſeem to have no Defence to depend upon but the Forces they can draw down out of the Country if they ſhould be attack'd. The *Portugueſe* have a Governor upon this Iſland, but he reſides at a Place call'd *Porta Nova*, at the Eaſt End of the Iſland; this is a Place of the beſt Trade in all the Iſland; and both here and at *Laphao* ſeveral *Chineſe* live, and the *Chineſe* Junks come every Year to trade at both Places. It is not long ago that a Pyrate (doubtleſs ſenſible of the Weakneſs of this Iſland,) plunder'd and burnt both this Town and the *Dutch* Town of *Concordia*.

Complexion. THE Natives of this and the other Iſlands between it and *Java*, are of ſo ſwarthy a Complexion, that they are commonly called *Blacks*. They are of a middle Stature, long black Hair, ſtrait Limbs and ſlender, with a long Viſage. It is ſaid that thoſe who are not ſubjected to the *European* Chriſtians, are very barbarous, and ſtick not to cut off any *European* that lies in their Power; but as one Story is good till the other is told, we muſt ſuſpend our Cenſures of the natural Barbarity of thoſe Natives, till we conſider with what Cruelty both the *Dutch* and *Portugueſe* have uſed the Natives of other Places, whoſe Properties they had a mind to engroſs to themſelves, and then judge whether we think the *Timoreans* have not been juſtly provoked againſt ſome *Europeans* at leaſt.

THE meaner Sort have no Dreſs but a little Cloth about their Loins, pull'd up and made faſt between their Legs; but for Ornament the better Sort wear a Coronet of Mother of Pearl, or thin oval Plates of Silver or Gold as big as a Crown Piece; four or five of theſe make a fine Dreſs. The Men go always arm'd with Swords, Darts, or Lancets, with which they ſtrike their Wild Buffaloes when they hunt them; and they make no ſcruple of eating any Thing that Nature produces, and their Appetites approve of.

THEY have Wild-Beaſts and Inſects as in *Java* and other Places, but of Fowls, beſides Hens, Pidgeons, &c. as in other adjacent Iſlands, there are ſome beautiful Birds with very harmonious Notes, a great rarity in theſe Countries; there is alſo a little Bird called the Ringing Bird, having juſt ſix Notes, he begins with the higheſt and ends with the loweſt, and at every time of ſinging them repeats them twice. There are abundance of Bees in the Woods, which produce great Quantities of Honey and Wax.

THESE Iſlands afford great Variety of Fiſh, both what is known in *Europe* and others peculiar to the Country; there are Oyſters of ſeveral Kinds, and Cockles as big as a Man's Hand, with Allegators or Crocodiles, as in moſt other of thoſe hot Countries.

AMONG their Trees there is one ſeems peculiar to the Iſland; it grows by the Sea Side, and is ſomething like a Pine; it is a hard Wood, of a reddiſh Colour, very ponderous, and good Timber; here are ſeveral ſorts of Palms, of which one kind is ſeven or eight Foot in Circumference, and eighty Foot high, with Branches only at the Top, like the Cocoa-Tree, the Fruit like a Cocoa-Nut, but no bigger than a Hen's Egg, and no Liquor in it, as in others; there is alſo another Palm, which bears great quantities of ſmall Fruit, which hang on the Branches, but the Tree has no Leaves or any thing green about it; but, there are nevertheleſs abundance of common Cocoa-Nut-Trees, which are a great Relief to the Natives; they have alſo Fruits in common with *Java* and other *Indian* Iſlands, as Oranges, Mangoes, &c. and ſeveral good eating Herbs, one eſpecially not known in *Europe*; it eats like Spinage or Purſlain, and grows wild in the Field.

Few of them have Land. THERE are but few in this Iſland have any Land they can call their own, becauſe the Inhabitants are but few, and the Land is common; if a Man clears and manures a Piece of Land to ſow his *Indian* Corn upon it, it is his till he has reap'd his Crop, and then he deſerts it, and finds out another Piece for the next Seaſon, &c. for they ſeldom plant their *Indian* Corn twice in one Place; probably it will not bear a ſecond Crop without a greater Charge than that of only preparing a freſh Piece, which is done by only burning up the Graſs and Shrubs which grow upon it, and then it is prepared for the wet Seaſon or Seed Time.

THE *Andaman* and *Nicobar Iſlands* lie to the Weſtward of *Siam* and *Malacca*, and to the Northward of *Sumatra*; but as they afford us no Matter for Trade or Navigation, and the Map beſt diſcovers their Situation, it is needleſs here to give any further Account of them.

THE

THE

HISTORY

AND

DESCRIPTION

OF

PROPER INDIA:

Or the EMPIRE of the

GREAT MOGUL.

CHAP. I.

Shews the Situation and Extent of this mighty Empire; the first Foundation of it; with the vast Additions with which it has since been augmented and improved.

Situation.

THIS spacious Empire is bounded on the East with the Kingdom of *Ava*, and on the West with *Persia*, with *Usbeck Tartary* and *Thibit* on the North, and with Cape *Comorin*, or rather the *Indian Ocean*, on the South. Cape *Comorin*, the Southermost Point of the Continent of *Proper India*, lies in the eighth Degree of North Latitude, and from thence this Empire extends Northwards to Latitude of about forty Degrees; and for its Breadth, the East Side of it next to the Kingdom of *Ava*, is ninety two Degrees of Longitude East from *London*; and the West Side next to *Persia* is in Longitude sixty six East from *London*. Its Breadth in Longitude is twenty six Degrees, which reckon'd in Latitude twenty five, which is about the broadest Part of the Empire, gives about fourteen hundred Miles Breadth from East to West, and nineteen hundred and eighty Miles Length from North to South.

Founda-tion.

This Empire was first founded by *Tamerlane*, and has ever since improv'd, insomuch that it is now one of the largest in *Asia*; not but that there are some Raja's, or petty Sovereigns, on the Coast of *Malabar*, and some even in the Heart of *India*, who inhabit the mountainous and inaccessible Parts of the Country, which yet maintain their Liberties, and have not submitted to the Yoke of Conquest.

Name

As to the Name of *India*, or as some call it, *Indostan*, it is generally supposed to be taken from the River *Indus*, and consequently is supposed to contain that Tract or Space of the main Continent, which is comprized between the River *Ganges* on the East, and *Indus* on the West. As for its Name *Mogulston*, which the present Natives affect, we have no occasion to regard in *English* History, because it is known to us by the Name of *India*, and under that Name it will be represented in the ensuing Discourse of it.

Tamerlane

As to the Foundation of this great Empire, it was laid about the Year 1400 by the Great *Tamerlane*, King of *Usbeck Tartary*, who derived his Pedigree from the *Moguls*, and from his Northern Dominions penetrated into the Bowels of the present *Mogul*'s Empire, and made great Conquests; but as he advanc'd to distant Enterprizes and new Attempts, his late conquer'd Subjects revolted, and his Successors held but little of what his conquering Sword had made him Master of.

Succession

TAMERLANE order'd, that at his Death his third Son *Miracha* should succeed him in all new Conquests in *India*, and in the North East Parts of *Persia*; but *Miracha* did not chuse to fix his Imperial Seat in *India*, but at *Herat* in *Persia*, and came down once a Year, with a great Force, to demand the Tribute imposed by his Father upon his late conquer'd *Indian* Subjects, but either because of his Non-residence amongst them, or for some other Reason, they deny'd Allegiance to him, and refused to pay the Tribute required, which *Miracha* thinking to recover by Force, one of the *Indian* Raja's, or Governors, fought him in a pitch'd Battle, and took *Miracha* Prisoner, but generously releas'd him, upon Condition that he would quit all Demands of that Kind for the future; but having got his Liberty, he renew'd his former Demands, and being still refused, another Set Battle ensued, wherein *Miracha* took the same

Raja Priſoner who had before been ſo kind to him, but inſtead of Gratitude, he put out both his Eyes, and kept him Priſoner.

MIRACHA, who delighted very much in ſhooting with Bows and Arrows, at which the *Tartars* are generally very dexterous, had a Number of them about him exerciſing that Sport, and being told that the Raja his Priſoner, though blind, could hit a Mark, if any particular Noiſe was made at the Mark he was to ſhoot at, the Mark was prepared, and *Miracha*, eager to ſee the Performance, gave the Word of Command; the Raja willingly directing his Arrow where the Voice came from, ſhot *Miracha* through the Body. This happen'd about the Year 1451, when *Miracha* had reigned forty ſix Years.

Miracha kill'd.

Some Authors diſpute the Truth of this Accident occaſioning *Miracha*'s Death, but as we have the Authority of *French* Hiſtory for it, and *Miracha*'s Ingratitude might ſeem Provocation enough to the Raja to meditate Revenge, it is probable enough that he would not ſlip ſuch a favourable Opportunity for that Purpoſe, if it once fell into his Hand, let what would be the Conſequence.

Abouchaid. *ABOUCHAID* ſucceeded next according to ſome, though others ſay *Mahomed* was between them, but as we find nothing material recorded of *Mahomed*, that may probably be the Reaſon why ſome Authors paſs him by in Silence; and we find little recorded of *Abouchaid*, but that after a troubleſome Reign of twenty eight Years, he left his Dominions to his Son *See-Omer*, who reſided at *Samarcand*, and was kill'd by a Fall from his Terraſs in the Year 1493, after a Reign of twenty four Years, and was ſucceeded by his Son *Babar*, who being expell'd from *Samarcand*, retir'd to *India*, conquer'd the Kingdom of *Patana*, or at leaſt drove the Inhabitants into the Mountains, about the Year 1519, where they now remain, ſometimes Tributary, but taking all Opportunities, by Hoſtility, or otherwiſe, to recover their loſt Liberty.

See Omer.

Babar conquers *Patana.*

When *Babar* had thus conquer'd, or rather ſubdued the *Patanes*, he made *Delly* the Imperial Seat, where the *Tartars* crowded to him from the North, and particularly from *Samarcand*, to be protected by him, and, if poſſible, to make their Fortunes under him, and were ſo kindly received, and as it were incorporated with them, that *Tartars* as well as *Indians* were now indifferently called *Moguls*. The *Perſians*, after the Example of the *Tartars*, and not queſtioning but to ſucceed as well, came over to him in Troops, and one with another augmented his Forces, ſo that he was eaſily eſtabliſh'd in his new Conqueſts, whereby his Empire was enlarged without the Effuſion of much Blood, and himſelf dy'd in perfect Peace in the Year 1530, when he had reigned about thirty Years over the *Indians*, and left his Dominions to his Son *Amayum*.

Babar's Death

Amayum ſucceeds.

There was a young *Patane* Lord who had been bred up with *Amayum* in his Father's Court, and was become one of *Amayum*'s chief Favourites, in whom *Amayum* repoſed ſo much Confidence, that (when he ſucceeded his Father *Babar* in the Government) he made him Generaliſſimo of all his Forces, and Commander of the Guards about his Perſon; but *Chira* (for that was the *Patane* Lord's Name) meditating more the recovering the Liberty of his conquer'd Country, than Gratitude to his generous Maſter, conſpired the depoſing of *Amayum*, not queſtioning but the Conſequence of that would be advancing himſelf to the Throne; and the rather, becauſe he had now the Command not only of the *Mogul*'s Troops, but of all thoſe of the *Perſians* and *Tartars* who had voluntarily reſorted to him, and had by his obliging Behaviour gain'd the Hearts of the greateſt Part of *Amayum*'s Subjects, which *Amayum* finding, and obſerving the Coolneſs and Diſaffection of his Subjects of late, and as he apprehended that *Chira*'s inſinuating himſelf into the Favour of the Subjects was the Cauſe, ſo his own Deſtruction might be the Conſequence; and therefore with a ſmall Body of *Tartars* and *Perſians* he gave Battle to *Chira*, but proving too weak, he was forced to quit the Field, and flee to the Sophy of *Perſia* for Protection, after he had reign'd in *Delly* eleven Years, and left to *Chira* the Victory, and with it the Empire.

CHIRA reigned nine Years, but we do not read of any thing memorable that he did, ſaving that he was the firſt that built Caravanſera's, or Houſes for the Entertainment of Travellers upon the Road, and alſo adjuſted their Weights and Meaſures, Balances being then unknown in the *Indies*, and they having no Meaſure but the Span or Cubit, which differ'd according to the Stature of the Perſon from whom it was taken.

When *Chira* had reigned nine Years, he was kill'd by the burſting of a Cannon that had been preſented to him, which he gave Fire to himſelf, and leaving no Children, the *Patanes* Raja's differ'd about the Election of a Succeſſor, and *Amayum* taking hold of this Advantage of their being ſo divided, found an eaſy Opportunity of recovering his Kingdom, eſpecially as his powerful Friend the Sophy of *Perſia* was ſo firmly attach'd to his Intereſt, and by this means he was ſoon reſtored to his former Dignity; but when he was reſtored, he forgot his former Promiſes to the Sophy of *Perſia*, neither paying him the annual Tribute ſtipulated, nor putting him in Poſſeſſion of *Candahor*, according to his Promiſe; but he reign'd not long, till going to erect a ſtately Tomb, after the manner of the *Mahometan* Princes, and walking over the Scaffolding, fell down, and was ſo bruiſed that he never ſpoke afterwards: And thus ended the Reign of *Amayum*, in the Year 1552.

Chira kill'd.

Amayum reſtored.

AMAYUM was ſucceeded by his Son *Akbar*, whom all agree was a Man every way accompliſh'd for Government, and being of a penetrating Judgment, he ſoon perceived that of thoſe under his Government, the *Moguls* and *Tartars* were few in Proportion to the *Patanes* and *Indians*, and therefore to carry the Balance in his own Favour, he invited the neighbouring *Uſbecks* and *Tartars* to ſerve under him, and gave them Wives, that they might propagate and ſtrengthen his Power and Intereſt, and ſo continued to encourage new Supplies of *Perſians* and *Tartars* to tranſplant themſelves, and for their Encouragement, they uſually fill up the greateſt Poſts in the Government; and having taken theſe Meaſures to ſecure his preſent Poſſeſſions, his next Buſineſs was to extend his Dominions towards the Sea, that he might taſte the Sweets that Navigation produced, by a Communication of one Place with another by Sea.

Amayum kill'd.

His firſt Attempt of this Kind was againſt the Kingdom of *Guzarat*, between *Surat* and the River *Indus*: This was a Place of great Trade, and the *Portugueſe* having got footing here, had ſeveral Colonies, and tranſported great Quantities of Goods hence to *Europe*. It was a *Mahometan* Prince named *Badar* that then reign'd in *Guzarat*, he had maintain'd a long War againſt his Invaders the *Portugueſe*; but upon the Alarm of *Akbar*'s coming againſt *Guzarat*, Sultan *Badar* and the *Portugueſe* united againſt him, but in vain, for *Akbar* at the Head of his Forces routed both *Guzarat* and *Portugueſe*; Sultan *Badar* fled, his Children were taken and put to Death, and the whole Kingdom ſubmitted to him, except the Towns in Poſſeſſion of the *Portugueſe*, which being fortified after the modern Way, were above the reach of all his Forces.

Akbar conquers *Guzarat.*

AKBAR reſolved to purſue his maritime Conqueſts, directed his Courſe to the Southward, along the Coaſt to *Decan*. In this Province, or Sovereignty, are the Towns of *Brampour* and *Ago*, govern'd by *Muſtapha*, a *Mahometan* Prince. *Akbar*

Decan.

danger,

danger, and its Territories, was ſubject to the Queen of *Cande*, and *Ambar* had the Command of the Diſtrict of *Doltabad*. Theſe Princes, though commonly at Variance, yet all united againſt *Akbar*, and gave him Battle, but he defeated them with very little Loſs. *Muſtapha*, and the Princeſs of *Cande* ſurrender'd their Capitals upon Conditions, and *Ambar* was kill'd in an Engagement, and the reſt ſubdued to *Akbar*'s Conqueſt.

After this Conqueſt *Akbar* remov'd the Imperial Seat from *Delly*, and demoliſh'd the City to the Ground, and built a Palace at *Fetipour*, but the Air not agreeing with him, he return'd, and built another City in the Neighbourhood of it, but ſoon after remov'd to *Agra*, to the Southward of *Delly* upon the River *Gemma*, which has of late been the common Reſidence of the *Mogul* Emperors.

Removes to Agra.

But *Akbar*'s extenſive Deſires not yet ſatisfied, he meditated the further Enlargement of his Dominions, and fell upon *Rama*, whoſe Dominions lay to the Eaſtward of *Guzarat*; the Raja, though aſſiſted by ſeveral *Indian* Princes, was not able to withſtand *Akbar*, but ſhut himſelf up in the City of *Chitor*, which held out for about two Years, and then the Raja being kill'd in the Siege, the City and the whole Country ſubmitted to *Akbar*.

Conquers Rama.

AKBAR ſtill being in Peace, and quietly enjoying his new Conqueſts, he enlarged the City of *Agra*, and planted the Road from *Agra* to *Labor*, making it one continued Walk of ſhady Trees, though four hundred and fifty Miles long. He had a difficult War with the Peaſants of the Country, who were very obſtinate, and when they could not overcome him by Force, they ſhut themſelves up in a fortified Town, but he impatient to revenge their Inſolence, order'd the Conductors of the Elephants to advance and break open the Gates, which they perceiving ſome Hazard in, by reaſon of the reſolute Temper of the Peaſants, *Akbar* put on a common Soldier's Coat, mounted the Elephant himſelf, forced open the Gates, and though in a Shower of Arrows, came off without Damage. The Government is now ſo ſevere to prevent theſe Inſurrections, that if a Peaſant be found under Arms, he loſes his Head, abundance of which Heads are to be ſeen now by the Road Sides, to deter the reſt from Rebellion.

Road above four hundred Miles.

War with the Peaſants.

But while *Akbar* was at War with the Peaſants, his Son *Jehan Guire* raiſed a Rebellion againſt him, but the conquering *Akbar* ſoon defeated him, and made his Son Priſoner, but inſtead of keeping him confin'd, he tenderly took him along with him, and ſhew'd him the Heads of thoſe that had been the chief Conſpirators under him in the Rebellion, hanging upon Branches of Trees: The Prince was ſo melted with the tragical Proſpect of them, and his Father's Tenderneſs to him, that he was always after loyal and ſteady to his Father's Intereſt.

Civil Rebellion.

AKBAR through the Courſe of his Enterprizes obſerved, that if he miſcarried, it was commonly for want of good Engineers, and upon that Account invited ſeveral *Europeans* to his Court from *Goa*, and other *Portugueſe* Settlements, as Goldſmiths, Surgeons, *&c.* and afterwards march'd againſt the *Patanes*, for they being abandon'd by the Emperor's Brother and their new Allies, were driven to the Mountains again. Upon this *Akbar* grew intolerable vain and proud, ſetting up a new Religion, or rather a Medley of all Religions; the Baptiſm of the *Chriſtians*, the Circumciſion of the *Mahometans*, the Idolatry of the *Indians*, &c. were all encouraged, thinking thereby to unite his Subjects of all Perſuaſions to his Intereſt; but what was moſt abſurd and ſhocking, is what we have from our *French* Author's Account, Mr. *Manouch*, or his Editor *Carou*, viz. that *Akbar* commanded his Subjects to worſhip him as God, when he appear'd every Morning in his Balcony; he then received their Vows, heard their Prayers, and cauſed it to be divulged among the People, that their Petitions would infallibly be miraculouſly granted. So far our Author, though others diſpute whether he went this extravagant Length laſt mentioned.

Europeans Arrive.

Pretended Revelation.

But his Religion did not hinder his new Conqueſts, but marching with a ſtrong Army to the Northward, with a Deſign to ſubdue the Kingdom of *Cachemire*, they ſubmitted to him without ſtriking one Stroke; but in the mean Time *Muſtapha* (the *Mahometan* Prince mention'd before in *Akbar*'s Conqueſt of *Decan*) who had lived peaceably in the *Mogul*'s Court ſince he was ſubdued, retired from thence, and by means of great Numbers of *Mahometans*, who revolted from *Akbar* upon account of the Slights and Innovations he had put upon their (*Mahometan*) Religion, *Muſtapha* was eaſily re-poſſeſs'd of his own Kingdom.

Subdues Cachemire.

Muſtapha revolts.

AKBAR incens'd at this Revolt, ſent his Son *Morad* with an Army to ſuppreſs the Inſurrection, and correct the Raja *Muſtapha*, whom he engaged in the Province of *Cambaya*, but *Muſtapha* being an experienc'd Commander, and beloved as well as acquainted in the Country, he entirely defeated *Akbar*'s Forces, and his beloved Son *Morad* was found ſlain among the reſt of the dead Bodies, which was ſuch a heart-breaking Mortification to *Akbar*, that he, as ſenſible of the Wrath of Heaven for his former Ambition, never afterwards worſhip'd the Sun, nor ſuffer'd divine Honours to be paid to himſelf.

Morad ſlain.

The Emperor began now to think of retiring from *Cachemire*, by way of *Labor*, to the Capital *Agra*, and to meditate Revenge for the Death of his Son, and the Revolt of *Muſtapha* from his Allegiance, and made great Preparations againſt him; accordingly in the mean time *Akbar* found out a new way of executing State Offenders, for he had poiſon'd Pills made up, and when he found any of his Lords diſaffected, cauſed them to take of theſe Pills in his Preſence, and thereby diſpatch'd them without any further Ceremony.

Akbar takes Poiſon and dies.

This Method of Execution becoming common with *Akbar*, he cauſed a Gold Box to be made with three Partitions; in one he had Betel Leaves, in another Cordial Pills, and in the third his Pills of Poiſon; and miſtaking one for the other, himſelf took one of the fatal Pills; and notwithſtanding all the help of his own and the *Portugueſe* Phyſicians, he, after lingering a little Time, expired, dying a *Muſſulman*, without any regard to the Endeavours of the Miſſionaries for his Converſion. If we look back into his Life, we cannot but obſerve that the vaſt Additions he made to his Empire, the Arts he introduced, the opening a Way to the Sea Coaſt, and the Trade and Commerce firſt eſtabliſhed by him in his Dominions, the Cities and Palaces that he built, the Road of four hundred and fifty Miles long from *Agra* to *Labor*, being one continued Walk of ſhady Trees, which he planted, *&c.* all theſe are evident Marks of his Grandeur, and renders his Hiſtory worthy a Place, where the Additions and Augmentations of the *Mogul*'s Empire are treated of; he died in the Year 1605.

Cha Selim ſucceeds.

It is ſaid that *Akbar* before his Death appointed Sultan *Coſrou*, eldeſt Son of *Cha Selim*, to be his Succeſſor; but however that was, *Cha Selim* acceeded to the Crown without any Oppoſition, and took upon him the Name or Title of *Cha Jehan*; he was the Son of *Akbar*, but nothing like him for his temperate Way of Living, but on the contrary, given to all manner of Exceſs; the Appearance of which might probably be the occaſion of *Akbar*'s ſettling the Empire upon *Coſrou*, the eldeſt Son of *Cha Jehan*, if it was ſo; for he having now got the Empire, and looſed from all Reſtraints, order'd the Palace Gates to be always open to the

Europeans,

Europeans of what Nation ſoever, and frequently drank with them all Night till Morning, and that even in the Time of the *Mahometan* Lent, which Slight of hisof ſo ſolemn a Time, gave the Miſſionaries ſome hopes that he might be eaſily drawn to embrace Chriſtianity, but it ſeem'd rather to be the effect of his Frolick than any thoughts of Religion, that induced him to theſe Liberties.

Cha Jehan *CHA JE HAN* remov'd his Imperial Seat from *Agra* to *Labor*, which lies four or five hundred Miles to the North, in a more temperate Climate; he improved the fine Walk from *Agra* to *Labor* made by his Father *Akbar*; he improv'd the City of *Labor*, and built a Palace there, but not ſo ſumptuous as that at *Agra*. And being walking in his Terraſs here, which is by a fine River, a Barge was rowing by, in which was a Lady of ſurprizing Beauty ſitting under a Canopy, which Sight coſt the Empire a great deal of Trouble; for he being ſmitten with her Beauty, ſent immediately to know her Name and Place of Abode; the Meſſengers inform'd him that her Name was *Nour Mahal*, and that ſhe was the Wife of an Officer that had the Command of five hundred Men under the Emperor. Whereupon the Emperor ſent her rich Preſents, and gave her to underſtand how much he was ſmitten with her Beauty; but ſhe would not liſten to any Temptations to be unfaithful to her Husband; whereupon the Emperor order'd her Husband to attend a certain General, commanding the General at the ſame Time to put him to Death, which was executed accordingly, and then the Emperor renew'd his Addreſſes to her, to take her among the Number of his Wives; but ſhe having found that her Husband was murder'd by the Emperor's Order, ſhe broke out into bitter Invectives, and boldly reproach'd him with Treachery and Cruelty; but the View of the Splendor of a Court waſh'd away her Paſſion, and ſhe was willing to comply upon Terms, which was, that ſhe ſhould be firſt Queen, her Father Prime Miniſter, and all her Relations preferr'd to the higheſt Poſts; to all which he agreed, and the Marriage was ſolemnized, the Emperor changing her Name from *Nour Mahal* to *Nour Jaham*, or *Light of the World*; though ſhe was but of mean Parentage, and her Husband a Camel-driver till he advanc'd his Fortune in the Mogul's Service.

Slays the Woman's Husband for love of her.

She is made Sultaneſs

And now like an ambitious Woman, advanced from ſo mean a Beginning, her firſt Buſineſs was to rid herſelf of all Rivals, no leſs than five of the Emperor's Favourite Queens dying the firſt Year, not without ſtrong Suſpicion of a fatal Doſe to ſhorten their Days; and having ſo far clear'd the Way, her next Ambition was to unite her Blood with that of the Emperor's, and in order to that propoſed to marry her only Daughter to the Heir apparent to the Crown; for the Emperor had four Sons, the eldeſt, called Sultan *Coſrou*, was born while his Grandfather *Akbar* was alive, the ſecond Sultan *Perwis*, the third Sultan *Chorrom*, and the youngeſt Sultan *Scheriar*; the ambitious Queen aim'd at nothing lower than the eldeſt Sultan *Coſrou* for a Match for her Daughter, but he was prejudiced againſt the Sultaneſs his Mother in Law, thinking ſhe had too much Influence over the Emperor, and beſides he was already married to a Daughter of one of the Raja's, whom he loved too well to ſlight her for *Nour Jaham*'s Daughter; ſhe then propoſed her Daughter in Marriage to *Scheriar* the youngeſt Son, who immediately embraced the Offer, thinking by that and the Intereſt of the Sultaneſs, who would now be his Mother-in-Law in a two-fold Reſpect, to advance himſelf to the Throne at his Father's Death; and to make his Aſcent to the Throne more eaſy, the three elder Brothers were appointed to different Governments; *Chorrom* was ſent to *Decan*, *Perwis* to *Bengall*, and *Coſrou* the eldeſt was appointed for *Guzarat*; and now the Sultaneſs thought the Way was open for her Daughter's Husband to take poſſeſſion of the Empire, without Rival or Oppoſition as ſoon as the Emperor died.

A Feaſt marries her Daughter to

But *Coſrou*, inſtead of going to *Guzarat*, and leaving his younger Brother ſo fair a View of the Empire, aſſembled a Body of Troops to ſecure his Succeſſion, as ſuppoſing it was his Right even in his Father's Life-time, he having been told (as before hinted) that his Grandfather *Akbar* appointed him, and not the preſent Emperor *Jehan Guire*, to be his Succeſſor; and though *Coſrou* was content notwithſtanding that his Father ſhould peaceably enjoy the Empire during his Life, yet he could not bear to ſee himſelf deprived of his juſt Right of Succeſſion, by means of the Sultaneſs and her Daughter, and ſettled upon his youngeſt Brother before his Face.

The Emperor had at this Time two great Miniſters of State, to whom he committed all Affairs of that kind; one was *Aſaph Cham*, who was Brother to the Sultaneſs, and in her Intereſt, and the other was *Mahomet Cham*, a Man above Corruption, and in the Intereſt of *Coſrou*. The Sultaneſs had carried her Intrigues ſo far againſt *Coſrou*, that he was forced to betake himſelf to Arms to defend himſelf and his Right; and in caſe *Mahomet Cham* ſhould appear in his Favour, ſhe had laid an Ambuſcade to ſeize and diſpatch him as he came out of the Palace, but he eſcaped their Hands; and being General of a Party of Soldiers, he aſſembled them, ſurrounded the Emperor's Appartment, ſeized the Emperor, and carried him home to his own Houſe, holding a naked Dagger in his Hand, and letting the Sultaneſs know that if any Attempt were made to reſcue the Emperor or ſtop his Paſſage, the Emperor, ſhould not ſurvive it; and when he came at his own Houſe, he had a Body of Troops under Arms ſufficient to protect himſelf from the Deſigns of the Sultaneſs and her Brother *Aſaph Cham*.

It was now expected that the Emperor *Jehan Guire* would be depoſed, and *Coſrou* advanced to the Imperial Dignity; but inſtead of that, *Mahomet*, after ſome Promiſes of Loyalty, releaſed the Emperor, march'd againſt *Coſrou*, defeated him in the open Field, and brought him Priſoner to Court, where he, his Wives and Children, were ſhut up in the Caſtle of *Guallore*.

Coſrou is taken Priſoner

The Sultaneſs taking the Advantage of *Coſrou*'s Diſtreſs, repeated her Offer of not only aſſuring him his Liberty, but ſecuring his Succeſſion to the Crown, if he would marry her, which if he would comply with, ſhe would have divorced from his youngeſt Brother *Scheriar*; but ſuch was *Coſrou*'s Averſion againſt her, and his paſſionate Love for his Wife before mention'd, that he deſpiſed Liberty rather than accept it on her Terms, and *Aſaph Cham*, the Sultaneſs's Brother, having married his Daughter to *Chorrom*, the third Son of the Emperor, encouraged *Coſrou* to perſiſt in his obſtinate Reſolution againſt the Sultaneſs; *Aſaph* ſuppoſing that if ever ſhe and *Coſrou* ſhould be reconciled by that Marriage, there would be ſmall hopes of his Son-in-Law *Chorrom* ever enjoying the Empire; and to prevent ſuch Reconciliation or Affinity, *Aſaph* prevail'd with the Emperor to ſend for Sultan *Chorrom* home to Court, where to put an End to all doubt, they conſpired to murder *Coſrou*, which being firſt attempted by Poiſon, and he ſuſpecting it, would eat nothing but what his Wife dreſt; and therefore they being reſolute in their Deſign, order'd the Captain of the Fortreſs to ſtrangle him, which was accordingly done, unknown to the Emperor, but he ſoon found it out, and though the Murder was perpetrated by Perſons of ſuch Conſequence that he could not puniſh it as it deſerved, yet he defeated them of all that they deſign'd by it, or expected

Liberty offer'd, and refuſed

Coſrou murdered

from

from it, by commanding *Chorrom* to retire to his Government at *Decan*, and ſettling the Succeſſion upon *Bolaqui*, *Coſrou*'s eldeſt Son, as it were in the Right of his injured Father.

BOLAQUI was a hopeful Prince, and about ſeventeen Years of Age, and was immediately brought to Court, and treated as preſumptive Heir to the Crown, forming Alliances with the Neighbouring Raja's, and gaining the Eſteem of the beſt Officers in the Army.

THE Emperor *Jehan Guire* frequently retired in the Summer to the Kingdom of *Cachemire*, the Northermoſt Part of his Dominions, which being in a more temperate Climate, is exceeding healthful, and abounds with all Things that can render Life comfortable; but in the midſt of his Enjoyment here with his Sultaneſs, he received the News that *Cha Abbas* King of *Perſia* threatened to invade *Indoſtan* or *India*, unleſs *Candahor* was ſurrendred to him, according to a former Agreement of *Amayum*, Grandfather to the preſent Emperor *Jehan Guire*, which the Emperor not agreeing to, ſent Orders to *Sian Cham*, Viceroy of *Multan*, to march towards the Frontiers, to ſtop the Progreſs of the *Perſian* Army; but he being unprovided for ſuch an Expedition, he only ſaw *Candahor* taken by the *Perſians*, which News no ſooner reach'd the Emperor's Ear, but it was ſeconded with the News of his Son Sultan *Chorrom*'s raiſing a Rebellion in the Heart of the Empire.

Candahor demanded.

THE Emperor being inclined to have his Reſidence at *Labor*, had order'd the Treaſure of the Empire to be brought thither from *Agra*, under the Conduct of *Aſaph Cham*, Brother to the Sultaneſs, and he being now in the Intereſt of the Rebel *Chorrom*, on account of his marrying *Aſaph*'s Daughter, *Aſaph* ſent to *Chorrom* to betray the Treaſure to him, telling him where upon the Road he might beſt intercept and ſeize it, whereupon *Chorrom* came towards *Agra* with an Army of ſixty thouſand Men; which the Eunuch that kept the Treaſure underſtanding, would not deliver the Treaſure, though it was to the Sultaneſs's Brother, and by the Emperor's Order; but the Eunuch diſpatch'd a Courier to Court, to acquaint the Emperor what Hazard it would be to remove the Treaſure at that Juncture. Sultan *Chorrom* being diſappointed of meeting the Treaſure on the Road, came to *Agra*, and attack'd the Fort where the Treaſure was depoſited, but was repuls'd with Loſs, and ſo with only plundering the Palaces of the *Omrah's*, he return'd towards *Decan*.

Chorrom plunders the Palaces.

WHILE this was doing, the Emperor march'd towards *Agra*, with a great Force, and finding ſuch Ravages committed by *Chorrom*, he with his youngeſt Son Sultan *Pervis* from *Bengall*, purſued *Chorrom*, but *Abdul Cham* one of the Emperor's Generals, deſerted to *Chorrom*, which diſabled the Emperor from correcting his Son's Rebellion; however he gain'd the Victory, and *Chorrom* was compell'd to retire to the Mountains. The young Prince *Bolaqui* laid ſiege to *Amadabat*, the Capital of *Guzarat*, and having ſtorm'd it, plunder'd *Chorrom*'s Palace, broke down his Golden Throne, and diſtributed the precious Stones with which it was adorn'd amongſt his own Officers; *Abdul Cham*, the late Deſerter from the Emperor, muſter'd the Remains of *Chorrom*'s broken Troops, and engaged young *Bolaqui*; but being again defeated, he eſcaped to *Surat*, and afterwards found means to join *Chorrom* at *Brampour*, where they raiſed a great Body of Troops, but they were ſoon diſperſed upon the Approach of Sultan *Pervis* and *Mahomet Cham*, with the Emperor's Forces.

Cham Canna Abdul Cham

THE chief Favourite Miniſter of *Chorrom* at firſt was *Cham Canna*, but when *Abdul Cham* deſerted the Emperor to join *Chorrom*, it was look'd upon as ſuch a diſtinguiſhing Piece of Service, that he was the moſt reſpected, which ſo incens'd the late Favourite *Canna*, that he went over to the Emperor, and acquainted him with *Chorrom*'s Diſtreſs in *Bampour*, and how they might eaſily ſurprize him; the Emperor's Forces came accordingly, but *Chorrom*, either by Advice or Suſpicion, was gone from *Bampour*, which gave great Cauſe of Jealouſy as to the Truth of *Canna*'s Relation of *Chorrom*'s being in ſuch diſtreſs at *Bampour*.

IN the mean Time the *Uſbeck Tartars* invaded their neighbouring Province of *Cabulſtan*, which obliged the Emperor to go with a great Part of his Forces to the Northward; and *Chorrom*, glad to ſee the Emperor ſo diverted, enter'd the Field again, and having plunder'd the rich Country of *Bengall*, and retiring with his Booty, was met by his Brother Sultan *Pervis* and General *Mahomet*, who fell upon him, defeated his Army, and he eſcap'd with only three thouſand Men.

Cabulſtan invaded.

BUT the Sultaneſs thinking that the ſuppreſſing of *Chorrom*, and advancing Sultan *Pervis* and *Mahomet Cham* to the Head of the Emperor's Troops, would tend, to if not end in the Ruin of her Family, ſhe inſinuated to the Emperor that *Mahomet*'s Zeal for Sultan *Pervis*'s Intereſt was with a Deſign to ſet *Pervis* on the Throne, even in his Father's Lifetime, and adviſed the Emperor to ſend for *Cham Canna* to Court, who being a mortal Enemy to *Mahomet*, and being pre-inſtructed, came up with a heavy Charge againſt *Mahomet*, magnifying the Services he had done in deſerting *Chorrom* to come over to the Emperor, for which inſtead of being rewarded, he was confin'd as a Priſoner in the Camp of Sultan *Pervis*, and that he and *Mahomet* had acted as if they were already Maſters of the Empire; this Charge of *Cham Canna*, by the Inſtigation of the Sultaneſs, ſo touch'd the Emperor, that he immediately diſcharg'd *Mahomet* from his Command, and required him to give a ſtrict Account of his Conduct.

False Charge

MAHOMET thinking it in vain to plead his own Inocency or Integrity before the Sultaneſs and her Creatures, who were bent upon his Ruin, he form'd another Project; for the Emperor being now upon his Progreſs from *Agra* to *Cachimere*, *Mahomet* with five thouſand *Rajaputes* ſurprized the Emperor in his Tent one Morning, while his Army was paſſing the River *Tziunab*, the greateſt Part of them being got to the other Side, and the Guards being ſurprized fled; ſo that without ſtriking one ſtroke he ſeized the Emperor, Prince *Bolaqui*, Sultan *Scherier*, and his two great Enemies *Aſaph Cham* and *Cham Canna*, and indeed all the whole Court; the City of *Agra* hereupon declared for *Mahomet Cham*, and the Cittadel ſurrenderd to one of his Officers; and it was now in his Power to have advanced which of the Royal Family he pleas'd to the Throne, but he was not intending to bring about a Revolution, nor attempted any Alteration, but gave the Emperor and his Sultaneſs liberty to purſue their Journey to the North, himſelf attending them as Captain of their Guards, he ſent *Bolaqui* and *Scherier* to the Caſtle of *Agra*, and carried *Aſaph Cham* and *Cham Canna* along with him in Irons.

Seizeth the Emperor

THE Sultaneſs now ſtudied to make Reprizals upon *Mahomet*, and make him Priſoner, and in order to that, conſulted ſome of the chief Officers who had been diſperſed by *Mahomet*'s firſt Surprize, and they concluded to poſt a Body of Troops upon the Road, who might eaſily defeat *Mahomet* and his *Rajaputes*, and make *Mahomet* Priſoner; but he having Intelligence of the Ambuſcade, return'd back to *Agra* with his two Priſoners, leaving the Great Mogul and his Sultaneſs to go their Journey without him, giving *Cham Canna* liberty alſo to follow the Court, when he had firſt ſworn him upon the *Alcboran* never for the future to bear Arms againſt him.

Sultaneſs's Contrivance.

But the Sultaness not yet satisfied, not only prevail'd upon the Emperor to send a powerful Army against *Mahomet Cham*, *Canna*, notwithstanding his Oath, gladly accepting the Command thereof, but also, either by Presents or Promises, procured all *Mahomet*'s Friends, even his own Son, to desert him. In this Strait *Mahomet* thought he could not do better, either for his own Security, or to be revenged on the Sultaness, than to desert the Emperor, and go over to Sultan *Chorrom*, who received and entertain'd him with the greatest Satisfaction, as being sensible he might be of great Use to him in his intended Struggle for the Empire at the Decease of his Father, which accordingly happen'd in his return from *Cachimere* to *Labor*, in the Year 1627.

The Emperor *Jean Guavedies*.

And now the Empire was involv'd in Confusion in the several Interests of three different Competitors to the Crown. Now the Sultaness exerts her utmost Efforts in favour of her Son-in-law *Scheriar*, who married her Daughter, and she had him proclaimed in the Palace. The Army adher'd to Prince *Bolaqui*, as being Son and Heir of the late Emperor's eldest Son *Cosrou*; he being recognized at *Agra*, enjoy'd the Imperial Title for some Time. The Sultaness, and her Son-in-law *Scheriar*, were deliver'd up to him, and he put out the Eyes of *Scheriar* as a Usurper, and kept the Sultaness in Prison.

Three Competitors for the Crown, and *Bolaqui* proclaim'd

The two old Ministers *Asaph Cham* the Sultaness's Brother, and *Mahomet*, who a little before the Emperor's Death deserted to *Chorrom*, were both in *Chorrom*'s Interest, but durst not declare themselves, because the Forces and Treasure of the Empire were under the Command of *Bolaqui* at the same Time. *Bolaqui*, willing to sound his Uncle *Chorrrom*'s Temper, and how he could brook being tributary, sent to demand Homage for the Kingdom of *Decan*, and the other Dominions he held of the Empire. When the Messenger came at Sultan *Chorrrom*'s Palace, he was told that the Sultan was in such an ill State of Health that he could not be spoke to; but the Messenger insisted upon seeing him, which at last he was admitted to do, and found the Sultan vomiting Blood, and so weak that it seem'd as if he could not live many Days. The Messenger dispatch'd a Courier to acquaint the Court at *Agra*, that Sultan *Chorrom*'s high Indisposition detain'd him, as knowing that his Sickness would be welcome News to the young Emperor, though this Sickness was all dissembled, and the Blood he vomited was the Blood of a Kid put in his Mouth privately, to compleat the Cheat, which they carried on till he disappear'd, and then they gave out that he was dead, and the Court went into Mourning for him. *Mahomet* also advised the Messenger to write to *Bolaqui* for Leave to bury Sultan *Chorrom* in the Royal Sepulchre at *Agra*, which was readily granted; and upon the return of the Courier, a pompous Funeral Procession was begun, suitable to the Quality of so great a Prince. *Mahomet Cham*, at the Head of a thousand Officers of the Deceased, attended the Hearse, and Sultan *Chorrom* himself follow'd in Disguise, several Bodies of the Rajapates, Allies of Sultan *Chorrom*, fell in with the Procession upon the Road, under pretence of paying the last Devoirs to the Deceased. *Asaph Cham*, who was of *Bolaqui*'s Council at *Agra*, (but privately in *Chorrom*'s Interest) treacherously advised the young Emperor to meet his Uncle's Corpse as they drew near *Agra*, who thereupon march'd out with an ordinary Guard and small Equipage suitable to the Occasion; but when he saw such a numerous Body of Troops attend the Hearse, and suspecting he was betray'd, he turn'd short, and made his Escape, not attempting to recover *Agra*, nor stopping till he came in the *Persian* Dominions, for he supposed the Defection was universal, and he knew that if he fell into his Uncle's Hands, Death, or the loss of his Eyes would be the Consequence.

Chorrom feigned Sick, and dies. The Emperor's Funeral. *Bolaqui*'s Escape

Upon their Approach to *Agra*, Sultan *Chorrom* threw off his Disguise, and at the Head of his Troops entred the City, whose Gates were set open to receive him; he was immediately proclaim'd Emperor, and took upon him the Name or Title of *Cha Jehan*, or King of the World. Sultan *Scheriar*, who had before lost both his Eyes, was order'd to be shut up with his two Sons in an Apartment in the Palace, where it is supposed they all starved, nothing having ever been heard of them since.

Chorrom proclaim'd. *Bolaqui* proclaim'd.

Cha Jehan having contracted an inveterate Hatred against the *Portuguese* in his Dominions, for refusing to assist him in his Wars against his Father, was resolved, if possible, to expel them out of his Dominions; they had indeed been weaken'd at Sea by other *Europeans*, and several of their Settlements taken from them by the *Dutch*; but his first Enterprize was against the *Portuguese* Fort at *Hugly*, a little up the River *Ganges* or *Hugly* River. This Place the General *Cassam Cham* besieged in Form, but when he first appear'd, he only demanded a certain Sum of Money, upon Payment of which he promised to withdraw his Forces, but as soon as they had answer'd his demand, he opened the Trenches, and play'd from his Batteries with so much Fury, that they were soon forced to surrender, and were made Prisoners of War, and carried to *Agra*, where they must either turn Mahometans, or die Martyrs to their Religion.

Besieges *Hugly*.

Cha Jehan remov'd the Imperial Seat to *Delly*, where he made beautiful Gardens, with Fountains and other Water-Works, and by Degrees degenerated into such Luxury and Effeminacy, that he became contemptible to his Subjects, and the great Raja's refused to obey his Orders; but as he grew in Years, he became covetous, even to Excess, and the greatest Miser that ever sat on the Throne, insomuch that he would allow his Generals and Governors of Provinces no Salary, but an unlimited Power to fleece the People, and when by that means any of them grew vastly rich, he would soon charge them with some Misdeamour, and as a Penalty, empty their Bags into his own Treasury, whereby he became immensely rich; his Sons (which were four) likewise having no Allowance but what they could extort from distant Courts and People to which they were sent, to save Charges at Home.

Leaves *Delly*.

Covetous.

Of his four Sons, the eldest was Sultan *Dara*, the second was Sultan *Sujah*, the third *Aurengzebe*, and *Morad Back* the fourth; and of two Daughters the eldest was *Begom Sabeb*, and the other, *Roxanara Begum*; some Authors mention a third, named *Merinza Begum*; but if there was such a one, she was kept very obscure, and made little Figure in History.

Four Sons and two Daughters.

Cha Jehan intending his eldest Son *Dara* to be his Successor, kept him at Court, and near his Person, and had him instructed in Mathematicks and Mechanicks, and such Sciences as might qualify him for Government; so that in his Father's Life-time he was vested with almost regal Authority, and allow'd to sit upon a Sopha or Chair of State but little lower than the Emperor's, and even in his Presence, which was an unprecedented Honour in that Empire, for he had all the Marks of Sovereignty conferr'd upon him, except disposing of the Revenues; and all these royal Favours were answer'd by him with suitable Returns of Gratitude and Obedience to his indulgent Father.

Royal Favour

But this Grandeur set him above the Respect due to the Raja's and principal Ministers, insomuch

Lofty Deportment

much that he treated them with a Sort of Diſtance, or rather Contempt, as ſuppoſing ſuch a Favourite Prince as himſelf could never need to be beholden to any Subject to ſupport his juſt Pretenſions to the Crown; but this his loſty Carriage alienated the Hearts of the Miniſtry from him, and procur'd him many Enemies at Court, which his other Brothers obſerving, made the more Intereſt againſt *Dara*, every one ſeverally to ſucceed to the Government in caſe the Emperor ſhould die.

WHILE every one was thus ſecuring his own Intereſt, there happen'd to be one *Mirza Mula*, a *Perſian* in the Mogul's Service, and advanced by *Cha Jehan* to the moſt conſiderable Commands in the Army, and an old Friend of *Aurengzebe*; but notwithſtanding his Merit, he was ſlighted by the haughty Sultan *Dara*; upon which Provocation he went over to the King of *Golconda*, who gave him a Poſt in the Treaſury, and the Direction of the Trade of his Country. In this Place of Truſt he grew rich, and valued himſelf for his magnificent Equipage, and purchaſing Curoſities, and preſenting them to the King and Royal Family; the Queen Dowager the King's Mother, was ſo taken with the Preſents and Complaiſance of this *Perſian Mirza*, that ſhe deny'd him no Favours, which the King perceiving, ſent *Mirza* out of her Way to the Government of *Carnate*, where the Diamond Mines were; where he took care to lay by the moſt Valuable for his own Uſe, and among the reſt one which was not to be match'd in the *Indies*, either for Bigneſs or Luſtre. This he preſented to his Friend *Aurengzebe*, whoſe Government lay contiguous to the Kingdom of *Golconda*, and with it he ſent a Meſſage to let him know, that if he would march an Army into *Golconda*, he would join him with a Body of Troops from *Carnate*; and to convince him of the Value of ſuch a Conqueſt, ſent him the Diamond above-mention'd as a Specimen of what that Kingdom afforded.

AURENGZEBE, who made Religion the chief Motive and Spring of all his Actions and Undertakings, at leaſt ſeemingly ſo, and from that Principle alledged that the Kingdom of *Golconda* and the rich Diamond Mines of that Country ought not to be in the Poſſeſſion of a Heretick of the *Perſian* Sect, but of a true Believer, as he called both of; and under that Pretence he thought he could eaſily juſtify his intended Invaſion of *Golconda*; but his chief Motive at the Bottom was, that he queſtion'd not but that if he was once in poſſeſſion of the Riches of *Golconda*, he would be in a fair Way for the *Indoſtan* or *Indian* Empire, and therefore without Delay march'd and join'd *Mirza*'s Forces with his, and made a powerful Army.

As ſoon as the King of *Golconda* was inform'd of theſe united Forces coming againſt him, he retir'd from his Capital of *Baguagar* in the utmoſt Conſternation, and ſhut himſelf up in the Fortreſs of *Golconda*, about three Miles from *Baguagar*; they plunder'd *Baguagar*, and then inveſted the Fortreſs where the King was; and having made this Progreſs, *Aurengzebe* ſent Advice to his Father the Emperor *Cha Jehan* of his Succeſs; but Sultan *Dara* being afraid, and not without Reaſon, that if *Aurengzebe* ſhould once make himſelf Maſter of the Diamond Mines, his next Stroke would be at (the Succeſſion at leaſt to) the *Indian* Empire, he told his Father what he was apprehenſive of, who thereupon diſpatch'd Orders to *Aurengzebe* to deſiſt from any further Purſuit of his preſent Enterprize, and retire immediately to his Government at *Decan*.

AURENGZEBE with Reluctancy obey'd the Emperor's Orders, but firſt made Conditions with the King of *Golconda*; which were, that the Mogul ſhould be re imburs'd the Charges of the War; that the King of *Golconda* ſhould give his Daughter in Marriage to *Mahumed*, *Aurengzebe*'s eldeſt Son, who ſhould ſucceed to the Crown of *Golconda* after the King's Deceaſe; and that *Mirza*, notwithſtanding his Treachery and Rebellion, ſhould be at Liberty to retire peaceably with his Family and Effects out of the Kingdom; and thus *Aurengzebe* return'd to *Decan*, but with ſuch a Taſte of the Riches of *Golconda*, that he reſolved to make it a Province of the Empire if ever he ſucceeded to the Crown; and finding that *Mirza* had Courage, Conduct, and indeed Villany enough to execute, without Remorſe, whatever he was bent upon, and not queſtioning but that *Mirza*'s Prejudice and Averſion to Sultan *Dara* was ſufficient to confirm him in the Intereſt of *Aurengzebe*, he look'd upon him as the fitteſt Inſtrument to promote the Deſigns he had in view; and upon that Account he made him General of the Forces employ'd againſt the Kingdom of *Viſapour*, and ſhew'd him other particular Marks of Favour and Reſpect.

Cha Jehan ſick.

IN the mean Time the Emperor *Cha Jehan* was taken dangerouſly ill, inſomuch that it was reported almoſt all over the Empire, and even in *Delly* itſelf, that he was dead; whereupon the three youngeſt Sultans, his Sons, began to puſh for the Empire; Sultan *Sujah* was the firſt that appear'd in Arms; he was Viceroy of *Bengall*, he march'd towards *Delly* with forty thouſand Horſe, and ſpoke by way of Proverb or Motto, *Now for a Throne or a Grave.*

Dara falſely accuſed.

SULTAN *Sujah*, to make his Plea the ſtronger, gave out that Sultan *Dara* had poiſon'd the Emperor, but *Cha Jehan* recovering, not only clear'd Sultan *Dara* by his own verbal Evidence, but writ to Sultan *Sujah* that *Dara* had not done any thing that contributed to his late Illneſs, and therefore commanded him to return to his Government at *Bengall*; but *Sujah* ſtill hoping that his Father was paſt Recovery, continued his march towards *Delly*; but the Emperor *Cha Jehan*, upon Advice of *Sujah*'s Approach, removed the Court to *Agra*; *Dara* follow'd his Father, but detach'd two Generals with his Son *Soliman Chacu*, one of them was Raja *Jaſing*, the other *Dalil Cham*, to oppoſe *Sujah*, whom they defeated, and it was with Difficulty that *Sujah* eſcaped to *Bengall.*

Sujah defeated

Aurengzebe and Morad join.

AT the ſame Time, the two youngeſt, *Aurengzebe* and *Morad Back*, aſſembled their Troops to oppoſe *Dara*; *Aurengzebe* continued to promote his Intereſt upon a religious Foundation, and wrote to his Brother *Morad Back*, Viceroy of *Guzarat*, that he had no other View but to ſee the Worſhip of God, and the Law of his holy Prophet eſtabliſh'd in its primitive Purity, and that he would endeavour to prevent any Heretick ſucceeding to the Throne of his Father, and that as he (*Morad*) alone retain'd a true Zeal for the Alchoran, he would aſſiſt him to oppoſe both *Sujah* and *Dara*. *Morad*, pleaſed with his religious Reſolution, invited him to join Forces with him, that they might march in a Body to *Delly*; whereupon *Aurengzebe*, with his Friend *Mirza Mula*, march'd for *Delly*, well provided with Money and all other Neceſſaries; and when the Armies came in ſight of each other, *Aurengzebe* proſtrated himſelf before *Morad* as his Sovereign, (as ſuppoſing the Emperor *Cha Jehan* was now dead;) but *Morad* immediately took up *Aurengzebe*, and took upon himſelf the imperial Stile and State, which *Aurengzebe* ſubmitted to, under a pretence that he had no further View of his own Intereſt than to devote his Time to Acts of Mortification and Devotion.

BUT when *Dara* underſtood that the two Brothers were united, he diſpatch'd Letters to each of them, to let them know that their Father *Cha Jehan* was alive, and that they ſhould diſband their Forces immediately, upon pain of Reſentment; this ſhock'd *Morad*, but *Aurengzebe* ſpirited him up, telling him that though their Father might be alive,

he

he was superannuated, and *Dara* being little less than Sovereign already, would certainly extirpate the Holy Religion, if not timely prevented, and under these specious Pretences prevail'd upon *Morad* to continue his march.

Cassam deserts Dara.

DARA being apprized of the Design of his two Brothers sent two of his Generals, with proper Forces, to meet them; but *Cassam Cham*, whom the insolent *Dara* had formerly disobliged, being in the Interest of *Aurengzebe*, withdrew, and left *Dara*'s other General to fight by himself, by which means the two Brothers gain'd an easy Victory, and made themselves Masters of all the Enemy's Artillery and Baggage.

Cha Jehan resigns to Dara.

UPON these Successes *Cha Jehan* thought himself betray'd, upon Account of some Prejudice to his own Person, and upon that resign'd to his Son *Dara*, who thereupon rais'd a prodigious Army, and march'd to meet his Enemies the two united Brothers; but all the Officers of the haughty *Dara* were prejudiced, some against him, and some against his Father *Cha Jehan*, that upon Trial, they had almost every one a particular Pique against *Cha Jehan* or *Dara*. In short, *Calil Cham*, one of those prejudic'd Generals of *Dara*'s, being sent to oppose the two Brothers *Aurengzebe* and *Morad*, and at the same Time holding a private Correspondence with them, and in their Interest, suffer'd the Army of the two Brothers to pass the River without Opposition, and without any Disturbance, to form themselves in order of Battle, and in a Readiness to receive *Dara* and his Forces, some of whom being commanded by those prejudic'd Officers, were remiss in their Duty, and others deserting to the two Brothers, they easily obtain'd an entire Victory, and *Dara*, with a few that stood by him, retired to *Agra*, and thence to *Delly*, but the Governor having heard of his Defeat refused him Admittance, whereupon he was obliged to withdraw to *Lahor*.

Dara defeated.

Agra betray'd. Cha Jehan taken Prisoner.

IN the mean time the two Brothers *Aurengzebe* and *Morad* advanced to *Agra*, which was soon betray'd to them, and their Father *Cha Jehan* soon became their Prisoner, whereupon they seiz'd his immense Treasure, left a Garrison at *Agra*, and continued their March towards *Delly*, *Aurengzebe*, and the whole Army, treating *Morad* as Emperor; and when they encamp'd in the Plains of *Matura*, where there is a noble Mosque or Temple, erected by some of the *Mogul* Emperors, which *Aurengzebe* thought a proper Place to perform the Ceremony of the Inauguration of his Brother *Morad*, for which Solemnity they appointed the fifteenth of *June* 1656.

Morad to be made Emperor.

BUT *Aurengzebe* had a quite different Project to manage, and in order to that, he, under a pretence of Indisposition, remain'd at his own Quarters the Night before the pretended Ceremony, and sent for *Morad* to his own Quarters, under a Pretence of regulating some Affairs relating to the Procession, and to consult the Astrologers about the lucky Minute for the Inauguration; whereupon *Morad* went to *Aurengzebe*'s Tent, where a noble Entertainment was provided, and plenty of Wine brought in; the Royal Brothers eating and drinking together, while *Morad*'s Officers were entertain'd in a distant Tent, and only his Eunuch *Cha Abbas* remain'd in the Tent with his Master.

Morad betray'd

MORAD, mistrusting no harm, made himself drunk, and *Aurengzebe* order'd him to be remov'd into another Pavilion, attended only by his Eunuch, who laid down at his Feet, and towards Morning *Aurengzebe*, with a few that were privy to his Design, came to *Morad* half drunk, and scarce awake, and bound him and his Eunuch, and sent them one to *Agra* and the other to *Delly*, under strong Guards as Prisoners, and for the greater Privacy in accomplishing this Design, they were shut up each in a close Litter, and convey'd away unknown to any in the Camp, except those concern'd in the Execution of the Design; the Musick continuing to play, and all Tokens of rejoicing continuing, as if the two Royal Brothers had actually been still feasting together, and the new Emperor *Morad* being every Minute expected to appear in his Procession to his Inauguration, while on a sudden *Aurengzebe* appear'd in his Royal Robes upon the Throne erected for his Brother *Morad*, his Party, as they had been before instructed, crying, *Long live the Emperor* Aurengzebe, in which Acclamation both Armies join'd, or if any of *Morad*'s Party refus'd, they were immediately disarm'd, or made to comply with the common Voice of proclaiming *Aurengzebe* Emperor.

Aurengzebe proclaim'd.

AURENGZEBE having thus united both Armies in his own Interest, thought it was now time to conspire the Ruin of his rival Brother *Dara*, and went in pursuit of him to the Kingdom of *Lahor*, but upon the Approach of *Aurengzebe* *Dara*'s Forces dispersed, except a very small Retinue, with whom he went along the *Indus* to *Guzarat* with a Design to escape to *Persia*.

Defeats Dara's Force

THE new Emperor elevated with this Success, resolved to march against his Brother *Sujah*, who he understood was advancing towards *Agra*, and accordingly he did, and prevented that Capital from falling into his Hands, but *Sujah* had encamp'd so advantageously, that he kept a Communication open with several Towns, from whence he had Plenty of Provisions, while *Aurengzebe* wanted common Necessaries, nor could they come at any Water but what they fetch'd upon Camels from the *Ganges*, about twenty Miles off. In this Distress *Aurengzebe* struck their Tents, and put the Army in Motion, which *Sujah* observing, fell upon their Rear, and thus it came to a Set Battle, the Armies advancing they fought with great Obstinacy, till *Aurengzebe* drew his Enemy into a Field, where the Night before he had caused Pits to be dug, and cover'd with Turf; here *Aurengzebe* drew his Brother in Person to engage him, himself avoiding the Pit, while *Sujah* with his Elephant tumbled in, and the Army losing Sight of him, thought he was slain, and thought of nothing but a Retreat, and though *Sujah* recover'd himself and mounted a Horse that was brought him, yet his Army was so confused, that he could not rally them again, but was forced to make his Escape to the Province of *Bengall*, where he recruited his Forces and waited for his Brother and Enemy *Aurengzebe*, whose eldest Son *Mahomet* being under his Father's Displeasure, *Sujah* took that Advantage to invite him over to his Party, which he agreed to, and brought several of the best Officers along with him; but this Revolt was short-liv'd, for *Aurengzebe* encouraged his Son, and prevail'd upon him to return to his Duty, which when he had done, he rewarded him accordingly, confining him in the Castle of *Guallior*, being conscious of what he had done to his Father *Cha Jehan*, and not unjustly suspecting that his Son *Mahomet* might serve him in the same manner if he were at Liberty.

Sujah betray'd & defeated

Mahomet imprisoned.

AURENGZEBE having now got *Cha Jehan* his Father, the rightful Emperor, and his Rival Brother *Morad*, and also his Son *Mahomet*, all in Prison, he thought he had nothing to fear, and made a triumphant publick Entry into *Delly*, assumed all his Titles, and caused Money to be coin'd with this Inscription, *I the King* Aurengzebe, *Conqueror of the World, have caused this Money to be coin'd as bright as the Sun itself.*

BUT Sultan *Dara* resolving in the mean time to dispute the Title with *Aurengzebe*, drew together another Army at *Guzarat* to meet his Brother; but upon the Approach of the Armies towards

Dara again defeated

each

each other, *Dara*'s Forces diſpers'd, and all abandon'd him, except about two thouſand Horſe, with which he was forced to travel a ſandy Deſart, deſigning to go to *Amadabat*, where his Troops were; but when almoſt ſpent with his Journey, and arriving near the Town, *Aurengzebe* had ſo work'd the Governor, either by Threats or Promiſes, that *Dara* was deny'd entrance; whereupon his Fortune being now deſperate, and paſt hopes of retrieving, he determined to flee to *Perſia*, truſting to the Favour of *Given Cham*, Commander of a Fort upon the Frontiers, whoſe Life *Dara* had formerly ſaved, when *Cha Jehan* had ſentenced him to be trod to death by Elephants; he received *Dara* with all Marks of Gratitude and Eſteem, but immediately ſent Intelligence to *Aurengzebe*'s General, that he had *Dara* in his Power, and would deliver him up, which was accordingly done, and he was carried Priſoner to *Bakar*; which was now beſieged by *Aurengzebe*'s Forces, and was the only Fortreſs that held out for *Dara*; who being now under ſuch unfortunate Circumſtances, was eaſily prevail'd upon by *Aurengzebe*, to ſend Orders to the Governor of *Bakar* to ſurrender, upon Condition that *Dara* ſhould have Liberty to retire to the Kingdom of *Calamire*; but when *Aurengzebe* had got poſſeſſion of *Bakar*, he, regardleſs of his Promiſe, ſent *Dara* Priſoner to *Delly*; where being for ſome Time expoſed in the moſt mercileſs and contemptible Manner, *Aurengzebe* order'd him to be beheaded, and further to gratify his Revenge, cauſed his Head to be ſent to his Father *Cha Jehan* and his Siſter *Begum Saeb*, who were in Priſon at *Agra*, which melancholy Sight added infinitely to their Affliction.

AURENGZEBE having thus rid himſelf of *Dara*, he went with an Army againſt Sultan *Sujah*, who was at *Bengall*; but *Sujah*, not able to ſtand before his Brother, retired to *Arracan*, which lying to the South-Eaſt from *Bengall*, and being ſeparated from it by unpaſſable Mountains, and the *Portugueſe* being then poſſeſs'd of *Chatigan*, a Port near the Mouth of the River *Ganges*, undertook to tranſport him, with his Family and Treaſure, by Sea to *Arracan*, but they proved treacherous, and ſunk the Ship where his Treaſure and Jewels were, in ſuch ſhallow Water, that they could afterwards weigh them, and convert them to their own Uſe, but *Sujah* and his Family arrived ſafe at *Arracan*, where he fled for Refuge. But he had not been long at that Court, till there happen'd ſome Miſunderſtanding between that Prince and *Sujah*, which amounted ſo high, that not only the Sultan himſelf, but his Wives and Children were all cut to Pieces. This happen'd in the Year 1658.

The next that *Aurengzebe* conſpired to cut off, was his rival Nephew *Chaan*, the eldeſt Son of *Dara*, who though he had fled for Refuge to the Raja *Srinagor*, whom neither Threats nor Promiſes could prevail upon to deliver *Chaan* up to *Aurengzebe*; who therefore went another Way to work, and prevail'd upon the Raja's Son to betray *Chaan* to him; in order to which, a Hunting Match was appointed, and intelligence given to *Aurengzebe* of the Time and Place for the intended Sport, and *Chaan* went along with the Raja's Son and his Company to partake of the Diverſion; where *Aurengzebe* had detach'd ſome of his Forces to form an Ambuſcade, who carried off the young Prince, who was ſent to Priſon at the Caſtle of *Guallior* to accompany his Uncle *Morad*.

AURENGZEBE thought he had nothing now to fear but his Brother *Morad*, and not thinking himſelf ſafe while he was alive, he, according to ſome of his former pretences of Sanctity, as if he would not execute him unjuſtly, produced Witneſſes to prove, that when *Morad* was Viceroy of *Guzarat*, and the Emperor *Cha Jehan* ſent an *Omrah* to inſpect into his Conduct, *Morad* cauſed the *Omrah* to be aſſaſſinated, whereupon Sentence was paſt upon *Morad*, and he executed, or rather murder'd, the better to ſecure the Poſſeſſion of the Throne to *Aurengzebe*; who now thinking himſelf eſtabliſh'd againſt all Oppoſition, demanded the Inveſture of the Government, and demanded the Oaths of Homage, as the Cuſtom is upon the Acceſſion of a new Emperor or Mogul; but in this the Cadi or High-Prieſt oppoſed him, who declared that he could not be recogniz'd as Emperor during the Life of his Father, eſpecially having taken ſuch indirect and unjuſt Meaſures to cut off his elder Brother, and any other that he thought might ſtand in his Way. *Morad* ſlain.

Upon this he ſummon'd an Aſſembly of Doctors of the *Mahometan* Law, and told them his Father was ſuperannuated, and that *Dara* had violated their holy Religion by drinking Wine, *&c.* and that the chief Motive that induced him to take the Government upon him, was his Zeal to ſee the Precepts of their great Prophet maintain'd: But all this had no effect upon the Cadi, who ſtill oppoſed his Inauguration; whereupon he cauſed that Cadi to be depoſed, and another to be ſubſtituted in his Room; who fearing that if he did not comply with the Emperor's Demands, he might undergo the Fate of his Predeceſſor, or worſe, he immediately agreed to his Inauguration; which was accordingly perform'd on the 20th of *October* 1660, and received the uſual Compliments upon that Occaſion. *Aurengzebe* Inaugurated.

But *Cha Abbas*, the great Sophy of *Perſia*, ſo much reſented the Diſſimulation and Uſurpation of *Aurengzebe*, with his repeated Murders, the Impriſonment of his Father, *&c.* that when *Aurengzebe* afterwards diſpatch'd an Envoy to *Perſia* upon ſome particular Affair, the Sophy order'd the Envoy's Beard to be pull'd off, and the Preſents he brought to be burnt, intending to invade the Great Mogul, *Aurengzebe*'s Dominions, whoſe People were generally ready for a Revolt; but the Sophy dying, before he could put his Deſign in Execution, ſaved *Aurengzebe* the Charge and Trouble he would otherwiſe have been put to, to defend himſelf and his Dominions. Sophi of *Perſia*.

The Mogul ſtill kept his Father *Cha Jehan* in Priſon, but treated him with all manner of Reſpect, and allow'd him all the Pleaſure that ſuch a State of Confinement could afford, and ſent him ſeveral Mollahs to read the Alchoran to him: theſe being *Aurengzebe*'s Creatures, brought *Cha Jehan* over to a perfect Reconciliation to *Aurengzebe*, forgiving all Injuries, and aſſiſting him in the Government with his Advice; and, beſides other diſtinguiſhing marks of his Favour, agreed that *Aurengzebe* ſhould marry the Daughter of his eldeſt Brother *Dara*, the better to confirm his Title to the Crown. But ſtill *Aurengzebe* was not quite eaſy, but jealous even of thoſe of his Officers, who knew by what indirect Means he had advanc'd himſelf to the Throne, particularly of *Emir Jemla*; whom he had advanced to be one of his Generals, but being a very ambitious Man, and having a great Influence over the Mogul's Subjects, *Aurengzebe* did not ſtill think himſelf ſafe while *Emir Jemla* was alive, and not finding any Thing to charge him with, commanded him to invade the Territories of the Raja of *Acham*, which lies to the Eaſtward of *Bengall*; where he went on with Succeſs at firſt, but the wet Seaſon coming on, he return'd to *Bengall*, where he was Governor; thinking to compleat his Conqueſt of *Acham*; but himſelf and a great Part of his Forces having contracted the Bloody Flux, which cauſed a great Mortality amongſt them, *Emir Jemla* was ſwept away among the Reſt, to the great Satisfaction of *Aurengzebe*; who never thought himſelf ſafe as long as this aſpiring General was alive; and having thus gain'd his Point, he never attempted any further Conqueſt on that Side of his own Dominions. *Emir Jemla* ſent to *Acham*.

Pirates.

In the mean Time the Coaſt in the Bay of *Bengall*, eſpecially about the Mouths of the River *Ganges*, was infeſted with Pirates, being moſtly *Europeans*, but chiefly *Portugueſe*, who plunder'd and burnt the Frontier Towns belonging to the Mogul, and made Slaves of his Subjects, and made the Trade here either by Sea or Land very hazardous, but *Aurengzebe* ſent one of his Generals, who ſuppreſs'd the Pirates, and render'd the Government and Trade there as peaceable and as ſafe as in any Port of the Mogul's Empire.

Rebellion of Sevagi.

While theſe Things were tranſacting in the Eaſt Parts of the Empire, Raja *Sevagi* attack'd the Mogul's Frontiers on the Weſt: His Father had been an Officer in the King of *Viſiapour*'s Service, and the young *Sevagi*, inclined to Rebellion, rais'd a Parcel of looſe Fellows againſt the King of *Viſiapour*, who ſuſpecting that the Father of *Sevagi* was concern'd in the Rebellion, ſhut him up in Priſon, where he dy'd. *Sevagi* out of Revenge, plunder'd *Viſiapour*, the Capital of the Kingdom, and with that Treaſure raiſed a Force which enabled him to form a new State in the Heart of the Country, which he did with little Oppoſition, becauſe the King of *Viſiapour* died about the ſame Time, and left the Adminiſtration of the Government to the Queen, who rather than contend with *Sevagi* made Peace with him, and confirm'd to him the Territories he had already uſurp'd; and *Sevagi*, thinking his Uſurpation would always have the like Succeſs that it had in his Attempt upon *Viſiapour*, fell to plundering ſeveral Towns belonging to *Aurengzebe*'s Dominions; but *Aurengzebe* order'd his Uncle *Chaſta Cham* to head an Army againſt *Sevagi*, who thereupon retir'd to the Mountains; but when *Chaſta Cham* purſued him to thoſe wild, and to him unknown, Paſſes, *Sevagi* ſurprized him in his Tent, kill'd his Son, and wounded his General, and ſo harraſs'd the Mogul's Forces that *Chaſta Cham*, finding he could do no good, was glad to quit the Enterprize, and return to his Government of *Aurengabad*.

Invades Surrat.

When *Sevagi* had thus defeated *Aurengzebe*'s General *Chaſta Cham*, he thought himſelf able to invade *Surrat*, on the Weſt Coaſt of the Mogul's Empire, and a Port of the greateſt Trade in all the Mogul's Dominions. In this Expedition he firſt went in Diſguiſe to viſit the Avenues to *Surrat*, and finding the Place but weak, and his Expedition againſt it very ſecret, he took but four thouſand Men, and march'd ſo privately that the Governor had no Notice of his Approach till he arrived within Sight of the Town, and under this ſudden Surprize retir'd to the Caſtle with the moſt valuable Effects. The Inhabitants alſo quitted their Houſes, and left to *Sevagi* the Plunder of one of the richeſt Towns in *India*, only the *Engliſh* and *Dutch* Factories erected Batteries to defend their Houſes, and ſo ſav'd their Effects. His plunder at *Surrat* was computed to the Value of three Millions of Pounds Sterling, and altho' *Aurengzebe* was nettled at the Ravages and Plunders of *Sevagi*, yet not being able to reſiſt him, he carried all fair, and pretended to one of the Raja's that attended the Court, that he would be glad to ſee ſuch a puiſſant Heroe, and deſired him to invite him to Court, which *Sevagi* accepted, and with his Son were received at the Mogul's Court with all poſſible Tokens of Reſpect, but in a ſmall Time being jealous of *Aurengzebe*'s Integrity, and being informed that there was a Deſign againſt him, he did not wait to ſee the Event, but haſten'd with his Son to *Viſiapour*, where he and his Succeſſors maintain'd a long War with *Aurengzebe*.

Sevagi's jealouſy.

Cha Jehan dies.

Cha Jehan died in the Year 1666, leaving his Son *Aurengzebe* ſole Emperor, who, beſides his eldeſt Son *Mahomet*, who died in Priſon at *Gualeor*, had four Sons, viz. *Cha Alem*, *Azem Dara*, *Akbar*, and *Chan Bux*, who all ſeverally, and for themſelves, (except *Chan Bux*) conſpired the Downfal of their Father *Aurengzebe*. *Cha Alem* cauſed a Pit to be dug near his Father's Tent, which the Emperor narrowly eſcaped falling into, for which (being detected) he was ſhut up in a dark Priſon many Years. *Azem Dara* alſo having conſpired againſt his Father, and fearing to be detected, deſerted to the King of *Viſiapour*. *Akbar* being ſent with an Army to reduce the Raja *Liſonte*, whoſe Dominions lie contiguous to *Aſemire*, join'd with the ſaid Raja againſt his Father, and marching to attack *Aurengzebe* in his Camp, he partly by Strength and partly by Stratagem overcame them, though they were of ſuperior Force; whereupon *Akbar* fled, but being purſued by his Father's Forces, was forced to betake himſelf to the *Portugueſe* at *Goa* for Protection, and they tranſported him to *Perſia*, where the Sophy entertain'd him kindly, and gave him his Daughter to Wife, and continued ſo faithful to him, that *Aurengzebe* could never prevail upon the Sophy by Threats or Promiſes to deliver him up: However, *Aurengzebe* fell upon *Sevagi*, becauſe he had aſſiſted *Akbar* in his Rebellion, took ſeveral of his Towns, and ſent ſome of his Forces to beſiege his Capital *Gingy*, while himſelf ſubdued the Kingdoms of *Golconda* and *Viſiapour*.

Death.

AURENGZEBE having made ſuch large Conqueſts, ſeem'd to have nothing but his Sons to defend himſelf againſt, and therefore kept the Field at the head of his Army, and to prevent any Attempts from his new Conqueſts of *Viſiapour* and *Golconda*, he made their Kings tributary to him in the Years 1685 and 1686, diveſting them of all Appearance of Sovereignty, and brought them Priſonors to his Camp, and their Kingdoms being made Provinces of the Empire, are govern'd by Officers or Raja's appointed by the *Great Mogul*; and now *Aurengzebe* may be ſaid to have extended his Conqueſts as far as *Cape Comorin*, the Southermoſt Limits of *Proper India*, and to be even ſole Monarch of all the Peninſula, except ſome little Provinces, whoſe Raja's aſſiſted him in ſubduing *Golconda* and *Viſiapour*, and he in Point of Gratitude, or rather becauſe theſe mountainous Provinces produce nothing worth the Trouble and Charge of a Conqueſt, lets them remain quiet under their own Government in their little Principalities, but even they are ſo far from being able to withſtand him if he ſhould think them worth his Conqueſt, that they may properly be called his, though not made tributary, and all the South Part of his Empire is now bounded by the Sea from the River *Indus* Weſt to the great River *Ganges* on the Eaſt.

Death of Cha Alem.

AURENGZEBE being now eſtabliſhed in his Empire and advanc'd in Years, he took care before his Death to ſettle the Affairs of the Empire, and fix the Succeſſion, and in order thereto, releas'd *Cha Alem* out of Priſon, and gave him the Government of *Indoſtan*; he gave *Decan* to *Azem Dara*, and to *Chan Bux* he gave *Viſiapour*, *Golconda*, and *Biſnagar*, (for *Akbar* was dead in *Perſia*.) *Aurengzebe* being dangerouſly ill, and paſt Hopes of Recovery, the three Brothers, before the Breath was out of his Body, began each to draw his Forces together to puſh for the Empire. *Aurengzebe* died the fourth of *March* 1708, and *Azem Dara* arrived at the Camp the next Day, and being attended by ſome of the great Officers of the Court and the Generals, he mounted the Throne, and cauſed himſelf to be proclaim'd King by the Name of *Mahomet Azem Cha*. He buried his Father at *Aurengabad*, in a magnificent Tomb which he had cauſed to be built ſome Years before his Death.

Azem proclaim'd King.

CHA

Cha Alem. *CHA ALEM*, *Azem Dara*'s eldest Brother, being a Prince of great Prudence and Moderation, was better beloved by many than *Azem Dara*, who had now assumed the Throne; wherefore *Azem Dara* gave out that *Cha Alem*'s Mildness was only his Weakness occasioned by his Age, endeavouring thereby to represent him to the People as a Person uncapable of Government; notwithstanding which *Cha Alem*'s Interest increas'd, and he drew together Troops from all Parts, among which were *Rajapouts*, *Patans*, &c. who are better Soldiers than the other *Indians*; with them he march'd to *Delly*, and was joyfully received, and seated on a magnificent Throne; in the mean Time *Hassameddin*, *Cha Alem*'s second Son, march'd from *Bengall* with a considerable Force to assist his Father, took *Agra*, and put the Governor to death, for stopping Letters that were written from Court to *Cha Alem*. Prince *Chan Bux* also prepared for War, but was pacified by a Letter sent him by *Cha Alem*, wherein he promised to protect and maintain *Chan Bux* in the Possession of *Visiapour*, *Golconda*, and *Bisnagar*, which his Father had left him; whereupon *ChanBux* was crown'd King of *Visiapour*, and sent his Son to take Possession of *Golconda*.

Chan Bux crown'd.

In the mean Time *Azem Dara* march'd against *Cha Alem* with an hundred and fifty thousand Men, and arrived at *Aurengabad*, and pursued his March to meet *Cha Alem*; who dispatch'd his two Sons, *Hassameddin* and *Massoudy*, to meet their Uncle, while himself tarried at *Agra*. The two Brothers advanc'd towards the River *Naandaba*, which was within twelve Leagues of *Azem Dara* and his Forces, but *Azem Dara* observing how advantageously *Cha Alem*'s Forces were entrench'd, durst not pass the River to meet them; whereupon the two Brothers with their Forces quitted their Intrenchments, and retired to the Plain in some seeming Disorder, which made *Azem Dara* conclude that they retired out of fear, for which Reason he cross'd the River, and pursued them the more eagerly; but the two Brothers fac'd about to receive the Enemy, and Sultan *Bederbeck*, eldest Son of *Azem Dara*, attack'd a Body of Horse commanded by Sultan *Mahmedguery*, Son of Prince *Hassameddin*, who made *Bederbeck* give Ground; who out of revenge, or rather despair, push'd his Elephant against *Mahmedguery* and wounded him mortally with his Launce, who finding Death approach, push'd his Elephant against *Bederbeck*, run him through, and thus both these Princes dy'd together.

Two Princes kill'd.

Sultan *Valataber*, second Son of *Azem Dara*, likewise attack'd Sultan *Iskander*, Son of Prince *Massoudy*, but the latter wounded the former in the Throat, that he died in the Evening; *Azem Dara*, enraged at the Loss of his two Sons, animated his Generals to revenge, but next Morning he found himself surrounded with the Enemies Army, yet he would not presently surrender, but held out a Fight of almost eight Hours, in which Time he lost sixty thousand Men; and while he endeavour'd to rally his broken Troops, *Razin Sekader*, one of the Sons of *Cha Alem*, fell upon him with fifteen thousand Horse, and a thousand Camels, and made a great Slaughter, and at the same Time Sultan *Massoudy* attack'd him on another Side, so that of a hundred and fifty thousand Men, Horse and Foot, he had only six thousand Horse left; whereupon he quitted his Elephant, and mounted his Horse, to make his Escape, but his Horse being soon kill'd under him, he defended himself till he had kill'd above twenty Men that would have seiz'd him; but at last Sultan *Massoudy* came up in Person, who gave Orders that they should not kill him, but take him alive; but he finding no probability of an Escape, kill'd himself with his own Poniard, rather than be taken Prisoner by his Nephew; and thus perish'd *Azem Dara* with all his Party, and *Cha Alem* remain'd entirely Master of the Field.

Azem Dara kill'd.

CHA ALEM upon this Success took upon him the Name or Title of *Badour Cha*, who now thinking his Power almost beyond Limitation; he, at the Instigation of his Sons, and without any regard to his former Promise to his Brother *Chan Bux*, was perswaded to make War against him, and deprive him of his Kingdoms of *Visiapour* and *Golconda*, his Sons and Ministers insinuating that he was never secure in his Kingdom as long as *Chan Bux* was in a Condition to give him any Disturbance. Upon this *Badour Cha* march'd with a great Army against *Visiapour*, and contrary to all Obligations to his Brother *Chan Bux* for Neutrality, when *Cha Alem* and *Azem Dara* were at War; he also broke through former Agreements with the Raja's, by whose Assistance he obtain'd the Crown; but they being exasperated at his perfidious Violation of his Words and Promises, took up Arms, not to fight but to plunder the Country; but *Badour Cha*, not willing to be diverted from his Enterprize against his Brother *Chan Bux*, let them ravage at pleasure, while he advanc'd into his Brother's Dominions with an Army of fifty thousand Horse and thirty thousand Foot; but *Chan Bux*, not expecting any such hostile Visit from his Brother and Ally *Badour Cha*, he was not prepared for him, not being able to draw together more than eight thousand Horse and twenty two thousand Foot, with which he lay intrench'd near *Golconda*; when *Badour Cha* thought fit to begin the Attack, he soon forc'd *Chan Bux*'s Intrenchments; who seeing himself now under a Necessity to overcome or perish, he put himself at the Head of his Troops with two of his three Sons; and as this was the last Stake, to win the Victory, or lose his three Kingdoms, they fought desperately, but being so much inferior in Number, they were soon overcome, and *Badour Cha* gain'd an entire Victory; and thus the three Kingdoms of *Visiapour*, *Golconda*, and *Bisnagar* were subdu'd, and made Provinces of the Empire, and *Badour Cha* sole Emperor of *India* or Great Mogul. This Victory was obtain'd in the Year 1708.

Badour Cha invades Visiapour.

Chan Bux defeated, and his Kingdoms reduc'd.

CHAP. II.

Treats of the Situation and Extent of India, *the Climate, Monsoons, and Seasons; also the Rivers, Tides, and Sea Ports upon the Coast of* India.

IT might not have been improper, before we had enter'd upon this Chapter, to have given some Account of the first *European* Discoverers and Discoveries of the *East Indies*, or the Trade included under that Title; as also of the first Establishment of the *English* and *Dutch East India* Companies, *&c.* but those Discoveries being sufficiently treated of in Chap. I. of the Description of the *Oriental Islands*,

Page

Page 93, and the Eſtabliſhment of the above-mention'd Companies being alſo treated of in Chap. XIV. of the ſaid Book, Page 114, we refer the Reader to thoſe Places for further Satisfaction.

For the Situation and Extent of *Proper India*, ſee the Beginning of Chap. I. before-going. The Northern Part of *India* is in the Temperate Zone, and the Winds variable, as in other Places without the Tropicks; but the Southern Part is hot, and the Winds periodical, returning to certain Points at or near certain Times of the Year; as from *April* to *October* it blows from the South-Weſt or Weſt-South-Weſt; and from *October* to *April* the contrary Way upon the *Malabar* Coaſt, or between that and the Coaſt of *Africa*, to the Southward of the *Red Sea*. At the ſhifting of thoſe Monſoons, or a little before it, they have prodigious Storms of Wind, and yet theſe Storms do not come ſo exactly by the Day of the Month, but ſometimes a Fortnight or three Weeks before or after the uſual Time; which often occaſions much Damage to Ships, which will be ſo bold as to venture out of a good Harbour, upon a Preſumption that theſe Storms will not come till the periodical Time, whereas if it comes a Fortnight or three Weeks before, they are taken in it, and imprudently expos'd to needleſs Hazards. And ſuch is the Superſtition or Vanity of the Prieſts, and Credulity of the Ignorant, that when the cunning *Bramins* or Prieſts foreſee by the Approach of the Seaſon and other concurring Teſtimonies, that the Hurricanes are almoſt over, they offer gilded Cocoa-Nuts and other Trifles to the Sea, by throwing them into it, doubtleſs with a ſhew of Devotion; and they having thus calm'd the Wind, and ſtill'd the Sea, as the Ignorant believe, they pronounce it ſafe for Ships to go out to Sea again.

But they have alſo Land and Sea Breezes, as they are call'd, which ſhift once in twelve Hours, except the Hurricanes be ſo violent that thoſe Breezes (though otherwiſe periodical) cannot be perceiv'd; theſe Breezes are very uſeful by Sea and Land, eſpecially the Sea Breezes, which are not only uſeful to convey Ships from Port to Port, but in cooling the Land, which is ſcorch'd by the Heat of the Sun, and not at all cool'd by the Land Breezes, ſo that without them the Heats in *May* or the Beginning of *June* would be intolerable.

Wet Seaſon. About the latter End of *June* the wet Seaſon comes on, and continues about four Months, *viz.* from the latter End of *June* to the latter End of *October*, but it ſometimes holds longer. The Rains fall ſo heavy that the whole Country will be overflow'd ſometimes in a Night or two, eſpecially about the Middle of the wet Seaſon, but nearer the Beginning or latter End there are conſiderable Intervals of fair Weather, and ſo increaſe and decreaſe gradually, as the Seaſon is latter begun, or nearer expired; and the heavieſt of the Rains are commonly attended with the moſt terrible Thunder and Lightning; and in the dry Seaſon there is commonly Lightning without Thunder moſtly every Night, but without doing any harm.

Bengall unhealthy. The loweſt Lands are reckon'd the moſt unhealthy, and hence the Country of *Bengall* is reckon'd ſo in particular, being water'd by the ſeveral Branches of the great River *Ganges*, and therefore muſt lie low, and the noiſom Vapours ariſing from the Mud after the Inundations are over, and the River return'd into its Channel, muſt need be pernicious, and doubtleſs are more ſo by the great Numbers of Frogs and Inſects kill'd in the Floods, and left upon the Shore in great Numbers when the Floods are over.

Rivers, Ganges. Of the Rivers in *India*, *Ganges* is not only the largeſt, but in the greateſt Eſteem; the Depth, Breadth, and Number of the Channels, by which it empties itſelf into the Sea; and not only the Clearneſs but Goodneſs of the Water, which Seamen ſay will keep at Sea better than any Water in the World, except that of the *Thames*; and if to that we add a Piece of the Superſtition of ſome of the Natives, they believe there is ſo much Sanctity in the Water of this River, that they worſhip it as a Deity, and think that Perſon entirely happy that expires upon its Banks. The Tides riſe at the Entrance of the *Ganges* ten Foot in the Spring Tides, and ſix in the Neap Tides; but as for the motion or ſetting of the Tides it is uncertain, becauſe that is affected by the Monſoons, and beyond Calculation, though ſome Authors have taken upon them to determine it. This River empties itſelf by ſeveral Paſſages into the Bottom of the Bay of *Bengall*, but for its Source, its winding Motion, and what Places ſtand upon its Banks, &c. will be beſt ſeen upon the Map of *India*, &c. which will follow in its proper Place. *Tides.*

The next River for Note and Magnitude is the River *Indus*, which waters the Weſt Part of *India*, as *Ganges* does the Eaſt; they riſe not far aſunder, but *Indus* running to the South-Weſtward, empties itſelf into the Sea near the Tropick upon the Coaſt of *Guzarat*. *Indus.*

The River *Jemma*, famous for the two Capitals *Delly* and *Agra*, being ſituate upon its Banks, it riſes to the Northward of *Delly*, and runs South to *Agra*, and falls into the *Ganges* about Latitude 27 North. *Jemma.*

The River *Criſtna* riſes in the Province of *Decan*, a little to the Northward of *Amadanger*, and having run Southward ſome hundreds of Miles, turns to the Eaſtward near *Golconda*; it falls into the Bay of *Bengall* about Latitude 16 North, a little to the Southward of *Maſulapatan*. *Criſtna.*

Guenga River riſes in the Province of *Decan*, and having run ſome hundreds of Miles North-Eaſt, it turns Eaſt, and falls into *Hugly* River, (the Weſtermoſt Branch of the River *Ganges*,) near its Confluence into the Sea in the Bay of *Bengall*. *Guenga.*

Tapte River riſes near the City of *Bramport*, and runs Weſt through *Surrat*, and falls into the Sea near the Gulf of *Cambaya*. *Tapte.*

The River *Paddar* riſes near the City of *Aſmer*, and after a Weſterly Courſe, meets the River *Indus*, and loſes itſelf in the Sea to the Northward of *Guzarat*. *Paddar.*

Chaoul River riſeth in the Province of *Penbbab*, one of the Northermoſt Provinces of *India*, and holding almoſt the ſame Courſe with the River *Indus*, at laſt falls into it, a little before it falls into the Sea. There are ſeveral other Rivers, ſome whereof are as broad as the *Thames* immediately after the Rains, but are commonly dry before the Rains fall again. *Chaoul.*

India may be divided into North and South; the latter contains twelve Provinces, 1. *Biſnaga*, *Carnate*, or *Narſinga*, for they are all the ſame. 2. *Golconda*. 3. *Orixa*. 4. *Bengall*, on the Eaſt Side. 5. *Malabar*. 6. *Viſiapour*. 7. *Decan*. 8. *Guzarat*, or *Cambaya* on the Weſt; and within the Land more to the North are the Provinces of 9. *Berar*. 10. *Candich*. 11. *Chitor*. 12. *Malva*. But beſide theſe particular Diviſions, the Coaſt commonly goes by two general Names, the Eaſt Coaſt is *Cormandel*, and the Weſt *Malabar*; the Southermoſt Part of *India* is but barren, and famous for nothing but the Pearl Fiſhery between the Continent and *Ceylon*, which employs ſome thouſands of People every Seaſon; but the *Dutch* have the Benefit of it, as being Maſters of both Coaſts; but the Pearls are not ſo large, nor the Fiſhery ſo valuable as in the *Perſian* Gulf; and therefore we ſhall defer giving any Account of the manner of Fiſhing for Pearl till we come to the Deſcription of *Perſia*. *Diviſion.*

The Province of *Biſnagar*, or *Carnate*, comprehends not only *Biſnagar* but *Cormandel*, *Tanjour*, and *Madura* to Cape *Comorin*. *Madura* lies on the South-Eaſt *Biſnag.*

East Part of *India*, being bounded on the North by *Tanjour*, and on the West by *Malabar*, and on the South and East by the Ocean and the Streights of *Manar*, which lies between the Continent and the Island of *Ceylon*. The chief Towns are, 1. *Madura*, in about ten Degrees North Latitude; 2. *Periapatan*, upon the Coast, in about nine Degrees of Latitude; and 3. *Tutacorin*, on the East Coast, in eight Degrees; the *Dutch* took this Town from the *Portugueſe* in the Year 1658. The inland Part of this Country is moſtly inhabited by native *Blacks*, but the Coaſt has been long poſſeſs'd by Strangers, as *Moors*, *Portugueſe*, *Dutch*, and ſeveral other Nations.

Tanjour

The Province of *Tanjour* adjoins to *Madura* on the South, and the Bay of *Bengall* on the East, it making a Part of that Coaſt which goes by the general Name of *Cormandel*; the chief Towns are, 1. *Tanjour*, which lies up in the Middle of the Country; 2. *Negapatan*, on the Coaſt of *Cormandel*, in about eleven Degrees North Latitude; this was but a ſmall Place till the *Portugueſe* enlarged and fortified it, but it is now ſurrounded with a Wall and twelve Baſtions, and defended by a numerous Artillery. The *Dutch* appearing before it with only five hundred Men, the *Portugueſe* ſurrender'd it to them in the Year 1658 without ſtriking one ſtroke. When the *Dutch* took poſſeſſion of *Negapatan*, it had ſeveral fine Churches, a Monaſtry, and other Publick Buildings, but run to ruin ſince it has come to be poſſeſs'd by the *Dutch*.

Trankebar

Trankebar ſtands about fifteen Miles to the Northward of *Negapatan*, and is in the Poſſeſſion of the *Danes*; here is a regular Fort, ſurrounded with a deep Moat, and the Town, which is about two Miles in Circumference, is encompaſs'd with a Wall, with large Baſtions mounted with Cannon; the Houſes are of Brick or Stone, and made very commodious, though only upon the firſt Floor, eſpecially thoſe where the *Danes* or other *Europeans* live; the Streets are wide and ſtrait, and pav'd along each Side with Brick; but the *Indian* Houſes are Mud Walls and thatch'd Roofs, and every way very mean, and the Garriſon, being only a hundred and fifty *Europeans* and a few *Indians*, ſeem'd too weak to defend ſuch a Place; and yet in the Year 1699, when the King of *Tanjour* (aſſiſted underhand by the *Dutch*) beſieged it, they held out ſix Months, and then by a Re-inforcement ſent by Governor *Pitt* of Fort *St. George*, they defended themſelves, and the Enemy was forced to raiſe the Seige.

Building

Gingy

Next to *Madura* is the Province of *Gingy*, and to the Northward of that is that Part of *Narſinga* called *Cormandel*, which is bounded by *Golconda* on the North, by *Proper Narſinga* on the Weſt, and by the Sea or Bay of *Bengall* on the Eaſt. Upon this Coaſt are *Porta Nova*, Fort *St. David's*, *Conymere*, *Saderaſapatan*, *Maderaſs*, now call'd Fort *St. George*; alſo *Poliate* and *Pettipolly*.

Porta Nova

Porta Nova is a *Dutch* Factory to the Northward of *Trankebar*; and about fifteen Miles to the Northward lies Fort *St. David's*, in near twelve Degrees of Latitude North: This Place was purchas'd by the *Engliſh East India* Company, and regularly fortified, and is a Place of the greateſt Conſequence to the *Engliſh* of any upon the Coaſt, except Fort *St. George*; there being a great Trade at Fort *St. David's* for Callicoes and Muſlins.

Bengal and South Settlements

About fourteen Miles to the Northward of Fort *St. David's* is *Pondichery*, a *French* Settlement, and a fine Fortification; and near thirty Miles to the Northward of that is an *Engliſh* one call'd *Conymere*; and ſix Miles beyond that is a *Dutch* Settlement called *Sadera-a-Patan*; to the Northward of which about twenty Miles is *Coblon*, the only Settlement that the *Oſtend East India* Company have in the *East Indies*.

Meliapour

The next Place, once of great Note, is *Meliapour*, about ten Miles North from *Coblon*; it was once as conſiderable a Place as any on the *Cormandel* Coaſt; but being in ruins when the *Portugueſe* fix'd a Settlement here, they rebuilt it by the Name of *St. Thomas*, and made it a Biſhop's See; they fortify'd it regularly, and it became the greateſt Place of Trade upon all this Coaſt; but they were beat out of it by the *Moors*, and the *French* took it from them about the Year 1666. The *Dutch* apprehending that if the *French* got footing in *India*, they might diſpute the Sovereignty of the Seas with them, (the *Dutch* now thinking themſelves ſole Lords of that Element,) they therefore, before the *French* had been four Years in Poſſeſſion, block'd it up with fifteen Ships, while the King of *Golconda* beſieged it by Land; but the Town holding out beyond expectation, the *Dutch* landed ſeven hundred Soldiers, who join'd the Beſiegers and took it; they demoliſh'd the Fortifications, and the Trade is now removed to Fort *St. George*, whither many of the *Portugueſe* alſo removed, and have a Church allow'd them for the Exerciſe of their Religion.

Maderas or Fort St George

Maderas, or Fort *St. George*, is about four Miles to the Northward of *Meliapour*, or *St. Thomas*; it is in about thirteen Degrees of Latitude, and about eighty of Longitude from *London*; the Fort is a regular Oblong, about the Middle of the *White-Town*, where the *Europeans* inhabit, about a quarter of a Mile long, and not half ſo broad; the *Portugueſe* have a Church on the North Side of the Fort; and on the South Side of it is the *Engliſh* Church, a large Building, with a handſome Altar-piece and an Organ.

Black-Town

To the Northward of the *White-Town*, and adjoining to it, is the *Black-Town*, where *Portugueſe*, *Black-Indians*, *Armenians*, and other Strangers inhabit; this Town has alſo the Sea on one Side, and a River on the other, which makes its Situation pleaſant, and it is well ſupply'd; but (except ſome few brick Houſes,) the Buildings are poor and miſerable, only Mud Walls and thatch'd Roofs, no Windows to be ſeen on the Outſide, (except a little ſquare Hole in the Middle to give them light,) nor Furniture within, except Matts and Carpets to lie upon.

Singing-Women

In this *Black-Town* is an *Armenian* Church, and ſeveral little *Indian* Pagoda's or Temples; to the latter belong abundance of Singing-Women, who ſerve not not only in the Temple to ſing Anthems to their Idols, but to entertain their Gallants of any Nation whatſoever, and alſo to make up a Part of the Equipage of a great Man; for every Man of Figure when he goes abroad is attended by them, even the Governor of Fort *St. George* at his going abroad was attended by fifty of them, with the Country Muſick when he went out.

Our *East India* Company, beſides *Maderaſs* or Fort *St. George*, have ſeveral neighbouring Villages under their Government, which they purchas'd of the King of *Golconda* when this Coaſt was under his Government; they have alſo a Houſe and Garden at *St. Thomas's Mount*, about eight Miles to the Weſtward of Fort *St. George*, where the Country People ſay St. *Thomas* was buried.

The Salaries of thoſe in Places of Truſt or Employment under the *East India* Company at Fort *St. George* are as follow:

	l.	*s.*	*d.*
The Governor by the Year, beſides Perquiſites, Advantages by private Trade, *&c.*	300	0	0
A Lieutenant by the Month	6	6	0
An Enſign by the Month	4	19	0
A private Soldier by the Month	1	1	9
A Serjeant by the Month	2	5	0
A Corporal or a Gunner by the Month	1	5	0

	l.	*s.*	*d.*
Two Senior Merchants, each by the Year,	40	0	0
Two Junior Merchants, each by the Year,	30	0	0
Five Factors, each by the Year,	15	0	0
Ten Writers, each by the Year,	5	0	0
Two Chaplains, each by the Year,	100	0	0
The Surgeon, or Doctor, by the Year,	40	0	0
Judge Advocate, by the Year,	100	0	0
The Attorney General, by the Year,	23	0	0
The two Essay Masters of the Mint, by the Year, each	120	0	0

The Church is so well provided for, that they have usually three or four thousand Pounds in Bank, which they put out to Interest; but the annual Repairs of the Church not expending what that Interest amounts to, the Overplus is added to the Principal, and the Fund increases, as it well may, for they have neither got a Ring of Bells, nor if they had, have they built a Steeple to hang them in; but the other Buildings belonging to the Church are kept in good repair, and handsomely beautified.

Palicate. The next Place of Note to the Northward of Fort *St. George*, is *Palicate*, a little more than twenty Miles distant; this is one of the first Settlements the *Dutch* had in *India*; they have had it in Possession above a hundred Years, and yet hold it. About a Day's sail North of *Palicate* lies *Calctore*, where the *English* have a small Factory About a hundred Miles to the Northwatd of this is *Pettipolly*; here also the *English* have a Factory; this lies in Latitude sixteen North, and is the Northermost Factory upon the Coast of *Cormandel*.

Masulipatan. About thirty Miles to the Northward of *Pettipolly* is *Masulipatan*, in the Kingdom of *Golconda*. This is a large and populous Town, and a Place of good Trade, both the *English* and *Dutch* having Factories here; but it is not to be admired, either for its Situation or Buildings, it standing upon a Morass, at the Mouth of a River, and the Buildings mean, after the manner of the *Indians*; it was once famous for the Trade driven here for Diamonds and precious Stones, as also in Chints, Calicoes, and Muslins. A little to the Northward of this is *Madapollom*; here the *English* have a small Factory, in a much more healthy Situation than that of *Masulipatan*.

Nagapa-tan. Between forty and fifty Miles to the Northward of *Masulipatan* is *Nasipore*: here the *Dutch* have a Factory; and about a hundred and fifty Miles further is *Vizagapatan*, where the *English* have a Factory; and at *Bimlepatan*, about fourteen Miles further Northward, is a *Dutch* Factory at *Bimlepatan*; these are all the trading Towns on that Coast.

CHAP. III.

Treats of the Trading Ports upon the Coast of Malabar, *and of the inland Cities and Towns in the Southern Provinces of* India.

THE *Malabar* Coast may be said to begin at Cape *Comorin*, and according to the common way of speaking, is reckon'd to continue to the Gulf of *Cambaya*; but though all the Coast is generally known by that Name, yet *Malabar* extends no further than *Mangalore*, about Latitude thirteen Degrees North. *Malabar* is bounded on the North with the Kingdom of *Visiapor*, on the North, with the Mountains of *Gate* on the East, and with the Ocean on the West and South.

Tagapatan The first Town upon the Coast to the Northward of Cape *Comorin* is *Tagapatan*; it is about thirty Miles from the Cape. Here the *Dutch* have a Fort and a Factory; and about seventy Miles further North is *Anjengo*; this is the Southermost Settlement the *English* have upon this Coast; here our *East India* Company have lately built a Fort to secure their Pepper Trade.

Anjengo. A little to the Northward of *Anjengo*, is *Coulan* or *Quelon*; the *Portuguese* took it and rebuilt it about the Year 1505, and had seven Churches in it, but the *Dutch* took it from them about the Year 1662, and destroy'd the Churches and publick Buildings: They have also a Settlement at *Calecoulon*, a little to the Northward of *Coulan*, which they fortify on Account of their Pepper Trade, after the *Portuguese* had almost destroy'd it in the Year 1523.

Porca *Porca* is the next remarkable Place, it was the Capital of a small Kingdom or Province of that *Cochin* Name; and the next is *Cochin*, a Town of great Trade, and the best Settlement the *Dutch* have upon this Coast: It lies in near ten Degrees of Latitude, it was fortified by the *Portuguese* in the Year 1504, and adorn'd with several fine Edifices, Churches, Monasteries, and a beautiful Cathedral of noble Architecture; the Jesuits Church had a lofty Steeple, and there were other fine Buildings of excellent Stone and Workmanship; but being surrendered to the *Dutch* in the Year 1662, they, according to their wonted Generosity, preferring Warehouses before Churches, destroy'd all the Churches but one, thinking that one was sufficient for as many of them as wanted to make use of it, converting the Stones to a regular Fortification, and rendring the Town almost impregnable.

Cranganor About fifteen Miles to the Northward of *Cochin* is the City of *Cranganor*; it was possess'd and fortified by the *Portuguese*, but taken from them by the *Dutch* in the Year 1661, who found here a noble College of Jesuits, a stately Library, a Cathedral, and six or seven other Churches, the Ruins of all which (for that is all that is now to be seen) is a plain Proof that they, amongst the rest of their Neighbours, have been Partakers of *Dutch* Cruelty.

Panane. Tanor. The Towns of *Penane* and *Tanor* are situate between *Cranganor* and *Calicut*. It was at *Panane* that the *Portuguese* Admiral treated with the King of *Calicut* about setting a Trade, and was repuls'd by the *Moors*, &c. (*See Chap. I. of the Oriental Islands, Page 93.*) but the *Dutch* succeeded the *Portuguese*, and have now a Factory at *Panane*. *Tanor* is but a poor weak Place, but the *Europeans* resort thither sometimes upon the Account of Trade.

Calicut. The City of *Calicut* lies in 11 Degrees, 20 Minutes North Latitude; it was the greatest Place of Trade in all *India* when the *Portuguese* first arrived here; and now several *European* Nations have Factories, and trade there, and especially the *English*, with whom the King of this Country entered into an Alliance against the *Portuguese* in the Year 1615.

Panola.

Between thirty and forty Miles North from *Calicut* is *Panola*, a *French* Factory; and about five Miles further is *Tillicherry*, where the *Engliſh* have a Fort to protect their Trade, which conſiſts chiefly in Pepper. The City of *Cananor* is a few Leagues further North; here the *Portugueſe* erected a Fort, but the *Dutch* took it from them in the Year 1663, and keep it to this Day. *Mangalore*, the Northermoſt Bounds of *Malabar*, is the beſt Port in *India* for Rice; it ſupplies all the reſt of the Coaſt, and the *European* Ships alſo. The Town lies a little up a River, the Bar whereof is very dangerous. The *Portugueſe* pretend to ſome Property here, but other *Europeans* regard them not, but make their Markets to the beſt Advantage, without any Premium or Acknowledgment paid to them.

Cananor.

Mangalore.

Rajapour.

The next adjoining to *Malabar* to the Northward is the Kingdom or Province of *Viſiapour*, upon whoſe Coaſt, ſtill purſuing our Courſe to the Northward from *Mangalore*, the next Place is *Barcelor*, called by ſome *Baſſalore*, and by others *Baquor*, in near fourteen Degrees of North Latitude. Here the *Dutch* have a Factory. About ſeventy five Miles to the Northward of this is the Town of *Carwar*. Here the *Engliſh* have a ſmall Fort, and the Country produces the beſt Pepper in *India*. This is the moſt pleaſant and healthful Settlement the *Engliſh* have upon the *Malabar* Coaſt, (as this, though in *Viſiapour*, is commonly called) and in the Mouth of the River in *Batteçore*, Ships ride ſecure from the Southweſt Monſoons.

Carwar.

Beſt Pepper Trade.

Goa.

From *Carwar* to *Goa* is about thirty Miles. The *Portugueſe* had formerly great Dominions in this Part of *India*, of which *Goa* was the Metropolis, but now they have hardly any conſiderable Settlement but it left. It ſtands about eight Miles up the River *Mandoua*. It is a ſafe and commodious Harbour; and as a certain Captain obſerves, is not much inferior to *Portſmouth*, either for Strength or Conveniency; the Truth of which ſeems to appear in that the devouring *Dutch*, in Purſuit of their Ravages upon this Coaſt, thinking to make *Goa* a Prey to their boundleſs Deſires, block'd it up for ſeveral Years, but could never make themſelves Maſters of it, as they had done by many other *Portugueſe* Towns upon this Coaſt, but the *Portugueſe* ſtill keep it in Poſſeſſion.

Situation.

Goa ſtands upon an Iſland about twenty four Miles in Circumference, which whole Iſland is encompaſs'd with a Wall fortified with Baſtions and Redoubts. The Town is about two Miles in Length, and half a Mile in Breadth; but including the Fields and Gardens about it, it is about twelve Miles in Circuit. The *Portugueſe* have rendered this Place almoſt impregnable, by Caſtles and Redoubts on each Side the Channel before you come up ſo high as *Goa*, which, as before obſerved, ſtands about eight Miles up the River; for all which Space the Shores are ſo adorn'd with Groves of the fineſt Trees that *India* affords, interſpers'd with Forts, Gentlemen's Seats, Villages, and Variety of other Buildings, that it yields a delightful Proſpect all the Way up the River to *Goa*.

Marmagoa.

Goa and Salſet.

Adjoining to the Port of *Goa* is another, call'd *Marmagoa*, made by another Channel, which runs between the Iſland of *Goa* and the Peninſula of *Salſet*. Theſe two Channels meet at *St. Laurence*, and form the Iſland of *Goa*, which contains thirty Villages. In going into the Harbour there is *Salſet* on the Right, which contains fifty Villages, and in them, by a modeſt Computation, are not leſs than fifty thouſand Souls. On the Left is the Peninſula of *Bardes*, containing twenty eight Villages; and if we allow every Village in *Goa* and *Bardes* to contain a thouſand Souls, the Number of People contain'd in the three Iſlands or Peninſula's of *Goa*, *Salſet*, and *Bardes*, amount to one hundred and eight thouſand.

First taking of Goa.

Alphonſo de Albuquerque took *Goa* in the Year 1508, but *Idal Chan* recover'd it again, but did not hold it long till *Albuquerque* retook it; and the *Portugueſe* having rebuilt and fortify'd it as above deſcribed, neither *Dutch* nor *Indians* think it worth while to make any Attempts againſt it; neither doth the Raja, deſcended from *Sevagi*, give them much Diſturbance, for he and the *Portugueſe* are ſo equally match'd, that when either would encroach upon the other, either the *Portugueſe*, to enlarge their Dominions on his Side, or he to make a Conqueſt of *Goa*, they both defend their preſent Property with ſo much Vigour, that the Aggreſſor gets nothing but Blows; and now both Parties reſt ſatisfied with their own Poſſeſſions.

Viſiapour.

The next Town of Note to the Northward of *Goa* is *Rajapour*, in about ſeventeen Degrees of Latitude. *Viſiapour*, formerly the Capital of this Kingdom before the Mogul ſubdu'd it, is an inland Town in about Latitude ſeventeen North: It has ſuffer'd ſo many Depradations, by its being defended againſt the Attempts of the Mogul, before it was conquer'd, that it is now a Place of no Strength, but a weak ſtraggling Town.

Dabul.

The next Province is *Decan*, which is bounded by *Cambaya*, or *Guzarat*, on the North; *Golconda* and *Berar* on the Eaſt; *Viſiapour* on the South; and the Ocean on the Weſt. The chief Town of Note upon the Coaſt of this Province (proceeding ſtill to the Northward) is *Dabul*; it is in near eighteen Degrees of Latitude, and ſix Miles from the Sea. The *Portugueſe* took it in the Year 1508; but the *Indians* retook it, and it is now ſubject to *Sevagi*, or his Succeſſors.

Dunde.

Choul.

Dunde Rajapour, (a Place diſtinct from, and to the Northward of *Rajapour*, before-mention'd) is about forty Miles to the Northward of *Dabul*; and twelve Miles to the Northward of that is *Choul*, ſituate upon the Bank of a River, about ſix Miles from the Sea. The Fort *Ehnero*, which ſecures the Entrance of the River, was built by the *Portugueſe* in the Year 1520. The River is Navigable up to the Town for Ships of good Burthen. Its Territories extend ſix Miles from the City, and borders on the Country of *Sevagi* on the South.

Bombay.

Bombay, ſo called from the Corruption or Contraction of the Word *Boon-Bay*, it being ſo call'd by the *Portugueſe*; the Word ſignifying a good Bay, or good Harbour, and not improperly; for it is ſaid, it is ſufficient to contain a thouſand Ships. It lies in Latitude nineteen Degrees North. In the Year 1663 the King of *Portugal* transferr'd the Property of it to *Charles* II. King of *England*, on Account of his marrying *Catharine* the Infanta of *Portugal*, as a Part of her Fortune; and King *Charles* afterwards made a Preſent of it to the *Engliſh Eaſt India Company*. The Iſland is about ſeven Miles long, and twenty Miles about. The chief Town is about a Mile long; the Houſes of the Natives low and mean, but the Fort is ſtrong and regular; it has a hundred and twenty Cannon mounted, and ſtands at ſome Diſtance from the Town. They have no good Water but what they ſave in the Time of Rain; but there is a Spring about a Mile off, where thoſe that pleaſe to be at the trouble, may ſend for good Water to drink. The Iſland does not produce much Grain, but they are ſupply'd from the neighbouring Countries; but they have Groves of Cocoa-Nut-Trees. Their Gardens produce Mangoes, Jacks, and other *Indian* Fruits; and they have Salt pretty cheap, the Climate affiſting them to make Salt at a ſmall Expence; for the Sea Water is let in to Pits made for that Purpoſe, and the Heat of the Sun extracts the Moiſture, and leaves the Salt behind.

How Salt is made.

The

Government. THE Preſident of *Surrat* is commonly Governor of *Bombay*; who, when he is upon the Iſland, appears in great State. Both the Mogul and the *Dutch* have ſeverally attack'd *Bombay*. The Mogul's General in the Year 1688, attack'd *Bombay* with twenty five thouſand Men, but retired without Succeſs.

Venomous Creatures. *Bombay*, at the Time of the Rains, produces vaſt Numbers of venomous Creatures, which come to an uncommon Growth. Mr. *Ovington*, late Chaplain to King *William*, who was upon the Spot, ſays their Spiders are as big as a Man's Thumb, and the Toads near as big as Ducks.

Canorin. THE Iſland of *Canorin* is ſeparated from *Bombay* only by a narrow Channel on the North Side of *Bombay*, which is fordable at low Water. This Iſland is twenty Miles long, and ſeventeen broad; it belongs to the *Portugueſe*, but is of no further uſe than to be parcell'd out among ſome of the Crown Favourites, who willing to live an indulgent Life, have a Parcel of Land allotted them in this Iſland, and have the common People like ſo many Vaſſals to cultivate it for them.

THIS Iſland produces Rice, Sugar-Canes, and *Indian* Fruits in abundance, in the low Grounds near the Sea, but the middle of the Iſland is mountainous and barren. The chief Town is *Baudora*, where are ſeveral good Buildings; but the pooreſt Sort live in miſerable Cottages, and go almoſt naked, and yet are ſo willing to imitate the better Sort, that they wear Bracelets upon their Legs and Arms made of Glaſs, if they cannot afford richer Materials.

Baſſaim. THE next to the Northward of that is *Baſſaim*, in between nineteen and twenty of North Latitude: It is in Poſſeſſion of the *Portugueſe*, and is the Reſidence of their Captain-General of the North, who has the Juriſdiction over all the Governors of the Northern Settlements. The next to the Northward of that is *Daman*, which the *Portugueſe* have had the Poſſeſſion of from the Year 1559 to this Time; it is Situate at the Mouth of a River, in about twenty Degrees of Latitude; it is an obſcure Place with reſpect to Trade, and not any Harbour for Ships of Burden.

Surrat THE next Port to the North of *Daman*, is *Surrat*, in about twenty Degrees and a half North Latitude; it ſtands on the River *Tapte*, about ten Miles from the Sea; the City is above two Miles in Circumference, and lies almoſt in the Form of a Crefcent, by reaſon of the winding of the River; it is defended by a Wall and Towers, and has ſix or ſeven Gates, at which Centinels are plac'd. The Streets ars narrow, and the Houſes low and mean where the Natives live, but the *Europeans* have loftier Houſes, built of Stone or Brick, and cover'd with Tiles, but no Glaſs in their Windows, either for the ſcarcity and dearneſs of it, or elſe becauſe it ſhould not hinder the cool Air of its Paſſage into the Houſe.

Officers at *Surrat*. THE *Engliſh Eaſt India* Company have a Preſident of *Surrat* who lives in great State; there is alſo an Accomptant, a Store-keeper, a Purſer Marine. Theſe conſtitute the Council, and have a Secretary: There are alſo Factors and Writers. The Company has alſo a Chaplain, who reads Prayers three Times, and preaches once every Sunday, beſides reading Prayers twice every Week-day. The Salary of the Preſident is three hundred; the ſecond one hundred and twenty, and the Chaplain a hundred Pounds a Year. The Senior Factors of the Council have Forty Pounds a Year, the Junior Factors Fifteen, the Writers Seven Pounds a Year, and the *Black Peons*, who ſerve the Company either for Servants or Soldiers, as Occaſion requires, have but each nine Shillings a Month.

THE Preſident has the Inſpection of all the Affairs and Settlements of the Company, and their Factors and Agents on the Weſtern Parts of *India*, and ſome of the Inland, as at *Agra*, *Amadabad*, &c. and bears a great Authority at *Surrat*. There are no Publick-Houſes at *Surrat*, but *Caravanſera's*, where Travellers may dreſs their Victuals, and lodge, and have Water to waſh in or drink. No Publick Houſes.

Surrat cannot properly be ſaid to be a Settlement or Colony belonging to the *Engliſh* or any *European* Country or Company; for the Mogul keeps the Property in his own Hand; and though he ſuffers *Engliſh*, *French*, and *Dutch* to carry on a great Trade here, yet they pay a Duty of almoſt Four *per Cent.* though the *Dutch* when they thought they were too much impos'd upon, block'd up his Ports, and compell'd him to lower his Impoſts or Cuſtoms; but all the Trade of the *Europeans* is not comparable to that of the *Moors*, *Armenians*, *Banians*, *Arabians*, and *Jews* at *Surrat*.

BUT as *Surrat* is not a convenient Harbour for large Veſſels, the *European* Shipping uſually lie at *Swalley-Hole*, a little Bay about ten or twelve Miles to the Northward of *Surrat*; here they load and unload their Goods, the *Engliſh*, *French*, and *Dutch* having each their proper Place to lodge and ſtow their Goods in; and while the Shipping lies here, which is from *September* to *March*, the *Banians*, *Armenians*, and *Moors* build little Huts along the Shore, and expoſe their Goods to Sale as in a kind of a Fair. Swalley-Hole.

Baroche is in the Gulf of *Cambaya*, about fifty Miles to the Northward of *Surrat*; it was formerly a ſtrong Place, but the Fortifications are run to ruin; but there is yet ſome Trade there, both the *Engliſh* and *Dutch* having Agents here. Baroche.

Amadabad is the Capital of *Guzarat*, and Seat of the Viceroy; it is ſituate at the very Bottom of the Gulf of *Cambaya*, in Latitude 23, 40, or a little without the Tropick; it ſtands on a fine Plain, and water'd by a ſmall River. The Town is incloſed with a Wall, in which are twelve Gates; the City and Suburbs is three or four Miles long. The principal Street is full thirty Paces over, and the reſt very wide; the King's Square is an Oblong of ſeven hundred Paces in Length, and four hundred in Breadth; the Caſtle is on the Weſt Side of this Square; and on the South is the great Caravanſera, or publick Inn for the Lodging of Strangers; near this Square is one of the Mogul's Palaces. The *Engliſh* have a Factory in the middle of the Town, and the *Dutch* have another in the great Street; their Ware-houſes are well ſtored with rich *Indian* Goods. Amadabad.

THE Moſques or Pagodes are very numerous, but thoſe little Idol Temples having been deſcribed in our Account of *Tonquin*, Chap. V. we ſhall refer the Reader to that; but at *Amadabad* is a ſumptuous *Mahometan* Temple, call'd the *Friday's Moſque*; it is aſcended by ſeveral large Steps, and before it ſtands a ſquare Cloiſter, a hundred and forty Paces in Length, and one hundred and twenty in Breadth, adorn'd with twelve Domes, and an open pav'd Square in the Middle of it. There are three large Arches in the Front of the Temple, over which are very high Steeples; the chief Dome is ſurrounded with ſeveral ſmall ones, and two Minorets or Spires; the whole Building is ſupported by forty four Pillars in two Rows, and the Pavement is Marble. There were ſeveral other Moſques and Temples, but ſome of them much defaced in the Time of the Civil Wars of the Empire. A large Temple.

THERE are Hoſpitals here for ſick and lame Beaſts, Birds, and other Animals, as at *Cambaya*, and for the ſame Reaſon; but here they not only take care of their own, to cure them if poſſible, but if the Chriſtians there have any ſuch ſickly Animals, Hoſpitals for Beaſts.

Animals, they will purchaſe them to entitle them to the ſame Charity; there they remain till they die, if they cannot be cured; but if they recover, they either keep them, or ſell them to thoſe of their own Belief, and will not ſell them to Infidels, (as they term thoſe that do not believe their Doctrine of Tranſmigration;) leſt the Souls of their Anceſtors ſhould be again diſlodg'd before their Time.

Cambaya. The City of *Cambaya* is at the Bottom of the Gulf of the ſame Name; it is bigger than *Surrat*, and had formerly a better Trade, but it is now remov'd to *Surrat*; the *Portugueſe* once had this Place, till the *Moors* beat them out. *Cambaya* is encompaſs'd with a brick Wall, and there is an old Caſtle; the Streets are wide, and the Houſes built of Brick dry'd in the Sun. Here, as well as in other Parts of the *Indies*, there were Hoſpitals erected for Beaſts and other Animals that were ſick, they having ſuch a ſtrong Opinion of the Tranſmigration of Souls, and thinking the Souls of their Anceſtors might be removed into ſome of thoſe Animals, they do what they can to keep them alive, to keep the Soul as long as poſſible from being diſturb'd again, or at leſt when it removes again, it ſhould be ſent to a worſe Habitation. The Tide being confin'd between *Diu*, the Southermoſt Point of *Guzarat*, and the Coaſt of *Bombay*, and to the Northward of the firſt of the Flood, ſets up into the Gulf of *Cambaya* with that Violence and Swiftneſs, that the ſwifteſt Horſe cannot keep Pace with the Flood.

Diu. *Diu* ſtands upon an Iſland of the ſame Name, upon the Southermoſt Coaſt of *Guzarat*, on the Weſt Side of the Entrance of the Gulf of *Cambaya*; it is ſeparated from the Main by a narrow Channel. The *Portugueſe* took it in the Year 1515, and to its natural Strength added new Fortifications; they had not been long in Poſſeſſion of it, till *Badur* King of *Guzarat* attack'd it, but was forced to raiſe the Seige; whereupon he prevail'd with the Grand Seignior to aſſiſt him with a great Fleet, and twenty thouſand Men; with which, added to his own Forces, he renew'd the Attack; but the *Portugueſe* not only defended themſelves and the Place, but beat the Enemy off with ſo much Precipitation that they were glad to eſcape, leaving behind them their Artillery and Baggage, and alſo their wounded Men, who were not able to ſhift for themſelves. This was a Place of good Trade, but now declines.

And now, having gone along the Coaſt of Southern *India*, as far as *Guzarat* under the Tropick, we ſhall take a general View of the inland Country; and firſt, to the Eaſtward of the Province of *Guzarat* lie the Provinces of *Candiſh* and *Berar*, now united; they have the Provinces of *Chitor* and *Malva* on the North, *Orixa* on the Eaſt, *Decan* on the South, and *Guzarat* on the Weſt. The Capital of *Candiſh* is *Brampour*, above two hundred Miles to the Eaſtward of *Surrat*, and near the ſame River; and near a hundred Miles North-Eaſt from that is the famous Caſtle of *Mandoa*, which ſtands upon a high Hill, and is encompaſs'd with a Wall twenty Miles in Circumference; and Eaſt from that is *Shapour*, the Capital of *Berar*; both which lie in Latitude about twenty two North.

Candiſh and Berar.

Orixa. The next to the Eaſtward is *Orixa*, bounded on the North, (and ſeparated from *Bengall*) by the River *Gueuga*, on the South by *Golconda*, and on the Eaſt by the Sea. The Chief Town is alſo call'd *Orixa*, in the twenty firſt Degree of North Latitude; and about a hundred Miles from the Sea or Bay of *Bengall*, is *Ballaſore*, a Sea Port; where *European* Ships bound for any Part of *Bengall* commonly take in a Pilot; it is in the Mouth of a River of the ſame Name, in Latitude twenty one and a half; this is a Place of ſome Trade; here the *Engliſh* have a Factory, and it is a good ſafe Road.

A little to the Northward of *Ballaſore* is *Pipley*, where both *French* and *Dutch* have Factories, but the River is not navigable for large Veſſels; they lie in the Road ſome Diſtance off. *Pipley.*

The next Province to the Northward along the Coaſt, is *Bengall*, the Eaſtermoſt of all the Mogul's Dominions; it has *Orixa* and the Bay of *Bengall* on the South, *Aracan* and *Tipra* on the Eaſt, *Patua* and *Jeſua* on the North, and the Province of *Malva* on the Weſt; it is a large Province, being about four hundred Miles from Eaſt to Weſt, and three hundred from North to South. Some compare *Bengall* to *Egypt* for its Fruitfulneſs, and the *Ganges* to the *Nile*, for its many Mouths, and its annual Overflowing. *Bengall.*

There are ſeveral remarkable Towns upon the great River *Ganges*, as, 1. *Decca*, upon one of the Eaſtern Branches, in Latitude twenty four; this is the Seat of the Viceroy, and a Place of great Trade; here the *Engliſh* and other *Europeans* have Agents to carry on their Trade. 2. *Ragemahal*, higher up, in about twenty five Degrees of Latitude. 3. *Caſſimbazar*, upon the Weſtermoſt Branch, in Latitude twenty four and a half. This Place affords great Quantities of Silk and Muſlin, and ſeveral *European* Factors are employ'd here, both *Engliſh* and others. 4. On the ſame Branch, and more to the Southward, is *Hugly*, which gives Name to that Branch of the River; it is ſituate upon an Iſland made by the *Ganges*, in Latitude twenty three Degrees; it is a large Town, and there are Factors here from moſt *European* Nations trading to *India*. But the *Engliſh* finding the Climate unhealthy, removed lower down the River near *Calcuta*, and built a Fort about the Time that King *William* came to the Crown of *England*, and called it from thence Fort *William*. 5. The City of *Chatigan*, lies near the Mouth of the moſt Eaſterly Branch of the *Ganges*. Here the *Portugueſe* ſet up not only for Governors but for Pyrates too, and intercepted Trade to that degree, that the Great Mogul, which was *Aurengzebe*, found it neceſſary to ſend a Power to expel them, as was hinted in the firſt Chapter of *India* in his Reign. 6. *Malda*, to the Eaſtward of *Ragemahal*, where the *Engliſh* and moſt other *Europeans* have their Factors. *Decca.*

The Northern Provinces of *India* are, *Cabul*, *Haican*, *Multan*, *Buckor*, *Tatta* or *Sinda*, *Jeſſelmere*, *Soret*, *Hindowns*, *Jengapour*, *Labor*, *Delly*, *Agra*, *Aſmer*, *Gualeor*, *Narvar*, *Caſſimere* or *Cachemere*, *Bankiſh*, *Naugracut*, *Siba*, *Jamba*, *Becar*, *Gor*, *Canduana*, *Patan*, *Mevat*, beſides ſome other ſmall Sub-diviſions belonging to *Bengall*. *Candahor* is a Province of *Perſia*, and will be ſpoke of when we come to the Deſcription of that Kingdom. Northern Provinces.

Cabul is the Northweſtermoſt Province of *India*. The greateſt Part of the Mogul's Dominions are ſupply'd from hence with Horſes brought from *Perſia* and *Tartary*. The Capital City is *Cabul*, which being ſituate upon the Frontiers of *Tartary* and *Perſia*, is as well fortified as moſt Towns in *India*. *Haitan*, *Multan* and *Buckor*, as alſo *Jeſſelmere*, *Soret*, *Hindowns*, and ſome others, being obſcure Places, and of little or no Trade, we ſhall refer the Reader to the Map for their Situation, and proceed to *Cabul.*

Caſſimere, whoſe chief Town is of the ſame Name, ſituate upon a Lake near the Head of the River *Indus*. This has been a Retreat or Summer's Reſidence for ſeveral of the Moguls, as has been already intimated, there being beautiful Palaces, and fine Gardens and Canals in the Neighbourhood of this City, which makes its Situation ſo pleaſant, that it is call'd by ſome the *Parradice of the Indies*. *Caſſimere.*

Labor, in about Latitude twenty three, is upon the Bank of the River *Ravi*, a Branch of the River *Indus*; it is a large City, founded by the Mogul *Amayum*; whoſe Reign ſee Chap. I. it was ſome *Labor.*

Time the Capital of the Empire, and had many fine Buildings, but is now in a declining Condition: However, the Ruins that now appear, partly discover how magnificent the Place has been; and here it is that the fine Walk of between four and five hundred Miles in Length terminates.

Delly The Capital of the Province of *Delly* is the Town of the same Name, in about twenty eight Degrees of Latitude; it stands upon the Bank of the River *Jemma*; it is about three Leagues in Circumference. There are in *Delly* two handsome large Streets, with Piazza's on each Side, under which are Shops and Warehouses; and these Streets terminate at a large handsome Square, on the further Side of which is the Palace; but the rest of the Town are but irregular Streets, compos'd of low thatch'd Cottages. The Palace is like a Castle, with a Wall, Towers, and a Moat, in all about two Miles in Compass. There is a great Mosque, with several fine Marble Domes, and a large Caravansera, for the Entertainment of Strangers.

Agra. *Agra* is situate to the Southward of *Delly*, but likewise upon the Banks of the River *Jemma*: It is the Capital of a Province of the same Name; it is in about twenty six Degrees of North Latitude; it was but an inconsiderable Place two hundred Years ago, but is now the Capital of the Mogul's Dominions. The Town is seven or eight Miles in Length, but not near that Breadth, and there is always an Army there, but especially if the Mogul be there, for then the City is very populous, though at other Times like a Desart, the chief Traders following the Camp; so that it may be said, that the Mogul and his Camp (wherever he is) is the Capital of his Dominions.

There are some other Inland Provinces, but as they are no Places of Trade, we shall refer the Reader to the Map which will follow the Description of those Parts of *Asia* for their Situation, chusing rather to hasten over those Places which produce nothing in History but their Situation, that we may have room to be more particular in our Account of the Diamond Mines, which follows in the next Chapter.

CHAP. IV.

An Account of the Diamond Mines in Visiapour *and* Golconda; *the Colour of their Earth, and Weight of the Diamonds found in the respective Mines.*

THERE is a great Range of Mountains, which begins near Cape *Comorin*, and continues scatteringly along the Coast of *Cormandel*, to, or even through *Bengal*; some of these are very rocky, and adjacent to these craggy Hills the Diamond Mines are found, but the Kingdoms of *Golconda* and *Visiapour* have the most as well as the best Diamonds of any Place in the World yet discover'd; and first in the Kingdom, or (as it is now) the Province of *Golconda*.

Quolure is the first Mine that ever was wrought in this Province; the Earth is somewhat yellowish, but the Diamonds lie so scattering, that sometimes digging a Quarter of an Acre of Ground they find but few, especially where they find great Stones near the Surface of the Earth, but what they do find are often well shap'd, some of them pointed, and a good lively white Water; but there are some yellow, some brown, and other Colours; they are of an ordinary Size, from about a sixth of a Mangelin to five, ten, and some twenty Mangelins, though such large ones are but seldom found.

N. B. The Reader is desired to take Notice in this Account of the Diamond Mines, that a Mangelin is four Grains, and a Pagoda's Weight is nine Mangelins, or thirty six Grains.

Malabar, &c. The Mines of *Codawillakal*, *Malabar*, and *Butepallam*, is a reddish, or rather Orange colour'd Earth, and stains the Cloaths of the Labourers that work in it. The Diamonds lie about four Fathom deep; they are of a Chrystalline Skin, and an excellent Water, but they are generally a smaller Size than *Quolure*, but have a yellowish Earth; but there are many Diamonds of a blue Water.

Gurone *Gurone* is an excellent Mine; in it have been found Diamonds of about nine Ounces *Troy*; they are large and well spread, and very few small ones among them; they have a bright Skin of a pale greenish Colour, but within they are pure white. The Soil here is also reddish; but though these Diamonds are large and valuable, they are very scarce. We read of a *Portugese* that went to those Mines from *Goa*, perhaps to repair his broken Fortune, if his Luck should be propitious, in his Search for Diamonds; but he spent all he had, and what wearing Cloaths he could spare, without Success, and resolving to venture Life and Fortune upon the Issue of one Day more, he prepar'd a Cup of Poison, with a full Resolution, that if that Day produced nothing, he would at Night put an end to his Search and his Life by drinking his fall; but in the Evening the Workmen brought him a fair spread Stone of twenty Pagoda's Weight which is about an Ounce and a half *Troy*, in memory of which Success he caused a Stone to be erected at the Place, with the following Inscription.

Your Wife and Children sell, sell all you have,
Spare not your Cloaths, nay, make your self a Slave,
But Money get, then to Gurone *make haste,*
There search the Mines, you'll find a Purse at last.

Latawaar and *Gangcouta* are much the same Soil and Water; *Jungaire*, *Pean*, *Pagulle*, *Parwall*, and *Ammapelle*, are all red Earth, and afford many large Stones of a greenish Water, but these may rather be call'd Pits than Mines. In digging some of their Mines they sink through Rocks so deep that they can go no further for Water; sometimes they go forty or fifty Fathom deep, the Rocks they dig through are hard white Stone, in which they cut a Hole like a Well five or six Foot deep, then they fill the Hole with Wood, and kindle it, keeping a hot Fire in it for two or three Days, and when it is hot they quench it suddenly with cold Water, which makes the Stone or Rock crumble like Lime, this they dig out till they come at the solid Rock again, and so repeat the Operation till they get through the Rock, and then they come to a Vein of Earth which runs under the Rock, sometimes for the Space of two or three Furlongs or more, this they dig out and search, and

and then dig deeper, and through other Strata of Rocks, till they come ſo low that the Water flows in upon them, and then they are obliged to deſiſt, although the Vein lies lower. They break all the Lumps of Mineral in Pieces, and find Diamonds among them, the Earth is red; they find many large Stones, but ſome leſs than a Grain; they are commonly good, but ill-ſhap'd, craggy, and as it were broken.

Muddamurg produces the beſt Diamonds of any Mine yet mention'd; they are a very fine Shape and Water, and a tranſparent Skin, yet ſome veiny ones are found here. *Melwille* or the *New Mine* produces Diamonds, but the Earth ſticks to them as if they were clammy, or compos'd of a glutinous Subſtance, or as ſome think, they are not come to their full hardneſs; they are very apt to flaw in ſplitting, and are neither ſo hard nor ſo white as ſome others.

THERE are fifteen Mines employ'd in the Kingdom of *Viſiapour*; it is needleſs to fill up Room with an Account of every particular Mine; ſome produce ſuch ſmall Diamonds, that it is almoſt impoſſible to diſcern them among the Earth where they are found: But where they are ſo ſmall they make a Ciſtern, near the Place where they are digging, of about two Foot high, and ſix Foot over, with a ſmall Vent in one Side about two Inches from the Bottom, by which it empties itſelf into a little Pit made in the Earth to receive the ſmall Stones, if by Chance any ſhould run through. The Vent in the Ciſtern being ſtopp'd, they fill it with Water, and therein put the Earth which they dig out of the Mine, breaking it as they put it in, that it may diſſolve or ſeparate the ſooner, picking out the greateſt Stones, and ſtirring the reſt about with Shovels till it is thick and muddy; then they open the Vent, and let off the muddy Water, and fill it again with clean Water, repeating this till all the Mud and Clay be gone, and the Gravel and Diamonds left, which cannot run out with the Water, becauſe the Vent is two Inches above the Bottom of the Ciſtern. About ten a Clock before Noon they take off the gravelly Stuff they have waſh'd, and ſpread it on a clean ſmooth Place made for that Purpoſe, where the Heat of the Sun ſoon dries it, and then they ſearch among the Gravel for Diamonds; which after they are thus waſh'd, are ſo eaſily diſcover'd by their gliſtering, that the ſmalleſt can hardly eſcape them.

CHAP. V.

Of the Buildings and Furniture of the Indians *and* Mahometans *in the Empire of the Great Mogul.*

THE original *Indians* or Pagan Inhabitants are much more numerous than the *Mahometans*; but their Houſes, even thoſe of which their chief Towns are compos'd, are poor Cottages, with Clay Walls and thatch'd Roofs, and no Rooms but what are upon the Ground; indeed in the Market Places they have little Sheds in the Front of their Houſes, ſupported by little Pillars, and under thoſe Sheds, or as ſome call them Piazza's, are little Banks of Earth thrown up, for People to tranſact their Affairs, entertain their Friends, or expoſe their Goods to Sale; they have no Windows into the Street, and even the Princes Palaces are very indifferent, meanly built in one Form; before the Gate is a large Roof ſupported by Pillars; upon each Hand, as you go up towards the Gate, are Banks of Earth rais'd about a Yard high; theſe Banks are cover'd with Carpets or *European* Scarlet, with Cuſhions of the ſame to lean upon, here the Raja hears the Complaints of his Subjects, receives Foreigners, or tranſacts Affairs of State; within the Gate of the Palace is a ſquare Court, with Piazza's on every Side, opening into ſeveral Rooms, which had no Light but what they receiv'd by the Door; the Women are kept in the more retired Part of the Buildings, and probably have Piazza's looking towards the Gardens to divert themſelves, as the Men do towards the Street. Their Furniture is chiefly Cuſhions, Matts, and Carpets to ſit or lie upon; they have no Beds, Tables, Chairs or Stools; they have no Chimnies or Kitchens in their Houſes, but thoſe that cannot afford little Cook Rooms to be built at a ſmall Diſtance from the Houſe, dreſs their Meat in the Yard.

THEIR Inns, or Caravanſera's, are built almoſt in the ſame Manner as the Sheds before their Houſes, being open before, and no Doors to ſhut in to ſecure them either from Wild Beaſts or Robbers. Near any of their Places of Entertainment there is commonly a large Reſervatory of Water ſaved in the rainy Seaſon, and ſo large, that it ſerves all the fair Weather, and till the wet Seaſon comes on again; ſome of them are above a Mile in Circumference, and lin'd with ſquare Free-ſtone, with Steps down to the Bottom on every Side; ſome have a Summer-Houſe of Stone in the Middle, encompaſs'd with Galleries, from whence you may deſcend by Stone Steps into the Water, where ſeveral Perſons may bathe unſeen by one another; but the common People, that have not theſe Conveniences (eſpecially the Females) pour Water upon their Heads two or three times a Day, and let it run down over their Bodies, to cool themſelves inſtead of Bathing.

THEIR Pagodes or Temples appear very hand- Temples.
ſome on the Outſide, many of them built of Stone, with lofty Spires and good Carving, but the Inſide is diſmal, being a long dark Room without Windows, which want of Light being ſupplied with a multitude of Lamps, which by the Heat of the Climate and the want of Air is ſo ſuffocating, that it is almoſt intolerable to endure, eſpecially for thoſe that are not uſed to it. There are alſo a great many other Pagodes in the Country, open before, and but big enough to hold the Image, and here generally the People ſacrifice and perform their Devotion; but the Figures, or carv'd Work, in theſe Pagodes are very monſtrous; ſometimes the Head of a Hog, the Body of a Man, and the lower Part of a Lion in one Figure, and ſuch other prepoſterous Figures they have, as would be ſufficient to frighten a Chriſtian to ſee them, eſpecially in a Place of Devotion.

HITHERTO of the Buildings of the *Indians*, and indeed thoſe of the *Mahometans* do not much exceed them, nor do the great Omrahs much affect Building, becauſe they have no Inheritance in their Lands, and beſides, they live two Thirds of the Year in the Camp, and delight more in fine Tents, and moving from Place to Place all the dry Seaſon, than in being confin'd to one Place to live

in a fine Houſe, ſo that their Houſes are rather Lodgings during the wet Seaſons, when they cannot encamp in the Field, than Habitations for them to improve and take Delight in. However, the Mahometan or Chriſtian Merchants have handſome Houſes in ſome of the great Towns, which are built with Brick or Stone two Story high, with flat Roofs and Battlements, very commodious for taking the Air Mornings or Evenings, or when they pleaſe.

Moſques. THE Mahometans are at a vaſt Expence in erecting magnificent Temples or Moſques, the common Sort whereof are of good Stone, or ſometimes Marble; they are built in an Oblong Form, the Ends North and South; the Ends and Weſt Side are all ſolid Walls, without any Windows, and the Eaſt Side is Pillars, and Vacancies between them to let in the Light; there are neither Images nor Painting within them, but the Walls are perfectly plain, and when at their Devotion, they place themſelves with their Faces to the Weſtward or dark Side of the Temple; the reaſon of this Poſition of their Temples and of their Perſons at their Devotion is, that they may then have their Faces towards the Tomb of their great Prophet *Mahomet*, which is Weſtward from them, it being at *Mecca* in *Arabia Felix*, about forty Miles from the *Red Sea*; towards this Place all Mahometans, in what Part of the World ſoever, turn their Faces when they perform their Devotions, and their Moſques or Temples are ſituate in a proper Poſition to give them that Opportunity. Over the middle of the Moſque, and at each Corner, is a high Tower, where the Prieſts aſcend five times a Day to call the People to Prayers.

Tomb THEIR Tombs might have been thought rather to belong to the Article of their Funerals, but as ſome of them are very ſumptuous Structures, they may as well be ſpoke of under this Head. If a Mahometan be a Perſon of any Note or Figure, he commonly erects a Tomb for himſelf in his Life-time. They have ſuch Notions of Futurity, that they think it not worth the while to build magnificent Houſes for the little Time they are to live in this World; but for their Tombs or Burying-places, they (themſelves in their Life-time) encloſe a great Compaſs of Ground near one of the great Reſervatories of Water, planting Trees and Flowers, and every thing that can render it pleaſant; here they erect little Moſques or Temples, and near them raiſe the Tomb, which is arched and cover'd with a handſome Dome, and in ſome of them they keep Lamps continually burning, and leave a Penſion to their Prieſts to perform Devotion there.

CHAP. VI.

Gives an Account of the Genius and Temper of both Indians *and* Mahometans; *alſo of their Perſons, Habits, Food, Diverſions, and Ceremonies, with their Carriages, and Manner of Travelling.*

Diſtinction. WE are here to obſerve, that under the Name of *Indians* we mean thoſe originally ſo, or Natives of the Place, which are call'd *Pagans*; the *Moors* or *Moguls* being (in Point of Religion) *Mahometans*, and are compoſed of *Tartars*, *Arabs*, *Perſians*, and almoſt all Nations where the *Mahometan* Religion is profeſt, theſe being the Lords of the Country, as being Adherents of the Great Mogul, treat the antient Inhabitants with even more Contempt than they do the Chriſtians, though greater Strangers, becauſe the Chriſtians are uſeful to them, as Mathematicians, Engineers, *&c.* but their Affection for us reaches no further than their Intereſt, for otherwiſe, even to touch a Chriſtian is an Abomination to a Mahometan.

Indians moſt affable. BUT the *Indians* or *Pagans* (the far greater Part of the Inhabitants) are much more affable, polite and ingenious, as well as tender and compaſſionate to Men and Beaſts, which may perhaps be the reaſon that they are not ſo couragious againſt an Enemy as others that are more cruel or leſs tender, and few excel them in an equal Temper at the Approach of Death.

Genius. As an Inſtance of their Genius, they can imitate any Pattern either in Cloaths or Head-Dreſs at firſt Sight, and make others ſo like it, as not to be diſtinguiſhed from the Original, and the ſame in copying a Picture. Their Chints and Calicoes, whoſe Flowers and Shades we reckon ſo beautiful, are drawn by their common Sort of People from their own Fancy at three Pence a Day, to which (almoſt) common Genius of that People, the valuable Figures, drawing, and ſhading in their Chints, Calicoes, and the like, are chiefly owing.

Stature and Complexion. THE *Indians* are of a good Proportion, well ſhaped, and agreeable Features, hardly any crooked, or otherwiſe deformed among them; they have long black Hair, and black Eyes; thoſe of the Northern Part of the Empire are an Olive or deep Tawny, but thoſe in the South are quite black, and ſo are the Inhabitants of the Mountains, but thoſe upon the Coaſt who have mix'd with the *Portugueſe*, are a mixture of both white and black, or rather tawny and black.

Dreſs of the Mogul. AS for Dreſs it may not be amiſs firſt to mention that of the Great Mogul when he goes abroad, which we ſhall deliver in Sir *Thomas Roe*'s own Words, in his Account of the Mogul's Dreſs upon that occaſion, which, with the order of putting on, was as follows: As he came out, one came and girt on his Sword, another hung on his Shield ſet with Diamonds and Rubies, with a ſuitable Belt; another hung on his Quiver with thirty Arrows, and his Bow in a Caſe. He had on his Head a rich Turbant, with a Plume of Heron's Feathers; on one Side hung a Ruby unſet as big as a Walnut, and on the Side a Diamond as large, and in the Middle an Emerald like a Heart, but much bigger. His Staff was wound about with a Chain of large Pearls, Rubies, and Diamonds drill'd. He wore a Chain of three Strings of excellent Pearl about his Neck; he had Bracelets ſet with Diamonds above his Elbows, and three Bracelets of ſeveral Sorts on his Wriſts; he had a Pair of *Engliſh* Gloves in his Girdle, but none on his Hands, having almoſt on every Finger a Ring. His Coat was Cloth of Gold, but without Sleeves, and on his Feet a Pair of Buskins, embroidered with Pearl. In this Dreſs he went into his Coach, which was exactly like an *Engliſh* one, but cover'd with *Perſian* Velvet, embroidered with Gold.

But

of

But the Dreſs of the common *Indians* is a white Veſt of Calico, Silk, or Muſlin, which folds before, and is tied with Strings on one Side; the Sleeves are cloſe to their Arms, but ſo long that they ſit in wrinkles about the Wriſt; the upper Part is cloſe to the Body to the Waiſt, but full and pleated below, and reaches a little below the Knees. Under this Veſt they have a ſhorter, but they have Breeches reaching down to their Heels; they put on their Slippers without Stockings, and down at the Heels, that they may be readier ſlipt off upon occaſion, when they go into any Houſe, that being the firſt and moſt common Token of Reſpect when they enter a Friend's Houſe, and ſhews the ſame Veneration as we mean by putting off our Hats, as is common in other Eaſtern Countries. (*See Chap.* III. *of* Siam.) Moſt of them wear Saſhes, and the better Sort wear a Crice or Dagger. Both *Indians* and *Mahometans* wear Turbants of Muſlin or Calico; but thoſe of the Mahometans are much the largeſt. The Mahometan Women are dreſt like the Men, but being veil'd, their Dreſs is not ſo eaſily diſcover'd. The Women in the Southern Parts wear no Shoes or Slippers, nor Head-Dreſs, except their Hair, of which they let Part hang down over their Shoulders; the lower Part of their Arms are naked, only adorn'd with Rings, Bracelets, and other Toys. Children are quite naked till they are five or ſix Years old.

Their chief Times of eating and drinking is Morning and Evening; the exceſſive Heat of the Day they endeavour to paſs away in Sleep. The *Banian* Tribes, which are very numerous, and likewiſe the Bramins, or Prieſts both forbear to eat any thing that hath or had Life, or even Eggs, as ſuppoſing they may have Life; but they live chiefly on Rice, Roots, Herbs, or Fruit; but the Pagan *Indians* eat both Fiſh and Fleſh, only abſtaining from Beef, and the Fleſh of ſome other Animals that they look upon as ſacred; but Beef they look upon as moſt ſacred, eſpecially the Cow or Female, not only becauſe they think ſome of the happieſt Souls are diſlodged from their own Bodies to that Animal, but becauſe the Bramins teach that after Death they are to be conducted over a River by a Cow, and aſſiſted in their Paſſage by taking hold of her Tail; and they further add, that their God *Mahadeu* being incens'd by the Sins of the People, was appeas'd by a Cow. Whatever their Errors be, they ſeem to retain a grateful Principle, who will not eat the Fleſh of that Animal that was their Mediator, and is to be their Guide after this Life, according to the Notions they have of the Cow.

The Mahometans eat no Swine's Fleſh, but the common Victuals of the Country is boil'd Rice, with a high-ſeaſon'd Broth made of Fleſh and Fiſh, which they call Curry, pour'd upon the Plate, and mix'd with the Rice, the Fleſh being cut in little bits like Dice, and laid on the Side of the Plate; but this is eat but ſparingly for a Reliſher, as we uſe Pickles. The middling People ſit croſs legg'd upon the Ground, but this Poſture, and the manner of eating, differing but little, if at all, from what has been ſaid of other Eaſtern Countries, we ſhall not make Repetitions, but refer the Reader to *Chap.* III. *of* China, as alſo for their ſtrong Liquors, which is Palm Wine, Toddy, &c.

Fashion

The common *Indian* Salute is lifting the right Hand to the Head, or, to expreſs more Reverence, both, (but never the Left-Hand alone) but if it be to a Perſon of Diſtinction, they bow the Body a little; but to a Prince they bow the Body low, put the Hand to the Ground, then to the Breaſt, then lift it to the Head, and ſome repeat this three times when they are to pay a profound Reverence.

Upon a Viſit, the Perſon viſited never moves to meet his Gueſts, but deſires them to ſit down upon the Carpet, and according to the Cuſtom of all the Eaſtern Countries we have hitherto treated of, Betel and Arek is brought to them; they have but little Converſation, but if they have a mind to be merry, they ſend for the Dancing Girls, who when they have diverted the Company, will, any of them, retire privately with any of the young Fellows, if they deſire it. There are Jugglers and Legerdemain People, who act ſo dexterouſly that it was thought what they did could not be performed without magical or diabolical Aſſiſtance; but what Performances of that Kind were then thought Wonders, are not now worth the Entertainment of a common Reader. Viſits. Diverſions.

Another of their Diverſions is Hunting, but their Sport is mean, having no Dogs, for they ſurround the Place where the Game lies, and employing ſome to beat about, they ſtand ready to ſhoot the Beaſt, or knock him on the Head, as ſoon as he breaks out. There are good Hawks brought from *India* and *Perſia*, which will afford fine Sport, being flown at Partridges. Hunting.

The Fiſhermen uſe Nets as we do, but inſtead of Boats they have two or three Timber Logs tied together, upon which they go a fiſhing; it is true they are not ſo dry nor ſo capable of being commanded as the Boats, but are in leſs Danger of being overſet. Fiſhing.

Their Roads are commonly a deep Sand, and very hot to walk in; at about every ten or twelve Miles upon the Road ſtands one of the Caravanſera's or Inns, with one of the Reſervoirs of Water near it, as before deſcribed in Chap. V. When a Man of Faſhion and Subſtance travels, he takes with him eight or ten Cooleys or Chairmen, to carry his Palanquin, which is a Couch carried upon two Poles by four Men like a Bier, one four ſhifting and relieving the other at certain Diſtances, that at this Rate they will carry a Man four or five Miles an Hour, and they that carry ten Cooleys along with them, have two ſpare Men to ſend before to the Caravanſera, where they intend to bait, for ſometimes there is neither Victuals nor Fewel at the Caravanſera but what you carry along with you, but there are Sticks enough to be gather'd in the Woods near the Road without any Interruption; and this extraordinary Attendance is not dear, the ten Cooleys coſting but half a Crown a Day, or three Pence a Man. Roads and the Travelling

For the Carriage of Goods they uſe Camels, Oxen, and Aſſes; the Horſes are too valuable to make uſe of in theſe Drudgeries, and of too little a Size for great Burthens. The Camel is the moſt uſeful, becauſe in thoſe hot ſandy Countries he will travel ſeveral Days without Water. They alſo uſe Oxen both to ride upon, draw, and carry Burthens, guiding him with a Rope put thro' the Cartilage that is between his Noſtrils. Carriage.

The Buffalo is as large as an Ox, but more ſluggiſh, and therefore ſerves only for the Carriage of Water, or to draw in the Scavenger's Carts. Their Hackeries are Square like the Bodies of our Coaches, and run upon two Wheels, being drawn by the Oxen; every Perſon of Quality has a Set of *Perſian* Horſes for their own riding, and our *Eaſt India* Company keep Sets of them for their Factors and Servants in their chief Settlements. The Mogul and his Omrahs travel with Elephants, by which they convey their Women, Children, and Baggage from Place to Place; he has alſo a prodigious Number of Camels and Wheel Carriages, Hackeries

riages, which are commonly drawn by eight or ten Oxen; their Wheels have no Spokes, but are all one solid Board.

It is very troublesome Travelling in the rainy Seasons, for in all Southern *India* the flat Countries are overflow'd at the rainy Seasons, as in other Countries between the Tropicks. There are no Posts for Conveyance of Letters in this Country, but all Letters and Packets dispatch'd by Land are sent by Messengers on purpose, who travel very quick on foot, and at a reasonable Charge.

CHAP. VII.

Of the Trade and Manufacture of India; *also of their Soil, Husbandry, Plants, Minerals, Animals, and Insects; with a particular Account of the Growth of Cotton, the making of Indico,* &c.

Produce of India.

THE principal Manufactures of *India* are Silks, Calicoes, and Muslins; but, as we have observ'd in Chap. IV. there are great quantities of Diamonds in *Visiapour* and *Golconda*, some of which and other precious Stones we import to *England*; we have also great quantities of Pepper from the *Malabar Coast*, with Salt Petre, Indico, Cardamums, Opium, Assafœtida, and a great variety of Physical Drugs, &c.

Goods exported thither.

Goods proper to be carried from *Europe* thither are *English* Broad-Cloth, Lead, Looking-glasses, Sword Blades, Knives, Haberdasher's Ware, Gold and Silver Lace, Tin-ware, Wine, Brandy, Beer, and other Provisions, but these are mostly taken off by our own Factories. Flints carried from *England*, as part of their Ballast, are very acceptable there, for so far in *India* as the *Europeans* have yet visited, there is not a Flint to be seen, (but what are brought there,) insomuch that a Bag of good Gun-flints in the inland Country, where they are far distant from the Ships, is almost worth its Weight in Money.

Soil and Husbandry.

At the latter End of the dry Season the Earth looks scorch'd and barren like a Sandy Desart; no Grass appears upon the Surface of the Earth, but the Trees retain their Verdure all the Year round, but no sooner the Rains come on but Nature revives, and the Grass and Herbs cover the (late) barren Ground. They never manure the Land they till for Rice and other Grain; it is made so fruitful by the annual Rains that it always produces a good Crop. In the Northern Part of *India* they have as good Wheat and Barley as we commonly have in *Europe*, but in the Southern Part they scarce sow any Grain but Rice, nor do the Natives eat any other. As for their Manner of preparing and cultivating their Land for Rice, with the Manner of sowing and reaping it, &c. *see Chap.* V. *of* Siam: we may only add, that as Rice delights in a very wet Soil, if the Land they intend to assign for the Growth of that sort of Grain be not of itself moist enough, it must be chose in such a Situation, that by digging of Trenches or Channels it may be moistened or overflow'd when the Season or State of their Husbandry requires it, and when the Crop is reap'd (which is at the return of the dry Season,) they do not carry it into Barns in the Straw, as we do our Wheat, Barley, &c. but thresh it out in the Field as soon as it is cut; for when the dry Season comes on, the Heat soon makes the Ground sufficiently dry and hard, to answer the purpose of a Threshing Floor.

Wheat and Barley.

Threshing-floor of Rice.

Their Lands are mostly common, except near the Towns, and every one chuses a piece of Land for his own Use, having no other Property but present Possession, but then the Prince's Officers takes a Third, or sometimes have the Crop, which the Husbandman is forc'd to surrender as an Acknowledgment to the Prince for the Land he occupies. They have no Oats, but Pease and Beans as good as ours, though smaller. They have a sort of big Pease call'd *Donna*, larger than Tares, which they boil and mix with coarse Sugar, and being made up into Balls, are excellent feeding for Horses when it is cold, as is also a Composition of Barley Meal and other Ingredients, made into a sort of Paste, and given them as Victuals.

When they churn their Cream, it only produces a Substance like thick Oil, and never comes to the hardness of our Butter, by reason of the Heat of the Climate, but it is sweet, and tastes well. They make plenty of Cheese from the Milk of their Cows, Buffaloes, and Goats. Their Wheat Bread at *Bengall* is as good and as white as ours at *London*.

They have pleasant Gardens adorn'd with Walks, Trees, and large Basons of Water, but few Flowers; but what they have generally last all the Year; they are more grateful to the Sight than to the Smell, excelling more in Beauty than Fragrancy, except the Rose, and a white Flower like Jessamine, of which People of Fashion make a kind of a sweet Oil to perfume themselves.

Their Fruits are much the same as in other Eastern Countries, as Cocoa-Nuts, Mangoes, Pomegranates, Tamerinds, Lemons, Oranges, and also Betel and Arek, which they chew here as frequently as in other Eastern Countries, and in the North Part of *India* they have Pears, and Apples, and some Grapes, and other *European* Fruit; their Kitchen-Gardens afford Melons, Potatoes, Garlick, Onions, and other Roots, as well as Pot-herbs; they have also the Pepper-plant, Ginger, Cardamums, Saffron, Turmerick, Opium, Indico, and Cotton, and large Plantations of Sugar-Canes, chiefly in *Bengall*.

There are large Groves of Cocoa-Trees in the low Grounds almost all along the Sea Coast of *India*, it is about twelve or sixteen Inches thick, thirty or forty Foot high, and sometimes much more; it has no Boughs but at the Top, where it puts out eighteen or twenty tender Branches, on which are thick Leaves about two Foot long, and two or three Inches wide, like the Sedges that grow in moist Places in *England*; the Nuts grow at the lower End of the Branch where it comes out of the Tree, six or eight in a Cluster, some of the Nuts being bigger than a Man's Head. The Shell is enclosed in a thick Rind like our Walnuts, with the Fibres or Strings of which they make Cordage; the Shells we see frequently in *England*, for a kind of Rarity, made into Punch Bowls, Drinking Cups, &c. The Meat of the Nut does not fill the Shell, but sticks to it on the Inside about half an Inch thick, within which the rest of the Space is fill'd with a Liquid, which while the Nut is green, drinks as soft as Milk, and is a very agreeable Morning's draught; but when the Nut is ripe, it is of a more clammy or oily Substance, and is used as such

Plants.

The Liquor call'd Toddy is alſo drawn from this Tree, by making Inciſions in the Branches, and hanging Pots underneath to catch it; if the Pots be taken down before the Heat of the Day comes on, it drinks mild and pleaſant, but if it be left till the Heat comes on, it is more ſtale or louriſh, but then it is ſtronger; and hence People, according to their different Palates, let it hang longer or leſs Time. It is ſaid it is poſſible to build, rig, and victual a Ship out of this Tree only, ſuppoſing the Hull and Maſts to be made of the Tree or Timber, the Cordage of the Fibres of the Husks, the Sails may be made of the Leaves, which are capable of being made into Baskets, Matts, Fans, coverings for Houſes, *&c.* the Victuals of the Meat of the Nut; but this is only making the moſt of it, that it may be ſaid ſuch a Thing may be done, but the Materials that this Tree affords are not the moſt fit for the above-mention'd Uſes. The Toddy when ſour ſerves for Vinegar, the Leaves, beſides the Uſes above-mention'd, ſupply the uſe of Paper, for they write, or rather engrave upon them, with a Steel Pencil, inſtead of Pen, Ink, and Paper.

The Cotton-Shrub is alſo very uſeful; for out of its Fruit is made Callicoes, Muſlins, Ginghams, *&c.* they plant the Seed in large *Fields*; it grows up to a Shrub about the height of a Roſe-buſh, and then puts out yellow Bloſſoms, which falling off, there remains little Cods as big as the Top of one's Thumb, which ſwell to be about as big as a Walnut, and then break the outer Skin, and there appears a fine ſoft Wool or Cotton as white as Snow, and then they gather it; theſe Shrubs will bear three or four Years ſucceſſively, and then they fail, and are dug up, and the Ground replanted in the ſame Manner as before: The Seeds are always found among the Wool. But beſides this Cotton-Shrub there is a Cotton-Tree, which grows to a great Height, the Fruit when ripe is near as big as a Hen's Egg and then burſts like the other, and within it there is a fine white Wool or Cotton as in the others; the Fruit hangs at the middle and ends of the Branches, and are commonly two together.

Indico is made from a Shrub like a Goosbery-buſh, but not ſo prickly; they ſtrip off the Leaves, and lay them on a Heap for ſeveral Days together till they ſweat, which being over, they put them in Water in large Veſſels, and let them lie till they leave a blue Tincture and Subſtance in the Water; then the Water is drain'd off into other broad ſhallow Veſſels, and ſet in the Sun till all the Moiſture is exhal'd, and then there is left at the Bottom a dry hard blue Cake about a quarter of an Inch thick, which is the Indico that we uſe.

They have plenty of good Timber for building Houſes, but no Oak, Aſh, or Elm, or any kind of Timber known or uſed as ſuch in *Europe*; they have great Quantities of Red-wood for dying; but the moſt remarkable is the Banian-Tree, the Twigs of which bend down to the Ground, and takes root and grows upwards to the Trees, whoſe Branches again taking root grow again, *&c.* and by this means what was originally but one Tree, will ſpread a vaſt ſpace of Ground, and become a multitude of Trees; which by reaſon of the Branches bending down again to the Ground, form very delightful Arbours and Arches, and they being always full of green Leaves makes them ſtill more pleaſant; ſome of theſe are made uſe of as Places for their Idols, and Retirements for their Penitentiaries and other Perſons, who ſeem in a more particular Manner to be devoted to the Exerciſe of Religion.

These Oxen are the moſt uſeful of any other Beaſt, both for Draught and Carriage; they are not large, but will carry a Man twenty or thirty Miles a Day with eaſe. The Oxen are moſtly employ'd in the Caravans; the Drivers of them follow no other Employment, nor have they any Habitations, but are always travelling, or live in Tents, taking Wives and Children along with them. They are divided into four Tribes, and every one knows his own Branch of Trade or Carriage; the firſt Tribe carries nothing but Corn, the Second Rice, the Third Peaſe and Beans, and the Fourth Salt; the Tribes are diſtinguiſh'd by proper Marks; their Prieſts travel with them, and every Morning before they ſet forwards they pay their Adoration to the Image of a Serpent, which they carry along with them. Their Coaches are drawn by two Oxen, and will hold but two People, but they have uſually ten or twelve to draw one of their heavy Carriages. When they bait, they feed their Oxen with Balls of Paſte made of Flower, as mention'd before for the feeding of their Horſes. Camels are not ſo much uſed for Carriage as Oxen, but are very uſeful in the Sandy Deſarts for that purpoſe, becauſe they can live a long Time without Water.

Four Tribes.

Camels.

Here are plenty of large Elephants, ſome twelve, ſome fifteen Foot high, but very docible; they ſeldom or never go any Pace beyond a Walk, but they have ſuch a long Step that they will travel four or five Miles an Hour; their Trunk is as uſeful to them as Hands, to reach what they want, to pull up Graſs or green Corn, and alſo for a Defence: for if they ſtrike a Horſe or a Camel with it in earneſt, they will break their Bones, or ſometimes kill them at one Blow; when they ſwim they have little but the Trunk above Water, and through it they breathe, and will hold out to ſwim as long and as far as any Animal whatſoever.

Elephants.

They have alſo Buffaloes and Aſſes; the former differ but little from Cows and Oxen, only more ſluggiſh, and have a thick ſmooth Skin with little or no Hair, and their Fleſh is very coarſe Food. The Sheep in the Southern Parts of *India* are thin and long-legg'd, with reddiſh Hair inſtead of Wool upon their Backs; their Fleſh is good for little; but towards *Perſia* and *Tartary* they have fine Sheep with good Fleeces, ſome of their Tails weighing ſeveral Pounds. The *Perſian* Sheep brought into *India* have from three to ſeven Horns a-piece. They have Plenty of Goats, and the young Kids are tolerable good Eating.

Buffaloes and Aſſes.

Sheep.

Goats.

The little ſort of Hogs which we ſee in *England*, with their Bellies down to the Ground, came originally from *India*, and are reckon'd as good Butchers Meat as the Country affords, except the Wild Hogs, which are very Plenty, as are alſo Deer, Hares, Wild-Beaſts, and Wild-Fowls, which Poor as well as Rich have liberty to kill, they not being reſerved for Game to the Rich, only but for the common Uſe of Mankind, which was doubtleſs the Deſign of their Creation. The Lion is the only Beaſt of the Field, the hunting whereof the Emperor reſerves to himſelf. There are alſo Tigers, Leopards, Wolves, Monkeys, and Jackals. Theſe laſt are like Foxes in Shape and Colour, but ſomething larger; they run about in Companies in the Night, not only in the Country, but in the great Towns, and make a hideous Howling. Some ſay it is one or more of theſe that hunt the Lion's Prey for him, but ſome diſpute that, alledging that to be improbable, becauſe there are great Numbers of Jackals where there are no Lions. I muſt own it would have made out much more againſt the Probability of the Lion's having ſuch an Attendant or Harbinger, if it had been proved that there were great Numbers of Lions where there were no Jackals, but that Proof not being attempted, we muſt beg leave to ſuppoſe, that the common Report of Travellers of the Lions being attended by the Jackals, is not without Foundation.

Hogs.

There are abundance of Serpents, Scorpions, and other Venemous Creatures and Inſects. The Muſketoes, Gnats, and Bugs ſalute the *Engliſh* at their

Venemous Creatures.

their firſt going aſhore in ſuch a Manner, that in one Night's Time their Faces are ſo ſwell'd that next Morning they can ſcarce know one another. People of Faſhion keep Servants to beat them away while they ſleep; and for Bugs, they ſwarm amongſt common People and Soldiers, and yet there is a Way to keep them off; for if the Bed be all cloſe but an End or a Side, and the Way into the Bed be beſmear'd with a ſtreak of Tar (which may be done without daubing the Bedding,) the Bugs can never get into the Bed, either becauſe of the Averſion they have to Tar, or, which is more probable, that their Feet ſtick faſt in the Tar, and they are not able to proceed on their Journey.

Spiders. Toads. THERE are Spiders and Toads of a prodigious Bigneſs: during the Rains the Frogs multiply prodigiouſly, which is ſuppoſed has given riſe to that

Rats. fabulous Report of raining Frogs. Their Rats grow to be three or four times as big as ours, and will ſcarce give way to a Man. Beſides Serpents and Scorpions, the Centipedes are very dangerous; it has abundance of Feet, (from whence it takes its Name,) it is about as big as a Gooſe's Quill, and three or four Inches long; its bite is very dangerous.

Hogs Scorpions. There are Scorpions which frequent the Houſes; they are about as long and as thick as a Man's little Finger, they are ſomething like a *Lizard*; they have a Sting in the End of their Tail, which they carry turn'd upon their Backs; their Sting is ſmall like that of an Hornet, and they have no way to draw it out of Sight.

Locuſts. THE Locuſt is about two Inches long, but ſo ſtrong of Wing that they can croſs a conſiderable Arm of the Sea; they ſometimes fly in ſuch prodigious Multitudes, that where they light they will deſtroy a whole Crop in one Night, as Mr. *Ovington* tells us was the Caſe of a Husbandman near *Surrat*.

OF Fowls they have great Plenty, as Geeſe, Hens, Ducks, Pigeons, Partridges, Turtle Doves, Quails, Peacocks, Parakeets, &c. their Fleſh is lean and dry, and ſome of their Bones are as black as Jet, but the Fleſh of thoſe that have black Bones differ not in Taſte from thoſe that have white. Vultures are very common and tame here. There is a Bird leſs than a Wren with pretty Feathers, and her Note not inferior to the beſt of ours; but the Monkeys, which are very numerous there, do plunder the Neſts of thoſe Birds when they can come at them, and the Birds, as if apprized of their Danger, build their Neſts in the remote Ends of the Branches or Twigs, that will not bear the Weight of the Monkeys, and by this Means ſave their Eggs and young ones from their Tyranny.

HERE are Dolphins to be admired for their inimitable Colour, eſpecially when alive, their Fleſh as white as Snow, and they are reckon'd by the Sailors a nice Diſh, eſpecially when ſhort of Victuals, they ſwim very ſwift, and prey upon the Flying Fiſh, which to avoid them, ſpring out of the Water, and fly in the Air as long as their Wings are wet, and the Dolphins watching their Motion, wait to catch them as they fall into the Sea again, which they muſt of Courſe do when their Wings are dry. The Albecores and Bonetaes will follow a Ship for ſix or ſeven Weeks together in good Weather between the Tropicks, as the Sharks alſo do, if the Ship does not ſail too faſt.

CHAP. VIII.

Of the Nature, Property, and Manner of breeding the Silk-Worms in India, *which may be called their proper Climate; with ſome Obſervations of the different Manner of managing Silk-Worms in colder Climates, from the Methods uſed in* India.

IN *India* the Silk-Worms are in Eggs twelve Days, which Number of Days the Natives call one *Aggoa*, and from thence the Silk then made is called *Aggonedbund*, and is the beſt that is made all the Year; about the twelfth or thirteenth of *November* the Worms are hatch'd, and laid upon Matts, after which they give them Mulberry Leaves for the firſt four Days; they cut them in ſmall thin Pieces, and feed them at Morning, nine a-Clock, Noon, and three a-Clock, but the fifth Day they are not fed at all.

THE ſixth Day they grow bigger, and ſo the ſeventh, eighth, and ninth Day, and are to be fed with Leaves four Times a Day, at the Times above-mention'd, but the tenth Day they muſt not be fed at all.

THE eleventh and twelfth Day they are to be fed four times a Day, but the thirteenth and fourteenth not at all. The fifteenth, ſixteenth, ſeventeenth, and eighteenth they muſt be fed with whole Leaves four times a Day as above.

THE nineteenth, and ſo to the twenty ſixth inclusive, they are fed five times a Day, *viz.* Morning, nine a Clock, Noon, three a-Clock, and Midnight. They begin to be green about the fourteenth Day, and at the twenty ſixth Day they are above two Inches long, and after the twenty ſeventh Day they are not to be fed any more, becauſe then they begin to ſpin.

THE twenty eighth Day they muſt be put upon Ledges of Matt, faſtned to a large Piece of round Matting, the Ledges being about an Inch high from the Matt, and running round like a Screw, beginning at the Center of the Matt, and running round at about three Inches diſtance to the Circumference. When the Worms are put upon thoſe Ledges, they ſet the Matts leaning in the Sun about eight in the Morning, and let them ſtand about an Hour and a half, and then they put them into the Houſe, leaning againſt the Wall, till about four in the Afternoon, and then they ſet them in the Sun again till about Sun-ſet, and then take them in again, and in this Day and Night they finiſh their Houſes.

THE twenty ninth Day they take the Worms with their new Houſes and put them upon other Matts flat, without any Ledges or Partitions, and ſo lay ſeveral Matts upon Frames one over another.

FROM the thirtieth to the thirty third inclusive, they ſpin within their Houſes of Silk, and then they take each Worm with its Houſe and ſhake it at their Ears, and thoſe that are alive are good, and kept for Breeders; but thoſe that make no noiſe have ſpun their Lives away, and are dead, ſometimes a quarter, or half a quarter, or fewer of them live.

FROM the thirty fourth Day to the thirty ſeventh inclusive, they continue ſpinning. The thirty eighth

Day

Day they eat through their Houſes, and are like a Butterfly, and then the People take up their Houſes, and put them upon new Matts. The Males are diſtinguiſh'd by their Slenderneſs; when both Sexes are put together they join or copulate, and the thirty ninth Day they throw away the Males.

The fortieth Day the Females lay their Eggs, after which the Females are thrown away alſo; ſo that the whole Time of the Silk-Worm from the very firſt Propagation to its final Exit is but twelve Days in the Egg, and forty Days alive afterwards, which is but fifty two Days in all.

But there are different ſorts of Worms that produce the various Kinds of Silk; the beſt is produced by the Worms above-mention'd: But the ſecond Sort is called *Cheita-Bund*; theſe Worms are but eight Days in the Egg, and live thirty two Days afterwards, *viz.* forty Days in all, and is from about the Middle of *February* to the twenty fourth or twenty fifth of *March*.

The next or third Sort of Silk is called *Sowaud-Bund*; the ſpinning of this ends about the laſt of *July*.

The next or fourth Sort for Goodneſs is call'd *Affaree-Bund*; when the Worms have ſpun themſelves to death, they ſtill continue in their Eggs, (dead;) the making of this Silk ends about the fourth of *June*.

The fifth is called *Suuk-Bund*; the Worms ſtay in their Eggs eight Days, and live thirty two Days afterwards, which amounts to forty Days in all; the making of this Silk ends about the ſixth of *May*.

The ſixth Sort is call'd *Maug-Bund*; the Worms that ſpin this Silk are fourteen Days in the Egg, and live forty Days afterwards, which is fifty four in all. This is the worſt ſort of Silk, and the Worms leave off ſpinning about the Middle of *February*, ſo that in *Auguſt* or *September* there is no Silk made, and but very little in *October*.

Thus far as to the Nature of the Silk-Worms in *India*, their proper Climate, where the Heat of the Sun renders them much more fruitful than in any of our *European* Countries; for if we conſider the ſeveral ſorts of Worms, we may obſerve they breed and ſpin their Silk ſix times in the Year, but in *England* only once, becauſe here in *England* they remain in the Egg from the latter End of *Auguſt* to the latter End of *May*.

The Silk-Worm derives its Birth from the Seed of the Butterfly, which is as ſmall as Pins Heads, and are ſomething like Rape Seed. This Inſect, by whoſe Induſtry we have the Silk, ſpins it out of its Bowels, and winds it by its Mouth into the Form of a Clew or little Ball; it is ſomething like a Caterpillar both for Shape and Bulk, only it is more hairy, and its Web weaker and of a different Colour. The moſt proper Food for them is Mulberry-Leaves, but for want of that, People ſometimes feed them with Leaves of the Roſe-Tree, ſome with Lettice, or other Leaves; but it is obſerved, that with this Feeding, they either ſpin a weaker Thread, or elſe they do not ſpin at all; but what is moſt remarkable in this Inſect is, its Change of Shape; I might almoſt ſay Specie, for it is tranſformed from a creeping Worm into a Butterfly.

The Seed or Grain of thoſe Creatures was tranſported ſome hundred Years ago by two religious Perſons, but their Silk was of an older Date, and was brought into *Europe* above a thouſand Years ſince, and called *Sericum*, from an *Oriental* People called *Seres*, who were very induſtrious in improving the Silk-Worms, and the Silk they produce.

Note, This Account of the Silk-Worms was taken from Mr. *Ovington*, who reſided ſome time in *India*, and had the Opportunity of making or ſeeing the Experiments of nurſing and breeding the Silk-Worms there; but the following Account we have from *Andreas Libavius*, a famous Phyſician of *Rotenburg* in *Germany*, which being a cooler and more Northerly Climate than *India*, is not ſo natural to the Silk-Worms, and requires a different Way as well as a longer Time to nurſe them. The Method he uſed in breeding them was as follows:

He kept the Silk-Worms Eggs in warm Chambers all the Winter, and expoſed them to the Sun ſhining through the Window the latter End of *April*, and as they hatch'd, they left the empty Shells behind, and were like Caterpillars in Form, having ſmall Threads like the ſpinning of a Spider, by which they lower themſelves down from the Leaves, or pull themſelves up, much as the Spiders do.

As ſoon as they are hatch'd, the propereſt Food here (as in *India*,) is the Leaves of Mulberries; with which they feed them from the latter End of *April* till about the eighth of *May*, when they caſt their firſt Skin; and then they appear ſmooth and of a ſhining black Colour; but when the Skin is off, the Body grows ſo ſenſibly, as if the ſtraitneſs of the Skin had confin'd or ſuppreſs'd their Growth while they had it on. When they caſt their Skin they eat but little; it is ſuppoſed their Mouths are too tender to feed upon Leaves, but when they come to eating, they ſeem to grow ſleepy after they have eat, till freſh Leaves are given to them, and then they ſeem to revive and eat again.

About the middle of *May* ſome of them caſt their Skins a ſecond Time after their Sleep, for they are always ſeemingly inclined to ſleep before they caſt their Skins, and after they have them are more inclined to eat. Their next Change begins about the twenty ſecond Day of *May*, when they firſt incline to Sleep, or at leaſt decline eating till they caſt their Skin again; and this ſleeping and caſting their Skins is again repeated before the Month of *May* is expired. And at this fourth Change they become Silk-Worms, and now great Care is to be taken in feeding and managing them.

When the Worms have done ſpinning, and it is time to wind the Silk off, they put them into ſcalding Water, or ſome put them into an Oven after the Bread is taken out; (but the former was the Way that I ſaw practiſed in *Italy*,) then they have Servants or Attendants to find the End of the Thread, and ſo they wind it off upon a large Wheel made for that purpoſe, till they come to the inner Coat; which being more difficult to undo, is dry'd and pull'd into Tow, and comb'd, and apply'd to other Uſes.

their firſt going aſhore in ſuch a Manner, that in one Night's Time their Faces are ſo ſwell'd that next Morning they can ſcarce know one another. People of Faſhion keep Servants to beat them away while they ſleep; and for Bugs, they ſwarm amongſt common People and Soldiers, and yet there is a Way to keep them off; for if the Bed be all cloſe but an End or a Side, and the Way into the Bed be beſmear'd with a ſtreak of Tar (which may be done without daubing the Bedding,) the Bugs can never get into the Bed, either becauſe of the Averſion they have to Tar, or, which is more probable, that their Feet ſtick faſt in the Tar, and they are not able to proceed on their Journey.

Spiders. Toad. THERE are Spiders and Toads of a prodigious Bigneſs: during the Rains the Frogs multiply prodigiouſly, which is ſuppoſed has given riſe to that fabulous Report of raining Frogs. Their Rats grow to be three or four times as big as ours, and will ſcarce give way to a Man. Beſides Serpents and Scorpions, the Centipedes are very dangerous; it has abundance of Feet, (from whence it takes its Name,) it is about as big as a Gooſe's Quill, and three or four Inches long; its bite is very dangerous.

Rats.

Lizards. Scorpions. There are Scorpions which frequent the Houſes; they are about as long and as thick as a Man's little Finger, they are ſomething like a Lizard; they have a Sting in the End of their Tail, which they carry turn'd upon their Backs; their Sting is ſmall like that of an Hornet, and they have no way to draw it out of Sight.

Locuſt. THE Locuſt is about two Inches long, but ſo ſtrong of Wing that they can croſs a conſiderable Arm of the Sea; they ſometimes fly in ſuch prodigious Multitudes, that where they light they will deſtroy a whole Crop in one Night, as Mr. *Ovington* tells us was the Caſe of a Husbandman near *Surrat*.

OF Fowls they have great Plenty, as Geeſe, Hens, Ducks, Pigeons, Partridges, Turtle Doves, Quails, Peacocks, Parakeets, &c. their Fleſh is lean and dry, and ſome of their Bones are as black as Jet, but the Fleſh of thoſe that have black Bones differ not in Taſte from thoſe that have white. Vultures are very common and tame here. There is a Bird leſs than a Wren with pretty Feathers, and her Note not inferior to the beſt of ours; but the Monkeys, which are very numerous there, do plunder the Neſts of thoſe Birds when they can come at them, and the Birds, as if apprized of their Danger, build their Neſts in the remote Ends of the Branches or Twigs, that will not bear the Weight of the Monkeys, and by this Means ſave their Eggs and young ones from their Tyranny.

HERE are Dolphins to be admired for their inimitable Colour, eſpecially when alive, their Fleſh as white as Snow, and they are reckon'd by the Sailors a nice Diſh, eſpecially when ſhort of Victuals; they ſwim very ſwift, and prey upon the Flying Fiſh, which to avoid them, ſpring out of the Water, and fly in the Air as long as their Wings are wet, and the Dolphins watching their Motion, wait to catch them as they fall into the Sea again, which they muſt of Courſe do when their Wings are dry. The Albecores and Bonetaes will follow a Ship for ſix or ſeven Weeks together in good Weather between the Tropicks, as the Sharks alſo do, if the Ship do not ſail too faſt.

CHAP. VIII.

Of the Nature, Property, and Manner of breeding the Silk-Worms in India, *which may be called their proper Climate; with ſome Obſervations of the different Manner of managing Silk-Worms in colder Climates, from the Methods uſed in* India.

IN *India* the Silk-Worms are in Eggs twelve Days, which Number of Days the Natives call one *Aggoa*, and from thence the Silk then made is called *Aggoadhaud*, and is the beſt that is made all the Year; about the twelfth or thirteenth of *November* the Worms are hatch'd, and laid upon Matts, after which they give them Mulberry Leaves for the firſt four Days; they cut them in ſmall thin Pieces, and feed them at Morning, nine a-Clock, Noon, and three a-Clock, but the fifth Day they are not fed at all.

THE ſixth Day they grow bigger, and ſo the ſeventh, eighth, and ninth Day, and are to be fed with Leaves four Times a Day, at the Times above-mention'd, but the tenth Day they muſt not be fed at all.

THE eleventh and twelfth Day they are to be fed four times a Day, but the thirteenth and fourteenth not at all. The fifteenth, ſixteenth, ſeventeenth, and eighteenth they muſt be fed with whole Leaves four times a Day as above.

THE nineteenth, and ſo to the twenty ſixth inclusive, they are fed five times a Day, *viz.* Morning, nine a Clock, Noon, three a-Clock, and Midnight. They begin to be green about the fourteenth Day, and at the twenty ſixth Day they are above two Inches long, and after the twenty ſeventh Day they are not to be fed any more, becauſe then they begin to ſpin.

THE twenty eighth Day they muſt be put upon Ledges of Matt, faſtned to a large Piece of round Matting, the Ledges being about an Inch high from the Matt, and running round like a Screw, beginning at the Center of the Matt, and running round at about three Inches diſtance to the Circumference. When the Worms are put upon thoſe Ledges, they ſet the Matts leaning in the Sun about eight in the Morning, and let them ſtand about an Hour and a half, and then they put them into the Houſe, leaning againſt the Wall, till about four in the Afternoon, and then they ſet them to the Sun again till about Sun-ſet, and then take them in again, and in this Day and Night they finiſh their Houſes.

THE twenty ninth Day they take the Worms with their new Houſes and put them upon other Matts flat, without any Ledges or Partitions, and ſo lay ſeveral Matts upon Frames one over another.

FROM the thirtieth to the thirty third inclusive, they ſpin within their Houſes of Silk, and then they take each Worm with its Houſe and ſhake it at their Ears, and thoſe that are alive are good, and kept for Breeders; but thoſe that make no noiſe have ſpun their Lives away, and are dead, ſometimes a quarter, or half a quarter, or fewer of them live.

FROM the thirty fourth Day to the thirty ſeventh inclusive, they continue ſpinning. The thirty eighth

Day

Day they eat through their Houſes, and are like a Butterfly, and then the People take up their Houſes, and put them upon new Matts. The Males are diſtinguiſh'd by their Slenderneſs; when both Sexes are put together they join or copulate, and the thirty ninth Day they throw away the Males.

The fortieth Day the Females lay their Eggs, after which the Females are thrown away alſo; ſo that the whole Time of the Silk-Worm from the very firſt Propagation to its final Exit is but twelve Days in the Egg, and forty Days alive afterwards, which is but fifty two Days in all.

But there are different ſorts of Worms that produce the various Kinds of Silk; the beſt is produced by the Worms above-mention'd: But the ſecond Sort is called *Cheita-Bund*; theſe Worms are but eight Days in the Egg, and live thirty two Days afterwards, *viz.* forty Days in all, and is from about the Middle of *February* to the twenty fourth or twenty fifth of *March*.

The next or third Sort of Silk is called *Sowaud-Bund*; the ſpinning of this ends about the laſt of *July*.

The next or fourth Sort for Goodneſs is call'd *Aſſorce-Bund*; when the Worms have ſpun themſelves to death, they ſtill continue in their Eggs, (dead;) the making of this Silk ends about the fourth of *June*.

The fifth is called *Sauk-Bund*; the Worms ſtay in their Eggs eight Days, and live thirty two Days afterwards, which amounts to forty Days in all; the making of this Silk ends about the ſixth of *May*.

The ſixth Sort is call'd *Maug-Bund*; the Worms that ſpin this Silk are fourteen Days in the Egg, and live forty Days afterwards, which is fifty four in all. This is the worſt ſort of Silk, and the Worms leave off ſpinning about the Middle of *February*, ſo that in *Auguſt* or *September* there is no Silk made, and but very little in *October*.

Thus far as to the Nature of the Silk-Worms in *India*, their proper Climate, where the Heat of the Sun renders them much more fruitful than in any of our *European* Countries; for if we conſider the ſeveral ſorts of Worms, we may obſerve they breed and ſpin their Silk ſix times in the Year, but in *England* only once, becauſe here in *England* they remain in the Egg from the latter End of *Auguſt* to the latter End of *May*.

The Silk-Worm derives its Birth from the Seed of the Butterfly, which is as ſmall as Pins Heads, and are ſomething like Rape Seed. This Inſect, by whoſe Induſtry we have the Silk, ſpins it out of its Bowels, and winds it by its Mouth into the Form of a Clew or little Ball; it is ſomething like a Caterpillar both for Shape and Bulk, only it is more hairy, and its Web weaker and of a different Colour. The moſt proper Food for them is Mulberry-Leaves, but for want of that, People ſometimes feed them with Leaves of the Roſe-Tree, ſome with Lettice, or other Leaves; but it is obſerved, that with this Feeding, they either ſpin a weaker Thread, or elſe they do not ſpin at all; but what is moſt remarkable in this Inſect is, its Change of Shape; I might almoſt ſay Specie, for it is tranſformed from a creeping Worm into a Butterfly.

The Seed or Grain of thoſe Creatures was tranſported ſome hundred Years ago by two religious Perſons, but their Silk was of an older Date, and was brought into *Europe* above a thouſand Years ſince, and called *Sericum*, from an *Oriental* People called *Seres*, who were very induſtrious in improving the Silk-Worms, and the Silk they produce.

Note, This Account of the Silk-Worms was taken from Mr. *Ovington*, who reſided ſome time in *India*, and had the Opportunity of making or ſeeing the Experiments of nurſing and breeding the Silk-Worms there; but the following Account we have from *Andreas Libavius*, a famous Phyſician of *Rotenburg* in *Germany*, which being a cooler and more Northerly Climate than *India*, is not ſo natural to the Silk-Worms, and requires a different Way as well as a longer Time to nurſe them. The Method he uſed in breeding them was as follows:

He kept the Silk-Worms Eggs in warm Chambers all the Winter, and expoſed them to the Sun ſhining through the Window the latter End of *April*, and as they hatch'd, they left the empty Shells behind, and were like Caterpillars in Form, having ſmall Threads like the ſpinning of a Spider, by which they lower themſelves down from the Leaves, or pull themſelves up, much as the Spiders do.

CHAP. IX.

Of the Learning, Language, Characters, Arts and Sciences, of the Indians; *also of their Physicians, Diseases, and Cures.*

Learning. THE *Indians* do not learn or use *Latin* or *Greek*; which may probably be the Reason why they cannot so well converse with other Parts of the World, as those People can who learn these original Languages. The Moors or Mahometans have heard of *Aristotle*, and have some of his Books, as well as those of the famous Physician *Avicene*, in the *Arabian* Language, in which they have also some Fragments of the Old Testament, but they are all in Manuscript, for Printing has not yet been introduced among them.

Language and Characters. THE Mahometans use the *Indian*, or else the *Persian* Characters, though their Language differs from the original *Indian*, but the Court Language spoken by the great *Omrahs*, and the politest of them, is the *Persian*; but their learned or School Language is the *Arabian*, which they write from the Right to the Left, like the *Hebrew*, for they borrow many Words from that Language. The Bramins, the chief Sect amongst the Idolaters, have a Language peculiar to themselves, in which their Records, Books of Divinity and Philosophy, and the Fables of their Priests, are written. In these Books they tell us of four remarkable Periods since the World began. The first was the Golden Age, which they say lasted a Million, seven hundred and twenty eight thousand Years, at the expiration of which Time their God *Brama*, the Original of the Bramins, was form'd, and that those original Bramins were Giants, and liv'd to the Age of four hundred Years in Innocency, and not subject to Diseases. Then came on the second Age, which lasted a Million, two hundred and ninety six thousand Years; in this Age the Raja's were created, who were a noble Race next to the Bramins. In this Age they say Vice prevail'd, and Man's Life was shortened to three hundred Years. The third Age lasted eight Millions, and sixty four thousand Years: and now Man's Life was reduced to two hundred Years. The fourth, or present Age, which they say is to be the last, they likewise undertake to limit, and when it expires, the World is to be at an end; but they allow a vast Time of it yet to come: But however, they reckon in those three Ages above eleven Millions of Years, and we do not reckon six thousand.

Four Ages. Golden Age.

BUT the common *Indians* or *Pagans* most commonly speak the *Malabar* and *Jentee* Tongues, the one upon the Coast of *Malabar*, and the other on the Coast of *Coromandel*; but the *Portuguese* Language is the most used, and the best understood in the Places of Trade upon the Sea Coast, only mix'd with some *Indian* Names or Words.

THE *Pagan Indians* commonly write on the Leaf of the Cocoa-Tree or the Palm-Tree, and write from the Left hand slanting to the Right; but the *Mahometans* have a thin shining Paper, sometimes ten Foot in Length and a Foot broad; the Pen they use is the antient Calamus or Reed, about the thickness of a Goose's Quill, and when they send Letters of Consequence, they enclose them in a hollow Cane or Bamboo, to secure them from the wet. They have no Coats of Arms, but have Seals of Gold, Silver, or Cornelian Stone, with their Names engraved upon them.

History. THEIR History is written in Verse, and those are most valued by them which treat of their Heroes and subordinate Deities, which formerly inhabited their Country. They also celebrate the Memory of their Saints and Martyrs, as in *Europe*, and think it an indispensible Duty to believe all that the Bramins teach them of the Adventures or Miracles of those Deities, as they look upon them to be.

New Year. THE original *Indians* or *Pagans* begin their Year the first of *March*, but the Mahometans not till the tenth, when they think the Sun crosseth the Equator; they divide the Year into thirteen Months or Moons.

Mogul's Feast. The Great Mogul holds a Feast from the first of *March* to the tenth, to usher in the new Year, during which Time his great Lords repair to Court in their gayest Equipage, and make great Presents to their Prince, who at that Time makes such Promotions, or other Alterations, among his great Officers, as is intended for the ensuing Year.

Mathematicks. THEY know little of the Mathematicks, except Arithmetick, at which they are so expert that few can excel them, and frequently cast up their Accounts by Head, without the help of a Pen. The Bramins have Tables for the Calculation of Eclipses, by which they can calculate within a few Minutes; but they do not call their Sub-divisions of Time Minutes, as we do, but Garis, and the half, the Quarter, and the half Quarter of the Garis; their Garis is about half of one of our Hours; so that their lowest Division of Time is very near our four Minutes of Time, which with them is reckon'd a tolerable Error in the Time of an Eclipse. Their Notions of the System of the Heavens is very vulgar and ignorant; as that the Moon is further from the Earth than the Sun; that when the Sun is set, it is only hid behind some great Mountain, *&c.* but they divide the Zodiack into twelve Signs as we do, and call them by the same Names of *Ram*, *Bull*, *Lion*, &c. in their Language, as we do in the *English* or *Latin*: By Indeed it is most probable that we have the Divisions and Names of the Signs and Constellations from the Pagan Astrologers, for they are such great Bigots to Astrology, that even the Mogul himself will not undertake a Journey, nor resolve upon any thing of Moment till the Astrologer be consulted for the lucky Minute, and the Moment that he prescribes is made use of.

Astro-logy.

Phy-sick. THEY have but little Skill in Physick, and none in Anatomy; but from Tryal and Experience they have found the Virtue and Use of some Simples, which they apply with Success; and one common, and indeed, safe Prescription, is Abstinence; for when they meet with a Distemper that they can neither find Name nor Cure for, they order them to eat nothing but Congee, or a little Gruel made of Rice, till they find themselves better. Indeed one great Reason why a slender Diet contributes so much to a Cure, may be because they have a Distemper call'd, *Mort-de chien*, proceeding from Indigestion, which throws the Patient into vomiting and purging, with racking Pains, and is often mortal; but doubtless where People have but a lower Degree of this Distemper, Nature only supported, but not over-burthen'd, will be best able to expel those Crudities which the Stomach, by an ill State, has contracted, and wants to throw off.

Bur

But in the higher Degrees of this Diſtemper, their Cure is to ſtop the Purging and Vomiting, and eaſe the Pain, by clapping a red hot Iron to the Sole of the Foot near the Heel, and another like Cure they have for the Cholick, which is by an Iron Ring about an Inch thick, and an Inch and a half Diameter; this they heat red hot, and clap it to the Patient's Belly, ſo that the Navel is in the middle of the Ring, and immediately taken off again, eaſes the Pain of the Cholick. *Doubtleſs it will make the Perſon nimble, if he is able to move at all.*

Chintz. The Bramins induce, or rather ſeduce, the ignorant *Indians* to believe that they cure Diſtempers by Charms; but as thoſe things are not believ'd by any in *England*, except thoſe remarkable for their Ignorance (not for their Knowledge) I ſhall not take any further Notice of that unwarrantable Practice of thoſe *Pagans*, where Ignorance and Superſtition prevails, nor are they worth indeed mentioning in an *Engliſh* Hiſtory, except to guard the weaker Sort againſt the Belief or Regard of ſuch Impoſitions.

Muſlins. It is much more worth while to obſerve the excellent Qualifications of the *Indians* in Mechanicks, eſpecially in making Muſlins out of the Cotton that grows upon the Cotton Shrub, as hinted before; this they make ſo fine, that a whole Piece may be drawn through a Ring, and ſo dextrous are they about this Commodity, that if a Piece of Muſlin be torn, they can join it ſo nice, that it is impoſſible to diſcern where it is torn, though it was a whole Piece torn in two.

Chints. Calicoes. The Chints and Calicoes on the Coaſt of *Cormandel* are painted with a Pencil, as before obſerv'd, but thoſe made in Northern *India* are printed; however, whether it is owing to their Art, or to the Ingredients the Colours are made of, we ſee they will endure waſhing very well. Their Painters will very exactly follow a Copy in drawing a Picture; and ſo will the Goldſmiths as well imitate any Piece of *European* Work in their Way of Buſineſs, though their Tools are mean. The Cement they uſe in Building is harder than Brick, that they can terraſs the Roof of a Houſe or lay a Floor, which when dry ſhall be a hard as one entire Stone. Their Smiths are the moſt deficient; they can make no Clocks, Watches, or Gun-lock, or any Iron or Steel Ware that requires Springs, but they make Swords, Crices, Poniards, Scymetars, and other Arms to anſwer their Purpoſe; but they ſupply the uſe of Clocks in great Towns by a Veſſel of Water, which by a ſmall Hole in the Bottom, lets the Water out into another Veſſel, and when it is out, a Watchman appointed for that Purpoſe, ſtrikes the Number of Gares upon a Concave Piece of Metal, hung by him for that Deſign, in a Manner ſomething reſembling our Clocks, ſtriking the Number of the Hour upon the Bell. Meaſure of Time.

Eſtates. The Mahometans have no hereditary Honours or Eſtates; they are only created or promoted by the Government; the Nabobs and Omrahs are often Natives of *Perſia* or *Tartary*, and whatever advantageous Poſts they are in, yet when they die, what they have got together does not deſcend to their Families or Succeſſors, but devolves on the Crown. The Dignity of the Omrahs is according to the extent of their Command; he that is to furniſh a thouſand Horſe has a Country allotted him ſufficient to maintain them, and he that furniſheth fewer has a leſſer Diſtrict in Proportion. But though the Cuſtom is ſuch that the Omrah cannot ſettle any of his Subſtance upon his Children, yet there is regard had to his Behaviour, which if it has been agreeable, the Emperor commonly makes Proviſion for his Family by Preferment, or otherwiſe taking Care of them; but for the Encouragement of Trade, the Merchants Houſes along the Sea Coaſt deſcend to their Children.

But the *Pagans* or *Proper Indians*, who vaſtly exceed the Moors or Mahometans in Number, value themſelves upon their Birth, Family, or Tribe, inſomuch that they will not eat with thoſe of an inferior Caſt, but here Honour is not always accompanied with Riches. The Bramins are both the Prime Nobility and the Prieſts, which in ſome Nations would give a great Opportunity of being Rich, yet here even they are often very Poor. The next in Honour is the Rajaputes, they are Soldiers by Profeſſion, and a Sort of Vaſſals to the Raja's or Princes of the Mountains. Theſe Raja's, though tributary to the Mogul, retain their own Religion and Laws, and their Honours and Eſtates deſcend to their next Succeſſors.

CHAP. X.

Gives a Deſcription of the Mogul's Court; his Officers, Women, &c. alſo of the Succeſſion of the Empire, with his Civil Government, Laws and Puniſhments: With an Account of his Camps, Forces, Revenues, Coins, Weights and Meaſures.

THERE is no ſtanding Council of State kept in the Mogul's Court, like ſome other Princes; but the Affairs of the Empire are managed by four or five ſuperiour Officers, who diſpenſe his Orders to their reſpective Diſtricts, and report the State of thoſe Provinces to him. The Mogul never uſes or wears a Crown. The Emperor himſelf preſides as Judge in criminal Caſes in the Province where the Court reſides, and his other ſuperior Officers do the ſame in their reſpective Diviſions. The Emperor's Sons are call'd *Sultans*, and the Daughters *Sultana's*; and when any Perſon is preferr'd to great Dignity, he has a Name or Title added, that is expreſſive of the Dignity he is advanc'd to; as *Aſaph Chan*, is rich Lord; *Chan Channa*, Lord of Lords; one of the Moguls call'd his chief Phyſician *Moarib Chan*, or Lord of his Health, &c. the great Military Officers are call'd Omrahs; he has alſo Treaſurers, Stewards, and Comptrollers of the Houſhold; and his other great Officers are Secretaries of State, Governors of the Elephants, Maſter of the Tents, and Keepers of the Wardrobe; theſe laſt are entruſted with the Jewels.

Women. There are ſeveral Denominations of Women in the Seraglio, as Wives, Concubines, Princeſſes of the Blood, Governants, and Slaves; his Wives are contracted to him with a kind of a Nuptial Ceremony, and their Number ſeldom exceeds four; and he never marries the Daughter of a Foreign Prince,

Succeſſion.

Prince, but often of a Raja, and ſometimes makes choice of one of his Slaves if ſhe pleaſe him; and the firſt Son by any of theſe Wives is accounted the Heir of the Empire, without any regard to the Blood or Quality of the Mother, though it often happens that the moſt Powerful in Arms carries it againſt this hereditary Courſe of Succeſſion; and when it is thus determined by Force, the Conqueror generally deſtroys all his Rivals and their Male Iſſue, to ſecure himſelf from any Attempts they might make upon him or his Dominions for the future. Beſides the Wives, the Great Mogul has ſometimes above a thouſand Concubines.

Sultans.

The young Sultans are married at thirteen or fourteen Years of Age, and then live in great Grandeur in ſeparate Courts, except the Heir apparent, who is brought up near the Emperor. The young Sultaneſſes are tenderly uſed, and not under ſuch ſevere Reſtraints as the other Women are, he allowing them all the Gayneſs in Dreſs and Gallantry that can be imagined, but they are never allow'd to marry with any Subject of the Empire.

Privy Council

If the Mogul may be ſaid to have any Privy-Council, it is the Ladies of the Seraglio, for there, according to their Dignity, one is ſtil'd Prime Miniſter, another Secretary of State, another Viceroy of ſuch a Province; and each Lady maintains a Correſpondence with the Miniſter whoſe Title ſhe bears, and Eunuchs are employ'd for the intercourſe of Letters between them; by which Means theſe Ladies know the Affairs of the Province, whoſe Viceroys Title they bear, and have greater Opportunities of repreſenting Things to the Emperor than his Miniſters at a Diſtance, that have not ſuch frequent Acceſs to him; and according to their Way of repreſenting, the Affairs of Provinces or Perſons are frequently determined, and the great Offices of State or Places of Truſt in the Government are diſpos'd of accordingly. The Mogul has alſo a Guard of *Tartar* Women, arm'd with Scymaters and Bows, who have the Care of his Perſon.

Ambaſſadors

The Mogul never ſends an Ambaſſador to a Foreign Court, as looking upon all the Princes in the World to be his Inferiors; nor does he treat Ambaſſadors ſent to him any other than common Meſſengers: But when his Orders are diſpatch'd to any of his Miniſters or Governors, he receives it as if the Emperor was preſent, meeting the Meſſenger upon the Road, and as ſoon as he ſees the Packet, he alights from his Horſe, and falls on his Face to the Earth, then takes the Packet from the Meſſenger, and binds it faſt upon his Head, and returning to his Reſidence, reads and anſwers it with the utmoſt Expedition he is capable of.

Court

He uſually ſhews himſelf three Times a Day to the People, *viz.* at Sun-riſing, when they give him an Acclamation *Padſha Salamet*, or *Long Life and Health to the great King*; he alſo ſhews himſelf at Noon, and a third Time a little before Sun-ſet, the Drums, Trumpets, and other Muſick filling the Air with their Sound when he appears and when he withdraws.

Laws and Punishments.

There are no written Laws in the Empire, but yet the ſame Puniſhment is commonly inflicted for the ſame Crime, as Death for Murder and Theft, &c. but the Manner of the Execution is intirely in the Breaſt of the King or Viceroy of the Province. They never lie above a Night in Priſon, and ſometimes not ſo long, for if they be apprehended in the Morning, they are immediately brought before the Governor, and either condemn'd or acquitted, and if condemn'd, there is no Reſpite between Sentence and Execution, but the Criminal is directly hurry'd away to the Market-Place, to be executed according to his Sentence. Some are hang'd, others beheaded, ſome impaled on ſharp Stakes, others torn in Pieces by Wild-Beaſts, ſome trod to death by Elephants, and others bitten to death by Snakes, &c.

Preſents expected.

The Mogul expects a Preſent from every Foreign Ambaſſador that addreſſes him, though he treats them not as Repreſentatives of, but as Meſſengers from their Maſters, but with the more or leſs Reſpect according to the Value of the Preſents they make to him. And though he never ſends Ambaſſadors to Foreign Princes, yet he ſends Letters to them by the Ambaſſadors that they ſend to him, and gives them their Titles in the Beginning of his Letters, in a Language very condeſcending and courteous.

His Camp.

The Form of his Camp in the Field is near round, and when they remove, there is a Detachment goes before to clear the Ground and the Streets, and every one's Habitation or Tent is to be found in the ſame Form as if it had been remov'd all in one, or rather as if it had not been remov'd at all. The Circumference of the Camp is ſeldom leſs than twenty Miles, and will contain a hundred thouſand military Men, with their Wives and Families, beſides all manner of Trades and Profeſſions that are exerciſed in the Camp. The Tents are for the moſt part white, as is the Cloathing of the People, but the Mogul's Tent is red, pitch'd in the Center of the Camp, and much higher than the reſt, that he may from thence have a full View of all the Camp; and as almoſt the whole Seraglio take the Field and encamp with him, his large Family of Queens, Sultans, Concubines, Eunuchs, Slaves, &c. makes his Camp as large as a conſiderable Town, and no Man is ſuffer'd to approach it within a Muſket Shot. The Tents of the Omrahs ſurround the Emperor's Camp at a Diſtance, in proportion to their Dignity, and ſo the more inferior People are pitch'd the moſt remote from the Mogul's Tent. The Streets are wide and ſtrait, and the chief of them run in a direct Line from the Royal Camp. In every Quarter there is a Market-Place for Proviſions, and all Trades are carried on in the Camp as in a City; but the Mogul's Camp is the greateſt Market in the World for Diamonds. They always take Care to pitch where Water is plenty, and they always have abundance of Barges for the Emperor to take his pleaſure in upon the Rivers, as well as for paſſing the Army and Baggage when interrupted by Water; but when they move the Camp, and travel by Land, theſe Barges are convey'd from one Place to another upon Carriages made for that Purpoſe. He alſo carries with him Hawks, Dogs, and Leopards for the Game, ſo that his Enquiry into the Conduct of his Viceroys or Governors is intermix'd with proper Diverſion, and his thus ſhewing himſelf once or twice a Year ſtrikes a Terror into his Raja's, and keeps them up to their Duty.

Forces.

As to his Forces, it is ſaid he allows Pay for a Million of Horſe, but it is not ſuppoſed that any Mogul did ever muſter ſuch a Number in the Field all at the ſame Time. The Viceroyſhip of *Patan* maintains five thouſand Horſe; the Pay of each is but two hundred Roupies, or twenty two Pounds ten Shillings Sterling a Year for each Horſe, but the Viceroy is not obliged to keep up above fifteen hundred Men, which is not one Third of the five thouſand, ſo that if we reduce the Million at this rate, we cannot reckon above three hundred thouſand Horſe in the whole Empire, and if to theſe we add the *Rajaboes* or *Rajaputes*, the only fighting Men among the Idolaters, but generally if not always on Foot, it will fall vaſtly ſhort of the Number which ſome give account of as to the Emperor's Forces.

Revenue.

The Revenues of the Mogul ariſe from the Product of the Ground, the Labour of the People, the Cuſtoms of the Sea Ports, the Effects of great

Men

Men which devolve on the Crown at their Deceaſe, and the Preſents of the Subjects. The Viceroy of every Province is obliged to anſwer the Crown a certain Sum, which he raiſes out of the Product and Manufacture of the Soil; which Part of the Revenue alone, *Manouchi*, who reſided in the Mogul's Court forty Years, computed at three hundred and eighty ſeven millions, one hundred and ninety four thouſand Rupees; which at two Shillings and three Pence each, amounts to forty three Million five hundred fifty nine thouſand three hundred and twenty five Pounds Sterling; if as above we add to this the Eſtates of his Viceroys and Governors, that devolve on the Crown when they die, the Preſents of his Subjects, the Benefit of the Diamond Mines, *&c.* the Total of his Revenues muſt amount to an immenſe Sum.

Coins. THE Coins are, the *Pice* or *Caſh*, a Copper Coin, Value about one Halfpenny; the *Fanam* worth three Pence; the *Roupee* two Shillings and three Pence, (the two laſt are Silver;) the Gold *Roupee*, Value one Pound eleven and Sixpence; the *Pagoda* is worth nine Shillings; for Things of ſmall Value they give the ſmall Shells call'd Blackamoors Teeth, of which about ſixty is worth a Halfpenny. But their great Sums are reckon'd by other Terms; a *Leck* is a hundred thouſand *Roupees*, a *Caron* is a hundred *Lecks*, and an *Arob* is ten *Carons*.

Weights. THEIR Weights differ in different Places, but the common Weight at *Surrat* is the *Seer*, which is about thirteen Ounces and one third, and forty *Seers* make a *Maund*, and twenty *Maunds* make a *Candy*. But the ſeveral Sorts of other Goods go by different Weights, as in *England*: we ſell ſome ſome ſorts of Goods by *Troy*, and ſome by *Avoirdupoiſe*. Corn and Rice is alſo ſold at *Surrat* by Weight.

Meaſures. CALICOES and Silks are ſold by the *Cobit*, a Meaſure equal to an Ell *Flemiſh*, or twenty ſeven Inches.

THEIR *Coſs* or Miles, by which they meaſure or compute their Roads, is about an *Engliſh* Mile and a half near the Coaſt, but in the Country about *Brampour* it is near two Miles,

CHAP. XI.

Of the Variety of Religions profeſs'd in India, *or the Mogul's Empire, and by what Tribes or Caſts thoſe ſeveral Religions are profeſs'd.*

Religion. Four Sorts. THERE are four ſorts of Religions, or Profeſſors of it; firſt the *Original Indians*, who are by far the greateſt Number, are Idolaters; ſecondly, the *Perſees*, or Worſhippers of Fire, who ſuppoſe themſelves to be the Extract of the antient *Perſians*; thirdly the *Moors* or *Mahometans*, which under the Mogul's Government is the eſtabliſh'd Religion; and fourthly the Chriſtians, who are either the Inhabitants of other Chriſtian Countries ſettled there, or ſome of that Country converted by the Miſſionaries ſent there for that Purpoſe, ſome of whom are diſtinguiſh'd by the Name of Chriſtians of St. *Thomas*; and thoſe are ſuch as believe that that Apoſtle firſt planted Chriſtianity in this Part of the World, and is Patron of their Religion, and therefore refuſe to ſubmit to the Authority of the Pope.

Original Indians. THE *Original Indians* (by ſome call'd *Hindowns*,) are divided into abundance of Tribes; who though of nearly the ſame Religion, yet will not intermarry, or ſcarce eat or drink with any of another Tribe; and although there are ſixty or eighty different Tribes, yet the *Bramins* are reckon'd the Chief; (as well they may, having engroſs'd to themſelves the chief Dignities both Civil and Eccleſiaſtical;) the next are the *Rajaputes*, who enjoy military Preferments; and the third are the *Banians*; but there is a fourth Sort, who eat the Fleſh of ſome Animals, and not of others; a fifth, and very numerous Sort are call'd *Pariars*; they make no ſcruple of eating any thing whatſoever, and are uſeful only in the moſt ſervile Offices, as Scavengers, Kennel-rakers, Cleaners of the Streets, and the like; and are ſo contemptible, that if they touch one of the ſuperior Tribes, they imagine themſelves to be ſo much above them, that they think they are defiled by the Touch.

Bramins. THE *Bramins* are divided into ſeveral Caſts among themſelves, ſome eat ſome kinds of Fleſh, others none; ſome marry, others will not with any pleaſure look upon a Woman; ſome waſh and bathe ſeveral times a Day, but ſome not at all, for fear of killing ſome Animal, and for the ſame Reaſon they burn no Wood, leſt they ſhould thereby kill ſome Inſect harbour'd in it.

They own a God. THE *Indians* agree in this, that they own one ſupreme God, and that their Images repreſent ſome Heroes or virtuous Perſons, who lived on Earth and are now exalted to Heaven, and that they pay Adoration to the before them Images as Mediators or Interceſſors for them. But as we are not now upon the Hiſtory of any Part of *Europe*, we ſhall not make any Remark how nearly the Popiſh Religion reſembles this of the Pagan *Indians*.

Fourteen Worlds. THE *Bramins* believe that *Brama*, by the Power given him by *Mahadeu*, made fourteen Worlds, and that our World is to continue four Ages; which will fill up ſeveral Millions of Years, as mention'd near the Beginning of Chap. IX. and that this Age wherein we live has above four hundred thouſand Years yet to come.

Shapes of their God. THEIR *Vedam* (which is the Foundation of their Belief, and read to them by the *Bramins* as ſuch,) tells them that their God *Mahadeu* has appear'd in ſeveral Shapes, ſometimes with four Heads, and four Arms and Hands; ſometimes with a Head like a Hog, with two great Tuſks, and a Body like a Man, with four Arms and Hands. This is a common Image in *India*, and as frightful to a Chriſtian to look upon as one of their Deities, who think it more like a Devil. Another there is, partly Man, partly Fiſh, with ten Heads. and ten pair of Hands; and they believe that this is their God *Viſtnow* that appears in all thoſe Shapes. But theſe Accounts are ſo ridiculous and incredible, that if we would have any Charity for them or their Religion, we may perhaps be miſtaken in taking their Deſcription of God in a literal Senſe; and thus they might, for want of knowing our Language or Religion better, miſtake us, and report that we believe the Devil to be in the Form of a Lion, becauſe he is repreſented in our Scripture, *as a roaring Lion ſeeking whom he may devour*, &c. though indeed this will bear but little Weight in their Favour, when Chriſtian Travellers ſee thoſe Images ſet up as Objects of their Worſhip.

THEY ſeldom have any publick Aſſemblies in their Pagoda's, but every one performs his Devo-

tions when and to what Image he pleaſes; but the greateſt Part of their Worſhip is Singing, Dancing, Playing, and offering Rice, and other Food; though ſome pray before the Shrines of their Gods with as much Fervour as if their God was as able to ſupply their Wants as they are to feel and know them; and even the pooreſt Sort will waſh, perfume, and otherwiſe adorn their Images, according to the utmoſt of their Ability.

THE Bramins believe a pre-exiſtent State, with reſpect to which this was a future State, and that the good or bad Fortune we meet with in this World, is a Reward or Puniſhment for what we did in the former; and that according to our Behaviour in this World we ſhall be rewarded or puniſhed in the next, *&c.* Some aim at Works of Supererogation, or more than the Vedam requires, in Hopes to enjoy extraordinary Happineſs in the next State. Some undertake Pilgrimages, eſpecially to the Pagodes, near the Mouths of the *Ganges*, as believing that the bare waſhing in the River contributes very much to the cleanſing them from their Sins. Their Law enjoins moral Duties, as Temperance, Charity, *&c.* and forbids Murder, Stealing, Lying, and Oppreſſion, and the Rajaputes hold the ſame.

Morals.

Rajputes.

THE Banians are the moſt numerous of the *Pagan* Tribes, but they are ſubdivided into ſeveral Profeſſions and different Tenets in Matters of Religion, but though they differ in ſome Particulars, yet they all agree in their Tenderneſs to Animals, upon a Suppoſition that every Animal is enliven'd by the Soul of ſome Perſon deceas'd, and that to kill or abuſe that Animal would be diſlodging or diſturbing the Soul that is embodied in it.—But of this before.

THEY perform all ſervile Offices with the Left-hand, but all venerable Offices or Salutes with the Right; and that Diſtinction is ſo ſtrictly obſerved, that to give a Salute with the Left-hand is the greateſt Affront that can be offer'd.

THE Second of the four Sorts mention'd in the Beginning of this Chapter, is the *Perſes*, or Worſhippers of Fire; they were tranſplanted hither from *Perſia*, when the Mahometans conquer'd that Country, and thence call'd *Perſees*; they alſo acknowledge one Supreme GOD, Creator of all things; but they believe that their Law-giver *Zertouſt*, when caught up into Heaven, had Fire given him, which he brought down from thence, and commanded his Diſciples to worſhip it, and hence to extinguiſh Fire of any Kind is, with them, deem'd a heinous Crime. They pay ſuch a Veneration to Fire, that they keep Lamps fed with Oil continually burning in their Temples, and attended by their Prieſts; and ſome ſay they have burnt for many Generations without Intermiſſion; and it is reported by ſome experienc'd Travellers, that if a Houſe was on Fire they would not extinguiſh it, becauſe thereby they would interrupt the Operation of that venerable Deity.

Perſees.

THEY eat indifferently of all Animals, ſave the Cock, to which they pay as much Veneration as the *Banians* do to the Cow. They eat Beef and Pork with a Sort of Reſerve, but that Reſtraint is more in Compliance to the *Moors* and *Banians*, than any Point of Conſcience in themſelves.

THE Religion of the *Moors* is the ſame with that of the *Turks*, and the *Perſians* are look'd upon as Hereticks by both. We ſhall have Occaſion to enlarge upon the Mahometan Religion, when we come to treat of *Perſia* and *Turky*, where it is profeſt; yet in ſome Meaſure to ſatisfy the Reader's Curioſity in the mean Time, their Principles are, 1. That there is one only God, and that *Mahomet* was his Prophet, *Abraham* his Friend, *Moſes* his Meſſenger, and that Chriſt was the Breath of God. 2. That every Man ought to marry to encreaſe the Number of Believers. 3. That all Men ought to be Charitable to the Poor. 4. To pray five Times a Day. 5. To keep a Month's Faſt Yearly, which they call *Ramezan*, when they faſt religiouſly all the Day, but regale themſelves at Night. 6. To be obedient to Parents. 7. To do no Murder. 8. To do by others as they would be done by. And *Laſtly*, To abſtain from Wine and Swine's Fleſh.——*Friday* is their Sabbath.

Moors Religion.

SOME think that Chriſtianity has been profeſt there ever ſince the Apoſtle's Time: However, it is certain there were Chriſtians here when the *Europeans* firſt viſited this Coaſt. The Natives had a Tradition that St. *Thomas* was martyr'd near *Maliapour*, on the Coaſt of *Cormandel*, and the *Portugueſe* believing it, call'd *Maliapour* by the Name of St. *Thomas*. It is now a Biſhop's See, and ſituate about a League to the Southward of *Fort St. George*. Theſe *Indian* Chriſtians differ from the Church of *Rome* in the following Particulars: 1. They adminiſter'd the Sacrament in both Kinds, only, having no Wine, they ſupply'd that with a Liquor made of Reaſons. 2. They did not Baptize their Children till they were forty Days old, except they were in Danger of Death. 3. They had no Images in their Churches only the Croſs. 4. They allow'd their Prieſts to marry once. 5. They had no extreme Unction; and, 6. They do not acknowledge the Pope's Juriſdiction. And they ſo far agree with the Proteſtants that they come to Church within the Walls of *Maderaſs*, and practiſe their Religion in ſo near a Conformity to the Proteſtants, that our Divines do not attempt to contradict or proſelyte them, though whether that be owing to their near Conformity to us already, or to the Pains that our Divines muſt be at to make themſelves ſo much Maſters of the Language as to be able to diſpute with them, in order to convince or convert them, is a Queſtion.

Chriſtianity.

CHAP. XII.

Of the Marriages and Children of the Indians.

IN the Marriages of the *Jentoe* or *Indian* Idolaters, the Contract is made by the Parents of the contracted Parties in their Infancy, before they have the uſe of their Reaſon, or are capable of chooſing for themſelves, and they both look upon themſelves as obliged to ſtand by their Parent's Choice, only if the Man do not like the Choice his Parents have made for him, he may take another, and as many Concubines as he pleaſes, but the Woman can have no Divorce, and if ſhe murmur at her Husband's Conduct, he may reduce her to a State of Slavery, and ſet her to Work among his Slaves if he pleaſe, nor need the Woman under her greateſt Diſcontent and her Husband's higheſt Reſentments, be afraid of her Life, for they will not kill an Animal, and, doubtleſs, they pay ſome Deference to their Bed-fellow; and if a Woman is married to a *Bramin* or *Banian* Husband, ſhe need not fear undergoing any greater Mortification than ſeeing him kiſs her Rival before her Face.

A *Jentoe* or *Indian Idolater* will not marry out of his own Tribe or Profeſſion; a Merchant will not marry into a Mechanick Tribe, nor will any Mechanick marry into a Profeſſion different from his own, as a Smith into a Carpenter or Weaver's Family, or the contrary, and ſo of any other Trade.

Marriage.

AT

The Ceremony.

At the Solemnization of any *Jentoe*'s Wedding, the Bride and Bridegroom are for ſeveral Nights ſucceſſively carried through the Streets, dreſs'd in the richeſt Apparel which they can produce, attended with Flags, Streamers, and Muſick, and by their Friends and Acquaintance, the Streets being illuminated upon this Occaſion. When the Cavalcade is over, the Couple proceeds to the Wife's Father's Houſe, where being ſeated on each Side of a Table, they join their Hands a-croſs the Table, and the Prieſt covers both their Heads with a kind of a Hood, in which Poſture they continue till he has ended his Prayers, and pronounc'd the nuptial Benediction, and then their Heads are uncover'd, and the People are ſprinkled with Roſe-water tinctur'd with Saffron, which leaves the Stains as well as the Smell upon their Cloaths, and ſerves as our Favours do to diſcover thoſe that have been at the Wedding: The Evening concludes with Entertainments ſuitable to the Quality of the married Couple, and ſometimes the Feſtival laſts ſeveral Days.

The Women ſeldom bring any Fortunes to their Husbands, but rather advance a Sum to their Wife's Friends, ſo that it may be ſaid to be a Purchaſe; and this renders the Woman vaſtly inferior to her Husband, and obliges her to pay him an extraordinary Reſpect; and ſometimes ſhe is kept at that Diſtance that ſhe is not allow'd to eat with him, but ſits down when he has done. But the Women are not here ſo cloſely confined from converſing with other People as in ſome other of the Eaſtern Countries.

Naming their Children.

When their Children are about ten Days old, the *Banians* give them Names, with this Ceremony; they aſſemble ten or a dozen Children, and placing them round in a Circle, they give them a Sheet to hold, in which the *Bramin* pours a quantity of Rice, and upon it he lays the Child that is to be named; the Boys that hold the Sheet ſhaking the Child and the Rice together, the Father's Siſter (or if there is no ſuch Aunt, the Father or Mother) advances, and names the Child; and a Month or two after it is carried to the Pagod or Temple, to be initiated into the *Banian* Religion; in which Ceremony the *Bramin* mixes ſhavings of Sandal-Wood, Camphire, Cloves, and other ſweet Things, and puts them upon the Child's Head; and from that Time he is reputed a compleat *Banian*.

They have ſwinging Cradles, that go with much leſs Noiſe than ours, that ſtand upon the Ground, ſome ſay they are uſed in *Holland*; however, I have ſeen them in *Muſcovy*. The *Indians* never bind or ſwaddle up their Children when young, but let them go naked till they are ſix or ſeven Years of Age; and as we have before obſerved, that none of them are crooked or miſhapen as many are in *England*, it would give ſome Reaſon to conjecture, that thoſe Deformities which often happen to Children, and continue when come to Maturity, is either owing to our cramping them in ſwaddling Cloaths, or at leaſt to the Midwives or Nurſes doing it unskilfully when they are young.

It is needleſs here to give any particular Account of the Marriage of the *Mahometans*, that falling more naturally under the Hiſtory of *Perſia*, or that of the *Turkiſh* Empire.

Burial.

When a Perſon is dead they waſh the Corpſe, and dreſs it in ſuch Cloaths as the Perſon uſually wore when alive, and carry it out upon a Bier attended by the Friends and Relations of the Deceas'd to the Funeral Pile, which is commonly fix'd near ſome River or Pond, that when the Body is conſum'd to Aſhes they may be convey'd away by the Stream, or loſt in the Water; but if Wood is ſo ſcarce that they cannot procure a Funeral Pile, they ſink the dead Body in a River, eſpecially if they be near the River *Ganges*, whoſe Waters they eſteem very ſacred; and next to it they pay a great Veneration to the River *Tapte*, upon whoſe Bank *Surrat* is ſituate. Their next, but indeed their laſt Choice, is to bury their dead; but this muſt be where they have neither Wood for a Funeral Pile, nor a convenient River wherein to ſink it deep out of their ſight.

As to the Cuſtom of the living Wife burning herſelf with her deceas'd Husband, Hiſtory gives us but few Inſtances of it, nor do our late Travellers warrant it by their Relations; the leaſt that we can now conjecture is, that if in Times of Ignorance they were ſo infatuated either by Prieſt-craft or Obſtinacy, they are now grown wiſer; however, now neither the *European* nor even the *Moriſh* Government do allow of it.

Mourning.

The Women who mourn for their Husbands ſhave their Heads, neglect their Dreſs, and abandon themſelves to Grief; but the Men never cut their Hair, except it be upon the death of a Raja, or Father, or ſome Superior; but the common Mourning of one Relation for another is expreſt by renting their Cloaths, or rather wearing old torn Cloaths, or a careleſs negligent Dreſs for ſome Time; during which they viſit the Place where the Body was burnt or buried, and carry Cocoa-Nuts, Rice, and other Proviſions, probably for the Uſe of the Deceas'd, but it is devour'd by the Fowls or Wild-Beaſts as ſoon as they are gone.

It is ſaid that the *Indians* formerly buried great Sums of Gold with the Deceas'd, or with the Bones that were left unconſum'd if the Body was burnt; but the *Europeans* finding them to uſe this Cuſtom, and thinking that the Gold would be of more uſe to the Living than the Dead, they plunder'd them of it, and converted it to their own Uſe. If this was a *Dutch* Invention, it was one of the eaſieſt Plunders they met with, becauſe they met with no Reſiſtance from the Poſſeſſor, nor had they occaſion to maſſacree him in cold Blood to oblige him to ſurrender.

The *Jentoes* do not affect magnificent Tombs as the *Moors* do; who do not burn but bury their Dead in Vaults, ſo high that one may ſit upright in it; they are as ſtrict in making their Graves North and South as we in making ours Eaſt and Weſt; the Relations of the Deceas'd hold a Feſtival for ſeveral Days after the Burial, beſides annually reſorting to the Tomb to pay their Reſpects to the Memory of their deceas'd Friend. The *Mahometans* are very extravagant in adorning and beautifying the Tombs of the Deceas'd and publick Burying-Places; they encloſe large Fields, and convert them into fine Gardens or Groves, probably imagining that the Soul hovers about the Place where the Body is depoſited; and however ridiculous ſuch an Opinion appears at firſt hearing of it, yet the Vulgar in moſt Countries ſeem to be of an Opinion not much differing from this; for what is more common in *England* than for Nurſes or grown Perſons to affright the Children with dreadful Notions of Spirits and Apparitions, which they imagine frequent the Burying Places, which is now our Churches and Church Yards; though it is obſerved that neither *Pagans* nor *Mahometans* make Burying-Places of their Temples, nor (as the Learned tell us) did the Primitive Chriſtians practiſe it, that Cuſtom being firſt introduc'd amongſt Chriſtians by their building Churches over the Graves of their Primitive Martyrs, and others, being willing to be depoſited as near theſe holy Men as poſſible, were deſirous to be buried in the Churches that were built over them; but the Churches not being able to contain all that dy'd, others, for the ſame Reaſon, were willing to be buried in the Ground that was as near the Church and the Holy Martyr as poſſible, and hence gradually aroſe the Cuſtom of burying in Churches and Church-Yards now ſo frequently practiſed.

THE

THE DESCRIPTION OF THE KINGDOMS OF *Pegu, Ava, Arracan, Tipra, Acham,* and *Boutan.*

BEFORE we proceed further to the Weſtward, to treat of *Perſia* and *Arabia*, &c. it is proper for us to return to where we broke off, when we paſs'd over to the *Oriental Iſlands*; and as *Siam* was the laſt treated of upon that Continent, we ſhall go on to deſcribe the above-mention'd Kingdoms of *Pegu*, *Ava*, *Arracan*, and *Tipra*; which being now all reduced under the Power of the King of *Ava*, and their ſeveral Manners, Cuſtoms, and Religion being nearly the ſame, it is needleſs to treat of them ſeparately, but ſhall include them all under the Name of the Kingdom of *Ava*.

Ava. THIS Kingdom thus underſtood, is bounded on the North by *Aſem* or *Acham*, and on the Eaſt by *Siam* and *China*, and on the Weſt and South by the Bay and Country of *Bengall*; it extends from about ſixteen to twenty ſeven of North Latitude; ſo that from North to South, which is much the longeſt Dimenſions, it is about ſix hundred and ſixty Miles, and the Breadth from Eaſt to Weſt between three and four hundred Miles.

Rivers. THE chief Rivers in this Country are, 1. *Capoumo*, one Source of which is in the *Chamia Lake*, and in its Courſe from thence meeting with other Branches that proceed from other Heads, as the Rivers *Aſa* and *Ava*, by ſome called *Menan*, it falls into *Pegu River* a little below *Pegu*, and into the Sea or Gulf of *Bengall* at *Martaban*. 2. The *Arracan*, which falls into the Gulf of *Bengall*, near a Town of the ſame Name with the River. 3. The *Pegu* River riſes about Latitude twenty two North, and running about full South to *Pegu*, meets the *Ava* or *Menan*, and falls into the Sea at *Martaban*, as above obſerved.

Chief Towns. CHIEF Towns are, 1. *Pegu*; it is ſituate in about Latitude ſeventeen Degrees North, and on the Eaſt Side of the River *Pegu*; it has been ſo improv'd ſince it was firſt built, that it is by ſome diſtinguiſh'd into the New and Old City, which are ſo far from being intermix'd or confuſed together, that they are ſeparated by a Wall and a Ditch; it is almoſt in Form of a Square, and is defended by a Wall and a Moat, and has five Gates on every Side. The Court, together with the People of Faſhion or Quality, inhabit the New City; whoſe Streets are ſtrait, and wide enough for fifteen Men to ride a-breaſt; they have Trees before their Houſes for Shade, as in other *Indian* Towns and hot Countries before deſcribed. The Palace is in the middle of the New city; it is ſtrongly fortified with Walls and Towers like a Caſtle, and is reckon'd by our Travellers a very magnificent Building.

Ava. THE next Capital is *Ava*; it is to the Eaſtward of *Arracan* upon the River *Ava* or *Menan*, before or above its meeting with the River *Capoumo*. The Town of *Arracan* ſtands (as before obſerved) near the Confluence of the River *Arracan* into the Gulf of *Bengall*, in the twenty firſt Degree of North Latitude. *Tipra* is the Capital of the Province of the the ſame Name, and is in about twenty four Degrees of North Latitude South-Weſt from *Chamai Lake*.

THERE are other Towns of Note that are not Capitals of Provinces, as *Prom* and *Mero*, both on the Eaſt Side of the River *Ava* or *Menan*, and after (or to the Southward of) its meeting with the River *Capoumo*; *Prom* is in about Latitude Eighteen, and *Mero* in about Latitude Seventeen; but as we do not find them to be Places of any great Trade or Concourſe, the Map will beſt diſcover their Situation.

THIS Country lying partly under the Tropick, or within it, and the Courſe of the Rivers being moſtly to the Southward, the Rains have the ſame Effect here, both in overflowing the Rivers, and in rendring the Country fruitful, as in *Bengall* and *Siam*, and therefore ſhall not repeat any thing of it here, but refer the Reader to the foregoing Account of thoſe Countries.

Monſoons. THIS Country being contiguous to *Siam*, and the Monſoons and Seaſons being much the ſame, we ſhall, to avoid filling up room with Repetitions, refer the Reader to Chap. I. of the Hiſtory of that Kingdom; and for their Manner of Building, ſee Chap. II. of the ſame; and laſtly for their Genius, Temper, their Habit, Food, Entertainment, and Ceremonies; alſo their Husbandry, Product, their Manner of making War, their Learning and Religion, ſee the reſpective Chapters in our Account of the Kingdom of *Siam*, and they ſo exactly agree with the ſame Articles in the Inhabitants of *Pegu*, *Ava*, *Arracan*, and *Tipra*, that to give any further Account of them would be but to write the ſame Thing over again; only our Sailors take notice in a particular Manner of the Complaiſance of their Women, who they ſay will contract with them for as long or as ſhort a Time as they pleaſe, and during that Time behave with the utmoſt Faithfulneſs

Faithfulneſs to their contracted Husband, and it is look'd upon ſo lawful, as well as cuſtomary to do ſo, that when the Men come away the Women return home, not having the leaſt Reproach, or being receiv'd with any Shyneſs by their Friends at their return. And in this the Women of *Pegu* differ very much from thoſe of *Siam*; who are not only faithful after Marriage, but generally modeſt and reſerv'd when Maids, only if they do take liberty to be familiar with a Man, they chuſe a white one rather than otherwiſe, it not being deem'd ſo great a Crime to conceive by a white Man, becauſe they hope thereby by degrees to mend the Complexion; for even at *Siam* they admire the white Complexion moſt; (*ſee Chap.* VIII. *of the Kingdom of* Siam,) but the Women of *Pegu* that live here at *Siam* proſtitute themſelves, and are as faithful to their Contracts as in their own Country.

THE *Engliſh* who live at Fort St. *George*, drive a great Trade to *Pegu* and *Arracan* for Rubies, Sapphires, Amethiſts, and other precious Stones, and find a conſiderable Advantage in it, as alſo in dealing here for Skins and Furs, another great Branch of their Trade. Precious Stones.

Acham and *Boutan* lie both to the Northward of the Kingdoms or Provinces hitherto mention'd. The former, viz. *Acham*, is bounded on the North by *Boutan*, on the Eaſt by *China*, alſo by *Ava* on the South, and by *Patan* on the Weſt. But *Boutan* lies to the Northward of *Acham*, and has *China* on the Eaſt, *Tartary* on the North, *Great Tibet* and Part of the Mogul's Dominions on the Weſt, and *Acham* on the South; but how far *Boutan* extends to the Northward, our Authentick Geography has not yet determin'd; for as this Part of the Country is ſo woody and mountainous that it is ſcarce paſſable, it cannot be expected to be very populous, nor to afford any thing of Trade, Product or Manufacture worth a particular Notice. *Acham* and *Boutan*.

THE DESCRIPTION OF THE Iſland of *CEYLONE.*

CHAP. I.

Of the Situation and Extent of the Iſland of Ceylone, *with the Names and Diviſions of its reſpective Provinces; of the Springs and Rivers, the Winds, Monſoons, Harbours,* &c.

Situation. THE greateſt Dimenſion of this Iſland, which is from North to South, is about two hundred and forty Miles, it being comprehended between the ſixth and tenth Degrees of North Latitude, and ſcarce two hundred Miles in Breadth from Eaſt to Weſt: It is not far from a round Form, except a Peninſula at the North End of it, which makes the *Dutch* ſay it is rather like a *Weſtphalia* Ham; the Middle of it lies about Eaſt from Cape *Comorin*, the Southermoſt Part of *India*; and the Northermoſt Point of it is ſeparated from the main Continent of *India*, by a Channel between forty and fifty Miles broad.

Cinnamon. THIS is one of the beſt Acquiſitions the *Dutch* have in *India*, there being no Place in the *Indies*, nor in the World, that produces the right true Cinnamon but this Iſland only, or, however, in any Quantity, to furniſh a Trade, and the Plantations are wholly in the Power of the *Dutch*, who have drove the King up into the Mountains and deprived him of all Commerce and Correſpondence with the reſt of the World, and it is ſaid, that they have ſince made him a Priſoner.

Provinces. THE Inland Provinces are, 1. *Nourecalava*, towards the North Part of the Iſland; it is divided into five leſſer Diſtricts. 2. *Hohourly*, which lies to the Weſtward, and is ſubdivided into ſeven Counties. 3. To the Eaſtward of that lies *Mautaly*, containing three Counties. 4. Farther Eaſt is *Tamaquod*; and 5. *Bintana*. 6. *Vellas*; and 7. *Panao*, all diſtinct Juriſdictions; and to the Southward of theſe is, 8. *Ouvah*, which is divided into three Diſtricts. To the Weſtward of *Ouvah* lies the particular Diſtricts of *Wallaponahoy*, *Goddaponahoy*, *Ponaipot*, *Hevoyhattay*, *Cottemul*, *Horſepot*, *Yallanwa*, and *Timponahoy*; and farther Weſt is *Oudipollat*, *Doluſbang*, and *Hotteracourly*; and the fartheſt Weſt of any of them is *Timcourly*; all theſe, except the firſt, ſecond, fourth, and ſixth above-mentioned, and *Hotteracourly*, lie upon fruitful Hills, well water'd with Springs, and are called *Conde Uda*, which ſignifies Tops of the Mountains; and hence the King (I ſuppoſe ſince his Advancement to that elevated Ground, by the Benefit of *Dutch* Favours) is call'd King of *Conde Uda*; but his proper Title takes its Name from his Country, as other Kings do, and is *King of* Ceylone.

Capital Cities. THERE are five Cities reckon'd Capitals; Firſt *Candy*, which is ſituate about the Middle of the Iſland, upon the River *Mavillagonga*, and in the Province of *Yattanour*; this was the Reſidence of moſt of their Kings, and the King of *Ceylone* was ſometimes call'd King of *Candy*, till the *Portugueſe* burnt it, and the King finding it ſo much expoſed to the Attacks of Foreigners, remov'd the Royal Seat. 2. *Nellembyneur*, which lies to the Southward of *Candy*, in the Province of *Oudipollat*. 3. *Allontneur*, North Eaſt from *Candy*; the River *Mavillagonga*, upon whoſe Bank *Candy* ſtands, runs through *Allontneur*. 4. *Badoula*, between ſixty and eighty Miles North Eaſt from *Candy*. 5. *Digligyneur*, between *Candy* and *Badoula*, in the Province of *Ouvah*, in the moſt inacceſſible Part of the Mountains; this is the Royal Seat, and here is the Palace, ſince the *Portugueſe* burnt his Capital of *Candy*, and the *Dutch* drove him into the Mountains for Shelter from their Fury; but more of this in Chap. V. when we come to ſpeak of the Prince's Court, &c.

Coaſt. THE *Dutch* has chiefly the Command of the Coaſt. The chief of all the *Dutch* Settlements (which was once ſo to the *Portugueſe*) is *Columbo*; it lies on the South Weſt Part of the Iſland, in about ſeven Degrees of Latitude. The *Portugueſe* fortified this and ſeveral other Places upon the Coaſt about the Year 1520, and having made themſelves Lords of ſeveral of the beſt Harbours along the Coaſt, their Ambition did not terminate there, but they begun to conceit themſelves to be Kings of all the Iſland, and diſpute the Sovereignty with the King of *Candy* himſelf. The crafty *Dutch*, glad of this Irruption, offer'd their Aſſiſtance to him againſt the *Portugueſe*, not doubting, but that if they, by his Help, could expel the *Portugueſe*, they could uſe him as they pleas'd when the *Portugueſe* were gone. This was the Opportunity the cunning *Dutch* wanted, and it happen'd according to their Scheme, for the joint Forces of the King of *Candy* and the *Dutch*, took *Columbo* from the *Portugueſe* in the Year 1656, and after that ſeveral other of the beſt Towns along the Coaſt, and as faſt as they drove the *Portugueſe* out, the *Dutch* took Poſſeſſion for their dear Ally the King of *Candy*, as he imagined, but they kept all that they had got in Poſſeſſion, without allowing him any Share of the

Dutch Contrivance.

Plunder,

Plunder; and here the poor King of *Candy* jump'd out of the Frying-pan into the Fire; for whereas before the *Portugueſe* would not ſuffer the King to ſell his Cinnamon to any but themſelves, the generous *Dutch* redreſs'd his Grievance, for they would not allow him any to ſell, for they deprived him of the Cinnamon itſelf. This, and their keeping *Columbo*, and other Places, in Poſſeſſion, which he had help'd them to take from the *Portugueſe*, did exaſperate him, but he found no effectual Way to reſent it, only by refuſing to receive an Ambaſſador from the *Dutch* for ſome Years afterwards.

The next conſiderable Fort on the Weſt Side of the Iſland, and eight Leagues to the Northward of *Columbo*, is *Negumbo*: This the *Dutch* have had the Poſſeſſion of ever ſince the Year 1644. *Negumbo.*

But the beſt Harbour in the Iſland, except *Columbo*, is *Chilao*, twenty Miles to the Northward of *Negumbo*; and ſixteen Miles further North is the Iſland of *Calpetyn*, between *Ceylone* and the main Continent of *India*; it is about thirty Miles long, and three broad; and about forty or fifty Miles to the Northward of that, on the ſame Coaſt, is the Iſland of *Manar*, which the *Dutch* took from the *Portugueſe* about two Years after they had taken *Columbo*. *Chilao*

On the Northermoſt Part of the Iſland is the Peninſula call'd the *Kingdom of Jaffanapatan*; and between that and the Iſland *Manar*, lies ſeveral ſmall Iſlands, which are all in the Poſſeſſion of the *Dutch*, and by them called by the Names of ſome of the Iſlands and Places of their own Country, as *Delft*, *Middleburg*, *Leyden*, *Amſterdam*, *Enkheuſen*, and *Hoorn*. This Peninſula and theſe *Dutch* Iſlands contain one hundred and fifty nine Villages, and ſome great Towns. The Capital bears the Name of the Kingdom of *Jaffanapatan*; this was likewiſe taken by the *Dutch* in their Inundation over *Ceylone* (if I may ſo call it) in the Years 1656, 57, and 58; it is regularly fortified, and is a ſtrong Place. The Northermoſt Point of this Peninſula, and of the whole Iſland, is called *Punta das Pedras*, or the rocky Point. *Jaffana-patan.*

About fourſcore Miles to the Southward of *Punta das Pedras*, and on the Eaſt Coaſt of *Ceylone*, is *Trinkamale*; and about fifty Miles to the Southward of that, upon the ſame Coaſt, is *Battacalao*, now alſo in Poſſeſſion of the *Dutch*; alſo on the South Part of the Iſland they have a Fortification; and, in ſhort, the whole Iſland is ſurrounded with their Forts, as if it all, or all the Coaſt at leaſt, was their own.

There are no navigable Rivers, though there are ſeveral that riſe up in the Mountains, and in their Paſſage water the Country: but their Courſe is ſo rapid and full of Rocks, that they rather tumble into the Sea than glide to it, to receive Ships into the Country. The largeſt is *Mavillagonga*; it riſes in *Adam's Mount*, and running North Eaſt by *Candy*, and through *Allontneur*, it falls into the Sea at *Trinkamale*.

The Monſoons, and wet and dry Seaſons, are the ſame here as on the Continent of *India*, and with the ſame Sort of Variation; for as the Rains come on ſooner on the Coaſt of *Malabar*, or Weſt Coaſt of *India*, than on the Eaſt Coaſt, or *Cormandel*, ſo they come ſooner on the Weſt Coaſt of *Ceylone* than on the Eaſt Coaſt, and the Reaſon of both ſeems to be the ſame, for as during all the rainy Seaſon the Wind is South Weſt, or very near it, the Coaſt of *Malabar* muſt of Courſe receive it before it can come to the Eaſt Coaſt, or *Cormandel*; and the ſame Reaſon holds good for their coming ſooner upon the Weſt than upon the Eaſt Coaſt of *Ceylone*; and ſome are of Opinion, that the Mountains of *Gate*, a high Ridge of Mountains running up the Middle of *India* between *Malabar* and *Cormandel*, retards the Motion of the Wind and Rains; and the ſame Effect they impute to a Ridge of Mountains that ſeparate the Eaſt from the Weſt Part of *Ceylone*; and however weak it may be, to imagine that theſe Mountains can retard the Paſſage of the Wind and Rain to the Eaſtward, becauſe the Rain (that doth not fall amongſt them) muſt fly over them, and not be ſubject to their Interruption, but purſue a horizontal Motion, as if there were no Mountains at all, yet it is certain that the Rain coming from any Point of the Compaſs will require a Time to paſs to any Place towards the oppoſite Point, as we daily obſerve, if a Shower approaches us from any Point of the Compaſs, we can ſee it fall at ſome Diſtance from us, and on that Point from whence it comes ſome Time before it reaches us, in Proportion to the Diſtance it is from us when we firſt ſee it; and hence it is evident that the firſt of the rainy Seaſons muſt require a conſiderable Time to paſs over ſuch a large Tract of Land as the main Continent of *India*, and muſt be upon the Weathermoſt Coaſt ſome conſiderable Time before it reaches the other. Monſoons and Seaſons.

The Northern Parts of this Iſland are ſubject to great Droughts, and the Affliction is the greater becauſe Springs or Rivers are very ſcarce in that Part of the Iſland, and what Water they have is from the Southern Part of the Iſland; and this Inconvenience renders the Kingdom of *Jaffanapatan*, and all the North Part of the Iſland, very ſickly, but the reſt of the Country is eſteem'd very healthful. Droughts

CHAP. II.

Of their Towns, Fortifications, and other Buildings; with their Furniture, the Stature, Complexion, and Habits of the Natives; alſo of their Food, Feſtivals, Diverſions, and Ceremonies, with their Carriages, and Manner of Travelling.

Their Towns, if we may ſo call them, are only irregular Numbers of Buildings promiſcuouſly placed, without any regard to regular Streets, but every Man encloſes a Spot of Ground according to his Ability, Neceſſity, or other Circumſtances, with a Bank or Pale, and twenty or thirty, or more or leſs, of theſe Enclo-ſures, being near together, is what may be called a Town. Towns.

Their Buildings are mean, low, thatch'd Cottages, with one or two Ground-Rooms, but few or no Chambers or upper Rooms; the Sides inſtead Houſes.

instead of Walls, are splinter'd with Ratan or Cane, which they sometimes cover or daub with Clay, and sometimes not; but if they do they are not allow'd to white-wash them, that being a Privilege which the King reserves to himself. The better Sort have a Square within their Houses, and as many Rooms about it (like so many Piazza's about any other Square,) as there are Persons in the Family; these Rooms are parted with Banks of Earth about a Yard high. They have no Chimnies, but dress their Meat in a Yard or Corner of a Room.

Furniture. THEIR Furniture is a Matt, some few Stools, but no Chairs with Backs to them to lean against, (that being prohibited as too great an Indulgence for the Vulgar,) China Plates, and Earthen and Brazen Vessels to hold Water and dress Victuals in; and the Master has a Bed, which, instead of Cords, has small Ratan or Cane wove to support what is upon it; but the Women and Children lie upon Matts, and cover themselves with the Cloaths they wear in the Day Time.

Fortifications. THE Mountains or inland Country is so well defended that it needs no Fortification, for which Way soever you approach that Part of the Country, it must be ascending the Mountains, which are vastly high, and cover'd with thick Woods, altogether unpassable, except by one narrow Path, which is fenced at proper Distances, and by the help of that may be defended by a very few Centinels, which are placed there to keep the Passes Night and Day.

Genius and Temper. THE original Inhabitants of *Ceylone* and their Descendants, are call'd *Cynglasses*; who are Men of quick Parts, Courageous and yet Complaisant, even-temper'd, not soon provok'd, but easily reconciled, temperate, but nice in Diet, neat in their Dress, and not indulgent in their Sleep, and yet not very active in Business; they do not regard their Promise, but are great Liars; and so superstitious and inclined to believe Omens, that if they see a white Man or a great-belly'd Woman at their first going out in the Morning, they promise themselves good Success that Day; Sneezing is an ill Omen, and there is a certain little Animal like a Lizard, which if they hear they will not proceed in what they are going about, they look upon it to be so unfortunate.

Stature, Complexion, &c. THEY are well-shap'd, middle Stature, long black Hair, dark Complexion, and black Eyes, as other *Indians* have, and in other Respects differ not much from them, as being an Island so nearly adjacent.

Food. IN this Island, as in other Parts of *India*, their chief Food is Rice, or, with those that can afford it, some savoury Soup of Flesh or Fish to relish it; the better sort indeed have variety of Dishes at the Table, but they consist mostly of Soup or Herbs, but seldom above two of Flesh or Fish, of which they eat sparingly. The Meat is cut in little Pieces and laid by their Rice. The better Sort have Brass and China Plates to eat upon, but the poor Sort make a shift with Leaves for the same Purpose.

Drink. FOR their Liquids they have Ladles and Spoons made of the Cocoa-Nut Shell, and their usual Drink is Water; they have no Wine or Beer, and but little Arrack. When they drink Water, they hold the Cruise or Bottle over their Mouths, and pour it in as we do in pouring into a Pot. The Poor think they are well provided if they have Rice and Salt in the House, and can make a good Meal of Sallad relish'd with Juice of Lemon instead of Vinegar. They are forbid to eat Beef, and had rather sell their Pork and Fowls to Foreigners than be forced to eat them themselves, which they would think a Hardship. The Wife dresses the Victuals, and waits upon her Husband till he has done eating, and then she and her Children sit down, and satisfy themselves with what he leaves.

Habit of Men. AMONGST the genteeler Sort the young Men wear their Hair long, and comb it back, or tie it up; they let their Beards grow long; they wear a Waistcoat of blew or white Calicoe, and a Piece of the same wrapp'd about their Middle, with a Sash over it, in which they stick their Knife; they also wear a Hanger. They walk with a Cane, which has sometimes a Tuck in it; and have a Boy to wait on them with a Bag, in which he carries their Betel, Arek-Nut, and such Trinkets. The poorest Sort have only a Piece of Calicoe about their Middle, which comes down to their Knees.

Women's Habit. THE Women have their Hair comb'd back, and oil it with Cocoa-Nut Oil to make it shine; the better Sort wear Waistcoats of flower'd Calicoe close to their Bodies, through which their Shape appears; they wrap a piece of Calicoe about their Middle, which reaches down to their Knees, or longer or shorter according to their Quality; they make great Holes in their Ears, to hang their Jewels at, and seem to be at some pains to stretch their Ears downwards; they wear Necklaces and Bracelets, and abundance of Rings upon their Fingers and Toes; they wear a Girdle or two of Silver Wire and Plate about their Waist, and when they go out they throw a Piece of Silk over their Heads, as our Women do their Hoods.

Visits and Salutations. THEY are very condescending to their Inferiors, and obliging to all, conversing with freedom and familiarity; when they salute their Equals, they hold out both Hands with the Palms upwards, and bow the Body; but when a Superior salutes one of a lower Rank, he holds out but one Hand, or sometimes neither, but only nods his Head. The Women salute by clapping the Palms of their Hands together, and carrying them to their Foreheads. When Relations visit, they never talk much, but the Visitors commonly carry Provisions and Sweetmeats along with them to their Friend's House, and if they stay longer than one Day, they fall to work to assist the Master in his Business, for the People are generally poor, and not able to sustain a long Entertainment, except the Visitor do some Work to help to support the Charge.

Carriage and Roads. THE *Cynglasses* or Natives of *Ceylone* have no Wheel Carriages, for if they had, the Country is so woody and mountainous, and the Roads so narrow, that they could not make use of them, for in some of the Roads in the Mountains two Men can scarce go a-breast; for the Narrowness of the Roads is the greatest Security that the King has against the Insults of the *Dutch*: And for want of Carriages the greater Sort of People have Slaves to carry their Baggage, but the common People carry theirs themselves; for there were no Horses in the Country till the *Portuguese* brought them, and those that they now have, the King will neither permit his Subjects nor Foreigners to ride upon in his Country. They have Oxen with Bunches on their Backs, as on the main Continent of *India*, which serve for Carriage; and when the King and the Court move, they have Elephants as well Oxen to carry their Baggage.

CHAP.

CHAP. III.

Gives an Account of their Trade, Manufacture, and Husbandry; alſo of their Plants, Animals, and Minerals.

Cinnamon.

THERE is no Nation in the World produces ſuch Quantities of the beſt Cinnamon as the Iſland of *Ceylone*; which is ſo good and in ſuch Quantities, that the *Egyptians*, *Arabians*, *Perſians*, and indeed all the Eaſtern Country People traded thither for it. Thoſe Eaſtern People being here when the *Portugueſe* attempted to ſettle here, oppoſed and would not ſuffer them to eſtabliſh any Factories here, becauſe themſelves had ſo long enjoy'd the Benefit of the Cinnamon Trade in tranſporting it to *Europe*; but the *Portugueſe* grew too ſtrong for the *Moors*, and were not ſatisfied with barely participating of the Trade, but attempted to engroſs it all to themſelves, that they might keep it up to their own Price; and in order to this in all their Treaties with the King of *Ceylone* they endeavour'd to prevail upon him to confine his Cinnamon Trade to them, and ſell none of that Commodity to any other Nation or People whatſoever; and he, glad of ſuch Chaps as they were at firſt, agreed to confine himſelf to their Deſires; but when they found they had engroſs'd the Trade, they behaved with ſuch intolerable Inſolence, that the King, not able to bear with their Encroachments, invited the *Dutch* to his Aſſiſtance to expel them, as obſerv'd before in Chap. I. Indeed he juſtly made Repriſals upon them, by ſeizing the *Dutch* while they were gathering the Cinnamon, and they complain'd of it as an Abuſe, that he ſhould diſturb them in the Enjoyment of what they ſo notoriouſly robb'd him of; and he perſiſting in the Proſecution of his own Right, they made him tributary to them, or, as ſome ſay, and which is moſt likely, made him Priſoner. The *Dutch* are poſſeſs'd of the Pearl Fiſhery, which is between *Jaffanapatan* and *Madura*; but, like the Dog in the Manger, they neither ſuffer other People to partake of the Benefit of it, nor do themſelves practice it much of late Years.

Trade.

THERE are no publick Markets, but ſome Shops in the great Towns, where they ſell Rice, Calicoe, Braſs, Copper, and Earthen Veſſels, Swords, Knives, and Tools of Iron and Steel for Carpenters, and Husbandmen, *&c.* which they make very well; they alſo perform Goldſmiths Work, Painting, and Carving tolerable well, and make good Fire-arms. Their Calicoes are ſtrong, but not ſo fine as thoſe on the Coaſt of *Cormandel*.

Husbandry.

THEY have ſeveral Sorts of Rice, ſome of which are ſeven, ſome ſix, five, or four Months after they are ſown before they are ripe. That which is ſooneſt ripe is the beſt taſted, but yields the leaſt Increaſe; and as all the Sorts grow in the Water, the Inhabitants are at great Labour and Expence to level the Ground they intend for Rice, and making Repoſitories for Water at the Top of the Hill, and Channels to convey it to the Fields; as the Ground is very mountainous, and the Rice will grow no where but upon a Level, where the Water will ſtand; they cut the Sides of the Hills into Levels, one above another, like ſo many Stairs, of about ſix or eight Foot wide; they are obliged to proportion the Rice they ſow to the Quantity of Water they can ſave to moiſten it with, or if Water be ſcarce, they ſow that Sort that will be ſooneſt ripe, for if the Crop wants Water it dies. If they ſow the ſeveral Sorts of Rice, they ſow that firſt that requires the longeſt Time to ripen, and the reſt in proportion, that they may be all ripe together; for their Fields are common, and they turn their Cattle in after Harveſt, as in *England*, and if any of their Rice is much later in the Field than the reſt, they do not wait for it, but the Cattle eat it up, to prevent which as much as poſſible, when they are a little later than ordinary a ſowing their Rice, they ſow that Sort that will be ripe in the leaſt Time, that it may all be ready together.

IN the North Part of the Iſland they have few Springs, and therefore are forced to ſave Water in the Time of the wet Seaſons in great *Tanques* or Ponds, ſome of a Mile round; and thoſe they intend for the watering of their Rice they have upon the Tops of the Mountains or Hills, that they may, at the proper Seaſon after the Rice is ſown, let it down in Channels to the gradulated Levels above-mention'd to water it. Their Seed-time is about *July* or *Auguſt* a little after the wet Seaſon begins, that the Rains may naturally water the Ground with leſs Toil to the Husbandman. But where they have Plenty of Water, they ſow and reap almoſt at any time of the Year, the Seaſon not altering much for growing between the Tropicks, where the Sun is always ſo near them.

Plowing.

THEY plow their Lands twice; when they have plow'd it the firſt Time, they make up their Banks to keep the Water in that is to overflow the Ground, and alſo upon theſe Banks they go from one Field to another, when the Fields are a Foot or two deep in Water and Mud. At the ſecond Plowing the Ground is ſo ſoak'd with Water that it is as ſoft as wet Mortar, and when it is ſo ſoft they take great Pains to make it level, and ſmooth it with dragging a heavy Board over it, that the Water may ſoak it equally. They ſteep their Seed in Water before they ſow it, and lay it on a heap till it grows, and when it is ready they drain the Water off the Land, and ſow the Rice as we ſow Wheat, and let it continue without any Water till it is eight or nine Inches long; then the Women weed it, and tranſplant it from where it grows too rank to where it is thin; and then they let in the Water upon it again, and it grows in Water half a Foot or a Foot deep till it be ripe.

Rice, how it grows.

Threſhing.

THEY do not threſh their Corn, but tread it out with Oxen, always performing ſome Religious Ceremony before they begin, and apply to their Idols for a Bleſſing upon their Labour.

Other Grain.

BUT though Rice be their chief Grain, yet they have other Sorts of Grain to ſupply the want of it when it grows ſcarce; as *Coracan*, a Grain as ſmall as Muſtard-Seed, which they grind into Flour, and make Cakes of; as alſo is their *Tanna*; every Seed whereof that takes in the Ground ſhoots out four or five Stalks, with an Ear upon each, and they ſay multiplies a Thouſand for One; they only cut off the Ears when ripe, and carry it home; but it makes ſuch dry Food that they do not care to uſe it but when Rice is ſcarce.

Fruit.

THEY have plenty of Fruit, but they do not much regard it, except when green, to make Pickles or Soup, or to uſe with their Rice. They have great plenty of the Betel Nut, ſo often mention'd; alſo a Fruit call'd *Jack*, which grows upon Trees, round in Form, and as large as a Peck Loaf,

they gather them before they are ripe, and dreſs and eat them like Cabbage, or if they let them be ripe, they are very good to eat raw, and ſaving the Kernels (which are in Bigneſs, Colour, and Taſte like a Cheſnut,) they roaſt them in the Embers, and they are good Proviſion on a Journey. There is alſo a Fruit call'd a *Jambo*, almoſt like an Apple, and others like our Plumbs and Cherries; beſides Cocoa's, Pine-Apples, Mangoes, and the Fruits common to other Parts of *India*. They have Yams and other Roots and Herbs; not only thoſe peculiar to that Country, but Coleworts, Lettice, Roſemary, Sage, and abundance of *European* Herbs have been introduced and propagated there by the *Portugueſe* and *Dutch*.

Tree. The moſt remarkable Tree is the *Tallipot*, a ſtrait tall Tree; one Leaf whereof will cover fifteen or twenty Men, and keep them dry; they are round, and fold up like a Fan; they ſerve them as Umbrella's to ſhade them from the Sun; and they are ſo tough they can travel through the Woods with them; every common Soldier carries one to make his Tent of, to ſhelter him both from Rain and Heat; it bears a hard Fruit as big as a Nutmeg, the Inſide of which is like the Pith of Elder, and is ſometimes eaten like the Pith of the Sago-Tree, (*ſee Chap.* VIII. *of the* Oriental Iſlands,) or like it made into Bread; but it never bears this Fruit till the laſt Year, and then it dies.

Vallat. The *Reſſule* grows up ſtrait and tall as the Cocoa-Tree, and is alſo full of Pith. There grows out of the very Top of this Tree a Bud, which if it was ſuffer'd to grow would bear a round Fruit, but it is good for nothing but to plant again; and therefore they can apply the Tree to a better Uſe, by cutting that Bud, and binding about it Salt, Pepper, and other Ingredients, which hinders its Growth, and ſtagnates the riſing Sap in the Body of the Tree, from whence they draw it at the rate of three or four Gallons a Day from one Tree; it taſtes no ſtronger than Water, but by boiling it they extract a ſort of a Brown-Sugar, which they call *Jaggory*, which they can make finer or coarſer as they pleaſe. It renews its Leaves every Year, as other Trees do, till it comes to its full Growth, and then the ſame Leaves remain till it begins to decay, and when it caſts them, never any more grows upon it.

But the moſt valuable Tree in Iſland, and moſt profitable to the *Dutch*, who now poſſeſs all the Trade there, is the Cinnamon-Tree; of which take the following Account:

Cinnamon Tree. This Tree is as common in the South-Weſt Parts of *Ceylone*, near *Columbo*, as any Tree in the Wood, though but few of them are found in the North Part of the Iſland. It is of a middle Size, and not very large; it has a Leaf in Colour, Shape, and Thickneſs like that of a Lawrel; when the Leaves firſt ſprout out they are as red as Scarlet, and if rubb'd between the Fingers, ſmells like a Clove. It bears a Fruit like an Acorn, which is ripe about *September*, but the Fruit neither taſtes nor ſmells like the Bark; yet boiling the Fruit in Water, an Oil will ſwim on the Top, which has a very agreeable Smell, and when it is cold it is white and hard like Tallow; they ſometimes uſe it as an Ointment for Aches and Pains; but it is ſo common, and being a combuſtible Liquid when melted, they burn it in their Lamps.

This Tree has two, or ſome ſay three Barks, however the outermoſt but one is the Cinnamon, the beſt of which are peel'd off the Trees of a middling Growth; the Way to come at the Cinnamon is, by firſt ſtripping off the outſide Bark, and then they cut the next round the Tree at certain Diſtances with a pruning Knife, like ſo many Hoops about the Tree; theſe again they cut croſs, or up and down the Tree at half an Inch or an Inch diſtance, and ſo peel off the Pieces, and lay them in the Sun to dry, which makes them roll and ſhrivel up together, as we ſee them when they come to *England*. One would think that pulling off the outſide Bark, and afterwards the next for Cinnamon, would be ſufficient to kill the Tree, but whether it does or no it matters not; for there are ſuch Plenty of them, and they grow ſo faſt, that there is continually enough in this Iſland to furniſh a perpetual Supply for the whole World.

The Body of the Tree after the Bark is off is white, as moſt other Trees are, and ſerves them for Building and other common Uſes of Wood, but has no Fragrancy either in the Smell or Taſte, as the inner Bark or Cinnamon has.

Mala. Cinnamon. There are alſo Cinnamon Trees upon the *Malabar Coaſt*, but far ſhort of the *Ceylone* Cinnamon, though its Bark is ſo like it in Colour and Taſte that it is not very eaſily diſtinguiſh'd, eſpecially by the Sight, and ſome think if it were cultivated, and taken care of, it would not be much, if at all, inferior to the *Ceylone* Cinnamon. But this being but a bare Conjecture, and never confirm'd by the Experience of the *Engliſh* upon the *Malabar Coaſt*, who doubtleſs have uſed Endeavours to make the beſt of it, we muſt ſuſpend our Belief, not as to there being Cinnamon on that Coaſt, but as to its coming near the *Ceylone* Cinnamon for Goodneſs.

It is a Miſtake as common as the Report, that Cinnamon, Nutmegs, Mace, and Cloves grow all upon one Tree; affirming that the Nutmeg is the Fruit, the Clove grows upon the End of the Nutmeg, as the decay'd Flower upon the end of the Apple or other Fruit, the Mace is the Huſk of the Nutmeg, and that the Cinnamon is the Bark of the ſame Tree; whereas they neither grow all upon one Tree, nor all in any one Country, nor within ſome thouſands of Miles of one another. Nutmegs grow only in the *Banda Iſlands*, (*ſee their Growing, Chap* XIII. *of the* Oriental Iſlands.) Cloves grow only in the *Moluca's* and *Amboyna*, (*See their Growth in the ſame thirteenth Chapter,*) and the true Cinnamon only in *Ceylone*.

There are other Trees of leſs Note, as the *Orula* and the *Downckaia*; which latter is in great Eſteem by the Idolaters, becauſe they believe their God *Buddou*, when he was upon Earth, uſed to refreſh himſelf under the Branches of it; under it therefore they ſet up their Altars and Images, and place a Number of lighted Lamps, as other *Indians* do, in or before their Places of Worſhip.

Animals. They have Buffaloes, Bears, and other Beaſts and Animals common to other *Indian* Countries. But Elephants are ſo very numerous in this Country, that they do great Damage by breaking down the Trees, and trampling down the Corn: The only Way that People have to prevent the Damage, is by great Noiſe and Fires to frighten them away. There are abundance of Monkeys, ſome with black Faces and white Beards, and ſome with white Bodies, but neither of theſe do much harm. But there are others that delight in Miſchief, and not only eat great Quantities of Corn, but carry abundance away in their Hands, and will plunder their Gardens or what they can come at; theſe have white Faces and long Hair on their Heads, like Men, but they have no Beards. There are Alligators, Serpents, and ſome Snakes, ſo venomous, that their Cattle being bit by them are often found dead. Here are Hens, Ducks, Geeſe, Woodcocks, and Partridges; but the King prohibits the keeping of theſe domeſtick Fowls, preſerving that as a Prerogative to himſelf. They have great Plenty of Fiſh, both in the Rivers and Ponds; but in ſeveral Places the King denies the Subjects the Privilege of taking them, on pain of Death. And to this they impute the Tameneſs of the Fiſh, for they are ſo familiar, that they will ſwim after any Body to the Sides of the Pond to be fed.

Fruits

Leeches are ſo common here in the Fields and Woods, that Travellers cannot paſs along without having their Legs full of them; for they travel without Shoes orStockings; they ſuck till the Blood runs down: Thoſe that would avoid the Trouble of them, rub their Legs with Lemon and Salt; but ſometimes they ſuffer them to feed, for though it makes the Legs ſmart, they think it wholſom, they knowing of no other Way of Bleeding.

They have Plenty of Iron, and have the Art of manufacturing it it ſo well, that they can make tolerable good Steel. The Prince has abundance of Diamonds and Precious Stones; but it is ſuppoſed he had them in Exchange for Cinnamon in his Trade to *Golconda*; for it is reaſonable to ſuppoſe that if there were any Diamond Mines in *Ceylone*, the prying *Dutch* would have found them before now. Mines.

CHAP. IV.

Of the Language, Learning, and Books of the Cynglaſſes, *or* Ceyloneſe, *and alſo of their Modern Hiſtory; with a particular Account of ſome that were twenty Years Priſoners, and of the Return to* England *of thoſe that eſcaped at laſt.*

Language. Although the Main of the *Cynglaſſes* Language be peculiar to themſelves, yet they have ſome Words borrow'd from the *Malabars*; there is alſo in the Iſland a learned Language underſtood only by the *Bramins* or Prieſts, and in this Language is written all that pertains to the Rites and Ceremonies of their Religion. In their Addreſſes to their Superiors they are very complaiſant, and have ſuch diſtinguiſhable Titles both for Men and Women, according to their different Dignities, that Mr. *Knox* (one of the Priſoners mention'd in the Title of this Chapter,) tells us, that they can diſtinguiſh their Titles in their Addreſſes into ten or a dozen degrees of Dignity; and their Children are brought up with ſo much good Manners and Behaviour, that they are ſeldom guilty of that inadvertant Rudeneſs in their Addreſſes that the unpoliſh'd Youth amongſt the Vulgar in other Nations are frequently guilty of. The *Portugueſe* ſpeak their own Language, and by the Natives frequent Converſation with them, it has begun to prevail upon all the Sea-Coaſts in the Iſland.

Writing. Inſtead of Paper they uſe the Leaves of the Tallipot-Tree before-mention'd, which they cut into Slips of what Length and Breadth they require, and the Leaf will contain, and thereon write with a Steel Bodkin from the Left to the Right. Their firſt Way of teaching their Children to write is by making Letters in the Sand

Aſtrono- They have ſome tolerable Knowledge in Aſtronomy; they can make Almanacks, and in them tell the Age of the Moon, and foretel the Eclipſes. They alſo profeſs Aſtrology, and pretend to determine lucky and unlucky Days to begin any Journey or other Enterprize; but (which is the moſt groſs Abuſe of their pretended Art) they pretend to determine a Child's Fortune by its Birth, and the Poſitions and Configurations of the Planees at that Time; and if the *Wiſe Man* finds it deſtined to bad Fortune, they anticipate it by an immediate Deſtruction of the Infant. *If thoſe Aſtrologers are always right in their Predictions, and all that are born to bad Fortune be diſpatch'd before they are expos'd to the World, or come to Maturity, it would neceſſarily follow that all the living Inhabitants of* Ceylone *muſt needs be a happy and fortunate People, and yet we ſee that even the King himſelf was not exempted from the Vicciſſitudes of Fate, when the* Dutch *robb'd him of all his Trading Ports, and drove him into the Mountains. One would think this might be a Caution to them (though they are no Chriſtians,) to guard againſt the Impoſition of thoſe pretended Fortune-tellers, and yet we ſee ſome that profeſs to be Chriſtians drawn into a kind of a Belief of it.*

Time. They have Three hundred and ſixty five Days as ours is, and is alſo twelve Months, and theſe again are divided into Weeks. The firſt Day of each Week they always reckon fortunate for any Undertaking. Their Days (from Sun-riſe to Sunſet) are never much, if at all, more or leſs than twelve Hours in Places ſo near the Equinoctial; but they divide the Day and Night each into thirty Parts, call'd *Pays*. And, having no Clocks or Sun-Dials, they divide Time by a little Copper Diſh, with a ſmall Hole in the Bottom, and it is ſo contrived, that being ſet upon the Water to ſwim, the Water comes in at the ſmall Hole, and it juſt takes in as much in a *Pay*, or the thirteenth Part of a Day as will ſink it, and when it ſinks they immediately take it out, and ſet it on the Water again, to meaſure another *Pay*, &c.

Phyſick. They have no great Skill in Phyſick, any otherwiſe than what is known to almoſt every Body; they know of ſome Herbs, Barks of Trees, &c. in the Woods, with which they purge and vomit, as they find Occaſion; they have alſo Cures for Green Wounds, and even for the biting of Snakes if apply'd in Time; they have Antidotes againſt Poiſon. The moſt prevailing Diſtempers here are Agues, Fevers, Bloody-Flux, and Small-Pox They never bleed except with Leeches, as was hinted above, when treating of Animals in the third Chapter.

Hiſtory. Their Hiſtories conſiſt moſtly of Accounts of their (now) Deified Heroes, which they think are removed to Heaven, and do make the Objects of their Worſhip. Their Records are kept in the *Bramins* Language, and therefore the People are entirely ignorant of them, except ſo much as is communicated to them in Songs and Ballads, which they frequently ſing and repeat at their common Labour, and with ſuch a Grace and Tone, as makes Strangers believe they are Pſalms or Divine Songs.

Modern Hiſtory. But to come down to their Modern Hiſtory: The *Portugueſe* were the firſt *Europeans* that we hear of that diſcover'd this Iſland, which was about the Year 1505, but they did not ſettle a Trade and Factories here till about 1517, and about 1520 they built a Fort near *Columbo*, at which the King being alarm'd, laid Siege to it; but they being too ſtrongly fix'd for him to remove them, they came to a Treaty; which at firſt amounted no higher than that the King ſhould deliver them a certain Quantity of Cinnamon at a certain Price, both which were determin'd and agreed upon; but the *Portugueſe* encroach'd upon this Contract, and in a ſmall Time it amounted to that, that they would not ſuffer him to ſell any Cinnamon to any *European*

but themſelves; and indeed if they gave him a Market-price, both Parties were Gainers, for the *Portugueſe* engroſs'd all that advantageous Trade to themſelves, and the King had a ready Market for his Cinnamon; and this mutual Correſpondence continued many Years, till the *Portugueſe* growing rich, grew alſo inſolent; and then the *Dutch* General *Spilbergen* arriving on the Coaſt, the King entred into a Treaty with him for his Defence againſt the Inſults of the *Portugueſe*. This was tranſacted in the Year 1602.

But *Sebald de Weert*, the *Dutch* Admiral that was to aſſiſt the King againſt the *Portugueſe*, did, according to the wonted Generoſity of the *Dutch*, uſe the King more like a Slave than a Sovereign as far as lay in his Power, which ſo incens'd the *Ceyloneſe*, that they cut the *Dutch* Man to Pieces, which put an End to his Inſults for that Time; and the *Dutch* finding the Want of the Cinnamon Trade, feign'd a Submiſſion, by Letters in the Name of Prince *Maurice*, and the States of *Holland*, to propoſe an Alliance with the King of *Ceylone*; which Alliance, offenſive and defenſive, was concluded in the Year 1613; and therein the King obliged himſelf not to diſpoſe of his Cinnamon, Pearls, or Precious Stones to any *European* but the *Dutch* only, and allow'd them to build a Fort at *Trinquemale*; but when they had done that, the *Portugueſe* ſoon beat them out of it, and maintain'd their Poſſeſſion and Trade there till about the Year 1636. Whereupon the King invited the *Dutch* to his Aſſiſtance againſt the *Portugueſe*, which they hearing of, and expecting to be defeated, burnt the Capital City of *Candy*, and plunder'd it, but in their Retreat were attack'd by the King's Forces, and all cut to Pieces.

The Power and Intereſt of the *Portugueſe* thus weakening and decaying, the *Dutch* took the Advantage of it, and beſieged the Town and Caſtle of *Battacalao*, then in Poſſeſſion of the *Portugueſe*, and took it from them, and then renew'd their Treaty with the King; who was glad to treat with them almoſt upon any Terms to revenge himſelf, and get rid of the *Portugueſe*; and ſoon after this the *Dutch* took the Southermoſt Settlement in *Ceylone*, call'd *Point de Galle*, from the *Portugueſe*, and alſo the Town of *Caleture*; this was in the Year 1655; and they, jointly with the King's Forces, took *Columbo*, in the Year 1656; of which, and how ungratefully and unjuſtly they ſerv'd their dear Ally the King, we have already in the firſt Chapter given an Account.

The *Dutch* having thus plunder'd the King's Dominions, and drove him into the Mountains, as obſerved in the firſt Chapter above-mention'd, he was ſo exaſperated that he now invited the *Portugueſe* to his Aſſiſtance againſt the *Dutch*, ſo that he might now be call'd rather the Balance of Power, than abſolute Monarch in the Iſland; for between the two Parties, the *Portugueſe* and the *Dutch*, who were contending for what neither of them had any Right to, to whoſe Side ſoever the King took, was ſuppoſed to be the ſtrongeſt Party, and now he with the *Portugueſe*, though not ſtrong enough to extirpate the *Dutch*, yet they frequently ſally'd out upon their Cinnamon Gatherers, deſtroy'd and plunder'd them, and diſappointed the *Dutch* of the Stocks of Cinnamon that the Gatherers ſhould have brought down.

But the *Dutch*, who underſtood Flattery as well as Cruelty, and never fail'd to uſe which beſt ſerv'd their Turn, begun to court the King's Friendſhip again, ſending him rich Preſents, and abundance of Excuſes for their late Conduct; and when that would not do, they ſent Ambaſſadors to him, who try'd all means, both by Flattery and Threats, to bring him to a Reconciliation; but he remain'd as obdurate as they had been perfidious, and was ſo far from being prevail'd upon, that he detain'd their Ambaſſadors Priſoners, to ſhew his Reſentment of their former unjuſt Practices.

The firſt Ambaſſador that they ſent, being detain'd Priſoner ſeveral Years, at laſt engaged in the King's Service, thinking thereby to get an Opportunity to betray his Councils to the *Dutch*, which the King not preſently miſtruſting, preferr'd him to a Place of Truſt, which was what he wanted, and made ſome Progreſs in his Treachery, but was betray'd by a Letter ſent him from *Holland*, and intercepted by the King, in which they thank'd him for diſcovering to them a certain Enterprize that the King was about, upon which the King order'd him immediately to be put to Death.

The *French* obſerving the vaſt Advantage that accru'd from the Cinnamon Trade to the *Dutch*, and finding that there was no good Underſtanding between the King of *Ceylone* and them, they fitted out a Fleet of fourteen Sail, under the Command of Captain *De la Hay*; on board of which they ſent an Ambaſſador, with a full Power to ſettle a Treaty of Commerce between the two Kings of *France* and *Ceylone*; the Fleet arrived at *Trinquemale* in the Year 1673, and from thence three Gentlemen were diſpatch'd to the King to give him Notice of their Arrival. Theſe were very ſplendidly entertain'd at Court, and as Tokens of a kind Reception, were every one preſented with a Gold Chain, a Sword inlaid with Silver, and a Gun, and ſo diſmiſs'd to go down to their Fleet to give Account of what Treatment they had met with. The Fleet being bound to the Continent of *India*, the Ambaſſador with ſix Attendants went to Court, thinking to ſtay there till the Fleet return'd; the King continued ſo generous to them, that he not only ſent great Quantities of Proviſion aboard the Fleet, but aſſiſted the *French* in building a Fort at *Trinquemale*; thinking he had now met with an *European* Ally, who, with his own Forces, would be a ſufficient Defence againſt the Encroachments of the inſatiable *Dutch*. But whether the *French* Fleet were deſtroy'd by the *Dutch*, or whatever other Accident happen'd, Captain *Knox*, who was upon the Iſland from before the Time of their Arrival till a great many Years after they ſail'd, aſſures us that they never return'd, and the *Dutch*, to whom nothing came amiſs that they could catch, ſoon made themſelves Maſters of their new Fort.

French Ambaſſador's Ambition.

The Ambaſſador, as if he had forgot whoſe Country he was in, began to put on ſo many *French* Airs, that his Behaviour was reſented at Court, and inſtead of Friends, made them Enemies; for he, either ignorant of the Cuſtoms of the Court, or by an unguarded Ambition, reſolved to act in contempt of them, rode on Horſeback from *Trinquemale*, a Privilege the King never allows any Man; but that was wink'd at, and Orders ſent to meet him upon the Road, for him to remain there till a Houſe was provided in the City for his Entertainment; and when it was ready he had Notice given to come to the City, ſeveral Noblemen coming to meet him, and to aſſiſt in bringing his Preſent to the King; but notwithſtanding the former Affront in coming ſo near the City on Horſeback, he would not be diſſwaded from entring the City in the ſame State, and rode up by the Palace Gate, though it is reckon'd the higheſt Inſult to an Eaſtern Prince to approach his Gate without the moſt profound Reverence; however, no Notice was at that Time taken of it, but he went to his Houſe without Interruption, and was generouſly entertain'd with Proviſions ſent him from the King's Palace three times a Day.

When the Time appointed for his Audience was come, ſeveral of the Nobility and great Officers [illegible] waited on him to Court; and when he came there, and not having an immediate hearing, he began to ſtorm,

ſtorm, and notwithſtanding all the Repreſentations made to him, nothing could pacify him, but he would return to his own Houſe; to prevent which, and his thereby affronting the King, they placed Elephants in his Way to prevent his return; but his *French* Ambition being reſolute, he laid his Hand upon his Sword, and gave them to underſtand that he would not be interrupted by them; which Inſult being reported to the King, he order'd him and his Retinue to be ſeverely beaten, and laid in Irons, and though he ſoon releas'd the reſt, yet he kept the Ambaſſador in Chains ſix Months; his Attendants were ſuffer'd after their Releaſement to live every one in his own Houſe, and to follow their reſpective Buſineſs; but whether ever that imprudent *French* Ambaſſador was releas'd is uncertain, and the leſs probable becauſe their Fleet never return'd from the Coaſt of *Cormandel*, nor did they ever recover the Fort of *Trinquemale* from the *Dutch*.

Captain *Knox*.

THE Nature of Travelling in this Country, and their Uſage of Strangers, may pretty well be accounted for in the following Relation of Captain *Knox*; who ſail'd from the *Downs* in *January* 1657; and being in the Road of *Meſulapatan* in *November* 1659, they were ſo diſabled by a Storm that they were forced to go into the Harbour of *Trinquemale* to refit; where they were a little jealous of the Inhabitants at firſt, but finding a free Commerce with them, and that they ſupply'd them for their Money with what the Country afforded, they thought themſelves welcome and ſecure.

Engliſh Captain ſeiz'd.

THE King hearing that there was an *Engliſh* Ship in the Bay, ſent a Preſent to the Captain, with an offer to ſupply him with Proviſions; upon which Encouragement the Captain, with his Son and fifteen or ſixteen more, went aſhore, but they were all made Priſoners, and the Captain was commanded to order his Ship up the River; the Captain pretended to ſend two Men to his Chief Mate with that Order, but inſtead thereof order'd his Mate (by the ſame two Meſſengers) to take care of the Ship, and ſtand in his own and the Ship's Defence, let what would be the Conſequence.

THE Ship not being brought up the River according to the King's Orders, the Reaſon was enquired into, and the Captain alledged in his own Defence that his Men would not obey his Orders; whereupon the Captain was order'd to ſend his Son to the Chief Mate with the aforeſaid Command, to bring the Ship up the River. The Captain ſent his Son to the Chief Mate, but (inſtead of the King's Orders,) he commanded the Mate to take care of the Ship, and go to the Coaſt of *Cormandel*, and ſhift for themſelves, only deſiring his Son, who carried the Meſſage, to return to him again, which he did. And after a ſmall Time the Captain, his Son, and the Sailors were convey'd into the Mountains, or Kingdom of *Conde Uda*, and there every one quarter'd in a different Village, except the Captain and his Son, who reſided together, and had Victuals brought to them, ſuch as the Country afforded.

Captain *Knox* die.

BUT the Country being very ſickly, and infeſted with a Sort of an Epidemical Diſtemper, though of the Nature of an Ague and Fever, both the Captain and his Son fell ſick of the ſame; the old Gentleman dy'd, but his Son, being pretty well recover'd, wrapp'd him up in his Cloaths and the Matt he lay upon, and bury'd him by the Side of a Wood, near the Village of *Boudecoos-wat*, about the Middle of the Iſland.

THE reſt of the Captain's Crew that were ſingly lodg'd at ſeparate Houſes, were every one removed every Day, ſo that no one continued two Days in the ſame Houſe; though afterwards they had more Liberty, and were ſuffer'd to go from one Village to another; and indeed they might well enough allow them that Liberty, for they were ſo far from the Sea Side, and the narrow Paſſes of the Mountains ſo ſecurely guarded, that it was next to impoſſible that they ſhould eſcape; nor were they very uneaſy in their preſent Circumſtances, for their Allowance from the King was more than they could eat by one half, ſo that they could afford to ſell the other half to help to buy them Cloaths, and to this adding their own Induſtry in knitting of Caps, which Neceſſity, the Mother of Invention, put them upon learning, they began to be worth a little ready Money.

AS their Acquaintance and Intereſt increas'd, they gain'd ſtill more Privilege, and were permitted to live every one in a ſeparate Houſe of his own; and then ſome follow'd Husbandry, ſome diſtill'd Arrack; and ſo, whatever Goods they could find vent for, and had the proper Ingredients for making up, they had the Liberty to trade in, and to keep Geeſe, Hogs, and Poultry about them for their own private Uſe; till at laſt Captain *Knox*'s Crew were all ſent for to Court, where they found other *Engliſhmen*, who had been caſt away upon the Iſland, and were made Priſoners as well as themſelves.

BUT in the Year 1664, Sir *Edward Winter*, Governor of *Fort St. George*, ſent to the King of *Ceylone* to demand the Releaſe of the *Engliſh* Captives; but though the King promiſed it to the Governor, yet he conceal'd it from the Priſoners, and uſed all poſſible Means to induce them to engage in his Service, which they refuſed. And in the mean Time there happen'd a Rebellion at *Candy*, and the King's Palace was attack'd, and by this Combuſtion the *Engliſh* Priſoners were neglected, and they left almoſt ſtarving; but when the Rebellion was ſuppreſs'd, they were all reſtored to their former Allowance and Privileges; and ſome of them ſettled with ſo much Satisfaction, that they married and had Children; but Mr. *Knox* and his Companion kept ſingle, always meditating an Eſcape, and reſolved to make uſe of the firſt Opportunity that offer'd for that Purpoſe; and, rather to prevent Suſpicion of a Deſign to eſcape than to procure a Settlement, Mr. *Knox* purchas'd a Piece of Land, which ſo much rivetted the People and the Government in an Opinion of their Willingneſs to remain in the Country, that he and his Mate were now ſuffer'd to travel where they pleas'd, without any Suſpicion.

Set up Peddling.

AFTER this, to give a better Sanction to their pretence of travelling, they ſet up a kind of a Peddling Trade, buying Goods in one Part of the Country, and carrying them to another to ſell, hoping by this Means to ſlide down to the Sea-Coaſt and ſo make off; and knowing that the Paſſes towards the North were the leaſt guarded, they purchas'd a little Cargoe of what was moſt wanted there, and of light Carriage, as Tobacco, Pepper, Cutler's Ware, and the like; but they having diſpoſed of all their Stock before they got out of the Country of *Conde Uda*, or the Mountainous Country, to which the King is now reduc'd, they had no pretence of travelling further, and ſo to avoid Suſpicion, they were forced to return.

NINE or ten Times, by one Diſappointment or other, they were thus obliged to return; however, their frequent coming back gave the Government an entire Confidence in them. And all Suſpicion of running away being now quite wore off, they were reſolved once more to puſh for it, and directed their Courſe towards *Annarodgburrow*, a Town in the Northermoſt Part of the King of *Candy*'s Dominions, where they found a River, which, as they knew that all Rivers run into the Sea, and that very poſſibly there might be a Harbour at the Mouth of it, and perhaps ſome Shipping that might contribute to their Eſcape, they accordingly came down to the Sea, and it happen'd

happen'd to be the River *Molwat*, which falls into the Sea on the northweſt Part of the Iſland, near the Iſland and Port of *Manar*; where being come, they were kindly receiv'd by the *Dutch*, to whom it belongs, and who afterwards gave them their Paſſage to *Columbo*; where the *Dutch* Governor was very inquiſitive about the Forces and Policy of the King of *Candy*, in which having reſolv'd him as well as they could, they were ſent to *Batavia*, where meeting with a Fleet ſailing for *England*, they embark'd aboard, and after above twenty Years abſence, return'd once more to their Native Country. They arrive at home.

CHAP. V.

Of the Prince's Court, his Forces, Revenues, Laws, and Puniſhment; with their Coins, Weights, and Meaſures.

THE Palace of the King of *Candy*, or *Ceylone*, is contrived more for Security than Beauty; it is built in the moſt inacceſſible Part of the Mountains, the Place, or what may be call'd the Palace, is wall'd round; but the Rooms and Apartments are promiſcuouſly plac'd, being neither regular nor contiguous; the King's own Apartments are not diſtinguiſh'd, nor is it known in which Apartment he lies. He is ſo jealous of his own People, that his Guards immediately next to his Perſon are *Negroes* or *Coffres*, who are not only immediately about his Perſon, but he ſends them down as Spies at uncertain Times to watch if the Officers and Centinels be upon Duty.

Attendance. He is attended chiefly by beautiful young Boys, who are taken up and ſent to Court, as they do young Girls, which they pretend are to ſerve as Cooks to dreſs or to ſerve up his Victuals, but when they come there they ſerve as Concubines; the *Portugueſe* Women (Maids or Wives) are ſometimes ſent for upon the ſame Account, and thoſe immediately call'd in that he has preſent Occaſion for, and the reſt put up till call'd for.

Guards. He has a very numerous Guard, and in them both *Dutch* and *Portugueſe* Companies, under the Commanders of their reſpective Countries; they are obliged to aſſemble upon the leaſt Notice, which is often given when he has no Deſign of going abroad, to ſee in what readineſs they will be upon any Occaſion and ſo ſmall a Warning.

Addreſs. When a Subject comes into his Preſence, he falls three Times upon his Face, and then does not ſtand, but ſits upon his Legs, and gives him almoſt divine Titles, as, *May your Majeſty be a God*, &c. and to make the greater Diſparity between him and them, they call themſelves the Limbs of Dogs, or ſome contemptible Animals, as not worthy to approach him, and when they go out of his Preſence they creep backwards till they are out of Sight. No Courtier in waiting is allow'd to come near his Wife or any other Woman during that Time.

Prerogative. This King is abſolute, and acts without Reſtraint. All the Lands are holden of him, but by different Tenures; ſome hold for ſo much Service in the War, ſome for ſuch a Time of Labour, ſome give him ſuch a Quantity of the Product or Manufacture of their Land in lieu of Rent; ſome Villages and Land he retains entirely in his own Poſſeſſion, allowing the Husbandman that he employs a yearly Stipend for cultivating and improving them, and theſe may properly be call'd his own Demains; but ſome Lands are hereditary, and deſcend in the ſame Line, only paying the Tax or Acknowledgment impoſed, as in *England* and other Places.

Revenue. They that hold their Land immediately of the King, bring their Rent to Court three Times a Year; and all the Officers in the Government make Preſents to the King every New-Year's-Day according to their different Stations, ſome of precious Stones, others of Gold, others of Plate, Calicoe, &c. and ſome, but very few, bring Money, but that is ſcarce. The Jewels are the moſt acceptable, and are moſt commonly uſed as Preſents when People of a ſuperior Rank are in purſuit of Preferment; and when the Exigencies of the Government require an extraordinary Supply, as in the Caſe of War, or Rebellion, or the like, if he demands even all the Produce of their Lands, or other Incomes, they dare not reſiſt him.

Forces. He has no ſtanding Troops, but the Soldiers that hold their Land by Military Tenure, or doing ſo much Military Service for their Land as above-mention'd, mount Guard by Turns, and are as numerous as our Militia; the Generals are always upon Duty; the Forces are moſtly on Foot, there being no Horſes here but what are imported hither from other Places. He never truſts one General with the Command of his whole Army, which has been of great Advantage to the *Dutch* in their Wars with him, for although his whole Army at once might have cruſh'd them, they could cut down his ſeparate Companies one after another, and by degrees deſtroy them all; but he is ſo jealous of his Subjects, that he is afraid if he ſhould give the Command of a whole Army to one Man, that General might ſet up for himſelf againſt his Maſter, and be too ſtrong for him too.

Arms. The Arms of the Soldiers are broad Swords, Bows and Arrows, Pikes and Muskets, and ſome little Field Pieces; their Tents are cover'd with Tallipot Leaves; they have no Carriages for their Proviſions, but every one carries his own, and when as much as they could carry is ſpent, they go to ſeek more, ſo that by the Time the Army has been a Month in the Field, their Proviſion is gone, and they diſperſed about the Country to ſeek more.

Laws. They have no other Laws but the arbitrary Will of the Prince, who reſerves to himſelf the Prerogative of inflicting Puniſhment for capital Crimes, not entruſting any of his Governors with that Power; he has no regular Forms of Trial, but if upon the ſlighteſt Evidence he thinks a Perſon guilty, he condemns him; whether Life or Eſtate, or both be concern'd, if Death is the Puniſhment, the Manner of Execution is moſt commonly being trod to death with Elephants; ſome are impal'd, or, if guilty of Treaſon or Conſpiracy againſt the King, his Fleſh is tore off with red hot Pincers; and ſometimes, when the Crime is Capital, not only the Criminal ſuffers, but his Father, or Brothers, &c. participate of the Puniſhment, by being ſent into Slavery, or the like.

Succeſſion. The Succeſſion is hereditary, except when the reigning Prince ſettles it in his Life-time; for he has a Power to ſettle the Succeſſion upon any of his Sons, or to divide the Kingdom amongſt them if he thinks fit.

Coin. They have but little current Coin, but more commonly barter one Commodity for another. The *Portugueſe* coin'd ſome Pieces which they call'd *Tan-*

gam-

gum-Maſſa, worth about nine Pence, which ſtill paſs current in the Country; there is alſo a Piece like a Fiſh-hook, made by the common People, of finer Silver than Dollars; but the King coins one ſort of Money himſelf, ſeventy five of which makes a Piece of Eight, and it is a Capital Crime for any Perſon to counterfeit it.

Weights. THEIR ſmalleſt Weight is a *Collonda*, ſix of which weighs a Piece of Eight, and twenty *Collonda's* make a Weight call'd a *Pollam*. Their long Meaſure for Cloth is the Cubit. Their Corn Meaſure is the *Potta*, which is as much as a Man can heap upon the hollow of the Inſide of his Hand; and four of theſe *Potta's* is a Meaſure call'd *Bonder-Nellia*, or the King's Meaſure. Four Meaſures is a *Courney*, and ten *Courneys* is a *Pale*, four *Pales* is an *Ommounas*, by which they reckon their Stock or other great Quantities of Grain. Their Uſurers are as covetous and over-reaching as ours in *England*, and for that Reaſon their Meaſures are contriv'd too large rather than too ſmall, becauſe theſe covetous Extortioners take Corn by the Meaſure for Intereſt for the Money they lend.

CHAP. VI.

Of their Religion, Idols, Temples, and ſolemn Feſtival; with their Marriages, Women, Children, and Funerals.

Worſhip. THE *Cynglaſſes* or Natives worſhip one Supreme God, as Creator of all Created Beings, but they fall down before the Images of their Saints and Heroes, who have lived on Earth, and whom they now ſuppoſe to be Angels or Miniſtering Spirits to the ſupreme Deity: but the Principal of thoſe inferior Deities is their God *Buddou*, who (as they believe) came from Heaven to procure eternal Happineſs for Mankind, and when that was done, aſcended into Heaven from a Hill in *Ceylone* called *Adam's Mount*. It is ſhap'd like a Sugar-loaf, and on the Top there is a little plain flat Rock, with a Print upon it in ſhape like a Man's Foot, but larger, being about two Foot long; this is ſuppoſed to be the laſt Place that ever he ſet Foot upon on Earth, and that when he aſcended into Heaven the violent Spurn which he gave made that Impreſſion in the Rock. It is cuſtomary for the Natives to come in Pilgrimage every Year, as ſuppoſing it to be a meritorious Act. They alſo worſhip the Sun, as likewiſe the Moon and other Planets. They have alſo their Houſhold Gods, for whom they erect little Chapels, placing Lamps, and ſtrewing before them, and offering Rice and other Food to them as Mediators, and addreſs them as ſuch at leaſt every Morning, every one making choice of the Deity he moſt affects, or, as ſome ſay, who he moſt fears; as ſuppoſing that God gives Permiſſion to evil Spirits to afflict them, and therefore they worſhip them to pacify them, or that they may not act according to the utmoſt Rigour of their Commiſſion. We do not find that they have any Temples or Prieſts dedicated any higher than to thoſe inferior Deities only, but whether it is owing to their Humility or Superſtition we cannot determine.

Prieſts. THE Prieſts are ſo abſolutely devoted to divine Service, that they are prohibited all ſecular Employments, Women, and Wine, nor are they allow'd to eat more than one Meal a Day; they will have no hand directly or indirectly in the killing of any Animal, that is, they will neither do it, nor (if ask'd) will give their Conſent to it, and yet they will eat Fleſh, except Beef, or ſome particular Sort of Fleſh which is forbidden them. If they do not like the Auſterities they are confin'd to, they may quit the Order when they pleaſe, without any Ceremony, but only pulling off their Prieſt's Habit, and throwing it into the River, and then waſhing themſelves all over, which done they are quite diſcharg'd from the Prieſthood.

Their Privileges &c. THE Clergy, if I may ſo call them, have prevail'd ſo much there, as well as in ſome Chriſtian Countries nearer hand, that if even the himſelf King ſhould call them to an Account for any Crime, he would be look'd upon as an Infidel, or Violator of their Religion; though there have been Kings amongſt them that were not ſo Prieſt-ridden, but that they took liberty to condemn ſome of the Prieſts, and execute them too when found in Arms or Conſpiracy againſt him.

Lower Claſſes. THERE are other Claſſes or Orders of Prieſts, ſome of whhich are allow'd to follow ſecular Employments. When the People bring boil'd Rice and Fruit to the Temple, the Prieſts take it of them, and preſents it to the Idol, and when it has ſtood ſome Time, they bring it out again, (for their Idols cannot eat any more than the Idols of other Countries,) and then the other Servants of the Temple and other poor People eat it up; but they never ſacrifice any Fleſh to theſe Idols.

THEY never aſſemble publickly for divine Worſhip, except at ſolemn Feſtivals, but at other Times every one goes to the Temple when his Neceſſities require it, and to that Temple and Idol where he believes his Neceſſity is moſt likely to be ſupply'd; but Wedneſdays and Saturdays they eſteem the moſt propitious Days for them to apply to their Deities.

One Feſtival. THEY have one ſolemn Feſtival either in *June* or *July*; it begins at the New Moon, and continues till the Full Moon, during which Time there are in the principal Cities a great Number of Elephants ſplendidly accoutred, and hung with Braſs Bells; theſe march round the City, and through the principal Streets, and after them come People dreſſ like Giants, in Memory of thoſe that they think formerly inhabited the Earth; then follows Muſick and Dancing, in ſeveral Companies; then comes Women of the beſt Quality, three a-breaſt, with Flags and Pendants; and after them the Generals, with the Troops, and the great Officers of State cloſe the Proceſſion; and this they repeat twice every twenty four Hours, *viz.* once by Day and once by Night, all the Time from the New Moon to the Full.

Sacrifices. THEY offer Sacrifices of Rice and Fruit to their God *Buddou*, and on their New-Year's-Day they perform a ſolemn Feſtival to him; but this is not done in his Temple, but on the Top of *Adam's Peak*, where he left the Print of his Foot as before mention'd, or elſe under a ſacred Tree (as they think it) which ſtands at *Anuradgbouro*, a Place in the North Part of the King's Dominions; under this Tree they ſay their God *Buddou* uſed to repoſe himſelf.

Images. THEY have Images of various and monſtrous Shapes, but the Images of *Buddou* are in the Shape of

of Men ſitting croſs-legg'd in yellow Coats. They have abundance of Idol Temples all over the Country, ſome of hewen Stone and excellent Workmanſhip. They have been built by People of ſome other Nation, or elſe a very long Time ago, for the preſent Inhabitants are ſo far from being able to imitate their excellent Architecture, that they cannot ſo much as repair them where they fail, after the ſame Manner as they were firſt built; but it is rather conjectured that theſe fine Pieces of Workmanſhip were built by the *Chineſe*, when this Iſland was a Province of that Empire, for they have a Tradition that it was formerly ſo, and it is natural to ſuppoſe that they who could build the *Chineſe* Wall above twelve hundred Miles in Length, could eaſily manage any of the Structures that are to be ſeen in *Ceylone*.

Temples.

THERE are ſeveral of the Race of the *Portugueſe* who profeſs Chriſtianity, and other *European* Nations are allow'd the free Exerciſe of their Religion; but there are no Chriſtian Churches in the Kingdom of *Conde Uda*, but down towards the Coaſt, that being the chief Settlement and Reſidence of the *Portugueſe*, *Dutch*, and other *European* Chriſtians.

THEY follow the ſame Cuſtoms as in other Parts of *India*, for the Parents make the Match before the Parties know any thing, always taking care that they be of the ſame Caſt or Tribe; when they are ſuppoſed to be old enough to cohabit together, the Man brings or ſends a Piece of Calico to his Spouſe, of ſix or ſeven Yards long, and with this Difference, that if he carry it himſelf, they ſleep together that Night, and appoint the Time for performing the Nuptial Ceremony. The Evening before he takes her from her Father's Houſe, he comes thither with his Friends, bringing Sweetmeats and other Proviſion with him, and they have a Supper ſuitable to their Condition, and the next Day they have a Dinner; after which they form a kind of Proceſſion from the Wife's Father's to the Husband's Houſe, the Wife always going before the Husband; and ſome Time after they are ſettled, the Relations viſit them, but bring Proviſions with them, and they rejoice together; but the Prieſt has no Hand in the Marriage, nor are they by theſe Contracts ſo faſt bound, but that if either Party diſlike the other's Temper, they may part, and match again if they pleaſe; only when they do ſo part, the Man muſt return to the Woman's Parents what he had with her, or an Equivalent; and if they have Children, the Man has the Boys, and the Woman the Girls.

Marriages.

THE Women have no Midwives at their Labour, only the neighbouring Women are called to aſſiſt; and as ſoon as the Child comes into the World, the Aſtrologer is immediately conſulted, and if he ſays it is born under a lucky Planet, they keep it; but if not, they give it away, (if any body will take it) ſuppoſing it may be fortunate to another though not to them; but if no body will accept of it, they expoſe or ſtarve it, or throw it into the River; and under the Pretence of their being born under an unlucky Planet, ſome that are afraid to have a Charge of Children, deſtroy them to ſave the Expence of bringing them up. They diſtinguiſh them by Names when they are young; but as they grow up, and are capable of Buſineſs, they loſe thoſe Names, and are called by the Place where they live, or the Buſineſs they follow, or the like.

WHEN a Perſon of Diſtinction dies, they lay out and waſh the Corpſe, and lay it upon a Bier, and being cover'd with a Linnen Cloth, they carry it out to ſome high Place, and burn it; but if he is an Officer, they muſt not do that till they have an expreſs Order from the King, and in that Caſe they hollow the Body of a Tree, and having taken out the Entrails, and embalm'd the Corpſe, they put it into the Cavity, and fill up the Vacancy with Pepper, and bury it in the Houſe till the King's Order comes to burn it.

Funerals.

WHEN the Order comes for burning it, the Corpſe is laid upon a Pile of Wood, about three Foot high, and more Wood laid upon it, and if it be a great Perſon there is an Arch built over it, with Colours, Flags, and Pendants, which are all conſum'd with the Corpſe in the Fire; and when they have ſwept the Aſhes up together, they build a Fence about them, and make a Sort of an Arbour over them, to preſerve them as Monuments to the Memory of the Deceas'd. But for the poor People that cannot afford ſo much Ceremony, they wrap them in the Matts they uſed to lie upon, and bury them any where in the Woods, laying their Bodies Eaſt and Weſt, as the Chriſtians do in *England*.

Burning the Corpſe.

SOME Time after this burning or burying, the Prieſt is ſent for to the Houſe of the Deceas'd, to ſing Anthems, and pray for the Repoſe of the Soul; the Women carelеſly undoing their Hair and wringing their Hands, uſe all poſſible Expreſſions of Sorrow for the Death of the Deceas'd, the Men at the ſame Time groaning as if their Hearts would break. But however ſincere this may be, the Widows ſoon marry again, if they can meet with an agreeable Match.

THE

A

DESCRIPTION

OF THE

MALDIVIA Islands.

Extent and Situation.

THE *Maldivia* Islands extend North West and South East, from about seven Degrees of North Latitude, to about one or two South; the Southermost end of them being near the same Longitude with Cape *Comorin*; but we need not be particular as to their Situation, because they will be included in the Map of the Western half of *Asia*, which we shall publish with the Conclusion of the Description of that Quarter of the World.

AUTHORS differ in the Number of them, which I suppose is owing to their different Opinions as to what they call an Island; for if they were to reckon every little Rock for an Island, they are reckon'd to amount to above twelve thousand; but if we reckon none into the Number but what may properly be call'd Islands, they are generally computed to the Number of about a Thousand. These Islands are commonly surrounded with Sands or sunken Rocks, that, except in three or four Places, they are not accessible by Sea, it being frequently observed, that where the Land is low, and the Shore shelving, as is the Case in these Islands, the Water is also shallower than where the Land is high, and the Shore bold.

Monsoons and Season.

WE need not enlarge upon any Account of the Monsoons and Currents, for both, as well as the Seasons of wet and dry Weather, are the same as upon the Coast of *Malabar*; for although the *Maldivia*'s lie under the Equinoctial, and in less North Latitude than any Part of *India*, yet as the Wind blows out of the South West when the rainy Seasons come, the *Maldivia*'s have the Rains at the same Time, if not sooner, than the Coast of *Malabar*, for the same Reasons that the Coast of *Malabar* has them sooner than that of *Cormandel*.

Whence peopled.

THIS Country was probably peopled from *Arabia*, because the Natives are of the same Complexion, and their Religion is Mahometanism, as the *Arabians* are; and this Conjecture is corroborated, if we consider that *Arabia* is the nearest Land to them, except *India*, or the Island of *Ceylone*, both which Countries differ from the Natives of *Maldivia* both in Complexion and Religion, the *Indians* being of much the darker Complexion, and their Religion Paganism.

Government.

THEY are all under the Government of one Prince, who has his Court, or Place of Residence, upon the Island *Mala*, the chief of these Islands, and from whose Name they derive the Title of the *Maldivia* Islands; but they are divided into thirteen Provinces. The Channels between many of the Islands are very narrow and shallow, in some Places not a Stone's-cast over, nor Knee deep; the Land low, and yet many of them barren and uninhabited, and those that do produce any thing, bring neither Rice nor any sort of Corn; but what they excel in, and which is their chief Subsistence, is the Cocoa-Trees, which furnish them with Meat, Drink, Cordage, and Timber, and many other Uses, as has been already treated of in the Description of other Countries, when speaking of the Cocoa-Tree.

Blackamoor's Teeth.

IT is here they take up the little Shells, call'd Blackamoors Teeth, of which there are vast Numbers, which serve by Tale instead of Money, to purchase small Trifles, almost all over *India*. Here is plenty of good Fish, which with their Roots, and what they produce from the Cocoa-Nut, instead of Bread, is their common Food, for they have little or no Flesh, but get some small matter of Rice from *Bengall*, in exchange for their Shells They find some small matters of Ambergrease, but neither of that, nor any thing else that is valuable, is there a sufficient Quantity to induce any *Europeans* to fix a Colony, or to settle and trade amongst them; and as these Islands have neither Trade nor Product that is worth Notice, it will be needless further to enlarge upon a Description of these Islands.

A DESCRIPTION OF THE Empire of *PERSIA.*

CHAP. I.

The Situation and Extent of this Empire, with its Diviſion into Provinces; alſo of the Air, Climates, and Seaſons; and an Account of the Rivers, Seas, and Iſlands, belonging to Perſia.

THIS Empire is, by all *Engliſh* Authors, call'd *Perſia*; but though they all agree in the Name, yet they differ in the Original and Derivation of its Name; ſome will have it derive its Name from one of its Provinces, call'd *Perſis*, or from *Perſepolis*, the Capital of this Province; others rather think it is from *Perſeus*, the Son of *Jupiter* and *Danae*; others from *Perſes*, a Nobleman of this Province, who rais'd himſelf to the Throne by his extraordinary Merit; but we ſhall leave all Perſons to judge for themſelves, and ſatisfy our ſelves with a Deſcription of it under the known Name of *Perſia*.

Bounds. *Perſia* is bounded with *India*, or the Mogul's Dominions on the Eaſt; with the Ocean, and the Gulf of *Perſia*, (by ſome call'd the Gulf of *Baſſora*) towards the South; the *Turkiſh* Empire towards the Weſt; *Circaſſia*, the *Caſpian* Sea, and River *Oxus*, towards the North; on the North Side of which is *Uſbeck Tartary*.

Extent The Extent of *Perſia* from North to South, being from Latitude 25 to Latitude 45 Degrees North, is ſix hundred Miles, accounting ſixty Miles to a Degree; and its Breadth, taken in Latitude thirty three, (which is about the middle Latitude of the Body of the Empire) is twenty two Degrees, which taken in that Latitude, is eleven hundred and ſeven Miles from Eaſt to Weſt.

Provinces The twelve Provinces of *Perſia* are, *Choraſſan*, *Sablaſtan*, *Sgiſtan*, *Makeran*, *Kerman*, *Fars*, *Chuſiſtan*, *Curdeſtan*, *Erack-Agem*, *Gilan*, *Aderbeitzan*, and *Shirvan*; of which in Order.

1. *Choraſſan*, including the Diſtricts of *Eſterabad* and *Khomas*, may be called the Northermoſt Corner of *Perſia*, bounded on the North Eaſt by the River *Oxus*, on the North Weſt by the *Caſpian* Sea, on the South by the Province of *Sablaſtan*, and on the Weſt by *Gilan* and *Erack Agem*. 2. *Sablaſtan*, including *Gaur* and *Candahar*, lies to the Southward of *Choraſſan*; and to the Southward of it is, 3. *Sgiſtan*, which again is bounded on the South by the Province of *Makeran*; ſo that theſe four Provinces take up all the Eaſtern Part of *Perſia*, and lie pretty much North and South from one another.

The next Province Weſt from *Makeran*, and on the South Coaſt of *Perſia*, or the Gulf of *Oman*, is *Kerman*, anciently *Carmania*; and to the Weſtward of it, upon the ſame Coaſt of the *Perſian* Gulf, is the Province of *Fars*, or *Farſiſtan*; and the next to the North Weſt of that, upon the ſame Coaſt, and at the Head of the Gulf of *Baſſora*, is the Province of *Chuſiſtan*. The chief Town is *Suſter*, ſaid to be the ancient *Shuſhan*, the Palace where King *Ahaſhueras* made his magnificent Feaſt at his eſpouſing Queen *Eſther*: There is alſo *Elmais* and *Banderick*, now ſmall Towns on the Coaſt of the *Perſian* Gulf.

To the Northward of *Chuſiſtan* is the Province of *Curdeſtan*, or *Aſſyria*, the Weſtermoſt Part of which belongs to *Turkey*, and the Eaſtermoſt to *Perſia*; and to the Eaſtward of *Curdeſtan*, in the Heart of the Country of *Perſia*, and between the Provinces of *Curdeſtan* and *Choraſſan*, is the Province of *Erack-Agem*, or the ancient *Parthia*, now *Parthia.* the principal Province of the *Perſian* Empire, being almoſt in the Center of it, and of a large Extent, and the Province where the Capital City of *Iſpahan* is ſituated. This great Province is bounded by *Aderbeitzan* and *Gilan* (or the ancient *Hyrcania*) on the North, *Choraſtan* on the Eaſt, *Farſiſtan* and *Chuſiſtan* on the South, and *Curdeſtan* on the Weſt. *Iſpahan* (the Metropolis of *Perſia*) is in *Iſpahan.* Latitude 32, 40 North, and Longitude 50 Degrees Eaſt from *London*. Other Capital Towns are, *Cabin*, anciently *Aſtaria*, in about Latitude 36, and North Weſt from *Iſpahan*; *Hamadan*, *Sava*, and *Com*, between *Cabin* and *Iſpahan*; alſo *Kaſhan*, North, and *Yeſd*, Eaſt from *Iſpahan*.

Gilan, or the ancient *Hyrcania*, is bounded on the *Gilan.* North by the *Caſpian* (or by ſome called the *Hyrcanian*) Sea; *Choraſſan*, or *Bactria*, on the Eaſt; *Erack-Agem*, or *Parthia*, on the South; and *Aderbeitzan* on the Weſt. The chief Towns are, *Gilan*, in 38 Degrees of North Latitude, and two hundred Miles Eaſt from *Tauris*; and *Mezanderan*, two hundred Miles further Eaſt; and *Aſterol*, within two Miles of the *Caſpian* Sea.

Aderbeitzan is the South Part of the antient *Media*, adjoining to the *Caſpian* Sea; its Capital is *Tauris*, ſuppoſed to be the ancient *Ebatana*, formerly the Seat of the *Median* and *Perſian* Monarchs, a Place of great Antiquity and Magnificence; it is in the thirty ninth Degree of North Latitude, and is about four hundred Miles North Weſt from *Iſpahan*, alſo *Ardevil*, thirty Miles Eaſt from *Media* an

from *Tauris*; and *Sultania*, South East from *Tauris*, and in Latitude 36, 30 North.

Schirvan. *Schirvan*, including *Dagistan* and the *Persian Georgia*, and *Armenia*; it lies to the Westward of the *Caspian* Sea, and South East from the *Black* Sea. In this Province is the noted City of *Derbent*, upon the Coast of the *Caspian* Sea, and in 42 Degrees of North Latitude. There is also *Schamakie* and *Baku* upon the same Coast, and to the Southward of *Derbent*. In this Province, in Latitude 40 Degrees, and South from the East Part of the *Black* Sea, is the Mountains of *Ararat*, famous for *Noah*'s Ark resting upon them, when the Waters of the Flood abated; and a little to the South East of those Mountains is *Nackschivan*, or *Nazivan*, a Village, or Town, reported to be built by *Noah* when he first came out of the Ark, which Opinion is rather corroborated by the meaning of the Word, which signifies a Station for Ships; for though it is too far from any Sea, or navigable River, to have any Concourse of Shipping, yet it was a Station for his Ship or Ark, from whence she never floated or sail'd afterwards, which might be sufficient to give Name to the Town which he built, where he first fix'd after his Landing from such an uncommon and surprizing Voyage. There are other Places formerly eminent, but reduced to Ruins since the *Armenians*, and with them the chief Trade of the *Persian* Dominions is removed to *Ispahan*, or Places adjacent.

Mount *Ararat*, where *Noah*'s Ark came aground

Rivers. In all the Country of *Persia* there is not so much as one River in the Heart of the Country that will carry a Boat of any Burthen; nay, a Person may travel a great many Days Journey without meeting with any Water in many Parts of *Persia*. The River *Kur*, or antient *Cyrus* and *Aras*, formerly *Araxes*, rise in the Mountains of *Ararat*, and joining their Streams in the Country, fall altogether into the *Caspian* Sea, in near forty Degrees of Latitude, and make the most considerable River in all *Persia*.

Aqueducts. Water being so very scarce in *Persia*, they are very industrious in making Aqueducts, both subterraneous and in visible Channels, and by one means or other, the chief Towns are supply'd with the Streams that issue from the Mountains, and convey'd to Places at twenty or thirty Leagues Distance, and they can turn the Water from one Channel to another, to serve the Inhabitants alternately, as is done by Pipes here in *London*.

Caspian Sea. The *Caspian* Sea, which breaks in upon the North East Part of *Persia*; it is about a hundred Leagues in Length from North to South, and ninety in Breadth, and has near a hundred Rivers runs into it; the chief of which is the *Wolga*, which rises in *Muscovy*, and falls into the *Caspian* Sea at *Astracan*; but though so many Rivers run into it, yet there is no visible Way out of it, and yet it neither overflows its Bounds, nor does it appear higher or lower at one Time than another; but probably it may have a subterraneous Passage into some other Sea, and occasion some of the Currents not hitherto otherwise accounted for.

A new Canal. The late Czar of *Muscovy* attempted a Communication between the *Caspian* Sea and the *Black* Sea, which, when accomplish'd, would open a Passage from *Persia* to the *Mediterranean*; this he proposed to do by a navigable Canal cut between the Rivers *Don* or *Tanais*, which falls into the *Black* Sea, and the River *Wolga*, that falls into the *Caspian* Sea, as above; and this Cut was to be made in about Latitude 50 Degrees, where these Rivers are nearest together; and this was so confidently supposed to be practicable, that this Canal was actually exprest in some of our late Maps, but we having never heard any more of it, there is Reason to believe the Project is suspended at present.

Pearl Fishery. But though, for Reasons above, there cannot be much Navigation on the *Persian* Side of the *Caspian* Sea, yet they improve the Opportunities they have in the Gulf *Bassora*, especially as to the Pearl Fishery, the nature and manner of managing of which we shall explain in *Chap.* VI. wherein we shall give an Account of the Plants, the Sea and Land Animals, and other Product of that Empire, and the adjacent Seas, Gulfs, or Lakes, and the Islands in them, of which *Bahara Island* in the *Persian* Gulf is the chief, or lately was, for the profitable Branch of fishing for Pearl, while the *Portuguese* kept the Island of *Ormus*, as being the Key of the Gulf; but now the Trade is remov'd to *Gombron*, near the entrance of the Gulf, and in Possession of the *Persians*, who are able to command the Gulf, and preserve the Pearl Fishery to themselves, and for this they are beholden to the *English East India Company*, who above a hundred Years ago assisted him to reduce the Island to Obedience to him, and expel the *Portugeuse*, for which the *English* were to have great Advantages in Trade, and half the Customs of *Gombron*; but when the *Persians* had got sure Possession of the Place and the Trade, they found means to quarrel with the *English*, and their stipulated Priviledges dwindled away to nothing, or but to a mere Trifle at best, to what it was by the first Agreement.

CHAP. II.

Gives a Description of their principal Towns; their manner of Building, and the Furniture of their Houses.

Quality's Houses. THE Houses of the Quality, which might otherwise be supposed to be the greatest Ornament to the Cities, Towns, or Streets where they are built, are rather the least, because they are built backwards, and retir'd in a Garden, and make no Appearance in the publick Streets where Travellers frequent; and so fond are they of Retirement, that they have a dead Wall before the House; and if there is a Gate in the Middle, there is also a Wall cross the Gate, and at some Distance within it, by the End of which they rather chuse to go about to the House, than to let a Stranger see any further than the inner Wall or Skreen itself. One would think they need not be at that Pains to hide their Buildings, for they are not so very high, but with a little declevity or disadvantage of Ground, they would hide themselves, for they seldom have more than the Ground-Floor, in the Front of which is a Piazza, or Cloyster, call'd by them *Eyvando*, it is open before, and here they transact their common Affairs, or meet and complement Acquaintance, as in the Porch of a House; but behind this is a spacious Hall, some so high as eighteen or twenty Foot, which is the highest as well as the largest Room in the House; this is the Room

for

for great Entertainments upon ſolemn Occaſions. At each Corner of this Hall is a Parlour or Lodging-room; for it is uſed promiſcuouſly in both Capacities. There is alſo another Piazza behind the Houſe like that before it, and out of both into the great Hall are abundance of Doors, which contribute very much to the cooling of the Houſe when they are ſet open, the Fronts of the Piazza's being always open, only as in other Piazza's, ſupported by Pillars.

Walls. THEIR Walls are ſometimes of Brick, burnt like ours, but more commonly they are only dried in the Sun. Their Doors do not go upon Hinges as ours do, but have a Piece of Timber thicker than the reſt of the Door goes up the Middle of it, and it being alſo longer than theſe Ends, are made round, and fix'd in round Holes made for that Purpoſe in the Middle of the Threſhold, and of the Top of the Frame, and when they open it, it is like two half Gates, only as one Part turns into the Houſe, the other turns into the Street; they ſeldom have any Locks or Bolts but what are made of Wood.

Furniture THEIR Furniture is Carpets ſpread on the Floor, and Cuſhions or Pillows to lean upon, and a Matt to ſleep upon, with a Quilt or two (but ſeldom any Sheets) to cover them. The Sides of ſome of the Rooms are lin'd with Tiles, like *Dutch* Tiles, about a Yard high, and the reſt adorn'd with Painting or Pictures, according to every one's Fancy or Ability, aſpiring to be like their Betters, as is common in other Places.

Deſcription of *Iſpahan*. *Iſpahan* ſtands on a fine Plain, almoſt ſurrounded with Mountains that are two or three Leagues from it; the *Sanderhout* runs by it, and the Town is ſupplied with Water from a Place a Mile diſtant, by Channels and Pipes contrived for that Purpoſe. Antient Hiſtories give an Account of the Town being wall'd about, but there is no regular Wall about it now: However, that is no Proof but that it may have been wall'd about; for was a foreign Traveller to give a Deſcription of *London* in its preſent State, the Walls are now ſo obſcure, that without good Information he could not give Account where they are, (or rather where they were;) and indeed if we ſhould continue to demoliſh one Gate after another, and never rebuild them, (as is the preſent Caſe of *Biſhopſgate*,) it may be diſputed hereafter whether ever *London* had any Walls or Gates or no.

Account of Streets THE City or Town of *Iſpahan* is now reckon'd about twelve Miles in Circumference; but in this Account they take in *Julpha*, which is on the other Side of the River, and ſome adjacent Villages; as if in a Deſcription of the Circumference of *London* a Stranger ſhould take in *Southwark*, *Newington*, *Kenſington*, *Iſlington*, *Hackney*, *Bednall-Green*, and *Blackwall*. There was formerly (when the Town was wall'd) twelve Gates; but four of them are now fill'd up, and the reſt are demoliſh'd, or ſo fallen to Decay, that they can ſcarce be called Gates.

Streets THE Streets are narrow and crooked; and few of them being pav'd, they are either duſty or dirty, according to the Weather, or Seaſon of the Year; but there are ſeveral fine Squares in the Town, eſpecially the Meydan, or Royal Square, into which two of the Palace Gates open. This Square is above five hundred and eighty Yards in Length, and more than half as much in Breadth; and on the Sides of it are Buildings like the *New Exchange* or *Fleet Exchange* in the *Strand*, with Shops and Counters on both Sides, and a common Paſſage both for Foot and Horſe in the Middle. In this is a particular Apartment for every ſeveral Trade, and the Mechanicks have their ſeveral Shops in a ſecond Story. Theſe Exchanges have not particular Windows, but large Openings, at proper Diſtances, to let in the Light

THIS Square was at firſt deſign'd for manly Exerciſes, but it is now apply'd to Traffick, and in the Middle of it is a Market for Horſes, Cattle, and alſo for all Sorts of Eatables. Several Streets are arch'd over, which makes them pretty dark. In the Night-time they lock up their moſt valuable Goods, and leave the reſt in the Charge of the Watch, who are ſo careful, or the People ſo little given to thieving, that ſeldom any thing is loſt; but whether this their Honeſty is owing to their Principle, or to the ſevere Penalties inflicted upon Offenders of that kind, we cannot determine; but if the Severity of their Puniſhments deter Spectators from the Crimes that procure them, there is no Doubt but was the ſame Severity to be uſed in other Places, the Terror of it might deter People from the like Crimes, and ſave many, who not dreading a milder Puniſhment, proceed from peddling, thieving, and pilfering to downright Robbery and Murder, and go to Execution unlamented.

Caravanſera's THERE are ſeveral publick Caravanſera's in the City, in which Foreign Merchants lodge themſelves and their Goods, where alſo they have their Diet, and uſe them both as Inns and Ware-houſes, but every Lodger finds his own Bed, and cooks his own *Victuals*, and though it may be thought an Inconveniency, yet it prevents Travellers or Lodgers being impos'd upon. There are in *Iſpahan* above 1500 of theſe Caravanſera's, which come much cheaper to Strangers than the Uſe of our Inns do, becauſe they have been built by charitable People for the Uſe of Strangers; ſo that the Rent of any Number of Rooms is but a Trifle. The Caravanſera's are built moſtly in one Form, and differ only in the Dimenſions; there is a handſom Portal at the Entrance, and on each Side of it are Shops, and from thence you go into a Square, on every Side of which are Piazza's, and within are Lodging-rooms, Ware-houſes, Stables, *&c.*

No Taverns. THEY have no publick Taverns in *Iſpahan*, becauſe Wine is prohibited, but they that can afford it, drink it plentifully in private. There are handſom Coffee-houſes apply'd to the ſame Uſe as ſome in *London*, viz, for People to meet and diſpute about Politicks, and to give ſome People an Opportunity of being Politicians that know nothing of the Matter.

Moſques. THERE are above 150 Mahometan Moſques or Temples in *Iſpahan*; they are cover'd with Domes or Cupeloes, and being commonly built amongſt Groves of Trees, they afford a very agreeable Proſpect; but the common Buildings are ſo low, that they are hid by the Trees. It is difficult to give any true Deſcription of the Inſide of their Moſques, becauſe no Chriſtian is ſuffer'd to come within them if it is known: but thoſe whoſe Curioſity have amounted ſo high as to induce them to go in Diſguiſe tell us, that the King's Moſque at *Iſpahan* (which may in ſome Meaſure give the Reader an Idea of the reſt,) has a Gate leading to it, through which there is a Court, with Piazza's or Cloiſters on each Side, where the Prieſts lodge that belong to the Moſque. The Moſque is compos'd of five Iſles; in the Middle is a Cupelo ſupported by four ſtrong Pillars; two great Windows towards the Top of the middle Iſle (whoſe Roof is higher than that of the outſide Iſles,) give light to the whole Moſque; there is towards the Middle of it a kind of a Pulpit, with Stone Steps up to it; the Floor of the Moſque is cover'd with Carpets, and the People put off their Shoes when they enter into it; but there are no Seats or Pews as there are in Chriſtian Churches.

Bagnio's. THERE are abundance of Bagnio's, the *Perſians* thinking that ſweating and bathing is very healthy in that Country, and cures Colds, Aches, and many other common Diſtempers.

THE

Charbag. The *Charbag* is much admired by Travellers; it is a Walk somewhat like the *Mall* in *St. James's-Park*, but larger, being above a hundred Yards broad, and a Mile long, and extends from *Ispahan* to the River *Zenderud*; it has double Rows of Trees down each Side, and a Canal down the Middle; which goes with a Descent towards the River, and not driving down like a common Stream, but at every Furlong falls from one Bason to another, till at last it falls into the River, and at the End of the Walk is a Bridge over the River to *Julpha*. There are also two other Bridges, by which there is a Communication between *Ispahan* and the neighbouring Country on the South Side of the River.

Julpha. At the other End of the Bridge, on the South Side of the River, is the Town of *Julpha*, mostly inhabited by *Armenians*. This Town is about eight Miles in Circumference; it is better built, and wider Streets than *Ispahan*. This Colony has improv'd very much since their first Settlement by *Shaw Abbas*, they being now reckon'd the greatest Merchants in the World, and are dispers'd almost all over *Asia* and *Europe*; but at first they might more properly be call'd the King's Factors, he furnishing them with a Stock to trade, and allowing them a Share of the Gain; but now they trade with their own Stock, only paying a Yearly Tax to the Government; and have Liberty to buy Estates and settle, which is a Privilege not allow'd to any other Christian.

Schiras. The City of *Schiras* is about two hundred Miles South-Eastwards from *Ispahan*; it is accounted the second City of the Kingdom; some say the great King *Cyrus* was buried there, and that the Name *Schiras* was derived from his Name. It is situate in a pleasant Valley, and has a Rivulet running through it, which in the Spring has the Appearance and Force of a large River, but in Summer is almost dry; it is not wall'd about, nor is it very populous. The chief Buildings are the Viceroy's Palace, Mosques, and Caravansera's, *&c.* but their Form and Manner of building being the same as in *Ispahan*, we need not give any further Description of them, but refer to *Ispahan*. It is very common here for succeeding Generations to build new Houses rather than live in those of their Ancestors, but their Form and Manner of building is still the same.

Persepolis. The antient Palace or Temple of *Persepolis* is about thirty Miles North-East from *Schiras*, but little remains of it now but the Ruins; it is now call'd *Chilmanar*, which in *English* is forty Pillars; it is at the North-East End of that Plain upon which stood the antient *Persepolis*, and is supposed to be a Part of the Palace of *Darius*, who was conquer'd by *Alexander the Great*, and stood upon near three-score Acres of Ground; the Ascent to it was by ninety five Steeps, thirty Foot long, twenty Inches broad, and not above three Inches deep, so that a Horse might easily go up or down them. This valuable Piece of Antiquity, so far superior to any Thing that *Rome* itself can produce, was burnt to the Ground by *Alexander the Great* about the Year of the World 3724, which was above two hundred Years before the Birth of our *Saviour*.

Gombroon. *Gombroon* is on the North Side, and a little within the Mouth of the *Persian Gulf*, in Latitude 27 Deg. 30 Min. North, and about two hundred fifty Miles South-East from *Schiras*; it is a Place of the greatest Resort of any Port in *Persia*, the *English East India* Company have had a Factory there for above this hundred Years. It stands upon a level Ground close by the Sea; is inhabited by *English*, *Dutch*, *Portuguese*, *Arabs*, *Jews*, *Armenians*, *Banians*, and several other Nations; of which, the two last are much the greatest Merchants. There is an old ruinous Wall towards the Land, and three small Forts, of five Guns each, and a Platform of eight towards the Sea; there is also a Castle mounted with five and thirty Guns, for the Security of the Road.

Houses. Their best Houses are of Stone, but the most common Sort are of Bricks, not burnt like ours, but hardned in the Sun; some are two Story high, and have a Wooden Machine at the Top to drive the Wind down into the House to cool it. The *English* Factors are most of them remov'd to *Bassora*, a Place in the *Turkish* Dominions at the Bottom of the Gulf.

Tauris. The next Town of note is *Tauris*, in about thirty eight Degrees of Latitude, supposed to be the antient *Ecbatane*, the Seat of the *Median* and *Persian* Monarchs, and built by *Semiramas*; though *Josephus* tells us, that the City, or at least a Palace in it, was built by the Prophet *Daniel*, and these two different Opinions may easily be reconciled, if we allow the City to be built by *Semiramas*, and the Palace by *Daniel*. It was fifteen Miles about, and had a Wall seventy Cubits high and fifty broad, with many noble Palaces, but now there is little or nothing of either to be seen; however, it is yet a considerable Town for Trade, is about five Miles in Circumference, and pretty populous, considering the Decays it has labour'd under.

Tauris (like *Ispahan*, and several other noted Places in *Persia*,) stands on a Plain encompass'd with Mountains, and the Springs that trickle out of those Mountains collect themselves, and form a Stream, in the Valley, which descending to the Town runs through the Middle of it, and supplies it with Water; but upon the melting of the Snow from the Mountains it occasions a Confluence of Water, which amounts to a mighty Torrent. In this Town they have Squares, cover'd Streets, Exchanges, Mosques and Bagnio's, imitating those in *Ispahan*, and not much inferior to them.

This City has been sometimes possess'd by the *Turks*, and at other Times by the *Persians*, but the Inhabitants being originally *Persians*, they have endeavour'd to withstand the Invasions of the *Turks*, and sometimes with Success, in requital for which the *Turks*, when they prevail, burn and plunder the City in a dreadful Manner; but the great *Shaw Abbas* above a hundred Years ago expell'd the *Turks* so effectually, that they have not since been disturb'd, till very lately they have repeated their Inroads, and renew'd their former Barbarity upon the City of *Tauris*.

Teflis. *Teflis* is the Capital of *Georgia*, and stands upon the River *Kur* or *Cyrus*, in about forty two Degrees of North Latitude. It is inhabited mostly by Christians, as appears by the Places for Religious Worship, there being fourteen Christian Churches, and not one Mahometan Mosque in the City. It stands at the Foot of a Mountain; it is not large, but handsomly built; there is a Castle on the South Side of it, but of little Strength at present. *Teflis* is a Bishop's See, and has a handsom Cathedral built in Form of a Cross; their other Churches belong to the *Georgian* and *Armenian* Christians. The Churches and other publick Buildings are built of Stone, and in the same Form and Model of those in other Parts of *Persia* already described, to which we refer the Reader. N° 7.

CHAP. III.

An Account of the Genius and Temper of the Perſians; *alſo of their Stature, Complexion, Shape and Habit; with their Food, Liquors, Entertainments, Diverſions, and Ceremonies; and likewiſe of their Roads, Carriages, and manner of Travelling.*

THE *Perſians* are reckon'd more lively and courageous than the *Indians*, which is the Reaſon, as has been obſerved before, that the Mogul prefers them both in his Court and Army before his own Subjects the *Indians*. They are very obliging to Foreigners; and if they are guilty of a Crime, it is in their Profuſeneſs and Extravagancy in their Cloaths, Equipages, and number of Servants, and the like; but moderate in eating and drinking, both as to Quantity and Quality, for the greateſt Part of their Food is Rice, Fruits, and Garden-ſtuff; they have not much Fleſh, nor much variety in dreſſing of it; but a ſtanding Diſh, eſpecially with the better Sort of People, is *Pilo* or *Palaw*, which is a boil'd Fowl cover'd with Rice, boil'd dry, and cook'd with Spices and Turmerick. It is not cuſtomary with them to drink extravagantly, or force Liquor at Entertainments; nor do they detain any after they are inclin'd to go, but every Perſon may retire when they pleaſe, without the Imputation of Rudeneſs, or being charged with the Breach of good Manners.

They are much addicted to Women, Wives, and Concubines; and their Law is ſo far from reſtraining them, that they are taught to believe that the Enjoyment of Women contributes much to their Happineſs in the next World as well as this; nor are they ſatisfy'd with this unlimited Liberty, but follow Practices of a more odious Nature with Boys, which the great ones keep for deteſtable Uſes, not proper to be named in Hiſtory.

They are covetous to get Money, but profuſe in ſpending it, not taking thought for To-morrow; inſomuch that if a Man has eight or ten thouſand Pounds left him, he acts as if he did not know the Uſe or Value of it, but raſhly lays it out for Wives, Slaves, Cloaths, Furniture, or whatever comes to hand; by which imprudent Management they are often forced to ſell off ſome of their new Purchaſes ſoon after they have bought them, and that to procure common Neceſſaries.

Temper. They have great command of their Paſſions, not eaſily provoked, but ſeldom ever incited to a Quarrel; and the chief and moſt common of their hard Words uſed in ſcolding, is calling one another Jew or Chriſtian.

They perform their Addreſſes with an obliging Behaviour, and with the beſt of good Manners; punctual in their Bargains, and treat Strangers with the utmoſt Humanity; they are grateful to Benefactors, generous to Strangers, and courteous to all Chriſtians, as well as others.

Stature, Complexion. They are of a good Stature, well-proportion'd clean limb'd, and agreeable Features. In the North Parts, towards *Circaſſia*, they are of an admirable Complexion, though towards the South they are a little upon the Olive; and as white is the valuable Complexion, they take Wives and Concubines of the *Georgian* and fair *Circaſſian*; and by that Means, even the Southern Provinces have very much mended their Complexion. Their Hair and Eye-Brows are generally black. They wear only one Lock of Hair upon the Crown of their Heads, by which they expect that *Mahomet* will lift them up to Paradiſe. The King, and great Officers of State, and Soldiery, wear no Beards, only Whiskers on the upper Lip. Their *Mollahs*, or Religious People, wear their Beards their full Length, only cutting off the wither'd Ends to bring them into a regular Form; and the common People clip their Beards pretty ſhort, but do not ſhave at all.

Habit. They wear Turbants of different Value, according to the different Quality or Ability of the Perſon; and made ſo large, that with the Scull-cap under, it weighs not leſs than ſeven or eight Pounds. They have a Shirt of Silk or Calicoe, commonly blew, which they wear as long as it will laſt, and never waſh it; their Stockings are of woollen Cloth, but not ſhap'd to their Legs; inſtead of Shoes they wear Slippers, with narrow piqu'd Toes turning up, but they never tie or buckle them; when they ride they have Boots of yellow Leather, and delight in extravagant ſize Houſen, and ſo large as almoſt to cover the hinder Part of the Horſe. They wear a Crice or broad Sword, and a Poniard, whether riding or going on foot.

The Women wear no Turbants nor Saſhes, and their Coats come almoſt as low as their Heels. When they go into the Street they have a Veil over them from Head to Foot. They make their Hair in Treſſes, and let it hang down upon their Backs, the Quality having it interwoven with Pearls and Jewels. They wear no Gloves, but have their Fingers adorn'd with Rings, and their Arms with Bracelets.

The Dreſs is ſo material an Article in *Perſia*, that let the Faſhion be what it will, the rich will have it, and the Poor will imitate them, if they have ſcarce neceſſary Victuals at the ſame Time; nor need we go ſo far as *Perſia* for an Inſtance of this kind, becauſe *England*, and even *London* itſelf, produces infinite Numbers of thoſe, who for the ſake of imitating the greateſt in a gay airy Dreſs, fall ſhort of even the meaner Sort in Things neceſſary and commendable, and their Faſhions alter as much as amongſt us; ſo that what would ſerve as a Deſcription of their Dreſs a good many Years ago, though it may anſwer in general, yet it will differ in ſome Particulars from their Dreſs at this Time.

Food. The *Perſians* commonly drink a Diſh of Coffee early in the Morning, and about eleven they eat Liquors. Melons, Sweetmeats, Curds, or other light Victuals; but their chief Meal is Supper, when they have a Diſh of *Pilo*, (deſcribed before) and perhaps a Piece of Mutton or Kid ſerved up with it. They commonly bake their largeſt Joints, but baked or roaſted, it is always done to Rags, that it may be the eaſier pull'd to Pieces, for they uſe no Knives or Forks. They never eat Pork, Veal, or Hares, nor but ſeldom uſe *Beef*, Venilon, Fiſh, or Wild-Fowls. They ſeldom have any Sauce, except a Slice of Lemon, or ſome Pickle; their chief Bread, or what they uſe inſtead of it, is boil'd Rice, but they have ſome made in thin Cakes, but never bake till they are going to uſe it. They never pickle any Meat beforehand, but kill their Meat as well as their Fowls the ſame Day they uſe them. There are a great many Cooks in *Ispahan* that are

to

so ready to furnish House-keepers with what they want, whether *Pilo*, or other Victuals, that they seldom dress any thing at Home. They are very ambitious to imitate *Abraham* in his Hospitality, keeping their Doors open at Meal-times, and inviting every Body to eat with them that comes in, thinking that by chance they may entertain some Angels unware, as he did; they never set any Thing by till next Morning, but what is left they always give to the Poor.

Their chief Meal, as at any Entertainment is, commonly a Supper, but till that is ready they divert themselves with smoaking, and eating Sweetmeats, and repeating heroick Poems of the great Atchievements of their Prince; there are also dancing Girls to divert the Company, and if any of the Men are inclined to step aside with one of them, they are presently shown into a private Room, the Company not taking any more notice, either at their withdrawing or at their return, than would be taken at any two Persons calling one another apart to transact common Business.

Wine is not allow'd to the Mahometans, yet they indulge themselves with it privately, but the *Armenians* consume most of the Wine made in *Persia*. But those who abstain from Wine for Conscience sake, under the Name of Wine, scruple not to supply that Defect by intoxicating themselves with Opium, Bang, Poppy-Seed, and the like; and though we may at first wonder that any Person should use Opiates to a Sort of Intoxication, and call that a Refreshment, yet we may look nearer home and find much the same Thing; for, not to regard those, who under a Pretence of drinking strong Liquor to cheer the Spirits and support Nature, never think they are refresh'd till they are so intoxicated, that a blind Passion will put them upon rash and imprudant Attempts, which when govern'd by Reason they would not have Courage enough to undertake; but besides them, what is our Tobacco, so disagreeable in the Taste, that the Use of it is generally attain'd with Difficulty; and when that Hardship is overcome, the best that the most Genteel, as well as the most Impartial, generally say of it, is, that it is a Companion, an Amusement, &c. Far be it from me to attempt to discourage the Use of smoaking Tobacco, so genteel an Exercise, and which brings so great a Revenue to the Crown. But I am only observing, that it need not surprize us that those People intoxicate and lull themselves into a pleasant Amusement with Bang and Opium, when we do the same Thing, but only another Way; and as it is said of those Men that are used to Opium, that one of them can take as much Opium as would kill or confound the Senses of six *Englishmen*, and not only so, but that he can scarce live without such a Quantity; I may add, that some *Englishmen* used to smoak Tobacco, can smoke as many Pipes in three or four Hours as would make half a Dozen Men disorder'd and uncapable of Business for as long a Time, if they had never been used to smoaking before. It is said the Use of those Opiates was first occasion'd to supply the Use of Wine, and that was prohibited to preserve Peoples Health, which was impair'd by the excessive Use of it. But so resolutely are some People bent upon indulging themselves to their own Detriment, that when those People were restrain'd by a Law from impairing their Health by Wine, they industriously found out their Opiates to execute the same Design, and do it as effectually. And of this Kind we have also a fatal Instance at home, for notwithstanding the Laws that have been made to suppress the excessive drinking of that odious Liquor, commonly called Gin, yet I think there never were so many Gin-Shops, or any so much frequented, or so many fatal Accounts of People dying by excessive drinking, as now.

The *Parthians* are so famous for the Bow and for Horsemanship, that even their Princes have exerted themselves in those Exercises, in contending for the Prize, not for the Value of it, but for the Honour of winning it. One sort of Game (if it may be so call'd,) on Horseback is almost like Bandy, every Gentleman has a short Batt in his Hand, and a Ball being thrown among them they ride after it, and reach down as they sit on horseback to strike it, and he that hits it the oftenest wins the Prize. Exercise.

They are taught to manage the Back-sword and Sabre, and are dextrous at throwing the Lance, to which they are first brought up by throwing a Staff about five Foot long, without any Iron upon it, or Spear at the End of it. And for the Exercise of the great Proficients, there is a high Pole erected in the *Meydan* before the King's Court, upon which is put a Prize agreeable to the Dignity of the Persons contending for it; if the King, or great Officers, design to shoot for it, it is sometimes a Cup of massy Gold or the like. The Way of winning the Prize, or gaining the Applause, is to ride full Gallop with their Bows and Arrows in their Hands ready, and being got a little beyond the Pole, on the Top of which the Prize is, they bend themselves back and shoot at the Prize, and he that brings it down gains the Honour. Which Practice it is to be supposed has caused the *Parthian* Forces to be as much dreaded when they retreat as when they engage. Lance.

Hawking and Hunting is another Exercise with them; it is needless to describe their manner of managing, so far as it is the same as in *England*, but they have something peculiar in their way of Hawking, for the Hawks do not only fly at Partridges, Rabbits, &c. but at Deer and Wild-Beasts, when too swift for the Dogs; and to bring them up to this, they stuff the Skin of one of these Beasts, and fasten upon its Head a Piece of the same Flesh with which they feed the Hawk; which done, they fix the stuff'd Skin upon a Board that runs upon Wheels, and turning the Hawk loose to catch the Meat, they pull the stuff'd Beast swiftly along, till by degrees she is brought to fly upon the Deer or Wild Beast, till the Dogs are let go, and then the Hawks beat about his Head that he cannot see his Way, and by this Means the Dogs easily seize him; and then they call off their Hawks with a Kettle Drum, which they carry at their Saddle-bow for that Purpose. Hawking.

In Saluting they never move their Cap or Turbant, but to common People they bow the Body a little, but to the King, or Viceroy of a Province, they bow their Faces three Times to the Ground, but it is expected that *Europeans*, if dress'd in their own Country Habit, should pull off their Hats, and pay their Reverence to the great ones there in the same Manner and Form as they do to those in their own Country.

They have no Wheel Carriages, but travel upon Camels, Horses, Mules, or Asses. The Women, who affect being conceal'd, are put in a square Wooden Machine, and hung like Panniers on each Side of a Camel, being cover'd with three or four Hoops, and a Cloth over them, like the Tilt of a Boat or Waggon; but they usually travel with Caravans; and in this Country they travel very cheap, for there are Caravanseras at every proper Distance, erected at the Charge of generous People, as hinted before, towards the Beginning of this Chapter, where they have their Lodgings gratis, only buying their own Victuals at the best Hand, and sometimes dress them where they lodge. Carriages and ways of travelling.

They have no Posts for conveyance of Letters, but every Person of Quality dispatches a *Shaun* or Footman; who, through constant Practice, are brought up to travel at a very great Rate. They take great Pride in the extraordinary Performance Footmen.

of

of Running-Footmen, insomuch that when the King chuses a Footman, he tries him by causing him to run twelve times in a Day from the Palace to a Place a League and a half off; and as a Proof of his Performance, he brings every Time a single Arrow from the Place, and this he is obliged to perform between Sun and Sun, which is less than fourteen Hours at most, and is a hundred and eight Miles, which is between seven and eight Miles an Hour, and if he cannot perform this, he is no Footman for the King; nor if he can, is he admitted to this Tryal, except he was a Favourite before, but if he was, and performs, he has great Presents made him, and is usher'd into his Place with Acclamations, as if it was a great Festival.

CHAP. IV.

Treats of the late Rebellion and Civil Wars in Persia, *and of the deposing the late King* Shaw Sultan Hossein; *and of the Actions and Death of* Mereweys, (*call'd by some the Usurper*) *in the Time of the late Czar of* Muscovy.

WE now come down to the History of the present Age, and to the Affairs transacted in *Persia* in the Time of the late Czar of *Muscovy*, which, as largely as our History of the World will admit of, you have in the following Account.

THE late Sophy of *Persia*, *Shaw Sultan Hossein*, succeeded his Father Sultan *Solyman*, in the Year 1694; but this Prince chose to live an indolent Life in the Haram or Seraglio, minding his Women more than the Affairs of Government, and leaving the Administration of publick Affairs entirely to his Ministers, who oppress the Subjects, and imposed new Taxes as they pleas'd, though in a Time of profound Peace; and while one Part of the People were employ'd in plundering and collecting Money, the other, after the Example of their Prince, spent their Time in the Haram among the Women.

Now People were placed or displaced, not always according to their Merit, but according to their Interest, or the Presents they made; and if they fail'd in that, even those who were in Place were cashier'd, which was the Case of *Mereweys*, of which we have had some Hints in the publick Papers in their Accounts of the Wars in *Persia* in the Time of the late Czar of *Muscovy*.

MEREWEYS was originally a *Tartar*, or however commanded a Body of four or five hundred Tents on the North or North East Bounds of the *Persian* Empire, towards *Usbeck Tartary*, where the *Persians* are as populous as the *Tartars* are on the other Side of the River *Oxus*, and move from one Place to another with their Tents, as they can find necessary Provision.

BUT *Mereweys* was removed from this Post when he scarce knew the Reason of his being so discarded, but he soon (by prying into the then Constitution of the Government) found that he was degraded for no other Reason but to make room for another that was a Court Favourite, and had out-done him in Presents. He therefore muster'd all his Friends and Interest, and as Sums of Money was to carry the Cause, he found means to procure such a Sum, as by the Virtue of it he was re-inflated in his former Command; but though he succeeded so far as to produce Money to answer the present Design, yet both his Fund and Interest were thereby so much exhausted, that he found himself in very uneasy Circumstances, but thought of another Contrivance whereby to retrieve himself: For the Government being but in a weak Condition, and he being very remote from the Court, he resolved to seize the Neighbouring Province of *Candahor*, which lies upon the Eastermost Bounds of *Persia*, bordering upon the Great Mogul's Dominions, and there set up a Government for himself.

THIS Design he communicated to his Friends, who all approved of the Project; and his Friends and Countrymen the *Tartars* promised to assist him with their Forces in the Enterprize; but upon a second Consideration that *Candahor* was a Frontier upon *India*, and that a great Body of Troops was commonly quarter'd thereabouts, he had recourse to a Stratagem, which he chose rather to make use of, than to expose his Forces in such an Attack, and it was this:

HE pretended that when he received his Commission to re-instate himself in his Command, he also received a Commission to succeed the Governor of *Candahor* in that Province, and upon that pretence march'd up with his Troops towards the Town, and coming within a Mile or two of the Place, he sent to the Governor to acquaint him with this his pretended Commission, supposing that the Governor would come out to meet his supposed Successor, which he accordingly did, but *Mereweys* had posted his Men so advantageously, that after a small Time past in Complements between him and the Governor, they would not suffer the Governor to retire into the Town, but having cut his Guards to Pieces, march'd forward to *Candahor*, where he found the Gates open for his Reception, before the Inhabitants knew any thing of what had happen'd to their Governor and his Guards, in meeting his pretended Successor.

BUT this bare Possession was of little use to *Mereweys*, without contriving how to secure it to himself, which might be best done by erecting it into an independant State, but that could not be accomplish'd without forming some powerful Alliances, and the Great Mogul, now his bordering Neighbour, he thought the propereſt Person to address in this Case, because the Great Mogul and the Sophy of *Persia* were at perpetual Variance, and he thought that to contract an Alliance with the Great Mogul, was the best way both to secure himself from his Rage, and, in case of need, to have his Assistance to defend him against the Sophy of *Persia*, which he thought he would be very willing to do, in case the Sophy should resent *Mereweys* Usurpation; because what *Mereweys* (as an Ally of the Great Mogul) had taken from the Sophy, was, in some respect, the same as if done by and for the Mogul himself.

ACCORDINGLY he dispatch'd an Omrah with the News of his Success, which was joyfully received by the Mogul, who now began to think, that by means of his new Ally *Mereweys*, he might

find

find an Opportunity to have *Candahor* reſtored into his own Poſſeſſion, and therefore ſent him all poſſible Aſſurances of Affection, offering him what Number of Troops he thought fit to require to his Aſſiſtance; and for his further Encouragement gratified his Ambition in giving him the Title of *Prince of Candahor*, which gave the *Perſians* Reaſon to entitle him, *The Uſurper Mereweys*.

When the News of the taking of *Candahor* reach'd the Ears of the Government and Miniſtry of *Perſia*, it put them all in a Surprize; whereupon they detach'd a Body of four or five thouſand Horſe, in order to reduce him, but he had got too firm footing to be ſo eaſily rooted out, for he was joined by the *Usbeck Tartars*, and others, who were glad to aſſemble under him, in hopes, under his Protection, to plunder *Perſia* by Authority; and he finding himſelf ſo ſtrong did not hide himſelf in *Candahor*, but march'd out, met them, attack'd them, and defeated them. This Succeſs elevated him to ſo high a Pitch, that he began to aim at a Revolution, and in order thereto he ſent his Agents, not only to the remote Parts of *Perſia*, but even to *Iſpahan* itſelf; and thoſe his Emiſſaries inſinuated to the Subject, that they were oppreſs'd by the Male Adminiſtration and perſonal Vices of the Sophy; who, as they endeavour'd to inſinuate from thence, was unworthy to have the Command of the true Believers.

The Government, on the other Hand, was at a loſs to know who to truſt to for their own Defence, for they had diſobliged ſo many of the Chans and Omrahs, that they could not repoſe any Confidence in them, but were afraid that if they ſhould aſſemble their Forces to make Head againſt this formidable Rebel, they would revolt and join him; and inſtead of defeating him make him ſtronger than before, and enable him firſt to call them to an Account for their Adminiſtration, and then to demand their Heads, if in his own Judgment only their Crimes deſerved it.

But, on the other Hand, they were no leſs perplex'd; for to let him march forwards without Oppoſition, was, in other Words, to reſign to him, and let him have all *Perſia* as cheap as he had got *Candahor*; therefore, in this Difficulty, they reſolv'd of two Evils to chuſe what they thought the leaſt; and came to a Reſolution to diſpatch a General, whoſe Fidelity and Conduct they could depend upon, and order'd him to attend the Motion of *Mereweys*; not ſo much in Hopes to overcome him, as at leaſt to awe the Country, and prevent their ſupplying him with Proviſion, and conſequently oblige him to retire for want of thoſe common Neceſſaries, without which he could not ſubſiſt; but this Detachment ſucceeded no better than the reſt, for *Mereweys* met them, cut them to Pieces, and plunder'd them, eſpecially of their Arms, with which, and the Arms that he took from the Governor of *Candahor*'s Guards, when he approach'd the Town, he equipp'd his own Forces, who before were little better than a naked Rabble.

With theſe Succeſſes he began to imagine himſelf Conqueror of all *Perſia*, and thought in his next Expedition to advance to *Iſpahan*; but it is above eight hundred Miles from *Candahor* to *Iſpahan*, and all his Force not amounting to above ten thouſand Horſe, he thought it beſt to ſecure the Conqueſts he had made, before he aſpired after new ones; and in order to that, contracted an Alliance with the Grand Seignior, and put the City of *Candahor* in a Condition to defend itſelf againſt any Attempt that might be made againſt it in his Abſence.

His Negotiations had all the deſired Succeſs, and the Baſſa of *Bagdad* receiv'd Orders immediately to march with an Army to the Frontiers of *Perſia*; and now *Mereweys* began to think himſelf eſtabliſhed upon ſuch a ſure Foundation, that he took upon him the Stile and Title of *Protector of the Kingdom of Perſia*, and reſolved to march to *Iſpahan*, to take actual Poſſeſſion of that Capital, and of his new Government: But, in the midſt of this his great Succeſs, Death put a Period to his Life, and with that, to all his Schemes and Projects. Death of *Mereweys*.

But the Hoſtilities begun by *Mereweys* did not terminate with his Death; for his Son *Mahamood*, being a prudent Man, and very ſenſible of the great Reputation his Father had got by the Conqueſt, or rather Surprize of *Candahor*, reſolved to carry on the Work his Father had begun, and to begin where he left off, and directly purſue his Schemes; and the better to effect this his Deſign, and to appear more formidable to his Oppoſers, he wiſely conceal'd his Father's Death, and reſolv'd to do every thing in his Father's Name, and in the ſame manner as if his Father was alive, till his own Reputation ſhould be eſtabliſhed; and therefore, without the leaſt Interruption or Intermiſſion, the Preparations for marching to *Iſpahan* were continued, new Alliances cultivated, and new Forces rais'd, as if no Accident or Alteration had happen'd in the Family, and vigorouſly purſued his March for *Iſpahan*.

The *Muſcovite* (in the Time of the late Czar of *Muſcovy*) on the one Hand, and the *Turk* on the other, very gladly took the Advantage of theſe Diſtractions in *Perſia*. The *Turk* attack'd *Hamadan*, and ſeveral other frontier Places in the Weſtern Part of *Perſia*, which they took without much Difficulty, meeting with little Oppoſition, while the *Muſcovite* ſurprized *Derbent*, and on the Weſt Side of the *Caſpian* Sea; and their Succeſs giving them Encouragement, they proceeded to the Southward as far as *Gilan*, or the ancient *Hyrcania*; and along the South Coaſt of the ſaid *Caſpian* Sea, the *Perſians* finding ſo many Enemies to encounter with, the *Turks* and *Muſcovites* upon the Frontiers, and *Mahomood* (ſtill in the Name of *Mereweys*) penetrating into their Bowels, and aiming at their very Capital, this put them in the utmoſt Conſternation, but not having much Time to deliberate, they reſolved rather to let the Frontiers ſhift for themſelves than neglect their Capital, and expoſe it to the Mercy of the Uſurper, who they heard was in full March againſt them, and therefore aſſembled an Army of eight or ten thouſand Horſe about *Iſpahan* for its Defence, in caſe of an Attack.

When the King heard what Havock the *Turks* and *Muſcovites* were making in his Frontiers, and that the Uſurper's Army was in the Neighbourhood of his Capital City; and, which yet added to his Affliction, he was very ſenſible that the People in general were diſcontented with the Adminiſtration, he propoſed to reſign the Crown, and ſurrender it to his eldeſt Son: this the Omrahs approved of; but the poor effeminate young Prince, who had been always brought up in the Seraglio, and knew more of Eunuchs and Ladies than of military Affairs, was ſo affrighted at the Report he heard of the formidable Power of the Uſurper, declined the Offer, chuſing rather to ſleep in a whole Skin than become a Sacrifice to ſuch a powerful Enemy, which he ſuppoſed would be the Conſequence, if he ſhould attempt to give him a meeting.

It was then propoſed to ſettle the Crown upon the ſecond Son, Sultan *Tahmas*, or *Thomas*, and he not being quite ſo puſillanimous, accepted it, and put himſelf at the Head of the Army, encamping them at *Charbag*, near *Iſpahan*, in continual Expectation of being attack'd by the Uſurper's Forces.

In the mean Time *Shaw Thomas*, the young King, ſeem'd to endeavour to find out how the Minds of the People ſtood affected to him, and in order to that, he ſent (amongſt others) to the *Engliſh* Factory, reminding them what Privileges they had enjoy'd under his Anceſtors, and that in return he expected their Aſſiſtance in the preſent Exigency. What Anſwer he had is uncertain, but People buoy'd themſelves up with the Hopes of expelling the Uſurper out of the Neighbourhood of *Iſpahan*; when Affairs took a ſudden and unexpected Turn; for News was brought one Morning that *Shaw Thomas*, with ſome few of his Friends, had privately retired from the Army the Night before, and that they did not know where he was gone.

In this Confuſion the Officers of the Army and Citizens of *Iſpahan* conſulted together what was beſt to be done, and ſoon reſolved to make their Peace with the Uſurper, and invite him to *Iſpahan*; which being done, and he in ſafe Poſſeſſion, he made the old King and the whole Court his Priſoners, though all his Forces did not amount to above ſix or ſeven thouſand Horſe. He took Poſſeſſion of *Iſpahan* in the Month of *February*, 1721-2.

Mahamood had now no longer occaſion to conceal his own Name, or the Death of his Father *Mereweys*; his next Buſineſs was to find what Condition the Treaſury was in, which upon enquiry he found very empty, and being under a Neceſſity of raiſing more Forces to ſupport his Poſſeſſion, he therefore took a ready Way to ſupply himſelf with Money, and at the ſame Time purge the Nation of ſome of thoſe Caterpillars with which it had been infeſted; for he confiſcated to his own Uſe the Goods and Riches of thoſe who were not in his Intereſt, thereby ſtrengthening himſelf, and at the ſame Time weakening his Enemies, and then cut off the Heads of thoſe Prime Miniſters and others, who had for ſeveral Years been fleecing the Publick, and ſeiz'd their Riches to himſelf which they had unjuſtly plunder'd the People of, and thereby gain'd a univerſal Applauſe and the Affection of the People; for it is natural for People to rejoice when they ſee a Plunderer of the Publick ſuppreſs'd and puniſh'd, they commonly expreſs Satisfaction, though they meet with no Reſtitution.

But not content with this, he extorted Money from the Foreign Merchants, eſpecially the *Engliſh*, by which Means our *Eaſt India* Company's Trade at *Iſpahan* is now in a poor Condition, and their Factory almoſt, if not quite ruin'd; and it is ſaid the Company have order'd their Factors to get away as well as they can.

But the better ſtill to eſtabliſh his Poſſeſſion, he ſent the old King *Shaw Sultan Hoſſein* Priſoner, under a ſtrong Guard to *Candahor*, and himſelf took poſſeſſion of the Royal Palace. In the mean Time, the young King *Shaw Thomas*, who at his Departure from *Iſpahan* took the Road to *Tauris*, aſſembled a Body of Troops, pretending to oppoſe the *Turks*, which brought many of the *Perſians* over to him to aſſiſt in that Enterprize, but to little purpoſe; for he was ſo far from defeating them, that he could not ſtop the Progreſs of their Arms; and the Towns being moſtly without Walls or Garriſons, became an eaſy Prey to the *Turks*, or if they met with any Oppoſition at *Tauris*, it could only be from a raw undiſciplined Multitude; for the *Perſians* could never raiſe ten thouſand Men at a Time ſince the Wars begun; however, the *Turks* ſo diverted *Shaw Thomas*, that it was in vain for him to return, to attempt to give *Mahamood* any Diſturbance in his Poſſeſſion of *Iſpahan*; which *Mahamood* finding, he tranſplanted ſeveral thouſands of Families from the Province of *Candahor* to *Iſpahan*, and has now ſo eſtabliſh'd his Affairs, and fix'd himſelf at *Iſpahan*, that we do not find that they make any Attempts to dethrone him.

CHAP. V.

Of the Manufactures, Mechanicks, and Home Trade of the Perſians; *alſo of their Foreign Trade; and of their Weights, Coins, and Port-duties at* Gombroon.

Manufacture.

SILK is the principal Manufacture of the Country, as Taffaties, Tabbies, Sattins, and Silk mix'd with Cotton, or Camel and Goat's Hair, Brocades, and Gold Tiſſue. There are a hundred Sorts of ſingle Brocade. The double Brocade is call'd Duroy, which in plain *Engliſh* is two Faces, becauſe both Sides are alike, or, according to the common Way of ſpeaking, both Sides are right Sides; thoſe of *Perſia* are the richeſt of any in the *Indies*, and the ſame may be ſaid of their Gold Velvet. All the *Perſian* Stuffs are very durable, and where there is Gold or Silver in the Work, it keeps its Colour and Luſtre to the laſt. The fineſt Looms and Workmen are at *Iſpahan*, *Caſhan*, and *Yeſd*. Thoſe Carpets which (by reaſon of their being brought to us by way of *Turkey*) are call'd *Turkey* Carpets, are indeed *Perſian* Carpets, made chiefly in the Province of *Kirman*; in which Province, near the Entrance of the *Perſian* Gulf, is the great Sea-Port of *Gombroon*. Goat's-Hair Stuffs are made in *Hyrcania*. The *Perſians* make and ſtain ſome Calicoes, but they are not to be compared with the *Indian* Calicoes.

Mechanicks.

There is a Head or Warden belongs to every Trade, eſpecially in the Cities or great Towns, who acts as a Sort of a Juſtice of Peace, and is inveſted with a Power to ſee the Rules and Orders of that Trade ſtrictly obſerved; but they are not under any great Reſtrictions, for, although every Perſon that would ſet up any Trade muſt firſt go to the Warden, and enter his Name and Place of Abode, yet he is not examin'd where he learn'd his Trade, or whether he underſtand it, nor are they limited to the Branch that they profeſs only; for if a Brazier can make a Veſſel of Silver, and deal in that Ware, it is not reckon'd any Encroachment upon the Silver-Smiths, and the like in any other Trades.

They take no Apprentices, but Youths hire themſelves to Maſters whoſe Trade they fancy, who gives them little or no Wages at firſt, but as they improve in Workmanſhip, they increaſe their Wages; and when they think they are perfect of their Trade, they may enter their Names and Places of abode with the Warden, as above, and then are at liberty to ſet up for themſelves. Every Trade is bound to work for the King when he requires it, or to pay an Annual Tax for an Exemption.

They have but little large Timber, and therefore few Carpenters, and thoſe but poor Workmen. Their Joiners and Turners are very expert in laying on Lacker. Moſt of their Kitchen Veſſels are of Copper, tinn'd; they have no Braſs or Pewter Veſſels; they make but ordinary Guns, and for their Gun-locks, or any Thing that goes by a Spring, they either have them from *Europe*, or have

have *European* Workmen there to make them. They are very ready at Embroidering, especially with Gold or Silver, either upon Cloth, Silk, or Leather. The *Turkey* Leather (so call'd because we have it from thence, is made in *Persia*. The Shagreen, which is made of the Skin of an Asses Rump, is made also in *Persia*. They make a Sort of Earthen Ware far exceeding the *Dutch*, and little inferior to *China* Ware. They excel in Wire-drawing. Mr. *Chardin*, who was there himself, affirms that they can draw a Piece weighing a Drachm, to the Length of two hundred and ninety, or three hundred *English* Yards. Their Barbers do not give a Man a Bason of Water to hold under his Chin, as with us, but hold it themselves in a little Cup, and when they have shaved a Man, which they do with an incredible light and quick Hand, they cut the Nails of his Hands and Feet, and rub and chafe his Flesh, which even to *Europeans* is cooling and refreshing in those hot Countries. But not to enumerate Particulars, their Mechanicks are generally ingenious, except Goldsmiths and Watch-makers; the former are meer Bunglers, and there are none of the latter, they not understanding any Thing that works with a Spring.

Foreign Trade.

A Merchant is deem'd an honourable Profession, and are much encouraged because they bring in so great a Revenue to the Crown; and the Ministers of State, or even the King himself, do not think it beneath them to be Merchants, and have their Agents or Factors in the adjacent Countries, and export Silks, Brocades, Carpets, and other rich *Persian* Goods; and such is his Industry in Trade, that his Agents at the Mogul's and other Courts are commonly dignified with the Title of Ambassador, when their Business is chiefly, if not only, Traffick and Merchandize.

Tehre is no Exchange where Merchants may meet, but the Buyer or his Broker talks it over at the Seller's House. Though the Mahometans are the most powerful Part of the Country, yet the *Armenian* Christians and the *Indian Banians* have much the best Share of Trade; the former trade in their own Country and to *India*, but the latter, especially the *Armenian* Christians, trade all over *Europe*; one Reason why the Trade of the Mahometans is so much confin'd to their own Country is, because their Law forbids them to eat Flesh kill'd by one of another Religion, or to drink out of the same Cup, or even to touch such Persons at some times, which they could not possibly avoid if residing in a Christian Country; this, with some other Reasons, restrain the Mahometan Trade to People and Places of their own Religion; and this may be a great Reason why Christians are so much encouraged in *Persia*, to wit, because they manage most of the Foreign Trade, which brings in so great a Revenue to the Crown.

This Country was once famous for Pearls, and the greatest Fishery of that kind in the World was once, and that not long ago, in the *Persian* Gulf; but whether the Pearls there be exhausted, or the Fishery is diffused by *Persians*, having lost those Islands where the Pearl Fishery was, is uncertain; but certain it is, that the *Arabians* have got from the *Persians* one Island after another, and *Bahren* itself, and that Part of the Coast of *Arabia* which the *Persians* once possess'd, and where they used to fish for Pearl; of which, and the Manner of fishing for them, we shall treat in the next Chapter near the latter End.

The *English* have a Factory at *Ispahan*, and another at *Gombroon*, in the Entrance of the *Persian* Gulf; their chief Agents live very grand. The *English East India* Company seldom carry any thing to *Persia* but Cloth, and the *Turkey* Cloth being sold so cheap, the *English* have but a poor Market for theirs; they bring back Goat's Wool, which is the Down that grows among the Roots of the Hair, and is used by the Hatters; they also bring Abasses and Chequeens, and also Gold Bars; and if they cannot make out their Loading, they take Freight of the *Armenians*, *Banians*, and *Moors*. The *Persians* have no Ships in the Gulf, but put their Goods aboard of *English* or *Dutch* Vessels; they let the Conveniencies for Passengers very dear; the great Cabbin in a Ship of four hundred Tons is let for a thousand Rupees, (each two Shillings and Sixpence, which amounts to a hundred and twenty five Pounds Sterling,) for a Passage from the *Persian* Gulf to *Surrat* or *Bombay*.

One Branch of the Company's Profit is their Ships being employ'd in carrying the Goods and Effects of the *Armenians*, *Moors*, and *Banians* from *Gombroon* to *Surrat*; the *Persians*, as above observed, having no Ships in Gulf. When an *English* Ship is taken to Freight to or from *Persia*, the Agreement is made before the *English* Council at *Gombroon*, and Care is taken that the Passengers have proper Accommodations, and that the Ship have a competent Price for them. And to see Justice done in the Passage, the *Persians* send a proper Person in each Ship, and when they return, the Council enquires whether the Captain has acted according to his Agreement; and if not, the Council protests against such Commanders, and makes Satisfaction to the Passengers for the Damage, and acquaints the Company with what they lose by such irregular Captains, in losing Freight and Passengers by such Abuses.

Weights.

Their great Weight is a *Maund*; but they are different in different Commodities, as it is with us in our *Troy* and *Averdupoize* Pounds, or, as in most Counties in *England*, a Pound of Butter is heavier than a Pound of Tobacco, or Tea, or the like. They sell all Sorts of Drugs by the *Maund-Tabrees*, which is about six Pound three Quarters *Averdupoize*, but the *Maund-Basar* is six Pound and a Quarter. The *Maund-Copara* is seven Pound three Quarters; by this they sell Rice, Fruit, and other Eatables. Fine Goods, as Gold, Silver, Musk, Camphire, Coral, Amber, Cloves, and Cinnamon, are sold by the *Miscal*, six of which is a Pound *Averdupoize*. The *Maund-Shaw* is thirteen Pound and a half.

Coins.

They keep their Accounts of Money in *Shahees*, though it is a Species which is very scarce with them, but that need not be suprizing, if we consider that we reckon our Money very frequently by Pounds, Shillings, and Pence, and yet have no Pieces of a Pound, and very few of a Penny among our current Coin.

The *Shahees* are worth about four Pence each; the *Coz*, *Mamooda's*, and *Tomaud* are current Coin.

The *Coz* is a Copper Coin; 10 makes a *Shahee*.

Two *Shahees*, or twenty *Coz*, is a *Mamooda*.

Two *Shahees* and a half is one *Laree*.

Two *Mamooda's*, or four *Shahees*, make one *Abassee*.

Two *Abassees*, or four *Mamooda's*, make one *Surrat Rupee*.

Fifty *Abassees* are a *Tomaud*.

A *Shahee* is reckon'd worth four Pence Sterling, and by that all the rest may be computed.

Our *East India* Company, as a Recompence of the Service they did the *Persians* in taking the Island of *Ormus* from the *Portuguese*, are exempted from all Customs, and Ships trading under their Protection only pay as below:

Two *per Cent.* on the Sale of Goods to the Company.

One *per Cent.* Consolage to the Agent.

One *per Cent.* to the Broker.

Boat or *Franky* Hire for landing Goods, thirty *Mamooda's* for two thousand *Maund-Tabrees*.

Hamalgae or *Cooly* Hire, is one *Coz*, for weighing every twenty *Maund-Tabrees*.

CHAP.

CHAP. VI.

Describes the Face of the Country, and Nature of the Soil; and also gives an Account of the Husbandry and Gardening of the Persians, *with their Plants, Animals, and Minerals; and the Manner of Fishing for Pearl.*

IN *Persia* are more Mountains and Rivers than in any Country in the World, and some of their Mountains are reckon'd the highest upon the Face of the Earth; and amongst them, that Range of Mountains commonly known by the Name of Mount *Taurus*, which stretches itself quite through the Country; the South West Part of them are the highest, and is called Mount *Ararat* in *Armenia*, at the Bottom of which is the City of *Erivan*; they are in about 40 Degrees of Latitude North, and in 43 Degrees of Longitude East from *London*; this is the famous Mountain where *Noah*'s Ark rested on the seventeenth Day of the seventh Month, *Genesis*, viii. 4. after the Waters of the Flood began to abate. There are also very high Mountains between *Gilan* and *Hyrcania*, and *Erack* or *Parthia*, as also between *Fars* or *Parsis*, and *Carmania*, now called *Kerman*, of which Mount *Jarron* is the highest; but they are dry and barren, except those of *Gylan* or *Hyrcania*, and the Mountains of *Curdestan* or *Assyria*, which are cover'd with Wood, and fruitful where cultivated. Here are vast sandy Deserts of several Days Journey, and scarce a Drop of Water; but there are some fruitful Valleys, where their chief Cities are, and it is very fruitful near the *Caspian* Sea.

IT is not altogether the Badness of the Soil which renders *Persia* so barren, but the want of Husbandmen and Managers for their Aqueducts that should convey Water to their Land, they are choak'd up and gone to Ruin; the Soil is a hard Gravel or stiff Clay, and if well water'd, will bear two, or sometimes three Crops in a Year, and when it was well cultivated, was as fruitful a Country as any in the World, and only lost and barren for want of Improvement.

THEY have no Oats, and but little Rye. Rice, Wheat and Barley is the chief Grain; they have in their Gardens much the same Roots and Sallading that we use in *England*; they have twenty several Sorts of Melons, which is the common People's constant Food during their Season; the Gentry have a Way to preserve them under Ground till their Season returns. The best Sort grow in the Province of *Choraffan*, near *Tartary*, and carry'd to *Ispahan* to supply the Court. They have Grapes of several Sorts, and some as large as a great Plumb; but they make their Wine of a little round Grape, of which the best Sort is made at *Sheraz*.

Dates. DATES are no where so good as in *Persia*, and themselves reckon them most delicious Fruit. The Tree they grow upon is slender and tall, and has no Branches but at the top, and they grow in Clusters of thirty or forty Pound Weight; the Tree never bears till it be about fifteen Years old, but when it begins, it will continue bearing above a hundred Years. They have most of the Kinds of *European* Fruit, but they have no Way of improving Fruit-Trees by grafting, inoculating, or the like, and yet they have excellent Apricots, and some of their Nectarins weigh sixteen or eighteen Ounces a Piece; there is a Sort of Apricot called *The Egg of the Sun*; it is red within; they dry and export great Quantities of them; in using them, they boil them with Water, and as it boils the Water thickens with the Juice of the Fruit, and makes a fine sweet Syrup without Sugar.

Fruit. THEY have Apples, Pears, Oranges, Quinces, Pomegranates, &c. and put so great a Value upon Variety of Fruit at their Entertainments, that Mr. *Chardin* reports that he has seen above fifty Sorts of Fruit upon such an Occasion, some of which were fetch'd above three hundred Leagues. They have Nuts, Filberds, Almonds, and Olives, the latter especially in *Hyrcania*, and near the *Caspian* Sea, but they neither know how to preserve them, or extract the Oil: There are also Plantations of Sugar and Tobacco.

Trees. OF Trees they have the Palm and the Cypress; the Mulberry they nurse and cultivate very tenderly, and have large Plantations of them for Food for the Silk-worms; as soon as the Mulberry Trees grow old, they root them up, and plant young ones, because these bring the best and tenderest Leaves. Here are plenty of Sena Trees, whose Leaves we use as Physick; it has a large straight Body, forty or fifty Foot high; the Tree is useful in Building, as common Timber. They have the Trees that yield Gum and Mastick; also the Tree that yields Frankincense, which is very like a Pear-Tree. There are Trees that produce Manna of several Sorts, but the best is large and yellowish. The Tamarisk Tree produces a Sort of a Manna of the same Name: There are Trees whose Leaves drop liquid Manna in Summer-time, which makes the Ground under them fat and greasy, but it has the Taste of other Manna.

BESIDES the Cotton Tree, there is another that yields a kind of a Down, that serves for quilting and stuffing of Pillows; but there are Shrubs of a poisonous Quality, as the *Galbad Samour*, and the *Kerzabree*; the latter grows about six Foot high, and has a Flower like a Sweet-Bryer; but as there are few Trees found in the Mountains of *Persia*, any further Description will be needless.

IN *Hyrcania* they have whole Groves of Orange Trees, Jessamins, and other Vegetables, that produce Flowers; but what is most remarkable is, that in our Winter, *viz.* from *September* to *April*, the whole Country is cover'd with Flowers, and this is the best Time they have for their Fruit. They have abundance of Lillies and Roses, insomuch that they export great Quantities of Rose-water to other Countries.

Drugs. THIS Country affords Plenty of Physical Drugs, as *Cassia*, *Sena*, *Antimony*, *Nux Vomica*, *Gum Arabick*, *Galbanum*, *Sal Armoniack*, and a Sort of *Rhubarb*, with which they Purge their Cattle. The *Persian* Poppies grow about four Foot high; they make little Incisions into the Head of the Poppy, and a thick clammy Liquor ouzes from thence; this they gather before Sun-rising, and is so strong an Opiate, that it will intoxicate the People employ'd about it, and make them Convulsive, or Paralitical: This Liquor, when thus extracted, thickens into a clammy Substance, and at last is capable

capable of being made upon into Pills, and is what we call in *England* Opium.

Aſſafœtida. *Aſſafœtida* diſtils from the Plant call'd *Hiltot*; it thickens after it is drawn, and grows as hard as a Gum; there are white and black Kinds, but the white is reckon'd the beſt; it is of that Nature, that it not only diffuſes its Smell, but will tarniſh any thing that lies near it.

Mummy. *Mummy* is the Bodies of Men or Women embalmed, and having laid under the Earth for ſeveral Ages, becomes as hard as Horn; and whether by Battles formerly fought there, or by what other Means is unknown, that ſo many human Bodies are found in the Sands of *Choraſſen*, or antient *Bactria*; however, they are not only found there in great Plenty, but their very Features, after having been ſo many Years depoſited, remain perfect and diſtinguiſhable.

But there is another Sort of Mummy which diſtils from a Rock, and is a Sort of a Gum, which, they ſay, performs thoſe wonderful Cures which is attributed to the Mummy in *England*.

Camels. Some of the Camels in *Perſia* will carry ſix, ſeven, ſome eight, ſome nine hundred, or a thouſand Weight; but thoſe that carry the moſt ſeldom exceed a Foot-pace, whereas the other will gallop like a Horſe; the Way of loading them is very remarkable, for when they are to take up their Burthen, the Driver touches their Knees, and they knowing what it means, lie down upon their Bellies, though at the ſame Time they expreſs a great uneaſineſs; and when they are loaded, and upon a Journey, they are not chargeable as to their Victuals, and can live two or three Days without Water, which is a vaſt Advantage in thoſe dry ſandy Deſarts, where Water is ſo ſcarce.

Horſes. They have beautiful Horſes in *Perſia*, light and ſprightly; but as Camels are ſo plenty, the Horſes are ſeldom uſed for Burthen, but for the Saddle; they never geld them, nor cut their Tails, which adds to their Beauty; but they are neither ſo ſwift as the *Arabian*, nor ſo hardy as the *Tartar* Horſes; they are ſold from fifty to three hundred Pound a Horſe; but it is not ſo much the Scarcity, as the vaſt Numbers they vend to *India* and *Turkey*, that makes them ſo dear.

Sheep. The *Perſian* Sheep are remarkable for their large Tails, of which that in *Greenwich Park*, by ſome call'd a *Turkey Ram*, is an Inſtance; but ſome of them have Tails that will weigh ten or twelve, and ſome ſay twenty Pound Weight; and ſome of them have ſix or ſeven Horns, promiſcuouſly diſpoſed forwards or upwards, as Nature can find room or uſe for them.

They have ſometimes ſuch Swarms of Locuſts, that in flying they darken the Air like a Cloud, and where they alight they deſtroy the Fruits of the Earth; but there are temporary Birds, whoſe Seaſon of appearing is at the ſame Time with that of the Locuſts, and who eat them up, and ſo prevent the Ruin of the Country: *But I do not find there are any ſuch Birds in* England, *that deſtroy the Caterpillars, and other pernicious Creatures, ſo prejudicial not only to the Gardeners, but to other People in* England.

The Coaſt of the *Caſpian* Sea is very much infeſted with Serpents, Toads, Scorpions, *&c.* which dying in the Summer, for want of Moiſture, infect the Air, and make it unwholſome. There is a white Fly, no bigger than a Flea, which makes no Noiſe, the Sting is like the Prick of a Pin; there are alſo abundance of Multipedes of a pernicious venomous Nature; they have Geeſe, Hens, Ducks Partridges, Snipes, *&c.* like ours; they are very induſtrious to improve their Pidgeons, becauſe their Dung is of ſuch great uſe in raiſing their Melons, that it is ſold at three Pound for a Penny. The Pelican is Plenty here; they have a Body as big as a Sheep, a ſmall Head, but a Bill half a Yard long, and as thick as a Man's Arm, under which is a large Bag, which will hold a great Quantity of Water; they build and breed in the Deſarts, far from the Water, to avoid being diſturb'd by the Inhabitants, and fetch Water for their Young in the ſaid Bag, which will hold enough to laſt ſome Time.

Fowls. There are abundance of Eagles, Hawks, and other Birds of Prey, ſo frequently brought up for the Game, that few of any Figure are without them; and how they bring them up to it we intimated in *Chap.* III. towards the latter End. Sparrows are very numerous and troubleſome in deſtroying the Corn when the Harveſt approaches. Water is very ſcarce, and conſequently but few Fiſh, for of the few Rivers they have, moſt of them ſink before they find any viſible Way into the Sea, by Reaſon of the exceſſive Heat and Sandineſs of the Country; there are Plenty of Sea-Fiſh in the *Caſpian* Sea and *Perſian* Gulf, and freſh Water Fiſh in the Rivers *Kur* and *Arras*, but they are all ſo far from *Iſpahan*, that Fiſh is very dear eating there.

Minerals. They have good Mines of Steel, Iron, Lead, and Copper; their Steel being ſo brittle, and they not underſtanding how to temper it, is the Cauſe why they can make no Springs, nor conſequently Gun-Locks or Watches, or any thing that requires Springs, as was hinted towards the Beginning of *Chap.* V. ſpeaking of their Mechanicks. They dig Sulphur and Salt-petre in the Mountains which ſeparate *Hyrcania* from *Erack*. There is a Baſtard Sort of Antimony in *Carmania*: There is a Sort of a Salt ſo hard, that they uſe it as Stone to build their Cottages with: There is white, black, and red Marble; the beſt comes from *Tauris*, and is white mix'd with green, and is almoſt as tranſparent as Chryſtal. There is abundance of Bole-Armoniack, and Sort of Marl, which they uſe inſtead of Soap; there are alſo Mines of Iſing-Glaſs: But the moſt valuable Mines in *Perſia* are thoſe where the *Turquois* Stones are found, one of which is at *Niſhapour* in the Province of *Choraſſan*, and another in the Mountains between *Erack* and *Hyrcania*; they have lately found another, but the Stones are not quite ſo good.

Fiſhing for Pearl. And now we ſhall, according to our Promiſe, conclude this Chapter with ſome Account of the Pearl-Fiſhery, and the Way of managing it.

In the *Perſian* Gulf, it is reckon'd, was formerly the beſt Pearl-Fiſhery in the World, but it is now made little uſe of; but whether the Pearl-Oyſters (call'd *Nacres*) be exhauſted, or whether the preſent Indolence of the *Perſians*, or laſtly, whether it is becauſe the *Arabians* have now the chief fiſhing Iſlands of *Babaren*, and the adjacent Iſlands in Poſſeſſion, and neither will purſue the Fiſhery themſelves, nor ſuffer the *Perſians* to do it; I ſay, which of theſe Reaſons, or whether ſome other be the Cauſe of this Decay of that Fiſhery, is uncertain; but ſure we are, it is now dwindled to little or nothing: However, as it has been ſo very famous, and probably may revive again, take the following Account of the Way of Fiſhing for Pearl.

There are two Seaſons a Year wherein this Fiſhing is practicable, *viz.* one Seaſon is in *March* and *April*, and the other in *Auguſt* and *September*; but this latter is the chief Seaſon; for ſome Travellers, that give Account of the Fiſhing Seaſon, do not mention the former at all, probably becauſe they were not there at that Seaſon; but be that how it will, the Method of performing is the ſame. When the Fiſhery was in its moſt flouriſhing State, there were ſometimes two or three thouſand Boats near the Iſland *Babaren*, which is about the Middle of the *Perſian* Gulf, and neareſt to the *Arabian* Shore; there is in every

Boat a Diver, who (when the Boat is brought to an Anchor, in about five Fathom Water) ſtrips himſelf naked, and having fix'd a Piece of Horn upon his Noſe, to pinch it gently together, to keep the Water out, and tied a Stone to his Foot to ſink him immediately, and taking a Net or a Basket with him, there is one Rope faſtened to him under his Arms, and another to the Basket. Then he ſlips the Rope that faſtened the Stone to his Foot, and falls to Work to gather up the Oyſters at the Bottom, putting them into his Net or Baſket; and when he has remain'd under Water as long as he can, he makes a Sign to thoſe that attend him in the Boat, to draw him up, and after he is ſafe in the Boat, they draw up the Basket, while he ſmoaks his Pipe, or otherwiſe refreſhes himſelf, and then goes down as before, and continues to repeat the Performance from about eight till eleven in the Morning; and after about an Hour for Dinner, begins the ſame Work of diving again, and holds till about three, and towards Evening they carry their Oyſters aſhore and lay them on Heaps, and when they begin to dry they open themſelves, and the Men ſeek diligently for the Pearls, which the *Banians* and *Armenians* purchaſe, and ſort them, and diſpoſe of them to a great Advantage.

CHAP. VII.

Gives an Account of the Language and Characters of the Perſians; *alſo of their Learning, Hiſtory, and Chronology.*

Language. BESIDES the *Perſian* Language itſelf, there is ſpoke the *Arabick* and the *Turkiſh*, and alſo another ſpoken by the *Gaurs* or *Guebres*, the Deſcendants of the ancient *Perſians*, or Worſhippers of Fire. The *Arabick* is the learned Language, and in it their valuable Books are written, as the Alchoran, and their Books of Divinity, Philoſophy, Morality and Phyſick: But, it ſeems, that the Language of the ancient *Perſians* is not underſtood by the *Arabians* or *Turks*, becauſe they do not underſtand the Inſcriptions yet remaining at the Ruins of the once famous *Perſepolis*; nor indeed are the Characters uſed by the preſent *Gaurs* the ſame as thoſe at *Perſepolis*, though theſe *Gaurs* deſcended from thoſe ancient *Perſians*; nor need this ſurprize us, if we conſider, our Print in *England* now differs both in the Characters and Spelling from what was printed two hundred and fifty, or near three hundred Years ago.

THE common Language now uſed in *Perſia*, participates of the Languages of the ſeveral Nations that have conquer'd them, or trade with them; as is the Caſe in *England*, where we have been conquer'd by ſo many different Nations, and participated of their Language, that moſt *Engliſh* People are, in a great Meaſure, if not intirely Ignorant of the *Welſh* or ancient *Britiſh* Language; which moſt Hiſtorians allow is either the Original, or, at leaſt, the moſt ancient Language that we have any Specimens of, that was ſpoke in this Iſland; and ſo far has the *Engliſh* prevail'd, eſpecially in South *Wales*, that in ſeveral Years Travelling there, I do not remember one School in any Market Town, but where *Engliſh* was Taught: Nor do they think a Gentleman is qualified to converſe even with their own Gentry, if he have not had *Engliſh* Education; but more of this when we come to the Hiſtory and Deſcription of *England* and *Wales*.

FOR the Reaſon above-mention'd, the *Perſian* Language is compounded of *Turkiſh*, *Tartars*, *Arabs*, and of *Europeans*, *High Dutch*, *French*, and *Engliſh*; and ſome *Engliſh* Travellers ſay, there is more of the *Engliſh* than any other; but that perhaps may be becauſe they underſtood *Engliſh* when they heard it, better than any of the reſt; they borrow ſome from the *Greek* and *Latin*, as we do in *England*, but they have more *Arabick* than any other.

Letters. THEY have eight and twenty Letters, amongſt which they have but one Vowel, *viz. Aliſ*, it ſounds like our *a*, but the Letters *you* and *ye* are by different Accents ſounded either as Vowels or Conſonants. They have no Stops nor Paragraphs, but diſtinguiſh a new Clauſe or Sentence, by beginning it with a Capital Letter.

THEIR Paper is made of Rags of Silk and Cotton, but not comparable to ours, being neither ſo white nor ſo thick, and will bear but on one Side. Their Pen is made of a ſmall Reed inſtead of a Quill, and whatever Language they write, they uſe the *Arabick* Characters, as we do the *Engliſh* in writing *Latin*, *French*, or *Welſh*.

THEY are very tender of burning Paper, or putting it to any ſervile Uſe, becauſe as writ upon, they ſay, the Name of God may happen to be writ upon it; or, if not writ upon, yet it may ſerve to write that Name, or ſomething ſacred upon. Their Books are all in Manuſcript, the Art of Printing not yet being known, or at leaſt practiced among them: They excel in writing, and uſe eight ſeveral Hands, which altogether are call'd the *Nesky*, and he is no more reckon'd an accompliſh'd Writer there, that can write only ſome of the Hands, and cannot write the whole *Nesky*, or all the eight Hands, than he would be with us that could only write ſome of the Letters of the Alphabet, but cannot write them all. They never uſe Desk or Table to write upon, but lay the Paper on their Hand, and yet are prodigiouſly expeditious in the Diſpatch of Buſineſs; they write not as we do, but from the Right to the Left, and their Lines Curve like a Bow. Writing is ſo great a Buſineſs, that the Clerks ſtrive to out-do one another in writing cheap to get Buſineſs, as is the Caſe in ſome Trades or Occupations with us, which has brought the Buſineſs of Writing to be a very poor Employment.

Arithmetick. THEY uſe Figures in Arithmetick as we do, and the ſame firſt four Rules, Addition, Subſtraction, Multiplication, and Diviſion, but know nothing of the Rule of Three, or any Rule above it. The *Perſian* Magi were ſo expert in Aſtronomy, that it was thought by the Vulgar, they dealt with infernal Spirits; but Arts and Sciences being cultivated, and become more common among the Curious and Studious, thoſe ignorant People are now undeceiv'd, and even the Artiſts ſurprized that they ſhould formerly be ſo ignorant in the late Improvements in Aſtronomy and Coſmography; for it is but a few Years ſince, that a *European* brought a Pair of Globes to *Iſpahan*, of the Uſes of either of which they were intirely Ignorant.

THEY

THEY, as well as other Eaſtern Countries, have a great Belief in judicial Aſtrology, and call the twelve Signs by the ſame Names as we do, which doubtleſs we had from thoſe Eaſtern Countries, not they from us. Aſtrology is ſo much encouraged here, even by the Government, that the King's Head Aſtrologer has ten thouſand Pounds a Year, and there are ſo many inferior Poſts under him, that the whole annual Penſion paid them all is no leſs than four hundred thouſand Pounds a Year; and yet they cannot always predict future Events, even relating immediately to themſelves. For there being once ſome State Criminals to be cut to pieces, and the King and all the great Men preſent to ſee the Execution, and the chief Aſtrologer being among the Spectators, he (it is ſuppoſed, not able to ſee ſuch inhuman Barbarity,) ſhut his Eyes at every Stroak of the Sabre, which the King obſerving, and ſuppoſing it proceeded from his diſlike of the inhuman Sentence, order'd a Governor of a Province, which ſat near the Aſtrologer, to put his Eyes out, which he accordingly did: But doubtleſs had the poor blind Aſtrologer fore-known any thing of his impending Fate, he would either have ſtaid away from the Execution, or have kept his Eyes open to have ſaved them. They alſo uſe Charms, and truſt very much to lucky and unlucky Days to undertake Buſineſs.

Poetry. THEY have ſuch poetical Paſſions and Fancies, that moſt of their beſt Pieces are written in Verſe: Every great Man keeps a Poet in his Family, and any Entertainment is deem'd imperfect if they have not a Poet to divert them with his Compoſitions; and the Caſe is the ſame in Coffee-houſes and other Places of publick Reſort; where they always think the Converſation as lame without a Poet, as a Country Wedding would be thought in *England* without a Fidler or a Piper; and indeed ſo much is Poetry eſteem'd there, that they think the beſt Way to rivet the remarkable Actions of their Princes and great Men in the Memories of the People, is to record them in Verſe, which is the Practice accordingly.

THEY are no great Proficients in ſinging or daning, it being reckon'd ſcandalous among People of Faſhion to ſuffer their Children to learn either; and they that have acquired thoſe merry Qualifications, are look'd upon as common Proſtitutes, if they have ſo much Aſſurance as to exerciſe them publickly; and Muſick is as little eſteem'd for the ſame Reaſon; but they uſe Drums, and a Sort of Trumpet ſeven or eight Foot long, and wide at the End in proportion; with theſe they ſound at certain Hours to let the People know the Time of the Day or Night, they having no Bells to anſwer that Purpoſe; they alſo uſe theſe Drums and Trumpets to give Notice of the King or any great Man's going out of his Palace, or upon any other like Occaſion, which requires ſuch publick Notice.

Geography. THEY formerly thought that only the upper Part of the Earth (as they call'd it) was inhabited, or, that the habitable Part of the Earth, was only like the upper or viſible Part of an Orange ſwimming in the Water, ſuppoſing themſelves to be upon the Vertex or uppermoſt Point of the ſaid Part of the Globe, and that there were no Antipodes; but they are convinced to the contrary, ſince the *Europeans* have found the Way to them about the *Cape of good Hope*.

Hiſtory. THEY know very little of the Hiſtory of their own Country, much leſs of *Europe* or any remote Regions. *Ferdous*'s Hiſtory of their Kings in Verſe, is indeed good Poetry, but poor Hiſtory, and conſidering it was writ, as they ſay, in the Beginning of the fifth Age, according to Mahometan *Æra*, the Credit of it is very dubious.

Their Year. THEY differ in their Accounts of the Year; ſome reckon twelve Moons to the Year, but others begin the Year at the Sun's Entrance into *Aries*; which doubtleſs is a more proper Beginning of the Year than that we uſe, either the firſt of *January* or the twenty fifth of *March*, except we allow the Probability of the Sun's having formerly enter'd *Aries* on the twenty fifth of *March*, and that its being now come back to the tenth or ninth is owing to an Error in the *Engliſh* Account, as was proved in *Gadbury's Ephemeris* for the Year 1729. Their *Epocha* commences with the Year of *Chriſt* 622; which Year they call the *Heriga*, which ſignifies Retreat or Flight, becauſe this Year he was forced to flee from *Mecca*, his native Place, on account of the new Religion he broach'd, and the Doctrines he advanc'd.

BUT as, beſides thoſe common Accounts of Time by the Year, the *Greeks* computed their Time by *Olympiads*, the *Romans* by *Indictions*, the *Jews* by *Jubilees*, ſo the *Perſians* have a Revolution of four Years, ſo that forty Years is ten of thoſe Revolutions. Their Sabbath is on the ſeventh Day, but they begin their Week on the Saturday, ſo that their Sabbath is on our *Friday*.

THEY have no Clocks or Watches to divide Time, or give the Hour, but they have as in ſome other Eaſtern Countries, a Brazen Veſſel (which we have deſcribed before in the Hiſtory of thoſe Countries,) with a Hole in it, ſo contrived, that when it is ſet in the Water, the Water comes into it, as into a leaky Boat, and juſt in three Hours Time it takes in as much as will ſink it, and then he that watches it, immediately takes it up from the Bottom, and ſets it afloat again, and gives Notice by his great Trumpet, that the Watch, or three Hours, is expired.

THE Aſtrologers (before ſpoke of) and the Phyſicians are equally encouraged, and equally uſeleſs, and, I may add, equally concern'd in deluding their credulous Votaries and Employers; for when a Perſon is ſick, the Phyſician is conſulted, and preſcribes a Remedy, but before he takes or applies it, the Aſtrologer is likewiſe conſulted to tell them the proper Minute for that purpoſe; if it ſucceed, and either make a Cure, or give any Eaſe, they both come off with Applauſe, as our Aſtrologers do; who being ask'd whether the Man or his Wife ſhall die firſt, is cry'd up for an Oracle if he hits right but once in three Times, though he had an equal Chance in his Favour; but if the Doctor's Patient dies, or finds no Benefit, the Aſtrologer charges the Phyſician with a Miſtake in his Preparation, and the Doctor charges the Aſtrologer with a Miſtake in his Calculation, ſo between them the deluded Patient ſuffers, while they each defend himſelf, and the ſuffering Patient, or his Survivors, are equally ignorant who to blame. Phyſicians.

BUT though they ſeldom let Blood, and never give Clyſters, yet Bathing is much uſed among them, for which they have very good Conveniencies; the Bath having three Rooms, which receive their Light from little round Quarries of Glaſs fix'd in the arch'd Roof; the firſt is a great Room with Benches, where they undreſs and put on their Bathing Cloaths; the ſecond has a large ſquare Room, in which is fix'd a Copper fill'd with Water, with a great Fire under the Bottom of it, in the Room under that where the Copper is; the Copper is cover'd cloſe, and the boiling Water in it diffuſes Heat all over the Room where it is, where being kept continually hot, it makes the Room anſwer the Purpoſe of a Bagnio; and in the third is Conveniency for bathing. The Men and Women bathe all in the ſame Place, but not at the ſame Time; the Men's Time is from Day-break till Four in the Afternoon, and the Women from thence till Midnight; the Men are attended by Men Servants, and when the Men's Time of bathing is over, and the Women begin, they are attended by Servants of their own Sex. Bathing.

ONE

ONE would think by the Excellent Painting to be ſeen in *Perſia*, and the ordinary Work they now perform there, that ſome Branches of that Art have been loſt, as Painting upon Glaſs is in a great meaſure, if not quite, in *England*. They delight more in Invention than Nature in their Painting, and make *Harlequin* miſ-ſhapen Figures, and indeed it is no wonder that imitating of Nature by Painting or Engraving declines ſo much, if we conſider that the repreſenting of created Animals is forbidden by their Doctors; but tho' the want of Practice may be a Hindrance to their Painting of living Creatures, yet they paint Flowers pretty well, as not being reſtrain'd from that Branch of Painting, as having more lively Colours to do it with, and a drier Air to do it in than we have.

Schools. THERE are plenty of Schools in *Perſia*, where they learn their Mother Tongue the *Perſian*, and alſo the *Arabick*, which is their learned Language; the Alchoran is reckon'd by them the Standard of good Language: Their Method of Education is like ours in *England*, firſt to learn their Mother Tongue (the *Perſian*) and then the learned Language (the *Arabick*,) which when they have learned, as alſo writing and Accounts, they are ſent to the Colleges. *Medres* or Colleges; ſome of which are large and well endow'd, and moſtly by the publick Benefaction of the King or great Men; moſt of theſe Charities being laid out in publick Foundations, as Caravanſera's to lodge Strangers *gratis*; it is alſo Cuſtomary with them to apply theſe Charities to the purchaſing of a Bagnio, a Coffee-houſe, a Market-place, and the like, and let them out at an eaſy Rent, and apply the Income to the Maintenance of the Colleges and Students. And yet thoſe charitable Deſigns are there, as in other Places, often abuſed; for there are ſometimes ſome of the pretended Scholars ſo idle, that they will endeavour to make Friends and get into the College without any Deſign to ſtudy, but to participate of the Maintenance, and to live a Life of Lazineſs and Indulgence, or, as there are ſome Profeſſors ſo charitable to read Lectures *gratis*, the indolent Students apply to them, and ſave their Money to indulge their Luxury.

BUT the induſtrious Students of acquired Parts and Learning and ſober Behaviour, may have good Salaries in great Men's Houſes for educating their Children; for Gentlemen and People of Fortune are ſo careful in the Education of their Children, that they had rather be at the Charge of having it done at home under their immediate Care, than expoſe them to the various, and ſometimes vicious Tempers which they muſt be obliged to converſe with at the publick Colleges.

CHAP. VIII.

Treats of the Eſtabliſhment of the preſent Royal Family, and of the Prerogative of the Perſian *Kings, with the Succeſſion of the Crown of* Perſia.

THE *Perſians*, but eſpecially the Clergy, are of Opinion that none but Prophets, or their Deſcendants, or Subſtitutes, have any right to govern, alledging in Defence of this Opinion, that *Abraham*, *Moſes*, *Samuel*, *David*, *Solomon*, and next to them they rank *Mahomet*, *Haly*, and the twelve *Imans*, as the *Perſians* aſſert, who were all Prophets as well as Supremes or Governors.

BUT I ſhall not enter into the Merit of this Aſſertion, but give account of the Riſe and Eſtabliſhment of the preſent Royal Family, as I have done in that of *India* or the Great Mogul, and other Countries.

Original of the Royal Family. WHEN *Tamerlane* had defeated *Bajazet*, he return'd through *Perſia* with great Numbers of *Perſian* and *Turkiſh* Captives; but *Cheik Aider*, a Doctor in Law, of great Reputation for his Sanctity among the Mahometans, obtain'd of him a Releaſe for moſt of his Priſoners; which ſo increas'd the Fame of the Doctor, that when *Tamerlane* march'd away, the Doctor, *Cheik Aider*, began to entertain ſome Thoughts of aſſuming the Government, and in order to pave his Way the ſmoother to that Deſign, he gave out that he deſcended from the above-mention'd *Haly*, the immediate Succeſſor of *Mahomet*, and took upon him the Title or Name of *Caliph*, which ſignifying a Prieſt as well as a Prince, this looks as prophetick, according to the Notions of Government above-mention'd, as if he had been the only Perſon, both by Deſcent and Function, that was cut out for that Purpoſe. *Iſmael Sophi*, the Son of the ſaid *Aider* or Doctor, follow'd the Steps of his Father, and being ſucceſsful in ſeveral Battles, he accompliſh'd what his Father had begun, and eſtabliſhing himſelf in the Government, is reckon'd the firſt King of this preſent Royal Family of *Perſia*.

THE next that ſucceeded *Iſmael Sophi* was *Shaw Thomas*, but being a cruel Prince he was depoſed, and ſucceeded by his Brother *Mahomet Codabundi*; who was as weak as his Brother was cruel; how long he reign'd is uncertain, but he made no Figure in the World, but only being the Father and Predeceſſor of *Shaw Abbas* that ſucceeded him. *Shaw Thom.*

Shaw Abbas enlarged the Empire on every Side, he took the Province of *Candahor* from the Great Mogul, he conquer'd the Kingdoms of *Lar* and *Ormus*, and almoſt expell'd the *Turk* out of *Armenia* and *Georgia*, he encourag'd all Arts and Sciences; and as he did not find the *Perſians* at all enclin'd to Foreign Trade, he tranſplanted the *Armenians* of *Zulpha* to *Iſpahan*, and made them his Factors and Merchants in every Part of *Europe* and *Aſia* where there was any Trade: and as he obſerved the Pilgrims to *Mecca* carried abundance of Treaſure out of his Dominions, he went himſelf a Pilgrimage to the Tomb of *Imaurezez*, which was in his own Dominions of *Perſia*, thinking by his Example to induce his Subjects to carry their pious Benevolence there, that the Money might circulate in his own Country. He puniſh'd Fraud and Injuſtice ſo ſeverely, that he cauſed a Cook to be roaſted alive, and a Baker to be bak'd in his own Oven for keeping falſe Weights, and made many other Examples of that kind. *Shaw Abbas.*

BUT in ſome Caſes his Juſtice and Severity amounted to Cruelty, of which his own Son, *Sophi Mirza*, was a fatal Inſtance; who in his Youth was not ſhut up in the *Haram* or Seraglio, as was uſual, but attended his Father in all his Wars, and was look'd upon as one of the greateſt Generals of his Time; and as he frequently commanded in the moſt dangerous Enterprizes he became extremely popular in the Army, and gain'd the Love of the People

People to ſuch a Degree, that the King his Father begun to be jealous, that of a General, he would become his Rival; which Fears increas'd ſo much, that, in ſhort, the King did not think himſelf ſafe while his Son was alive: As to the Cauſe of thoſe Apprehenſions of the King, ſome ſay it proceeded only from his own Surmiſes, as being ſo conſcious of his own Cruelty, and afraid that the Hearts of his Subjects would, for that Reaſon, be ſet againſt him; but others go further, and ſay, that for the Reaſons above, the principal Chans had actually offer'd to depoſe *Shaw Abbas*, and advance *Sephi Mirza* to the Throne; but which Way ſoever it was, *Shaw Abbas* was reſolved to make himſelf eaſy, and ſo commanded a Nobleman, who attended him, to bring him *Sephi Mirza*'s Head.

This Nobleman, not caring to be the Executioner of ſo tragical a Scene, deſired to be excuſed; but another Courtier, named *Bebut Bey*, not regarding the Cruelty of the Action, but thinking thereby to ingratiate himſelf into the King's Favour, readily offer'd his Service, and by the King's Order, ſurprized *Sephi Mirza* as he came out of the Bagnio, having but only one Page, and acquainted him, that it was his Father's Pleaſure that he ſhould die, and without further warning, threw him down; the poor young Prince would have expoſtulated with the Ruſſian, to know what he had done to deſerve ſuch a violent and unforeſeen Death, but all in vain, for immediately *Bebut* ſtabb'd him with a Poniard, and then cut off his Head and carried it to his Father.

The People were no ſooner acquainted with this Piece of Barbarity, but they aſſembled at the Palace Gate, and were inclined to a general Inſurrection; *Sephi Mirza*'s Mother alſo upbraided the King with his Cruelty, and in a Tranſport of Paſſion flew in his Face; all this he took very patiently, and was ſo far from reſenting it, that he begun to conſider what he had done, and only asked her, what ſhe would have had him do, when there was a Conſpiracy againſt his Life? And adding, that it was done, and could not be recall'd; but that if it was to do again, it never ſhould be done; and ſo pacifying himſelf and the Queen, as well as he could, he thought there was no Way to make Atonement for the Blood of his injured Son, but to execute immediate Revenge upon thoſe who had adviſed him to the inhuman Murder; and thereupon, pretending to have recover'd himſelf a little from his Grief, he made a Feaſt, and invited all the *Perſian* Lords, who had been Buſy to inſtil thoſe Notions of Jealouſy againſt his Son into his Head; and, after Supper, mixing Poiſon with their Wine, he ſaw them every one expire before his Face.

But as a Puniſhment in ſome Sort of the ſame Nature with the Crime of *Bebut Bey*, who was ſo very officious to offer his Service to be the Executioner of *Sephi Mirza*, he order'd him to cut off the Head of his own Son, and bring it to him; which, to his great Grief, he did, which when the King ſaw, he mildly told him; *Now you are ſenſible of the Grief I undergo for the Cruelty you ſo readily offer'd your Service to commit*; but we do not read of any further Puniſhment inflicted upon him. *Shaw Abbas* having reigned about forty Years, died in the Year 1628, appointing *Shaw Sephi*, the Son of *Sephi Mirza*, to be his Succeſſor. *Shaw Abbas dies.*

Shaw Sephi. *Shaw Sephi* was not above fifteen Years old when he came to the Crown, and being ſo young, the Adminiſtration of the Government continued in much the ſame Condition and Hands in which his Grandfather left it; but when he came to Man's Eſtate, and ſenſible of his Power, he call'd his chief Miniſters to a ſevere Account for cutting off the Head of *Ali Couli Chan*, Viceroy of *Perſia*, who had deſerv'd well of his Country, and contributed as much as any General to the Conqueſts that were made in the late Reign. He alſo ſent for the Heads of his three Sons, and of ſeven other Lords to Court. His Reign was violent and tyrannical, and he drank to that Exceſs, that in one of his Debauches he kill'd the Queen, for which he expreſt ſo great a Concern when he was cool, that he prohibited the drinking of Wine in any Part of his Dominions; but in leſs than a Year's Time he fell to his old Exceſs, and died in a Debauch, when he had reign'd fourteen Years.

Shaw Abbas II. the ſecond Son of *Shaw Sephi*, ſucceeded him when he was about twelve Years of Age: He was a brave Prince, and hoſpitable to Strangers, eſpecially Chriſtians; but he was ſo violently addicted to his hereditary Vice of Drunkenneſs, that he cauſed three of his Women to be burnt, becauſe they would not drink ſo long as he did. He died in the Year 1664, after he had reign'd about two and twenty Years. *Shaw Abbas* II.

Shaw Sephi II. ſucceeded him, but the Grandees apprehending that this Prince had been dead, were about to advance his younger Brother *Hamzel Mirza* to the Throne, till an old Eunuch aſſured them, that *Shaw Sephi* was alive. This Prince took upon him the Name of *Solyman*; 'tis obſerved, that in his Reign the Kingdom of *Perſia* was afflicted with Famine, War, and epidemical Diſtempers; but his Government was much milder than that of his Predeceſſors. He died the 29th of *July* 1694, and was ſucceeded by his Son *Shaw Sultan Hoſſein*, who after a long and indolent Reign, was depoſed by *Mahamood* the Son of *Mereways*, of which you have already had a full Account in *Chap* IV. of this Hiſtory of *Perſia*, to which we refer the Readers.

The King of *Perſia* is an abſolute Monarch, and has the Lives and Eſtates of his Subjects entirely at his Diſpoſal; there need be no legal Proſecution or Evidence of the Fact; but if in his Caprice he paſſes Sentence, it muſt be immediately executed, though the Life of his Queen, or of his Son, and intended Succeſſor, lies at Stake, as has been juſt now inſtanc'd in the Murder of *Sephi Mirza*, by Order of *Shaw Abbas*; alſo of *Shaw Sephi* killing his Queen, and *Shaw Abbas* II. ordering three of his Women to be burnt, for no other Crime, but becauſe they would not drink ſo long as he did; and theſe Severities are commonly exerciſed upon Domeſticks or Courtiers, ſo that the moſt remote and obſcure of his Subjects are in leſs Danger of thoſe Severities and Oppreſſions ſuffer'd at Court, but yet he is ſo modeſt as to make his Commands ſubſervient to the divine Laws, and does not think that they are obliged to obey him, if his Commands are inconſiſtent with any Branch of their Religion.

Mr. *Chardin*, and other Writers, gives us an Inſtance of this in a Prime Miniſter in the *Perſian* Court, whom the King commanded to drink with him, but he excuſed himſelf, alledging that he had been a Pilgrimage to *Mecca*; but the King in his Cups, not regarding that Excuſe, cauſed his Servants to throw it into his Face and Boſom, and to pour it into his Mouth by Force, and he perſiſting in his Refuſal, the King threatened him with immediate Death; to which he mildly anſwer'd, *That he own'd the King had a Right to his Life, but not to his Religion; and that he would willingly reſign his Life rather than his Religion, and conſequently, would rather die than drink:* For which, though the King did not kill him, he diſcarded him, but with Regret; and when he conſider'd what he had done in puniſhing him for his Zeal to Religion, he reſtored him to his Place, and valued him more than ever, for his Conſtancy.

But there is another particular Piece of Tyranny in the *Persian* Government, and that is, the executing the Governors of Provinces by the King's arbitrary Command, without charging them with any Crime, or giving them Leave to plead for themselves; and the Manner of doing it is as strange, for the King two or three times a Year sends every Governor the *Calaat*, which is commonly a Royal Vest; and this is sent by some Court Favourite, because it is expected that the Governor to whom it is sent should make a handsome Present to the Messenger. When he comes within two or three Miles of the Governor's Residence, he sends to him to come to receive the *Calaat*, which is so made up, that the Messenger himself knows not what it is, only thinking it is the fine Coat, but it sometimes proves a Halter when they open the Parcel; and if so, the Messenger is obliged to execute the Governor without hearing any Defence, or either Party knowing the Reason of the Sentence; which put the Governor under dreadful Apprehensions when he meets the Messenger to open the *Calaat*.

The *Persians* plead in Defence of this barbarous Practice, that it is never used but upon some extraordinary Suspicion of a Design against the King or Government, and that, in such Cases, if they were allow'd Time for a legal Trial, the Party might in the mean Time come to a Head, and rescue their rebellious Leader, which by this means is prevented; but this sudden Severity awes the Governors, and makes them not only fearful to rebel, but to do any thing that can be construed as such.

The King has no Privy Council, or Council of State, but is according to the Constitution, advised by the Prime Minister and great Officers: Notwithstanding which, his Women in the *Haram* have so great a Sway, that he will reject the Advice of his proper Counsellors, and indulge them.

The Crown of *Persia* is hereditary, but the Heiresses or Females of the Line are excluded; but if the Succession is intercepted by a Woman, yet if she come in the Place of the next Heir, and be excluded only upon the Account of her Sex, in such a Case her Son may inherit, if she have one, though she could not. It is a positive Law there, that no blind Man shall enjoy the Crown; and hence comes that barbarous Practice there, as well as in some other Places, of putting out the Eyes of some of the young Princes, which, as they pretend, is done to prevent War and Bloodshed in contending for the Crown; so that Children born of poor Parents are much happier in that Respect than the Sons of the Royal Family.

The Crown, according to Right of Succession, always falls to the King's eldest Son, but if the King have a Mind to interrupt the Succession, and settle the Crown upon the next, or even upon the youngest Son, he disqualifies all that are elder than the intended Successor, by putting out their Eyes; and by thus ending all Disputes, the youngest, or he which the King intended should succeed, mounts the Throne at the King's Decease, without Opposition.

As the Princesses of the Royal Blood are by their Sex excluded from Government, they never are so barbarously blinded, but they are commonly married to some dignified Ecclesiastick, but never to a Minister of State, or a Man of the Sword, lest his marrying into the Royal Family should inspire him with rebellious Sentiments, and create in him an Ambition to aspire after the Crown.

CHAP. IX.

Gives an Account of the Arms of Persia, *and of the pompous Titles that the King of* Persia *assumes.*

Arms. Titles.

THE King of *Persia*'s Arms is a Lion Couchant, looking back at the Sun as it rises. His usual Title is *Shaw*, or *Patshaw*, which rendred in *English*, is Disposer of Kingdoms, and is the highest Title used in *Asia*: But to make his Title, and, as they think, his Dignity the more complete, they add the Title of *Sultan*, and also of *Chan*, or *Cham*, which is the Title of the *Tartar* Sovereigns. The King never subscribes his Name to Acts of State, but gives his Sanction at the Head of it to this Purpose; *This Act (or Edict) is given by him whom the Universe obeys.* The last King but one, in his Letters, stil'd himself, *Victorious Lord of the World, the most valiant Prince, descended from* Cheik Sephi Moulla, *and* Hessein. Some of them, when they grant Patents, enumerate the several Kingdoms and Provinces under their Dominion; and as the King of *Spain* stiles himself, *King of Castile, Leon, Arragon*, &c. so the King of *Persia* calls himself King of the several Provinces of *Persia*, as, *King of Parthia, Media, Hyrcania*, &c. and sometimes *King of Kings*, for they give all the Viceroys of their respective Provinces the Title of *Cham*, or *Sovereign*.

When his Subjects address him, they call him, *The most renowned of all Men living; the Source of Power, Majesty, and Glory; equal to the Sun; Substitute of Heaven; Object of all Men's Vows; Master of the Conjunctions; Head of the most excellent Religion; Prince of the faithful Shadow of the Almighty God; Father of Victory; Lord of the Revolution of the World; thrice happy Sultan* Hossein Patshaw, *descended from* Sephi Moulla, *and* Hessein, *Disposer of Thrones and Crowns*, &c. These are the Titles with which they address him in their Petitions sent to him; but those that are admitted to his Presence to address or petition him, call him the *Lieutenant of God*, the Prince by whom God dispenses his Grace and Favour to Men. Those of the Blood Royal, and not arrived at the Throne, are call'd *Mirza*, added to their other Title, as *Sophi Mirza Ibraham Mirza*, *Mirza* being a Title common to the Son of a King, as the Title Prince is with us.

State Officers.

The *Persians* prefer all Men indifferently to Posts or Places of Trust, according to their Merit and Capacity, either in the State or the Army; sometimes Ecclesiasticks are made Generals, and Soldiers sit as Judges; and the High Priest is sometimes Prime Minister at the same Time. The King does not regard a Person's Birth or Fortune, as a Condition of his Promotion, but only his Integrity and Capacity, and other Branches of Merit; and doubtless was all other Nations as well as they to consult Merit, as the chief Condition

of

of Preferment, without regard to Parentage or Interest, there would be more compleatly accomplish'd Officers than now, and Industry and Integrity would be more encouraged and practised, when People know it will be rewarded; they enjoy their Posts during Life, and sometimes they are made Hereditary, according to Behaviour.

Creating great Officers.

When a great Man is to be invested with a Place of Trust, his Commission is sent him in a Purse of Gold Brocade, and with it the Calaat, or rich Habit which he always gives at the first investing a Person with Power, as well as two or three Times a Year, as has been observed before, and if he be a Sword's-Man, he is presented with a broad Sword and Poniard, set with precious Stones; and the Officer thus equipp'd with his new Dress, and the other Accoutrements, attends at Court, and when the King appears, he prostrates himself three times before him, with his Face to the Ground, and then rises and takes his Place, according to his Dignity, in the Presence Chamber. When a Person falls under Disgrace, and is to be degraded, the King sends for his Commission, or the Seal of his Office, according as his Place is; but if it is but a trifling Crime, he is commonly restor'd to his Place in a small Time.

Chief Minister.

The chief Minister in the Kingdom is call'd in that Language *Atamadoulet*, which in *English* signifies the Support of the Empire; he is call'd *Vizir Azem*, or *Grand Vizir*; he is at the Direction of all State Matters of Consequence; no Grant, or Act of the King, is thought valid till he has counter-seal'd it; for as their Princes are usually brought up in the Haram among the Women, they are not so skill'd in Affairs of State as those Ministers and Politicians that make it their Business: Nor is *Persia* the only Place in the World where the Affairs of State are chiefly directed by a Minister, or the Ministry; though the King must give a Sanction to it before it can become a Law.

Bey.

The second Office is the *Bey* or *Divan Beghis*, which is something like our Lord Chancellor, or Lord Chief Justice; the Word signifies Lord, and *Divan* a Court or Council. This Office determines all Cases Civil and Criminal, except where the King himself sits as Judge; the *Divan Bey* can command any Cause to be removed to his Tribunal; nor do the Kings of *Persia* of late trouble themselves much with determining Trials in Civil or Criminal Cases, except in the arbitrary Sentence of Death, when his Passion leads him to it, as before-mention'd.

General.

The third is the Generalissimo, if in a Time of War; otherwise it is the General of the *Courtchis*, which is a Body of thirty thousand Horse, originally *Turks* or *Tartars*; there is also the General of the Musketeers, and the General of the *Coulars*, or Royal Slaves: And after the Generals comes the Secretary of State; he registers the publick Acts, and keeps the Records, and appoints a Deputy in every Province, who transmits Affairs of Consequence to him, to be laid before the Ministry.

Mirab.

The last great Office is the *Mirab*, or Lord of the Water; it is their Business to distribute the Water of the Rivers and Aqueducts, that every Country or Place may have its Share.

Houshold Officers.

The Officers of the Houshold are the Lord Treasurer, and Steward, with whom all Ambassadors and Foreigners transact their Affairs; but there are those, who though inferior to him, are yet a Check upon him, as he is upon the Prime Minister; but to prevent the publick Treasure being embezzled, no Money can be paid out of the Treasury, without an Order from the Prime Minister, the Chief Justice, and other great Officers; and they are too jealous of, and too great a Check upon one another, to propose the committing of any Fraud, which, in this Case, it is impossible for any one of them to do alone.

Master of the Ceremonies.

There are also Masters of the Ceremonies, Porters, Ushers, and Guards, and then the Master of the Horse; he has Stables all over the Kingdom to keep the King's Horses in, and proper Officers to take care of them. Then there is the great Huntsman, who has not less than a thousand Huntsmen and Falconers under him: When the King Hunts, they carry Lions and Panthers to the Chase, as well as Dogs; all which are bred up to the Game; they have also all Sorts of Birds of Prey, as well as Hawks, all which are taught to fly at Beasts as well as at Birds, as has been mention'd before.

Chief Physician and Astrologer.

Next in Rank is the chief Physician, and chief Astrologer, Places of great Profit, and People much in request; and then the High Chamberlain, who has a great Influence on Affairs of State, but never sits in the King's Presence, but only stands behind him; he is always a white Eunuch, who serves the King at Table on his Knees, tastes his Meat, dresses and undresses him; and, in short, is always with him, except when he is going to engage with the Ladies, and therefore has a great Opportunity of giving the King a good or ill Opinion of Persons or Things, as his Interest or Inclination leads him.

Pontiff.

Of Ecclesiastical Officers the chief is the Pontiff, or High Priest, the *Antient of the Law*, the *Cadi*, and the *Mufti*. The Pontiff is also entitled, Prince of their Religion, right Head of the true Church, and is in all publick Assemblies next to the Prime Minister. The bigotted Part of the *Persians* think that the High Priest only has the Right of Government repos'd in him, because *Mahomet* was both King and Priest, and that God gave him the supreme Power both in Spirituals and Temporals.

Cheik Islam.

The second Ecclesiastical Judge is the Ancient of the Law, whom the *Persians* call *Cheik Islam*; he is not much inferior to the Pontiff, and People seldom appeal from one of those Courts to the other, but from both to the *Divan Bey* upon occasion, for he is the grand Judge in all Cases.

Cadi.

The third Ecclesiastical Judge is the *Cadi*, he takes Cognizance of the same Causes with the two former, but is limited to some particular Town or District. The fourth is the Mufti, he is but of an inferior Power in *Persia*, for he cannot Controul or Reverse the Proceedings of other Courts; but they pay a Reverence to him as to a Man skill'd in the Law, and frequently consult him for Advice, but do as they please when they have done, his Authority being little regarded among them.

Mufti.

Every one of those Judges have their respective Tribunals, and the People apply to them indifferently, as they are inclin'd. The other Ecclesiastical Officers have no Jurisdiction, but are kept pretty much in Subjection by the Temporal Power, on account of their making such Pretensions to a Right to supreme Authority, as is scarce consistent with Regal Power.

CHAP.

CHAP. X.

Of the Government of the ſeveral Provinces and great Towns in Perſia, *and of their* Chans, *or* Chans Vizirs, *and other inferior Magiſtrates.*

Chan Vizir.

THERE is a *Chan* and a *Vizir* in every Province of *Perſia*: The *Chan* has the Government of the Province in General, and the *Vizir* has the Government of thoſe Towns or Villages in particular which are the King's Demeſne Lands, or which belong immediately to the Crown. The *Chans*, in their reſpective Provinces, live almoſt in as much State as the King himſelf, having all the Officers of the ſame Kind and Title with thoſe at the King's Court, but inferior both in Number and Salaries. The *Chan* commands the Millitia of his Province, and aſſigns them Land for a Maintenance; he reviews them at certain Times to ſee that their Arms and Horſes be in good Order, but every Soldier is permitted to live at his own Houſe in Times of Peace.

The *Chans* have their Places for Life, and if they behave well, their Children often ſucceed them. There are two Sorts of *Chans*, the greater are call'd *Beglerbeg*, or Lord of Lords, the other are *Coulembeg*, or Lord of Slaves. The Governors of the Frontier Provinces are commonly *Beglerbegs*, as the *Chan* of *Armenia*, from whom the *Chans* of *Chars Marega*, and other Diſtricts, in Time of War receive their Orders, and are obliged to march under his Standard.

Three Officers.

THERE are in every Province three Officers put in by the Government, *viz.* a Lieutenant and a Receiver General of the King's Taxes; he has alſo the Management of the Crown Lands, and the Places where they lie; there is alſo a Secretary, who takes account of all Tranſactions of Moment in the Province, and tranſmits them to Court; and it is the Buſineſs of all theſe three inferior Officers to have an Eye upon the *Chan*'s Conduct, and to oppoſe him if he ſhould undertake any Thing againſt the State.

Daroga's.

THERE are alſo *Daroga's*, or Governors of Cities and Caſtles, they are put in directly by the King, and have their Lieutenants and Secretaries independent of them. The ſame Perſon who is Governor of the City is never made Governor of the Fort or Caſtle belonging to it. The Miniſters of State and Generals of Armies have alſo their inferior Officers, not ſo much to act as ſuch, as to inſpect into the Conduct of their Superiors, and if they find any thing amiſs to report it to the Court; and this they are double diligent in, both to ſpy and to diſcover what is amiſs, in hopes to ingratiate themſelves into the King's Favour, and gain Preferment; ſo that Men in thoſe ſuperior Places are forced to be very circumſpect in all their Actions.

Cadi

THERE is alſo in every Town a *Cadi*, or Civil Judge, a Mayor, or Head Officer among the trading People, and Provoſt or Sheriff; and every particular Trade has a Warden or Maſter; there is an Officer alſo that acts like a Conſtable, he has a Watch under his Command, and is to keep the Peace in the Night, eſpecially in the great Towns, and Places of great Trade or Concourſe of People.

Chief Judge.

THE Governor of every Town is the chief Judge in Caſes both Civil and Criminal in any Puniſhment leſs than Death, but that the King generally reſerves as his own Prerogative; the moſt common Puniſhment is a Fine, more or leſs, in proportion to the Nature of the Crime. When a Governor or *Vizir* is ſent to any Province, he has his Inſtructions in Writing, with a Deſcription of the Extent of his Government, and of the Revenues, and the Manner in which he is to treat the People; he has alſo Inſtructions to give to every Officer of State when he enters on his Poſt.

Diſcharging.

WHEN an Officer returns from his Command by the King's Order, (which often happens when they do not know the Reaſon of it,) he always waits at the Gate of the Palace, till he can find an Opportunity to acquaint his Majeſty with his Arrival, and begs leave to throw himſelf at his Feet; which, if there have been no Misbehaviour in his Conduct, he is admitted to do, but if ſome Miſdemeanor was the Cauſe of his being ſent for, Orders are commonly given to ſtrike off his Head.

Agents at Court.

ALL the Governors and great Officers of the ſeveral Provinces are obliged to have an Agent at Court, and to give an Account of the Tranſactions of the Province when the Government requires it, and to ſend Diſpatches upon ſuch Occaſions, as the Court does not think fit to employ an Expreſs on purpoſe, but chiefly to ſolicit the Affairs of the Governor and the Province. Thoſe Lords have uſually one or more of their Children brought up at Court, intended as a Pledge for the Father's Fidelity; but by this Means the Youth commonly learns ſo much of the Affairs of State, that he frequently ſucceeds his Father in his Poſt.

THE *Vizirs* and Receivers of the King's Revenues are a much greater Burthen to the People than the *Chans*, they impoſing new Taxes and Oppreſſions upon the People, under a Pretence of ſupplying the Neceſſities of the State; and uſually obtain and keep their Place of Truſt and Profit by virtue of Preſents made to the Court Favourites, and by engaging to find out Meaſures and Schemes to increaſe the Revenue beyond what is has been before. But though I relate this as Matter of Fact in *Perſia*, I do not relate it as peculiar to *Perſia* only, for I doubt not but in our Progreſs to the Weſtward, we may find Inſtances of the like Kind in *Europe*; but doubtleſs it is a double Mortification, where they find it in the Power of a *Vizir*, or by his Inſtigation, to impoſe new Taxes perhaps with little other View but to enrich himſelf; but bleſſed be God *we are a free Nation in a Chriſtian Country*

Preſents to Court Favourites.

THE *Perſian Vizirs* are generally as good as their Words, eſpecially to their Patrons and Friends that promoted them: Complaints are often carried to Court againſt their Oppreſſions, but the Miniſters that participate of the Booty are frequently the Inſtruments of ſtifling them before they can be introduced to the King's Ear; though what is done of this Kind is all clandeſtine, for thay dare not openly oppoſe or intercept any Petition or Petitioner, but will ſometimes divert them from their Importunity to be admitted to his Preſence, by making them large Promiſes of Redreſs, and ſo put them off for that Time, till they can find ſome other Expedient to ſerve them in the ſame Manner when they come again; and it is very difficult to get any Redreſs even though they are admitted to the King, for by their Oppreſſion his Revenue is increas'd, and the *Vizir* muſt muſt allow the King a Share or elſe his Fraud will be detected. Indeed ſometimes when the *Vizir*, Miniſter, or other great Man petition'd againſt, has powerful Enemies at Court,

or

Diſ. ing.

WHEN an Officer returns from his Command by the King's Order, (which often happens when they do not know the Reaſon of it,) he always waits at the Gate of the Palace, till he can find an Opportunity to acquaint his Majeſty with his Arrival, and begs leave to throw himſelf at his Feet; which, if there have been no Misbehaviour in his Conduct, he is admitted to do, but if ſome Miſdemeanor was the Cauſe of his being ſent for, Orders are commonly given to ſtrike off his Head.

Agent Court

ALL the Governors and great Officers of the ſeveral Provinces are obliged to have an Agent at Court, and to give an Account of the Tranſactions of the Province when the Government requires it, and to ſend Diſpatches upon ſuch Occaſions, as the Court does not think fit to employ an Expreſs on purpoſe, but chiefly to ſolicit the Affairs of the Governor and the Province. Thoſe Lords have uſually one or more of their Children brought up at Court, intended as a Pledge for the Father's Fidelity; but by this Means the Youth commonly learns ſo much of the Affairs of State, that he frequently ſucceeds his Father in his Poſt.

Preſer to Cou Favour ites.

THE *Vizirs* and Receivers of the King's Revenues are a much greater Burthen to the People than the *Chans*, they impoſing new Taxes and Oppreſſions upon the People, under a Pretence of ſupplying the Neceſſities of the State; and uſually obtain and keep their Place of Truſt and Profit by virtue of Preſents made to the Court Favouries, and by engaging to find out Meaſures and Schemes to increaſe the Revenue beyond what is has been before. But though I relate this as Matter of Fact in *Perſia*, I do not relate it as peculiar to *Perſia* only, for I doubt not but in our Progreſs to the Weſtward, we may find Inſtances of the like Kind in *Europe*; but doubtleſs it is a double Mortification, where they find it in the Power of a *Vizir*, or by his Inſtigation, to impoſe new Taxes perhaps with little other View but to enrich himſelf; but bleſſed be God *we are a free Nation in a Chriſtian Country*

THE *Perſian Vizirs* are generally as good as their Words, eſpecially to their Patrons and Friends that promoted them: Complaints are often carried to Court againſt their Oppreſſions, but the Miniſters that participate of the Booty are frequently the Inſtruments of ſtifling them before they can be introduced to the King's Ear; though what is done of this Kind is all clandeſtine, for thay dare not openly oppoſe or intercept any Petition or Petitioner, but will ſometimes divert them from their Importunity to be admitted to his Preſence, by making them large Promiſes of Redreſs, and ſo put them off for that Time, till they can find ſome other Expedient to ſerve them in the ſame Manner when they come again; and it is very difficult to get any Redreſs even though they are admitted to the King, for by their Oppreſſion his Revenue is increas'd, and the *Vizir* muſt muſt allow the King a Share or elſe his Fraud will be detected. Indeed ſometimes when the *Vizir*, Miniſter, or other great Man petition'd againſt, has powerful Enemies at Court,

or

or ſome great Man waiting for his Place, the aggriev'd Party is eaſily introduc'd to a Hearing, and obtains Juſtice according to his Complaint.

THE Vizirs or Receivers are ſeldom puniſh'd capitally, except detected of defrauding the King, which, if known, they are inevitably ruin'd, and a Perſon is uſually ſent to take off his Head, with an Order diſpatch'd by the Prime Miniſter, under the King's Seal, and when the Meſſenger, or intended Executioner arrives at the Place, he goes to the Governor, or ſome great Officer, and ſhews him the King's Order; whereupon he takes him with him to the Delinquent's Houſe, and as ſoon as he enters, produces his Order, and immediately puts it in Execution, without ſaying one Word, but *By the King's Command*; and thereupon, without admitting of any Defence, cuts him in Pieces with his Sabre; and if he ſhould offer to reſiſt, every Body will lend a Hand to have the King's Order put in Execution.

Miniſter in Diſgrace.

WHEN a Miniſter is diſgrac'd, his Eſtate is immediately confiſcated, he is deprived of his Goods, his Slaves, and ſometimes of his Wife and Children; and, till the King's Pleaſure is known, No-body dare relieve him with ſo much as a Cup of Water; but if the Accuſation do not amount ſo high as to touch his Life, he has his Wife and Children return'd, and often ſome of his Slaves, and a Competency for Subſiſtence, is return'd to him; and if the Crime be trivial, or a falſe Charge, he is commonly reſtored to his former Poſt, or to ſome other, equivalent.

THERE being no Nobility in *Perſia*, every Man is honour'd according to his Poſt, or his Riches, except thoſe of the Family of *Mahomet*, or of the twelve *Imams*, Succeſſors of *Haly*; they are honour'd with the Title of *Prince*, or *Noble*, and wear green Turbants by way of Diſtinction. Although Places of Profit or Truſt are ſo precarious in the *Perſian* Court, yet People covet them, and crowd the Court perpetually in Purſuit of Preferment. The greater Sort have a Footman at the Palace Gate, to tell them when the King comes out of the *Haram*, that they may take the firſt Opportunity of addreſſing him, for the Preferments or Places they are aiming at.

CHAP. XI.

Of the Laws and Puniſhments of the Perſians.

Clergy.

THE *Perſians* have but one Word (viz. *Chera*) to ſignify both Canon and Civil Law, purſuant to that Principle of the *Mahometans*, that one Man ought to be both King and High Prieſt; and that the ſame that is at the Head of the State to Command in War, and adminiſter Juſtice, ought alſo to have the Direction of the Church, and explain the Articles of Faith, and regulate Eccleſiaſtical Diſcipline, as *Mahomet* and his Succeſſors did for ſome Ages, in Imitation (as they ſaid) of *Abraham*, *Moſes*, *Samuel*, &c. as hinted at the Beginning of *Chap.* VIII.

Doctors ſeize the Adminiſtration.

THE Doctors would exclude the Civil Magiſtrate from any Share in the Adminiſtration of Juſtice, any further than to execute ſuch Sentences as the Clergy ſhall pronounce, but the Temporal Power retains their Authority, notwithſtanding the Attempts of the Clergy, and furthermore will not allow the Clergy any other Share in the ſupreme Courts of Juſtice, but to give their Opinion in difficult Caſes. When the *Divan Bey*, or ſupreme Civil Magiſtrate, demands the Opinion of the Mufti, (whoſe Office ſee *Chap.* IX. towards the latter End) he tells him what is written in the Alchoran, that God commands ſo or ſo, or that the *Imams* have determined in ſuch a manner in a like Caſe, but their Authority extends no further, for the *Divan Bey* is ſo far from being govern'd by his Opinion, that he often ſits in Judgment without him.

Alchoran, and other Books.

THE Alchoran is their fundamental Law-Book, both in Spirituals and Temporals; and if any thing yet remain doubtful, they have recourſe to a Book call'd the Sayings and Acts of *Mahomet*, and afterwards to another, call'd the Sayings and Acts of the *Imams*; and laſtly, to another call'd the *Cheraiet*, which is a Collection of Judgments both Civil and Criminal: But they are expreſſ in ſuch myſtical, equivocating Terms, that the Judges can make them ſpeak what Language they pleaſe, according to their different Conſtructions of them; nor are the Uſe of theſe Books, in Trials at Law, any more than pure Ceremony, for at laſt the King, the Governors of Provinces, and the Vizirs, determine arbitrarily, without laying much, if any, Streſs upon their Conſtructions of thoſe Books, and although the Clergy would aſſume a Power which the Laity will not allow them, and call thoſe Determinations which are made without their Conſent, *Sentences of Violence*, and *Acts of Tyranny*, the Temporal Government regard them not. The Eccleſiaſtical Courts and Laws are ſo ſevere againſt Chriſtians, that if a Mahometan kills a Chriſtian, cutting off one Joint of his little Finger is thought a ſufficient Atonement for killing an Infidel (ſo they call Chriſtians) and if the Temporal Courts did not interpoſe in favour of them, and diſpenſe with ſome of the Severities of *Mahomet*'s Law againſt them, they could not live in *Perſia*, much leſs be ſo kindly treated as they are; for if it is the King's Inclination, and he finds it for his Intereſt to encourage Chriſtians, as is the Caſe for Reaſons given in *Chap.* V. when ſpeaking of their Merchandizes or foreign Trade, he ſometimes gives Orders that Chriſtians be admitted to dwell in any City, and that they have Liberty to build Churches, and be protected from all Violence (as is now the Caſe with the *Armenian* Chriſtians at *Julpha* near *Iſpahan*.) The ordinary Mahometan Miniſters and Judges will not ſubmit to ſuch Orders, or if the King inſiſts upon having them put in Execution, the others think them Acts of Force and Tyranny; but here the Temporal Courts interpoſe, and ſtrictly ſee the King's Orders put in Execution.

Laws ſevere againſt Chriſtians.

No Faith to be kept with Infidels.

THEIR Doctors formerly ſtrenuouſly advanced and maintain'd a Doctrine, that no Faith ought to be kept with Infidels, as they call the Chriſtians; but that Opinion is little regarded at preſent, except by the bigotted giddy Vulgar; but the Merchants of *Europe* meet with Juſtice and civil Treatment in their Dealing and Commerce, both with the Government and private Perſons, if of any Faſhion.

Courts have different Buſineſs.

THOUGH the Spiritual and Temporal Courts differ as to Superiority, yet the Temporal always have the Aſcendant, nor, except in ſome general

Cases, are they concern'd in the same Affairs; it is the Business of the Ecclesiastical Courts to meddle with Deeds and Contracts, Marriages, and Divorces, Succession of Estates, and other litigious and troublesome Matters; but the Temporal Courts are employ'd about Criminal Cases, or those that are so self-evident that they will scarce admit of any Dispute, and hence very often determine a Cause at the first Hearing, but the Spiritual Courts are more tedious and chargeable.

Debtors. WHEN a Person is either unable or unwilling to pay his Debts, 'tis true he is not imprison'd and jail'd, and render'd entirely useless, but he is taken into the Creditor's Possession, who makes him work, and uses him as he pleases, provided he do not lame or kill him; he may also dispose of the Debtor's Estate and Goods, and even himself, Wife, and Children, to pay his Debts; but, however, the Fury of the worst of them terminates there; they are content when they have got him, and all he has, and he is reckon'd a barbarous Man that proceeds to such Extremities.

Way of swearing. WHEN an Oath is required, they swear upon the Alchoran; if they be Mahometans that are to swear, the Alchoran is brought into Court in a fine Linnen Cloth, and upon its Approach the Judge and all the Court rises to pay Respect to it; the Judge takes it in both his Hands, and with the most profound Reverence kisses it, and bows to it till his Forehead touch it, and opening it, he offers it to the Person who is to swear, who kissing it, puts his Hand upon it, and swears to speak the whole Truth; but they indulge Persons of different Religions with their own way of swearing, sending an Officer with him to a Priest of his own Religion; and thus the Christian swears upon the Gospel, the Jew upon the Old Testament, the *Indian* Idolater by his Cow, and the *Gaur*, or Fire-worshippers, by Fire; and then proceed to speak, when required: But it is not supposed that it is altogether out of Indulgence to People's Consciences, that they allow them their own Ways of swearing, but chiefly, if not only, to prevent their touching the Alchoran, for they think it is prophaned if an Infidel touch it.

Prosecutions. WHEN a Person aggrieved has a mind to prosecute the Aggressor, he draws up his Petition in such Words as he thinks will best express his Grievance, and presents it to the Judge, whereupon the Judge writes in the Margin, which serves as a Warrant to bring the Offender before him, and sends a Servant with it to the Defendant, who brings him before the Judge, and being allow'd some Time to produce each his Witnesses, each Party pleads his own Cause, and so, without Lawyer or Council, the Judge determines the Cause, and commonly gives Sentence in a Hearing or two.

Women's Pleas. THE Women sometimes come to have their Grievances redress'd too, and with more Clamour and Importunity than the Men; they seldom have any other Business in the Court than to sue for a Divorce, and their Plea is commonly the Impotence of the Husband, which they express in such moving Terms, and with such howling and crying, that they are perfectly troublesome, and the more so because he will not take such measures with them as he does with the Men, whom he causes to be cudgel'd, when they are impertinent in their pleading for Justice against one another; and what may, perhaps, give the Women the more Assurance, is that they are veil'd when they come in Publick upon such Occasions, and let them be never so impertinent, they cannot be known as to who it is, except a Conjecture can be made by the Voice.

Criminals. THE Civil Magistrate never intermeddles in Criminal Cases, nor is the Ecclesiastical Law consulted, but are left to the Determination of the Temporal Courts, who give Judgment according to the Nature of the Offence, compar'd with former Precedents, and it is the *Divan Bey*, the Governor of the City, and the *Nazir*, that is invested with Authority to give the definitive Sentence.

Murder. THERE are very few Murders committed, but when that happens, the Court, or Judge, surrenders the Murderer up to the surviving Relations of the Deceas'd, with Words to this Purpose; *I deliver you the Murderer, according to Law; make your selves Satisfaction with his Blood, for the Blood he hath spilt; but, remember, God is merciful*; and then the Judge's Servants are order'd to observe the Directions of the Prosecutors, and to conduct the Prisoner to the Place they desire, and they follow the Criminal, beating and abusing him as they go; and when he comes to the Place, he is deliver'd to them, who invent such variety of cruel Tortures to be inflicted upon him, that they are scarce to be remembered or exprest; and the Women are the most cruel, who though they seldom appear abroad upon other Occasions, yet will break through the Bounds of their pretended Modesty, to imbrue their Hands in the Blood of a Murderer; yet this is to be observed, that if either by Mistake, or Compassion, they leave him before he is quite dead, they must not return back to compleat the Execution.

Petty Crimes. COMMON, or petty Crimes, are commonly punish'd by Fines, or where the Person is poor, with a Number of Blows upon the Soles of his Feet, proportionable to his Crime: The Number is always above thirty, and under three hundred; with these Severities their Feet swell, and sometimes their Nails come off; and then for a Cure, they set him in warm Horse-Dung, almost to the Middle, for several Days, and when they take him out, they foment the swoln Parts with Spirits of Wine; but it is sometimes a long Time before they get the use of their Feet again.

Other Crimes. PICK-POCKETS and little pilfering Thieves, are branded in their Foreheads with a hot Iron. House-breakers have their right Hands cut off, and the same Punishment have they that counterfeit the King's Coin, for the first Offence; but if they be detected afterwards, their Bellies are ripp'd open. They tie his Feet to a Camel, and hoisting him up till his Head but just touch the Ground, they rip his Belly open, and let all his Entrails hang over his Breast and Face; and in this Manner he is dragg'd through the principal Streets of the Town, an Officer going before him, and with a loud Voice acquainting the People with the Nature of his Crime. He is afterwards hang'd by the Heels on some Tree, and it is often a long Time after that before he expires.

Women's Punishment. THERE are several other miserable Deaths inflicted on Men; but when a Woman is guilty of a capital Crime, their usual Punishment is to be precipitated from a high Tower, by which Fall they are beat to Pieces, or at least quite kill'd as soon as fallen.

Few Robberies. BUT those capital Crimes, and consequently Executions, are very rare in *Persia*; insomuch that those that have lived in the capital City of *Ispahan*, affirm, that there has not been a Murder or a Robbery committed there for several Years together, and but seldom on the Highway; so that it is very safe Travelling: The great Reason of which I suppose is, that there are Rabdars or Guards of the Road dispers'd all over the Country; and a Man is no sooner robb'd, but these Rabdars, like so many Beacons, give notice to one another, and the whole Country is immediately alarm'd; and there being few Woods to hide in, and large open Deserts to cross, it is

How prevented.

next

next to an Impossibility for them to escape, which is doubtless the chief Reason why so few Robberies are attempted; and besides, if a Man be found in a Village that does not belong to it, he is look'd upon as a Stroller, and immediately apprehended upon Suspicion; and if there is any Noise of a Robbery, he is detain'd till it is known whether he is the Person; and yet let the Crime be never so heinous, and his hazard of Punishment never so great, he is obliged to go to some Village or starve, for he cannot subsist in these barren Deserts; and to make the Rabdars more diligent in the Execution of their Office, the Governor when any Robbery is committed, sends for the Rabdars station'd near that Place, and if they have not taken the Robber, nor apprized their Fellow Rabdars so as to have him apprehended, the Governors compel them to make good the Loss to the Person robb'd, or, in Case of Refusal, to forfeit the Sum in which they were bound as Security for the faithful Execution of their Office, or if their Security falls short of the Sum the Men was robb'd of, the Rabdar is bastinado'd, and the Money levy'd upon the neighbouring Villages; which must doubtless make the Rabdars very vigilant and strict in the Execution of their Office.

When the Person robb'd has thus had his Money return'd, he is obliged to make the Governor a handsome Present; and another Perquisit that the Governor has out of those Robberies is, when the Money is levy'd upon the adjacent Villages, he always lays it too high rather than too low, and the Surplus goes into his own Pocket.

If a Robbery be committed in a City, the Watch is obliged to produce the Thief or make Satisfaction; if he is taken, he is without further Trial immediately executed, by ripping up his Belly, as before described; and as we observ'd before, the Murderer is executed, or rather murder'd, by the Relations of the Deceas'd; so that neither of these two are sentenc'd by the King, as other Capital Offenders are. It has been observ'd that Cooks are sometimes roasted, and Bakers bak'd in their own Ovens for cheating in their Weight, but this is when Provision is scarce and dear, which makes wronging their Customers become the greater Crime; but for petty Offences of the same Kind, they have lower Degrees of Punishment, as a Fine, the Bastinado, or the like, or sometimes the Baker is expos'd with a heavy Pillory Board fastened about his Neck, and a Bell fix'd to it, which rings as they move, and this they wear a certain Time, proportionable to the Nature and Aggravation of the Offence.

CHAP. XII.

Gives an Account of the Haram *or Seraglio, being the Women's Apartment in the Palace of* Ispahan; *as also of their* Guards *and other Attendants.*

Haram.

THE Word *Haram* is said to signify *Sacred* or *Prohibited*; and if the Expression may be allow'd, the *Haram* is in this Sense *Sacred*, or *devoted* to the Debaucheries therein committed, and is also devoted to the Use of those only that have the Privilege of Access to that Place and Company, and prohibited to every Body else; for there is no Place in the World where the Women are more strictly guarded than in *Persia*, and whatever may have been said of the Restraint the Women lie under in the more Eastern Countries, yet compar'd with that of the *Persians*, they may be said to enjoy almost a perfect Freedom. One of our late Authors ascribes this Severity in immuring or confining their Women, to their amourous Constitutions, which seems to intimate, in plain Terms, that Jealousy is the necessary Consequence of true and real Affection between a Man and his Wife; but as Jealousy, where it presides, is a perpetual Corrosive, it would follow that all married People in Christian Countries, where the Women are not so confin'd, must be miserable either in marrying a Woman that he loves not, nor cares what comes of her, or that because he loves her, he must be perpetually gall'd with Jealousy when she is out of his Sight; which must be the Case, if, according to his Maxim, *Jealousy is always proportionable to Love*; but as it is to be hop'd that is not the Case with all, or many, we may rather impute this strict Care they have for their Women, to that Precept of *Mahomet*, said to be deliver'd at his last Moments, viz. *Take Care of your Religion and your Wives*; and this seems rather to be the Case, because since *Mahomet*'s Time, a Woman in *Persia* is look'd as polluted if a Man do but cast his Eye upon her, and both the Wife and Husband's Honour is lost if she appears in publick; but in the Times of the Old Testament it was not so, and therefore it is not the Climate, but the Laws and Customs in force at that Time, which occasion'd the different Practices of the Place, as may be proved by the Practice of *Abraham*, who lived in *Haran* in the Country of *Mesopotamia*, *Gen.* xi. 31. This Country is upon the West or North-West Borders of *Persia*, between the Rivers *Euphrates* and *Tygris*, and by the late Geographers known by the Name of *Diarbeck*: And though *Abraham* travell'd from thence into *Egypt* by various Journeys, (see *Gen.* Chap. xii.) we find no Reason to think but that he retain'd the Principles he had imbib'd in *Mesopotamia*; and yet we find he did not confine his Wife from the Sight of Men, or if he had, he need not have apprehended his Life in Danger by the *Egyptians* seeing her, (*Gen.* xii. 12.) which plainly proves, that he had no Notion of a Law or a Custom, that should prevail upon him to confine his Wife from so much as seeing or being seen by any other Men.

Abraham lived on the Borders of Persia

But there is another Instance of Women having the same Liberty as above, without Restraint; for when King *Ahasuerus* reign'd from *India* to *Ethiopia*, he reign'd over one hundred and twenty seven Provinces, he kept his Court in *Persia*, at *Shushan*, which was therefore call'd *Shushan* the Palace, (*Esther* i. 1, 2.) it is now call'd *Schouster*, situate in 31 Degrees of Latitude, not far from the River *Euphrates*; here it was that he made his Feast, and not only allow'd his Queen *Esther* to be publickly seen, but left her in the Room with *Haman*, who was permitted to speak to the Queen when no other Person, that we read of, was present; which further confirms, that those Laws or Customs of restraining Women from the Sight, or even the Conversation, of Men, were not regarded then, and probably not till *Mahomet*'s new Religion got footing in the World. But where Women are so unjustly and

Ahasuerus his Palace and Feast.

and unnaturally confined, it is reasonable to suppose that, as they find opportunity, they may prostitute those Inclinations, which Nature has bestow'd upon them, in a Manner that Modesty would not admit of if not so unnaturally confin'd.

It is difficult to give a particular Description of the *Haram*, because so few Men of any kind, and much less Strangers and Travellers, are admitted within it; what account can be gather'd is from the Eunuchs that attend them, and the Women that furnish the Ladies with Toys and other small Matters; and they tell us, that the Apartment of the Ladies is in the most magnificent and best furnish'd Part of the Palace, the Prince spending most of his Time amongst the Ladies in the *Haram*. The Women have their several Posts here, as the Men in the outer Palace, as Treasurers, Secretaries, Stewards, Guards, *&c.* and sometimes lay their Schemes so close as to frustrate the Designs of the Ministers without.

Four Degrees of Women.

The Women are divided into three, or I may rather say four Ranks. First Princesses of the Blood Royal, they are call'd *Begum*. Secondly, those by whom the King has had Children, they are call'd *Cazun*, which Title is the same of *Chan* among the Men, as King and Queen are equal Titles only for the Difference of the Sexes. The third Sort are those that the King keeps in Case he thinks fit to call them to his Embraces, but till then they are only call'd Ladies; and the rest, which may be call'd the fourth Sort, are Slaves, and answer the common Use of Servants.

Women shut up.

But there is one Custom, which the second Rank of the four above-mention'd are the greatest Sufferers by; for there are several distinct Buildings in the Royal *Haram*, which have no Communication with each other, and when the King dies, the Ladies that he has used as Wives are shut up in a Quarter by themselves, and never permitted to stir from thence as long as they live, unless she of whom the succeeding Prince was born, who acts with the Authority of a Queen within the Limits of the *Haram*.

When the King has a Son or Brother marriageable, he gives him the Choice of a Mistress among the Ladies of the *Haram*, or of two or more, according to the Respect he has for him, for in proportion to that it is, that he bestows upon him a greater or less Number of Wives, and gives him a number of Female Slaves and Eunuchs, and other Domesticks suitable to his Dignity, and also an Apartment in the Palace to suit his Family; and there he continues in his own Apartment with his Family, but is never allow'd afterwards to converse with the rest of the *Haram* without the King's leave; and if ever these Princes are known to have any Love Intrigues with any other Ladies it is commonly fatal to both Parties, nor are they allow'd to converse with any Men, except the Eunuchs, so that when they succeed to the Crown they are as ignorant of the Affairs of the Kingdom, as if they had been born of the most obscure Parents in it. Their Princesses are commonly married as soon as they are at Age, and frequently to some dignified Clergyman.

The *Haram* is the Magazine of the Kingdom for beautiful Women, for the *Chans* or Governors are continually sending up fresh Supplies of beautiful Virgins to Court, or if he hears of a beautiful young Virgin in any Family, he sends for her to Court, and the Parents send her up without the least Regret, but rather rejoice that their Daughter is prefer'd at Court; for whenever a young Lady enters the Seraglio, there is a Pension immediately settled upon her nearest Relations, and if she becomes a Mistress to the King, the Salary is increas'd, but if she has Children by the King, she commonly procures the Advancement of all her Family. There are abundance of the fair *Circassian* Virgins in the *Haram*, whose excellent Beauties often captivate the Heart of the young Monarch.

But there is a grievous Mortification attends even the most beloved Ladies of the *Haram*, after the King has had several Children, for then the Women that afterwards have Children by him are not only confined to their Apartments, but in perpetual Apprehensions of having their Children murder'd, or their Eyes put out, which is most commonly executed, if not by the King, the Natural or rather Unnatural Father of those unhappy Children, yet his Son or Successor seldom fails to do it, to prevent any Dispute about the Succession to the Crown, as we have observ'd is often done in other Places in the East.

Guards.

The Guards that attend the *Haram* are composed of three Sorts of People. 1. The White Eunuchs, they guard the outer Gate, and never come within Sight of the Women. 2. The Black Eunuchs, these come from the *Malabar Coast* in *India*, they attend in the second Court, and some of the eldest and most deform'd are pick'd out to carry Messages to and from the Ladies within, and to assist in the Gardens, and Kitchens, and the like. The third, or innermost or Body Guard is composed of Women, commanded by some grave experienced Matron, that has her Orders directly from the Prince himself, and by the Eunuchs convey the King's Orders from within the *Haram* to the Guards without.

Lodging.

The Women of the *Haram* are every one lodg'd in a separate Chamber, or if two lodge in the same Chamber, they put an old One and a young One together, nor are they allow'd to make Visits from one Apartment to another without leave, and this Precaution is taken to prevent Quarrels that might ensue upon the Jealousies entertain'd against each other, grounded upon that Envy which is the common Consequence of Court Favourites, being or conceiting themselves to be one more respected than another; for if one excel the rest in singing, dancing, or any other Performance, they are sure to be the Butt at which the rest will level their Envy, especially if the King has either by Words or Gestures express'd his Approbation of the Performance in any distinguishing Manner.

Women indolent.

The Women in *Persia* lead very indolent Lives, and the Indulgence which they enjoy, is owing to an Opinion that Women were not made for any other Purpose but for Pleasure, and the Propagation of the human Species, and therefore they have nothing of Service required of them, but live in Idleness and Luxury, and instead of Exercise to make the Blood circulate, they have their little Slaves to rub and chafe them for that Purpose; sometimes they take Opium and smoak Tobacco, their Slaves dress their Victuals, and wash their Cloaths; so that the Women here have no difficulty to encounter with, except those in the *Haram*, who find difficulty enough to please their Tyrannical Prince.

Coura.

At the Time of the *Coura*, or March of the *Haram*, every Person of seven Years old or upwards is obliged to get out of the Way; for which Purpose a Troop of Horse marches before, and another behind them, crying *Coura*, *Coura*, by which Cry every Man knows that he is to retire from the Road, at a proper Distance, the Eunuchs with their Batons march on Horseback between the Guards and the Women; and if any Man is found in the Way, under any Pretence whatsoever, he loses his Life; and if they march through a City, the Men quit all the Houses in the Street they march through; they fire their Muskets at little Intervals to give Warning of their Approach; but

if after that they meet any Man in or near the Way they kill them directly, and never give any Quarter.

Eunuchs. THERE are vast Numbers of Eunuchs dispersed through all *Persia*, especially in the King's Palaces and Houses of the Quality, where thay are entrusted with almost every Thing valuable of their Masters, and even the Women are so much under their Care, that whenever they go abroad they are always attended by them, either upon a Visit, or even to the Bath, but not to their private Chambers. They also teach the Children of the Family to Read and Write, and instruct them in the Principles of Religion, till they are fit for more learned Teachers; and even then they attend them as Pages to take Care of their Persons; and the King's Son, that is to be his Successor, is always under their Care till he is advanced to the Throne. Some of these Eunuchs are vers'd in Liberal and Mechanick Arts, which is ornamental to a Prince, but sometimes to prevent aspiring Thoughts, that very Prince whom the King intends shall be his Successor is kept in Ignorance, as to what or whose Son he is, lest he should attempt to ascend the Throne before it is his Due. The Eunuchs are usually castrated at between seven and ten Years of Age, and if they are cut after they have arriv'd at Fifteen, few of them survive the Operation.

CHAP. XIII.

Of the Strength and Force of the King of Persia, *with regard to his Neighbours; and of their Manner of Engaging an Enemy.*

How Formed. PERSIA neither has nor needs any of the Fortifications made by Art, according to the modern Method; for it is defended on every Side either by the Sea, unpassable Desarts, or inaccessible Mountains, which render the Approach to it extremely difficult; nor have they any Enemy to be immediately under any Apprehensions from, except the *Turk*, and even he is at present so diverted otherways, that they have not much to fear from him, as we shall further observe below. When the *Tartars* have a mind to make any Attempts upon *Persia*, they are such little distinct Principalities that they can only make Incursions in small Bodies, but never penetrate far; for the Thoughts of an Enemy so affrights them, that they always retreat rather than stand a pitch'd Battle. The *Persians* look upon the *Indians* as a contemptible Enemy, whom they have upon all Occasions defeated. The *Turk* is a powerful Enemy where he has an Opportunity; but, as above observed, he has so much upon his Hands in his War with the Christians, that he has no Time to attempt new Conquests in *Persia*. The last War that the *Turks* and *Persians* had, was about the City of *Bagdat* or *Babylon*, which stands upon the River *Tygris*, in about Latitude 33 Degrees, and being near the Eastern Frontiers of *Turkey* in *Asia*, though in *Persia*, and in that King's Possession, it was a perpetual Bone of Contention between the *Turks* and *Persians*, the former to attack, and the latter to defend, which they did with a great deal of Vigour: For *Bagdat* is one of the finest Towns in the East, but it being far distant from any of the inhabited Parts of *Persia*, and separated from thence by a vast Desart, and the *Turks* on the other Hand having the advantage of the River *Tygris*, (upon which it is situate, as before observed,) for the Conveyance of Men, Ammunition, and Provision to it, it became an easy Prey to the *Turks*, who now have it in Possession: But the Surrender of *Bagdat* putting an End to all the Wars between the *Turks* and *Persians*, the latter now thought themselves secure, as having no Enemy from any Quarter, they indulged themselves in Ease and Luxury, their State neglected, and their Forces undisciplin'd, which contributed very much to the Conquest begun by *Mereweys*, and compleated by his Son *Mahamood*, with so small a Force as six or seven thousand Men; of which Conquest, and the several Steps of it, we have given a particular Account in Chap. IV. foregoing, to which we refer the Reader.

It is surprizing to observe how the natural Temper and Disposition of a Prince affects that of his People. The *Persians* were naturally a brave and active People, and yet the Indolence of their Princes (before *Mereweys* and his Son *Mahamood* awaked them out of their Lethargy,) had made them slothful, unactive, and unprepared to resist an Enemy, and though, in the last Century, in the Time of that active Prince *Shaw Abbas*, or *Abbas the Great*, (*see Chap.* VIII.) they enlarged the Empire, and made great Conquests both in *Turkey* and *India*, they are so much degenerated from what they were then, that they even suffer little Insults from the *Tartars* and *Arabians*, though, for want of a superior Power, they can make no Conquests upon them.

Two sorts of Troops. THE *Persian* Troops are of two Sorts, the Troops of State and the King's Troops; we mention the Troops of State because they are of the more Antient Institution, till suspected to be too strong, *Shaw Abbas* constituted the King's Troops, or Troops of the Crown, to suppress them. The Troops of State are maintain'd by the Governors of the respective Provinces, and paid out of certain Lands appropriated to that Purpose, and they are divided into Militia and Regular Troops, which last are call'd *Courtchis*, and were originally a stout hardy Race of *Tartars*.

Coselbasses. THESE are lately, and indeed properly, call'd *Coselbasses*, or Red-heads, so call'd, because they came to assist *Cheik Sephi*, or *Ismael Sephi*, the Son of *Aider*, the first of the present Royal Family, (as in Chap. VIII.) for which Service, he allow'd them the Honour of wearing red Turbants of the same Form of that he wore himself; these remain in their Tents in Peace or War; and when they are not call'd to Duty as Soldiers, they employ themselves in feeding, buying or selling of Cattle, and it is from thence they are call'd *Courtchis* or Shepherds. The Service they did for *Cheik Sephi* is not yet forgot, but out of Respect to that, and the Zeal they have for the Religion of the *Imam*, they are distinguish'd with the particular Favours of having the best Posts both in the Court and the Army; it is from those hardy Soldiers that the Natives of *Persia*, not only Soldiers but others, obtain'd the Name of *Coselbasses*, and even that Name itself has made them, though indolent, formidable to *Indians*, *Turks*, and *Tartars* in the last Ages of the *Persians*; it was by them that the *Turkish* Language was introduced into *Persia*, which is now more common in the Northern Parts of that Kingdom than the *Persian* Language itself

Coselbasses in favour.

But as we obſerv'd before, *Shaw Abbas* obſerving to what a Pitch of Power the *Cooſelbaſhes* had attain'd, and that they had ſo much Influence upon all the Affairs of State, that they were not much ſhort of the *Turkiſh Janizaries*, to depoſe and ſet up what Princes they thought fit, he did not think himſelf ſafe, and eſpecially upon the Account of his own Son, to whom he obſerved that the *Cooſelbaſhes* paid ſuch a profound Reſpect, as he was jealous was inconſiſtent with their Allegiance to himſelf, which made him apprehenſive of Danger; and therefore, to nip them in the Bud, he cauſed his Son to be put to death, and diſperſed the *Cooſelbaſhes* in ſmall Detatchments through all the Provinces of the Empire, that they might continue to anſwer all former Purpoſes, and yet be prevented of coming to a Head, or uniting into one Body againſt him. They ſerve on Horſeback, and for offenſive Arms they have a Bow and Arrows, a Sword, Poniard and Launce, and a Hatchet at the Saddle-skirt, and for defenſive Arms a Shield and a Helmet; they paſs in Review once a Year before a Commiſſary ſent from Court, or elſe before the Governor of the Province.

Kills his Son.

The Jealouſy of *Abbas* the Great, put him upon erecting another Body of Troops to ſuppreſs the *Cooſelbaſhes*, in Caſe of any Attempt, and theſe were therefore call'd the King's Troops, or the Troops of the Crown; one of theſe Bodies conſiſted of twelve thouſand Men, and were call'd Muſketeers, becauſe inſtead of Bows and Arrows, they carried Muskets; and though they march on Horſeback, they fight on Foot, but before this Time neither Foot Soldiers nor Fire-arms were uſed in *Perſia*, nor are in *Tartary* to this Day.

King's Troops.

The other Body was call'd the *Coulars*; they conſiſted of ten thouſand Horſe, and every one carried Fire-arms; the Word *Coular* ſignifies Slave, becauſe the firſt of them came from *Georgia* and *Circaſſia*, as voluntary Slaves to the King of *Perſia*; but now the *Perſian* Subjects, who voluntarily and abſolutely devote themſelves to the King's Service, as Troops of the Crown, are alſo call'd Musketeers; ſome of them are Preſents ſent to the King, and others are deſcended from *Georgian* and *Circaſſian* Families; they are generally faithful and courageous in the King's Service; for, as few of them know from whence they have deſcended, they can have no lingering Thoughts of returning Home, nor any particular View of Intereſt, otherways than to oblige the King their Maſter, by whom they ſubſiſt.

Coulars

But as we have ſpoke of *voluntary Slaves*, it is not amiſs to obſerve, that *Slave* is an honourable Title in *Perſia*, much above that of Subject; for *Coular Shaw*, or *King's Slave*, is equal to the Title of Marquis in *France*; and one of thoſe Slaves in *Perſia* is in one of the fairеſt Steps to Preferment, when Opportunity offers.

Slave an honourable Title.

There are alſo two other Bodies of Men, one of them is call'd *Sophi's*, or *Sephi's*, firſt inſtituted by *Cheik Sephi*, as a Guard to his Perſon, and continued in the ſame Office to this Day; they conſiſt of only two hundred Men; they wear the Sophi's Cap, and for their Arms have a Sabre, a Poniard, and an Ax, which they carry on their Shoulders. The other Body is call'd the *Zezami*, or the ſix Hundred; they are tall, ſtout, young Fellows, like Grenadiers; they were inſtituted by *Abbas* II. for the ſame Purpoſe as the former, only an Addition to them; they wear long red Caps, in the Form of a Sugar-Loaf; and their Arms are a Muſket, Sabre, and Pomard, adorn'd with Silver, exceeding fine. All the Troops of *Perſia* are comprehended under the two Names of *Courtchis*, and *Coulars*, Shepherds, or Slaves; and by this they diſtinguiſh the old Eſtabliſhment from the new.

Sophi's or *Sephi's*

The King finds all the Troops of the Crown with Horſes, Arms, and Accoutrements; but the Men cloath themſelves as they pleaſe, or are able; not being confin'd to any Livery, or Colour, as in *England*. There was formerly a Body of twelve thouſand Men belonging to the Artillery, but they are diſcharged; and there is now no Artillery, except a few Guns at the Palace of *Iſpahan*, and ſome other great Places, but they are of little uſe.

If we compare the Extent of the Kingdom of *Perſia* with the Number of their Forces, their Armies are not or ever were large; the great *Shaw Abbas*, who made ſuch a conſiderable Figure and Conqueſts in the World, had never above a hundred and twenty thouſand Men in his Service at a Time, take all the Provinces together; and indeed by the natural Strength of their Kingdom, and the peaceable Situation of their Affairs, they have at preſent ſo little need of a ſtanding Army, that they neglect to pay their Soldiers, for which Reaſon they frequently deſert, and enter into Foreign Service, and the Truſtees at Court conniving at it without Noiſe, take that Opportunity to put their Pay in their own Pockets, by which Means the King's Forces are weaken'd, his Enemies ſtrengthen'd, and his Soldiers Pay goes into the great Men's Pockets.

Their Diſcipline is much inferior to ours in *Europe*; they know very little, if any thing, of our Artillery, our Bombs and Granades; but by this Means they have one Advantage; for they make exceeding ſwift Marches, by which Means they ſometimes arrive at the Enemy unawares, and fall upon him at once with unlimited Fury, when he leaſt expects ſuch a Viſit; and the Country being ſo deſart, and Water ſo ſcarce, they can immediately divert the Courſes of the Rivers, and intercept their Proviſions; and when they have thus diſpirited them, fall upon them, where a Number far inferior to that of the Enemy is ſufficient to cut them off; but if the Enemy is able to make Head againſt them, and prove too hard for them, they retreat, (during which, as has been obſerved, they ſhoot more Arrows than when they advance,) and when they have drawn the Enemy to a diſadvantageous Ground, they return to the Charge again, and by this means often harraſs the Enemy till they prove ſucceſsful.

Their Diſcipline

The *Perſians* never throw up any Entrenchments about their Camps, but commonly encamp behind ſome Mountain or difficult Paſs; but in beſieging they entrench, and uſually undermine the Place they intend to take, for they are very dextrous at Mining and ſubterraneous Works; it was by this Means that they took *Eriwan*, the Capital of *Armenia*, from the *Turks*, when it was obſerved that the greateſt Part of the City was undermin'd in a very ſhort Time.

Notwithſtanding

Perſia is ſo thinly peopled, that a Part of it, if well cultivated, is ſufficient to ſubſiſt all the Inhabitants; and therefore when they are apprehenſive of an Invaſion from abroad, they draw all the People from the Frontiers, and deſtroy the Country in ſuch a Manner, that when the Enemy comes they can find no Subſiſtence; and for what Stores and Utenſils the Husbandmen or others may have, they make Pits in the Ground to bury them in, and cover them over ſo artfully that it is next to impoſſible to find them; and the Climate being ſo hot, and the Ground ſo dry, even Proviſion will lie there a long Time before it will take any Damage.

Method in their Incurſions.

When they have made the Country thus deſolate for about eight Days Journey together, they encamp near it in ſeparate Bodies, and when the Enemy is advanc'd near it in queſt of Plunder, they fall upon him to diſtreſs him in his March, or if by that Means they cannot force his Retreat, and expel him, the Army harraſſes him in his March, who-

while the *Perſians* themſelves continue to deſtroy the Country, that if they cannot Fight them out, they will Starve them out, rather than let them penetrate into the Bowels of the Country to make a Conqueſt. This is the Method by which they have defeated the greateſt *Turkiſh* Armies, and may ſerve as a Specimen of their Conduct on the like Occaſions. When the Enemy is thus expell'd, every Man returns to his own Land, and without much Expence, or Loſs of Time, ſoon repairs all the Damage; their Mud-wall Houſes are ſoon built, and, in this hot Country, ſoon dry. Their Furniture and Proviſion has received little or no Damage, and every Thing ſoon reſtore to its Place.

They are almoſt ſure of Succeſs, by the Project above-mention'd; for if the Enemy bring great Numbers to over-power them by Force, it is impoſſible for a numerous Army to ſubſiſt; and if for the Sake of ſubſiſting, they bring but a ſmall Number, they are eaſily defeated, ſo that it is very difficult to penetrate far into *Perſia*, except their own Remiſſneſs and Security pave the Way to their own Deſtruction, as was the Caſe with *Mereweys* and *Mahamood*, near the Beginning of this Chapter.

Colours. Their Colours are made of rich Silk, much in the ſame Form as our Horſe Standards; and for a Motto or Device, they have commonly ſome Clauſe of the Alchoran, or of the Confeſſion of Faith: Sometimes they have a Lion wrought in the Colours with the Sun-riſing over his Back. The great Standard-Bearer, or Alemdar Baſſa, is one of the principal military Officers. The Coofelbaſhes or Troops of State are well and regularly paid; for as their Wages are raiſed out of Land appropriated to that Purpoſe, Care is taken the Money ariſing from it ſhall not go through too many Hands before the Soldiers have every one his juſt Proportion, nor to be fleec'd by Men of ſuperior Authority, and the Soldiers deprived of their Right. The Officers, according to their ſeveral Ranks and Dignities, and alſo the Soldiers, receive of the Farmers that hold the Land their reſpective Shares of their Rents ariſing from thence. The General of the Musketeers, and the General of the Coulars have each three thouſand Pounds a-year, and the other Officers, and alſo the Soldiers, in Proportion; and as every one has the Rent of a certain Quantity of Land inſtead of Money in Specie, and the Lands aſſign'd for theſe Payments are valued very low, it is probable the Farmers may give more for the Lands than they are valued at, and conſequently the Pay of the Officers and Soldiers amount to more than the exact Sums that were allotted them.

That Pay

Standing Forces. The *Perſians* always keep up ſtanding Forces, though in Times of Peace, as about ſix or ſeven thouſand Men in *Chaldea* towards *Babylon*, to prevent the Incurſions of the *Arabs*. The Governors of *Armenia* and *Georgia* have each about five thouſand Men; in *Choraſſan* or antient *Bactria*, they have eight thouſand Men, to defend them againſt the *Uſbeck Tartars*, and the like Number in the Province of *Candahor*, on the Frontiers of *Perſia*, towards *India*; and all thoſe Frontier Troops being well diſciplin'd, and kept generally in Action or Motion, are good Soldiers; but thoſe that are canton'd in the Inland Countries have met with ſo little Oppoſition, and conſequently ſo little Exerciſe, that they have either loſt, or never had the Air of Soldiers: As for *Gylan* and *Mazenderan*, which lie on the Coaſt of the *Caſpian* Sea, they ſeldom keep any Troops there; whether they truſt to the Sea for their Defence, I cannot determine; but certain it is, that by the Way of the *Caſpian* Sea, the late Czar of *Muſcovy* brought his Forces to the *Perſian* Coaſt upon the Southern Part of the *Caſpian* Sea, in the Provinces of *Gylan* and *Mazenderan* above mention'd, and taking the Advantage of that Coaſt being ſo ill guarded, landed his Forces with little Oppoſition, and have now fix'd themſelves in thoſe Provinces, the richeſt and moſt fertile Part of all the *Perſian* Empire.

Vanity of the *Perſian* Aſtrologers. The King of *Perſia*'s Generals loſe many advantageous Opportunities in their martial Exploits by the King's Bigottry to Aſtrology; by which he ſuffers himſelf to be deluded; for he thinks them of ſuch Conſequence in the Army, that ſome of them muſt be ſure to accompany the General in every Expedition, to tell him the lucky Minute; and they being at leaſt ſo wiſe as to know it is the eaſieſt for them to ſtay at home, be indulg'd at Court, and ſleep in a ſound Skin, that they are ſeldom forward to confeſs that an Enterprize will be lucky at all; but if it is reſolved to be put in Execution, they muſt be conſulted for the lucky Minute to ſet about it, which they find with as much Reluctancy as the other; and the Prudence of both King and Generals muſt be ſubſervient to the Opinion of the Star-gazer, though they loſe a viſible Opportunity of Advantage.

The effeminate Eunuchs and Favourite Women are as averſe to War as the Aſtrologers; for they apprehend that if they loſe their Prince, they loſe their all, or however muſt undergo ſome ſevere Revolution, and therefore they are ſure to fall in with the Aſtrologers in diſſwading the King from every thing that carries in its Face the leaſt Appearance of Danger.

No Ships. The *Perſians* have no naval Forces, or any Ships whatſoever, though they have Sea Coaſts both on the South Shore of *Perſia* and in the *Caſpian* Sea; though they had formerly ſome Veſſels in the *Caſpian* Sea to defend them from the *Coſſacks*; but that Practice is diſcontinu'd, and the *Muſcovites* generally tranſport their *Perſian* Merchandize by the *Caſpian* Sea to *Aſtracan* in their own Veſſels, and have moſt of the Navigation of the *Caſpian* Sea to themſelves, which doubtleſs has facilitated their Conqueſts on that Side; and if they fortify the Coaſt, and can be ſupply'd by Sea from *Muſcovy*, it may probably be difficult for the *Perſians* to remove them, nor is it to be ſuppoſed they will much endeavour it, becauſe they are always apprehenſive that if the *Turks* had Power, they do not want Good-will to make an entire Conqueſt of *Perſia*; and by what has been obſerved before, it is natural to infer, that if others that the *Turk* is now at War with ſhould give him Time to breathe, and he ſhould take that Opportunity to fall upon the *Perſians*, their Enmity againſt the *Turks* is ſuch, that they would rather enter into an Alliance with the Emperor and *Muſcovy*, or perhaps invite their Forces into the *Perſian* Territories, than ſubmit to be a Prey to the *Turks*, though perhaps the Conſequence might be the ſame as that of the antient *Britains* inviting the *Saxons* to their Aſſiſtance againſt the *Picts* and *Scots*, who being faithful to the antient *Britains* till they had expell'd thoſe common united Enemies, they ſeiz'd the Kingdom to themſelves, and expell'd their Maſters the antient *Britains* too, or at leaſt ſubdu'd them, and drove them to *Wales*, *Cornwall*, and *France*, where their Succeſſion continues to this Day; but indeed the *Perſians* are not at preſent under any Neceſſity of running ſuch Hazards; for as Affairs now ſtand, the *Perſians* are a ſufficient Match for the *Turks*, eſpecially on the defenſive Part; and it might be for the Emperor's Intereſt to come into an Alliance with *Perſia*, as well as for the Intereſt of *Perſia* to enter into an Alliance with him, to quell the Inſolence of the *Turk*, in caſe the Emperor ſhould be engag'd with any of the Chriſtian Powers in *Europe*; for which Reaſon it is not to be ſuppos'd the Emperor will ſtand neuter, and ſee *Perſia* become a Province of the *Turkiſh* Empire; and the ſame Reaſon holds

good

good with the *Muſcovite*; for if the *Turk* ſhould conquer *Perſia*, which is in other Words, if the *Turk* and *Perſian* ſhould unite, it would be eaſy for them to expel the *Muſcovite*, and at leaſt oblige him to quit his new Acquiſitions in *Perſia*, and perhaps attack him in his own Dominions into the bargain; and doubtleſs the *Perſian* is ſenſible of the fatal Conſequence that may attend making *Muſcovy* his Enemy, and therefore of two Evils chuſes the leaſt, and rather parts with a Frontier Place or two; from whence they are in no more Danger of being conquer'd, than to be expos'd to the Mercy, or rather the Fury of two ſuch powerful Enemies as the *Muſcovite* on one Side, and on the other Side the *Turk*, whom he has more Reaſon to fear than all the World beſide, an Alliance with *Muſcovy* ſeeming to be the only viſible and probable Method to ſave *Georgia* from the *Turks*.

CHAP. XIV.

Of the Revenues of the Crown of Perſia.

Land, four Sorts.

BY an impartial Eſtimate of all the Land in *Perſia*, it is computed that where there is one Acre inhabited and cultivated, there are ten that are barren, deſolate, and uncultivated. The Land in Occupation are of four Kinds, or Tenures, as followeth.

Lands of State.

1. The Lands of State; and the Land under that Denomination contain the much greater Part of what is cultivated, and are in the Poſſeſſion of the Governors of the reſpective Provinces, who out of them take their own Revenue, and aſſign the reſt for the Payment of their Officers and their Troops, for every Soldier has his Pay aſſign'd him upon ſome Village or Farm, as was intimated in the laſt Chapter.

Demeſne Lands.

2. The Demeſne Lands are the King's immediate or perſonal Eſtate, out of which he pays the Officers of the Houſhold, and the Troops of the Crown, or the King's Troops, and the reſt is given as Preſents or Penſions to Court Favourites, and what remains of that is managed by the Vizirs and Intendants, who remit *what they can ſpare of* the Produce to the Treaſury.

Church Lands.

3. The Church Lands and theſe are the Donation either of Princes or of private Perſons, that are able and willing to advance in that Way; theſe are accounted ſacred, as being devoted to pious Uſes, and therefore they are never taxed, nor are they confiſcated or alienated from their original Deſign, for any Crime, or under any Pretence whatſoever, nor can their Title ever be ſo much as call'd in Queſtion after one Year's Poſſeſſion.

Lands of private Men.

4. The Lands of private Men; theſe they hold of the Crown for a Term or Leaſe of ninety nine Years, paying a ſmall annual Rent, or rather an Acknowledgment; it is ſo inconſiderable, that at the End of the Term above-mention'd, they renew their Term or Leaſe for ninety nine Years more, only advancing one Year's Income.

Un-occupy'd Land.

If any Perſon deſires to Cultivate or Build upon the un-occupy'd Land, they apply to the King's Officers, who procure him a Grant, or Leaſe, for ninety nine Years, upon a ſmall annual Acknowledgment, as above, and renew their Leaſe, when expired, as in other private Eſtates; and one would think, that if the Country were very populous, the Land would be more of it cultivated, ſince People may have Eſtates ſo cheap as for improving, and only paying ſo ſmall an Acknowledgment to the King, and doubtleſs it muſt be owing either to the Sordidneſs or Indolence of the Inhabitants, or to the Barrenneſs of the Soil in ſome Parts of the Country, that there is ſo much waſte, deſolate, defart Land in *Perſia*.

The King has one Third of the Produce.

WHATEVER Rent the Lands pay, the King has one Third of the Produce; but the Grain being very ſubject to be deſtroy'd by Hail, Drought, Locuſts, Graſs-hoppers, and other Inſects, the Tenants inſiſt on proportionable Abatements; and when the Deſtruction is very great, the People, the better to convince the King of their Loſs, carry to Court wither'd Branches of Trees, and damaged Ears of Corn, as Specimens of the Truth of their Complaint, and to prove their Inability to pay the uſual Rent; and if their Loſs be but little, yet they commonly make loud Complaints that ſometimes their Abatements is more than their Loſs; by which Means they ſometimes make an Advantage of their Misfortunes; but private Landlords cannot be ſo impoſed upon, becauſe they are proper Judges of the Farmer's Loſſes, as having the Land under their immediate Inſpection. The King's Officers frequently pretend they have no Authority to make Abatements, and therefore the Inhabitants of the Villages go up in whole Shoals to Court, to preſent their Petitions, and expreſs their Grievances to the King in Perſon, inſomuch that there are ſometimes ſeven or eight thouſand People attending at the Court of *Iſpahan* upon theſe Occaſions; and the Court uſually ſends Orders to their Intendants and Receivers in the ſeveral Provinces, or depute Commiſſioners to redreſs the People; but herein the Crown is uſually defrauded; for by a ſmall Purſe given as a Preſent to theſe Commiſſioners or Intendants, the Truth of their Complaint is confirm'd at Court by the Report of the ſaid deputed Officers.

Attends the Cattle, &c.

THE King has alſo one Third of the Husbandman's Profit in his Cattle, as the third Fleece, the third of the Breed, &c. Every Province makes alſo large Preſents to the Court, of the moſt valuable Things the Country affords, whether Silk, Grain, Fruits, Cattle, or whatſoever is moſt valuable among them, and that in ſuch Quantities as to be ſufficient to ſupply the King's Houſhold: He has the ſeventh Fleece, and the ſeventh of the Breed of Cattle, in thoſe Lands which are not appropriated to his Uſe, which is a conſiderable Addition to his Revenue; for the Shepherds in *Perſia*, like the Patriarchs of old, reckon their Riches by their Number of Flocks and Herds, and make attending upon them their Buſineſs. They live in Tents, and remove from Place to Place as they can find Paſture for them; for all Lands that are not the Property of particular Perſons, are common to all the King's Subjects to graze upon, only the ſevenths, above-mention'd, is demanded as an Acknowledgment, that it is the King's original Property.

The wealthy Shepherds and Herdſmen, are call'd *Sauamat-chan*, from whence we have the Word *Saracen*; for the Word ſignifies an Inhabitant of the Fields, for they live in Tents by two or three Hundred together, and ſometimes ſo many more encamp'd in one Place, that their Tents, and

their

their Flocks and Herds cover the Ground ſo far, that it requires two or three Hours to paſs thro' them; and the King has in every Province an *Inchomban Baſhi*, or Chief of the Shepherds, reſiding to take up the above-mention'd Sevenths both of Sheep, Aſſes, Mules, Camels, and Goats; but of Horſes, Silk, and Cotton, he has a third all over the Kingdom.

Minerals and precious Stones.

Minerals and precious Stones are his entire Property, and though he allows the Subject a Share, yet it is not till he has had his Choice, and he has two *per Cent.* of all the Money. Nothing will grow in that dry parch'd Country, without being artificially ſupply'd with Water, of which the King makes an Advantage, by making Perſons pay for turning it into their Fields and Gardens. Every-body alſo pays a Ducat a Head, whether Natives or Foreigners, that are not of the ſame Religion; and there is alſo a Tax of ten Pence for every working Shop, and twenty Pence for every one of the reſt.

Their Cuſtoms do not amount to much, as having no Port but *Gombroon*; and as for the Merchandize carried out or brought in by Land, they only pay a ſmall Sum for the Load of every Camel, Mule, or Ox, according to their Bignels, without examining the inſide of the Packs.

Preſents.

But the confiſcated Eſtates amount to ſomething conſiderable, and to that we may add the numerous Preſents made to the King, the chief of which are made on New-Year's-day, when they preſent wrought Silks, Horſes, Aſſes, beautiful Boys and Girls, Gold, Silver, precious Stones, Perfumes, and every thing that is Rich and Curious.

Several Handicraft Trades are exempted from all Duties to the Crown, but then they are obliged to Work for the King *Gratis*, when he requires it; and when the King has any Palace to Erect or Repair, he has nothing to do but give Directions, and find Materials; for the Maſons, Carpenters, *&c.* are obliged to Work without Wages, for the Reaſon above-mention'd. The Maintenance of Ambaſſadors, and their Carriage and Paſſage, is all done at the Charge of the Country they paſs through, without any Expence to the King; and when he has a mind to diſtinguiſh a Perſon with a Reward for ſome particular Service, it is done out of other People's Pockets, for he ſends him to one of the *Chans* with the *Caluat*, or Royal Veſt, for which the *Chan* makes the Meſſenger a Preſent of a much ſuperior Value, according to the Poſt he is in.

The King's Revenue four Millions Sterling.

By virtue of the Impoſts above-mention'd, it is ſaid the King's Revenue amounts to four Millions Sterling a Year, and yet ſuch is the Splendor of the *Perſian* Court, that it is ſuppoſed but little of it remains in the Treaſury at the Year's End, for the Court, whether at *Iſpahan*, or removed in Form, as deſcribed in *Chap.* XII. under the Name of the *Courac*, yet the numerous Women and Eunuchs are ſo chargeable, that it muſt require an immenſe Sum to ſupport ſo great an Expence.

The Officers of the Revenue ſend every Year to Court the State of their Province, and what every Town and Village produces, examin'd and atteſted by the principal Inhabitants of the reſpective Places, and theſe Accounts are given as a Security for the Payment of the Penſions or Salaries from the Crown; and in the ſame manner every Governor pays his Officers and Soldiers with Aſſignations on the Lands belonging to their reſpective Provinces, ſo that as their Pay is ſmall, there is little or no Money diſburs'd in the Payment of it.

Seals.

They have five Seals in *Perſia*. The firſt is uſed in Affairs relating to the Demeſne Lands. The ſecond for Commiſſions and Letters Patent. The third in military Affairs. The fourth about the Revenue; and the fifth in Things relating to the Houſhold. The Form of one of the Seals is round; two others are ſquare; and two of an irregular Form. There are no Arms engrav'd upon them, but on one is the Names of the twelve *Imans*, or Mahometan Patriarchs; on the other a Sentence of the Alchoran, or ſome other pious Motto. The largeſt are about the bigneſs of a Crown Piece, and the reſt about half that bigneſs; they are made of Rubies, or ſome other precious Stones; the King always wears the principal Seal about his Neck, and all Inſtruments that require the Royal Seal are carried in on a *Friday*, and ſeal'd in the King's Preſence. The Impreſſion is made on Paper, with a Kind of thick Ink, like our printing Ink, and not in Wax as it is here.

CHAP. XV.

Of the Birth, Parentage, Life, and Death of Mahomet, *firſt Author of that Religion that now goes by his Name.*

Mahomet, his Birth.

As the *Perſians* are of the Mahometan Religion, it may not be amiſs to give an Account of the Birth, Life, and Education of *Mahomet*, the Founder of it; which is briefly as follows:

He was born in the City of *Mecca*, near the Eaſt Coaſt of the *Red Sea*, in the twenty ſecond Degree of Latitude, in the Year of our Lord 571; he was of the Tribe or Family of the *Koraſhites*, which was eſteem'd the moſt honourable in that Part of *Arabia*: He deſcended in a right Line of Primogeniture from *Pher Koraſh*, the Original of that Tribe, from whence it took its Name; but his Father *Abdallah* dying when he was but two Years old, his Grandfather *Abdol Motallab*, who was then living, left the Bulk of his Eſtate to two of his other Sons. *Mahomet*'s Father being dead, he remain'd with his Mother till he was eight Years of Age, and then ſhe dying, his Grandfather *Abdol Motallab* took him Home into his own Family, and the Grandfather dying the Year after, left *Mahomet* to the Care of his Uncle *Aba Taleb*, who being a conſiderable Merchant, brought *Mahomet* up to his own Buſineſs; and when he arrived at a proper Age, his Uncle ſent him with his Camels into *Syria*; and at *Boſra*, a City upon the Borders of that Country, it is given out, that he was diſtinguiſh'd as a Prophet by a Light round his Viſage; and whether the Thing was Fact, or their telling him of it was Flattery, we cannot determine; but he from thence, or about that Time, commenc'd Prophet.

His Trade.

But notwithſtanding his prophetick Spirit, he continued to trade as a Factor for his Uncle, till he

he was five and twenty Years of Age, at which Time he was invited into the Service of a rich Widow of about the Age of thirty seven Years; her Name was *Cadigha*, and after he had been about three Years in her Service, trading to *Damascus*, and other Places, he married his Mistress, and by that Match, and his good Trade, he became one of the richest Men in *Mecca*.

This Success begun to inspire him with more ambitious Views, and he began to think, that considering his Pedigree, he ought to be the Sovereign of his Tribe, and after having weigh'd all Means to attain that Dignity, he thought nothing could answer his Purpose so well as a Pretence to extraordinary Sanctity, and an industrious Concern for the Reformation of the whole World.

His trading to *Egypt*, *Palestine*, and *Syria*, gave him a great Opportunity of being acquainted with both *Jews* and *Christians*; and in Order the better to qualify him for his intended Design, he took particular Notice of the Animosities that were amongst the several Sects of Christians at that Time, from whence he concluded, that it would be no difficult Matter to set up a *new* Form of Religion, that might please them all; and, lest by gaining one he should lose another, or more, he did not propose to abolish any Religion absolutely, but to collect from all what he thought might please every Body's Palate, and reject the rest, under the igneminious Terms of Innovations and Corruptions.

But as it was then, is now, and ever will be, very surprizing to see a Man of a very licentious Course of Life, set up for a Preacher of Righteousness, and a Reformer of the People, he thought it proper first to make himself a miraculous Specimen of the Reformation that he design'd to promote in others; and, indeed, this was no mistaken Conduct, for we find to this Day, that let a Preacher's Doctrine be never so Good and Orthodox, yet if he contradicts, and willingly falls short of it, in his Life and Conversation, People are apt to take Liberty to think, that he cannot expect that his Doctrine should have any Influence upon them, when it has so little or none upon himself.

But *Mahomet* obviated this Objection, and in his Reformation begun with himself, at least, to all visible Appearance, for he lead an abstemious Life, and every Morning retired to his Devotions at the Cave of *Hira*, near *Mecca*; and, as he gave out, continued all Day in Fasting, Prayer, and pious Meditations; and some think it was here that he met his Associates, by whose help he form'd his Alchoran.

When he return'd to *Mecca* in the Evening, he related to his Wife certain Visions that, he said, he had seen, and Voices that he had heard in his Retirement; but she look'd upon those Relations as ridiculous Stories, but he insisted to her upon his having intimate Conversation with the Angel *Gabriel*, and repeated the Report of his Visions to her with that Assurance, that she could not avoid giving some Credit to it, which was soon confirm'd by her asking the Opinion of a Monk which *Mahomet* kept in the House, who being privy to, and assisting in the Design, corroborated what *Mahomet* gave out, and from thence his Wife became his Proselyte.

When he had continued in this abstemious Life for about two Years, he began to aim higher, and to take upon him the Character of an Apostle of God, but with that Modesty and Humility, that he seem'd rather to conceal his Mission, than to be seen to promulgate it, which, doubtless, gave a Sanction to his whole Design; and now he gain'd more Proselytes, among which was his Cousin *Haly*, the Son of his Uncle, whose Name, and those of his Successors, were afterwards famous among the Mahometans, as stiling himself the first of Believers.

After this *Abubekar*, one of the richest Men in *Mecca*, espoused his Doctrine, which was brought into great Esteem by the Wisdom and Interest of this great Man, and now his Followers began to increase, and as they were capable he rewarded them with Preferment, to be Generals of his Army, and other Advancements suitable to their Capacities. Those Rewards and Preferments brought him more Proselytes, and strengthen'd him; and, on the other Side, his Officers being all Proselytes of his own making, contributed very much to the propagating and establishing his Doctrine: And now, which was in the four and fortieth Year of his Age, he began publickly to acknowledge and promulgate his Mission as the Messenger of Jesus Christ, or a Prophet sent from God, to reform his *Pagan* Countrymen, and reclaim them from Idolatry.

But what puzzled him most was, that he could not work Miracles, as *Christ* and his Apostles did, but he evaded that by saying, that he was only sent to preach, and not to work Miracles; and other times he would say, that their Ancestors had despised the Prophets, and contemn'd former Miracles, and therefore God would appear no more by Miracles among them; other times fixing his Doctrine upon the Foot of Predestination, he told them that those whom God had ordain'd to believe, would believe without Miracles, and the rest would not be convinc'd by Miracles, so that they were of no Use; however, many of his Followers, having Sense enough to see into these Evasions, forsook him, as he complains in his Alchoran. Cap. 2. Vers. 106. Cap. 3. Vers. 178. Cap. 6. Vers. 109. Cap. 16. Vers. 103.

When he came to *Medina*, and had a sufficient Force to support his Pretensions, and thought he was able by Force to make them do what they would not be deluded to, he told them in plain Terms, that God had sent *Moses* and *Jesus* with the Power of working Miracles, but since the obstinate People would not be convinc'd by them, God had sent him without Miracles to reduce them to Obedience by the Sword; and so with a Pretence of Indignation, forbid his Followers to enter into any Disputes about his Religion; but instead of that, commanded them to maintain it by Force, and without exception, to destroy all those that refused obedience to his Laws, promising glorious Rewards in the next Life to those who should take up Arms in his Cause, and the Crown of Martyrdom to all who died fighting for it.

His Proof of his Mission

But, not to regard those miraculous Legend Writers in favour of *Mahomet*, who affirm that he cleft the Moon in two Parts, that Trees went out to meet him, &c. the chief Thing that he alledges as a Proof of his divine Mission is, that he, an illiterate Man, could not possibly compose such an excellent Book as the Alchoran without the Assistance of some supernatural Power, and, as it is allow'd, that it is an elegant Stile, and the Standard of good Language in the *Arabian* Tongue, *Mahomet* infills, that it is beyond the Power of Men and Devils united to compose such another Book, or one Chapter of it, for eloquent Stile and divine Instructions; which his Followers agreeing to, they conclude he was sent from God; and that he was illiterate is more than probable, because the Tribe he descended from naturally despised all manner of Literature, and when he declared himself a Prophet, there was scarce a Man in *Mecca* that could either write or read; though at *Medina* they encouraged and promoted Learning to that degree, that they were, by way of distinction, call'd the People of the Book

By that time he had continued eight Years in his pretended Apostleship, his Party became so numerous, that the Governor of *Mecca* prohibited all People to join with him, or converse with him; but as long as his Uncle *Abu Taleb* lived, he skreen'd him from Prosecution, but when he died, *Mahomet*'s Doctrine suffer'd, abundance of his Followers leaving him, and looking upon his Cause to be desperate.

About this Time *Cadiga* his first Wife died, but he married two others, viz. *Ayessha*, the Daughter of *Abubekar*, and *Sewda*, Daughter of *Zama*, and soon after he married *Huphsa*, the Daughter of *Omar*; who all being of very considerable Families in *Mecca*, he thought thereby to strengthen his Interest. In the twelfth Year he pretended he was carried up into Heaven by the Angel *Gabriel*, in the following Manner:

As he was in Bed with his beloved Wife *Ayessha* one Night, he heard a Knocking at the Door, and when he open'd it he found an Angel at the Door, with seventy Pair of Wings expanded; they were witer than Snow, and clearer than Chrystal; this Angel mounted him upon the Beast *Alborack*, not so big as a Mule, and in the twinkling of an Eye carried him to *Jerusalem*, though it is above six hundred Miles; and there leaving his Beast, he ascended by a Ladder of Light to Heaven, and from one Heaven to another, till he came to the Seventh Heaven, the Throne of God. (*I hope the Reader will look upon this as his own Relation, which is what we are now upon, and not that we would impose it upon their Belief as matter of fact.*) But to proceed in his Account of his Journey, that the seven Heavens are five hundred Years Journey from each other, according to the Way of Mortals travelling upon this Earth; he says, furthermore, that in one of them he saw an Angel of such a prodigious Bigness, that it was above one hundred and ninety Years Journey between his Eyes; but if we allow, as Limners do, that the proportion of the Space between the Eyes, is to that of the Height of the Body, as One to Seventy Two, the Height of that Angel must be thirteen thousand six hundred and eighty Years Journey. But let *Mahomet* pretend to what he will as to his Divinity, he has proved himself very absurd in his Mathematicks, for his seven Heavens, allowing the first to be five hundred Years Journey from the Earth, to the highest of them could be but three thousand five hundred Years from the Earth; but the Height of the Angel being above thirteen thousand Days Journey, he would possess almost four times the Space that was contain'd between the Earth and the Seventh Heaven, and above twenty seven Times the Space that the Heaven, in which he was seen, contain'd; by which Way we may at least observe, that where an Imposture is intended to be introduc'd, the greatest Absurdities will go down to impose upon People's Belief, and make the Miracle appear the greater; and yet he tells us on the other Hand, that the Journey was perform'd in the tenth Part of a Night. When he came to give an Account of his Journey next Morning, it was receiv'd with a Ridicule suitable to the Improbability and Absurdity of it; but *Abubekar* gave it a Sanction, by professing his Belief of the Whole, by which the Populace were so drawn in, that *Mahomet* gain'd a great deal of Ground by the Project; and though it was some time disputed whether it was a Vision or a real Journey, *Mahomet*'s Party brought it in as a real Journey, and so put an End to the Dispute.

His Journey to Heaven.

The Consequence of the People's Credulity in this Particular was, that all *Mahomet*'s Sayings were afterwards deem'd sacred, as coming immediately from Heaven, and are recorded accordingly; and now the Interest of *Mahomet* was so far establish'd, that he sent his Disciples abroad into other Towns in *Arabia* to propagate his new Doctrine; but it did not take in any Place so well as at *Medina*, then call'd *Yathrib*; and what contributed to the introducing it there was, that the *Jews* and Christians (of both which the Inhabitants of *Medina* consisted,) were at continual Variance, and persecuted one another with great Violence, till one of the contending Parties, to strengthen themselves against the other, fell in with *Mahomet*, and it is generally believed, by the Consequence, that it was the Christians did so, because of the kind Reception the Christians now meet with in *Persia* and other Mahometan Countries, and on the other hand their inveterate hatred of the *Jews*.

In the thirteenth Year of his Mission, if we may so call it, there came seventy three Men and two Women to him, from *Medina* to *Mecca*, to embrace his new Religion; and this being a voluntary Act, he thought them a fit Company out of which to chuse twelve Apostles, which he did; and when he had instructed them, he sent them back to *Medina* to propagate his Doctrine, and they succeeded so well, that they brought over abundance of Proselytes; but *Mahomet* and his Followers at *Mecca* were so far from being encourag'd, that a Design was form'd to surprize them and cut them off, but he, having timely Intelligence of it, fled with his Disciples to *Medina*, where they arrived safe, though several Parties were sent out to intercept them; and having built himself a House, he spent the remainder of his Life and finish'd his Days at *Medina*.

It may not be amiss to observe here, that the Mahometan *Æra* takes date from this Flight of *Mahomet* from *Mecca* to *Medina*, which was on the twelfth Day of the Month *Rabia*, which is our twenty fourth of *September*, and this *Æra* is call'd the *Hegira* or Flight, as the Word implies in their Language; and the Time of his setting out from *Mecca* upon that Flight, being on the sixteenth of *July*, in the Year of *Christ* six hundred and twenty two, they date their Year from that time, as we do from the Birth of our *Saviour*, and hence the Year 1733 with us, is in the Mahometan Account but the Year one thousand and eleven.

But, being thus settled at *Medina*, he married his Daughter *Fatima* to his Cousin *Haly*; this was the only Child of six that he had living by his Wife *Cadigha*, and indeed the only Daughter that produced any Succession from *Mahomet*.

He being now Master of a considerable Town, and having Troops under his Command, he did not think it necessary to dispute about his Religion, but to drive People into it, and to compel those that would not embrace it to pay severely for their Infidelity, as he call'd it; this Levy upon Infidelity continues to this Day in Mahometan Countries.

When he found himself able to set forward in the World, he was more like *Cartouch* the famous *French* Robber, than an Apostle under a Divine Mission, for he attack'd some Caravans of Merchants who traded between *Mecca* and *Syria*, and often carried off a great Booty, though sometimes overmatch'd and defeated; however, by this Means he brought over abundance to his Party, not doubting but they might rob and plunder with a clear Conscience when they had such a sanctified Leader. Turns Robber.

In the second Year of the *Hegira*, or with us the Year 623, he alter'd the *Kibla*, or Order for turning their Faces towards *Jerusalem* when they pray'd, and commanded that they should upon that Occasion turn their Faces towards *Mecca*, not only for the Veneration that he would have them pay to the Place of his Birth, but for the inveterate hatred which he had now conceiv'd against the *Jews*, and for the same Reason he also order'd the Pilgrimages of his Followers to be made to the Temple at *Mecca*, and not to that at *Jerusalem*.

In

In the third Year of the *Hegira*, or of his compleat Apoſtleſhip, or rather Impoſtureſhip, and in our Account 624, he made War upon ſome of the *Jewiſh Arabians*, and taking many of them Priſoners, he ſold them for Slaves, and divided their Effects among his Followers, which further encouraged them in their religious Plunder; but not knowing when he was well, he attempted to proceed yet farther in his Conqueſts, but was himſelf defeated, which gave ſuch a Shock to his Infallibility, that his deluded Diſciples began to queſtion whether he was the Perſon they took him for; Mutiny. ſome forſook him, and others mutunied upon Account of their Friends, which he had drawn into the Battle, and were ſlain, but he was not at a Loſs for an Excuſe; and to ſatisfy thoſe who began to doubt his Miſſion, as that Great Prophet he ſtil'd himſelf, he told them, that his Defe t was owing to the Wickedneſs of his Army, and that it was for their Sins that God permitted him to be beaten; and for thoſe that murmur'd for the Death of their ſlain Relations, he quietted them with aſſerting his Doctrine of Predeſtination, affirming, that that was the Time appointed for their Death, and beyond which it was impoſſible for them to ſurvive, ſolving all the whole with making them believe that thoſe who died fighting for his Cauſe, had obtain'd a Crown of Martyrdom, and were now in a bleſſed State in Paradiſe, and theſe Doctrines anſwer'd his Purpoſe, and kept up the Spirits of his Followers; but afterwards, upon a Victory obtain'd, his Soldiers being merry with Plunder, and hot with Liquor, they quarrel'd, and therefore in the fifth Chapter of his Alchoran, he makes refraining from Wine and Games at Chance, a ſtanding Article of his Religion.

Mecca againſt him. But his City of *Mecca* were ſtill bent upon his Ruin, as being jealous, that if he was ſuffer'd to Reign at this Rate, he would ſome Time or other be prejudicial to them, and attempt to reduce them to Subjection; to prevent which they enter'd into a Confederacy with ſome *Jewiſh Arabians*, his mortal Enemies; and when they had muſter'd an Army of about ten thouſand Men, they went in queſt of him; but he not being able to encounter them, made his Eſcape from them; and having encreas'd his Forces, he return'd the Viſit to his Friends at *Mecca*, where a Battle was fought, but with no great Advantage on either Side; but they came to a Treaty, in which it was agreed, that all that were *Mahomet*'s Friends in *Mecca*, ſhould have free Liberty to join him, and all that were already join'd to him, and had a mind to deſert him, might return to *Mecca*, by which means he encreaſed his Forces, and with that his Ambition, and cauſed himſelf to be proclaim'd King at *Medina*, in the Year 627, and of the *Hegira* ſix.

Mahomet proclaim'd King. *Mahomet* now acted as both King and Prieſt, and ſo did his Succeſſors the *Caliphs*, till about the three hundred and twenty fifth Year of the *Hegira*; but then the Eyes of the Government began to be open, and they thought the Eccleſiaſtical Power or the Prieſthood was ſufficient for one Perſon, and ſo renounced all Obedience to him, as to any Civil Authority; and the Prince where the *Caliph* reſided, *viz.* in *Babylon*, now called *Bagdat*, depoſed the *Caliph* at his own Pleaſure, and ſet up another more in his own Intereſt; but in Proceſs of Time the *Tartars* over-ran the whole Country, deſtroy'd the Name and Authority of *Caliph*, and conſtituted High-Prieſts in the Room of *Caliph*, which in *Perſia* are call'd *Sedre*, and in *Turkey* the *Muſti* to this Day.

Mahomet, inveterate againſt the *Jews*, continued his War againſt the *Jewiſh Arabians*, and with his Army of ten thouſand Men he ſurprized the City of *Mecca*; and having cut off his zealous Oppoſers, the reſt comply'd with his Government and Religion; whereupon he conſecrated the Temple at *Mecca* to his own Religion, and enjoin'd all his Followers to reſort thither once in their Lives.

This Succeſs animated him to make ſtill further Attempts; but the Pagan *Arabians* united againſt him, and gave him battle, and forced him to fly for Refuge under the Walls of *Mecca*; but he recruiting, gave them a ſecond Battle, and defeated them, and compell'd them to embrace his Religion, and reduc'd moſt of *Arabia*, and ſome Towns in *Syria*, under his Power.

In the Year 631, being the tenth of the *Hegira*, he undertook a Pilgrimage to *Mecca*, and enter'd that City the tenth Day of the Month *Dulhaga*, where a vaſt Concourſe of People reſorted to him from all Parts of *Arabia*; he inſtructed them in his new Law; but finding himſelf in an ill State of Health, by reaſon of ſome Poiſon that he had taken unknown to him ſome time before he return'd to *Medina*, and being delirious in his Sickneſs, he pretended to leave them Inſtructions that he was never able to accompliſh, and died in great Torment.

Some of his Followers, that had ſuppoſed him immortal, were very much ſurprized at his Death; but *Abubekar* kept their Spirits up, by citing ſeveral Paſſages out of the Alchoran, intimating that he muſt die; and the only Diſpute now depending was, as to the Place of his Burial: Some would have him buried at *Mecca*, becauſe he fled from thence; others choſe *Medina*, becauſe that was the Place he fled to; a third Party would have him buried among the other Prophets at *Jeruſalem*; but *Abubekar* affirm'd, that he heard him ſay, a Prophet ought to be buried where he died, and thereupon made a Grave under the Bed he died upon, and buried him there, and ſo put an End to all the Diſpute.

He died the very Day of the grand Climacteric of his Age, Sixty-three; and it may be obſerved, let his Foundation be what it will, he made the greateſt Revolution in the World that ever happen'd in ſo little Time; for in leſs than a hundred Years he and his Succeſſors extended their Dominion more than the *Romans* did in eight hundred Years; and ſome of the *Mahometan* Dominions are at this Day the moſt potent in the World.

CHAP.

CHAP. XVI.

Of the Persian *or* Mahometan *Religion.*

gion. THE *Persian* Religion is that of the *Mahometan*, as explain'd by *Haly*, the Nephew and Son-in-law of *Mahomet*, and one of his Successors in the Empire, and also interpreted by the eleven *Imans*, the Descendants in a Right Line from *Haly*.

We have given in the last Chapter the Original of *Mahomet*, and of his Progress: It remains now that we give account of his Religion, as broach'd by himself, pursued by his Followers, and now embraced in *Persia*, the Place which is the Subject of the present Discourse.

When *Mahomet* died, *Haly* his Son-in-law, and *Abubekar* his Father-in-law, both pretended to have a Right to succeed him; and the People also being divided, it amounted to Blows, that they had various Battles with different Success, in which *Omar*, one of *Mahomet*'s Captains, exerted himself so much, that when *Abubekar* died, which was between two or three Years after the Death of *Mahomet*, he kept the Command for about ten Years; in which Time *Haly* was very much reduc'd; and when *Omar* died, one of his Relations, call'd *Osman*, took upon him to be *Mahomet*'s Successor, and was proclaimed accordingly; but he dying, both Parties were united in owning *Haly* to be the Successor of *Mahomet*.

But when *Haly* died, the Difference was again propagated; *Hassen*, the eldest Son of *Haly*, claim'd the Empire, by Right of Inheritance; but his Opposers insisting upon the Right of Election, chose *Muhuvia*, one of their Generals, who it is said procur'd *Haly* and eleven of his Sons to be murder'd, the twelfth only escaping; and from him the *Persian* Kings value themselves upon deriving their Pedigree: However, the Descendants of *Muhuvia* were always successful; but the Kings or Sophi's of *Persia* have always valued themselves upon being the Descendants of *Haly*.

Difference in the *Mahometan* Religion.

This Difference makes them vary in their Sentiments of Religion; and even the same Alchoran is differently interpreted by different Parties, insomuch that although the *Persians* and *Turks* use the same Alchoran as their original Guide, yet they vary as much in the Interpretation of it as they do in their Opinions of the legal Successors of *Mahomet*; of which the *Persians* think that *Haly* and the *Imans* are the only ones; but the *Turks* are for *Abubekar*, *Omar*, and *Osman*. The *Turks* and *Persians* are so inveterate in their Sentiments against each other, that neither of them believe that the other can be saved, though they are both *Mahometans*.

The *Mahometans* have two Articles of Faith, and five of Practice. The two first are,

I. That there is no other God but one.
II. That *Mahomet* was sent from God.

Their five Articles of Practice are,

I. That they ought to observe their Corporal Purifications.
II. To pray to God at the appointed Times.
III. To give Alms to the Poor.
IV. To fast all the Month of *Ramezan*.
V. To go in Pilgrimage to the Temple of *Mecca*.

And to this the *Persians* add a Sixth.

VI. That *Haly* is the Vicar of God.

The *Persians* hold that all Souls were created long before the World was made; and their Doctors believe and teach the Transmigration of Souls, especially those of Prophets, Saints, and good Men.

They allow the six Days Work of Creation, and that both good and evil Angels are composed of a Substance that may be so condensed as to become visible. They alledge that *Adam* was allow'd to eat any Fruit in Paradise, and that the gross Part did not turn to Excrement, but evaporated by the Pores only; that if he should eat Wheat it would turn to a noisom Excrement, and that it was for eating Wheat that he was turn'd out of Paradise; not as it was Sin, or he forbid to do it, but as it laid him under a Necessity of voiding those noisom Excrements which disqualified him from any longer Enjoyment of a Place so entirely clean and undefiled.

It would require a Volume of itself to enumerate all the Absurdities of their Religion. They say that when a Person dies the Soul wanders about till the Body be interr'd, and then it re-enters the Body it was separated from, and that as soon as the Body is deposited, and the Company retired, there comes two terrible black Angels, who demands of the Deceas'd an Account of his Faith, concerning the Unity of the Godhead, and the Mission of *Mahomet*, and what the Deceased answers, is wrote down, and preserved to be brought in at his final Examination, at the Day of Judgment; and after this first Examination is over, the Soul enters into an aerial Body prepared for it; where it continues till the Resurrection, when the Soul shall be united to the same Body it was separated from.

They believe that after the last Judgment every Person must pass over a narrow Bridge, not wider that the Edge of a Razor, and that the Wicked will slip off, and tumble into Hell, while the Righteous shall be supported in their Passage over, and conducted to Paradise.

Seven Hells

They allow seven Hells or Degrees of Punishment; in the first, or mildest of them, they place the wicked Mahometans; in the second those who deny *Haly* and the *Imans*; in the third, those who deny that *Mahomet* was a Prophet; and here they place the Christians: In the fourth, those who deny both *Christ* and *Mahomet*, of which Number they reckon the *Jews*: In the fifth the *Pagans*: In the sixth the Apostates; and in the seventh the Atheists.

They hold that *Adam* was the first Prophet, and *Mahomet* the last, and that as there was no Prophet before *Adam*, so there shall be none after *Mahomet*, and that every Prophet, or Law-giver, abrogates those given by his Predecessor; and hence the Followers of *Mahomet* would insinuate that his Alchoran has superseded, and made void the Gospel of our blessed Saviour.

They bring *Mahomet*'s want of Learning in as a corroborating Proof of his divine Mission, and as our Saviour did not begin to preach till he was above thirty Years of Age, *Mahomet*'s Followers presume to make a Comparison, and to observe that he did not preach till he was forty Years old.

The twelve *Imans*

The eleven *Imans*, (or twelve, if we reckon *Haly* to be the first) are, 1 *Haly*; 2. *Hassein*; 3. *Hossein*, 4. *Haly* II. 5. *Mahomet Beker*; 6. *Jafer*, 7. *Mousa*; 8. *Haly*; 9. *Mahomet* the Abstemious; 10. *Haly* III. 11. *Hassan* II. 12. *Mahomet Mehdy*; but

these *Imans* being all now extinct, the Kings of *Persia* stile themselves Slaves, or Lieutenants of *Mahomet*, the last *Iman*, and that they hold the Crown in his Right only, till he comes into the World again. *They need desire no better Title than to hold the Crown till he comes into the World again.*

Purifications. THEY are exceeding ceremonious as to their Purifications, and avoiding Things which they, according to their Religion, deem unclean; for, according to their Law, they look upon any thing unclean that has had Wine in it, or so much as dropp'd upon it. They scarce perform any Act of Devotion without first washing their Hands, especially in touching the Alchoran, there is that Care taken, that upon the Cover of it, or any other Book of Devotion, there is commonly written, *Touch not this Book with impure Hands*; and as they pray five Times a Day they are sure to wash as often, nor are they to do it for Ceremony or Convenency, but sincerely express themselves to this Effect, *I perform this necessary Act of Purification to render my Devotions acceptable to God, and that I may be fit to approach him.*

They pray five Times a Day. THEY pray five Times a Day; the first Time is at Noon, the Second in the Evening, the Third when it is dark, the Fourth at lying down to sleep, and the fifth in the Morning; but sometimes, if Business intervene, they are allow'd to put two together to have the sooner done; but the Clergy, who are more immediately devoted to Religion, seldom allow themselves any of these Dispensations.

Calling to Prayers. THEY have People to proclaim the Time of Prayer from some Eminence, as a Turret of a House, or the like, and begin their Declaration with these Words, *O God most great*, which they repeat four Times, turning to the four Quarters, East, West, North, and South; then they say, *The Testimony that we render to God is, that there is no other God but one*, Mahomet *is the Apostle of God*, Haly *is the Vicar of God*, and this they repeat in four different Positions, as above, after which they say, *Arise, say your Prayers, perform that most excellent Duty which* Mahomet *and* Haly *the most perfect of Created Beings have commanded*, and if it be Midnight or Morning, they begin with, *Awake out of Sleep*, and then proceed as above, and having again repeated four Times these Words, *O God most great*, they sing some Verses of the Alchoran, and then conclude, Omar *be curs'd*; and thus done, every one goes to Prayers in his own House, or where he thinks fit, prostrating their Bodies to the Earth, and turning their Faces or Heads towards *Mecca*.

Materials at their Devotions. WHEN they go to their Prayers every one has a little Carpet, in which they wrap up several Things which they use at their Devotion, as an Earthen Dish, a Bead-Roll, a Pocket Glass, a Comb, and some tatter'd Reliques, but especially the Alchoran, which they put in a Bag by itself; when they have taken these Things out, they spread the Carpet, and place their Trinkets before them; then they take the Comb and the Glass and comb their Beards and Whiskers; then they take out their Purse and put off their Rings, for they must have no Gold about them at their Devotions; and having got their Beads in their Hand, they prostrate themselves upon the Carpet, in the Posture above-mention'd.

Beads. THE Number of their Beads is ninety nine, some have them all of a Size, but some have every third Bead a little bigger than the rest, and so telling them over by three at a Time, when they come to the thirty third Bead, they cry *O God most great*, and at the sixty sixth, they say *Glory be to God*, and at the ninety ninth, or last, they say *God be praised*; sometimes they repeat some Part of their Confession of Faith, or of the Alchoran. Their little Earthen Dish, about as big as the Palm of one's Hand, is to clap upon their Foreheads, for as their Foreheads must be upon the Earth, they have these Dishes, as well as their Beads, made of Earth brought from some of the *Imans* Tombs, or some such Earth, which they deem more sacred than the rest.

Reliques. THEIR Reliques are little Pieces of the Pall or Hangings of *Mahomet*'s Tomb, or of the Palls of the *Imans*: For the Grand Seignior sends every Year new Hangings to *Mahomet*'s Tomb and the Temple at *Mecca*, and when the new Palls or Hangings are put up, the old ones that are taken down are cut in little Shreds, and given or sold to Pilgrims, and are look'd upon by them as sacred Reliques.

Eclipse. WHEN an Eclipse of the Sun or Moon happens, they use certain particular Prayers adapted to that Occasion, as apprehending that they portend some dreadful Calamity, though at the same Time the *Persians* are not quite ignorant of both the Cause and the Calculation of them; but upon whatever Occasion they pray, they do not assemble at the Mosque or Temple, or read the Alchoran, or if they do, they pray every Man by himself; for they think that no Man ought to pray or read the Alchoran to the Congregation in the Temple but an *Iman* or Prophet, or one legally descended from one, but there are but few in *Persia* at this Day that pretend to that legal Descent; and hence they generally pray and read the Alchoran separately, and in all Places indifferently, provided they be not polluted.

Prayers for the Dead. THEY do not make praying for the Dead any material Part of their Religion, only they commemorate their deceas'd Relations at some certain Times, and so think that God will increase the Happiness, or lessen the Misery of the departed Souls at the Importunity of their surviving Relations, but in this they are not all agreed; nor do they pray to their Saints, nor even to *Mahomet* or *Haly*, to intercede for them, nor do they think that their Saints know what is done upon Earth, any further than God reveals it to them.

Alms. THEY think that giving Alms is so essential a Duty, that without it their Prayers are not accepted, but their Charity consists very much in publick Buildings, as Caravansera's or Houses of Entertainment in the great Towns, or upon the Road, for the lodging of Strangers *gratis*, as also in making Bridges, Causeways, Cisterns, Colleges, Bagnio's, and the like; but they have no Hospital's for the Sick as in *Europe*, their Caravansera's in some measure supplying that Defect, because there all People, sick and well, may have a Lodging *gratis*.

Dervises. THERE are abundance of *Dervises* and *Fagirs* in almost all Mahometan Countries; they are a kind of begging Fryers, and pretend to a Sanctity much superior to other People; upon which Account they pretend to a Right to those plentiful Charities, which they may be rather said to demand than to crave, and go in such Shoals to the Country Villages, that it is hardly safe to deny them.

Tythe. THERE are other establish'd Charities for these begging Fryers, and this may be called a Sort of a Tythe of Camels, Oxen, and Sheep, which they have had in Possession seven Months: it is levy'd thus; if a Person has but four Camels, he pays no Tythe, but if he has five he pays a Sheep for them, and so for every five Camels under twenty six; but if he exceed that Number, he pays a Camel, or the Value of it; he that has less than thirty Oxen pays no Tythe, but for every thirty he pays a Calf; and so for every forty Sheep one Sheep is paid, but for less than forty they pay nothing; and besides this, there is paid towards this Charity one Fifth of all the Spoil and Plunder taken in the Wars.

THE begging Fryers have the best Share of these Tythes, but they are sometimes apply'd to the redeeming Slaves hardly used by their Masters, also for the Relief of Insolvent Debtors, and of Strangers who happen to be in distress in the Country, and the rest is laid out in publick Buildings above-named.

THE

ſt.

The *Perſian* Doctors define a Religious Faſt to be *A total Abſtinence from all kind of Nouriſhment and carnal Pleaſure, from the Break of Day till Night, with an intent to pleaſe God,* but their Religion does not expreſsly command any other annual Faſt beſides that of the Month *Ramezan*, unleſs upon ſome extraordinary Occaſion, as by Way of Penance, or to avert a Calamity, or the like. The Word *Ramezan* is the ninth Month, and may be call'd their Lent, becauſe it is the Month of Faſting, and takes date from the firſt Appearance of the Moon after that new Moon, which is always ſoon after Sunſet; and upon its firſt appearance the Holy Cryers proclaim the Faſt from the Terrets of their Moſques, as a ſurprizing Piece of News, with Hymns, Acclamations, and Illuminations, Sound of Horns from the Terret of the Bagnio, to let them know that the Baths are ready; for they begun their Faſts as well as other Acts of Devotion with waſhing, and the End of the Faſt is proclam'd much in the ſame Manner by the Appearance of the ſucceeding Moon.

ſt pro-
aim'd.

Another Thing that the Mahometan Religion requires is the Pilgrimage to *Mecca* once in their Life time; here is the *Kabba*, or as they call it, the Houſe of God, which though by ſome call'd the Temple, yet is ſaid to be a ſmall Chapel built by *Abraham*, fifteen Foot long, twelve broad, and above thirty Foot high; (but for a further Deſcription of it ſee the following Hiſtory of *Arabia.*) The chief End of theſe Pilgrimages is to viſit this Chapel, and to perform ſome Acts of Devotion in the Courts about it, in veneration to *Abraham*, and not becauſe it was the Place of the Birth or Burial of *Mahomet*, for his Tomb is at *Medina*, above two hundred Miles to the Northward of *Mecca*.

grima-
e.

When *Bagdat* was in Poſſeſſion of the *Perſians*, their Pilgrims went that Way to *Medina*, but now they go by Way of *Beſſora*, near the Bottom of the *Perſian* Gulf; from whence the Caravans ſet out at ſuch a Time as to be at *Mecca* at the Time that the Law requires; they are convoy'd upon the Road by *Arabs*, whoſe Power is as abſolute over them as that of a Pilot in conducting a Ship in Pilots Water, and by that Means keep them forty or fifty Days upon the Road when the Voyage might be perform'd in twenty. In this Deſart they travel by Night, becauſe of the Heat, and truſt to the Light and Direction of the Stars. There are no Inns or Caravanſera's in this Deſart, but the Pilgrims lie in Tents near ſome Well if poſſible, where the *Arabs* ſupply them with Proviſions, as they do during the Time they perform their Devotions at the *Kabba* at *Mecca*.

When the Pilgrims have paſs'd the Deſart, they encamp near *Mecca*, and on the firſt Day of the Month *Zilhab* they waſh themſelves, and perform the Purification required in a great Baſon of Water, after which they wear no Cloaths during the Time, but a Linnen Cloth about their Middle, and another about their Sholders as a Token of Purification, or Innocency, or being dead to this World, and that they have no regard to external Ornaments, but that their Hearts are fix'd upon heavenly Things, without any regard to what this World produces.

Thoſe that go from *Mecca* to *Medina* to viſit *Mahomet*'s Tomb, are commonly ill uſed by the *Turks*, and are obliged by the *Turks* to viſit the Tombs of *Abubekar* and *Omar*, (Enemies and Rivals of *Mahomet*, *Haly*, &c.) but for thoſe whoſe Zeal induces them to this Branch of the Pilgrimage, the *Perſian* Doctors grant a Diſpenſation to temporize a little with the *Turkiſh* Ceremonies, rather than hazard their Lives, and then thoſe that go to *Medina* uſed to return to *Bagdat* to viſit the Tombs of thoſe Imans that are buried in thoſe Parts of *Chaldea*, near that City, and take Certificates from the Magiſtrates of the reſpective Places of their having been there; and this whole Pilgrimage coſts them about a Year's Time, and ſeveral Weeks are ſpent after their Return in receiving the Compliments of their Friends, who afterwards add the Title of *Hadgi* or *Pilgrim* to the Name they went by before.

Diſpen-
ation.

Festivals.

They have a great Religious Feſtival, which they hold in Memory of *Abraham*'s ſacrificing his Son. This is held in the Month *Zilhab*, when beſides the ſacrificing of Sheep and Goats, both for themſelves and Neighbours, the grand Sacrifice is a Camel. The Ceremony is perform'd at *Iſpahan*; at which the King ſometimes aſſiſts in Perſon, and is as follows: Sacrifices.

On the firſt Day of the Month *Zilhab*, a Camel was given to the People out of the King's Stables: They dreſs'd him up with Garlands and Ribbands, and led him throught he City with Muſick, and all Marks of Triumph every Day, till the tenth, the grand Day appointed for the Sacrifice, which being come, he was led to a Field not far from the City, where the King often attends in Perſon upon that Occaſion, and the whole Court, with a rich Dreſs and magnificent Equipage: When they come at the Place, they make the Camel lie down, with his Head towards *Mecca*, and the King attending on one Side, and the Clergy on the other, they offer up certain Prayers, and ſtick the Beaſt in the Left Shoulder; then they preſent his Head to the King, and the Body and Quarters are preſented to the ſeveral Wards of the City, there being a Family appointed in each Ward to keep the Fleſh, which they now deem ſacred, the ſubſtantial People of the Neighbourhood contributing to a grand Entertainment for thoſe who aſſiſted in ſacrificing the Camel, and have in return Preſents made them of little Morſels of the Fleſh of the conſecrated Camel; not of the laſt, but of *that* which was ſacrificed a Year ago, the preſent Sacrifice being always ſalted, and kept till the enſuing Year, &c. ſo that they always have that holy Fleſh in the Houſe, and they that can get a Bit of it to eat, think themſelves entitled to all Bleſſings with it. Sacrifice in Memory of *Abraham*.

In Memory of *Haſſen* and *Huſſen*.

The other grand Feſtival is in the Memory of *Haſſen* and *Huſſen*, two Brothers, who loſt their Lives in the ſame War, *viz.* in a Battle with the Caliph of *Damaſcus*, who contended with *Huſſein* for the Empire in the ſixty fifth Year of the *Hegira*, on the tenth Day of their firſt Month, ca'l'd *Muharam*, of which we have this brief Account:

When *Huſſein* had loſt the Battle, he retired with his Troops to the Deſart of *Kerbele* near *Babylon*, in *Chaldea*, but being purſued, and overtaken there, he died fighting valiantly, (his Brother *Haſſen* being alſo ſlain in the ſame War;) and this Feſtival, if it may be ſo called, continues the firſt ten Days of the Month *Muharam*, during which Time every Countenance appears in the moſt dejected Manner: They neither waſh nor ſhave; they rent their Cloaths, paint themſelves black, and ſhew all poſſible Marks of Dejection, as if wholly diſconſolate; ſome appear naked, others ſlain'd with Blood; ſome in Armour, others as if fainting, and ready to periſh, all crying *Huſſein Huſſen*; and all this is to expreſs the Danger and Affliction they ſuſtain'd on one hand, and the Courage they exerciſed on the other to their laſt Moments.

Curſe
Omar.

They commonly add *Curſed be* Omar, (who was the great Enemy of their Patriarch *Haly*,) and they are ſo inveterate, and ſeem to expreſs ſo much Diſtraction, that it is Prudence for any, either Pagan or Chriſtian, to join with them, or at leaſt not to oppoſe them; but if they meet with a *Turk*, upon this Occaſion it is ſometimes with Difficulty that he eſcapes their Fury.

During

DURING this ten Days Mourning there are some sort of Altars almost at the Corner of every Street, and a Place enclosed and hung round with Shields, Fire-arms, and all sorts of Necessaries of War for Man and Horse. In the Night-time the Streets are illuminated, and sometimes their Doctors make Orations to excite the People's Rage against *Omar*, and in Praise of *Hossein*; and when Sermon is over they again begin to roar out *Hossein Hassen*, as long as they can hold out, and then return Home, and the Night before the last Day of the Feast is usually spent in Devotion.

Gaurs. BESIDE the Mahometan Religion, there is that of the *Gaurs* or antient *Persians*, Worshippers of Fire; they are dispers'd through all *Persia*, and have several Colonies, especially near *Ispahan* there is a Village inhabited only by *Gaurs*; they are generally of a rough Complexion; the Men wear their Hair and Beards long, a short close Vest, and a Cap something like our Hats; they are generally Husbandmen or Mechanicks, but not much inclined to Liberal Arts or Merchandize; they neither allow of Divorce nor Bigamy, except the Wife has remain'd barren nine Years, and then they may marry a Second. They think Intelligence is lodg'd in the heavenly Bodies, of which the Sun is chief, the Moon next, and the rest in Order as we reckon them; and hence when the Moon is eclipsed they think she has had some bad Intelligence, which she will soon communicate to this lower World, and the like with respect to the Sun, so that they seem to deduce almost articulate Predictions from those Affections of the Luminaries. They worship Fire, and sometimes break out in Extasies upon the Purity and Activity of the Fire, the Light, and God, which they thus confuse together; they believe that sacred Fire has been kept alive in *Persia* ever since the Time of King *Keyomersa*, who has been dead above three thousand six hundred Years, and to this Day they worship the common Fire; but that which is intended for that Purpose, they take care that it be not fed with smoaking or stinking Fuel: They always perform their Devotions with their Faces towards the Fire or the Sun. Their principal Temple is on a Mountain near the City *Yedz*, near two hundred Miles East from *Ispahan*, and there their High-Priest resides; their Priests are employ'd to keep alive the sacred Fire, which they say was lighted on this Mount ain by their Patron *Zoroaster*, and they live in hopes of his Return. They look upon it as a Duty to destroy noisom and pernicious Animals. Instead of burying their Dead, they expose them to be devour'd by Birds of Prey, as has been spoke of before when treating of *India*.

Armen. Relig. THE *Armenian* Christians make a considerable Body in the *Persian* Dominions, especially if we rank them with other Christians that have join'd them on account of the Privileges granted them by the *Persian* Government; (*For the Reason of which see Chap.* V. *under the Article of Foreign Trade*;) and all go now by the Name of *Armenian Christians*; they came originally from *Julpha* in *Armenia*, and are now become a numerous Colony at *New Julpha*, in the Neighbourhood of *Ispahan*, and call'd so after the City of *Julpha* in *Armenia*; they were originally of the *Greek* Communion, but now differ from both the *Latin* and *Greek* Churches.

Clergy THEIR Clergy consists of Patriarchs, Archbishops, Bishops, Priests, and Monks of the Order of St. *Basil*: Simony is so much tolerated among them, that the Patriarch himself obtains his Confirmation by Bribes and Presents; the Monks perform no Ecclesiastical Function but reading Mass; all the Clergy may marry except the Monks. Both Clergy and Laity have as many Fast-Days in a Year as there are not, and then they abstain from all Manner of Flesh and Fish, and eat nothing at all till Evening; and it is said their Bishops have not above four Days in a Year in which they may eat Flesh or Fish.

Sacrament WHEN they intend to administer the Sacrament, there are some little Bells, and all Clergy and Laity sing to the Musick of them. The Priest taking up the Chalice with the Bread upon it, he turns to the People, who falling upon the Ground, say, *This is the Lord who gave his Body and Blood for us*; then the Bread being dipp'd in the Wine, the Priest says three Times (the People repeating it after him,) *I confess I believe that this is the Body and Blood of the Son of God, who takes away the Sins of the World, and who is not our Salvation, but the Salvation of all Mankind*; then he gives the Bread so dipp'd in Wine to all the Congregation, and even to the very Children of two or three Years old.

Marriage THE *Armenians* contract their Children in Marriage in their Infancy, to prevent their being carried into the *Haram*; and the Marriage is commonly celebrated about Nine or Ten, but not consummated till some Eays afterwards.

THERE are other Denominations of Christians there as well as in *Europe*; but to give a distinct Account of all who differ so little, and amount to so small a Number, would tire the Reader's Patience rather than inform his Judgment, especially as we have thought ourselves to be pretty full in our Account of the Mahometan Religion.

CHAP. XVII.

Gives an Account of the Marriages of the Persians, *and of the Condition of their Children.*

IT cannot be said that Love is the chief Inducement to marry in *Persia*; for as the Women are never to be seen, the Man cannot form any Idea of his intended Spouse, but what is communicated to him by others, that he is obliged to content himself with such an Account of his Mistress's Beauty and other Accomplishments as he receives from others; nor do they seem much to regard that in their Choice, but rather marry with some politick View, either for the Quality or Interest of her Family, or to serve as a Governess over the rest of his Women, who, though they have the Privilege of their Master's Bed, yet must own her for their Mistress and Superior, and wait upon her accordingly, but their Children and her's are reckon'd equally legitimate, and Children of the same Wife, whether born before or after Marriage, have the same Privileges as to Right of Inheritance; so that they make no difference between a Child born of a lawful Wife, a Concubine, or a Black Slave.

WHEN a Man is propos'd to a Woman, the main Question that she enquires after is his Dress, his Equipage, the Number of his Slaves, and other Testimonies of Grandeur; and if the Account she has of that answers her Expectation, she is under no

no Apprehensions of being disappointed in the Man, for Love is so far from being the Motive to bring them together, that it often makes them unhappy; for if a Woman is indeed in love with her Husband, her Love to him will seldom restrain him from taking another to his Bed, it being so customary that it is thought no Crime; and in this Case the more she loves him the more unhappy she is, and if she complains, he studies revenge, and perhaps displaces her from her Authority, and not only so, but from his Bed too.

Forty Days.

When the *Persians* meet with an advantageous Match, they dispose of their Children very young, rather than lose the Opportunity, otherwise they are in no haste; and if their Sons are inclin'd to have Experience of Female Enjoyments before they can marry them to Advantage, they think it no Crime to allow them a She-bedfellow in the mean Time; so that however tenacious the Man that marries may be of the Virginity of his new Spouse, yet she has but little Assurance, or even Hopes, of being Mistress of his first Embraces.

Method of Marrying.

The Parties being agreed, and the Terms settled by them and their Relations, they make proof thereof to the Cadi or Civil Magistrate, who causes the same to be registred, but the Couple do not use any Form or Ceremony, as to go before him or any Priest, to Celebrate their Nuptials, but the Day of Espousal being appointed, the Bridegroom on the Day before it sends her a Habit, Ornament, and Jewels of Value, proportionable to his Ability and Circumstances; and on the next Day, being the Day appointed, towards Evening he dresses in his richest Apparel, and being mounted on Horseback, attended by his Friends, with Musick and dancing Girls, he goes to fetch her home; and she, being appriz'd of the Time of his coming, meets him upon the Way, mounted also on a Camel or Horse, but so veil'd that he cannot yet see her Face; she is also attended by her Friends and Relations dress't in their best Habits, with her Cloaths and Baggage, and all the Slaves she is Mistress of, the Number of which contributes very much to the Grandeur of the Show.

But so met, he returns back with them to his own House, being preceded with Drums, Trumpets, lighted Torches, and the Musick playing, being follow'd with the Acclamations of the Populace, who make the Skies echo with their Wishes of Happiness to the new-married Couple; and when they arrive at his House, the Bride is led to her Apartment, where being settled, the Husband comes to her, and finding her unveil'd, has his first view of her Face; upon which the Company spend the rest of the Evening, and sometimes several Days, in Feasting and rejoicing at the Bridegroom's House; but the Men and Women are in separate Apartments, while the Musick, dancing Girls, and Populace are also well entertain'd, especially if the new-married Man be a Person of Quality.

Here be shown the

This is the Form of marrying what may properly be call'd a Wife, according to our Notion of the Word, but they have also other Women, which, according to the Custom of the Country, it is lawful for them to take to their Beds, but these Contracts may rather be call'd Bargains than Marriages; these they agree with either for Life or for what Time they agree to contract for; and these Contracts are also registred by a Magistrate, as another private Contract may be, but not attended with any other Ceremony; and if the Contract is only for a Time, and they part by Consent when the Time is expired, she is obliged to remain single forty Days afterwards before she contracts with another, that it may be first known whether she is with Child, for if it proves so, he is obliged to keep her till her Lying-in, notwithstanding the Time of the Contract is expired, and also to maintain the Child, or if she had Children by him before, he is obliged to maintain them all, and she is at liberty; or if at the End of forty Days she is found not to be with Child, she is at full liberty to let herself out again as soon as she pleases, &c.

While these Contracts continue in force, which is till the Time agreed upon be expired, they are look'd upon in the Eye of their Law to be as sacred and valid as Marriage, and it is look'd upon as the same Crime, either in the Woman with a strange Man to violate this Contract, or in the Man that is guilty of such an Offence within the Time limited, as it is in defiling the lawful Marriage Bed.

Slaves. Bed-fellows.

But they have another sort of Women Bed-fellows, for they cannot justly be call'd Wives, and that is their Female Slaves, whom Custom has made lawful to take to their Beds at pleasure, without any Ceremony but taking them to Bed, or any Restriction but their own Choice, nor are they oblig'd, whether they have had Children by them or not, to continue them as Bed-fellows any longer than during Pleasure; only if they are with Child, he is obliged to keep them till they are deliver'd; and the Children of such Slaves inherit according to Seniority equally with those of the first or married Wife; so that if his eldest Son be born of one of his Slaves, he has the same Privilege of Inheritance as if he had been the Son of the Wife, except it is otherwise order'd by some previous Contract made with his Wife to settle a certain Part of his Effects upon her, and if so, that descends to her particular Issue.

Settling Effects.

But if the Man has neither made a Will, nor bound himself by any particular Contract, the eldest Son (whether by his married, a contracted Wife, or a Slave, it matters not) has two Thirds of his Estate and Effects, and the other Third is divided among the younger Children, without any regard to their Age, Sex, or the Quality of the Mother they descended from; and if he divorce his Wife without any Fault on her Side, she shall nevertheless have the Dowry stipulated for, and it descends to her Issue, as in Case of no Divorce at all.

Divorce.

If a Woman either alledge that her Husband is impotent, or spends too much Time with his Concubines or Slaves, or otherwise does not do justice to the Marriage Bed, the Magistrate will grant a Divorce, and both Parties are at liberty to marry again as soon as they please, or can find Opportunity.

When at Age.

The *Persian* Boys are reckon'd of Age at thirteen Years of Age, and the Girls at nine, and are no longer under the Direction of their Guardians, nor are they always strictly tied up to that Age, for if a Guardian die, and the Boy or Girl be found upon Examination to be of a ripe Capacity, the Magistrate will dispense with the strict Number of Years, and allow them to be of Age sooner, without giving them the Trouble of having a new Guardian; but among Children the Eldest, who, as above, has two Thirds of the Estate, is always Guardian to the Youngest; and the Minors have that Privilege, that if the Estate be involved it cannot be seiz'd for the Debts of the Deceas'd till they come to Age, and are able to plead for themselves. And when a Person dies intestate, there are proper Officers, whose Business it is to take Care that his Effects be distributed among his Relations, according to their Sex or Nearness of Kindred, for which the Law has settled a just Proportion.

Of Persons Intestate.

N. B. *Although it may seem needless to follow the Circulation of a Lunar to solar Years, and as it is so naturally to be very much, yet the Reader is desired to observe, that in Chap XV of the Description of* Persia, *Page* 211, *the first Column, Line* 31, *the Word which by Mistake is printed* [Days] *should have been* [Years], *and then the Passage will be* [But the Height of the Angel being above that a thousand Years *coming*], &c.]

CHAP. XVIII.

Of the Funeral Rites of the Persians, *their Behaviour to the Dying, their Way of burying the Dead, and Manner of Mourning.*

WHEN a sick Man is thought past all hopes of Recovery, and near expiring, they set up lighted Lamps, or make little Fires upon the Turrets of his House, that People that pass by may know there is a dying Man in the House, and that they may pray for him; they also send for a Priest to put him in mind to remember his past Life, and repent, to which he commonly answers *I repent*; then, if he is able, he repeats his Creed or Confession of Faith, *That there is one only God, and* Mahomet *was his Prophet*, &c. [as mention'd in their Religion,] and that *Haly* and the eleven *Imams* were the true Successors of *Mahomet*; and as they find him draw near his Exit, he repeats, that as he has lived in this Faith so he professes he dies in it, and after this Confession they continue to read to him in the Alchoran till his last Moments.

As soon as he is dead, it is soon discover'd by the dismal Groans and Lamentations of those about him; the Relations immediately set up a great Howl, rend their Cloaths, tear their Hair, beat their Breasts, and act like People in the utmost Distraction, especially the Women, uttering the most tender Expressions to the dead Corpse, as if it was sensible of their Grief.

In the mean Time those who are the most composed, send to the Civil Magistrate to procure an Order to the Person whose Office it is to wash the Dead, to send some to perform that Office, who always send those of the Sex of the Deceas'd; whatever is upon the Body they strip off for their own Use, and then carry out the Body to a certain Pool, appointed for that Purpose in some private Place in every Town, (but this is to be understood of the common People,) for the Rich have Basons in their own Gardens, over which a Tent is erected, and in this they wash any of the Family when they die, when the Corpse is wash'd, they stop up all the Vents, as Mouth, Nose, Ears, &c. with Cotton; the Corpse is afterwards wrapp'd up in a Winding-sheet, and if it be a Man of Figure, they have some Passages in the Alchoran or some sacred Book, written upon it; and in this Condition the Body is deposited at some Distance from the House, and if it be buried a great Way off, it is put into a wooden Coffin fill'd up with Salt, Lime and Perfumes, to preserve it, for they never embalm or embowel their dead Bodies, as is common in other Places.

If they are buried near the Place where they die, they are carried to the Place of Burial without much Ceremony, and the Company follow without any Order, except for Persons of Distinction, and then the Ensigns of the Mosque are carried before them, upon long Pikes or Poles, one of which has an Iron Hand at the Top of it, which they call *Haly*'s Hand; others have Crescents, and on the rest are written the Names of *Mahomet*, his Daughter *Fatima*, and his twelve Successors, they carry Streamers of Silk, and have Led-Horses to carry the Turbant and Arms of the Deceas'd: They have no Bearers on purpose to carry the Corpse to the Grave, that being reckon'd such a charitable Office, that People offer themselves, and if a Person of Fashion meet a Funeral, he will alight from his Horse to assist in carrying the Bier to the Grave.

They bury none in their Mosques or Temples, but in some Towns they have Burying-places by the Road Side near the Houses, but in *Ispahan*, and other great Cities, they have Burying-places within the City. They make in their Graves a hollow Arch on that Side next *Mecca*; wherein they lay the Corpse, with only a Winding-sheet, and no Coffin, with the Face towards *Mecca*; the Reason of this Arch is, because they believe that soon after the Interment, the Soul re-animates the Body, who is examined as to its Faith and Manners. Those who call themselves of the Family of *Mahomet* have no Earth thrown upon them, but cover'd with a Grave-Stone, upon which is commonly wrote some Sentence of the Alchoran.

Eight or ten Days after the Burial, the Relations of the Deceas'd, especially the Women and Children, visit the Tomb, and renew their Lamentations, and expostulate with the Deceas'd upon his leaving them, their Friends in the mean Time condoling with and comforting them, sometimes leaving Cakes, Fruit, and Sweet-meats upon the Tomb, with which they think the Angels who guard the Sepulchre are well pleased.

Their Mourning commonly lasts forty Days, Mour-
but they wear no Black, for they call that the De- ing.
vil's infernal Habit, but whatever their Colour be, it consists in a torn negligent Dress, and their Mourning is express by the most visible Tokens of Grief and Despair. When the Mourning is over, the Men shave and wash, but the Widows of the Deceas'd continue real Mourners, and seldom or never marry again.

Supplement to the History of Persia, *adapted more particularly to the fourth Chapter, which treats of the Succession of the Government.*

IN our Account of the Usurpation of *Meerweys*, and of the Success of his Son *Mahamood*, in aspiring and attaining to the Throne of *Persia* in the Year 1721-2, we gave a Detail of the several Steps taken to accomplish that Enterprize, for which we refer the Reader to Chap. IV. as abovemention'd; but we having later Accounts transmitted to us, not contradicting but continuing the former, we thought it necessary to insert it to make the Work compleat to the present Time.

In the last Account that we had, or could then give in the Conclusion of Chap. IV. we left *Mahomood* upon the Throne of *Persia*, which, as we there observed, he got Possession of in *February* 1721-2, but by later Intelligence we are assured that *Mahomood*'s Footing in *Persia* was not so firmly establish'd as was imagin'd, for *Shaw Thomas* or *Sultan Tahmas*, the second Son of the deposed *Shaw Hussein*, did, notwithstanding his voluntary Abdication, recover the Throne of *Persia*; and, as he was not a Man of the brightest Parts himself, he made the politick *Kouli Chan* his Prime Minister, and invested him with a full Power to transact all the Affairs of State, even at his own Pleasure

Thamas

Thamas Kouli Chan, who had long cheriſh'd ambitious Views, hearing of the Treaty which the Sophi his Maſter had concluded with the *Ottoman Porte*, thought he had a fair Opportunity of executing what he had already deſign'd, which was to poſſeſs himſelf of the Crown of *Perſia*; and in order thereto he firſt recover'd the Province of *Erack Agem*, in which the Capital of *Iſpahan* was ſituate, and then pretended that this Treaty was ſo diſadvantageous to the Nation, that he could not agree to it, but was reſolved to march with his Army towards *Iſpahan*, pretending to adviſe the Sophi to maintain his War with the Grand Seignior; but the Sophi, being very ſenſible that ſo ambitious a Prime Miniſter as *Kouli Chan* was, ought to be truſted with Caution, or not at all, forbid him to advance with his Army, and commanded him to halt in the Province of *Choraſſan* till further Orders; *Kouli Chan*, having particular Views in order to the Accompliſhment of his grand Deſign, obey'd; but, under a pretended Concern for the Security and Intereſt of the Publick, deſired the Sophi to ſend to him ſome of his Miniſters, in whom he repoſed the greateſt Confidence, that he might convince them of his own Deſigns for the Publick Intereſt. To this the Sophi ſoon agreed, and ſent ſeveral Deputies to *Kouli Chan*'s Army; who to gain the greater Credit by ſhewing them due Reſpect, he appointed *Imam Riza*'s Tomb for the Place of their Meeting; where he affirm'd with the moſt ſolemn Oaths, that he had no other Meaning in propoſing to march with his Army into the Province of *Iſpahan*, but only to proceed with them to the Frontiers of *Turkey*, that the *Perſians* might revenge all the Cruelties the *Turks* had exerciſed upon them.

But the Sophi, regardleſs of theſe Proteſtations, was not only upon his Guard, but march'd five Days Journey out of *Iſpahan*, there to muſter his whole Army, and make a powerful Head againſt *Kouli Chan*, at the ſame Time forbidding him to enter the Province of *Iſpahan* upon Pain of Diſobedience.

Kouli Chan continued his pretended Submiſſion, and ſo far prevail'd with his Friends at Court, that they perſwaded the Sophi to a good Opinion of his Fidelity, who upon that broke up his Camp, and return'd to *Iſpahan*.

When *Kouli Chan* had thus far gain'd his Point, he decamp'd with his Army, and detatch'd his moſt truſty Officers with ſmall Bodies of Men to take Poſſeſſion of the moſt important Poſts in the Neighbourhood of *Iſpahan*, ſo that in a ſhort Time he became Maſter of all the Paſſes through which the Sophi could poſſibly get out of the City, that now the City might be ſaid to be block'd up.

In the mean Time *Kouli Chan*'s Friends at Court were uſing their utmoſt Intereſt with the Sophi to invite *Kouli Chan* to Court; the Sophi, too late, ſenſible of the Diſtreſs he was in by quitting his Camp, and giving the General an Opportunity to ſurround him in his own Capital, comply'd, and wrote to *Kouli Chan* to come and receive the Marks of his Favour and Satisfaction; whereupon *Kouli Chan* advanc'd with his Army near the City, and caus'd them to encamp, and he demanding Audience of the Sophi, it was granted; he entered *Iſpahan* with ſome Troops and the principal Officers of his Army, and being introduc'd into the Hall of Audience, he approach'd the Sophi, and told him, *That he was the Prime Miniſter, and that as ſuch the Care of the Affairs of State belong'd to him, that his Majeſty ought to be perſwaded of his Fidelity by the important Services he had done him*, &c. and the Sophi, reduced to this Neceſſity, *confirm'd him in his Truſt, and told him, that he was perſwaded of his Fidelity.*

Kouli Chan's Authority being renew'd, he did not think fit to loſe this Opportunity to begin to put his Deſigns in Execution; and his firſt Step was to ſeize two of the Sophi's chief Confidants, Officers of the Crown, and ſtill pretending to act by the Sophi's Authority, he ſent for his Army to *Iſpahan*, inſinuating that that Prince had a Mind to review them.

When *Kouli Chan*'s Way was thus pav'd to his intended Deſign, he invited the Sophi to an Entertainment, pretending thereby to convince the Sophi and the People of his Fidelity, and that the People might ſee the Confidence the Sophi repos'd in him, the Sophi accepted the Invitation, and was received with all due Honour and Reſpect.

By *Kouli Chan*'s Perſwaſions, the Sophi ſtaid with him all that Night, but the next Morning he had prepared the principal Officers of his Army, and thoſe of the Court Party that he had brought over, and repreſented to them that the King was a weak Prince, and of no Courage, and that it was neceſſary to dethrone him, and place his Son *Mirza Abbas* upon the Throne in his Room; adding, that though that Prince was yet in his Cradle, he would take Care of the Government as Regent during his Minority, and all Men ſhould ſee the Difference; this Propoſal being univerſally agreed to, the Sophi was ſeiz'd, and ſent Priſoner to *Choraſſan* under a ſtrong Guard, with only two Eunuchs and a few Slaves to attend him; whereupon *Kouli Chan* went to the Palace, and proclaim'd *Mirza Abbas*, who, though in his Cradle, was placed upon the Throne to receive the Compliments of the Grandees. But *Kouli Chan* finding himſelf ſole Regent, and arbitrary during the Minority of *Mirza Abbas*, he in Royal Robes and the Crown upon his Head, aſſumed the Throne, and received the Compliments of the Courtiers; and entering the *Haram*, he by Force debauch'd the late Sophi's Siſter, the Daughter of *Shaw Hoſſein*, who had reſign'd to *Mahamood*; *(ſee the latter End of Chap.* IV.) he alſo ſeiz'd the Royal Treaſure, and every Thing belonging to the Crown and Royal Family.

Kouli Chan having had ſuch Succeſs, his next Attempt was to recover what his Predeceſſor, the late depoſed Sophi, had loſt; and with this View he attack'd *Babylon*, which the *Turks* had in Poſſeſſion, and ſhut it in ſo cloſe, that he made himſelf Maſter of all the Paſſes, and thereby cut off all Supplies of Men or Proviſions; by which Means *Achmet Baſſaw*, Governor of *Babylon*, found himſelf obliged to deſire a Suſpenſion of Arms, which he propoſed for two Months; but *Kouli Chan*, not now as Prime Miniſter, but as Regent and Protector of *Perſia*, taking the Advantage of the Diſtreſs he had reduced *Babylon* to, anſwer'd that he could not grant his Requeſt; but that he was willing to make a perpetual Peace with the *Ottoman* Empire, provided the Grand Seignior would ſign the following Conditions by Way of Preliminary, *viz.* 1. To ſurrender the City and Province of *Erevan*. 2. To reſtore all the Places taken from the *Perſians*. 3. To give a ſolemn and publick Satisfaction for the Affront offer'd at *Conſtantinople* to the *Perſian* Ambaſſador ſome Years ago, contrary to the Law of Nations; and 4. That Repriſals be made upon the *Turkiſh* Officers, who are now *Kouli Chan*'s Priſoners, by uſing them as the *Turks* uſed the *Perſian* Officers, whom they ſent back with their Noſes and Ears cut off, and their Mouths ſlit. But *Achmet*, having no Authority to admit of theſe Conditions, deſired a Time to tranſmit them to the *Divan*, to have their Opinion of them; which Anſwer being no Satisfaction to *Kouli Chan*, he purſued the Blockade with the utmoſt Vigour, and ſome Letters ſince ſay he has actually taken it.

These Particulars having been tranſmitted to *Holland*, and from thence to us in the Month of *April* 1733, what we have ſaid may be juſtly allow'd to be the preſent State of *Perſia*, it being impoſſible to bring the Hiſtory any lower down till more Time afford farther Matter for ſucceeding Hiſtory.

A DESCRIPTION OF ARABIA.

CHAP. I.

A Description of the Bounds and Extent of this Country, with the Name and Divisions; also of the Rivers, Port Towns, and Climate.

Division. ARABIA is divided into three Parts, *Arabia Felix*, *Arabia Deserta*, and *Arabia Petræa*; of which the first is largest and Southermost, the last is the least and Northermost, and the other, viz. *Desert Arabia*, is partly between the other two; and *Arabia*, thus consider'd, extends from Latitude 12 Deg. 30 Min. to 32 Deg. 30 Min. North, and in Longitude East from *London* from 34 to 61 Degrees; its longest Dimensions is from the North-West to the South-East, and its Form is like that of an Ax. *Arabia* thus consider'd is bounded by *Palestine*, *Syria*, and *Diarbeck*, or *Mesopotamia*, on the North, and on the West by the *Red Sea* and the *Isthmus* that separates *Asia* from *Africa*, on the South by the *Arabian Sea*, and on the East by the *Persian Gulf*, and *Ewat Arabick*, which is the ancient *Chaldæa* or *Babylonia*.

It is difficult to determine the Bounds that separate one of those grand Divisions from another, because they are govern'd by abundance of *Emirs*, or petty Princes, who march from Place to Place, and encamp where they can find Water and Pasture for their Cattle, and by this their wandering the Country is almost become Common, and few of them know the Bounds of their own Dominions.

Name. THE Name *Arabia*, as some say, is derived from *Harab*, a Thief or a Robber; but others say it is from *Arabes*, the supposed Son of *Apollo* and *Babylonia* but whether this be real or fictitious we cannot determine; however, the People or Inhabitants of *Persia* are more known by the Name of *Saracens* than *Persians*, which Word is derived from the two Words *Sara* a Desart, and *Sakan* to inhabit, and they being *Sarakalani*, or Inhabitants of the Desart, the Word is now contracted to *Saracens*, which we call them to this Day.

Persia. THUS, as well as *Persia*, is a Country very scarce of Water, there being but few Rivers or Springs here, except we reckon the great River *Euphrates*, which separates *Arabia Deserta* from *Mesopotamia*; it is indeed encompass'd on three Sides by the Sea, viz. on the South-West by the *Red Sea*, on the South East by the *Arabian Ocean*, and on the North-East by the *Persian Gulf*, which last, with their Manner of fishing for Pearls, and whatever else is material, we have already defended in our Account of *Persia*.

Coasts. AS to the Main Ocean, or *Arabian Sea*, it is observed there are no regular Tides in it, and what Current there is, is not fix'd upon any one Point of the Compass as to its Motion, but sets which Way the Wind blows, and runs stronger or weaker, in proportion to the Strength or Continuance of the Wind upon any Point of the Compass; but this is supposed at the Time of the Moon that we have Neap Tides, for it is observed that for three or four Days together, at the Full and Change, the Current sets against the Wind, and then the Water rises seven or eight Foot perpendicular upon the Coast of *Arabia*.

Winds. ALTHOUGH the Winds upon this Coast have a Tendency to Trade Winds, yet they are not exactly so, but blow from the South-West Quarter, or between the West and South-South-West, from *April* till the latter End of *August*; during which Time it blows very hard Gales, and is sometimes attended with violent Showers of Rain; but then it turns about to the Eastward, and blows gently from that Quarter till the latter End of *March* or the Beginning of *April*, with sometimes Land or Sea Breezes, but Trading upon this Coast is not practicable in the Months of *April*, *May*, *June*, and *July*, for during that Time the Wind generally blows hard about South-South-West, and there is no Harbour upon the Coast but what lies open to those Winds, nor is there any Soundings sometimes within six Miles of the Shore.

Red Sea. THE other Sea is called the *Red Sea*, or by some the *Arabian Gulf*; it lies on the South-West Side of *Arabia*, and extends from *Aden*, or the Streights of *Babelmandel*, North-West so near to the *Levant*, or East Part of the *Mediterranean*, that it is only separated from it by the *Isthmus* that divides *Asia* from *Africa*, or *Arabia* from *Egypt*. Authors differ about the Original of its Name; some affirm that the Redness of its Sand or Waters was the Occasion of giving it that Name, and though that Conjecture might naturally be thought probable, yet Travellers assure us that the Water differs not at all from those of other Seas in Colour; and therefore others derive the Name from King *Erythro*, who was Sovereign of this Sea, and was buried in one of the Islands of it, and hence it is called *Mare Erythræum*, or *Red Sea*; others will have it that the Red Mountains thereabouts give it that Name; but the Scripture calls it *Yam Suf*, or the Sea of Bulrushes, and if we allow that the Word there translated Bulrushes might be translated Reeds, with which this Sea so much abounds, it might then be call'd the *Red Sea*, which might naturally be contracted or corrupted to *Red Sea*, and give rise to that Opinion that the Waters or Sands in the Sea or the Mountains

tains about it were red; but this laſt Conjecture of its being the *Reed Sea* ſeems to me moſt probable, Water being the proper Element, and marſhy wet Ground, as the Shores of Seas and Rivers, the moſt agreeable Soil for Reeds as well as Bulruſhes. The *Arabians* call'd it the Sea or Gulf of *Cly ſma*, from a Town of that Name that ſtood in the Bottom of it, as we call the *Adreatick Sea* by the Name of the *Gulf of Venice* for the ſame Reaſon.

This Sea was very much frequented formerly for its maintaining a Communication by Sea from the *Eaſt Indies* by the *Mediterranean* to the Weſt Coaſt of *Europe* and *Africa*, except that ſmall *Iſthmus* by which it is ſeparated from the *Levant*, which would require Land Carriage; but that Trade was diſcontinued when the *Europeans* found a Way to the *Eaſt Indies* by ſailing round the *Cape of good Hope*; ſo that there is now but little Navigation in that Sea, except with *Turkiſh* Galleys and ſmall Craft, and ſome Veſſels that tranſport the Mahometan Pilgrims to *Mecca*; however, it may not be amiſs to give a brief Deſcription of thoſe Towns or Places that have been formerly Trading Ports and Harbours in this Sea.

Harbours. The furtheſt North, at the Entrance of this Sea, from *Egypt*, is *Suez*, in Latitude 30 Degrees; this is ſuppoſed to be the antient *Arſinoe*; it is now a little Town belonging to the Grand Seignior, containing about two hundred Houſes, and has a pretty Harbour, but not Water enough for Ships of Burden; it is full of People when Foreign Shipping or the *Turkiſh* Galleys are there, but it is but thinly inhabited at other Times, becauſe of the Scarcity of freſh Water, there being none within two Leagues of it. This Town being ſituate in the very Bottom of this Gulf, or the Northermoſt Point of the *Red Sea*, may be call'd the Port Town of *Grand Cairo*, from whence it is but about forty or fifty Miles, which in Caſe of a Trade between the *Red Sea* and the *Mediterranean* requires Land Carriage; this being all the Land Carriage that is required between thoſe two Places, and conſequently between *England* and the *Eaſt Indies* if they were to Trade this Way; but ſince a Paſſage about the *Cape of good Hope* has been found out, it is reckon'd ſo much more commodious, that this by the *Red Sea* is quite diſuſed, except by Galleys and ſmall Veſſels as above.

Tor. The next Port to this is *Tor*, on the Eaſt Side of the *Red Sea*, and about a hundred Miles from *Suez*. Between *Suez* and *Tor*, but nearer the former, is the Place where the Sea was cut in two to make a Paſſage for the Children of *Iſrael* to eſcape the Fury of *Pharaoh*, *Exodus* xiv. 21. Where the Sea was thus divided it was about fifty Miles broad, and thirty five Fathom deep where it is deepeſt; the Weſt, or *Egyptian Coaſt*, is very high and ſteep, except where the *Iſraelites* went down to the Sea Side, which goes down by an eaſy Deſcent, about eight or nine Miles, between vaſt inacceſſible Mountains, like Rocks or Walls; and *Pharaoh*, or his Officers, knowing very well the Nature of that Shore, and what a Preminary they had brought themſelves into, purſued them the more eagerly; aſſuring himſelf, that by reaſon of thoſe impaſſable Rocks and Mountains on each Side of them, and the Sea before them, it was impoſſible for them to eſcape his Fury; as indeed it was, had not that or ſome other Miracle been wrought for them; but when they found themſelves in this Diſtreſs, the ſteep Rocks and Mountains on each Side of them, the Enemy behind, and the Sea five and thirty Fathom deep before them, then the Sea divided and made way for their ſafe Paſſage. But as it will be too great a Digreſſion to purſue the Travels of the *Iſraelites* in *Arabia* any further at preſent, we ſhall defer that to the latter End of the fourth Chapter, and continue the Deſcription of the *Red Sea*.

The next Port to the Southward of *Tor*, and about a hundred Leagues from it, is *Yambo*, in the twenty fifth Degree of North Latitude; it is a tolerable good Harbour, but has a dangerous Sand or Bar at the Intrance into it; there is a Caſtle, which ſerves to defend the Town from the Inſults of the wild *Arabs*, though not ſufficiently ſtrong to withſtand a formal Siege; it is the Port Town of *Medina*, and is diſtant from it about four Days Journey. *Yambo.*

To the Southward of *Yambo*, in the twenty ſecond Degree of North Latitude, and on the *Arabian* Side, is *Siden* or *Judda*, the Sea Port of *Mecca*, where the Pilgrims uſed come to aſhore. The Country about here is ſo barren, that they have their Proviſion from *Egypt* by Way of *Suez*; and the *Egyptians* have in return great Quantities of Coffee, which the *Arabians* bring hither when the *Turkiſh* Galleys come into the Road.

But the chief Port in the *Red Sea* is *Mocha*, ſituate on the *Arabian* Shore at the Entrance of the *Red Sea*, in about thirteen Degrees of North Latitude; this is the gereral Rendezvous of Shipping and Trade from *Europe* and *India*, or what Ships come from the *Indian* or *Oriental Ocean*, and the *Abyſſine* and *Turkiſh* Ships, and the Merchants and Traders from *Egypt* that trade thither by Way of the *Red Sea*. *Mocha.*

There is another Port call'd *Aden*, one of the moſt antient and pleaſant Sea Ports in all *Arabia*, it is Situate on the South Coaſt of *Arabia*, about forty Leagues Eaſtward from the Entrance into the *Red Sea*, called the Streights of *Babel Mandel*; it is in about thirteen Degrees of North Latitude; it was once in the Poſſeſſion of the *Portugueſe*, but they not keeping it in a Condition ſtrong enough to reſiſt the Attacks of the *Arabian* Princes, they were forced to quit Poſſeſſion, though it is defended by a Wall on one Side and high Mountains on the other. *Aden.*

The next remarkable Place to the Eaſtward of *Aden* is *Macallah Bay*, in between fourteen and fifteen Degrees of North Latitude, and from thence to *Shahar* is between twelve and thirteen Leagues; this Place lies in about fifteen Degrees of North Latitude; beyond this is *Cureſe* and *Doſar*; and beyond *Cape Roſalgat*, on the *Arabian* Side, is *Muſcat*, in about twenty three Degrees of North Latitude, the King of which Province ſeems to excel any of the other *Arabian* Sovereigns in ſtrength of Shipping. *Macallah Bay.* *Muſcat.*

The Air in this Country is exceſſive hot, and conſequently unhealthful, eſpecially near the Coaſt, and the Sands in *Arabia* are very troubleſome and dangerous, being driven, as Snow is in *England*, like Clouds in the Air, inſomuch that whole Caravans have been loſt, and buried by Storms of Wind and Sand. Air.

CHAP. II.

Of the Kingdoms and Provinces into which Arabia *is divided, and of their Towns, Fortifications, Camps, Buildings, and Furniture.*

Hagiaz or Mecca.

I. TO begin in *Arabia Felix*, and in that with the Province of *Mecca*, or, as it is call'd by ſome, the Province of *Hagiaz*; it lies in the Weſtern Part of *Arabia*, and is bounded on the Weſt by the *Red Sea*, and on the South by the Province of *Tehama*. The chief Towns in this Province are *Medina*, *Mecca*, *Siden* or *Judda*, *Hagier*, and *Hageſa*.

Tehama.

II. *Tehama*, the Province next to the Southward of *Hagiaz*, has the *Red Sea* on the Weſt, and *Moha*, or *Moco*, on the South: The chief Towns are *Haran*, *Sibet*, and *Ghalaſeka*.

Mocha.

III. THE Kingdom of *Mocha*, which has the Streights of *Babel Mandel*, and further up the *Red Sea* on the Weſt, the Ocean on the South, the Province of *Hadramut* on the Eaſt, and *Tehama* on the North: the chief Towns are *Mocha*, *Aden*, *Abia*, and *Sanaa*.

Hadramut.

IV. THE next Province to the Eaſtward is *Hadramut*; it has the Ocean on the South, and the the Kingdom of *Careſe* on the Eaſt. Chief Towns are *Hadramut*, *Aragui*, *Macullah*, and *Shahar*.

Careſe.

V. THE two Kingdoms of *Careſe* and *Seger* (by ſome Geographers comprized under one,) has the Ocean for its Boundary on the South, *Hadramut* on the Weſt, and the Kingdom of *Muſcat* on the North and Eaſt. Chief Towns are *Hawſel*, *Fortach*, *Doſar*, *Mirabat*, and *Niban*.

Muſcat

VI. THE Kingdom of *Muſcat*, by ſome call'd *Oman*, is, if we include *Bahrelia*, the largeſt Kingdom in *Arabia*, and has the Kingdom of *Jamama* on the North-Weſt, the Gulf of *Perſia* on the North and Eaſt, the Ocean on the Eaſt, and *Segar* on the Weſt and South-Weſt. The chief Towns are *Haſen*, *Harmin*, *Gama*, *Muſcat*, *Sohar*, *Julphar*, and *Elcatiff*. *Cape Roſalgate*, the Eaſtermoſt Promontary of *Arabia*, is in this Province, as is alſo Cape *Muſledon*, which is one of the Capes that makes the *Streights of Ormus* near *Gombroon*, or the Entrance into the *Perſian Gulf*.

Jamama.

LASTLY *Jamama*, the chief Towns of which are *Jamama*, *Hujor*, and *Tiana*; but being an Inland Town, it is not ſo much known to Travellers and Sailors as thoſe that are ſituate upon the Sea Coaſt. A Deſcription of the moſt remarkable Towns in theſe ſeveral Provinces comes next under our Conſideration.

Medina.

THE firſt, and indeed the moſt noted in ſome Reſpects, is *Medina*, where *Mahomet* was buried, and his Tomb yet remains; which, in the Opinion of his Followers, gives ſuch a Sanction to the Place that the Natives call it *Medina Tamabi*, or the City of the Prophet; it lies not very far from the *Red Sea*, and in the twenty fifth Degree of Latitude, and about two hundred Miles North-Weſterly from *Mecca*; it contains about a thouſand Houſes, built moſtly of Brick and Stone, but not lofty, as having only a ground Floor; there are ſeveral ſtately Moſques in the City, the Principal of which is call'd *Mo a Kiba*, or the moſt Holy; it is built in the Middle of the Town, and is in Form of a long Square, a hundred Paces in Length, and eighty in Breadth, and ſupported by four hundred Columns, on which hang four thouſand Lamps. In a Tower in this Temple ſtands *Mahomet*'s Tomb, cover'd with a Dome and encompaſs'd with Iron Rails, and round it, within the Rails, is a Silver Grate, and the Wall within that is hung with rich Silks, adorn'd with precious Stones, the Benefaction of Mahometan Princes. The Pilgrims after their tedious Pilgrimages never ſee the Tomb itſelf, but only the Tower in which it is incloſed; but when the ſtated Times of the Pilgrimage is over, and the Crowd abates, they will ſhew it to any Mahometan for a ſmall Gratuity; ſo that even in thoſe Affairs that are deem'd ſacred, Money has the ſame Influence as in other Parts of the World; and it is not to be queſtion'd but that Money has contributed more to the Intereſt of *Mahomet*'s Miracles, or the Reputation of his Religion, than ever the Loadſtone did, by which it was ſuggeſted that he was ſupported in an Iron Coffin, which by the moſt Authentick Hiſtory, or the Report of the moſt credible Travellers, we find no Reaſon to believe.

Mecca is about two hundred Miles from *Medina* ſoutherly, in the twenty ſecond Degree of Latitude, and a Day's Journey from the *Red Sea* to the Eaſtward; it ſtands in a Valley almoſt ſurrounded with Mountains, it is twice as large as *Medina*, it is handſomly built with Brick, and the Houſes generally flat-roof'd. The *Kaaba*, or Houſe of God, ſtands in the Middle of the Town, and according to their Tradition was built by *Abraham*; to this *Kaaba Mahomet* obliged his Followers to go in Pilgrimage once in their Lives. It is a ſmall Edifice, not above fifteen Foot in Length, and twelve in Breadth, and about thirty Foot high; the Door is in the Corner on the Left Hand, about nine Foot high, and ſix Foot wide, made of beaten Silver, and opens with two Leaves, but it ſtanding upon an Aſcent of about ſix Foot above the common Level, and no Stairs to go up to it, they make uſe of a Ladder to approach the Door; the Roof is flat, and ſupported by three Pillars of Aloes-wood; the Sides are hung with red and white Stuff, with the following Words wrought in, in ſeveral Places, viz. *La Illa Illalla Mahomed Reſoul Allah*, that is, *God is a great God, and* Mahomet *his Prophet.* *Mecca*

ABOUT this Houſe there is a large Court, encompaſs'd with a Piazza, which is ſupported by three Rows of Pillars. In this Court the Pilgrims of the ſeveral Sects of Mahometans have their reſpective Places to perform their Devotions in; for the *Kaaba*, or Houſe of God, is ſo ſmall, as by the Dimenſions above, and the Concourſe of Pilgrims ſo great, that it is impoſſible it ſhould contain them. The *Kaaba* is girt round with two Belts of Gold, and hung on the Outſide with Damask; and every Year the Grand Seignior preſents new Hangings, at which Time the old Ones are cut into Slips and Shreds to make Relicks of, for thoſe who will be at the Charge of them.

Mocha, as obſerved before, is the Capital of a conſiderable Kingdom, and is ſituate on the *Abaſſian* Side of the Entrance into the *Red Sea*; it was but a ſmall Village within this two hundred Years, but by the Concourſe of Shipping into and out of the *Red Sea*, and other Ships that trade upon the *Arabian* and *African Coaſt*, it is now the moſt populous trading Town on that Coaſt. It ſtands upon a flat ſandy barren Soil by the Sea Side, on the Right Hand, or Star board Side, going in by the Streights of *Babel Mandel* to the *Red Sea*, the Houſes *Mocha*

are of Brick or Stone, and generally two Story high, with flat Roofs, and terraſs'd at the Top to walk upon; the Shops are furniſh'd with even all manner o Commodities, which are either the Product of the Country, or what they have from other Countries; in lieu thereof they furniſh large Quantities of Coffee here; of which we ſhall give a more particular Deſcription when we ſpeak of the Growth of that Berry, now ſo much in uſe.

The next conſiderable Place, though at a great Diſtance, is *Muſcat*; it is the Capital of a large Kingdom; it is about three Miles in Circumference, and ſituate upon the *Arabian Coaſt*, between *Cape Roſalgate* and the Entrance into the *Perſian Gulf*, and is nearly under the Northern Tropick. When the *Portugueſe* had the Command of all the Trade in the *Perſian Gulf*, they had Poſſeſſion of this Place amongſt the reſt; but when they had loſt *Ormus Iſland* near *Gombroon*, on the *Perſian* Side of the Entrance into the *Perſian Gulf*, and being much weakened by other *Europeans*, who ſucceeded them in the *Indian* Trade, the *Arabians* took that Advantage, and made themſelves Maſters of *Muſcat*, which was but recovering their own again; and as they have been at variance ever ſince, the *Muſcatters* ſometimes make Prizes of other *European* Ships under a Pretence of a Suſpicion that they are *Portugueſe*, and nothing but a Power to defend themſelves can ſecure them. *Muſcat*

There are ſeveral Redoubts and Batteries for the Defence of the Harbour of *Maſcat*, but they are much out of Repair; the City ſtands at the Bottom of a Hill, and ſurrounded with rocky Hills, which keeping off the Air, the natural Heat of the Climate makes the City prodigious hot; they have good handſom Houſes of two Story high, but they have little Furniture in them; the Streets are irregular, and ſo narrow that they are very incommodious to walk in. The Market-place is in the Middle of the Town, and is well ſtored with Proviſions of ſeveral Sorts, as Fiſh, Fruit, *&c.* very cheap.

The laſt remarkable Place on the *Arabian* Shore is *Elcatiff*; it lies in the *Perſian Gulf* above the Iſland *Bahrein*, in about twenty ſeven Degrees of North Latitude: This was a Place of great Trade when the Pearl Fiſhery was in its height, but now a Place of little Buſineſs, ſince the King of *Muſcat* reduced it, and brought it under Subjection, and annex'd this, with all the Coaſt hereabouts, to his own Kingdom. *Elcatiff*

CHAP. III.

Treats of the Genius and natural Temper of the Arabians; *alſo of their Complexion, Shape, and Habit, with their Food, Liquors, Diverſions, Roads, and Way of Travelling.*

Although there are ſome large Towns and Cities in *Arabia*, yet the far greater Part of the Inhabitants live like the Patriarchs of old, in Tents, wandering from Place to Place, as they can find Water and Paſture for their Flocks, and Herds of Camels, Sheep, and Goats; and when they find the Paſture is eat up, or the Forage or Water exhauſted in one Place, they load their Goods, Baggage, Wives and Children upon their Camels, and remove to another Place, where they can find thoſe neceſſary Supplies for their Families and Cattle; and the Place where formerly there was a Number of Tents, like a little Village, there is now nothing to be ſeen. Some impute this their frequently removing from Place to Place to their roving Temper; but I rather think as above, that their Neceſſity of removing ſo frequently for Water, Paſture, *&c.* has made it become cuſtomary; and continual Cuſtom, as having been born and brought up from their Infancy in that State of Peregrination, has made it become natural; whereas ſuch an unſettled Life would be very irkſome to a Perſon or Family that had been uſed to a fixed Habitation; and probably they rather chuſe this Sort of Life becauſe it gives them an Opportunity for Theft and Plunder, which is what they practiſe not only in whole Shoals, and without Contradiction, but alſo with a ſeeming Authority, by Permiſſion or Order of their Prince, and ſometimes with him at their Head committing thoſe Outrages.

These Plunders they make both by Land and Sea; for they have taken ſeveral *European* Ships which they have found weakly mann'd, or labouring under any other Diſadvantage; and not only taken them when out at Sea, but fetch'd them out of the very Road at *Gombroon* in the Night-time, and alſo defrauded thoſe Merchants of their Goods who came to trade with them at *Muſcat*; and for the Merchants Caravans by Land, though the *Arabian* Emirs or Princes cannot properly be ſaid to rob them, yet they extort what they pleaſe from them for their Paſſage through their reſpective Provinces; yet, with a View rather to their own Intereſt than to publick Juſtice, they limit their Extortions to hold ſome Proportion to the Value of the Goods ſo tax'd, becauſe if they ſhould let it amount to downright Robbery and Plunder, the Caravans would be afraid, or think it in vain to go any more that Way, and then theſe Exciſemen would loſe all.

But as it is common for a Traveller to give a general Character of a Country, according to the Treatment that he has met with from particular Perſons therein, we think that the moſt likely Way to reconcile the Account that we have given, with the following Inſtance, which differ in themſelves, and yet are undoubtedly both true.

Captain *Say* gives us the following Relation from his own Experience, as being his own Caſe: He tells us that he was ſhip wreck'd on the Iſland of *Maira*; it lies on the *Arabian* Coaſt, in Latitude 20 Degrees North,) and he and his Company eſcaping to the Shore, the *Arabs* came down upon them, who he apprehended were to plunder; but it proved quite otherwiſe; for they offered to aſſiſt in ſaving the Goods, as he underſtood by their Signs; (for they could not underſtand one another one Word) and ſo it proved, and when they had ſaved what they could, one of the *Arabs*, who ſeem'd to have the Command of the reſt, not having any other Way to make him underſtand what Share of the Goods he demanded for his Aſſiſtance, he made three little Heaps of Sand, and gave the Captain one, and kept two to himſelf, intimating that he expected two Thirds of what was ſaved to himſelf; at which the Captain ſhook his Head, to make him underſtand that he thought that was too hard; whereupon the *Arab* put all the Sand together, and dividing it into two equal Parts, Captain *Say*.

gave

gave the Captain one; whereupon the Captain ſhook Hands with him, as being well ſatiſfied that under ſuch a Misfortune he had better have half a Loaf than no Bread; and indeed he was much better off than ſome that loſe their Ships on a Chriſtian Shore; nay, even upon our own Coaſt, where ſometimes the Country comes down arm'd with Axes, Crows, and the like, and inſtead of treating with the Captain, run away with all.

Stature and Complexion.

THE *Arabians* are of a Middle Stature, and their Complexion neither white nor black, but of a ſwarthy Mixture of both, but their Hair and Eyes are commonly black; they have an effeminate Voice, though they are a brave People; they are expert at the Bow and the Launce, and ſince they have been uſed to Fire-arms, are pretty good Markſmen with them too.

Habit.

THEIR Habit is a blue Shirt, tied about with a white Saſh; and ſome have Veſts or Gowns of Fur, or (for Want of them) of Sheep-Skins, over their Cloaths; they wear Drawers and Slippers, but no Stockings, and have a Cap or Turbant upon their Heads, but ſome of them go almoſt naked; but the Women, with their Apparel and Veils, are ſo cover'd up, that when they are dreſt nothing is to be ſeen but their Eyes.

Food.

THEIR common Food is Beef, Mutton, Goat's-Fleſh, Veniſon and Camel's Fleſh, which laſt they prefer before all the reſt. For Bread they make thin Cakes of Flower and Water, or inſtead of Bread, eat dried Dates, which they prefer before the other Bread; they eat almoſt all Sorts of Fiſh that have Scales; but whatever Animal they eat, they take care to have the Blood well drain'd out of it. Thoſe about *Muſcat* do not only obey that Mahometan Precept of abſtaining from Wine, but even ſupererogate and abſtain from Tea and Coffee too; nor do they ſmoak much Tobacco. Water is their common Drink; and if they go higher than that, it is with a Sherbet made with Water and Oranges, and Sugar in it.

Travelling

NOTWITHSTANDING the frequent Travelling of the Caravans, yet there are no beaten Paths, as with us; for the hot Sand in thoſe Deſarts is ſo ſlippery, that although a numerous Caravan may be follow'd by the Path they have deſcribed, if the Weather be calm, yet the firſt Gale of Wind fills them up, as it is ſometimes with us in caſe of Snow; ſo that they have no more Certainty of a Path in theſe Deſarts than the Sailors have at Sea, and are therefore glad to make uſe of the Compaſs as they do, or elſe of the Stars, for Direction, becauſe they travel moſtly by Night, by reaſon of the exceſſive Heat of the Climate, which added to the reflected Heat of the Sand, renders Travelling almoſt intolerable, and impracticable in the Daytime.

Caravans.

PEOPLE chuſe to travel with the Caravans becauſe there is commonly two or three hundred Men, and perhaps a thouſand Beaſts; for they go thus in large Companies to ſecure themſelves from the thieviſh *Arabs*. They have no Wheel Carriages in this Country, but commonly carry their Goods upon Camels and Dromedaries, between which two ſorts of Beaſts there does not appear much Difference, only the Camel has but one Bunch upon his Back, and the Dromedary has two; and alſo that the Camel is the ſtrongeſt and ſloweſt, and fit for great Loads; but the Dromedary is the ſwifteſt, and moſt proper to ride on, and, as they ſay, will trot thirty or forty Leagues a-Day with Eaſe, and will travel five or ſix Days without Water; they kneel down to take up their Burden.

No Inns.

THERE are no Inns or Caravanſera's to bait at; but thoſe who travel with the Caravans carry not only their Proviſion, but their Tents along with them, which they ſet up in bad Weather; but if the Weather be good, they lie upon Carpets in the open Fields, without any Tents, to give themſelves the better Opportunity of keeping a ſharp Look-out for the thieviſh *Arabs*; of whom, if it was not for the Numbers of Men that travel with the Caravans, the Travellers would be in continual Fear.

Diſſerent Meat.

THE Servants and Slaves belonging to the Caravans dreſs their Maſters Meat upon the Road, which is done by making a Fire in a little Hole in the Ground, over which they ſet a Pot; their Fuel is Charcoal, which they carry along with them, but ſave it as much as they can, by gathering Brakes and Shrubs when they are to be had; and for Water, they carry it in Bags made of Skins, they not meeting with Water ſometimes for ſeveral Days together; but the *Arabians* obſerve, that wherever they find Trees, there is Water not far off; and the Camels are ſo ſenſible, by their Smell or ſome natural Inſtinct, of their Approach towards it, that they will ſet up a Trot before they can ſee the Water.

Captain of the Caravan.

AT the ſetting out of the Caravans they elect a Baſhaw or Captain, who orders the March, and appoints the Places they are to lodge at, and, by the Aſſiſtance of ſome of the principal Men, as if it was a Jury, determine Differences that happen upon the Road. They are alſo entruſted with compounding with the Governors of the ſeveral Provinces they paſs through for the Exactions impos'd upon them for their Paſſage through the Country, in which Caſe it is ſuppos'd they often bring in a larger Bill than they paid, and ſo both enrich themſelves and caſt an Odium upon the Governors of the Provinces, more than they deſerve, under a Pretence of their unreaſonable Extortions; and this is ſo commonly the Caſe, that the ſober People in the Caravan had rather ſubmit to a ſmall Impoſition than ſtand to diſpute it with ſuch as will undertake the Office of Captain of the Caravan, who are generally People of ſuch ſuſpicious Principles as few care to converſe with them.

THOSE who carry Wine along with them are obliged to furniſh themſelves with Pack-Horſes for that Purpoſe, for as the Camels are conſecrated to *Mahomet*, their Maſters will not ſuffer them to be polluted with touching or carrying the Liquor which he has forbid. They carry both their Wine and their Water in Goat-Skins, which, if they be not well pitch'd, and the hairy Side inwards, are commonly leaky.

THEY commonly adapt the Stages of the Caravans to the Opportunities they have upon the Road of finding Water; for which Reaſon they ſometimes travel ſix Hours, ſometimes eight, ten, or twelve Hours in twenty four. Every Merchant, with his own Servants, ride by thoſe Camels that are loaden with his own Goods, eſpecially if it be dark Nights; for there are ſly Thieves among them that will cut the Strings by which the Camels are faſten'd to one another, and in the Crowd drive a Camel or two away unperceiv'd till Day-light approach, when it is too late to purſue them.

WHEN the Caravans are come to the Place where they are to pitch for the Night, there are a ſort of poor People that attend them, who make it their Buſineſs to guard the Field, and take care of the Goods. They walk about in the Night, like our Watchmen in *London*, crying, *God is one*, *God is merciful*, *Have a Care of yourſelf*; and when the Time for Marching approaches, they give notice to the Caravan Baſhaw or Captain, and he upon that orders them to cry *Saddle your Horſes*; for which allowing a proper Time, the next Cry is, *Load your Goods*; after which ſecond Cry they are all immediately ready together, and ſet forward without the leaſt Diſorder or Confuſion.

But when they have a long Stage, and do not expect to come to their intended Place of pitching till ten or eleven in the Morning, (for it has been obſerved before that they travel moſtly by Night,) the Merchants ſpread their Carpets on the Ground, and pulling out their Proviſions go to Breakfaſt, while the Caravan marches ſlowly forward.

Any Traveller is obliged to temporize ſo far with the Mahometans, as to dreſs in an *Arabian* Veſt and Cap, or in a Mahometan Garb, or elſe he will ſcarce be allow'd to paſs ſome of the Towns. When they travel they have Boots of black, red, or yellow Leather lin'd with Cloth, they come no higher than the Knee: They never wear Spurs, but prick the Horſe with an Iron fix'd to the Stirrup.

The Water they have upon the Road is commonly in Wells or Ciſterns, where not above two or three Perſons can draw at a Time; and thoſe to whom the Beaſts of Burden belong will let no Body come near till they are ſerved, unleſs People will contend and run the Hazard of a Miſchief for their Pains, which makes Watering very tedious; and thoſe who are obliged to wait till the laſt Turn, are commonly a long Time before they can be ſerved.

CHAP. IV.

Gives an Account of the Nature of the Soil, with their Husbandry, Gardening, and Plants, and alſo of their Animals and Minerals.

The South Part of *Arabia* is commonly known by the Name of *Arabia Felix*, or *Happy Arabia*, not becauſe it is all fruitful and happy; for it abounds with ſandy Deſarts and dry barren Mountains, but as the South Part of it is tolerably fruitful, and may be ſaid to abound not only in Corn and Herbage, but in Aromatick Gums, *&c.* it is to be ſuppoſed that this productive Part of the Southern Part of *Arabia*, now call'd *Arabia Felix*, has given that Title to all that Part of *Arabia* ſo call'd.

Their Hills are not capable of Cultivation, as being ſuch a barren rocky Soil, and the Valleys are equally barren, where Water is wanting, and bear no Herbage; but where they can by ſmall Canals convey Water to them, they produce Corn, Herbs, Flowers, and Garden-ſtuff. They draw Water out of their Wells Morning and Evening, in large Skins, by the Help of Oxen, and convey it along thoſe little Canals, which they make for that Purpoſe; by the Sides of which their Plants and Greens are ſet, and their Corn is ſown, that they may ſupply the Defect of Rain by moiſtening the Ground, by the Water convey'd there by theſe Canals.

Fruits and Gums. They have excellent Lemons, Oranges, Grapes, Peaches, and Apricots; but what they moſt excel in is Dates and Coffee, of both which great Quantities are ſent from thence both to *Europe* and *India* every Year. Of the Growth and nurſing of Coffee, and how it is managed, take the following Account:

Coffee, how it Grows, &c. The Coffee-Tree or Shrub is about eight or ten Foot high, the Bark is grey and ſmooth, and the Wood white, and has but little Pith, the Twigs come out two at a Joint, one oppoſite to the other, and the Leaves upon thoſe Twigs, in the ſame Manner, oppoſite to one another, like the Leaves of our *Engliſh* Aſh, and each Pair about two Inches diſtant from one another; the Leaves are about four Inches long, and two broad in the Middle, and ſo decreaſing both Ways to a Point, and ſtand upon a ſhort Stalk, about a quarter of an Inch in Length, the Leaves are ſmooth, and not dented in the Edges, and pretty much reſemble a Bay-leaf; the Fruit comes out of the Twig where the Leaves come out, and hang upon ſhort Stalks by one, two, or more in the ſame Place. The Coffee-Shrub requires rich Ground, and are there water'd by artificial Canals, as their other Vegetables are; a Tree will bear tolerably well for three or four Years, and then they decay, and the Natives plant new ones in their Places. They dry the Berries in the Sun, and then take off the outſide Husk with Hand-Mills, which Husks the *Arabians* uſe in the hotteſt Seaſons, to roaſt in the Room of Coffee-Berries, as ſuppoſing the Liquor made of them to be more cooling than that made of the Kernel of the Berry.

Coffee has been uſed in *Aſia* two hundred Years and upwards, and was brought into *England* in the Beginning of King *Charles* the Second's Reign, by a *Greek* who came over with Mr. *Edwards* a *Turkey* Merchant, and was the firſt that kept a Coffee-Houſe in *London*. The beſt Coffee-Berry is large and plump, and of a greeniſh Colour, and a kind of a Tranſparency in the thinneſt Parts of it, but the other is yellowiſh and more groſs and opaque, but when they are roaſted, they are not eaſily diſtinguiſh'd; the beſt Way of keeping Coffee-Berries after they are roaſted, is in ſome warm dry Place, for Moiſture palls them, and takes off the Briskneſs of the Taſte; to prevent which it is beſt to grind it no faſter than it is to be uſed, as we find is the general Cuſtom in *England*.

Drugs. Beſides what is already mention'd, *Arabia* alſo produces great Plenty of Myrrh, Manna, Caſſia, Incenſe, Aloes, Olibanum, Balm, and Frankincenſe, and other valuable Drugs; but Timber or any kind of Wood is very ſcarce.

Animals. Their Camels and Horſes are the beſt in their Kind of any other Animal the Country affords. The Camels are extreamly uſeful in theſe Sandy Deſarts, not only for the vaſt Weight they carry, but for their being able to travel ſo long without Water. Their Horſes are only fit for the Saddle, and never uſed either for Draught or Burthen: The fineſt Horſes uſed in *Perſia* are *Arabian* Horſes, and are admired both for their Proportion and Swiftneſs. The common Food both for Camels and Horſes is Barley, or Barley Flower made into Dough. Mr. *Thevenot* tells us that in ſome Parts of *Arabia* they feed them with Camels Milk, Butter, and Wheat, and ſometimes with Camels Fleſh dried in the Sun, which laſt I muſt own carries but little Probability with it, and therefore quote the Author whence we had it; we have alſo a later Author who tells us that they feed their Cattle at *Muſcat* with Fiſh, not when it is newly catch'd, but they dig a little Pit, and throw a large Quantity of Fiſh into it, and let them lie till they are ſo rotten that they appear like a Sort of Earth, and then they take it up and boil it in Water, and when it is cold give it to the Cattle; it feeds them a-pace, and their Fleſh does not by this Means contract any diſagreeable Taſte. They have alſo Oxen, Buffaloes, Goats, and Veniſon, but the Beef and Buffaloes

loes Fleſh is very coarſe Meat; they never breed any Hogs, that being contrary to the Mahometan Principles; they have Plenty of Fiſh and Fowl along the Coaſt, they are ſcarce in the Country by reaſon there is ſo little Water. Wood is alſo very ſcarce, which is ſuppoſed to be the Reaſon that ſo few Lions, Bears, and other Wild-Beaſts are to be found here.

Gold. GOLD has been reported to have been very plenty here; but late Travellers inform us that they have few or no Gold Mines open at preſent; they have large Pearls near the Coaſt of *Perſia*, both in the *Red Sea* and in the *Perſian* Gulf; in the latter of which the Pearl Fiſhery belongs to the King of *Muſcat*; but he makes little or no Advantage of it at preſent, for Pearls are as dear there as in other Parts of *Aſia*.

Iſraelites. Travels. BUT as *Arabia* was the Scene of ſome Part of Scripture Geography, and particularly of the Children of *Iſrael*'s paſſing the *Red Sea*, and of their forty Years Travels in the Wilderneſs, it may not be amiſs to be ſomething particular in our Account of that Part of the Country. I have already in Chap. I. obſerved, that it was between *Suez* and *Tor* that the *Iſraelites* paſs'd over the *Red Sea* upon dry Land. Thoſe who viſit thoſe Places commonly go from *Suez*, the Northermoſt Port of the *Red Sea*, to *Tor*, not far from Mount *Sinai*, where the Law was given to *Moſes*, *Exodus* xix. To the Southward of *Suez* is *Marah*, where the Waters being bitter, *Moſes* cured them by caſting a Piece of Wood into them. A little further to the Southward, and not far from the *Red Sea*, is *Elim*, where the *Iſraelites* found twelve Wells of Water, and ſeventy Palm Trees. Mr. *Thevenot* and other late Travellers, inform us that theſe Wells are yet in being, and that they are now included in a Garden belonging to the Monks at *Tor*, and that they are all hot, and return'd to their former Bitterneſs; and they add that one of them is in a dark Cave, and is made uſe of to bathe in, and is call'd by the *Arabs* *Hummam Mouſa*, or the *Bath of Moſes*. In this Garden are a great Number of Palm Trees; and indeed there are ſcarce any other Sorts of Trees; but they do not pretend to affirm that any of theſe are the individual Trees which were growing when the *Iſraelites* were there; but as the Soil is probably the ſame, it is reaſonable to expect that it may produce the ſame ſort of Trees now as then.

Wilderneſs of *Sin.* FURTHER to the Southward, and on the Eaſt Coaſt of the *Red Sea*, is the Deſart or Wilderneſs of *Sin*; it lies between *Elim* and *Sinai*, *Exodus* xvi. Here it was that the *Iſraelites* long'd for the Fleſh-pots of *Egypt*, and God ſupplied them with Quails and Manna. In this Plain are abundance of *Acacia* Trees, which produce the Gum call'd by the *Arabians Acacia*, or *Acakia*: They are about the Height of an ordinary Willow, with thin prickly Leaves; the Gum iſſues out of the Tree of itſelf, without any Inciſion, as from our Cherry-Trees, or Plumb-Trees; the *Arabs* gather it about *July* or *Auguſt*.

Rephidim ABOUT two Days Journey from this Wilderneſs, and through a hilly Country, is the Place call'd *Rephidim*, where the *Iſraelites* murmur'd for want of Water, *Exodus* xvii. Here is the Rock from whence *Moſes* brought Water by ſmiting it with his Rod; this Rock is of a prodigious Height and Thickneſs, and the Inhabitants ſhew the Channel by which the Water flow'd from it, but it is all quite dry at preſent.

A few Miles from this Rock is a *Greek* Monaſtery dedicated to the Honour of the forty Martyrs; it is a neat Building, and has a fair Church, with very handſom Gardens, ſo well ſtored with Apples, Pears, Walnuts, Oranges, Lemons, Olives, and other curious Fruit, that it is ſaid the beſt Fruit which is eaten at *Grand Cairo* is fetch'd from thence. From this Monaſtery, about two or three Hours travelling up a great Hill, by a ſteep Aſcent, is another Monaſtery, which is at the Foot of Mount *Sinai*, ſo that Mount *Sinai* may be ſaid to be one Mountain above another.

THERE is another Head to Mount *Sinai*, call'd by the Inhabitants the Mount of *Moſes*; on the Top of which are two Churches, one of *Greeks* the other of *Latins*, and near them is a little Moſque, and by the Side of it is a Cave; in which the Inhabitants ſay *Moſes* was when he faſted forty Days and forty Nights; and on the Side of the *Latin* Church is a little Grotto, which they ſay is the Cleft of the Rock where God put *Moſes* while he paſſed by, *Exod.* xxxiii. 22. This is the Mount where *Moſes* received the two Tables of the Law from God himſelf.

THERE are yet to be ſeen little Chapels with Cells near them all over the Mount, which they ſay were the Habitations of fourteen thouſand Hermits, who came there to retire from the World, and devote their Time to Religion; and it was a very agreeable Retirement, for every Cell had a Garden, and a Receptacle for Water, &c. but the *Arabs* did ſo oppreſs them that they were forced to remove.

THE Monaſtery, before mention'd, at the Foot of Mount *Sinai*, call'd the Monaſtery of St. *Katharine*, has been in the Poſſeſſion of the *Greeks* above a thouſand Years, being given them by ſome of the *Greek* Emperors, and the *Arabs* ſuffer'd them a long Time to enjoy it peaceably, not ſo much for the Reſpect they had for them, as for the Privileges they enjoy'd from them: Which ſome ſay was occaſion'd as follows:

WHEN this Monaſtery was in its flouriſhing Condition, *Mahomet* ſerved the Monks in quality of a Camel-driver, and that as he ſlept an Eagle hover'd over his Head, from whence the Abbot foretold his future Greatneſs, deſiring that he would be kind to them when he was ſo advanc'd, which he promiſed to do; and accordingly when he aroſe to the Dignity of a Prince, he confirm'd them in the Poſſeſſion of their Monaſtery, and all the Lands belonging to it, obliging his Succeſſors and Followers not to diſturb them, but to protect their free Poſſeſſion; but made that as a Condition, that they ſhould never deny Entertainment to the neighbouring *Arabs*; and whether this was the real Caſe or no, it carries a great Face of Probability, for it is certain, that when the Monks were in Poſſeſſion of this Monaſtery, they gave half a Peck of Corn to every *Arab* that viſited them, which was ſometimes two or three hundred in a Day; but at laſt the ungrateful *Arabs*, not content with this Charity, plunder'd the Camels that were bringing Proviſions to the Convent, whereupon the Monks wall'd up the Gate, and retired to *Tor*.

THE Monks begun to be jealous of the *Arabs* before theſe Inſults were given, and never would admit them into any Part of the Convent, but lower'd down the Corn or Proviſions to them, and alſo drew up the Pilgrims in Baſkets by Ropes, for they did not think the *Arabs* People fit to be confided in, notwithſtanding the Obligation *Mahomet* had lain them under to let them continue in quiet Poſſeſſion, and the Sequel prov'd the Truth of what they apprehended.

THE City of *Midian*, of which *Jethro*, *Moſes*'s Father-in Law, was Prieſt, (*Exod.* iii. 1) is near *Rephidim*, between it and the *Red Sea*; but the Tract, call'd the Land of *Midian*, extends from the *Red Sea* to Mount *Horeb*, where the Angel appear'd to *Moſes* in the Burning-buſh; it was to this Place that *Moſes* fled from the Fury of *Pharaoh* when he had kill'd the *Egyptian*, and here he remain'd till God ſent him to *Egypt* to deliver the *Iſraelites* from *Pharaoh*'s Bondage; and as *Moſes* and the *Iſraelites*, in their Return from *Egypt*, travell'd to the Southward

ward near the *Red Sea* till they came to the Land of *Midian*, *Jethro* hearing of *Moses*'s Succeſs, and of his Approach, he met him with his Wife and Children; and after a ſmall Interview, *Jethro* return'd home to *Midian*, and *Moſes* proceeded to Mount *Sinai* in his Way to *Canaan*, with the Families of *Iſrael* along with him, *Exod.* Chap. xviii, xix.

Situation of Para-diſe

But, before we conclude this Part of Scripture Hiſtory relating to *Arabia*, it will be very ſeaſonable here to give ſome Account of the Situation of the Terreſtial Paradiſe; which as we ſhall not aſſert any Thing but what we have Scripture Hiſtory for, we ſhall produce our Authority for our Conjecture, and ſatisfy our Readers of the Probability, if not of the Certainty, of the Opinion we advance, ſince we find no other Place upon the Surface of the Terreſtial Globe anſwers the Deſcription, eſpecially according to the Names of the Rivers by which it is deſcribed in the ſecond Chapter of *Geneſis*.

But as this Part of Sacred Hiſtory was writ by *Moſes*, let us firſt conſider his Birth and Situation: He was born in *Egypt*, *Exodus* Chap. ii. and fled from thence to *Midian*, upon the Account of his killing the *Egyptian*, *Exod.* ii. 15. and while he dwelt there he ſerved his Father-in-Law in the low Capacity of a Shepherd, till keeping his Flock in Mount *Horeb*, God appear'd to him in a Burning-buſh, and gave him his Commiſſion to bring the Children of *Iſrael* out of *Egypt*, *Exod.* iii. which he executed accordingly, but never enter'd into the Land of *Canaan*, *Deut.* xxxiv. 4, 5. So that all his Travels in general was from *Egypt* to *Midian*, and from thence back to *Egypt*; from whence he came with the Children of *Iſrael* through the *Red Sea*, and after all their tedious Journeys in the Wilderneſs, he accompanied them into the Sight of the Land of *Canaan*, though himſelf never ſet Foot upon that promiſed Land.

Queſtion.

It cannot be an improper Digreſſion to enquire (that ſince *Moſes* could flee from *Egypt* to *Midian*, or *Madian*, when he had kill'd the *Egyptian*, *Exod.* ii. and could ſo eaſily return to *Egypt*, *Exod.* iv. 20.) which Way he went and came, ſince in the Paſſage of the Children of *Iſrael* to the Wilderneſs and Mount *Sinai*, there ſeem'd to be a Neceſſity of dividing the *Red Sea* to open their Way for their laſt Paſſage from *Egypt*?

Anſwer.

In Anſwer to which, as a natural Reaſon, it is evident that *Moſes* had the Opportunity of going by Sea from *Tor*, or ſome other Port on the *Arabian* Side, to *Suez*, or ſome other Port in *Egypt*, or elſe, that he might travel by Land over the *Iſthmus* that ſeparates the *Red Sea* from the *Mediterranean*; but if it be further objected, why did not the *Iſraelites* come the ſame Way? the Anſwer is plain, that *Pharaoh*, intending to intercept their Flight, block'd up that Paſſage by Land; and they finding a Neceſſity to retreat to the Sea, it could not be ſuppoſed that in that Sea of ſo little Trade, they could meet with Veſſels to embark ſuch a numerous People; and, as has been obſerved before, the Mountains on each Side, and the Enemy behind, they muſt have been deſtroy'd if this Miracle had not intervened for their Preſervation.

But we beg leave to be excuſed from attempting to give natural Reaſons for the Proceedings of infinite Wiſdom, and, as to the preſent Caſe, rather ſuppoſe in this Diſtreſs of the *Iſraelites*, God, willing further to convince them of, and confirm them in a Belief of his infinite Power, gave them this timely Inſtance of it, to ſupport them in their entire Dependance upon him, in the Difficulties they had to encounter with in a ſtrange and deſart Wilderneſs. But to return to our Deſcription of Paradiſe.

Having thus proved that all the Travels of *Moſes* were comprized in *Egypt*, *Arabia*, &c. excluſive of the Land of Promiſe, *Deut.* xxxiv. 4. it is evident that he muſt write the Hiſtory of the Creation, and the other four Books of the Pentateuch, within thoſe Limits which is contain'd between twenty eight and thirty eight Degrees of North Latitude; in which Climate lies *Iraa Arabick*, to the North-Weſtward of the *Perſian Gulf*; and if we compare this his Situation with his Words *Gen.* ii. 8. that God planted a Garden Eaſtward in *Eden*, it ſeems to be a ſatisfactory Proof, that the Garden of *Eden* is in or near the Latitude of ſome Part of the Travels of *Moſes*, and under a more Eaſterly Meridian.

Where *Moſes* writ the Pentateuch

Deſcription of *Eden*.

We are next to conſider the Deſcription that *Moſes* gives of the Garden of *Eden*; and it was at the Confluence, (or Separation, or both, of four Rivers, *Piſon*, *Gihon*, *Hiddekel*, and *Euphrates*; and if we allow the River then call'd *Hiddekel* to be the ſame at preſent call'd *Tygris*, theſe four Rivers do concur and empty themſelves into the Bottom of the *Perſian Gulf*.

If it ſhould be objected that the River deſcribed by *Moſes*, *parted and became into four Heads*, *Gen.* ii. 10. it may be anſwer'd, that that does not prove that it muſt run four different Ways; for, as we may obſerve in the following Map, the two Rivers *Tygris* and *Euphrates* meet, and running in the ſame Stream for ſome time, they part and fall into the *Perſian Gulf* in two Channels, the Weſtermoſt of which is *Piſon*, and the Eaſtermoſt *Gihon*; ſo that allowing that which contains the Confluence and Separation of theſe Rivers to be the Garden of *Eden*, they, as beheld from thence, *parted and became into four Heads*, and include the four Rivers mention'd by *Moſes* in his Deſcription of the Earthly Paradiſe.

Inconſiſtent Conjecture.

Some indeed would have the Garden of *Eden* to be in *Egypt*, and in favour of that Opinion affirm that the River *Nile* was call'd *Gihon*, and that before the Flood *it parted and became into four Heads*, (and no more,) by which it emptied itſelf into the *Mediterranean*, (though by many more ſince the Flood;) but this does not agree with the Situation of Paradiſe according to *Moſes*, who ſays, *Gen.* ii. 8. that God planted a Garden Eaſtward in *Eden*; but as *Moſes* was never further Weſt than the Land of *Goſhen*, and conſequently never to the Weſtward of the *Nile*, it is impoſſible that ever thoſe four Heads, and the Land included between them, could ever be Eaſtward from him, and therefore cannot be that Garden Eaſtward in *Eden* which *Moſes* deſcribes.

But the Paradiſe before mention'd agrees with *Moſes*'s Deſcription both as to Situation, being *Eaſtward* of the Scene of his Travels, and anſwering to the Confluence, or Separation, or both, of the four Rivers he mentions; and this is contain'd in about a hundred and fifty Miles in Length, which, though far ſhort of the Extent which ſome allow Paradiſe to contain, yet, humanly ſpeaking, not only that whole Plat, but even ſome ſelect Part of of that, was ſufficient for a Garden for a Man and his Wife, eſpecially as *Adam* alone was to dreſs and to keep it, *Gen.* ii. 15. And if to this we add, that there is no other Place in the World that will anſwer the Deſcription *Moſes* gives, both as to Situation and other Circumſtances, we may ſafely conclude, that ſuch a Concurrence of theſe more than probable Conjectures amount to little, if any thing, leſs than a Proof that this is the Garden of *Eden* which *Moſes* deſcribes.

CHAP.

loes Flesh is very coarse Meat; they never breed any Hogs, that being contrary to the Mahometan Principles; they have Plenty of Fish and Fowl along the Coast, they are scarce in the Country by reason there is so little Water. Wood is also very scarce, which is supposed to be the Reason that so few Lions, Bears, and other Wild-Beasts are to be found here.

Gold. GOLD has been reported to have been very plenty here; but late Travellers inform us that they have few or no Gold Mines open at present; they have large Pearls near the Coast of *Persia*, both in the *Red Sea* and in the *Persian* Gulf; in the latter of which the Pearl Fishery belongs to the King of *Muscat*; but he makes little or no Advantage of it at present, for Pearls are as dear there as in other Parts of *Asia*.

Israelites. Travels. BUT as *Arabia* was the Scene of some Part of Scripture Geography, and particularly of the Children of *Israel*'s passing the *Red Sea*, and of their forty Years Travels in the Wilderness, it may not be amiss to be something particular in our Account of that Part of the Country. I have already in Chap. I. observed, that it was between *Suez* and *Tor* that the *Israelites* pass'd over the *Red Sea* upon dry Land. Those who visit those Places commonly go from *Suez*, the Northermost Port of the *Red Sea*, to *Tor*, not far from Mount *Sinai*, where the Law was given to *Moses*, *Exodus* xix. To the Southward of *Suez* is *Marah*, where the Waters being bitter, *Moses* cured them by casting a Piece of Wood into them. A little further to the Southward, and not far from the *Red Sea*, is *Elim*, where the *Israelites* found twelve Wells of Water, and seventy Palm Trees. Mr. *Thevenot* and other late Travellers, inform us that these Wells are yet in being, and that they are now included in a Garden belonging to the Monks at *Tor*, and that they are all hot, and return'd to their former Bitterness; and they add that one of them is in a dark Cave, and is made use of to bathe in, and is call'd by the *Arabs Hummam Mousa*, or the *Bath of Moses*. In this Garden are a great Number of Palm Trees; and indeed there are scarce any other Sorts of Trees; but they do not pretend to affirm that any of these are the individual Trees which were growing when the *Israelites* were there; but as the Soil is probably the same, it is reasonable to expect that it may produce the same sort of Trees now as then.

Wilderness of *Sin.* FURTHER to the Southward, and on the East Coast of the *Red Sea*, is the Desart or Wilderness of *Sin*; it lies between *Elim* and *Sinai*, *Exodus* xvi. Here it was that the *Israelites* long'd for the Flesh-pots of *Egypt*, and God supplied them with Quails and Manna. In this Plain are abundance of *Acacia* Trees, which produce the Gum call'd by the *Arabians Acacia*, or *Acakia*: They are about the Height of an ordinary Willow, with thin prickly Leaves; the Gum issues out of the Tree of itself, without any Incision, as from our Cherry-Trees, or Plumb-Trees; the *Arabs* gather it about *July* or *August*.

Rephidim ABOUT two Days Journey from this Wilderness, and through a hilly Country, is the Place call'd *Rephidim*, where the *Israelites* murmur'd for want of Water, *Exodus* xvii. Here is the Rock from whence *Moses* brought Water by smiting it with his Rod; this Rock is of a prodigious Height and Thickness, and the Inhabitants shew the Channel by which the Water flow'd from it, but it is all quite dry at present.

A few Miles from this Rock is a *Greek* Monastery dedicated to the Honour of the forty Martyrs; it is a neat Building, and has a fair Church, with very handsom Gardens, so well stored with Apples, Pears, Walnuts, Oranges, Lemons, Olives, and other curious Fruit, that it is said the best Fruit which is eaten at *Grand Cairo* is fetch'd from thence. From this Monastery, about two or three Hours travelling up a great Hill, by a steep Ascent, is another Monastery, which is at the Foot of Mount *Sinai*, so that Mount *Sinai* may be said to be one Mountain above another. *Mount Sinai.*

THERE is another Head to Mount *Sinai*, call'd by the Inhabitants the Mount of *Moses*; on the Top of which are two Churches, one of *Greeks* the other of *Latins*, and near them is a little Mosque, and by the Side of it is a Cave; in which the Inhabitants say *Moses* was when he fasted forty Days and forty Nights; and on the Side of the *Latin* Church is a little Grotto, which they say is the Cleft of the Rock where God put *Moses* while he passed by, *Exod.* xxxiii. 22. This is the Mount where *Moses* received the two Tables of the Law from God himself. *Mount Moses.*

THERE are yet to be seen little Chapels with Cells near them all over the Mount, which they say were the Habitations of fourteen thousand Hermits, who came there to retire from the World, and devote their Time to Religion; and it was a very agreeable Retirement, for every Cell had a Garden, and a Receptacle for Water, &c. but the *Arabs* did so oppress them that they were forced to remove.

THE Monastery, before mention'd, at the Foot of Mount *Sinai*, call'd the Monastery of St. *Katharine*, has been in the Possession of the *Greeks* above a thousand Years, being given them by some of the *Greek* Emperors, and the *Arabs* suffer'd them a long Time to enjoy it peaceably, not so much for the Respect they had for them, as for the Privileges they enjoy'd from them: Which some say was occasion'd as follows:

WHEN this Monastery was in its flourishing Condition, *Mahomet* served the Monks in quality of a Camel-driver, and that as he slept an Eagle hover'd over his Head, from whence the Abbot foretold his future Greatness, desiring that he would be kind to them when he was so advanc'd, which he promised to do; and accordingly when he arose to the Dignity of a Prince, he confirm'd them in the Possession of their Monastery, and all the Lands belonging to it, obliging his Successors and Followers not to disturb them, but to protect their free Possession; but made that as a Condition, that they should never deny Entertainment to the neighbouring *Arabs*; and whether this was the real Case or no, it carries a great Face of Probability, for it is certain, that when the Monks were in Possession of this Monastery, they gave half a Peck of Corn to every *Arab* that visited them, which was sometimes two or three hundred in a Day, but at last the ungrateful *Arabs*, not content with this Charity, plunder'd the Camels that were bringing Provisions to the Convent, whereupon the Monks wall'd up the Gate, and retired to *Tor*.

THE Monks begun to be jealous of the *Arabs* before these Insults were given, and never would admit them into any Part of the Convent, but lower'd down the Corn or Provisions to them, and also drew up the Pilgrims in Baskets by Ropes, for they did not think the *Arab* People fit to be confided in, notwithstanding the Obligation *Mahomet* had lain them under to let them continue in quiet Possession, and the Sequel prov'd the Truth of what they apprehended.

THE City of *Midian*, of which *Jethro*, *Moses*'s Father-in-Law, was Priest, (*Exod.* iii. 1) is near *Rephidim*, between it and the *Red Sea*; but the Tract, call'd the Land of *Midian*, extends from the *Red Sea* to Mount *Horeb*, where the Angel appear'd to *Moses* in the Burning-bush; it was to this Place that *Moses* fled from the Fury of *Pharaoh* when he had kill'd the *Egyptian*, and here he remain'd till God sent him to *Egypt* to deliver the *Israelites* from *Pharaoh*'s Bondage; and as *Moses* and the *Israelites*, in their Return from *Egypt*, travell'd to the South-

Midian.

ward

ward near the *Red Sea* till they came to the Land of *Midian*, *Jethro* hearing of *Moses*'s Success, and of his Approach, he met him with his Wife and Children; and after a small Interview, *Jethro* return'd home to *Midian*, and *Moses* proceeded to Mount *Sinai* in his Way to *Canaan*, with the Families of *Israel* along with him, *Exod.* Chap. xviii, xix.

Situation of Paradise

But, before we conclude this Part of Scripture History relating to *Arabia*, it will be very seasonable here to give some Account of the Situation of the Terrestial Paradise; which as we shall not assert any Thing but what we have Scripture History for, we shall produce our Authority for our Conjecture, and satisfy our Readers of the Probability, if not of the Certainty, of the Opinion we advance, since we find no other Place upon the Surface of the Terrestial Globe answers the Description, especially according to the Names of the Rivers by which it is described in the second Chapter of *Genesis*.

Moses.

But as this Part of Sacred History was writ by *Moses*, let us first consider his Birth and Situation: He was born in *Egypt*, *Exodus* Chap. ii. and fled from thence to *Midian*, upon the Account of his killing the *Egyptian*, *Exod.* ii. 15. and while he dwelt there he served his Father-in-Law in the low Capacity of a Shepherd, till keeping his Flock in Mount *Horeb*, God appear'd to him in a Burning-bush, and gave him his Commission to bring the Children of *Israel* out of *Egypt*, *Exod.* iii. which he executed accordingly, but never enter'd into the Land of *Canaan*, *Deut.* xxxiv. 4, 5. So that all his Travels in general was from *Egypt* to *Midian*, and from thence back to *Egypt*; from whence he came with the Children of *Israel* through the *Red Sea*, and after all their tedious Journeys in the Wilderness, he accompanied them into the Sight of the Land of *Canaan*, though himself never set Foot upon that promised Land.

Question.

It cannot be an improper Digression to enquire (that since *Moses* could flee from *Egypt* to *Midian*, or *Madian*, when he had kill'd the *Egyptian*, *Exod.* ii. and could so easily return to *Egypt*, *Exod.* iv. 20.) which Way he went and came, since in the Passage of the Children of *Israel* to the Wilderness and Mount *Sinai*, there seem'd to be a Necessity of dividing the *Red Sea* to open their Way for their last Passage from *Egypt*?

Answer.

In Answer to which, as a natural Reason, it is evident that *Moses* had the Opportunity of going by Sea from *Tor*, or some other Port on the *Arabian* Side, to *Suez*, or some other Port in *Egypt*, or else, that he might travel by Land over the *Isthmus* that separates the *Red Sea* from the *Mediterranean*; but if it be further objected, why did not the *Israelites* come the same Way? the Answer is plain, that *Pharaoh*, intending to intercept their Flight, block'd up that Passage by Land; and they finding a Necessity to retreat to the Sea, it could not be supposed that in that Sea of so little Trade, they could meet with Vessels to embark such a numerous People; and, as has been observed before, the Mountains on each Side, and the Enemy behind, they must have been destroy'd if this Miracle had not intervened for their Preservation.

But we beg leave to be excused from attempting to give natural Reasons for the Proceedings of infinite Wisdom, and, as to the present Case, rather suppose in this Distress of the *Israelites*, God, willing further to convince them of, and confirm them in a Belief of his infinite Power, gave them this timely Instance of it, to support them in their entire Dependance upon him, in the Difficulties they had to encounter with in a strange and desart Wilderness. But to return to our Description of Paradise.

Where *Moses* writ the Pentateuch.

Having thus proved that all the Travels of *Moses* were comprized in *Egypt*, *Arabia*, &c. exclusive of the Land of Promise, *Deut.* xxxiv. 4. it is evident that he must write the History of the Creation, and the other four Books of the Pentateuch, within those Limits which is contain'd between twenty eight and thirty eight Degrees of North Latitude; in which Climate lies *Iraca Arabick*, to the North-Westward of the *Persian Gulf*; and if we compare this his Situation with his Words *Gen.* ii. 8. that God planted a Garden Eastward in *Eden*, it seems to be a satisfactory Proof, that the Garden of *Eden* is in or near the Latitude of some Part of the Travels of *Moses*, and under a more Easterly Meridian.

Description of *Eden*.

We are next to consider the Description that *Moses* gives of the Garden of *Eden*; and it was at the Confluence, (or Separation, or both, of four Rivers, *Pison*, *Gihon*, *Hiddekel*, and *Euphrates*; and if we allow the River then call'd *Hiddekel* to be the same at present call'd *Tygris*, these four Rivers do concur and empty themselves into the Bottom of the *Persian Gulf*.

If it should be objected that the River described by *Moses*, *parted and became into four Heads*, *Gen.* ii. 10. it may be answer'd, that that does not prove that it must run four different Ways; for, as we may observe in the following Map, the two Rivers *Tygris* and *Euphrates* meet, and running in the same Stream for some time, they part and fall into the *Persian Gulf* in two Channels, the Westermost of which is *Pison*, and the Eastermost *Gihon*; so that allowing that which contains the Confluence and Separation of these Rivers to be the Garden of *Eden*, they, as beheld from thence, *parted and became into four Heads*, and include the four Rivers mention'd by *Moses* in his Description of the Earthly Paradise.

Inconsistent Conjecture.

Some indeed would have the Garden of *Eden* to be in *Egypt*, and in favour of that Opinion affirm that the River *Nile* was call'd *Gihon*, and that before the Flood *it parted and became into four Heads*, (and no more,) by which it emptied itself into the *Mediterranean*, (though by many more since the Flood;) but this does not agree with the Situation of Paradise according to *Moses*, who says, *Gen.* ii. 8. that God planted a Garden Eastward in *Eden*; but as *Moses* was never further West than the Land of *Goshen*, and consequently never to the Westward of the *Nile*, it is impossible that ever those four Heads, and the Land included between them, could ever be Eastward from him, and therefore cannot be that Garden Eastward in *Eden* which *Moses* describes.

But the Paradise before mention'd agrees with *Moses*'s Description both as to Situation, being *Eastward* of the Scene of his Travels, and answering to the Confluence, or Separation, or both, of the four Rivers he mentions; and this is contain'd in about a hundred and fifty Miles in Length, which, though far short of the Extent which some allow Paradise to contain, yet, humanly speaking, not only that whole Plat, but even some select Part of of that, was sufficient for a Garden for a Man and his Wife, especially as *Adam* alone was to dress and to keep it, *Gen.* ii. 15. And if to this we add, that there is no other Place in the World that will answer the Description *Moses* gives, both as to Situation and other Circumstances, we may safely conclude, that such a Concurrence of these more than probable Conjectures amount to little, if any thing, less than a Proof that this is the Garden of *Eden* which *Moses* describes.

CHAP.

CHAP. V.

Treats of the Language of the Arabians, *and of their Learning, with their Account of Time; alſo of their Forces and Arms, with their Coins, Weights, and Meaſures.*

Language

IT is aſſerted by the People of the Eaſt, and believed by thoſe that are proper Judges, that the *Arabick*, or *Arabian* Language, is the richeſt and moſt copious of any in the World; it is compoſed of ſeveral Millions of Words, and ſuch Variety to ſignify the ſame Thing, that they have not leſs than a thouſand Terms to expreſs the Word *Camel*, and five hundred for that of *Lion*. And as it is a Language ſo well embelliſh'd with Choice of Words of the ſame Tendency and Signification, and many of them ſo emphatical, and bearing ſuch a particular Force and Energy, as not to be capable of being tranſlated into any other Language without a great many Words to explain them, that and the Situation of the Garden of *Eden* in *Iraca Arabick*, as obſerved in the Concluſion of the laſt Chapter, adds a further Probability of the *Arabick* being the Language of Paradiſe. But it is obſerved that a great deal of the Richneſs and Beauty of this Language is loſt, which, by-the-bye, corroborates the former Conjecture of its having been the Language of Paradiſe; and that when Paradiſe was loſt as to the Felicity and Beauty of it, and *Adam* drove out of it elſewhere, and, as ſome think, he and his Wife were ſeparated, it is natural to conclude that the Language muſt be loſt, or at leaſt loſe ſome of its primitive Beauties.

Mother or Original Language.

THERE is a Debate between the Eaſtern and Weſtern Part of the World, whether the *Arabick* or *Hebrew* be the Mother Language, the Eaſtern contend for the *Arabian*, but in this Part of the World they maintain the *Hebrew* to be the Original; but thoſe who would reconcile theſe Diſputes, aſſert that they both proceed from the ſame Source, and bear a great Reſemblance to each other. However, as *Latin* and *Hebrew* are the learned Languages with us in the Weſt, ſo is *Arabick* in the Eaſt; and therefore the Alchoran is read in that Language in *India* and *Perſia*, as well as in *Arabia*, where it is the native Language.

Arts diſcouraged.

BUT the Degeneracy of Arts and Sciences has been obſerved to make a conſiderable Progreſs (if I may be allow'd the Term,) in thoſe Places where the Mahometan Religion has prevail'd and been propagated; Witneſs, *Greece* itſelf, though formerly the Seat and Source of Polite Literature, yet not to ſay they, as well as *Arabia*, are ſunk into Sloth and Idleneſs, but they are degenerated into the Neglect of Arts and Sciences; for, as neither their Religion nor the Principles of their Government will bear examining, they diſcourage every Attempt towards the Improvement of Learning, leſt the Abſurdity of thoſe Maxims by which they are govern'd ſhould be detected, and that thoſe who are aiming at Impoſitions and Arbitrary Power, do endeavour firſt to expel all Seminaries both of Religion and Learning upon the ſame Account; as ſuppoſing that when Learning is excluded, and as a neceſſary Conſequence Ignorance promoted, it will be eaſier to impoſe upon the ignorant Vulgar, than upon thoſe People who have Senſe and Learning to judge for themſelves; in this Senſe it may indeed be ſaid, that *Ignorance is the Mother of* their *Devotion*.

THE Kingdoms upon the Coaſt of *Arabia* are ſome of them very extenſive: Their Monarchs are commonly ſtil'd Xerifs, as Xerif of *Mecca* &c. and others are call'd Imans, but they each of them ſignify Prieſt as well as King; and it would ſeem that thoſe call'd Imans are thoſe that reckon themſelves the more immediate Succeſſors of *Mahomet*, as the Caliphs of the *Saracens* were till conquer'd by the *Turk*; for the *Turkiſh* Emperors do not pretend to meddle with the Prieſthood, ſo as to officiate in it, but govern and controul the Eccleſiaſtical Juriſdiction as they pleaſe, and give Laws to their Mufti or High-Prieſt, as we ſhall further explain when we treat of the *Turkiſh* Dominions. Title of Governor.

Government.

As to the Form of Government in *Arabia* and their Laws, their Monarchs are abſolute, both in Spirituals and Temporals, or in all Affairs Civil and Eccleſiaſtical, the Succeſſion is Hereditary, and they have no Laws but what is founded upon the Alchoran, only their different Comments upon it cauſe different Opinions, both in Law and Religion; but *Arabia* is not the only Place that has experienced ſuch pernicious Differences, where the Religion has taken its Riſe from the ſame Original.

Account of Time.

THE *Arabians*, both before and ſince *Mahomet*'s Time, compute their Years by Lunar Months; but to rectify their Account, they did (as we do, by adding one Day in every fourth Year, which we call Leap-Year) intercalate ſeven Months in nineteen Years, which by allowing eleven Days every Year, (the Difference between the Solar and Lunar Years, and the Foundation of our Epact, it amounts to their Intercalary ſeven Months in nineteen Years (nearly,) ſo that by this Means their Months were again brought back to the proper Seaſons of the Year, and this Intercalary Correction was uſed in *Arabia* till *Mahomet*'s Time; but then, as if he had a Mind to do ſomething that ſhould be talk'd of, right or wrong, that Correction was diſuſed, and the Year only reckon'd to conſiſt of three hundred fifty four Days, eight Hours, and forty eight Minutes; which odd Hours and Minutes amount in thirty Years to elven Days exactly; to account for which they intercalate a Day every 2d, 5th, 7th, 10th, 13th, 15th, 18th, 21ſt, 24th, 26th, and 29th Years of this Period, ſo that their Intercalary Year conſiſts of 355 Days, the other but of 354; and hence it is that the Beginning of the *Hegira* is unfix'd, and paſſes through all the Seaſons of the Year, and makes a Revolution to near the ſame Place again, only with a Year's Alteration in their Account in every one of thoſe Revolutions. *Dean* Prideaux's *Life of* Mahomet, *page 66*.

THEY have twelve Months, of which the firſt has 30 Days, the Second 29, and ſo on alternately through the Year, which makes out their 354 Days in the Year, as above, only the Intercalary Years above-mention'd; the laſt Month of the Year, call'd *Dulhaga*, has alſo thirty Days.

Another Æra.

BUT the *Perſian* Mahometans have another Æra, call'd the *Æra* of *Jeſdegard*, which took Place upon his Acceſſion to the Throne, ten Years after the *Hegira*; and by this Year they compute in all Civil Matters, and it is three hundred ſixty five Days without any Intercalation; and by this the Eaſtern Aſtrologers reckon their Years.

THE *Hegira* commences with the Year of our Lord ſix hundred and twenty two, from the ſixteenth

teenth Day of *July*, which being the Day of *Mahomet*'s Flight, as the Word *Hegira* imports, they reckon the Date of their Years from thence, as we do from the Year of our Saviour's Incarnation.

They have no regular ſtanding Forces by Land; but the Conſtitution is ſuch, that if the King or Monarch requires either Men or Money they are obliged to ſupply his Demands; and of all the Xerifs or Imans of *Perſia*, the moſt Potent Monarch by Sea is the King of *Oman*, or *Muſcat*; who is now grown ſo formidable, that he is able to maintain a War not only with the *Aſiaticks*, but with the *Europeans* too; for they are always, of late, at War with the *Portugueſe* and *Danes*, and if an *Engliſh* Veſſel falls in their Way, that is not able to reſiſt them, they take her, and deem her a lawful Prize, though for no other Reaſon but becauſe ſhe could not defend herſelf from them. Mr. *Lockart*, in his Account of that Place, informs us, that there were fourteen Sail of Men of War in the Mole at *Muſcat* when he was there, from twenty to ſeventy Guns, but the biggeſt of them not ſo large as one of our Fourth Rates, their Ports being as near together as they can poſſibly work their Guns; there were alſo twenty Merchant-men in the Mole, and they had fifteen or ſixteen Men of War a Cruizing abroad; their Colours are red, which they diſplay in Flags and Pendants at the Top-maſt Heads, and Yard-arms, and make a beautiful Appearance; but they have very little, if any Timber fit for Shipping; but their Ships are built at *Surrat*, or at the Mouth of the River *Indus*, and many of them are Prizes taken from other Nations.

Shipping.

Thoſe of the inland Country are divided into Tribes, and the Tribes ſubdivided into Families. Every Tribe hath its *Sheik el Kebir*, or Grand Captain, and every Family its *Sheik*, or Captain; the *Sheik el Kebir* is inveſted with Supreme and Civil Authority; the Offices of the *Sheiks* are Hereditary, except they die without Children, and then it comes to an Election, by the Leave of the grand *Sheik*, or Sovereign; and if he dies without Iſſue, the whole Tribe aſſembles to chuſe another. It is ſaid that ſome of thoſe *Sheiks* or *Emirs* that lie next *Turkey* are tributary to them; but it is certain they receive large Gratuities from the *Turks*, for protecting the Pilgrims in their Paſſage through the Country. And the Grand Seignior is always glad to have a good Underſtanding with them, for he knows it is in their Power to do his Subjects a great deal of Miſchief, by their Excurſions and Robberies, and it is very difficult to puniſh them for it; for although the *Arabians* are not a Match for the *Turk* in the open Field in a ſet Battle, yet when they make their Inroads upon the *Turks*, to plunder them, and afterwards retreat in their own Country, it would deſtroy the beſt of Armies to purſue them into the wild Deſarts, where there is no Proviſion, or Water, nor ſo much as Towns or Habitations for Shelter from the Heat; which is ſo exceſſive, that it is inſupportable to any but the Natives, and this, and not the Power of their Forces, is the chief Reaſon why the greateſt Part of *Arabia* was never conquer'd.

Perſons

If it ſhould be ask'd if Water, and Proviſions, &c. be ſo ſcarce, how are the Natives ſupply'd? or why cannot the *Turks* in their Purſuit ſubſiſt as well as the *Arabs* in their Retreat? it may be anſwer'd, that the *Arabian* Tribes, which conſiſt of three or four hundred Families or more, are acquainted with the Country, and know where to find Water and Paſture to ſubſiſt themſelves and their Cattle; whereas was a great Army to purſue them through thoſe Deſarts, they muſt unavoidably periſh for Want, ſo that their Strength or Succeſs does not always conſiſt in a numerous Army, nor yet in a ſmall one; for if it is large, the Country cannot ſubſiſt them, and they muſt periſh of Courſe, and if their Number is ſmall, the *Arabs* are too ſtrong for them, and ſo defeat them; and that is the Reaſon why the *Turks*, either with large or ſmall Armies, never care to penetrate far into *Arabia*.

The *Turks*, *Perſians*, and *Portugueſe* have got ſeveral of the great Towns upon the Coaſt in their Poſſeſſion; which intimates that it is not their Power or their Skill in Military Affairs that ſecures them from being conquer'd by their Neighbours, becauſe ſeveral of their Ports or Places worth conquering have undergone that Fate by different Foreigners; but the inland Deſarts not being worth conquering, they continue in quiet Poſſeſſion of them, becauſe it is not worth any Body's while to take them from them; for who would exert his Courage and his Power to make a Conqueſt, if he knows, that in caſe he ſhould ſucceed, he muſt fare worſe than he did before.

The Arms of the *Arabians* are a Launce, a half Pike, a broad Sword, a Dagger, a Bow and Arrows, and of late they have found the Uſe of Fire-Arms and great Guns; they had formerly Shields cover'd with Skins of Beaſts or Fiſh, but theſe are not of much Service to them, ſince they knew the Uſe of Fire-Arms. They do not care to engage in a pitch'd Battle and upon equal Terms, but truſt more to the Swiftneſs of their Horſes, and the Barrenneſs of their Deſarts, by which they make their Flight, which renders a Purſuit almoſt impracticable, for this is what they truſt to for their Security more than Force of Arms.

Arms.

The Current Coin at *Mocha*, at the Entrance of the *Red Sea*, and the principal Trading Port belonging to it, are Dollars, but they abate Five *per Cent.* on the Pillar Dollars, becauſe they are not of the fineſt Silver. The Dollar Weight with them is ſeventeen Drams fourteen Grains; all their Coin paſſes by Weight, and is valued according to its Fineneſs. The Gold Coins that are current here are the Ducats of *Venice*, *Germany*, *Turkey*, *Egypt*, &c. there is a ſmall Coin call'd *Comaſſes*, but their Value is alter'd as the Government pleaſes. They generally keep their Accounts by an imaginary Coin call'd *Cabeers*, of which eighty goes to a Dollar, but they have no ſuch current Coin as *Cabeers*, though they reckon by them; as is the Caſe with us in *England*, who reckon by Pounds, Shillings, and Pence, and yet we have no ſingle Pieces of a Pound, or but few of a Penny, that paſſes current amongſt us.

Coins.

But the *Arabian* Coins alter either according to the Time or Place in which they are; for Mr. *Lockart* informs us that at *Muſcat*, when he was there, the Current Coin was *Budgerooks* and *Mamooda's*: The *Budgerooks* were made of a mix'd Metal, ſomething like Iron, with a Croſs on one Side, and were coin'd by the *Portugueſe* when they had *Muſcat* in Poſſeſſion; thirty of theſe *Budgerooks* are worth one Silver *Mamooda*, the Value of which is but eight Pence. The *Rupees* of *Surrat* paſs current for three *Mamooda's* and a half, and *Spaniſh* Dollars at ſeven *Mamooda's* and a half. *Venetians*, *Ibrams*, and other Pieces of Gold, paſs current at *Muſcat*.

Of Weights; the *Babar* is four hundred and twenty Pound *Engliſh*; the *Fraſſel* is twenty eight Pounds, fifteen of them is a *Babar*; the *Maun*, ten goes to a *Fraſſel*, and forty *Fakea's* is a *Maun*, and ten *Coſſila* is a *Fakea*.

Weights.

Of dry Meaſure, the *Aldeeda* is equal to three *Engliſh* Pints; and of long Meaſure the Cubit, by which they meaſure Cloth and Silk, is equal to our two Foot, or twenty four Inches.

Meaſures

A DESCRIPTION OF THE *TURKISH EMPIRE,* As lying in Asia, Europe, *and* Africa.

CHAP. I.

Of the Situation, Extent, Bounds, and Divisions of the Turkish Empire.

WE have now in our Description of the World travell'd as far to the Westward as the *Red Sea*, the South-West Bounds of *Arabia* and of *Asia* itself, and shall now alter our Course, and take a View of the *Turkish Empire:* Which, as it lies in *Asia*, *Europe*, and *Africa*, we shall treat of it under these three Heads, or rather four; as first of the *Turkish Empire* in general, secondly of *Turkey* in *Asia*, thirdly of *Turkey* in *Africa*, and lastly of *Turkey* in *Europe*; supposing that our Readers will approve of the Order in which we proceed, when they consider that the Reason of our describing that Part of *Africa* which is in the *Turkish* Dominions, and then returning from *Africa* before we had finish'd that Quarter, and proceeding to *Europe*, was in order to have all the *Turkish Empire*, in what Quarter of the World soever, compact and entire; because therein is generally compriz'd the Travels of the Patriarchs, Prophets, our Saviour and his Apostles, and the whole Scene of the Histories of the Old and New Testament, which when begun ought to be also finish'd before we leave it, to make it more compleat.

Bounds of the whole Turkish Empire.

THE whole *Turkish Empire* then, as consisting of the three Parts of it, lying in *Asia*, *Africa*, and *Europe*, may be said to be bounded on the East by the Kingdom of *Persia*, on the North by the *Black Sea* and the River *Neister*, which falls into it, to the Northward of the Influx of the *Danube* into the same Sea; and from that River the Northern Boundary ranges Westward, and separates it from *Poland* by the *Carpathian Mountains*; its Westermost Boundaries are *Hungary*, *Sclavonia*, *Croatia*, the Gulf of *Venice*, and the *Ionian Sea*, and it is bounded on the South by the *Mediterranean* and *Arabia Deserta*.

Turkey in Asia.

BUT, considering the *Turkish Empire* as consisting of the three Parts above-mention'd, *Turkey* in *Asia* extends from Latitude 29 to 35 Degrees North, and from 27 to 46 Degrees of Longitude East from *London*; and is bounded by *Persia* on the East, by the *Black Sea* and *Tartary* on the North, by the *Archipelago* and *Levant* on the West, and by *Arabia Deserta* on the South.

Divisions

IT is divided into Eastern and Western *Turkey*; the Eastern contains, first, *Eyraca Arabick*, or *Chaldea*, (the supposed Situation of Paradise.) 2. *Diarbeck*, or the antient *Mesopotamia*; 3. Part of *Curdistan*, or *Assyria*; 4. *Turcomania*, or the antient *Armenia Major*; and 5. Part of *Georgia*, and *Mengrelia* on the East of the *Black Sea*. Of these in order:

Chalde.

1. *Eyraca Arabick*, or *Chaldea*, is bounded on the North by *Diarbeck*, or antient *Mesopotamia*; on the East by Part of *Persia*; and on the South and West by *Arabia Deserta*. The chief Towns are *Bagdat* and *Bossora*; between which, and near the River *Euphrates*, was once the famous City of *Babylon*, and the Tower of *Babel*, mention'd *Gen.* ii.

Mesopo mia.

2. *Diarbeck*, formerly called *Mesopotamia*, Acts vii. 2. and is called *Padan-Aram*, Gen. xxviii. 2. it is bounded by *Turcomania* and *Curdestan*, or *Assyria*, on the North, by Part of *Persia* on the East, *Chaldea*, or *Eyraca Arabick*, on the South, and *Syria* on the West. The chief Towns are *Diarbeck*, *Orsa*, and *Mosoul*, or *Mausat*, which last is situate near the Place where old *Niniveh* once stood.

Assyria

3. *Assyria*, of which read 2 *Kings* Chap. xviii. now call'd *Curdistan*, the Eastern Part of which belongs to *Persia*, and not hitherto conquer'd by the *Turks*, has Part of *Persia* on the East, *Chaldea* on the South, *Mesopotamia* on the West, and *Turcomania* on the North. The chief Towns are *Betlis*, *Armadia*, and *Sheraszoul*.

Armen Major.

4. *Turcomania*, or *Armenia Major*, hath *Persia* on the East, *Mesopotamia* and *Assyria* towards the South, and *Natolia*, or *Lesser Asia*, on the West and North. The chief Towns are *Erzerom*, *Van*, and *Kars*.

5. THE fifth Division of Eastern *Turkey* in *Asia* contains Part of *Georgia* and *Mengrelia*; the greatest Part of *Georgia* belongs to *Persia*, but *Mengrelia* belongs to the *Turkish* Dominions, and is subdivided into *Mengrelia Proper*, *Iberia*, and *Guriel*. The chief Towns are *Amarchia* and *Gony*.

Weste Turkey

WESTERN *Turkey* in *Asia* contains, 1. Part of *Arabia Petraea*, and *Arabia Deserta*; 2. *Palestine* and *Syria*, and 3. *Natolia* or *Asia Minor*.

Arabia Petræa.

1. *Arabia Petræa* and *Deserta* are (so much of them as lies in *Turkey*) bounded by *Palestine* and *Syria* on the North, by *Mesopotamia* on the East, by another Part of *Arabia Deserta* towards the South, and by the *Red Sea*, and the *Isthmus* that divides it from

from the *Mediterranean* on the Weſt. The chief Towns are *Bozra*, and *Herat*, or *Anna*, and *Petræa*.

Paleſtine and Syria. 2. *Paleſtine* and *Syria* are bounded by *Natolia* and *Turcomania* towards the North, by the *Levant*, or *Mediterranean*, on the Weſt, on the South by *Arabia Petræa*, and ſome Part of *Arabia Deſerta*, and on the Eaſt by *Meſopotamia* and ſome other Parts of *Arabia Deſerta*. Chief Towns are *Jeruſalem*, *Damaſcus*, *Tripoli*, *Aleppo*, and *Standeroon*.

Natolia. 3. *Natolia*, or *Aſia Minor*, in which is the ſeven Churches of *Aſia*, mention'd *Rev.* i. 2. It is bounded on the Eaſt by *Georgia* and the River *Euphrates*, and on the North by the *Thracian Boſphorus* and the *Black Sea*, on the Weſt by the *Archipelago*, and on the South by the *Levant*, or the Eaſtermoſt Part of the *Mediterranean*; and is ſubdivided into four Parts; as

Bythinia. 1. *Natolia Proper*, which is the Weſtern Part of *Natolia*, and contains the antient Provinces of, 1. *Bythinia*; the chief Towns whereof are *Burſa* or *Pruſa*, *Chalcedon*, *Nice*, *Nicomedia*, and *Libuſta*. 2, *Miſia* and *Phrygia*; the chief Towns whereof are *Cyricus*, *Parium*, *Lampſacus*, *Abydus*, *Troy*, *Scamandria*, *Aſſos*, and *Pergamus*. 3. *Æolis*; chief Towns *Elea*, *Myrina*, and *Cumaphocea*. 4. *Ionia*; chief Towns *Smyrna*, *Clazomene*, *Erithræa*, *Colophon*, and *Epheſus*. 5. *Caria*; chief Towns *Miletus*, *Heraclea*, *Borigba*, *Mylaſa*, *Stratonice*, and *Alinda*. 6. *Lydia*, or *Mœnia*; chief Towns *Sardis*, *Philadelphia*, *Thyatira*, *Laodecia*, (four of the ſeven Churches.) 7. *Phrygia Major*; chief Towns, *Cotiæum*, *Coloſæ*, *Hierapolis*, *Prymneſia*, and *Tiberopolis*. 8. *Galatia*; chief Towns *Germe*, *Ancyra*, and *Amurium*. 9. *Paphlagonia*; chief Towns *Heraclea*, *Amaſtris*, *Claudiopolis*, *Tripoli*, or *Tenthramia*, and *Anciſus*.

Amaſia. 2. *Amaſia* contains the four Provinces following, 1. *Pontus Galaticus*; chief Towns *Amaſia*, *Themiſcyra*, and *Comana*. 2. *Pontus Ptolemoniac*; chief Towns *Tocat* and *Sebaſtia*. 3. *Pontus Cappadocia*; chief Towns *Trapezond*, *Pharnacia*, and *Cerauſus*.

Cappadocia

Aladulia. 3. *Aladulia* contains *Cappadocia*, and Part of *Armenia Minor*; chief Towns *Suvas*, *Caiſar*, and *Nyſſa*.

Caramania 4. *Caramania* contains the Provinces of, 1. *Lyſia*; chief Towns *Telmeſſus*, or *Patara*, *Xanthus*, or *Myra*, *Olympus*, or *Phaſelis*. 2. *Pamphylia*; chief Towns *Atralia*, *Perga*, and *Syde*. 3. *Piſidia*; chief Towns *Sangalaſſus*, *Antioch-Piſidia*, and *Temeſſus*. 4. *Lycaonia*; chief Towns *Lyſtra*, *Derbe*, and *Iconium*, (of *Lycaonia*, *Lyſtra*, *Derbe*, and *Iconium* we read *Acts* xiv. verſe 1 and 8) 5. *Cilicia*; chief Towns, *Tarſus*, (ſee *Acts* xxi. 39.) alſo *Iſſus*, now call'd *Aiazzo*.

Although ſome Geographers reckon all the Coaſt of *Barbary* to be in the *Turkiſh Empire*, yet as their Princes ſeem to be almoſt independant, and ſo far from being govern'd by the Grand Seignior that his Orders are very little regarded, we therefore ſhall confine *Turkey* in *Africa* to *Egypt* only, as being more immediately under his Influence.

Turkey in Africa.

Egypt. *Egypt* is divided into three Parts, viz. *Upper*, *Middle*, and *Lower Egypt*. *Upper Egypt*, formerly call'd *Thebes*, from its famous Capital of that Name, is bounded on the North by *Middle Egypt*, on the Eaſt by the *Red Sea*, on the South by ſome Mountains that divide it from *Nubia* and *Abyſſinia*, and on the Weſt by the Deſarts of *Barca*.

Upper.

Middle. *Middle Egypt* is bounded on the Weſt by the ſaid Deſarts of *Barca*, on the South by *Upper Egypt*, on the Eaſt by the *Red Sea*, and on the North by *Lower Egypt*.

Lower. *Lower Egypt* has the *Mediterranean* on the North, the *Iſthmus* of *Suez* on the Eaſt, *Middle Egypt* on the South, and the Deſarts of *Barca* on the Weſt.

Turkey in Europe. *Turkey* in *Europe* (excluſive of that Part of the *Turkiſh* Dominions that is in *Aſia*) is bounded on the Eaſt with *Little Tartary*, *Crim*, and the *Euxian* or *Black Sea*, and the *Propontis*; and on the North with the River *Neiſter* and the *Carpathian Mountains*, which ſeparate it from *Poland*; its Weſtern Boundaries are *Sclavonia*, *Hungary*, *Croatia*, and the Gulf of *Venice*, or the *Adriatick Sea*, and on the South it is bounded by the *Mediterranean Sea*; and is divided into ten Parts or Countries, *viz.* 1. *Greece*, 2. *Romania*, 3. *Bulgaria*, 4. *Servia*, 5. *Boſnia*, 6. *Raguſa*, 7. *Walachia*, 8. *Moldavia*, 9. *Beſſarabia*, and 10. *Budzack*, and *Oczacow Tartary*; and as *Little Tartary* and *Crim Tartary* are reckon'd a Part of the *Turkiſh Empire*, as being govern'd by the Porte, we ſhall include them in this Deſcription.

And, firſt, as to *Greece* it is divided into ſeven Provinces, 1. *Macedon*, 2. *Theſſaly*, 3. *Achaia*, 4. *Epirus*, 5. *Albania*, 6. the *Morea*, or *Peloponneſus*, and 7. the Iſlands near the Coaſt of *Greece* in the *Ionian Sea*, and the *Ægean Sea*, or *Archipelago*; of which in order.

Macedon. 1. *Macedon*, or *Macedonia*, is bounded on the South by the *Archipelago* and Part of *Theſſaly*, on the Weſt with *Albania*, on the North with *Romania*, and on the Eaſt and South-Eaſt with ſome Bays of the *Ægean Sea*, or *Archipelago*. Chief Towns are *Theſſalonica*, or *Salonichi*, *Amphipolis* now *Emboli*, *Conteſſa*, *Cavalla*, *Pella*, and *Stagyra*.

Theſſaly. 2. *Theſſaly*, now call'd *Janna*, has *Macedon* on the North, the Gulf of *Solonichi* on the Eaſt, *Achaia*, or *Livadia*, on the South, and *Epirus* on the Weſt. The chief Towns are *Lariſſa*, now called *Aſababa*, with *Janna*, *Pharſalus*, *Pegaſa*, now call'd *Volo*, and *Armiro*.

Achaia. 3. *Achaia*, called alſo *Hellas* and *Grecia Proper*, but now known by the Name of *Livadia*; it has *Theſſaly* on the North, the *Ægean Sea* and the *Euripan Streight*, which ſeparates it from *Negroponte*, on the Eaſt, the Gulf of *Lepanto* and the *Morea* on the South, and the *Ionian Sea* on the Weſt. Chief Towns are *Thebes*, *Livadia*, *Platæa*, *Athens*, *Marathon*, *Delphi*, and *Lepanto*, now call'd *Epactus*.

Epirus. 4. *Epirus*, or *Canina*; whoſe Northern Bound is *Albania*, the Eaſtern is *Theſſaly* and *Achaia*, which alſo extends to the Southward of it, and the Weſtern is the *Ionian Sea*. The chief Towns are *Chimera*, *Parga*, and *Larta*, by ſome call'd *Ambraica*.

Albania. 5. *Albania*, by ſome call'd *Arnaut*, is bounded on the North by the Mountains of *Argentura* and *Servia*, on the Weſt by the Gulf of *Venice*, on the South by *Epirus*, and on the Eaſt by *Macedon*. The chief Towns are *Scutari*, now call'd *Iſcador*, *Alleſio*, or *Liſſus*, *Dolſigno*, *Croya*, *Durazzo*, the *Dyrrachium* of the *Romans*, and *La Velona*.

Morea. 6. The *Morea*, or *Peloponneſus*, is bounded by the Gulf of *Lepanto*, which ſeparates it from *Achaia* on the North, and by the *Archipelago* on the Eaſt, the *Mediterranean*, or Sea of *Candia*, on the South, and the *Ionian Sea* on the Weſt. The chief Towns are *Patros*, *Clarenza*, *Modon*, or *Mutum*, *Coron*, *Navarinum*, *Belvedere*, *Languanica*, the antient *Olympia*; *Miſitra*, the antient *Lacedemon*, *Argos*, and *Corinth*, now call'd *Coranto*.

Iſlands of Greece. 7. The principal Iſlands in the *Ionian Sea*, near the Coaſt of *Greece*, are *Corfu*, *Cephalonia*, *Zant*, *Pachſu*, *Antipachſu*, *St. Maura*, *Ithica*, and *Columbus*. And more to the Southward, in the *Mediterranean*, are the Iſlands of *Sapienza*, *Serigo*, and the large Iſland of *Candia*, or *Crete*; and in the *Ægean Sea* the *Cyclades Iſlands*, viz. *Milo*, *Pario*, *Naxia*, *Margo*, *Delos*, *Micone*, *Andros*, and *Thera*, formerly *Caliſte*, *Lemnos*, and ſome other ſmall Iſlands, and *Negroponte*, which can ſcarce be call'd an Iſland.

Romania or Thracia 2. The ſecond Diviſion is *Romania*, call'd in antient Hiſtory *Thrace* or *Thracia*; it is bounded on the North by a Ridge of Mountains call'd *Hemus*, which ſeparates it from *Bulgaria*, and on the Weſt by *Macedonia*; it is bounded on the South by the *Archipelago*, and on the Eaſt by the *Propontis* and the *Black Sea*. Chief Towns are *Janicoli*, *Philippipoli*, *Adrianople*, *Trejaneple*, *Conſtantiaopole*, *Galata Galipoli*, *Seſtos*, *Selivera*, and *Rudiſto*.

3. *Bul-*

Bulgaria. 3. *Bulgaria* is bounded on the North by the *Danube*, which divides it from *Walachia* and *Moldavia*, and on the East by the *Black Sea*, by *Romania* on the South, and by *Servia* on the West. Chief Towns are *Sophia*, *Siliſtria*, *Nicopolis*, *Ternoon*, *Verna*, and *Meſembria*.

Servia. 4. *Servia* is bounded on the North and East by the Rivers *Save* and *Danube*, on the West by *Boſnia*; from whence it is divided by a Branch of the River *Save*, and on the South by *Macedon*. Chief Towns are *Belgrade*, (now in Poſſeſſion of the Emperor,) *Semendria*, *Widin*, *Niſſa*, *Scopia*, and *Novibazar*.

Boſnia. 5. *Boſnia* is bounded on the North by the River *Save*, by which it is divided from *Sclavonia*; by *Servia* on the East, from which it is ſeparated from the ſame River; on the South by *Dalmatia*, and on the West by *Croatia*.

Raguſa. 6. *Raguſa Republick*, on the Coaſt of *Dalmatia*, is partly Continent and partly Iſlands, and bounded on the North by the Bay of *Narenza* and the Iſland *Leſina*, and towards the East by the Land of *Dalmatia*, and by the Gulf of *Venice*, or the *Adriatick Sea*, on the South. The chief Towns are *Raguſa* and *Stagno*.

Walachia. 7. *Walachia* is bounded on the North and East by *Tranſilvania* and *Moldavia*, and on the West by *Tranſilvania* and *Hungary*, and by the *Danube* on the South. Chief Towns are *Targowiſch*, *Buchareſt*, *Braſchow*, *Rebnick*, *Alauth*, and *Pedt*.

Moldavia. 8. *Moldavia* is bounded by *Podolia* on the North, from whence it is ſeparated by the River *Neiſter*, a Part of the Northermoſt Bounds of all the *Turkiſh Empire*; by *Beſſarabia* on the East, on the South by the *Danube*, and on the West by *Tranſilvania* and *Walachia*. Chief Towns are *Jaſſy*, *Sezowa*, *Targonod*, *Chotzin*, and *Vaſleye*.

Beſſarabia. 9. *Beſſarabia* is bounded on the North by River *Neiſter*, which divides it from *Podolia*, and on the East by the *Black Sea*, and by *Moldavia* on the West. Chief Towns are *Tekin*, *Bialogrod*, *Kelia*, *Nova*, and *Kelia Vechia*.

Budziak. 10. *Budziak* and *Ozacow Tartars* is bounded on the North by *Podolia*, by *Little Tartary* on the East, by the *Black Sea* on the South, and *Beſſarabia* on the West. Here are no Towns, the Inhabitants living in Tents and Hutts, and moving from Place to Place like other *Tartars*.

To theſe we may add *Little Tartary* and *Crim Tartary*, the former of which is bounded on the North by *Muſcovy*, on the East by *Don Coſſacks* and the Sea of *Palus Meotis*, and on the South by an *Iſthmus* and two Bays, that ſeparate it from the Peninſula of *Crim Tartary*, and by the River *Boriſthenes* on the West. Chief Towns are *Stelnitz* and *Precop*; as for *Aſoff*, it may be reckon'd in *Tartary* in *Aſia*, being on the East Side of the River *Don* or *Tanais*. *Little Tartary.*

Crim Tartary, antiently *Taurica Cherſoneſus*, is a Peninſula almoſt ſurrounded by the *Black Sea*. Chief Towns are *Baccaſſara*, *Crim*, and *Caffa*. *Crim Tartary.*

CHAP. II.

Of the Seas and Rivers that are in or adjoining to the Turkiſh Empire.

Seas of Turkey. THE Seas which may properly be ſaid to belong to *Turkey* are the *Euxian*, or *Black Sea*. The *Palus Meotis*, which runs into the *Black Sea* by the Streights of *Caffa*. The *Propontis*, or Sea of *Marmora*, between the *Black Sea* and the *Archipelago*. The *Archipelago*, the *Ionian Sea* on the Weſt Coaſt of *Greece*, and the moſt Eaſterly Part of the *Mediterranean Sea*, commonly known by the Name of the *Levant*.

Black Sea. The *Black Sea*, call'd by ſome *Pontus Euxinus*, or the *Euxian Sea*; it lies on the North Side of *Natolia*, or *Leſſer Aſia*, and has a Communication with the *Mediteranean* by a Streight call'd the *Boſphorus*, and running thence by *Conſtantinople* into the *Propontis*, or Sea of *Marmora*, it paſſes by the *Dardanel* into the *Archipelago*, and thence falls into the *Mediterranean* on each Side of the Iſland of *Candia*, or *Crete*; *Pontus Euxinus* is contain'd between 42 and 46 of North Latitude, and between 29 and 44 Degrees of Longitude Eaſt from *London*.

It is ſaid that the Reaſon of this being called the *Black Sea*, is the frequent Tempeſts that are obſerved here, which they that have not been any further abroad than to trade within the Limits of this Sea, think they are not ſo violent any where elſe. Theſe Notions, imbibed by *Ovid*, and other Poets that lived before Navigation arrived to the Perfection it is now, and having the Report of ſeveral Shipwrecks happening in theſe Seas, thoſe Notions being improved and rendred diſmal by the Flights of thoſe Poets, who had no real Knowledge of, or Correſpondence with the other Parts of the Known World; and theſe Poetical Fictions and Dangers, magnified by the Art of Poetry, being now introduced into the Schools of Chriſtians as well as others, as Principles for the Pupils to draw Inferences from and improve themſelves by, 'tis no great Wonder that *Pontus Euxinus* has been really thought, and conſequently acquired the Name of the *Black* or *Terrible Sea*; although it is obſerved that neither the Water in this Sea, nor the Sands upon its Shore, differ in Colour from thoſe of other Seas. If the *Muſcovite*'s Schemes had ſucceeded, who, when in Poſſeſſion of *Aſoff*, where the River *Don*, or *Tanais*, falls into *Palus Meotis*, form'd a Deſign to participate of the Trade of this *Black Sea*, perhaps the Improvements that he might have made in making the Navigation here more practicable, might have obliterated this Name of *Black* or *Terrible*; but as he was obliged by the laſt Peace to ſurrender that Place, the ſole Trade of that Sea is in the Hand of the *Turk*, whoſe Navigation continuing much in the ſame State as formerly, this Sea continues to them to be a black or Terrible Sea.

Palus Meotis lies to the Northward of the *Black Sea*, and has a Communication with it only by the Streights of *Caffa*; its Extent is from *Crim Tartary* to *Aſoff* North Eaſt, and has *Little Tartary* on the North-Weſt, and *Kobau Tartary* on the South-Eaſt; it is about ſixty Leagues in Length, and forty in Breadth; and now, ſince the Surrender of *Aſoff* to the *Turk*, he is ſole Maſter of both the *Black Sea* and *Palus Meotis*. *Palus Meotis.*

The *Propontis*, or Sea of *Marmora*, lies South-Weſt from the *Black Sea*, and by a Paſſage between it and the *Black Sea*, call'd the *Boſphorus*, and alſo between it and the *Archipelago*, by another Paſſage, call'd the *Helleſpont*, there is a Communication maintain'd between the *Black Sea* and the *Archipelago*; the *Helleſpont* is about a League over, but the *Boſphorus* of *Thrace* is ſcarce a Mile broad: The City of *Conſtantinople* is ſituate at the South End of the *Boſphorus*, where it falls into the *Propontis* on the *European* Side: Here is ſuppoſed to be the fineſt Harbour in the World, being a Baſon of ſeven or eight Miles on the City Side, and as much on that Side towards the Suburbs, *Propontis.*

harbs, and good Ships may anchor in any Part of it; but is expoſed to the Eaſterly Wind, which though it blows there but ſeldom, yet when it comes, eſpecially in the Night-time, it cauſes great Confuſion among the Sea-faring People, and this Wind alſo affects the Seraglio itſelf, which ſtands juſt at the Entrance of the Port, on the Point of the Peninſula of *Thrace*.

The *Propontis*, being by ſome call'd the Sea of *Marmora*, is occaſion'd by an Iſland of the ſame Name lying in it. This Sea is about forty Leagues in Length, and fifteen or twenty broad. At the Entrance of the *Propontis*, going from the *Archipelago*, *rdanels.* are two Caſtles, one on each Side, call'd the *Dardanels*; ſo call'd, as ſuppoſed, from *Dardane*, an antient City not far from thence; there is at each Caſtle a Platform of Guns, but the Sea is ſo wide at this Entrance, that a Ship may ſail in or out, and not come within the Reach of the Guns from either Side; but further up, where the Channel is not a League over, ſtand two other Forts, one on the *European* Side, where *Feſtos* ſtood, and the other on the *Aſian* Side, where *Abydos* ſtood, and theſe two command the Paſſage by reaſon of the Narrowneſs of the Channel.

To the Southward of theſe Streights, and between *Greece* on the Weſt, and *Natolia*, or *Leſſer Aſia* on the Eaſt, are the numerous Iſlands of the *Archipelago*, or *Egean Sea*, of the moſt material of *he Archi-* which we ſhall treat in diſtinct Chapters.

n Sea. The *Ionian Sea* on the Coaſt of *Epirus*, on the Weſt of *Greece*, and at the Entrance of the Gulf of *Venice*, or *Adriatick Sea*, and to the Southward of *Greece*, the *Archipelago* and Part of *Natolia*, is the *Levant*, or Eaſtermoſt Part of the *Mediterranean*, call'd by the *Turks* the *White Sea*, but for what reaſon we know not; but however, as including that he ſtiles himſelf Lord of the *Black*, *Red*, and *White Seas*, the *Archipelago* and *Ionian Seas* being in this Caſe reckon'd a Part of the *Mediterranean* or *White Sea*.

Red Sea. We have given a Deſcription of the *Red Sea* before, which added to the above-mention'd, includes all the Seas belonging to the *Turkiſh Empire*; we ſhall next treat of the principal Rivers, and firſt of thoſe in *Aſia*.

Rivers in Turky The principal Rivers of *Turkey* in *Aſia* are the *Euphrates* and *Tygris*, both of which riſe in the Mountains of *Armenia*, but in different and far diſ-*Euphrates.* tant Sources. *Euphrates* firſt runs croſs *Armenia* from Eaſt to Weſt, and then turns South, and divides *Armenia* from *Natolia*, or it may be ſaid divides the greater from the *Leſſer Aſia*; from thence it paſſes between *Syria* and *Meſopotamia*, and gliding ſtill to the Southward by *Chaldea*, and meeting with the *Tygris*, and running together for ſome ſpace, they again ſeparate, and become two Rivers, the Eaſtermoſt *Gihon*, and the other *Piſon*, and by theſe two Streams they fall into the *Perſian Gulf*, or Gulf of *Baſſora*, in the thirtieth Degree of North Latitude.

Tygris. *Tygris* is ſo call'd from its rapid Motion, and, as above, riſes in the Mountains of *Armenia*, but not ſo far Northward as *Euphrates*; it runs generally South, or ſomewhat Eaſterly, and divides *Meſopotamia* from *Aſſyria*, and runs by *Bagdat*, (which ſome ſay is Old *Babel*, but that is a Miſtake; for *Babel* is further to the Southward,) and joining *Euphrates*, runs, as deſcribed in that River, into the *Perſian Gulf*.

There are no remarkable Rivers in that Part of *Turkey* which lies in *Africa*, but only the River *Nile*, which riſes in a Lake in the Kingdom of *Nile in Africa.* *Goyama* in *Africa*, in Latitude fourteen Degrees North, and when it has run croſs that Kingdom and *Ethiopia*, it runs North through the Middle of *Egypt*, and empties itſelf into the *Mediterranean* by two grand Channels, the Weſtermoſt call'd *Roſetta*, and the Eaſtermoſt *Damieta*, though Travellers affirm that there are ſeveral ſmall Channels. This River is remarkable for two Things, the firſt is the prodigious Cataracts or Falls, which renders Navigation impracticable above them, or to the Upper or more Southerly Parts of the River; and the other is the annual Overflowing of its Banks; which has for ſo many Ages been thought a Miracle, or rather a Prodigy, though it proceeds from natural Cauſes, as we have inſtanc'd in the Deſcription of *Tonquin*, Chap. I. whoſe Rivers, as well as others that riſe between the Tropicks, are affected with the ſame Property of annually overflowing of their Banks in the ſame Manner as the *Nile* does; but we ſhall treat further upon this Subject when we give a particular Account of *Egypt*, or *Turkey* in *Africa*; and in the mean Time proceed upon the Deſcription of the Rivers in *Turkey*; the chief of thoſe of *Turkey* in *Europe* are,

1. *Danube*, which riſes near a Village call'd *Tonc Eſchingen* in *Suabia*, a Province of *Germany*, and runs by *Ratisbon*, *Vienna*, *Presburg*, *Buda*, and *Belgrade*, and paſſing Eaſtward, it ſeparates *Servia* from *Wallachia*, and afterwards paſſes between *Moldavia* and *Bulgaria*, and falls into the *Black Sea* by ſix Channels, after a Courſe of above a thouſand Miles; it is generally rapid, notwithſtanding that it is ſo broad, and has three Cataracts or dangerous Falls in it. *Danube.*

The *Neiſter* riſes in and proceeds from a Lake not far from *Leopold* in *Poland*, and runs Eaſtward between *Moldavia* and *Podolia*, or, which is the ſame, between *Chriſtendom* and *Turkey* in *Europe*, and falls into the *Black Sea* a little to the Northward of the moſt Northerly Mouth of the *Danube*. *Neiſter.*

The *Bog River* riſes in *Podolia*, and paſſing through *Budziack Tartary*, falls into the *Boriſthenes*, a little before it falls into the *Black Sea*. *Bog.*

The *Boriſthenes*, by ſome called the *Niper*, riſes in the Province of *Bielki* in *Muſcovy*, from whence it runs Weſtward by *Smolensko* in *Poland*, and then turning to the Southward, ſeparates *Budziack Tartary* from *Little Tartary*, and falls into the *Black Sea* about a hundred Miles to the Northward of the *Danube*. *Boriſthenes*

CHAP. III.

Gives an Account of the Original of the Turks, *alſo of their Genius and Temper; with their Perſons, Habits, Diet, Liquors, Diverſions, and Ceremonies.*

Tartary in Scythia. It is agreed by moſt Geographers and Hiſtorians that the preſent *Tartary* is the antient *Scythia*, and that the *Turks* had their Original from thence; but the preſent *Tartary* is diſtinguiſh'd from the antient *Scythia* in this, that *Tartary* ſeems to be confin'd to thoſe Parts of the World that lie to the Northward of *China*, *India*, &c. but *Scythia* takes in that Tract of Land contain'd on the North

of both *Asia* and *Europe*, or to the Northward of the *Caspian* and *Euxian Seas*. There was the *Turcæ* a *Scythian* Nation, mention'd both by *Pliny* and *Pomponius Mela*, but they have not inform'd us what Part of *Scythia* they possess'd. However, this we know, that the *Turks* were but little talk'd of till the ninth Century; when in the Year 844 compleat, which was the ninth Century current, they plunder'd *Georgia*, and penetrated as far as *Armenia Major*, where they then fix'd themselves, and from thence it was that this Country was call'd *Turcomania*.

A Revolution.

About the Year of *Christ* 1000 the *Saracen* Caliph of *Babylon* prevailing upon the Sultan of *Persia*, and reducing him very low, the Sultan made an Alliance with the *Turks*, who sent three thousand Men to his Assistance under the Command of *Tangrolipix*; by which Means the Sultan obtain'd a signal Victory; but *Tangrolipix* not being rewarded according to his Merit for that Service, or at least not according to his Expectation, it occasion'd a Difference; upon which a War commenc'd, wherein *Tangrolipix* defeated the *Persian* Sultan, and kill'd him in the Field, and by that Conquest commenc'd Sultan of *Persia* himself; but the *Turks*, who were *Pagans* at their coming into *Persia*, had convers'd so long with the *Saracens* as to incline to their Religion, and *Tangrolipix* on his Accession to the *Persian* Throne commenc'd Mahometan, without which Compliance he could not well have accomplish'd his Conquest, and establish'd his Empire; but having done that, and thinking himself now almost capable of any Enterprize, march'd against the Caliph of *Babylon*, defeated and kill'd him; and now thinking no Undertaking too difficult, he attempted the Conquest of *Arabia*, but being repuls'd and quite disappointed, he turn'd his Arms and Forces towards *Natolia*, or *Lesser Asia*, and made a considerable Progress in the Conquest of that Country.

Why call'd *Ottoman*

The *Turks* being now Sovereigns of *Persia*, continued so till the Year 1260, when another Swarm of *Scythians*, or *Tartars*, invaded *Persia*, and making themselves Masters of *Persia*, *Assyria*, and the *Lesser Asia*, reduced the *Turks* to a very low Ebb; and at the same Time there were two great *Turkish* Families in *Persia*, to wit, the *Ogycian* and the *Selzuccian*; of the latter was *Tangrolipix*, who with the whole Family was entirely suppress't and eradicated; but from the *Ogycian* descended *Ottoman*, who was an enterprizing Prince, and from very small Beginnings restored his Family and the *Turkish Empire* to their former Grandeur, making himself Master of *Nice*, *Persia*, and a great Part of *Lesser Asia*; and from him it is that the Empire obtain'd the Name of *Ottoman*, and to this Day the Grand Seignior deduces his Pedigree from this Prince.

Genius and Temper

The *Turks* do not seem to aim at any Improvements either in Husbandry or in Arts and Sciences, and although some Part of the *Turkish Empire* is now what was once the famous *Greece*, yet the Spirit of the People is quite degenerated from what it formerly was; a sluggish useless Life is now thought preferable to Learning and Industry, and they had now rather be in the *Haram* among the Women, than in a College among the Students; and as an Effect of this Indolence, *Natolia*, one of the most fertile Countries in the World, lies in a great measure uncultivated, and several Provinces of it, which were exceeding populous and fruitful, are now become barren Deserts, remarkable only for the Ruins of famous Places, and particularly for the once noted seven Churches of *Asia*, mention'd *Rev.* i. 11. of the former flourishing and present decay'd Condition of which, see Chap. XVII. following.

Their Indolence forms in them a kind of an Independent and Incommunicable Principle; for as the Vulgar scarce trouble their Heads about the Affairs of their own Nation, much less about those of others, their passive Spirits are so well adapted to submit to Arbitrary Government, that it is no Wonder that *A Slave in Turkey* is so compleat a Slave as now to become a Proverb. It is observed that sometimes five or six of them will sit smoaking together, and scarce a Word be spoke among them in a Quarter of an Hour's Time, and then seldom any of their Sentiments in Matters of State is the Subjects of Discourse; and though some impute this to their Ignorance or Indolence, yet others think that it is owing to the Restraints they lie under from such Discourse; and indeed the two different Opinions are easily reconciled, for if one Generation after another be deprived of the Liberty of Speaking of what is done, the Consequence must terminate in profound Ignorance, the Path-way to Slavery and Arbitrary Government; the dreadful Thoughts of which may be thought sufficient to induce the People of any free Nation to defend and preserve their Native Privileges.

Acute in Trade.

They are very acute in Trade, and will carry long Accounts in their Heads, without the Help of a Book, their Arithmetick, so far as they use it, being mostly natural, and the Effect of Custom or Necessity more than of Education. They are such Enemies to Exercise, that when they see a *European* or other Stranger walking backwards and forwards in a House or Garden, purely for the sake of walking, they look upon the Exercise as ridiculous, and the People that perform it as crazy or distracted; or if they are obliged to spend some Time, they are rather willing to loll or sit cross-legg'd a long Time than move or walk; and when there is any Concourse of them, either by Appointment or Accident, they seem to have no more Conversation than Animals of a lower Species, which only consists in the Satisfaction of sitting or standing near together.

Drinking

Their Law forbids Wine, but their Consciences can now and then dispense with such a Breach of *Mahomet*'s Injunctions, if it can be done privately, and especially among those of a superior Rank, who think it no great Crime to drink even to Excess, provided they can in their Liquor behave inoffensively, and not expose or discover themselves to others.

Charity.

Their Charity is very extensive, and in itself commendable; however some Travellers, that cannot deny the Fact, would deprive them of the Honour of it, by saying it is done for Ostentation; but let the Inducement be what it will, their Charity is such that when they see Misfortunes but approaching a Person, they take care if possible timely to prevent it, and where the Misfortunes have gone higher, and the poor Debtor is confined, they at certain Times visit the Prisoners, pay their Debts, and procure their Discharge, though with some Regard had to the preceding Conduct of the Prisoner.

Fires.

And in Cases of Fire, which are very frequent among those Timber Buildings, they make the Loss a common Case, and the Suffering of one is reliev'd by the Contribution of the rest.

They repair Highways and erect Fountains and Cisterns at their own Expence, for the Conveniency of Travellers, and build Caravansera's to entertain them upon the Road, as in some other Eastern Countries; and some, as an Effect of extraordinary Devotion, build Sheds by the Way Side, as intermediate Places for the weary Traveller to refresh themselves. Their Charity sometimes extends to Animals and Plants, they will purchase the Liberty of imprison'd Birds, feed others, and religiously water certain Trees which want it, which in that hot Country is reckon'd an Act of great Charity.

Quarels.

In their Quarels they commonly supply the Place of Blows with Words; they seldom fight, but conclude their irreconcileable Differences and Disputes with

with accompliſh'd Scolding, and a Complication of old or new invented Curſes, with which they put an End to the Quarrel, though it do not put an End to the Difference.

They treat all Religions but their own, and all Perſons but themſelves, with ſo much Scorn and Contempt, that they allow or eſteem no Body Holy, Wiſe, or Valiant but themſelves, and reckon all others Reprobates, not entitled to the good Things of this World or the next; and hence they look upon it as a Duty to endeavour to extend their Conqueſts all over the Face of the whole Earth, as believing that if they die fighting for the Cauſe of *Mahomet*, they are thereby entitled to a Seat in Paradiſe.

Predeſtination. They have ſuch an abſolute Dependance upon Predeſtination, that that alone ſupports them under all Apprehenſions of Danger; if any of the Family, or even a Slave, is infected with the Plague, they attend the Sick with the ſame Freedom as if the Diſtemper was not contagious; and by the ſame Principle their Courage is ſupported in the Field of Battle as firmly, believing that the Time of every Man's Death is ſo irrevocably fix'd, that no Dangers can forward it, nor can any Endeavours for Security retard or prevent it; if they run into the moſt apparent Danger, and with the utmoſt Precipitation and Raſhneſs, and be thereby cut off, the Survivors believe that they were appointed to die at that Time, and that ſuch an unwary Accident was appointed as the Inſtrument to draw them to it. And yet, however previouſly fortified with ſuch Reſolutions, as the Effect of this Doctrine, it is ſometimes made ſubſervient to that innate Principle of Self-Preſervation, and they will ſometimes endeavour to eſcape from an Enemy or other Danger for the Safety of their Lives.

Perſons. The *Turks* are generally well-proportion'd Men, their Women beautiful and agreeable, which may eaſily be expected to be the natural Conſequence of the beautiful *Georgians*, and the fair *Circaſſians*; being ſo frequently tranſplanted hither by ſelling them in their own Markets to the *Turks*, who keep them for Breeders, by which Means, and Proceſs of Time, the *Turks* have acquir'd a Generation of handſome and beautiful People.

Habits. The common Men ſhave their Heads, but wear their Beards long; only thoſe in the military Service and Seraglio wear Whiskers. The Men wear Turbants upon their Heads, being long Pieces of Linnen wound about their Heads, but the ſame kind, though not ſo extravagantly large, being often to be ſeen in *London*, we need not to enlarge upon a Deſcription of them; but they reſerve to themſelves the Prerogative (as they call it) of wearing white Turbants, the *Greek*, *Armenian*, and other Chriſtians not being allow'd to wear that Colour, how far ſoever they may ſubmit to temporize with the Dreſs of the Nation. They wear a Pair of Drawers cloſe before and behind, and which Way ſoever Nature has Occaſion for a Diſcharge, they equally let down their Drawers, and ſit down to perform the Office. Their Stockings are faſten'd to their Drawers; they wear a Shirt with white Sleeves, but no Collar or Wriſtbands, and upon this a kind of a Veſt ſomething like our late Banyans uſed in *London*; it comes down to their Heels, and is cloſe to the Arms and Wriſts; they tie it with a Saſh or Leather Girdle, and over it, when they are dreſt, they have a ſort of a looſe Gown, ſhorter than the Veſt, being red, blue, or green of the Outſide, and lined with Fur; their Stockings are Cloth, and inſtead of Shoes they have Slippers, with narrow piqued Toes, made of yellow *Turkey* Leather, which they put off at the Entrance of any Houſe, eſpecially of a Superior, by way of Compliment, as we in *England* do our Hats; they carry their Purſe and Handkerchief, and ſuch other Things, in their Boſom, which we commonly carry in our Pockets, and have their Poniards in their Girdles.

The *Grecians* are more numerous in ſeveral Parts of *Turkey* than the Mahometans, but endeavour to imitate their Maſters as far as they will allow them, ſome Colours (as white above-mention'd) being forbidden them; but you may know a Chriſtian from a *Turk* if you ſee but his Head and his Feet.

The Women's Dreſs is not much different from that of the Men, only inſtead of a Turbant they wear a ſtiffned Cap, with four Points or Corners on the Top of it; their Hair hangs down their Backs in Treſſes; and when they go abroad they are ſo veil'd or muffled up with Linnen Cloaths or Handkerchiefs, that nothing appears but their Eyes.

Food. The *Turks*, as well as other *Aſiaticks*, feed moſtly upon Rice, but they have alſo a high-ſeaſon'd ſtrong Broth, made of ſeveral kinds of Meat cut to Pieces, which Broth they call *Shorba*, they mix it with Rice; the Meat they intend to roaſt they firſt cut in Pieces, about as big as a Man's Hand, and skewer it together, with Garlick, Onions, and other Seaſoning between the Pieces; this they call *Keback*, it is very reliſhing Victuals: But the moſt genteel Diſh among the better Sort is *Pilo*, which is Rice made of Broth boil'd with Fowls and Meat, till all the Liquor is evaporated. The common People live pretty much upon Melons and raw Cucumbers at the Seaſon, and theſe they never dreſs at all. Inſtead of Bread they make Cakes of Meal, and bake them upon the Hearth; they are either temperate in Living, or elſe, like the Fox and the Grapes, they deſpiſe what they cannot obtain; for they neither enjoy the Variety that a great many Chriſtians do, nor do they ſeem to deſire ſo much as to imitate it. They do not effect new Faſhions, either in what they drink or wear, for their Faſhions continue the ſame through many, if not all, Generations.

Liquor. Their common Drink is Water, but they uſe Sherbets and other cooling Liquors, which is thought a ſufficient Entertainment for a Friend, eſpecially if to that they add Coffee, Tobacco, and Sweetmeats; and ſometimes they moiſten their Tobacco with Perfumes; if they drink Wine, it is privately about Bed-time. But though they do not ſeem to affect great Variety of voluptuous Living, yet what they fall ſhort in Quality, they ſeem to make up in Quantity; for they devour much more Victuals than we do, eſpecially Rice; and though they do not drink Plenty of Wine, yet they take pleaſure in eating Opium, even to Intoxication, and in moſt of the Cuſtoms they uſe, in eating one Thing, and abſtaining from another, their chief Authority is Cuſtom or Preſcription; they eat one Thing and refrain from another becauſe their Progenitors did the ſame.

At Victuals they uſually ſit in an open Hall, on a *Sopha* or Bench, about five Foot broad, and a Foot and a half high, it is cover'd with Carpets and Cuſhions to lean on; here they ſpread a Piece of Leather when they eat, and ſet little wooden Tables about half a Foot high before them, upon which they ſet a Bowl of Rice, with a Ladle, Meat, and Plates; which being done, the Maſter ſays ſome Words in Form of a Grace, beginning *In the Name of God Almighty, merciful*, &c. and one Napkin of blue Linnen ſerves all the whole Company.

Salutation. When they would ſalute one another, they expreſs it by inclining the Head a little, and clapping the Right Hand to the Breaſt; but when they ſalute a Perſon of Diſtinction, they ſtoop ſo low as to take up the Hem of his Veſt and kiſs it.

Lodging. The *Sopha*, or elſe the Floor itſelf, ſerves them to lie upon as well as to eat upon: A Slave comes

at

at Bed-time, and ſpreads a Quilt or Mattreſs for every Perſon, leaving a Pillow, and ſome Cloaths for a Covering; and when they riſe in the Morning, he comes again, and rolls up all that he brought, and puts them in the Cupboard from whence he had them, to lie till he has Occaſion for them again.

Games and Diverſions.

THE *Turks* play at Draughts and Cheſs for Paſtime, but not for Sums of Money; and thus they think they comply with the true Intent of the Law, which prohibits Gaming upon the Account of the Quarrels it creates, as ſuppoſing there will not be much Quarrelling about the Game when there is no Hazard of loſing. Their Country Muſick is not at all entertaining to *Europeans*; but their Dervices have a kind of a religious Muſick, to which they will dance ſo zealouſly, that before they leave off they are ready to drop down. Here are Dancing-Girls, as in *Perſia* and *India*, with whom they ſometimes entertain themſelves.

Exerciſes.

THEIR manly Exerciſes are ſhooting at a Mark, and that both with Fire-arms and Bows and Arrows, and in almoſt all Poſtures. They alſo learn to dart with a Staff, with which they attack and purſue one another, and ſometimes give one another dangerous Bruiſes.

Travelling.

THEIR Way of travelling with the Caravans is the ſame as in *Perſia*, (*Chap.* III. *towards the latter End,*) and *Arabia*, (*Chap.* III.) Only Mr. *Motraye* gives us an Account of ſome Particulars in their Way of Travelling which has not been mention'd in the Chapters now quoted. He obſerves that it is cheaper travelling in *Turkey* than in any Country in the World, becauſe Proviſions are plenty, and Horſe-hire cheap, particularly for *Franks* or *European* Chriſtians; for if one of them would undertake a Journey, he has no more to do but to apply himſelf to the Ambaſſador or Reſident of his Nation, who ſends his Interpreter with him to Court, or to the Governor of the Place, to procure him a *Menzil Ferman*, or a *Yoll Ferman*, and he has always one or the other granted.

Menzil Ferman.

IF they have what is called the *Menzil Ferman*, he bears all the Charges of the Traveller, both as to Horſe and Proviſion, *&c.* during the whole Journey, which he is at laſt allow'd to place to the Grand Seignior's Account; and their Manner of being ſupply'd on the Road is, that at every three or four Leagues there are Houſes of Entertainment, and Horſes laid to furniſh the Couriers and Expreſſes to all Parts of the Empire, and equally allow'd to any Gentleman to whom the *Menzil Ferman* is granted; and as for the Conveyance of Letters, tho' they have no General Poſts, yet thoſe Expreſſes will convey Letters for the *European Frank* Merchants to *Bagdat*, *Aleppo*, *Smyrna*, *&c.* at reaſonable Rates.

WHEN a Gentleman who has the *Menzil Ferman* arrives at any Stage, there are People ready to take care of his Horſe and Baggage, and provide freſh Horſes while he eats and drinks, or otherwiſe refreſhes himſelf; for come in by Day or Night, there is always Meat, Fiſh, or Rice dreſt for the Travellers Entertainment; but if the Traveller has only a *Yoll Ferman*, he pays ten Aſpres, or Half-pence for every three Miles for his Horſe, but his Guide, Lodgings, and Proviſions are all upon Free-coſt. *Yoll Ferman.*

THE Caravanſera's or Inns where Travellers lodge that have no *Ferman*, are very common upon the Road, but eſpecially in the Towns or Villages at proper Stages or Diſtances; for the Manner of building of which ſee *India*, *Chap.* IV. latter End, and *Perſia*, *Chap.* II. Here they not only lodge *gratis* in *Turkey*, but have boil'd Rice, Meat, and Bread, if they will accept of it; notwithſtanding which, Proviſions being ſo cheap, People of any Faſhion generally make uſe of their own; but the *Turks* are ſo generous, that if a poor Traveller falls among them that has no Proviſion of his own, he need make but very little Ceremony to ſit down and eat among his own Countrymen. *Turkiſh Generoſity.*

THE Roads, Ciſterns, Bridges, and Caravanſera's are repair'd by the private People; ſome contributing their Money, and others their Labour; every one looking upon it to be a Work of Charity to provide for the Neceſſity and Conveniency of poor Travellers, and thoſe who have nothing but their Labour to depend upon for a Subſiſtence, will contribute a Part of that to that charitable Purpoſe; and Travellers further aſſure us, that thoſe Eaſtern (now *Turkiſh*) Countries of *Chalden* and *Meſopotamia*, retain their Native Principle of Generoſity that *Abraham* practiſed, (*Geneſis* xviii.) and will not only invite Travellers and Strangers to their Houſes, but contend for the Honour of entertaining them.

CHAP. IV.

Of the Power, Court, and Officers of State of the Grand Seignior; as alſo of his Women, and other Inhabitants of the Haram or Seraglio.

THE Grand Seignior thinks his Power ſo abſolute and unlimited, that he looks upon not only the Country or Empire, but even the Lives and Fortunes of the Inhabitants to be at his diſpoſing; but in this Caſe there is a Diſtinction between his Officers, or indeed his Creatures and Courtiers, who have their Dependance upon him, and thoſe other of his Subjects who have no Place or Penſion under the Government; thoſe have nothing to fear either as to their Lives or Effects, and do not pay any Duties to the Government; for ſhould he attempt to tax them, or change their antient Cuſtoms, he would run the Hazard of being depoſed. Two ſorts of Subjects.

As to the others that have been preſented to him, or purchaſed by him, or which Way ſoever, they become his Vaſſals, and are bred up in the Seraglio; theſe he acknowledges to be his own, 'tis true, but by Vertue of this his abſolute Property in them, he exerciſes an arbitrary Power over them, and not only diſgraces, but puts them to Death upon the leaſt Suggeſtion of Diſaffection or Miſconduct, without allowing them to anſwer for themſelves; and their Children commonly feel the Effects of the Reſentment, and ſcarce ever ſucceed to the Poſt or Fortune of the degraded Father. (*Thus far Mr.* Motraye.) But all Officers Civil and Military, as Viceroys, Baſſaws, and Governors, and even the whole Militia, are compoſed of theſe Royal Slaves or Court Dependents; and the Chriſtians, who are there very numerous, (and ſome go further, and ſay they are as numerous as the *Turks* themſelves,) are certainly in the Grand Seignior's Power, and treated as his Vaſſals, which is very probable when the *Turkiſh* Eccleſiaſticks, and even the Muſti, are depoſed, or ſometimes

times put to Death upon the least Disgust of the Grand Seignior; from whence we may conclude that he has an arbitrary Power, how far soever he may please to dispense with it in favour of his Mahometan Subjects.

Absolute Power.

However, his Power is little less than absolute in defending the Mahometan Religion against all Opposers under his Jurisdiction; to which his Mahometan Subjects are so biggotted, that if he should not defend and protect it, they would look upon themselves as absolved from their Allegiance; and whatsoever Pique they may have privately against him, yet they think no Plea so good as that of his not protecting the Faithful, (so they call the Mahometans,) and if he fails in that, they allow it to be not only a grand Plea against him, but a plausible Reason to depose him if they all unite against him.

Grand Seignior claims all Lands.

The Grand Seignior looks upon all the Lands in the Empire as his own, and consequently whatever Estates any Persons are possess'd of he thinks they hold them all of him, under certain Tenures; among which some of the conditional ones are, that when they are required to it, they shall bring into the Field a certain Number of Men and Horses, in proportion to the Land assign'd them; and thus the Prince first making the Land his own, made all the Forces his own of Course, and all his Creatures were then his Slaves, and obliged to serve him without any further Charge; only with this Condition, that it is in his Power to resume the Grant of his Lands at pleasure, but that when he recals the Privilege he formerly granted them, they are discharged from the Obligations that they were under.

The Tribute.

The Prince or Grand Seignior is stiled by his Subjects *The Shadow of God, a God on Earth, Brother to the Sun and Moon, Disposer of all Earthly Crowns*, &c. and by his Bigots he is look'd upon as something more than Human, and not bound by any Law whatsoever, except that of maintaining the Mahometan Faith.

Coronation.

The new Emperor at his Accession is conducted in great State to a Place in the Suburbs of *Constantinople*, call'd *Job*; where is a Monument, supposed to be that of *Job*, though their Reasons for that Opinion are very inconsistent with their History, which makes *Job* to be one of *Solomon*'s Judges, though he lived some hundred Years before *Solomon*'s Time, if we allow him to be the Son of *Isshak*, as expresst *Gen.* xlvi. 13. However, at this Place they, at the Inauguration of an Emperor, first offer solemn Prayers, that God would prosper the new Emperor, and inspire him with Wisdom, &c. and the *Mufti*, embracing him, pronounces the Benediction; and the intended Grand Seignior solemnly swears to maintain the Musulman Faith, and Laws of the Prophet *Mahomet*; though their Doctors hold that he is only obliged to observe that Part of the Law relating to Religion, but that he may alter or interpret the rest as he pleases; and this Belief very much excites their implicit Obedience to his Dictates, and corroborates his arbitrary Power; for though their Law was left them by *Mahomet*, yet his Construction of it is a Law to them, and as such they imbibe it from their Infancy; especially those that are brought up in the Seraglio, and are design'd to fill up the great Places in the Empire, they are kept in so much Ignorance, as to believe that an entire Submission and Resignation to the Emperor's Commands will entitle them to a Crown of Martyrdom, and a Seat in Paradise if they die in the Service he commands them to.

Those who have any Salary or Pension from the Government, or are in any Office under the Crown, seem to regard the Prophet more than the Honour, for at last they are but call'd the Grand Seignior's Slaves; but that Title they look upon as an Honour, and indeed such Slaves as they are there call'd, have the Command of those Subjects who are not in the Grand Seignior's Pay, so far at least as to insult them at their Pleasure. The Term of *Slave* is not quite so contemptible there as with us, but even there it signifies one who is entirely devoted to the Emperor's arbitrary Will, and is obliged to undertake whatsoever he commands, let the Danger in the Execution, or the Consequence in the Conclusion be what it will. Slaves.

Young Boys.

The young Boys educated in the Seraglio are commonly the Children of Christian Parents, and intended for Places in the Government: They are commonly either taken in the Wars, or made Presents from the Viceroys of *Georgia* and *Circassia*, which Places produce the most sprightly, beautiful, and well-shap'd Children that that Country, or perhaps the World, affords; *Circassia* being a Country noted in History for producing beautiful Persons of both Sexes: When there is a Number to be entred into the Seraglio, the Emperor reviews them, and according as they excel in Beauty, or other Accomplishments necessary to qualify them for the Seraglio, they are differently disposed of to the respective Seraglio's of *Pera*, *Adrianople*, or *Constantinople*; which last is preferable to the other, and the readiest Way to Preferment of all the three; they being under the Care of the *Capi Aga*, or Chief of the white Eunuchs; where, during their Continuance there, they are often, by Way of Correction, treated with great Severities.

Education.

The first Lesson they learn in the Seraglio (if it may be call'd a Lesson) is Silence, and then they are instructed in the Mahometan Principles, and to speak, read, and write the *Turkish* Language, and then the *Persian* and *Arabick*; their Diet is Rice and other wholsom Food, and their Raiment is commonly of *English* Cloth. The Eunuchs have a strict Eye over them till they are fit for manly Exercises, and then they are taught to handle the Spear, to draw the Bow, and to throw the Gerit or Dart; in which Exercises they spend much Time, and are corrected if they do not improve. They are also taught, as in *Persia*, to shoot their Arrows on Horseback in full Career, backwards, forwards, sideways, and in almost any Posture: (*See Chap.* III. *of the Description of* Persia.)

As they improve in their Exercises, they are advanced to a superior Class and Dress, changing their Cloth Vests for embroider'd Silks, their Salaries are augmented; and as Places fall they are prefer'd to the *Hazna Oda*, or Chamber of the Treasury, or to the *Kilor*, or Dispensatory, where the Drugs and Cordials are kept for the Grand Seignior's Use. And from these two Chambers they are elected into the highest Class of the Seraglio, or *Hax Oda*, which consists of forty Pages which attend the Grand Seignior's Person, of which twelve hold the principal Offices at Court, as 1. the *Selictor Aga*, or Sword Bearer; 2. the *Chiohadar Aga*, who carries the Grand Seignior's Cloak; 3. the *Richitor Aga*, who holds his Stirrup; 4. the *Ebrichta Aga*, who carries him Water to drink or wash with; 5. the *Tulbentar Aga*, who makes up his Turbant; 6. the *Kemhosar Aga*, or Keeper of the Wardrobe; 7. the *Chesnegar Bassa*, or Chief Sewer; 8. the *Zagargee Bassa*, who looks after the Dogs; 9. the *Turnachgee Bassa*, who pares his Nails; 10. the *Berber Bassa*, or Chief Barber; 11. the *Mahosebegee Bassa*, or Chief Accomptant; and 12. the *Tekeregee Bassa*, his Secretary; and besides these the *Dogan Bassa*, or Chief Falconer, and the *Hammamgee Bassa*, or Keeper of the Baths, are great Offices at Court. Officers at Court.

Those who are thus introduced to the Dignity of the Royal Chamber, are constantly under the Prince's Eye, and he frequently presents them with Swords, Bows, Vests, and the like, and are allow'd them. Presents made them.

allow'd to take Preſents for their Interceſſion and Application in the Behalf of others; they are alſo ſent with Orders to the Viceroys, Baſſa's, and Tributary Princes, from whom they receive large Preſents in Money, Jewels, Horſes and the like; and as Places and Governments fall they are preferr'd to them, but ſeldom till they arrive at or near forty Years of Age, and then their Judgment is look'd upon as ſound and mature, and the Heat of Youth ſuppos'd to be pretty well allay'd; and when they are rais'd to any Command, or Place of Truſt, they are preſented by the principal Members of the Seraglio as Favourites of the Grand Seignior, and take their Leave of the Seraglio with great Ceremony.

We ſhall not enlarge upon the unnatural Love, or rather Luſt, practiſed by the young Men in the Seraglio among themſelves, which is allow'd and practiſed by the Grand Seignior himſelf; inſomuch that they keep the handſomeſt of their young Men for Pages, and for the ſake of thoſe indecent Familarities which they exerciſe with them, make them their Companions, and ſometimes allow Honours to be paid them, not much if at all inferior to what they require to be paid to themſelves; and the Women likewiſe pleaſe themſelves with ſuch Indecencies, being deprived of Converſation with Men.

Mutes and Dwarfs.

The Emperor keeps Mutes, which are born Deaf, and conſequently are Dumb, to the Number of about forty; they teach them how to diſcourſe by Signs, and maintain Converſation without the uſe of Words, and there are eight or nine of the favourite Mutes continually attend the grand Seignior: He alſo keeps a Number of Dwarfs, little or deformed, and thoſe with the Mutes he uſes as Buffoons to divert himſelf with when he is ſo diſpoſed; but when a Dwarf proves a Mute, and eſpecially if he has been made an Eunuch, it is almoſt impoſſible to put too great a Value upon him. One of theſe being preſented to the Grand Seignior, was cloathed in the richeſt Tiſſue, and had the Liberty of paſſing all the Doors of the Seraglio; a Privilege ſcarce ever granted to any other Eunuch belonging to the Grand Seignior's Court. We ſhall ſpeak more largely of the Officers of the Eunuchs when we come to ſpeak of the Officers of State.

Ladies of the Seraglio.

The Ladies of the Haram, or Seraglio, are generally born of Chriſtian Parents, and are a Collection of beautiful young Virgins, either ſold into *Turkey* or taken in the Wars. When they are firſt entered into the Seraglio they are committed to the Charge of an old *Duena*, or Governant; they are taught Muſick, Dancing, and other Accompliſhments, and furniſh'd with rich Cloaths and Jewels to render them as agreeable to their Lords as poſſible, and ſeveral of them frequently play and dance before the Grand Seignior, while others entertain him with their Converſation. When he chuſes any one to be in private with him ſhe is complimented by the Ladies of the Court; and being dreſt and ſet out to the beſt Advantage, ſhe is conducted to his private Apartment with Songs and Muſick, and other Demonſtrations of Joy and Triumph, as being diſtinguiſh'd for her ſuperior Charms among ſuch a Crowd of Beauties; when ſhe has obtain'd this Honour, ſhe has an Apartment, with Servants and an Equipage appointed her, as being now become a Royal Concubine; and if ſhe is ſo fortunate as to bring the firſt Son, ſhe is crown'd with a Coronet of Gold ſet with precious Stones, and ſtil'd the *Haſaki Sultana*, but thoſe who afterwards have Children are only ſtil'd the firſt, ſecond, third Concubines, &c.

The Grand Seignior's Daughters are commonly married very young to ſome of the Baſſa's or Viceroys of Provinces, who are obliged to keep Courts, and maintain them like Sovereigns, and make large Preſents to the Grand Seignior for having the Honour to match with his Blood; and the *Baſſa*, &c. having married one of them is obliged to put away the reſt of his Wives, how long ſoever he has had them; and if he is but even ſuſpected to caſt an amorous Glance upon one of the female Slaves of his Royal Wife, it is as much as his Life is worth.

The Grand Seignior never marries, nor does he ever take the Daughters of any Mahometan Princes or Subjects to be his Concubines, but they are generally the handſomeſt Girls of thoſe either taken in War, purchaſed, or preſented to him (as above) when young, and brought up in the Mahometan Religion. If the *Sultana Haſaki*'s Son dies, ſhe, with him, loſes her Dignity, and the next that has a Son, ſucceeds her in the ſame Honour. The Ladies of the Haram are never ſuffer'd to go abroad, except when the Grand Seignior removes from one Palace to another, and then if they travel by Water they go in Boats encloſed on all Sides with narrow Lattices, and if they go by Land they are put in cloſe Chariots, and Signals are made at certain Diſtances to give notice of their Approach, that no Perſon may attempt to come in or near the Road where they are, and all this to prevent their being ſeen; and when they are to take an Airing in the Gardens of the Palace, *Helvet* is cried, and all People are obliged to remove at a great Diſtance; and then, before they enter the Garden, an Officer of the white Eunuchs ſearches all the Walls, to ſee that there be none of the young Men that are educated in the Seraglio attempting privately to ſee them, and when he finds all the Coaſt clear, and, to be further ſecure, having planted Eunuchs at the Windows, and at all Places from whence the Gardens can be ſeen, the Ladies come out of their Apartments to walk in the Gardens.

Concubines.

Slaves.

There are Female Slaves kept to wait upon thoſe that are choſe and ſet apart for the Grand Seignior's Uſe, and alſo luſty Male Slaves to go through the Drudgery, as Porters, Gardiners, Hatchet-men to cut and carry Wood, and Watermen; alſo Cooks, Butchers, Confectioners, Attendants of the Hoſpital, &c. Thoſe Slaves of the loweſt Claſs call'd *Agiamoglans*, undergo great Hardſhips, not only in Labour but Faſting, they wear coarſe Cloaths and Felt Caps, and their Diverſion, if it may be ſo call'd, conſiſts more in running, leaping, wreſtling, and ſuch violent and laborious Exerciſes, than in reading, writing, and the like; they are lodged in Sheds, and receive their Pay once in three Months, which is about four or five *Aſpers* (or Halfpence) a Day.

Officers of State.

The Officers of State, as has been hinted before, are commonly choſe out of the Royal Slaves which have been educated in the Seraglio; their Head is the Grand Vizier, in whom the Grand Seignior repoſes an almoſt unlimited Confidence, leaving the Adminiſtration entirely in his Hand, and giving him the ſole Command of both Peace and War; he has the Direction of the Revenue, and is ſupreme Judge both in Civil and Criminal Caſes. The Sultan at the Advancement of any one to the Poſt of Prime Vizier, delivers him the Seal of the Empire, upon which his Name is engraven, and the Vizier always carries it in his Boſom, and under it he iſſues his Orders: he diſpoſes of many Honours, and Offices; but his Power is limited in Military Matters, and he cannot inflict any Puniſhment upon a Soldier without the Conſent of his Officer. His Court is always open, and he gives Audience to the meaneſt Subject; he appears very magnificent, with a Turbant adorn'd with two Plumes of Feathers ſet with Diamonds and Precious Stones; his Guard is four hundred *Boſniaks*, ſome of which attend him on Foot when he goes to the Divan, but when he takes the Field, they are all gallantly mounted, and are arm'd with a Pair of Piſtols, a Launce, a Sword, and a Hatchet.

When

How inſtled with Command.

When the Grand Seignior inveſts the Grand Vizier with the Command of the Army, he takes one of his Plumes from his Turbant, and at the Head of the Army delivers it to the Grand Vizier, as a Badge of the Authority and abſolute Command he has given him over the Army, and the Soldiers after that look upon him as their General. In Time of War he has a Power to fill all the vacant Poſts, in which he commonly takes care to prefer the moſt deſerving of his Officers; and although in Times of Peace the Grand Seignior reſerves to himſelf the Prerogative of diſpoſing of Places of Truſt and Profit, yet as the Grand Vizier has the moſt Experience of the Merit of his Officers in the Time of War, his Recommendation for the Preferment of any of them in Times of Peace generally ſucceeds.

Grand Vizier's Salary.

The ſtated Salary of the Grand Vizier is but five thouſand Pounds a Year; but his Perquiſites make it amount to an immenſe Sum; for thoſe that are laying out for Preferment make him valuable Preſents to pave the Way to Succeſs, and as much as poſſible engage him in their Intereſt: His greateſt Rivals or Competitors in Power are the Sultana's Mother, the favourite Sultaneſs, and the chief Eunuch, who having the grand Seignior's Ear in his Retirements, can infuſe Sentiments into him in favour of their Friends, when even the grand Vizier himſelf can have no ſuch Opportunity; by which even his Schemes are ſometimes defeated, and theſe his Rivals not only ſometimes thus diſappoint him, but are Spies upon his Conduct, and oftentimes procure his Diſgrace, and ſometimes the Loſs of his Head; and though it is a great Place, yet it is ſo precarious, that it was look'd upon as no leſs than a Miracle that the two *Cuperli's*, Father and Son, enjoy'd this Place one after the other, without ſuffering Diſgrace when alive, and at laſt died peaceably in their Beds. Doubtleſs though their Merit was very great in diſcharging ſuch an important Office with Reputation and Applauſe, yet their great Succeſs contributed to their Eſtabliſhment.

Other Viziers.

But beſides the Grand Vizier, there are ſix others, call'd Viziers of the Bench of Council, and Baſſa's of the three Horſe-Tails, becauſe there are three Standards or Horſe-Tails carried before them, whereas the other Baſſa's have but one. Theſe ſix are skill'd in Law and Politicks; the Grand Vizier ſummons them to the Divan, but he is at Liberty to obſerve or reject their Advice as he pleaſes. The Mufti or Civil Judges are alſo called to aſſiſt at their Councils, and ordinary Matters are often determin'd by them.

Divan.

The Divans are both Councils and Courts of Juſtice, and are held every Day except Fridays, at the Vizier's Palace. He goes alſo to the Divan in the Seraglio in great State, the People ſhouting and wiſhing him Proſperity as he goes along the Street; and when he comes near the Gate, the Baſſa's haſten their March, and range themſelves on the Right Side of the firſt Court as the Vizier paſſes by. Upon entring the Divan, Prayers are made, and when the Court is come into the Divan, all the People proſtrate themſelves on their Faces to the Ground. When the Grand Vizier is ſeated, the two Juſtices take their Places on his Left Hand, which is the Poſt of Honour in *Turkey*; the chief Juſtice of *Europe* next him; and the chief Juſtice of *Aſia* in the ſecond Place; and next to theſe the Treaſurers of the Empire. The other Viziers, with their Seals, ſit on the Right Hand of the Grand Vizier; and if any Beglerbeg or Viceroy be arrived from his Government, he is placed next to the Viziers.

Buſineſs of the Divan.

When the Court is ſet, the firſt Buſineſs they enter upon is the State of the Revenue. The *Chiaus Baſha* takes the Seal off from the Door of the Treaſury, and brings it to the Grand Vizier; after which the Treaſury is open'd, and Money receiv'd or iſſu'd out as Occaſion requires, and then the Door is ſeal'd up again. The next Thing that comes under their Conſideration is Foreign Affairs, and then Domeſtick, and Orders, Grants, Patents, &c. are diſpatch'd. The Secretary of State records the Acts of State, and tranſmits the Orders of the Porte to the reſpective Viceroys and Governors; and when thoſe publick Affairs are over, they proceed to try criminal Cauſes, where the Accuſer appearing with his Evidences, the Offender is either condemn'd or acquitted immediately; and laſtly, comes on the Trial of Civil Cauſes, which concludes the Buſineſs of the Court for that Day.

Officers of the Seraglio.

The firſt Officer of the Seraglio is, 1. the Chief of the black Eunuchs, and Keeper of the Virgins; and it is obſerved that they always truſt thoſe beautiful Ladies under the Care of one of the uglieſt of the black Eunuchs that can be produced; for which one or both of the following Reaſons may be given for it, *viz.* either that he may appear leſs tempting to them, or that the Grand Seignior himſelf may upon his Approach appear more amiable, after their Eyes have been ſo long entertain'd with ſuch a diſagreeable Object; 2. the Chief of the white Eunuchs is always near the Grand Seignior, and introduces Ambaſſadors and Miniſters to his Preſence, and none can go in or out of the Grand Seignior's Apartment without his Leave; 3. the Governor of the forty Pages of the Bed-Chamber; 4. he that takes care of the Repairs and Furniture of the Grand Seignior's Apartment; 5. the Keeper of the Privy-Purſe; 6. the Butler or Keeper of the Cellars, Kitchens, &c. 7. the Grand Falconer, who puts on the Emperor's Veſt; 8. he who holds his Stirrup; 9. the Sword-bearer; 10. the Keeper of the Baths; 11. the Launderer, or he that has the Care of the Linnen; and, 12. the Maſter-Archer, or he that has the Command of thoſe that ſhoot with the Bow. Theſe ſeveral Officers are moſtly diſtinguiſh'd by their Caps, as the Hatchet-Men that cut Wood wear a Cap like a Sugar-loaf, &c.

Caimacan.

The Caimacan or Governor of *Conſtantinople* (which famous City ſhall be deſcribed when we come to treat of *Turkey* in *Europe*) has his Apartments without the Seraglio; he is the Grand Vizier's Lieutenant, and ſupplies his Place in his Abſence, even to ſo high a Station as that of giving Audience to Ambaſſadors. The Aga or General of the Janizaries is an Officer of great Authority and Reputation, having a hundred thouſand Janizaries at his Command. The Chiaux are Meſſengers of the Court, ready to be diſpatch'd to execute the Emperor's Order, whatever it be; though it be to take off the Head of a Baſſaw or Governor, yet neither the Executioner nor the Sufferer muſt diſpute it.

Viceroyalties.

There are ſeveral ſorts of Beglerbeglicks or Viceroyalties; of the firſt ſort there are about twenty, each of which have ſeveral Sangiackſhips or Provinces; the firſt is the Viceroyalty of *Natolia* or *Aſia Minor*, containing fourteen Provinces; 2. *Caramania*, antiently *Cilicia* (*Acts* xxii. 3.) hath ſeven Provinces; 3. *Diarbeck* or *Meſopotamia*, hath nineteen Provinces; 4. *Scham* or *Damaſcus*, hath ſeven Provinces; 5. the Viceroyalty of *Sivas*, a City of *Armenia Major*, contains ſix Provinces; 6. *Erzerum*, on the Confines of *Georgia*, hath eleven Provinces; 7. *Van* in *Turcomania* contains fourteen Provinces; 8. *Tchildir*, on the Borders of *Georgia*, contains nine Provinces; 9. *Sheriſoul* in *Curdeſtan*, or antient *Aſſyria*, hath twenty Provinces; 10. *Halep* or *Aleppo*, contains ſeven Provinces; 11. *Maraſh*, near the River *Euphrates*, four Provinces; 12. *Kibros*, or the Iſland of *Cyprus*, ſeven Provinces;

13. *Tarabolus Scham*, or *Tripoli* in *Syria*, four Provinces; 14. *Terbozon*, or *Trapezond*, on the South-East Part of the *Black Sea*, formerly the Imperial Seat of the *Commeni*, has fourteen Caſtles, but no Provinces; 15. *Kars* has ſix Provinces; 16. *Mouſal* or *Niniveh*, in *Aſſyria*, commands five Provinces; 17. (in *Europe*) the firſt is *Rumuli*, or *Romania*, the Seat of *Conſtantinople* and of the Grand Seignior, and the moſt honourable Poſt in all the *Turkiſh Empire*; 18. the Captain Baſſa, or Admiral of the Fleet, has likewiſe the Command of thirteen Provinces on the Continent, or in the *Archipelagian Iſlands*; 19. *Boſnia*, formerly divided into *Liburnia* and *Dalmatia*, now jointly call'd *Sclavonia*, in which are eight Provinces; and laſtly the Baſſa of *Caffa*, or *Theodoſia*, in the *Taurica Cherſoneſe*, he has only ſome poor Villages, but no Provinces

Saliane Viceroyalties.

ANOTHER Sort are *Saliane* Viceroyalties, they are paid out of the Grand Seignior's Treaſury, and are, 1. The Viceroy of *Grand Cairo*, he has the Government of the Kingdom of *Egypt*, which is divided into ſixteen Provinces. 2. The Viceroyalty of *Bagdat*, or *Babylon* in *Chaldea*, two and twenty Provinces; and to theſe ſome add *Algier*, *Tunis*, and *Tripoli*, but they ſeem now to be independent on the *Turkiſh Empire*, and treat with other Princes in their own Names, as Sovereign States.

EVERY Viceroy, Baſſa, &c. is obliged for every five thouſand *Aſpers* (which is little more than ten Pound Sterling) Rent aſſign'd him, to bring a Soldier into the Field compleatly armed; and to ingratiate himſelf into the Grand Seignior's Favour, ſome of them bring more than they are obliged to produce. Of the Beglerbegs, Viceroys or Baſſa's, ſome of them have the Title of Viziers, as the Baſſa's of *Anatolia*, or *Leſſer Aſia*, as alſo of *Buda Cairo*, and *Babylon*; but as the Territories belonging to *Buda* is now under the Emperor's Dominions, it is to be ſuppoſed that the Honour of Vizier is transferr'd to ſome other Baſſa.

Three chief Officers.

IN every one of theſe Governments, or Diviſions above-mention'd, there are three principal Officers, the Mufti, or Chief Prieſt; the *Reis Effendi*, who acts as Chancellor, or Secretary of State; (for theſe two Offices ſeem to be united in him;) there is alſo the *Teſter lau*, or Treaſurer, who are of the Baſſa's Council, but employ'd as Spies to inſpect into his Actions and Conduct. Appeals lie from theſe Offices to thoſe of the ſame Denomination at *Conſtantinople*, and their Power extends all over the *Turkiſh Empire*.

Crim Tartary.

As for *Crim* or *Little Tartary* the Han, or Cham of it is in ſome meaſure dependent on the *Turk*, at leaſt ſo far, that upon the Acceſſion of a new Cham to the Throne, the Grand Seignior claims a Power to confirm or reject him, and if the former, he makes him take the Oath of Fealty, and takes his eldeſt Son as an Hoſtage or Pledge of his Performance. And what makes the *Tartars* eaſy is, that they think in Caſe of failure of Iſſue in the *Ottoman* Line, the Empire is by antient Compact to devolve upon them, in hopes of which the *Tartar* keeps himſelf cloſe to the *Turkiſh* Intereſt, that he may hay have a more free Acceſſion to the Throne in caſe that Revolution ſhould happen to come about.

THE Grand Seignior in the mean Time pays that Deference to the Hans, or Chams of little *Tartary*, that he does not ſend his abſolute Commands or Orders to him, as to other Viceroys, but treats with him by Letters in the following Stile, viz. *To the Poſſeſſor of excellent Power and eſtabliſh'd Glory, the King of* Crim, Gian, Begli, *&c.* and by an antient Contract, whenever the Grand Seignior takes the Field, the *Tartar* Han is to join him with an Army of a hundred thouſand Men; but if the Grand Vizier or ſome other General head the Army, the Han is only obliged to meet and aſſiſt him with forty or fifty thouſand, under the Command of one of his Sons; or whatever General it be, they commonly enrich themſelves with the Plunder, but eſpecially with the Captives, who, Male or Female, are all ready Money when they bring them into *Turkey*.

WHEN they march into an Enemy's Country, they continue their March into it for three or four Days, without doing any Execution; but when they turn their Faces homewards, they burn, plunder, and ſpoil all before them, carrying off the Inhabitants to *Turkey*, for Sale, like ſo many Cattle to a Market; and for the greater Expedition, every *Tartar* has three or four Horſes to mount his Captives upon, and make a running March Day and Night, till they find themſelves ſafe; ſo that no regular Forces can come up with them; and the Country People are ſo far from being able to reſiſt or defeat them, that their Perſons as well as their Subſtance become a Part of their Plunder.

Tributary Countries.

THE Countries tributary to the *Turk* are as follow: *Moldavia*, whoſe Natives are generally Chriſtians, was firſt made tributary to the *Turks* by *Mahomet the Great*, but revolted after, and was not quite ſubdued till the Year 1574. It is true, the *Turk* ſtill allows them Princes of their own, but they are of his abſolute Choice, without any Regard to Succeſſion, or the Royal Line, or the Qualifications of the Perſon he advances to Regal Dignity, any further than that he is commonly ſome worthleſs Creature that the Grand Seignior can make a Tool of as he pleaſes; ſo that the Government may yet be ſaid to be in his Hands; and indeed he ſqueezes and oppreſſes theſe People more by thoſe Titular Kings that he puts over them, he does his Subjects that are govern'd by his own Baſſa's.

Yearly Tribute.

THE yearly Tribute that *Moldavia* pays to the Grand Seignior is a hundred and twenty Purſes, containing ſixty thouſand Dollars, ten thouſand Okes of Wax, and a thouſand Okes more for the Uſe of the Arſenal, ten thouſand Okes of Honey, ſix hundred Quintals of Tallow, five hundred Ox Hides, and five hundred Pieces of Canvas. To the Prime Vizier they preſent ten Purſes, each five hundred Dollars, and Sables for a Veſt. To the chief Steward five hundred Dollars, and to the Treaſurer the ſame. As for what is extorted by Artifice is uncertain, and may rather be call'd a Perquiſite than a Tribute; and under this Denomination we may reckon the Price paid for the Principality, which is every third Year ſet to Sale, and then the leaſt that muſt be paid to the Grand Seignior is a hundred and fifty Purſes, or ſeventy five thouſand Dollars; to the Queen Mother twenty five thouſand Dollars; to the Grand Seignior's Favourite five thouſand, and the ſame Sum to the chief of the black Eunuchs, beſides great Sums extorted by the Grand Vizier and others, for ſoliciting the Bargain, *&c.* and as the Grand Seignior gives no Credit, the Prince of *Moldavia* is obliged to produce the Money, though he has it at 50 or 100 *per Cent.* to anſwer which, he is forced to ſqueeze the Subject, as obſerved above.

Wallachia.

THE Tribute of *Wallachia* is much heavier than that of *Moldavia*; for they pay the Grand Seignior a hundred and thirty thouſand Dollars yearly, and the other Articles in proportion, as ſpecified in *Moldavia*, beſides ſerving him with their Troops, as will appear more at large hereafter, when we treat of the Grand Seignior's Forces.

Ragoſa.

THE little Republick of *Ragoſa*, on the Coaſt of *Dalmatia*, is more antient than that of *Venice*, and has ſecured itſelf not ſo much either by Defence or Conqueſt, as by a timely Submiſſion to the Powers it was in Danger from, and thereby came to better Terms; and they are now ſo jealous of being enſlaved by their Governors, that they change their chief Officer every Month; others weekly, and the Governor of the principal Caſtle holds

holds his Authority but twenty four Hours, a new one being nominated every Night by the Senate, who is without Ceremony led cover'd, and his Face hid, to the Caſtle; ſo that no Body knows who is Governor but thoſe who are concern'd in electing him, and carrying him thither, and it is impoſſible to form a Conſpiracy to betray the Place, becauſe no Enemy knows who to apply to as Governor by Bribes or Treachery, his Time being ſo ſhort.

Georgia and Part of *Mengrelia* are look'd upon as tributary to the *Turk*, but that is compounded to the Satisfaction of both Parties; for they pay their Tribute in Children of both Sexes, the Grand Seignior chuſing rather to have *Georgian* and *Circaſſian* Boys and Girls than Money, and they on the other hand chuſing rather to part with them, becauſe it ſaves their Money, and put them in the likelieſt Way of Preferment, as has been obſerved above in treating of the young Boys in the Seraglio.

CHAP. V.

Gives an Account of ſome Maxims of Turkiſh *Policy, and of the Arts they uſe to encreaſe their People, and gain Proſelytes.*

THE *Turks* apprehend that there is nothing contributes more to the ſecuring the Succeſſion to the Royal Family, than ſuppreſſing of all Rival Powers, and the leaſt Appearance of Nobility or a great Family among them; and to prevent any Family's growing in Riches and Grandeur, they allow of no Succeſſion to Eſtates or Offices; ſo that even the eldeſt Son of a Baſſa has no Chance of ſucceeding his Father in his Place, for theſe Officers are all taken out of the Seraglio, where they have been kept entirely ignorant from what Blood or Family they deſcended; and hence of however great a Family they come, they do not know of any powerful Relations they have to aſſiſt or ſupport them, in caſe they ſhould encourage any aſpiring Thought; and as the Authority of thoſe Officers are always ſhort-liv'd, and their Line or Succeſſion interrupted, it is impoſſible for either a Family or a Perſon in a great Office to contract a Correſpondence with the People, or to ingratiate himſelf ſo far into their Favour as to form any Deſign of Uſurpation againſt the Government, or of forming an Intereſt ſuperior to that of the Grand Seignior's.

AND yet there have been Rebellions form'd by Baſſa's of remote Provinces, but few of them had either Duration or Succeſs; for if it amounts but to a Suſpicion of a Rebellion, the Sultan need only take off the Leader, and he entirely defeats the whole Deſign, and, as above obſerv'd, the Leader when ſo taken off is never ſucceeded by his Son, or any of his own Family, to eſpouſe his Undertaking, but by a Stranger, that is altogether ignorant of the Affair; the Scheme is quite broke, and would require the ſame troubleſome as well as dangerous Meaſures to renew it as it did to begin it at firſt, which is not to be expected at his firſt Acceſſion to his new Government; nor could it be poſſible he could be privy to the Scheme of his Predeceſſor, becauſe no Perſon knew who it ſhould be, or ſo much as himſelf, till he was inveſted with his new Authority.

BUT if a Rebellion ſhould ſucceed for a while, the Uſurper has ſeldom any other Way to ſecure himſelf but by ſetting up another Prince of the Royal Family, who is no ſooner ſecur'd in his Poſſeſſion, but he commonly ſtrangles the Traytor that brought him there, leſt he ſhould ſerve him as he did his Predeceſſor.

Recital of Treachery

YET to this general Rule there is ſometimes an Exception; for the Baſſa's of ſome petty Governments have the Privilege of leaving their Commands to their Children, as was once the Caſe with the Baſſa of *Gaza*; but one of them happening to live ſeventy five Years in the Government, it was thought an ill Precedent, and contrary to *Turkiſh* Policy; for which Reaſon he was ſent for to Court and without any Proceſs or Charge brought againſt him, ſtrangled as ſoon as he arriv'd.

Keep them poor.

AND as Power and Riches are generally neceſſary Concomitants, it is another Maxim of *Turkiſh* Policy to deprive them of the latter, to prevent their aſpiring after the former; and for that Reaſon the Wealth of a Baſſa is ſeldom allow'd to deſcend to his Children, but is ſeiz'd by the Grand Seignior for his own Uſe; but whether this be only Policy to keep them poor and uncapable of rebelling, or Covetouſneſs to enrich himſelf under that Pretence, is difficult to determine; but it would look like a covetous ſort of Policy in a Chriſtian Country for a Government to fleece their Subjects for no other Reaſon or Pretence but to eſtabliſh their own Grandeur or Security upon the Poverty of the Subject.

HOWEVER, the ſurviving Children of the Baſſa are not quite left deſtitute, but have a ſlender Maintenance allow'd them; and if the deceaſed Baſſa was the Husband of a Sultana, a Siſter, Daughter, or near Relation of the Grand Seignior's, there is a Dowry of about a hundred thouſand Dollars deducted out of the Eſtate for her Maintenance, and the reſt devolves upon the Sultan.

Baſſa's during Pleaſure.

THE Baſſa's bear their Authority only during the Grand Seignior's Pleaſure, and are often depoſed or recall'd (and ſometimes ſtrangled) without any previous Notice given, or Cauſe ſhewn, except the Baſſa of *Grand Cairo*, who generally holds his Place for three Years, during which Time he lets no Opportunity ſlip to enrich himſelf by oppreſſing the People, who are generally rich; but here the Grand Seignior may be ſaid to come in for a double Share, for all the Baſſa's, as well as that of *Grand Cairo*, pay vaſt Sums to the Grand Seignior at their Entrance upon their Poſt of Baſſa. Thoſe of *Grand Cairo* and *Babylon* pay three or four hundred thouſand Dollars upon that Occaſion; and others fifty, one hundred, or two thouſand, according to the Extent of their Dominions; and as they are generally kept poor, they are obliged to take up the Money at 40 or 50 *per Cent.* of the Eunuchs of the Seraglio, and have no ſooner enter'd upon their new Authority, but think themſelves equally obliged to plunder, oppreſs, and by ſome Means or other extort Money from thoſe under their Juriſdiction, to enable them to return the Money they borrow'd to make up the Premium they advanc'd; and this they are in the more haſte to do becauſe they know not how ſoon they may be recall'd; or if they happen to be continued longer, and enrich themſelves, it, as has been obſerv'd before, never devolves upon their Children at their Deceaſe, but

is seiz'd by the Grand Seignior, for all the Riches may generally be said to tend to, and center in, the Coffers of the Grand Seignior, and those of the Eunuchs of the Seraglio, so that the People's Spirits are sunk by their dejected Poverty; for, as my Lord *Verulam* observes, *It is impossible for a People overladen with Taxes to retain a brave Martial Spirit*, or in the Words of a modern Author, *Whoever would effectually enslave a People, must first oppress and impoverish them*; where it is criminal to be rich, People will for their own Safety affect being thought poor, and nothing can stifle Industry more than for a Man to know that if he by his Diligence acquires a plentiful Fortune he must be pillag'd as soon as there is a Discovery made of his Substance.

Arts used to people the Country, and gain Proselytes.

One Artifice they make use of to propagate their Religion and gain Proselytes is, the Favours they confer upon those Christians who embrace the Faith, and become true Believers, so they call the Mahometans; and a still greater Inducement to Christians to embrace their Faith is, their bestowing higher Favours and Preferments upon such Converts than upon their own natural Subjects; which occasions a great many dissolute People to go over to them, especially such as have no other Notion of Religion but that they go by the general Name of Christians, and those who have it only so superficially will easily wipe it off, or change it away for a little Preferment; or when they can find a young Slave capable of any Impression, they ply such a one with Arguments to convert them, and think it brings a great Honour not only to the Person but to the Place where he lives, to gain a Proselyte.

It is observed that those who at Years of Maturity abandon the Christian Religion are afterwards more inveterate to Christians generally than the *Turks* themselves, which the *Turks* experiencing, chuse to prefer them; and it is observ'd that the greatest Successes of the *Turks*, especially at Sea, are obtain'd under the Conduct of these Renegado Christians.

It was formerly a Custom in *Turkey*, once in five Years, to take away the Christians Children from them, and educate them in their own Religion, and by this Means they increas'd their own People; but there being now so many Jews, and also *Greek* and *Armenian* Christians, who flock to the *Turks* to participate of the Temporal Honours and Advantages conferr'd upon those who embrace the *Turkish* Religion, they do not find so much occasion to take the Children, and be at the Charge of bringing them up.

And although it may be natural and easy for us to blame those Christians in *Turkey* for renouncing their Religion, yet we should rather pity them and consider the Oppressions, the Hardships, and Contempt which they go through, or are exposed to, and the Insolence and Arrogance with which they are treated, equal to their Beasts of Burthen, which they but just suffer to live to do the servile Work which themselves do not care to undertake, while we not only are allow'd the free Exercise of our Religion, but are protected in it; their abandoning their Religion may be owing to their Ignorance, and that again to the wretched Poverty of their Priests, whereas we are not under that Necessity of being Ignorant, because our Ecclesiastical Livings, if justly appropriated, according to the Design of them, (*1. Cor.* ix. 14.) are sufficient to maintain the *Preachers of the Gospel*; but we have reason to attribute it to divine Providence, that any of them should retain their Integrity under so many Difficulties that attend the Exercise of their Religion, and their abundant Temptations to desert it.

Hardships and Contempt Christians in *Turkey* undergo.

Another great Article by which they are supply'd with Inhabitants, is the vast Number of Slaves of both Sexes brought from *Tartary*, by the Way of the *Black Sea* and the *Bosphorus*, by which Way a great many *Turkish* Ships come loaded with those Slaves, being distinguished by a particular Flag at the Top-mast Head, to signify what their Cargo consists of; and by this Means it is computed that they import one Year with another at least twenty thousand Christian Slaves, who being mostly Women and Children, are easily, by common Conversation and fair Promises, brought over to their Religion.

Supply'd from *Tartary*.

If it was not for these Supplies, the *Turkish* Dominions would be but thinly peopled, for if we should allow by a general Computation that the Number of People of both Sexes are nearly equal, and consider the vast Numbers of Women lock'd up in the Seraglio, and also in the Harams of private great Men, who have hardly ever any Conversation with their Lords, nor are they ever allow'd scarce to be seen, much less to converse, with any other, these Women are lost as to Propagation, and the Sex by this Means becomes more scarce, which has doubtless contributed to the Practice and promoting of the abominable and unnatural Sin of Sodomy; and when there are such Multitudes both of Men and Women rendred useless as to Propagation, no wonder if Inhabitants are so scarce, that they are forced to purchase Supplies from other Parts of the World.

CHAP. VI.

Treats of their Manner of receiving and entertaining Ambassadors, and of their Conduct in their Negotiations at the Porte.

Although the *Turkish* Laws prohibit the offering any Violence to the Persons of Ambassadors, yet they are not look'd upon here with that Veneration, as honourable Representatives of their Masters, as they are in Christendom; but the Emperor's Ambassador is look'd upon with more Respect than those of any other Christian Princes; perhaps one Reason of that may be, because his Dominions, and even his Capital of *Vienna*, is upon their Borders, and that may make his Power appear more formidable; and as Power is what they most value in themselves, and fear in any other Prince, 'tis probable they may upon that Account, outwardly at least, shew more respect to the Emperor's Ambassador than to one of a more remote and unknown Prince.

When the Imperial Ambassador arrives in the *Turkish* Dominions, the Porte bears his Charges during his stay in the Country; but it is an antient Custom, and yet observed, for the Emperor to send a Present with the Embassy, for which the *Turk* returns another of equal Value; but other Ambassadors, or Ministers, whose Design is only to promote Trade and settle a Correspondence, they do not pay so much Respect to, but have a brocaded Vest, or some such like Present made them in return for

Charges born

for theirs, as thinking *England*, *France*, *Holland*, &c. ſufficiently gratified for their Preſents by the Privileges and Immunities granted to their trading Subjects.

Audience. WHEN an Ambaſſador is to be admitted to Audience, the Court appears in all its Splendor, and every Thing ſeems to be contrived to expreſs the Glory and Magnificence of the Empire; and thoſe Audiences are commonly contrived to be on ſome of the Days on which the Janizaries are paid, which is once in three Months; and the Audience being contrived at this Time is to give the Ambaſſador an Opportunity of ſeeing the Order and Diſcipline of their Troops, and the vaſt Sums of Money which are expos'd to view for the Payment of them, which is pil'd up on Heaps: When the Ambaſſador is introduc'd into the Divan, he is ſeated on a Stool, cover'd with Crimſon Velvet, near the Grand Vizier and other Viziers of the Bench; and the Money being paid to the reſpective Officers to be diſtributed among the Soldiers, an Entertainment is prepared for the Ambaſſador, who, with the Grand Vizier and the other Viziers, as above, and the Lord Treaſurer, all dine at a Table lower than what we uſe, upon which is a large Voider of Silver, in which are Diſhes, but no Knives or Forks are uſed at their Meals; there are alſo two other Tables in the Room, where the Ambaſſador's Retinue and ſome *Turkiſh* Officers of Quality ſit. There are commonly three or four ſcore Diſhes ſerved up, but as ſoon as they are taſted they are taken away.

Paying the Janizaries.

WHEN the Repaſt is over, the *Chious* Baſſa conducts the Ambaſſador with ſome of his Retinue to an Apartment, where rich Silk Veſts are preſented to them, made after the *Turkiſh* Mode, with which about twenty of them being cloath'd, two of the chief Porters of the Palace, with their Silver Staves in their Hands, introduce the Ambaſſador, the Preſents that he intends to make being brought after him, and deliver'd to Officers appointed to receive them. The outer Court of the Palace are now fill'd with Janizaries, who obſerve ſuch a profound Silence, that there is not the leaſt Noiſe to be heard among them; the Ambaſſador being brought to a great Portal at the Entrance of the Place of Audience, he finds ſeveral white Eunuchs, cloath'd in rich Brocade and Tiſſue, here all the Ambaſſador's Train ſtops, only his Secretary, his Interpreter, and two or three more are admitted along with him.

How introduc'd

AT the Entrance of the Audience Chamber there hangs a Golden Ball ſtudded with Precious Stones, and about it are great Chains of rich Pearl; the Floor is cover'd with Carpets of Crimſon Velvet embroider'd with Gold, and ſet in many Places with Seed-Pearl. The Grand Seignior's Throne is rais'd a little above the Floor, ſupported by four Pillars plated with Gold, and the Roof richly gilded, from whence hang ſeveral Golden Balls; and the Cuſhions he leans on are embroider'd with Gold and Jewels; there remains no other Attendants in this Room but the Prime Vizier, who ſtands in an humble Poſture at the Grand Seignior's Right Hand. As ſoon as the Ambaſſador appears in the Grand Seignior's Preſence, two *Capigi* Baſſa's lead him in, holding him under his Arms, and having brought him to a convenient Diſtance, they lay their Hands upon his Neck, and make him bow his Face almoſt to the Ground, and then raiſing him up, they retire back to the End of the Room; the reſt of his Retinue that are admitted perform the ſame Ceremony, but bow rather lower than the Ambaſſador himſelf.

No Chair allow'd.

THE Ambaſſador is not allow'd a Chair at his Audience, but is kept ſtanding till he acquaints the Grand Seignior with the Deſign of his Embaſſy, which being taken down in writing, and read over, is, with his Letters of Credence, put into the Hand of the Grand Vizier, with whom he afterwards negotiates his Affairs; but if any thing happens that the Grand Seignior takes as a Diſguſt, he will impriſon, or otherwiſe puniſh or affront him, without any regard to the Law of Nations, or the crown'd Head he repreſents.

Ambaſſadors impriſon'd.

THERE are Inſtances of Ambaſſadors, that without any Proof have been impriſon'd barely upon a Suſpicion of being guilty of the Crimes he was charg'd with, as was the *French* Ambaſſador in the ſeven Towers, on a Suſpicion of his having contrived the Eſcape of a *Poliſh* General, and was detained, till Money and the Mediation of his Maſter the *French* King, who was forc'd to put up the Affront, procur'd his Liberty; and ſeveral other Inſtances of this kind Hiſtory furniſhes us with; and if a War breaks out between them and any Power that has an Ambaſſador at the Court at the ſame Time, they then impriſon the Ambaſſador; but it is remarkable, that upon ſuch an Occaſion they never confiſcate or ſeize the Effects of thoſe Merchants, who being the Subjects of the Powers they contend with, are reſiding to trade at *Conſtantinople*, or in other Parts of *Turkey*.

IT is ſaid that of late the Grand Seignior will not allow an Ambaſſador to approach him with his Sword on; but whether the Imperial Ambaſſador be under this Reſtriction we cannot determine; but it ſeems by a † Paſſage in the following Account of Monſieur *Ferriol*, that they had been admitted to Audience with their Swords on till this Accident happen'd. This Inſtance is of a *French* Ambaſſador, to whom (as was obſerv'd in the Beginning of this Chapter) he does not pay ſo much Reſpect as to thoſe ſent from *Germany*. The Account, in the Words of a modern Author, is as follows:

No Sword allow'd at an Audience.

" WHEN Monſieur *Ferriol*, the *French* Ambaſſa-
" dor, attempted to be admitted to an Audience
" with his Sword on, and having put on the rich
" Veſt or Caffetan, in order to approach the Grand
" Seignior, the *Chious Baſſa* obſerving a long Sword
" peep from under it, told the Ambaſſador that it
" was not uſual to appear in that Manner before
" his Highneſs, and deſired him to lay it by; to
" which M. *Ferriol* anſwer'd, that the King his
" Maſter only had a Right to take it from him,
" and that another Man ſhould ſooner take away
" his Life; that his Predeceſſor M. *Chateauneuf*
" aſſured him that he had been admitted to Au-
" dience with his Sword on; to which the Vizier
" anſwer'd, that then it muſt have been ſo ſhort
" as to be entirely hid under the Caffetan, and
" that they would take care for the future that
" neither the Imperial † Ambaſſador, or any other,
" ſhould ever come to their Audiences with their
" Swords on. M. *Ferriol* ſtill remaining inflexible,
" the Aga of the Janizaries interpoſed, repreſent-
" ing that neither the Grand Vizier, who go-
" vern'd the *Ottoman* Empire as the Grand Seig-
" nior's Lieutenant, nor himſelf, who was General
" of his Forces, had ever enter'd arm'd into any
" of his Highneſs's Apartments. The Ambaſſador
" reply'd, *You are a Subject, but I have the Honour*
" *to repreſent a great Prince, who exempts me from ſuch*
" *Submiſſion.* Then the Viziers of the Bench uſed
" their utmoſt Efforts to perſwade him not to inſiſt
" upon entring with his Sword on; but finding all in
" vain, they only ſaid *You had better enter in as you*
" *are then*; whereupon he took the King's Letter
" in his Hand, and the two Capigi's taking him
" under each Arm, he was advancing towards the
" Door, when he found a Capigi privately endea-
" vouring to get his Sword from his Side, which
" he no ſooner perceiv'd, but he puſh'd him at a
" great Diſtance from him, and getting from the
" two Capigi's who had him under the Arms,
" drew his Sword half out, demanding if they
" were Friends or Enemies; to which they re-
" ply'd,

" ply'd, *Friends, but we will not suffer you to enter* " *with your Sword*; whereupon he refused to en- " ter at all, and putting the King's Letter in his " Pocket again, he pulled off his Vest, and gave " it to the first Officer he met, commanding all " his Retinue to do the like; after which he " retired, and crossed the Court of the Divan on " Foot, and mounting afterwards on Horseback, " returned with his People to his House; but the " Chious Bassa, who had conducted him to Court, " did not return with him. The Grand Vizier af- " terwards sent to acquaint Monsieur *Ferriol*, that " he might take his Presents back again, which " he did accordingly, and the King of *France* " found himself obliged to put up the Indignity " offered to his Minister." We have several other Instances of the little Regard paid to foreign Ministers at this Court; but as they had the same Tendency and Consequence, we shall not fill up Time nor Room with the Particulars.

An Ambassador is obliged to be upon his Guard; for if he fails either in his Courage or Conduct, he soon acquires a perpetual Slight from the Court; or if the Ambassador's Interpreter seems to the Grand Seignior to be either deficient, or too impertinent in explaining his Master's Meaning, he is often imprison'd, and sometimes executed for so doing; and indeed the Grand Vizier thinks he has a Right so to do, because these Interpreters are commonly the Grand Seignior's Subjects, and therefore it is thought a greater Crime for him in his Interpretation of the Ambassador's Sentiments to put any Construction upon what he delivers that may seem partial in his Favour, such a natural Antipathy they have to Christians.

CHAP. VII.

Gives an Account of the Turkish *Forces and Militia.*

Two sorts of Militia.

THE *Turkish* Militia are of two sorts, and are distinguish'd by the different Ways by which they are paid: The first have certain Lands appointed them for their Maintainence, and the other is paid out of the Treasury. Those who are paid by Lands appropriated to that Purpose, are again divided into two Denominations, viz. *Zaims* and *Timariots*, distinguished only by the different Number of Men they bring into the Field, and the Revenue appointed for that Service. The Land that a *Zaim* holds, is from 20 000 Aspers to *99999* a Year, not to exceed; for one Asper more, which would make it 100 00, is the Revenue of a Sangiack Bey, or *Bassa*, whose lowest Revenue is 100000 Aspers, and not to exceed *99999* Aspers a Year; for one more, which would make it 1000000, or one Million, is the Revenue of a Beglerbeg or Viceroy, who has several Bassa's under him.

Two sorts of Timariots.

The *Timariots* are also of two sorts; some of them hold of the Viceroy of the Province, and others immediately of the Crown: Those latter have from five thousand to any Thing less than 20 000 Aspers a Year; for if it amounts to 20000, it makes him a *Zaim*. Those who hold of the Viceroy of a particular Province, have from three thousand to six thousand Aspers a Year. The Number of Men which either of these bring into the Field is uncertain in itself, though limited between two Numbers. The *Zaim* brings in from four to nineteen; and the *Timariot* four, or under, but never above.

Horsemen

The *Zaims* for every five thousand Aspers yearly Rent, are obliged to find a Horseman compleatly furnished, and for a greater Rent in the same Proportion; and if we reckon the Aspers at a Halfpenny each, they are obliged for every ten Pound eight Shillings and four Pence yearly Rent, to furnish out a compleat Horseman with all his Accoutrements, which would seem but a little Money for that Service, if we did not consider the Cheapness of Provisions, and that probably in Times of Peace, when they have no Occasion for so many Horses in the Field, they may put most of the Money into their own Pockets.

But the *Timariots* are obliged for every three thousand Aspers Rent, to bring a Trooper into the Field compleatly armed: But both *Zaims* and *Timariots* are formed into Regiments, who have their respective Colonels, Colours, and Kettle-Drums; but the Colonels are commanded by the Bassa, and he by the Viceroy of the Province; and when the Army, as form'd of the Militia of several Provinces, is collected together, the whole is commanded by the Grand Seignior, or in his Absence the Grand Vizier has the sole Command.

Sea Service.

They are also furnish'd with Men for their Sea Service when the Government requires it, and to serve in Person, if they cannot produce Men to supply the Place. When the *Turks* compute the Number a Viceroy can bring into the Field, they reckon how many *Zaims* or *Timariots* are in the Province, and how many Provinces are in a Viceroyalty, and lastly, how many Viceroyalties are in such a Part of *Turkey*, whether in *Europe*, *Asia*, or *Africa*; they can by this compute the Number of Forces that that Part of the Empire can furnish; which is as follows: Suppose that, as above express'd, every *Zaim* is to bring between four and nineteen, and every *Timariot* four or under; if we calculate in a Medium for the Whole, and allow every *Zaim* to bring ten Troopers into the Field, and every *Timariot* two, the Forces raised by the several Provinces will be as follows:

Provinces.	Men.
Natalia, or *Asia Minor*,	25728 Number
Caramania, or *Cilicia*,	5060 of Men
Diarbeck, or *Mesopotamia*,	1156
Damascus, or *Sedam*,	3026
Sivas, Part of *Armenia Major*,	11109
Erzerum near *Georgia*,	12316
Van in *Turcomania*	3502
Marasch near *Euphrates*,	1294
Kibros, or *Cyprus*,	2534
Tripoli in *Syria*,	1770
Kika,	1932
Trabezond,	1556
Aleppo,	3258
Tekelder,	2378
Under the High Admiral,	3541
Rumelia, or *Romania*,	27158
In all	117451
And if to this we add the Militia on the Frontiers of *Hungary*, &c.	70000
It amounts to	187451

And

And to this we may add, that in every War there are a great Number of Voluntiers Cavalry, or Adventurers, who live at their own Charge, in hopes of succeeding the Zaims and Timariots who fall in the Service, who, to raise their Fortunes, will engage in the most desperate Enterprizes upon this Foundation, that if they survive they promise themselves Preferment, by succeeding some of the deceased Zaims or Timariots, who were equally exposed; and not only so, but they are taught to believe, that if they die in a War against the Christians, they shall go immediately into Paradise; and buoy'd up with this Hope of a Reward here, or in Paradise, they are so resolute, that at the Attack of a certain City a Timariot's Farm was disposed of eight Times one Day, the first Possessor being kill'd, the next succeeded, and he being killed, the third according to his Merit succeeded, *&c.* to the Number above-mentioned; and when these resolute Voluntiers are added to the former Number, the most moderate Computation cannot suppose the Forces raised by the above-mentioned Provinces only to amount to less than two hundred thousand Men.

They so violate.

Militia of Grand Cairo.

But besides the Militia above-mentioned, there are eighty thousand Timariots in the Province of Grand *Cairo* in *Egypt*, which, according to the former Computation, of every Timariot furnishing two Troopers, amounts to one hundred and sixty thousand Men more. This Country is divided into twelve Districts, commanded by as many Lords, by them called Beys, who have each of them five hundred Horse for their Guards, besides having Command of the other Militia: The Command or Authority of some of them descend from Father to Son; they are so powerful and resolute, that if the Beglerbeg or Viceroy of the Grand Seignior's attempt to impose any Thing upon them that they do not approve of, they commonly stand in their own Defence; and if they find the Viceroy insists upon his Imposition, they imprison or depose him, and yet the Grand Seignior is forced to put up the Affront, lest attempting to reduce them by Force, should cause an universal Revoult through all the Province, and rend it from the Body of the Empire.

Tributary Countries.

The tributary Countries, as the *Tartars*, *Walachians*, *Moldavians*, &c. raise certain Auxiliary Forces, commanded by their own Princes. The Han of the *Crim Tartars* is obliged to bring a hundred thousand Men into the Field, himself at the Head of them, when the Grand Seignior himself commands the *Ottoman* Army; but if the Prime Vizier has the Command of it, it is thought sufficient that the Han's Son, or some of his Generals, enter the Field with forty or fifty thousand. The Princes of *Walachia* and *Moldavia* are always upon such Occasions obliged to attend in Person, with forty or fifty thousand Men.

Sphahi's and Janizaries.

Besides all the Forces above-mentioned, there are the Sphahi's and Janizaries, which are paid out of the Treasury, and may properly be called the Troops of the Houshold. These were formerly Men of some Education taken out of the Seminaries in the Seraglio, and are about twelve thousand: They are in two Bodies, *viz.* the Silachtari, who carried yellow Colours, and the Sphahaoglari, or Servants of the Sphahi's, who carried red Colours; but these latter are now made equal, if not superior to the former, upon the following Occasion.

Sultan *Mahomet* the Third, at a Battle in *Hungary*, observing that the Silachtari gave Ground, earnestly endeavoured to perswade them to rally and charge again, but all in vain, while the Sphahaoglari, or Servants of the Sphahi's, still remaining in a Body, he encouraged them to Charge, and supply the Place of their Masters, which they did with such Resolution and Conduct, that they turn'd the Fortune of the Day, and the Sultan came off victorious; as an Encouragement for which, and to express his Resentment at the Cowardize of the other, he gave them the Pre-eminence of their *quondam* Masters, and allow'd them to carry red Colours from that Time forward.

Armour.

They were arm'd formerly with a Scymetar and Launce, also Bows and Arrows, and sometimes with a Dart which they threw very true, and were taught to take it up again from the Ground in a full Carreer without standing still; but now they they have learn'd the Use of Fire-Arms, as Carbines and Pistols, and some of them have Harness for the Head, Back and Breast, painted the Colour that their Squadron is distinguish'd by.

Asiatick Sphahi's.

The *Asiatick* Sphahi's formerly made a great Figure in the Army, bringing into the Field thirty or forty Men a-piece, with led Horses, Tents, and other Equipages very magnificent; but the Grand Vizier *Caprully* perceiving that this Grandeur and Ambition introduced a Spirit of Faction and Mutiny, beheaded several of them to humble the rest, and keep them in Awe; and now one Tent, with two or three Horses or Mules to carry their Bagage and Provision, will serve ten or twelve of them, and according to their Crimes undergo the same Punishment as the rest, either the Bastinado, or, if their Crime be great, they are sent for by a Messenger, and without being allowed to make any Defence, they are strangled near the Walls of the Palace, and in the Night their Bodies are thrown into the Sea, without any other Ceremony but only firing a great Gun, which is to give Notice that there has been such an Execution, to frighten others from committing the like Crimes.

Pay.

There Pay differs according to their Education, or the Chambers they are taken from, and is from twelve to a hundred Aspers a Day; those of them who are brought up in the Seraglio's of *Ibrahim*, *Bassa*, *Pera*, or *Adrianople*, which are Nurseries for the Art of War; as also those who are employ'd in servile Offices, as cutting Wood for the Court, *&c.* and yet have the Privilege of being entitled Sphahi, have the lowest Pay, which is twelve Aspers a-Day, but those who come from the Grand Seignior's own Seraglio at *Constantinople*, have nineteen Aspers a Day, but others that come from the higher Chambers, as the Laundry, the Turbant Office, the Dispensatory, the Treasury, the Falconer's Lodge, *&c.* have at first thirty Aspers a Day, and at the Instalment of a Grand Seignior five Aspers more is given to all the Sphahi's of the Army, and some of them by Diligence and Application rise to a hundred Aspers a Day, but are never allowed to exceed that Sum.

These Troops may have their Pay quarterly if they require it, or they may forbear it, and have nine Months Pay together, as some chuse it who live at a great Distance from Court; but if they forbear it longer, they never receive above nine Months Arrear, but lose the rest for want of looking after it. There having been great Abuses discovered in the Money being paid at the Paymaster or Treasurer's Houses, by their extorting Gratuities from the Sphahi's for preferring, or paying one before another, which occasioned Mutinies and Disorders, the Vizier *Caprully* ordered the Money to be paid in his Presence to the respective Persons to whom it was due, no Bribe or Reward being extorted from any Person on Account of the Order of their being paid, and the Viziers that succeeded him followed his Example.

Besides these two Bodies of Sphahi's there are four others; as first, the Sag Uleligi, who march on the Right of the Sphaha Oglani, carrying white and red Colours. 2. The Sol Uleligi, who march on

the Left of the Salachtari, with white and yellow Colours. 3. The *Sagureba* Voluntiers, or Soldiers of Fortune, who march on the Right Hand of the Sag Ulefigi, and carry green Colours. 4. The Sol Gureba, who march on the Left Hand of the Ulefigi, and have a white Standard; but theſe four Sorts of Sphahi's or Troopers are never employ'd but upon extraordinary Occaſions, as when a War is entring upon, or the like, and then they do all Manner of Duty; and their Pay is from twelve to twenty Aſpers a Day; one Advantage they have is, that when they have once been entred into this Sort of Supernumerary Company, they are capable of being preferr'd into other Bodies, if their Merit recommend them.

But there is yet another Body, called the *Matuſaraca*, which may be call'd the Grand Seignior's Life-Guards, they are a Sort of Court Favourites, and have had their Education in ſome of the principal Chambers of the Seraglio, there is four or 500 of them, their leaſt Pay is forty Aſpers a Day, they attend the Grand Seignior's Perſon as his Life Guard when he goes abroad.

But we have not yet deſcrib'd the Janizaries which we juſt mention'd; when we begun to ſpeak of the Sphahi's we then join'd them together, becauſe they are taken out of the ſame Seminaries, but with this Difference in their Stations, that the Janizaries always ſerve on Foot. *Amurath* the Third, Emperor of the *Turks*, preſcribed Rules for their Education and Maintenance; and his Prime Vizier order'd, that for the Augmentation of this Militia, every fifth Captive that was taken from the Chriſtians, and was above fifteen Years old, ſhould be given to the Sultan to be added to this Number; ſome of them while young being diſtributed among the *Turkiſh* Peaſants, to learn the Language and Religion of the Country. They did not at firſt exceed ſeven thouſand, but they now amount to twenty five thouſand effective Men; but if we reckon all who have the Name, and all the other Privileges, but not the Pay of Janizaries, they will amount to above a hundred thouſand Men, for there are many who with a Sum of Money purchaſe the Name and Privileges of Janizaries, who are ſcarce ever call'd to actual Service.

This Militia was formerly confin'd to the Children of Chriſtians only, but now Chriſtians or *Turks* are promiſcuouſly taken into thoſe Seminaries, and brought up to laborious Employments, as cutting Wood, carrying Burthens, manuring the Ground, and the like, and alſo ſome are made Cooks, or put to other Employments in the Kitchen; others, that cannot ſpeak the *Turkiſh* Language, are ſent to *Natolia* to plow and ſow the Ground till they are wanted for the Wars, and then they are called to the Chambers of the Janizaries, where they march in Order before the Muſter-Maſter, according to their Seniority, and he having enrolled their Names, they paſs by the Oda Baſſa, or Maſter of the Chamber, who gives every one as he paſſes by a Blow on the Ear, to intimate, that they are under his Command, which is all the Ceremony that is uſed in the Admiſſion of a Janizary.

They are at firſt allow'd, from one Aſper a Day to ſeven, and by Degrees advance to twelve, but a private Janizary never advances above that till he is preferr'd to ſome Office; but beſides this Pay, they have a Table ſpread for them at certain Hours, furniſh'd with Rice, Bread and Fleſh, they have alſo every Year a coarſe warm Soldier's Coat given them, made of Cloth of *Salonica*; ſo that beſides their Wages they may be ſaid to have both Victuals and Cloaths allow'd them; and they are in a great Meaſure exempted from thoſe preſſing Cares that attend People under the want of the common Neceſſaries of Life; and yet they frequently grow ſo mutinous, as to depoſe the Sultan, and demand the Heads of ſome of his Chief Miniſters, whom they ſuſpect to be their Enemies, and will not be appeas'd till they are deliver'd up to them: When a Sedition is intended to be put in Execution, they commonly diſcover it in the publick Divan, whither five or ſix Hundred of them are oblig'd to go twice a Week to attend their Aga or General, at which Time, they have their Food ſent them from the Grand Seignior's Kitchen, and if they have taken any Diſguſt at any great Man, they overturn their Plates of Rice, and ſlight the Entertainment, which the Grand Seignior and his Miniſters often finding to be the Forerunner of an intended Inſurrection, commonly endeavour to appeaſe and redreſs them before it amounts any higher.

Janizaries mutinous.

The Janizaries Chambers in *Conſtantinople*, are one hundred and ſixty two, of which eighty are of an antient, and eight two of a more modern Foundation, and there is generally to every Chamber a Tchorbagi or Captain; theſe are the Dwellings of the unmarried Janizaries, who have two Meals a Day provided for them by the Government. There are five Officers belonging to theſe Chambers; Officers.
1. The *Odabaſhee*, or Maſter of the Chambers, who is alſo Lieutenant of the Company in Time of War. 2. The *Wekilbarg*, or Burſer. 3. The *Bairackle*, who carries the Colours. 4. The *Aſhgee*, or Cook, who is alſo the Executioner: And 5. The Under Cook, who ſummons the married Janizaries that live in *Conſtantinople*, when their Attendance is requir'd; but there are but few of them married, becauſe it would be an Hindrance to their Preferment, otherwiſe there is no Law to reſtrain them.

They account the Janizaries their beſt Soldiers, and depend chiefly upon them in an Engagement; their Arms are Swords and Muskets, which they handle very dexterouſly, but are not Maſters of any Order: The Gunners and Armourers are taken out of the Janizaries, but the Renegado Chriſtians are their beſt Engineers, on whom they have ſuch a Dependance, that they think themſelves quite diſabled in that Reſpect if they cannot have them.

The *Azapes* and *Arcanges*, are another Sort of Inferior Infantry, and are chiefly employ'd as Pioneers, to fill up a Ditch, or to blunt the Sword of an Enemy, and are frequently detach'd before the Army to ravage and plunder the Enemies Country; in which if they behave well, they are ſometimes advanc'd to be the Janizaries. *Azapes* and *Arcanges*.

The Janizaries, in late Times, are not ſo powerful, nor ſo much reſpected in *Turkey* as formerly; for their Seditions have been ſo fatal to the Miniſters, and even to the Emperors themſelves, that they have ſuppreſt their Power, and now expoſe them to every trifling Service, and introduced Servants, Mechanicks, and almoſt any Sort of idle Fellows in their Room; inſomuch, that they are now generally a raw undiſciplin'd Multitude, and by this means their Power is leſſened, for they and the Sphahi had ſo much Power lodg'd in their Hands, that when they united, it was dangerous affronting them, or calling them to any Account; but now their Spirits, as well as their Power is broke, and they are neither a Terror to the *Turkiſh* Empire, nor are they the Glory and Security of it, as they have been formerly. Janizaries decline

There are another Sort of Men, which ſome rank among the Military Forces, becauſe they wear both offenſive and defenſive Arms, they are call'd *Chaouſes* or Meſſengers; they are chiefly employ'd in Civil Proceſſes, carrying Orders, and in arreſting and executing State Criminals; there are about five or ſix hundred of them, and their Pay is from twelve to forty Aſpers a Day; their Commander is call'd the *Chaous Baſchee*, they attend at the Prime Vizier's Palace, to execute the Orders of the Porte in any Part of the Empire, and Meſſen gers.

are

are ſometimes diſpatch'd to Foreign Princes: The Arms they uſed were a Bow and Arrows, a Scymetar, and a long Staff with a great Head. Thoſe of them that belong to the Prime Vizier, or Viceroys, have their Staves plated with Silver: As they ſerve all Summons's, and execute the Orders of all the Courts of Juſtice, they have very conſiderable Profits belonging to their Office.

Turkiſh Camp.

WHEN the *Turkiſh* Army takes the Field, the Janizaries and the reſt of the Infantry are poſted in the Front, and pitch their Tents round about that of their Aga or General; and about the Center of the Camp are erected the glorious Pavilion of the Grand Vizier, as alſo that of the Chief Steward, the Chancellor, the Lord Treaſurer, and the Maſter of the Ceremonies; theſe five Pavilions encompaſs a ſpacious Field, in the Center of which is a lofty Tent or Canopy, where People attend who have any Buſineſs in the Divan, the Court of the Vizier, or with the Generals or Officers of State. In this Place alſo, Criminals are corrected or executed; and within this Circle alſo is the Treaſure, pil'd up in ſmall Cheſts, and ſurrounded by a Guard of Sphahi's, and near the Grand Vizier's Quarters ſtand the Tents of the Baſſa's and Beys, and other Perſons of Diſtinction. The Sphahi's, and thoſe who guard the Baggage of the Horſe, pitch their Tents in the Rear; and on the Right Hand of the Vizier's Quarters ſtand the Train of Artillery and Ammunition.

Each two Tents.

PERSONS of Diſtinction in the Army, have always Duplicates of every Thing belonging to their Tents, ſo that when they are to remove, they ſend their Servants beforehand to the Place intended for their next pitching, and there they ſet up the ſpare Tents, ready for their Maſter's Reception, before they pull the other down, where he reſided laſt; but this double Baggage obliges them to employ Abundance of Servants and Camels, which makes their Armies appear very numerous, and be very expenſive, though not one half of them that appear in the Field are diſciplin'd fighting Men.

Neceſſary Places.

WHEN they are encamped in the Field, they are very careful to avoid any offenſive Smell, which doubtleſs would be very nauſeous in thoſe hot Countries, and therefore they have deep Pits dug in the Field, at a proper Diſtance, and encompaſs'd with Canvas, like little Tents; theſe ſerve for Conveniences to do the Offices of Nature, ſo that the Camp is free from all Ordure, or any Smell ariſing from thence.

March by Night.

WHEN they march in the Summer-time they travel moſtly by Night, to avoid the exceſſive Heat, having ſo many Lights as ſufficiently diſcover the Road to them. Their Lights are not Torches, but a bituminous oily ſort of Wood, which they burn in an Iron Grate, on the Top of a Pole, which diffuſes its Light at a great Diſtance.

Little Navigation uſed.

THEY do not ſeem to have any great Genius for Navigation, as having but few Ships, conſidering the vaſt Extent of the Empire, and the many fine Sea-ports in it. Their grand Fleet ſeldom conſiſts of more than thirty Men of War, beſides Gallies. Thoſe of *Conſtantinople* are tolerable large, and finely ſet off with Gilding, Carving, and other Ornaments; by which Means they make a very handſome Appearance. The *Turks* have little Notion of Ship-building, moſt of their Shipping being either bought from abroad, or built there by Renegado Chriſtians.

THEY in ſome meaſure ſupply the Art of Sailing with the Slavery of Rowing, eſpecially in their Galleys; for though *Turkey* does not breed many able Mariners to navigate their Ships, yet their own Country and *Tartary* affords them Plenty of Slaves to lug at the Oars. Theſe are what they ſo much truſt to, that there are People in *Conſtantinople* who make it a Trade or Buſineſs to let Slaves out for the Sea Service during the Summer Seaſon; but when they cannot procure Slaves enough, they ſend out Officers into the Country, who take one able Man out of every twenty Families, obliging the other nineteen to contribute to his Maintenance. The Zaims alſo and Timariots are obliged by their Tenures to find a certain Number of Men for the Sea Service; but as the *Turks* ſeldom ſail out of their own Dominions, nor import much foreign Merchandize in their own Bottoms, we cannot expect there can be any Plenty of able Mariners, and conſequently not much can be expected from their Fleets.

CHAP. VIII.

Treats of the Revenues of the Grand Seignior, and of his State and Grandeur in which he appears in Publick.

Revenues.

THERE are ſeveral Articles which contribute very conſiderably to augment the Grand Seignior's Revenues, as by the Cuſtoms; alſo by the Produce of the Demeſne Lands. There is likewiſe a Capitation Tax impoſed upon every Subject of the Empire that is not of the Mahometan Religion; and to this we may add the annual Tributes paid by the *Crim Tartar*, the Princes of *Moldavia* and *Walachia*, the little Republick of *Raguſa*, and Part of *Mingrelia*; and of a Million and a half of Money levy'd annually in *Egypt*, he allows a Million to pay the Officers and Forces of that Province, and the other half Million he puts in his own Coffers; but all theſe taken together are far ſhort of the Sums he extorts from his Viceroys and great Officers of State, which he allows them the Honour to call Preſents. He is the next Heir to all Places and Eſtates of the deceaſed Officers; for, as has been obſerv'd before, when a great Officer dies, his Subſtance does not devolve upon his Children, but upon the Crown, only the Children have an Allowance for a ſlender Maintenance; ſometimes if he finds an Officer very rich he cuts him off, under a Pretence of Miſconduct, and ſeizes his Eſtate and Effects to himſelf; or if a Poſt of Honour or Profit becomes vacant by the Death of the Officer that enjoy'd it, the Place is in the Grand Seignior's Diſpoſal, and muſt be purchas'd of him with a vaſt Premium or Preſents, (*See Chap.* V.)

Money raiſed other Ways.

IF there be a preſſing Neceſſity for Money upon ſome particular Occaſion, as a War with the Chriſtians, or the like, and the Treaſury be low, the great Moſques muſt be conſulted for a Supply, and they never fail, they being exceeding rich; nor does he make any Scruple of Conſcience to employ this ſacred Treaſure in Defence of their Superſtition, eſpecially againſt the Unbelievers, as they call the Chriſtians.

His private Treaſure

THE Grand Seignior's private Treaſure is lodg'd in a ſubterraneous Vault, where never any but himſelf, or ſome of the Pages of the Treaſury, enter.

ter. The Gold is put up in Leather Bags, and lock'd up in ſtrong Cheſts; and when there is a ſufficient Quantity of Gold in the outer Chambers to fill two hundred Bags, the Vizier gives notice to the Grand Seignior, who comes in Perſon to ſee them remov'd, and to ſeal the Cheſts they are in.

Land of the Zaims.

But beſides what have yet been mention'd, there is the Rents ariſing from the Lands of the Zaims and Timariots, which at leaſt are found to be ſufficient to maintain a hundred thouſand Men. What he borrows of private People he pays punctually again, and need not be accounted any Part of his Revenue; but few care to be known to be able to lend, leſt he ſhould, under a Pretence of keeping them from being too powerful, ſeize their Effects, and by keeping them under Subjection, enrich himſelf: But what he borrows of his Viceroys and great Officers he ſeldom returns, and yet they neither dare deny to lend it, nor murmur for the Loſs of it, leſt he ſhould demand their all, their Places, and ſometimes their Heads too. He muſt put up with his Loſs; and if he has any Way to retrieve it, it muſt be by pillaging and oppreſſing the Subject, to make it up, and then he is no Loſer; and hence it may in general be ſaid, that almoſt all the Money in the Empire is the Grand Seignior's Revenue, ſince what he borrows of his great Officers he ſeldom repays, and they again reimburſe themſelves out of the Subſtance of the Subject; ſo that they bear the Burden, and account for all at laſt.

The State in which the Sultan goes to Moſque.

The Sultan goes in State to the Moſque of St. *Sophia* on *Fridays*; the Janizaries in their Ceremonial Caps and other Dreſſes, make a Lane from the Gate of the Seraglio to that of the Moſque: The Cavalcade is begun by 60 or 80 Meſſengers on Foot, preceded by their Chief on Horſeback: After them come ſome hundreds of Boſtangies, with their Commander alſo on Horſeback before them: Next comes the Chancellor, accompany'd by the Judge of *Conſtantinople*; the Chief Juſtices; the Imans; the Molla's; and after them the Mufti or Grand Pontiff, mounted on a ſtately Horſe; then thirty or forty Gentlemen of the Seraglio, and twenty or thirty of the Life-Guards and as many Pages form two Lines, and in the middle of thoſe Life-Guards rides the Grand Seignior, on a fine *Arabian* Horſe, with the Bridle, Saddle and Houſing glittering with Gold and precious Stones. The Sultan on common Days wears but one Plume of Feathers; but he wears three in his Turbant upon extraordinary Occeaſions; one before, and one of each Side of his Head, that which is before is adorn'd with a Roſe of Jewels, with a Diamond of an extraordinary Size in the middle of it.

The Sword-bearer is next after, and a little to the Right of the Grand Seignior; he carries a Sabree in his Hand, the Hilt and Scabbard of which is cover'd with Precious Stones; then follows the Cup-bearer with a Veſſel of Water, and after him the Maſter of the Turbant, theſe three all on Horſeback; after them follow the white Eunuchs, and the young Gentlemen educated in the Seraglio; and after them follow ſome led Horſes, which cloſe the Cavalcade.

When he goes by Water.

When the Grand Seignior goes by Water he takes but a ſmall Retinue with him; he has Summer-houſes belonging to the Seraglio which ſtand upon the Water, and there he goes into his Galliot, and is row'd to the *Black Sea* to take the Air; his Galliot has four and twenty Benches of Oars on a Side, and to every Oar is two Men, wearing only Shirts and Drawers, and have red high Caps in form of a Sugar-loaf.

Walks Incognito

The Sultan uſed often to walk Incognito in the Streets of *Conſtantinople*, and would go into the Shops of the Bakers and Butchers, to ſee how his Edicts were obſerv'd; and if he found they ſold their reſpective Proviſion above the Price limited by his Order, he immediately made a Sign to his Executioner to take off the Offender's Head; but though Covetouſneſs in ſelling above the ſtated Price coſt many a Head, yet far ſhort of what were ſacrific'd to the ſmoaking Tobacco, notwithſtanding that it was ſtrictly prohibited upon Pain of Death, on Account of the frequent Fires that were occaſion'd by it.

CHAP. IX.

Of the Manner of depoſing one Sultan and ſetting up another; with their Method of Inſtalling and Crowning the New one: With a particular Account of the depoſing Sultan Muſtapha, *and the Advancement of Sultan* Achmet *to the Throne by the Soldiery.*

THIS Revolution happen'd in *Turkey*, in the Year 1703, and was brought about as follows: The Grand Seignior reſiding at *Adrianople* about the Beginning of *May*, and ſome time before and after, created a great Uneaſineſs among the People of *Conſtantinople*, becauſe the Trade was in a great meaſure diverted from that Metropolis; and they apprehending that the Mufti by his Advice, was the Chief Author and Occaſion of this Remove of the Court, and of the Uneaſineſs of the People, they exclaim'd moſt againſt him, which the Caimacan of *Conſtantinople* the Mufti's Son, perceiving, ſent Advice to the Court at *Adrianople* about it, but little Notice was taken, much leſs had the diſcontented People of *Conſtantinople* any Redreſs; and this Diſaffection was ſtill increas'd by their Apprehenſions, that the Mufti either farm'd out or ſold to the beſt Bidder, the publick Offices and Places of Truſt and Profit, and that by this Means, his own Family had engroſs'd the moſt advantageous Poſts in the Empire; and not only ſo, but that he made no ſcruple in iſſuing out his Fetſa's for exempting the greateſt Miniſters, to make Room for his own Creatures; and that the Oppreſſions, in which he was indulg'd in the Practice of, alienated the Hearts of the Subjects from the Grand Seignior, and made them look upon him as a Tyrant.

This Diſaffection continued and increas'd till *July* following, when ſome hundreds of the Zebidgies (which is thoſe who have the Care of the Arms,) ſet up a Standard in the *Atmeidan* (a great Square) in *Conſtantinople*, proclaiming that every good Muſſulman, as he valu'd their antient Laws and Cuſtoms, and his own Liberty, ſhould repair thither, and they were ſoon join'd by others of the Soldiery;

Soldiery; but the Zebidgi Baſſa, or Chief of thoſe that had the Care of the Arms, being one of the Mufti's Creatures, hid himſelf, as not being willing to appear at the Head of them, leſt he ſhould diſoblige the Mufti; however, the Gunners alſo repair'd to the Standard of the Male-contents, and having join'd them, they march'd in a Body towards the Seraglio, and meeting with the Vice-Aga of the Janizaries, at the Head of a Detachment of thoſe Troops who were going to poſt themſelves in the Seraglio, the Janizaries all deſerted their Aga, and came over to the Zebidgies, and alſo demanded their Colours of their Aga, and although he, being overpower'd by their Number, did not think fit to deny them, yet he would have excuſed himſelf by telling them that he had left the Colours at home, but they not being ſatisfied, one of the Soldiers cleft his Head with a Sabre, and when he had kill'd him, took the Colours out of his Boſom, and putting them upon a Pike-ſtaff, proclaim'd that if any of their Body did not repair to the Standard they ſhould be deem'd Infidels; whereupon the Janizaries aſſembled, and march'd with the Zebidgies to inveſt the Seraglio, where being come, they knock'd at the Iron Gate, and the Porters, being of the ſame Kidney, ſoon open'd to them; whereupon the Caimacan, the Mufti's Son, fled, and the Captain of the Porters, upon the Promiſe of his Life, and the Continuance of his Place, came over to them.

The Malecontents thus encreaſing, and amounting to ſuch a Number, were further augmented by the Addition of the Sphahi's or Troopers, (*of which ſee Chap.* VIII.) and now they are ſo ſtrong that they reſolv'd to leave a Garriſon in the Seraglio, and encamp at the *Atmeidan*, the Square where they firſt aſſembled, and about which the Janizaries have their ordinary Quarters. Here they choſe one *Achmet Baſſa*, who was then at his Country Seat near the *Boſphorus*, for Prime Vizier, whom they dragg'd againſt his Will from his Retirement, and even compell'd him to accept of the Command; which being accompliſh'd, they likewiſe conſtituted Viziers of the Bench, a new Chancellor, and other Members of the Divan, and then publiſh'd a Manifeſto, with their new Mufti's Fetfa to it, ſummoning the Grand Seignior to appear before the *Char Alla*, a Tribunal ſo ſacred, that whoſoever refuſeth to obey the Citation, is deem'd an Infidel; they alſo required him to deliver up the Mufti to the People, and this Manifeſto they ſent to the Grand Seignior, at his Court at *Adrianople*.

In the mean time the new Vizier ſent for the Interpreters of the *European* Ambaſſadors, deſiring that their Maſters would keep their People from ſtraggling abroad, and that no Taverns ſhould be open'd under their Protection, and prohibiting all Vintners whatſoever to ſuffer any *Turks* to have Wine under ſevere Penalties; and all the Shops were obliged to be ſhut, except thoſe where Proviſions were to be ſold, and the Women were prohibited not to go out of their own Houſes.

The Sultan was ſo far from obeying their Summons, that he aſſembled his Forces to march out againſt them, which when the Male contents had alſo that he had made a Preſent of a hundred and eighty Purſes to the Janizaries about him, and that *Mahomet's* Standard being ſet up with a Loaf, a Sabre, and the Alchoran laid upon a Table, according to the Cuſtom of the *Turks*, and that he had cauſed an Oath of Allegiance to be adminiſtred to his Army, which conſiſted of ſeventy thouſand Men.

They had alſo been inform'd that the Sultan's Mufti had publiſh'd a *Fetfa* in the City of *Adrianople*, and in the Army, declaring the People of *Conſtantinople* Conſpirators, Infidels, and Rebels, divorc'd from their Wives, and unworthy to bear the Name of Muſſulmen, and ought to be extirpated for their Rebellion, exhorting all true Muſſulmen to take up Arms for the Emperor againſt them; whereupon the Mufti of the Male-contents iſſued a like Fetfa againſt the *Kyſilbaſh*, as they ſtil'd the Mufti and his Adherents, for ſo they call the *Perſian* Hereticks.

In the midſt of all this Combuſtion it is very remarkable that all Things were very quiet at *Conſtantinople*, the Markets were regularly kept, and no Diſorders were heard of; the Imans and Clergy, with the Head of the Malecontents, united in adviſing the People not to diſgrace a good Cauſe by committing Outrages; and what contributed moſt to this Security was the uncommon Generoſity of the Clergy, who were content to part with the Treaſure of their Moſques to pay the Troops regularly.

The Malecontents having made this Progreſs, they held a Council on the eighth of *Auguſt*, in the ſame Year 1703, wherein they came to a Reſolution, that the Sultan *Muſtapha*, the preſent, or rather late, Emperor, having neglected to appear before the great Tribunal three *Fridays* ſince the Summons were iſſu'd, had forfeited his Crown by Law, and that they would proceed to depoſe him, and ſet another upon the Throne, which their Mufti had confirm'd by his Fetfa, and the Reſolution was committed to writing, and carried by a Janizary on the Point of a Spear through the City and Army, the *Mueſtin* at the ſame Time concurring with him in publiſhing the Contents of it from the Top of the Moſques. A Council held.

In the mean Time *Aſſan Firally* Baſſa (who had till now conceal'd himſelf in his Haram to ſee what Turn Things would take) began to appear, and, upon their aſſuring him of their Protection, and maintaining his Dignity and Poſſeſſion in the Poſt of Caimacan, undertook the Command of a Garriſon in *Conſtantinople*, conſiſting of twenty five thouſand Men, which being ſettled, the Army of the Malecontents march'd out of *Conſtantinople*, and ſoon after their March held a Council, wherein, after ſome Debates, it was agreed to ſet up Sultan *Achmet*, the only Brother and Heir of the (then) preſent Emperor, and to put him in Poſſeſſion of the Throne, as Grand Seignior of all the *Turkiſh Empire*. A Garriſon.

The Troops of the Malecontents proceeded in their March and encamp'd at a Place call'd *Dabout Pacha*, and were now amounted to the Number of ſixty five thouſand Men, beſides ſeven or eight thouſand Men arrived from *Aſia*, their Artillery being arrived here before them; and now the Gates of *Conſtantinople* were all ſhut except two, and at them ſtrong Guards were kept, and an Oath was adminiſter'd to thoſe who profeſs'd to be of the Party of the Malecontents, whereby they engaged themſelves not to lay down their Arms till they obtain'd Redreſs for their Grievances. Malecontents in Creaſe

But on the other Side, the Mufti of the late, or preſent, Sultan, repreſented that the Army of the Malecontents, as compos'd of Students, Shopkeepers, *&c.* was an undiſciplined Mob, who would diſperſe upon the Appearance of the Royal Troops; upon which they thought that a Body of thirty thouſand Men was ſufficient to oppoſe their March,

and accordingly they detach'd that Number; but the Generals of the Royaliſts (ſo they are ſtill call'd by way of Diſtinction from the Malecontents,) finding their new Enemies a more regular Body than they imagin'd, and which was more, their Numbers were vaſtly Superior, they propoſed to treat with them, to which the Malecontents gave this poſitive Anſwer, *That the Emperor had long known their Demands, and that they ſhould treat with none but himſelf in Perſon*, upon which the Imperial Officers made a precipitate Retreat, and many of the Troops deſerted, and went over to the Malecontents.

The diſaffected Party thus gaining Strength every Day, they continued their March towards *Adrianople*; which the Royaliſts being adviſed of, advanced half a Day's Journey with an Army of fourſcore thouſand men, commanded by the *Kiaca Bey*, to meet them, and arriving within Cannon Shot of the Enemy, Orders were given for the Attack, but the Royaliſts, inſtead of preparing for the Attack, moſt of them likewiſe deſerted and join'd the Enemy; whereupon the Janizaries alſo refuſed to fight for the *Kefilebaſh*, or Heretick Mufti of the Emperor, as they call'd him, and the *Kiaca*, or General, ſeeing this, declared alſo for the Malecontents, and the two Armies immediately united, except a ſmall Body of the *Albanians*, who retired to the Emperor's Pavilion with the melancholy News of the Deſertion of his Forces; the Sultan hearing this, immediately retreated to the Seraglio at *Adrianople*, there to attend his future Fortune, while his Prime Vizier and Mufti fled to ſecure their own Lives.

Seize the Sultan's Camp.

The Armies thus united in Favour of the Malecontents, took poſſeſſion of the Sultan's Camp, where his own Pavilion was left ſtanding, and made a general Diſcharge of great and ſmall Shot as a Signal of their Union: And a great Council being held, it was unanimouſly agreed to ſend the Aga of the Janizaries, the Boſtangi Baſſa, or Captain of the Porters, the Zebidgi Baſſa, or Captain of thoſe that take care of the Arms, and the Spahilar Baſſa, or Captain of the Troopers, each with two thouſand of their reſpective Forces, to the Seraglio at *Adrianople*, to demand Sultan *Achmet* in order to proclaim him Emperor; and being arrived before the Gate of the Palace, Proclamation was made by a Janizary that Sultan *Achmet* was elected Emperor by the Army and People, and he was required to come out to them and take the Government upon him; and Sultan *Muſtapha* the (yet) preſent Emperor appearing, the Zebidgi Baſſa declared to him that he was no longer Emperor, having forfeited his Crown, and that he therefore deſired that Sultan *Achmet* might be brought out to them; and the old Sultan *Muſtapha*, ſeeing it in vain to reſiſt, fetch'd his Brother *Achmet*, who was in the Priſon where the Princes of the Blood are kept, and preſented him to them, and then withdrew without expreſſing the leaſt Reluctancy or Uneaſineſs.

Manner of their Election.

There were then ſome Queſtions propoſed to Sultan *Achmet* in the Name of the People, and previous to their Allegiance to him, as, if he would govern his People according to their antient Cuſtoms, if he would reſide at his Capital of *Conſtantinople* in Times of Peace, if he would deliver up to them the late Mufti *Feſulla Effendi*, &c. to all which he anſwer'd in the Affirmative; upon which they unanimouſly cry'd out, *Let Sultan* Achmet *live and reign!* and inviting him to the Army, he was there ſolemnly proclaim'd their Emperor, after which the Viziers and all the Generals paid their Homage to him.

The News of the Succeſs of the Malecontents ſoon reach'd *Conſtantinople*, who, upon Confirmation thereof, and of the Depoſing of Sultan *Muſtapha*, and the Advancement of Sultan *Achmet* to the Throne, immediately cauſed the new Emperor to be pray'd for in the Moſques, and all Matters of State were tranſacted in his Name; the Gates of the City and the Shops were open'd, and every Body expreſt an entire Satisfaction under this Revolution; ſo univerſal was the Diſguſt conceiv'd againſt the late Mufti, and againſt his Maſter, the Sultan *Muſtapha*, for protecting and encouraging him in his Proceedings.

But their Reſentment did not ſtop here; for though the late Mufti had made his Eſcape, yet the new Emperor was no ſooner proclaim'd, but Search was immediately made through the City of *Adrianople* for him, but they finding that he was fled to *Philippopolis*, a Detachment of Troopers were ſent after him, but he was gone from thence the Night before they arrived; but they, reſolved not to leave off the Purſuit, divided themſelves into two Parties, and took different Routs, and took him as he was about to embark on the *Black Sea*; whereupon they put him into a Peaſant's Waggon, and convey'd him to *Adrianople*, where they did not want Inclination to have executed him, but the *Turks* believing that a Mufti, or Supreme Pontiff, is not to be ſubject to any human Judicature, they could not as ſuch proceed to his Execution; however, as they were inexorable, they firſt diveſted him of his Eccleſiaſtical Dignity, and conferr'd a Temporal one upon him, making him Baſſa of *Sophia*, and being brought under that Denomination, they could proceed to try him as a Lay-man; for it is to be obſerv'd, that as their Prieſts take that Office upon them without any Ceremony of Conſecration, ſo there need be no Ceremony uſed in diveſting them of that, but by conferring upon them ſome ſecular Employment. The old Mufti taken.

When they had contrived this Means to make him liable to the Examination, they firſt put him to the Rack to make him confeſs where his Money and Effects were, which on ſuch Occaſions always fall to the Sultan; and then he was deliver'd up to the Soldiery, who, being exaſperated againſt him, ſet him upon an Aſs, with his Face to the Tail, which they obliged him to hold in his Hand; and thus mounted, a poor *Jew* took the Aſs's Halter in his Hand and led him through the principal Streets of the City, the irritated People crying before and after him, *This is the Man that has given pernicious Advice to Emperors, violated the Laws he ought to have maintain'd, and enrich'd himſelf at the publick Expence; behold the* Perſian *Heretick!* and in this Condition they brought him to a Place where there are old Cloaths ſold, call'd the *Louſe Market*, and forcing the old Mufti to diſmount, one of the Soldiers ſever'd his Head from his Body with one Stroke of his Sabre, and both Head and Body were thrown into the River; and next Morning his two Sons were beheaded in Priſon, and their Eſtates confiſcated. Rack him. Expoſe him. Behead him.

The new Emperor's next Buſineſs was to ſet forwards for *Conſtantinople*, and arriving at *Dahout Baſhaw*, near that City, on the fifteenth of *September*, he appointed the Ceremony of his Inſtallation to be the eighteenth of the ſame Month, in the Moſque of *Job*, in *Ypre*, one of the Suburbs of *Conſtantinople*, which Moſque they ſay takes its Name from *Job*'s being buried here. In this Moſque they keep the Standard of *Mahomet*, and an old Sabre ſaid to have been worn by him; to which they pay ſuch a Veneration, that the girding of this Sabre on the Emperor at his Acceſſion is equivalent to the ſetting a Crown upon a Prince's Head with us; and this Ceremony is perform'd by the Agdi Becktaſſe, who according to their Tradition is always to be a Deſcendant from *Job*.

When the Day appointed for the Inſtallation of the new Sultan, *Achmet*, was come, the late Sultan *Muſtapha*, about ſeven in the Morning, was brought into *Conſtantinople* in a cover'd Waggon, ſurrounded by white Eunuchs, and guarded by a Detachment of Janizaries, and was convey'd to one of thoſe Inſtallation.

Apart-

Apartments, or Priſons, in the Seraglio, where thoſe of the Royal Blood are uſually kept; after him follow'd his only Daughter, his Siſter and the Empreſs Dowager in other Waggons, attended by their Slaves, and after them came about thirty other cover'd Waggons with Women belonging to the depos'd Sultan, ſurrounded by black Eunuchs, and guarded by another Detachment of Janizaries at ſome Diſtance in the Front and Rear of the Waggons, who convey'd them to the Old Palace.

His Entry

About half an Hour after eight the new Sultan began to make a magnificent Entry, attended by all the Officers of State, paſſing through a double Line of Sphahies and Janizaries, who were drawn up between *Dahout Baſhaw* and the Moſque where the Ceremony was to be perform'd; but it was obſerved that he did not appear like an extraordinary Horſeman, leaning forward almoſt to the Neck of his Horſe; but it is ſuppoſed that he, as well as moſt other of the Eaſtern Princes, underſtood the Inhabitants of the Seraglio better than riding or managing a Horſe, which Indulgence in their Youth contributes much to their being weak in Politicks.

The Emperor being arrived at the Suburb of *Ypre*, he diſmounted at the Gate of the Moſque between ten and eleven a Clock, where Prayers were ſaid upon that Occaſion; after which the Agdi Becktaſſe girded the Sabre about him, and put the Turbant adorn'd with rich Feathers upon the Sultan's Head, after which the Mufti pray'd for a Bleſſing upon the Emperor, and Succeſs to his Arms againſt the Infidels, and exhorted him to propagate the Mahometan Faith, *&c.* after which the Mufti embraced his Knees, and the Agi of the Janizaries, the chief Meſſenger, and the other Officers of State, kiſs'd the Hem of his Veſt, and the Ceremony concluded with the Diſcharge of the great Guns, and the Acclamations of the People through whom he paſs'd; and the Way being lined in his Return to the Seraglio in the ſame Manner as it was from thence to the Moſque, he returned thither with the Prophet's Sabre by his Side, which he ſent back to be repoſited in its Place as ſoon as he arrived at the Seraglio.

While the Ceremony was performing, the three Sons of the late Sultan *Muſtapha*, and *Ibrahim* the Emperor's Couſin, being in cover'd Waggons, and guarded by Eunuchs and Janizaries, were carried to their ſeveral Apartments in the Palace; as was alſo the Haram of the new Emperor, which conſiſted of above a hundred beautiful Damſels, which had been preſented to him ſince he had been declar'd Emperor.

CHAP. X.

Of the Adminiſtration of Juſtice, and of the Puniſhments inflicted upon various Offenders in Turkey.

MAHOMET being both Prince and Prieſt, both Civil and Eccleſiaſtical Authority was lodg'd in him, and his Succeſſors, the Caliphs of *Babylon*, bore the ſame for ſeveral hundred Years afterwards; but as the Spiritual and Temporal Power is now divided, the Grand Seignior his Viziers and Viceroys bear the Authority in judicial Affairs, though the Mufti is conſulted in the Affair, but the Emperor does as he pleaſes nevertheleſs; only in the Caſe of State Criminals, the Emperor cannot cauſe them to be put to Death without the Mufti's Fetfa; but that is ſeldom deny'd if the Emperor requires it, or if the Mufti ſhould refuſe it, the Emperor can depoſe him, and ſubſtitute another in his Room.

Cadiſiſquers.

Next to the Mufti are the Cadiliſquers, or Chief Juſtices of Provinces, of which thoſe of *Romania*, *Anatolia*, and *Egypt* are the Chief; theſe are ſuppoſed to be Eccleſiaſticks as well as the Mufti, and may be controul'd by the Viceroys of their reſpective Provinces, but in Caſes where the Soldiery is concern'd, the Cadiliſquers have the determining Voice.

The Alchoran is all the Statute Book that they make uſe of, and by it they are directed to determine and decide Differences, though ſometimes different Conſtructions put upon the reſpective Paſſages in the Alchoran give an unexpected Turn to Affairs to be decided, and it is reaſonable to expect that amongſt *Turks*, as well as among Chriſtians, a little Money, or ſomething equivalent, may add Force to a Clauſe which had otherwiſe had but a ſmall Share in the Queſtion.

The Judges in great Towns are call'd Molla's, and thoſe of ſmaller Towns are call'd Cadies, but are both deem'd Eccleſiaſticks, and receive their Authority from the Mufti; they determine Controverſies both Eccleſiaſtical and Civil, and where Marriage Contracts or Divorces come into the Diſpute, they determine them in a ſummary Way; but, as above obſerved, they rather adviſe than paſs Sentence in Capital Caſes, and confirm the Sentence by a Fetfa, which Sentence is commonly pronounc'd by the Grand Seignior, or his Viceroys, or Viziers, and only confirm'd by the Mufti.

But if a Viceroy, or Baſſa, is but in the leaſt ſuſpected of Diſloyalty or Miſconduct, that is ſufficient to bring him to a Trial, and condemn him too, without any Evidence in order to his further Conviction; for as all the Fortune of a State Delinquent devolves upon the Crown, a ſmall Charge will convict them, and it is common for ſuch to be condemn'd before they acquaint them with the Nature of the Offence they are charg'd with, or the Names of their Accuſers, or allow them Liberty to make a Defence, but to order Sentence to be executed, which is done by diſpatching a Capigi with the Imperial Decree to take off the Viceroy's or Baſſa's Head, without allowing him to plead for himſelf, or any other Ceremony required except the Mufti's Fetfa, as before obſerved, which for Form's ſake, according to their Conſtitution, is all that is neceſſary.

But to prevent any Reſiſtance, in Caſe the Capigi would meet with Oppoſition in the Execution of his Office, he carries an Order to the Civil and Military Officers of the Place to aſſiſt him if Occaſion requires; but this is ſeldom found neceſſary, ſo blindly paſſive are they under the arbitary Sentence of their Prince, and ſo entirely bigotted to the Doctrine of Predeſtination, that they do not impute their Sufferings either to their own Demerit or their Prince's Tyranny, but to an irreſiſtible Fate which was from the Beginning ordain'd for them.

When the Capigi comes to execute his Tragical Office, he firſt acquaints the Cadi and the principal Officers of the Place with the Subject of his Errand,

Method of proceeding in Offenders in *Turkey*.

rand, and enquires after the Affairs of the condemn'd Perſon, and then goes to the condemn'd Baſſa's, or Viceroy's, Palace, and preſents the Grand Seignior's Orders to him, which the Baſſa, or Viceroy, undauntedly receives with Tokens of the higheſt Reſpect, and reading it, he puts it to his Head, and ſays, *the Will of God and the Emperor be done*, or Words to that Purpoſe, expreſſes his entire Reſignation to the Sentence he is under, and has commonly about an Hour granted him for his private Thoughts, which ſome would imagine is to ſettle his Domeſtick Affairs, but I cannot find that that would be of any uſe to him, ſince he is now dead in Law, and all his Effects fall to the Government of courſe; but whether he ſpends that Hour in Devotion, or to make an Inventory of his Treaſure, is uncertain; but the latter ſeems to be improbable, for what Pleaſure can he have in having an Account of that Treaſure, which within an Hour he muſt leave, and which, after he is expired, muſt go out of his Family, and immediately fall into the Poſſeſſion of the Grand Seignior.

When this ſhort Reſpite is expired, the Capigi gives him a Silken Cord, which he has provided for the Purpoſe, and the Baſſa, or Viceroy, ties it about his own Neck, and, when he has ſaid a ſhort Prayer, the Capigi's Servant throws him upon the Floor, and by drawing the Cord tight, they ſoon diſpatch him, which done they cut off his Head, and carry it to Court to ſhew it to the Sultan.

Whether this laviſh Reſignation may be imputed to Fortitude and Reſolution, or to the puſillanimous and paſſive Spirits of thoſe Sufferers, who cannot properly be call'd either Victims or Martyrs, we cannot determine, but there ſeems to be a much greater Influence of Bravery in the following Account of *Aſſan* Baſſa, who at the Beginning of the Revolution, mention'd in the laſt Chapter, was made Cammacan of *Conſtantinople* by the Malecontents, and being at his Government, ſome Diſtance from Court, Sultan *Muſtapha* (being then reigning and not yet depoſed,) ſent a Capigi Baſſa to take off his Head, which Sentence was ſuppoſed to be occaſion'd by the Inſtigation of the then Mufti, Sultan *Muſtapha*'s Tool, who was ſuppoſed to be the Occaſion of the Alienation of the Hearts of Sultan *Muſtapha*'s Subjects from him, and of the Revolution which follow'd, as in Chap. IX. But *Aſſan* Baſſa, apprehenſive of this, contracted an intimate Friendſhip with the Cadi and other inferior Officers of the Place, and by his Bounty and impartial Adminiſtration render'd himſelf very popular in the Government, and gain'd their Hearts ſo much that when the Capigi came to enquire privately of the Cadi and other People into the Character of *Aſſan*, and whether he ſhould be likely to meet with any Reſiſtance in the Execution of his Office, they aſſured him that he would find him entirely reſign'd to the Emperor's Pleaſure, and that he had no occaſion to take any Soldiers with him; whereupon the Capigi went to the Baſſa's Palace, and preſented him with the Imperial Order.

The Baſſa diſſembled the moſt profound Submiſſion, and kiſs'd the Order with great Reſpect, and, having read it over, made an Inventory of his Effects, ſeemingly for the Uſe of the Emperor, and deſired only half an Hour's Time to take leave of his Family, which being granted, he left his Steward to entertain the Capigi, and for a little Time retired.

But as he had no Deſign of leaving the World ſo ſoon as the Capigi expected, ſo he did not employ his Time in taking leave of his Family, but in aſſembling his Friends and faithful Servants, and having told them of the cruel Meſſage the Capigi had brought, they with one Conſent reſolved to hazard Life and every Thing elſe in his Defence, rather than like Cowards to ſtand by and look on to ſee him ſo barbarouſly executed.

The Scheme being thus laid, he return'd to the Capigi within the Time that he had deſired, and order'd a Table to be ſpread, and a handſom Entertainment provided, and having ſeveral of his Friends about him, under a Pretence of taking his Leave of them, he prevail'd with the Capigi alſo to ſit down and eat; but when he was thus expreſſing all ſeeming Tokens of entire Reſignation and Satisfaction under his impending Fate, ſuddenly four Men came into the Room, and making boldly up towards the Capigi, demanded his Head; the Capigi, ſurprized at ſuch a ſudden Turn of Affairs, and finding it in vain to reſiſt by Force, began to petition for his Life, promiſing that if they would but ſpare him he would return to Court, without attempting to put his Orders for beheading the Baſſa in Execution; but it was now too late, and all Intreaties were vain, for they immediately ſtrangled him, and cutting off his Head, they ſent it to *Conſtantinople* to *Aſſan* Baſſa's Friends; and ſome think this unjuſt Demand of *Aſſan* Baſſa's Head, and his Succeſs in ſo bravely reſiſting it, gave the firſt Riſe to the Inſurrection, which was afterwards the Occaſion of depoſing Sultan *Muſtapha*, and advancing Sultan *Achmet* to the Throne, as you have already heard in Chap. IX.

The Capigi ſtrangled

The different Puniſhments, inflicted upon different Criminals, are as follow, *viz.* a Murderer is beheaded, a Thief ſtrangled, an Apoſtate burnt, a Traytor is dragg'd at a Horſe's Tail, and afterwards impal'd; and if one maims or wounds another, the ſame is inflicted upon him, an Eye for an Eye, a Tooth for a Tooth, *&c.* as in the *Jewiſh* Law; for Perjury they are ſet upon an Aſs, with their Face to the Tail, which the Criminal holds in his Hand, and, being thus expoſed through the City, they are afterwards branded in the Cheek with a hot Iron; Bakers, or others, who are guilty of defrauding in Weight or Meaſure, are baſtinado'd, that is, they receive a certain Number of Blows, according to the Nature of the Crime, on the Soles of their Feet, or ſometimes they are expoſed with a heavy Pillory-Board about their Necks, for a longer or leſs Time, according to the Crime they are guilty of; but it is alſo there as in ſeveral other Parts of the World, where there is Money, a Bribe or Fine will either buy off or very much mitigate the Corporal Puniſhments. Puniſhments

As to Civil Debates about Debts or Damages, the Plantiff commences by way of Petition, and the Judge ſends a Meſſenger of the Court to ſummon the Defendant, and when the Parties themſelves and their Evidences have been examined, the Matter is uſually determined without any long Delay; they do not allow Demurrs and dilatory Forms, nor are there any Lawyers to put falſe Gloſſes and wreſt the Truth of the Fact, or the Letter of the Law, to the vileſt Purpoſes; and though ſome here, as well as in other Parts of the World, are guilty of taking Bribes, yet it is both practiſed and puniſh'd as a Crime, and if a Judge be found guilty of Bribery or Extortion, his Puniſhment is, to be pounded in a Mortar without any Mittigation or Compaſſion. Civil Caſes

The ordinary Puniſhment for petty Offences is the *Falack*; in this Caſe the Offender ſits down upon the Ground, and, having his Legs held up, receives a Number of Blows, proportionable to his Crime, on the Soles of his Feet, with a Cane or Rattan about as thick as a Man's Finger; the Women receive it on the fleſhy Part of their Buttocks, but are allow'd Drawers at the ſame Time, that they may not be indecently expoſed; and the Number of Blows is always appointed by the Judge, and not left to the Mercy of an Executioner, or (after Sentence is paſt) to be bought off by a Bribe, or bullied off by a Mob. They have the Prices even of The *Falack*.

of Cherries and other Fruit ſo regulated, that he that comes firſt to Market has no other Advantage by his coming firſt, but only that of ſelling his Goods firſt, but not dearer than the reſt; which Expedition in his Sale, and having finiſh'd his Market betimes, is a ſufficient Reward for his Induſtry, without any Advancement of the Price; for if any one by his timely Arrival at Market pretend to enhance the Price, he is ſure to be condemn'd to the *Falack*, which he muſt undergo, or buy it off with a Fine. Mr. *Thevenot* gives us ſome particular Inſtances of the Rigour with which theſe Laws are put in Execution; as, of a Man who ſold Snow (a waſting Commodity in thoſe hot Countries when broke open and expoſed to Sale,) at five Pence a Pound, receiv'd and underwent the *Falack* for want of Weight; and another who had impoſed upon a Child, in not giving Onions enough for a Penny, was brought to the *Falack*, and received thirty Blows. If theſe petty Villanies were ſo expoſed and puniſh'd here, it would certainly contribute to the ſuppreſſing of petty Felonies, and in proceſs of Time the timely ſuppreſſing of thoſe might ſave abundance of People from the Gallows.

Murders. If a Perſon is found murder'd in the Streets, and the Murderer be not known or found, the neighbouring Houſes are amerced forty five thouſand Aſpers, which is not much leſs than a hundred Pounds Sterling; and this makes People, both in publick and private Buſineſs, to be very careful to ſee Differences reconciled, and Bloodſhed prevented; which, by Duelling and private Quarrels, frequently happen in Chriſtian Countries; for as, according to our Laws, it does not affect any but thoſe concern'd in the Action, the Neighbourhood cannot be expected to be ſo Induſtrious to prevent Murders as they might reaſonably be ſuppoſed to be if themſelves were to be Sufferers, whoever committed the Crime.

They keep a regular Watch in the Streets every Night, and take up Perſons that cannot give a good Account of themſelves, and of the Reaſon of their being abroad at unſeaſonable Hours, and condemn'd to the *Falack* or Baſtinado the next Morning, and ſometimes to pay a Fine into the Bargain.

The Chriſtian Foreigners, whom they call *Franks*, have the Privilege of having all their Controverſies determined by the Ambaſſadors, or Conſuls of their reſpective Nations; but in a Difference between a *Turk* and a *Frank*, the Cauſe is decided in their own Courts of Judicature, but if there the *Frank*, or Chriſtian, have not Juſtice done him, he appeals to the Reſident of his reſpective Nation, and commonly procures Redreſs upon ſuch Application.

They are very induſtrious to proſelyte ſuch Chriſtians as they can prevail upon, and take all Advantages to execute that Deſign; as we have an Inſtance in an *Engliſh* Cabbin-boy, who having received ſome hard Uſage from his Captain, turn'd Mahometan, and was circumciſed, without any regard to the Forms of Capitulation agreed upon before between *England* and the Porte; the Condition of which is, that if a *Frank* offers to turn Mahometan, he ought not to be received by them under the Ceremony of Circumciſion, till he acknowledges before the Interpreter of the Nation, that it is his own voluntary Act, and that he was not induced to it by Threats or Promiſes; and to prevent his being perſwaded or over-aw'd againſt his own real Inclination, he is to perſiſt in that Reſolution for twenty four Hours.

A Cabbin-Boy turns Mahometan.

The Lord *Paget* being then Ambaſſador at *Conſtantinople*, who was at that Time at *Carlowitz*, and returning to *Adrianople*, was informed of thoſe Proceedings of the *Vaivode* of *Galatia*, at whoſe Houſe the Boy had been circumciſed, and immediately demanded to have the Boy deliver'd to him, and to have the *Vaivode* baniſh'd for ſeducing the Boy contrary to the above-mention'd Agreement; the Vizier eaſily conſented to ſend the *Vaivode* into Exile, and to deliver the Boy up *privately*, if he repented of what he had done, but not *publickly*, leſt it ſhould give Offence to the Muſſulmen; but that if the Boy perſiſted in his Reſolution before the Druggermen, or Interpreters, he could not be deliver'd up notwithſtanding; but my Lord inſiſted upon having the Boy deliver'd up, whether he recanted or not, becauſe the Form agreed upon was not made uſe of when he was initiated; the Vizier endeavour'd to evade that Demand, by a Complement, telling him that they had been very much obliged to him for his good Offices at the Treaty of *Carlowitz*, but deſired that my Lord would not inſiſt upon any Thing which might caſt a Reflection upon their Religion; but the Ambaſſador ſtill inſiſted upon having the Boy return'd, alledging that the Capitulations had been violated, and that the Boy, who was ſcarce of Age to be grounded in his own Religion, much leſs in theirs, to which he was a meer Stranger, ought not to be deem'd a Mahometan, but to be deliver'd up *publickly*, and not *privately*, that the Capitulations might be look'd upon as the more ſacred and inviolable for the future; and now the Diſpute lay not whether the Boy ſhould be deliver'd up or not, for that was agreed upon in the Affirmative, but whether he ſhould be deliver'd up *publickly* or *privately*; and the Vizier condeſcended to communicate the Ambaſſador's Demand to the Mufti, but he poſitively refuſed to deliver up the Boy *publickly*; however, to accommodate the Matter, it was agreed that the *Vaivode* ſhould be baniſh'd for procuring the Boy to be circumciſed, contrary to the Capitulations, and that the Boy ſhould be protected by the Lord *Paget* againſt any Thing that he had to fear from his Captain for leaving him; which being agreed upon, and the Boy declaring himſelf a Chriſtian, and that it was only the hard Uſage he had from his Maſter that induced him to turn Mahometan, he was thereupon diſcharged of all the Engagements to their Religion and return'd to the Lord *Paget*.

Having thus treated of the Situation, Bounds, Seas, Rivers, Provinces, &c. of *Turkey*; and of the Original, Power, Arts, Negotiations, Forces, Revenues, and Adminiſtration of Juſtice of the *Turks*, we ſhall next proceed, according to our propoſed Method, to give a Deſcription of *Chaldea*, *Aſſyria*, *Meſopotamia*, *Syria*, the *Holy Land*; with the Situation and Deſcription of *Jeruſalem*, &c. with whatſoever is remarkable in any of thoſe Places, as it relates to Scripture Hiſtory; of which in Order.

CHAP. XI.

Of the Province of Eyraca Arabick, *or the Antient* Chaldea, *with a particular Description of the famous City of* Babylon.

Situation. THE antient *Chaldea*, now call'd *Eyraca Arabick*, has *Diarbeck*, or *Mesopotamia*, on the North, and *Arabia* and the Gulf of *Persia*, or *Bossora*, on the South; it lies on both Sides of the two Rivers *Tygris* and *Euphrates*, and may be said to comprehend a Part of both, which makes it very probable that this is the Place which was once the Garden of *Eden*, of which see more in Chap. IV. of the Description of *Arabia* towards the latter End.

Babylon. IN this Province stood the once famous, and yet memorable, City of *Babylon*, first built by *Nimrod*, and afterwards much enlarged by *Semiramus*, the Widow and Successor of *Ninus*, the third Monarch of this Empire, but it was *Nebuchadnezzer* that made it the Wonder of the World. The Walls of this City were eighty seven Foot thick, and, by the most authentick and probable Account that we have of them, they were about seventy five Foot, or twenty five Yards high; the City was exactly square, each Side was fifteen Miles in Length; it was built of large Bricks, and cemented with a kind of glutinous Slime or Bitumen, which in that Country arises out of the Earth, and when it is newly taken up it is soft and fit to use as Mortar, but when dry, it is harder than either Brick or Stone itself, which contributed much to the strength and duration of those Buildings.

THERE was a large Moat or Ditch without the Walls, both Sides of which were built with Brick, made of the Clay or Matter dug out of the Ditch, and the Moat was fill'd with Water; and on every Side of this spacious Square were twenty five Gates of solid Brass in the Walls; and where the Wall was not of itself impregnable, there were two Towers, or sometimes three, between every two Gates; but this is not to be understood of all the Gates, or of those Parts of the Wall which are inaccessible, but that the Towers were so disposed as to defend the weakest Part of the Wall; these Gates are supposed to be the Gates mention'd by the Prophet, when God promised *Cyrus* that *he would break in Pieces before him the Gates of Brass*.

FROM the twenty five Gates on each Side there went Streets cross the Square to its respective Gate on the other Side of the Square, so that there were fifty Streets, each of them fifteen Miles long, and about one hundred and fifty Foot broad, and by the Streets thus regularly crossing each other, there were within the Wall six hundred seventy six Squares, each Side of every one of which was four Furlongs and a half. The Houses, as is common in other Cities and great Towns, front the Street; and in the Squares behind the Houses were Yards, Gardens, Orchards, and all other Conveniencies; but these Houses are not contiguous to one another, but have Spaces left between them to render them more healthy and airy, as well as otherwise more pleasant.

THE River *Euphrates* divided the City into two equal Parts by its Passage through the Middle of it, entring on the North Side, and running directly South; the four Sides of the City answering exactly to the four Winds, or Cardinal Points, of the Compass, East, West, North, and South. There is a spacious Bridge in the Middle of the Town, which preserves the Communication of the East and West Parts of the Town with each other, and they that call it the least, say it is a Furlong in Length, though others say it is much more; there was at each End of the Bridge a Royal Palace, that on the East Side call'd the Old, and that on the West Side the New Palace; the old Palace was thirty Furlongs in Compass, but the new one sixty; the whole City was upon a flat Ground, without any Hill in it, and the Soil exceeding fruitful; and to People, this vast City *Nebuchadnezzer* almost depopulated, *Judea* and several other conquer'd Countries round about, so that the Inhabitants consisted of a Medley of People of almost all Nations and Languages.

IT was in this spacious City that the Temple of *Belus* was first built, and afterwards enlarged, which last was done by *Nebuchadnezzer*, but the most magnificent Part of the Building was a Tower, which was in the Middle of the Temple; which at the Foundation was a Furlong square, and consequently half a Mile about; it had eight Stories one above another, growing less at every Story, so that at the Bottom of each Story there was a large Battlement, or Gallery, on the Top of the lower Tower, lying without the Foundation of the next uppermost that stood upon it; and though there are various Accounts of the Height of it, yet those that bring it in at the least, say that it was a Furlong in Height.

AND though we shall always take care to avoid imposing upon the Belief of our Readers, or relating Matters impossible in themselves, or at least inconsistent with human Reason to give Credit to, yet we must beg leave to report the Account of other Authors and Travellers, who affirm that of all these eight Stories every one was a Furlong in Height, and consequently the whole must be a Mile, and that this was not the intended Height of it is evident, because they were abruptly broke off from the Work by the Confusion of Languages, and yet even this Height seems almost incredible; but if to this Conjecture we add the Opinion of those who think that this Tower was the Tower of *Babel*, mention'd *Gen.* XI. where God was willing to shew his infinite Power in so easily destroying the whole Design, by confounding the Language of the Undertakers of it, it may not be improbable that he should suffer them to proceed to a Mile in Height to expose their own Vanity, that after so great a Progress the Miracle of putting a stop to it might be more evident and convincing. *Tower Babel.*

BUT if we should still allow this to be the Tower of *Babel* above-mention'd of a Furlong square, or half a Mile about, and they had been suffer'd to carry it up to the Vertex of the Pyramid, or, which is the same, till by continual tapering they had brought it to a Point, and allowing likewise that every Tower was a Furlong in Height, and that the Foundation of every Tower was but three Foot within the Top of that upon which it stood, yet then there could have been but a hundred and ten Towers one above another, each a Furlong in Height, which though the Number of them and the Height of the whole be incredible, yet if granted, it makes not quite fourteen Miles; a Height surpassing human Belief to build so high, and yet immensly short of their intended Design of reaching to Heaven had it succeeded, so that human Frailty was expos'd on one Side in the Attempt, and Divine

Power

Power and Wisdom was display'd on the other Side in the Destruction of the whole Design.

We may subjoin one Argument more of this being the Tower of *Babel* mention'd in Scripture, for according to the authentick Authors, this Tower was built of Bricks, cemented with the bitumenous Substance above-mention'd, and Scripture says that the Tower was built with *Bricks throughly burnt, and that they had Slime for Mortar*, which Slime was, according to the Opinion of the best Interpreters, that bitumenous Matter above-mention'd; but this we only deliver as the different Opinions of different Authors, to which we may add the Account of it given by *Herodotus*; who tells us it was eight Towers upon one another, each of them seventy five Foot high, which in all made six hundred Foot, or two hundred Yards, which is the most probable, and capable of human Belief, except we allow it to be an extraordinary Case, as above-mention'd.

Why the *Chaldeans* [illegible] early.

But whatever Height this Tower was, Doctor *Prideaux* observes it amounted to so great an Eminency, that he thinks it contributed very much to the Improvement of the *Chaldeans* in Astronomy, and to their then excelling all other Nations in that Art; and as few deny their being the earliest, and at that Time the greatest Proficients therein, we may subjoin one material Reason to confirm that Conjecture, that is, that the Ark first resting upon the Mountains of *Ararat*, in *Armenia*, and that there at that Time were all the People of the inhabited World, being only eight Persons, who came out of the Ark, it is very natural to believe that they, or their immediate Successors, would soon spread themselves as far South as *Chaldea*; and as the *Antidiluvian* Learning was then in its Purity in *Noah*'s Family, no wonder if it declined as it was handed down to remote Nations by succeeding Generations, except retain'd by those whose natural Genius and Industry prompted them to retain and improve those excellent Sciences, in which this our remote Western Island of *England* has not been the least eminent.

But to proceed as to the Opportunities for Astronomical Improvements at *Babylon*, the above-mention'd Dr. *Prideaux* tells us there was a fine Observatory on the Top of the Tower, which contributed very much to the early Improvement of the *Chaldeans* in the Skill of Astronomy, beyond other Nations, and the Serenity of the Air in that Climate added still to the Frequency and Truth of their Observations; these Considerations, not to add any more, makes it cease from being a Wonder that the *Chaldeans* were esteem'd the most antient Astronomers, but it will not follow from thence that any of the present Inhabitants of the same Province are now the most, if at all, curious in that Art.

Temple of *Belus*.

But to return to the Temple of *Belus*, it is observed that it contain'd no more than this Tower when it was first built, nor till *Nebuchadnezzar*'s Reign, but he enlarged it with vast Buildings erected about it in a square Form, each Side of the Square being two Furlongs in Length, which is a Mile about; here the God *Bel*, or, as some say, *Baal*, was worshipped; and this is generally supposed to be *Nimrod*, to whom the Name *Bel* was apply'd, as signifying Lord, because he usurp'd such extensive Dominions; this Temple stood till *Xerxes*, in his Return from the *Grecian* Expedition, demolish'd it, and plunder'd it of a prodigious Treasure, particularly of several Images of massy Gold, one of them forty Foot high, which contain'd a thousand *Babylonish* Talents, or eight hundred seventy five Ounces of Gold, which amounts to about three Millions and a half Sterling; there were also other Images and Utensils in the Temple, which added to the former, amounted to above one and twenty Millions Sterling, beside other Treasure and valuable Things, which had been near two thousand Years collecting, *viz.* between the Foundation and the Destruction of *Babylon*.

Plunder'd

This famous Temple stood near the Old Palace, before spoken of, at the East End of the Bridge, and the New Palace was at the West End; it was defended by three Walls. But what has been most admired in this new Palace is, the hanging Gardens, which contain'd a Square of four hundred Foot, and were several large Terrasses one above another, and all supported by vast Arches, and surrounded and strengthened by a Wall of two and twenty Foot thick; the Mould was so deep that the largest Trees might take root in it, which were accordingly planted in Rows on each Side of the Walks.

Hanging Gardens.

The Walls of *Babylon* were so thick as to be deem'd almost impregnable before Gunpowder was invented, and supposed to have been able to resist any Force; and yet *Cyrus* surprized it by a Stratagem, diverting the River another Way, and entering at that Part of the Wall where the River run into the City; it was able to have held out a long Siege, by reason of the vast Quantity of Garden Ground contain'd in the City, and especially considering the Fertility of the Soil upon which it stood, it was sufficient to supply a great Number for a long Time.

There is also a Place call'd *Bagdat*, or *Bagdad*, which is sometimes called *Babylon*, and these Places are so promiscuously call'd by each Name, that some think that since *Bagdat* was in being, there is no such Place as *Babylon*, or that it stands where *Babylon* once stood; but that seems not to be the Case, for *Bagdat* stands upon the River *Tygris*, in 34 Degrees of North Latitude; it was built by *Mahomet* the Second, Caliph of the *Saracens*, who reign'd in the Middle of the eighth Century, and made it the Capital of the *Saracen*'s Empire; it was first built on the West Side of the *Tygris*, but the Caliph *Mustetahar* built a new City on the Eastern Bank of the same River, and then united both by a Bridge of Boats, and made it one City; and it continued in its former Dignity, as Metropolis, till the Middle of the thirteenth Century, when the *Tartars* made a Conquest of it, and put an End to the Dominion of the *Saracens*, though their Religion still prevail'd, and being profess'd by the Conquerors, has been since that establish'd in the Country, and profess'd to this Day.

Bagdat.

Tartars take *Bagdat*.

After the City of *Bagdat* was taken by the *Tartars*, it lost much of it Splendor, but has since in some measure recover'd itself; and being upon the Frontiers of both *Turkey* and *Persia*, as being in a Manner between both, it has been a Bone of Contention between both *Turks* and *Persians*, having been alternately taken and retaken several Times by each, until the Year 1689, when the *Turks* made themselves Masters of it, and made it the Capital of the Province, where the Viceroy continually resides; it has a considerable Trade at present, but had much more when it was under the Dominion of the *Persians*; however, it is supply'd with all the Merchandize of the East by Way of the *Persian Gulf* and *Bossora*, which stands upon the united Streams of *Tygris* and *Euphrates*, before it falls into the Gulf of *Bossora*.

Trade.

They have also a Trade with *Aleppo*, *Smyrna*, and the Western Part of the *Turkish Empire*, whereby they receive the Produce of these Countries by the Caravans; also the Pilgrims which visit *Mecca*, and the Tombs of *Haly* and the Imans, pass yearly through this Place; but since it has been taken by the *Turks*, this Trade has also declin'd.

Dimensions.

Bagdat is about fifteen hundred Paces long, and about half as broad; and if, according to our *English* Computation, we reckon five Foot to a Pace, it makes not quite a Mile and a half in Length, including only what stands on the *Persian*, or East Side

Side of the River, which may properly be call'd the City; but if with that we reckon that Part which ſtands on the Weſt Side of the *Tygris*, which indeed was the old City; though now not defended by either Wall or Caſtle, and may therefore rather be call'd the Suburbs, that adds a great deal to the Spaciouſneſs of *Bagdat*

THE City is much longer from North to South, as it lies along the River's Side, than the Breadth of it is from the River Eaſtward, but the North End is much broader, and extends further from the River towards the Eaſt than the South End. The Caſtle. Caſtle ſtands at the North End of the City, and upon the Bank of the River; the Walls are of Brick, except that next the River, which is white Stone; there are Towers, or Baſtions, after the Manner of our Modern Fortifications; the Ditch, or Moat, about it is wide and deep; it has but four Gates, one towards the River, and the reſt towards the Land; and they keep a Garriſon of three or four thouſand Horſe and Foot. Below the Caſtle, by the Water-Side, is the Seraglio, or Palace, of the Viceroy, with ſeveral Summer Houſes on the River, which makes a very agreeable Appearance. The Houſes are but meanly built, but the *Bazars*, or Exchanges, where the Tradeſmen keep their Shops, are arch'd, and cover'd, and tolerably handſom; there are five Moſques in the Town, two of which have handſom Domes, cover'd with varniſh'd Tiles of ſeveral Colours. The Cadi here has Authority almoſt equal to that of the Mufti of *Conſtantinople*, and are accountable for their Actions only to the Porte, and not to the Viceroy, but are rather a ſort of Equals to him, and conſequently a Check upon him, which makes him ſet a greater Guard upon his Actions.

Boſſora. THE next conſiderable City is *Boſſora*; it ſtands in thirty Degrees North Latitude, upon the Weſtern Branch of the united Rivers of *Tygris* and *Euphrates* after they are again ſeparated; which Branch, in our Deſcription of Paradiſe (*Chap.* IV. *of* Arabia,) we ſuppoſed to be *Piſon*, ſpoke of *Gen.* ii. 11. *Boſſora* is encompaſs'd with a Wall of Earth, above twelve Miles in Circumference; the Place has an advantageous Situation with reſpect to Trade, as well as to the Fruitfulneſs of the Soil, and it is ſo ſafe a Port, that large Veſſels may come up to the End of the Canal without Danger; it may be ſaid that *Boſſora* lies in the Center of Trade between *Europe* and the *Eaſt Indies*; with the latter of which they have an open Communication by Way of the *Perſian Gulf*, and with *Europe* formerly by the River *Euphrates*, where navigable, the Goods being firſt brought by Land from *Aleppo* to *Bir*, on the Eaſt Side of the River *Euphrates*, which is but four Days Journey; and ſo much is the Trade of *Boſſora* improv'd, that ſince the Civil Wars in *Perſia*, the *Engliſh Eaſt India* Company have withdrawn their Agents from *Iſpahan* and *Gombroon*, and made *Boſſora* their principal Factory.

BUT of late the Navigation of the River *Euphrates* is not practicable all the Way from *Bir* to *Boſſora*, by reaſon of the ſeveral Canals cut out of it to ſupply the Country with Water, by which Means the Water of the River is in a great Meaſure exhauſted, and uncapable of Navigation till lower down in the River, where it is made Navigable by the Flowing of the Sea; and to ſupply the Communication and Commerce between *Boſſora* and *Aleppo*, they carry the Goods from *Aleppo* to *Bir*, where they croſs the *Euphrates*, and proceed by Land to *Mouſul*, or antient *Niniveh*, where they embark them in *Kelecks* for *Bagdat* and *Boſſora*.

Goods how brought from *Aleppo* to *Boſſora*.

THESE *Kelecks* are about four Fathom long, and three broad, born up by Skins fill'd with Wind like Bladders, and call'd *Borachio's*, of which there is ſometimes twenty on each Side, and thirteen or fourteen at each End; to theſe they faſten long Poles, which are tied together with Withes, and croſs them they lay Poles from Side to Side, cloſe together, and of ſome Thickneſs, and upon theſe the Paſſengers and Goods are placed: The Ships Company conſiſts only of three Men, two to row, and one to wet that Part of the *Borachio's* that is above Water, which if not moiſt, is in Danger of burſting; they uſe neither Pin nor Nail in the Framing, nor either Maſt or Sail in the working, nor have they any regard to Head or Stern, or which End or Side goes foremoſt; and as the Wind in the *Borachio's* perpetually waſtes, they blow them up, and ſearch them to make them tight in caſe of any Defect every Night; they are obliged to lay in a Stock of Proviſions ſufficient for their Paſſage from *Mouſal*, or *Niniveh*, to *Bagdat*, there being ſcarce a Town to be found between the two on either Shore.

THE thieving *Arabs*, who feed their Cattle upon the Banks of the *Tygris*, wait the Opportunity of theſe *Kelecks* coming aſhore, which they commonly do in the Evening to blow up their *Borachio's*, which being done, if they then go to ſleep, the *Arabs* take that Opportunity to plunder the *Kelecks*; when the *Arabs* have occaſion to croſs the River, they only take a *Borachio* under each Arm, tied together under their Breaſts, as is the Cuſtom here with Bladders or Corks; and by the help of them, Men, Women, and Children can croſs this rapid Stream with Bundles on their Heads, and ſome are ſo expert as to do it without thoſe Helps. *Arabs plunder the Kelecks.*

FROM *Bagdat* to *Boſſora* the Navigation is leſs dangerous or troubleſome, there being no Cataracts or Falls to hinder or endanger it, ſo that large Boats can trade upon this Part of the River, and can go down from *Bagdat* to *Boſſora* in ten Days Time, nor need they in this Paſſage incumber themſelves with Proviſions, there being ſeveral Villages aſhore where they can buy Proviſions very reaſonable; theſe Boats are contrived with proper Shelter and Accommodations, that the Paſſengers need not lie aſhore, as in that Part of the Paſſage above *Bagdat*. The Towns near the Shore are *Amurat*, *Manſoury*, *Magar*, *Gazen*, and *Gorna*, at which laſt Place the *Tygris* and *Euphrates* meet, and here are three Caſtles, one on the Point where the Rivers meet, one on the *Chaldean*, or *Perſian*, Side, and the third on the *Arabian*; and as theſe Caſtles are in the Territories of *Boſſora*, they collect the Cuſtoms here for the Goods coming down out of the Country. *Bagdat to Boſſora.*

THE Ships from the *Arabian Sea* and the Coaſt of *Malabar* uſually arrive at *Boſſora* in the Months of *July*, *Auguſt*, *September*, and *October*, when the Monſoons ſuit to bring them in; during which Time the Town is crowded with Foreigners from moſt Parts of the World, who come to traffick, the City being very well ſituate for Trade; but the hot poiſonous Winds during their Seaſons, eſpecially ſome Years, are ſo pernicious to the Health of Strangers, that it is a great Damp to the Trade of the Place, and to the Concourſe of People in general; inſomuch, that Mr. *Thevenot*, who was upon the Spot in the Year 1665, aſſures us that theſe *Samiel*, or hot Winds, carried off above four thouſand People at *Boſſora* that Year.

THIS Country ſeems yet to retain ſomething of the Paradiſical State; for it is the richeſt and moſt fruitful of any in the Grand Seignior's Dominions; it abounds with fruitful Paſtures and Meadows, and with Flocks and Herds in proportion, and that for ſeveral hundreds of Miles together, which would produce an immenſe Revenue to the Grand Seignior, but their being ſo remote gives them a great Opportunity to defraud him; nor does he care to uſe them with Severity, leſt it ſhould provoke them to revolt to their Neighbours the *Perſians*.

CHAP.

CHAP. XII.

Gives a Deſcription of the preſent State of the Province of Curdiſtan, *or the antient* Aſſyria.

Situation. CURDISTAN, or the antient *Aſſyria*, was the Scene of the firſt of the four Monarchs, and of the Hiſtory of which, and the other three, *viz.* the *Perſian*, *Grecian*, and *Roman*, we ſhall give a compendious Abſtract when we have finiſh'd the *Turkiſh Empire*. In the mean Time, as to the Situation and Boundaries of *Aſſyria*, *viz.* that Part of it which is comprehended in the *Turkiſh Empire*, the reſt, being the Eaſtermoſt Part of it, belonging to *Perſia*, as was obſerved in Chap. I. of our Deſcription of that Empire; it lies on the North Side of *Chaldea*, deſcribed in the laſt Chapter, and conſequently bounded on the South by it; on the Eaſt by the *Perſian Curdiſtan*, or *Aſſyria*; it is bounded by *Diarbeck*, or the antient *Meſopotamia* on the Weſt, and on the North by *Turcomania*, or *Armenia*; it is ſaid to have receiv'd its Name *Aſſyria* from *Aſſur*, or *Aſshur*, the Son of *Shem*.

Boundaries.

Niniveh. In this Country ſtood the once famous City of *Niniveh*, upon the Eaſtern Bank of the River *Tygris*, over againſt *Mouſal*, in the thirty ſeventh Degree of North Latitude. This Town was ſixty Miles in Compaſs, according to the Deſcription of it in *Jonah*, allowing twenty Miles for a Day's Journey, and according to the Deſcription we have of it, when in its flouriſhing Condition, the Walls were a hundred Foot high, with eleven hundred Towers in them, each of them twice as high as the Wall; the Houſes were not always contiguous, but Spaces left for Gardens, and to render the City more airy and healthy. It is ſaid by ſome to be built by *Nimrod*, but others, and that more probably, ſay it was built by *Ninus* the Grandſon of *Nimrod*, and the third Emperor of the *Aſſyrian* Monarchy, but whoever built it at firſt, yet all Authors agree that it was either firſt built or very much enlarged by *Ninus*, and called *Niniveh* after his Name.

Beſieged. *Niniveh* was beſieged by *Arbaces* three Years, when the River overflow'd twenty Furlongs of the Wall, whereupon the effeminate Prince, *Sardanapalus*, collected his Wealth together, which was agreed upon by all to be an immenſe Sum, and retiring into his Palace, ſet fire to the whole, and threw himſelf into the Flames; whereupon *Arbaces* and *Beloch* jointly ſucceeded, and ſhared the Empire. *Arbaces* ſettled Eaſtward in *Media*, (now *Adarbeitzen*) and *Beloch* ſucceeded in *Niniveh*; in whoſe Time ſome ſay it was that *Jonah* preach'd in *Niniveh*, and this King proclaim'd a ſolemn Faſt; ſee *Jonah* III.

Niniveh deſtroy'd. This City was afterwards entirely deſtroy'd by *Aſtyages*, the eighth King of the *Medes* after *Arbaces*, ſo that nothing remains of it now but heaps of Rubbiſh on the Eaſt Side of *Tigris*, ſome Part of it over-againſt *Mouſal*: Amongſt which Heaps, about half a Mile from the *Tygris*, is a Hill a little higher than the reſt, on the Top of which is a Moſque, which they ſay was built over the Burying-Place of *Jonah*, and for this the *Turks* have ſo great a Veneration, that they will ſcarce ſuffer a Chriſtian to enter the Moſque. There ſtands in the Middle of the Moſque, or Temple, a Tomb cover'd with a Pall of Tiſſue, and at the four Corners are great Wax Candles, beſides ſeveral Lamps which hang down from the Roof; this is ſuppoſed to be *Jonah*'s Tomb; here the Alchoran is read by Monks employ'd for that Purpoſe.

Sheraſoul, or *Scherazur*, is now the Capital of *Aſſyria*; it lies to the Eaſtward of *Niniveh*; it is now the Seat of the Viceroy of the Province; the Building of it is very remarkable, for it ſtands on the Side of a Hill, and the Houſes are hew'd out of a Rock for a quarter of a League together, and there is an Aſcent to them by fifteen or twenty Stone Steps, or in ſome Places more. *Sheraſoul.*

To the Eaſtward of *Sheraſoul* is *Arbela*, near which is a Plain fifteen Leagues over; this is the Place where *Alexander the Great* vanquiſh'd *Darius*; there is towards the Middle of this Plain a little Hill about half a League in Circumference, round the Side of which is a ſtately Grove of Oaks, and at the Top is the Ruins of a Caſtle, in which it is ſaid *Darius* ſtood to ſee the Succeſs of the Battle. *Arbela.*

Betlis is ſituate in the Northern Part of this Province, near the Lake *Van*, in the thirty eighth Degree of Latitude. This Place is independent, and neither ſubject to the *Turks* nor *Perſians*; it is very mountainous, and probably either inacceſſible that they cannot come at it, or barren that it is not worth while to attempt it, but the former ſeems to be the Caſe; for by this Situation the Bey of *Betlis*, is able to intercept the Trade between *Aleppo* and *Tauris*, inſomuch that both Princes think it their Intereſt to keep fair with him. In approaching *Betlis*, the Way lies among high ſteep Mountains for a Day's Journey, from whence deſcend prodigious Torrents in the wet Seaſons; the Way to the City is cut through a Rock, and ſo narrow that there is but juſt room for one Camel to paſs at a Time. The City is built round the Sides of a Hill that is in Form of a Sugar-Loaf, with a Caſtle, where the Bey's Palace is on the Top of the Hill; it is ſaid that he can raiſe twenty five thouſand Horſe and a great Body of Foot out of the Shepherds of his own Country. *Betlis.*

Soil. This is a fruitful Soil and a pleaſant Country, being diverſify'd with Hills and Valleys; the former cloath'd with fine Groves of Oak, and great variety of other Timber and Fruit-Trees, and the Valleys well water'd, and where cultivated, bring excellent Grain; but as it is moſtly either in *Turkey* or upon the Frontiers between them and *Perſia*, there is very little of it improv'd as it might be; however, there are vaſt Flocks and Herds fed in this Country, the Owners living in Tents, and moving from Place to Place for the ſake of Paſture like the *Arabs*, where the Land is common.

The People. The People are generally Bruriſh and Rapacious, inclined to Rapine and Plunder, that the Caravans are not ſafe; but this is attributed to the continual Enmity between the two Countries, one plundering and the other making Repriſals perpetually. The chief Product of the Country, as now neglected, is Gauls and Tobacco; but it ſeems fit for any Thing that requires a deep rich Soil, which is the Occaſion of the Roads being deep and bad. Moſt of of the Villages have the Houſes diſperſed ſometimes a Musket-ſhot from each other; they form no regular Streets, but ſtand in the moſt convenient Part of the Ground belonging to them; almoſt every Houſe has a Vineyard, but they ſeldom make Wine, but dry their Grapes.

CHAP. XIII.

Treats of the Province of Diarbeck, *or the antient* Mesopotamia.

THE Province of *Mesopotamia*, now known by the Name of *Diarbeck*, lies between the two famous Rivers *Tygris* and *Euphrates*, being bounded on the East with the former, and on the West with the latter, on the South with *Chaldea*, and on the North with *Turcomania* and *Armenia Major*. The chief Towns are, 1. *Diarbeck*, 2. *Orsa*, 3. *Bir*, 4. *Sharmley*, 5. *Mousal*, 6. *Merdin*, 7. *Nesbin*; of which in Order.

Diarbeck. 1. *Diarbeck*, called by the *Turks Caremit*; it lies in about 37 Degrees of North Latitude; it is situate on a rising Ground on the West Side of the River *Tygris*, where it is in the Form of a half Moon; it is encompass'd with a double Wall, in the outermost of which is sixty two Towers and three Gates; on every Gate there is an Inscription in *Greek*, which though in a great Measure obliterated, yet the Name of *Constantine* in more Places than one remains legible. There is in the Town two or three handsom Piazza's, and there was once a Christian Church, but it is now turn'd into a Mahometan Mosque; about a League above the City there is a Canal cut out of the *Tygris*, which by reason of the great Descent of the *Tygris* in that three Miles running, brings the Head of the Canal above the Level with the highest Part of the Town, by which means the Water is convey'd from that Canal to all Parts of the City; in this Water all the red *Turkey* Leather is wash'd that is made at *Diarbeck*, and excels in Colour all that is made elsewhere, and has occasion'd such a Trade for that sort of Goods, that at least above one Fourth of the Natives are employ'd in it. The Soil is very good, and the Country abounds with Corn and Wine. It is a populous City, and in it are computed to be about twenty thousand Christians of one Denomination or other, as *Nestorians*, *Jacobites*, and *Armenians*; but the last are reckon'd double the Number of both the other. The Bassa is a Viceroy, and one of the Viziers of the Empire; several Provinces or Governments are under him, in which he can raise twenty thousand Horse among them who hold of the Crown by Military Tenure.

Diarbeck stands so near the Spring or Head of the *Tygris* that it is fordable there, except at the Time of the Freshes, which are occasion'd by the falling of the Rains, or the melting of the Snow from the Mountains, and they are obliged to go up as high as a Stone Bridge that is about a Mile above the Town.

Orsa. 2. *Orsa* is five or six Days Journey South-West from *Diarbeck*, and is supposed to be where *Edissa* once stood; it is in the thirty seventh Degree of North Latitude, on the East Side of the River *Euphrates*; here the Caravans commonly stay eight or ten Days, because the People who let the Horses and Mules between *Turkey* and *Persia* have their Houses here. *Orsa* is the Capital of *Mesopotamia*, and is said to be the Place where *Abraham* dwelt, *Abraham.* which carries with it a great deal of Probability, since we are certain that *Abraham* did dwel in *Mesopotamia*, *Acts* vii. 2. To those Strangers that desire to see the Rarities or Antiquities of the Place, they shew a large Fountain, upon the Springs whereof the Foundation of the principal Mosque in the City was laid; and they say this is the Place where *Abraham* prayed before he went to sacrifice his Son *Isaac*; and so exact are they in the Belief of it, that they say the two Springs are in the two Spots of Ground where *Abraham*'s two Knees were at that Time. The Springs feed the large Fountain above-mention'd, and at this Time they will not let any Person enter into the Grotto where those Springs rise, without pulling off their Shoes, and it is with difficulty that they will admit a Christian then, or even to see it. The Inhabitants are many of them *Armenian* Christians, and have their Churches, where they are allow'd to perform Divine Service; here are also several Grotto's in the Mountains, in which they say are the Tombs of antient Christians.

THE Town of *Orsa* is but meanly built, but it is encompass'd with Walls of Free Stone, with Towers at convenient Distances from one another. It is govern'd by a Bassa, and has a Garrison consisting of six or seven hundred Sphahi's, and about two hundred Janizaries, there being a greater Number of Horse that Foot required to oppose the Incursions of the *Arabs*, who, if not timely withstood, cross the River in hopes of Plunder. This Town is most famous for making the yellow *Turkey* Leather as it is call'd, the red (as above observ'd) being made at *Diarbeck*, and the blue is made at *Tocat*.

THERE is a Castle on the South Side of the City, about which is a broad deep Ditch, some Part of which is cut through a Rock; and on the Top of the Castle is a little square Turret, where they tell Travellers *Elias* formerly dwelt. There is a Well on the outside of the Town, of which they give the following Account: *Aggarus*, or *Agbarus*, King of *Orsa*, (supposed to be the same *Agbarus* which sent a Letter to King *Lentulus*, with a Description of our *Saviour*, which Letter, or one under that Name, is now frequently sold in *London*;) this *Agbarus*, being a Leper, sent Messengers to our *Saviour*, desiring that he would come and heal him, and with the Letter he sent a Painter to draw our *Saviour*'s Picture, but whether he thought to desire him to sit for it, or only to take a Sketch of it from some Views of him that he hoped to find opportunity to get, is uncertain, but the latter (if either) is most probable; but however the History further tells us, that when our Lord observed the Painter taking his Picture, he threw a Handkerchief over his Face which immediately received the Print of his Visage, and gave it them to carry to their Prince; but as they were returning home, and come near the City of *Orsa*, they were attack'd by Robbers, and the Person who had the Handkerchief dropt it into a Well to conceal it, and hasting to the Town related what had happen'd; the King, impatient to see the Handkerchief, or what was become of it, went the next Day with his Retinue in Procession to the Well, where they found the Water risen to the Brim, and the Handkerchief floating at the Top of it, which the King taking up in his Hand, was immediately cured of his Leprosy, and that the Water retains the same Virtue ever since.

I am apt to think some Persons may think this Story, but especially the latter Part of it, to be fabulous, and it is my Business to leave every Man to his own Way of Believing, and shall only add, that as we cannot prove the Impossibility of it, we must consult Probabilities; and as *Orsa* was not so far distant from the Place of our *Saviour*'s Birth and Travels but that a Correspondence might easily be maintain'd by Letters or Messengers, and if we further consider not only how frequent Leprosies

were

were in thoſe Countries, but how common it was to ſend to the Prophets to deſire a Cure, both which are atteſted in Holy Writ; and if we further obſerve, that *Eliſha*'s Word only ſent by a Servant to *Naaman*, made the Waters of *Jordan* become medicinal to him, and cured his Leproſy, 2. *Kings* v. 10, 14. or, that *Moſes* made the bitter Waters of *Marah* ſweet only by caſting a Stick into them by God's Appointment, *Exod.* xv. 25. it is very eaſy to believe that if *Agbarus* ſent the Petition to our *Saviour*, and receiv'd the Handkerchief from him, as above related, (though without any Promiſe to the Meſſenger of a Cure for his Maſter,) it might have that Effect upon *Agbarus* and the Well, as above, *for a greater than either* Eliſha *or* Moſes *was there*; nor does it at all derogate from the Credit of this Cure, that we do not read of it in the New Teſtament, for there are many other Things that *Jeſus* did which are not recorded there, *John* xxi. 25. This I thought fit to offer, and leave every Man to judge for himſelf, becauſe as too much Credulity in believing without Reaſon may be deem'd Superſtition; ſo too much Incredulity where Probabilities occur, may amount to Prejudice; but in what we relate that is any way dubious, we ſhall keep the middle Road between both Extreams.

Bir or Beer The next Place of Note is *Bir*, or *Beer*, ſituate on the Eaſt Bank of the River *Euphrates*, about four Days Journey, or eighty Miles from *Aleppo* towards *Perſia*, and to the Southward of *Orſa*, on the ſame Side of the River *Euphrates*; this is the chief Paſs from *Aleppo* to *Meſopotamia*. The Town is built on the Side of a Hill, and is not very ſpacious; and on the Top of the Hill there is a Caſtle, where the Governor reſides; this Caſtle is built upon a Rock, and from it there is a Way cut under Ground to the River.

When Mr. *Maundril* was there they ſhew'd him a Room full of old Arms, large Croſs-Bows and Beams of a prodigious Size, which he thought had been deſign'd for Battering-Rams; there were alſo large Head-pieces and *Roman* Saddles, *&c.* but he only ſaw them, for they would not give him any opportunity to examine into the Original or Antiquity of them; he obſerved in the Side of a Hill a large Cave or Vault cut into, with fifteen large natural Pillars left to ſupport the Roof. This City (like *Orſa*) is well wall'd, but meanly built; there is a Garriſon of ſix or ſeven hundred Men, commanded by an Aga; but it is within the Territories of the Baſſa of *Orſa*.

Sharmley About a Day's Journey to the Eaſtward of *Bir* lies the Town of *Sharmley*; but here is nothing obſervable; only there is a good Caravanſera and Baths, and a ſtrong Caſtle, or Fortreſs, upon a Mountain near it.

Mouſal ſtands on the Weſt Side of the River *Tygris*, over againſt where old *Niniveh*, in *Aſſyria*, once ſtood, in the thirty ſeventh Degree of North Latitude. This City, like many other noted Places in *Turkey*, has ſtrong Walls, but the Houſes are ordinary, and many of them in Ruins; the City however is three Miles in Circumference, and govern'd by a Baſſa, who reſides in a little Caſtle built on the *Tygris*. It is a Place of good Trade, as being the common Road of the Caravans from *Aleppo* to *Perſia*, and its ſituation upon the *Tygris* in that Road ſtill increaſes the Trade and Concourſe of People, becauſe it has a navigable Communication with *Bagdat*, and conſequently with *Boſſora*, by the River *Tygris*, ſo that it is the Center of Trade between *Aleppo*, *Boſſora*, and *Perſia*. Here is commonly a Garriſon of three or four thouſand Horſe and Foot; here is a great Trade for Gauls, that being the chief Product of the adjacent Country; it has a Communication with *Aſſyria* by a Bridge of Boats over the River *Tygris*. *Mouſal,*

Merdin is ſix or ſeven Days Journey to the Eaſtward of *Orſa*; it is a ſmall City, ſtanding upon a Mountain; it is encompaſs'd with a good Wall, and has a Caſtle upon a riſing Ground on the North Side of it, here the Governor reſides with a Garriſon of two hundred Horſe and four or five hundred Foot, but it is an inland Town, and a Place of no great Trade, but only as it is in the Road from *Aleppo* to *Perſia*.

Nesbin. The Town of *Nesbin* is two Days Journey to the Eaſtward of *Merdin* in the Road to *Perſia*; this is the antient *Niſibis* which was once the Capital of *Meſopotamia*, or rather ſtands where it ſtood, and is now only a Shadow of it, being reduced to a large Village; it is ſituate on the River *Saba*, about thirty Miles to the Weſtward of the River *Tygris*; it is inhabited now by *Armenian* and *Neſtorian* Chriſtians. Here they ſhew Travellers the Tomb of St. *James* Biſhop of *Niſibis*. In the ſame Church-Yard is a Pedeſtal of Stone, on which are placed ſeveral lighted Candles, which poor People offer when they are ſick or in Diſtreſs, as ſuppoſing it to be the Pedeſtal of ſome Saint's Statue which the *Turks* have defac'd. We have a certain Author that obſerv with a ſort of a Surprize, that the poor People pay the ſame Reverence to the Pedeſtal as they would have given to the Image: from whence it is natural to ſuppoſe, that he thinks the Pedeſtal could not hear them as well, and do them as much Service, as the Image could have done if it had been there.

CHAP. XIV.

Treats of Armenia Major, *now known by the Name of* Turcomania.

ARMENIA MAJOR lies to the Northward of *Aſſyria* and *Meſopotamia*, and conſequently is bounded on the South by them, and on the Weſt by *Natolia*, on the North by *Georgia* and Part of *Natolia*, and on the Eaſt by *Adirbitzan*, or the antient *Media*, which is a Province of *Perſia*. The chief Towns are *Erzerom*, *Kars*, and *Van*, of which take the following Deſcription:

Erzerom. *Erzerom* is in about forty Degrees of Latitude North, and about five or ſix Days Journey (allowing twenty Miles a Day) to the Southward of the *Black Sea*; it ſtands at one End of a fine Plain, at the End of a Chain of Mountains, which, as Mr. *Tournefort* obſerved, was cover'd with Snow when he was there, although it was in the middle of *June*, and the Place, as above obſerved, is but in forty Degrees of Latitude. The Plain of *Erzerom* is fruitful in all Manner of Grain, but their Harveſt ſeldom happens before *September*.

But another Thing that makes *Erzerom* very diſagreeable, is the want of Fuel; they have no Wood but Fir, and this they fetch two or three Days Journey; but as they have plenty of Cattle, the poorer Sort burn dry'd Cow's Dung mix'd with ſome other nauſeous Combuſtibles, which creates a very offenſive Smell in the Houſes where they are burnt, and partly leaves it's own Taſte upon Milk and Meat dreſt with it, which is otherwiſe very good, for the Country abounds with Grain and Cattle.

CHAP. XIII.

Treats of the Province of Diarbeck, *or the antient* Mesopotamia.

THE Province of *Mesopotamia*, now known by the Name of *Diarbeck*, lies between the two famous Rivers *Tygris* and *Euphrates*, being bounded on the East with the former, and on the West with the latter, on the South with *Chaldea*, and on the North with *Turcomania* and *Armenia Major*. The chief Towns are, 1. *Diarbeck*, 2. *Orsa*, 3. *Bir*, 4. *Sharmley*, 5. *Mousal*, 6. *Merdin*, 7. *Nesbin*; of which in Order.

Diarbeck. 1. *Diarbeck*, called by the *Turks Caremit*; it lies in about 37 Degrees of North Latitude; it is situate on a rising Ground on the West Side of the River *Tygris*, where it is in the Form of a half Moon; it is encompass'd with a double Wall, in the outermost of which is sixty two Towers and three Gates; on every Gate there is an Inscription in *Greek*, which though in a great Measure obliterated, yet the Name of *Constantine* in more Places than one remains legible. There is in the Town two or three handsom Piazza's, and there was once a Christian Church, but it is now turn'd into a Mahometan Mosque; about a League above the City there is a Canal cut out of the *Tygris*, which by reason of the great Descent of the *Tygris* in that three Miles running, brings the Head of the Canal above the Level with the highest Part of the Town, by which means the Water is convey'd from that Canal to all Parts of the City; in this Water all the red *Turkey* Leather is wash'd that is made at *Diarbeck*, and excels in Colour all that is made elsewhere, and has occasion'd such a Trade for that sort of Goods, that at least above one Fourth of the Natives are employ'd in it. The Soil is very good, and the Country abounds with Corn and Wine. It is a populous City, and in it are computed to be about twenty thousand Christians of one Denomination or other, as *Nestorians*, *Jacobites*, and *Armenians*; but the last are reckon'd double the Number of both the other. The Bassa is a Viceroy, and one of the Viziers of the Empire; several Provinces or Governments are under him, in which he can raise twenty thousand Horse among them who hold of the Crown by Military Tenure.

Diarbeck stands so near the Spring or Head of the *Tygris* that it is fordable there, except at the Time of the Freshes, which are occasion'd by the falling of the Rains, or the melting of the Snow from the Mountains, and they are obliged to go up as high as a Stone Bridge that is about a Mile above the Town.

Orsa. 2. *Orsa* is five or six Days Journey South-West from *Diarbeck*, and is supposed to be where *Edissa* once stood; it is in the thirty seventh Degree of North Latitude, on the East Side of the River *Euphrates*; here the Caravans commonly stay eight or ten Days, because the People who let the Horses and Mules between *Turkey* and *Persia* have their Houses here. *Orsa* is the Capital of *Mesopotamia*, and is said to be the Place where *Abraham* dwelt, *Abraham.* which carries with it a great deal of Probability, since we are certain that *Abraham* did dwel in *Mesopotamia*, *Acts* vii. 2. To those Strangers that desire to see the Rarities or Antiquities of the Place, they shew a large Fountain, upon the Springs whereof the Foundation of the principal Mosque in the City was laid; and they say this is the Place where *Abraham* prayed before he went to sacrifice his Son *Isaac*; and so exact are they in the Belief of it, that they say the two Springs are in the two Spots of Ground where *Abraham*'s two Knees were at that Time. The Springs feed the large Fountain above-mention'd, and at this Time they will not let any Person enter into the Grotto where those Springs rise, without pulling off their Shoes, and it is with difficulty that they will admit a Christian then, or even to see it. The Inhabitants are many of them *Armenian* Christians, and have their Churches, where they are allow'd to perform Divine Service; here are also several Grotto's in the Mountains, in which they say are the Tombs of antient Christians.

THE Town of *Orsa* is but meanly built, but it is encompass'd with Walls of Free Stone, with Towers at convenient Distances from one another. It is govern'd by a Bassa, and has a Garrison consisting of six or seven hundred Sphahi's, and about two hundred Janizaries, there being a greater Number of Horse that Foot required to oppose the Incursions of the *Arabs*, who, if not timely withstood, cross the River in hopes of Plunder. This Town is most famous for making the yellow *Turkey* Leather as it is call'd, the red (as above observ'd) being made at *Diarbeck*, and the blue is made at *Tocat*.

THERE is a Castle on the South Side of the City, about which is a broad deep Ditch, some Part of which is cut through a Rock; and on the Top of the Castle is a little square Turret, where they tell Travellers *Elias* formerly dwelt. There is a Well on the outside of the Town, of which they give the following Account: *Aggarus*, or *Agbarus*, King of *Orsa*, (supposed to be the same *Agbarus* which sent a Letter to King *Lonulus*, with a Description of our *Saviour*, which Letter, or one under that Name, is now frequently sold in *London*;) this *Agbarus*, being a Leper, sent Messengers to our *Saviour*, desiring that he would come and heal him, and with the Letter he sent a Painter to draw our *Saviour*'s Picture, but whether he thought to desire him to sit for it, or only to take a Sketch of it from some Views of him that he hoped to find opportunity to get, is uncertain, but the latter (if either) is most probable; but however the History further tells us, that when our Lord observed the Painter taking his Picture, he threw a Handkerchief over his Face which immediately received the Print of his Visage, and gave it them to carry to their Prince; but as they were returning home, and come near the City of *Orsa*, they were attack'd by Robbers, and the Person who had the Handkerchief dropt it into a Well to conceal it, and hasting to the Town related what had happen'd; the King, impatient to see the Handkerchief, or what was become of it, went the next Day with his Retinue in Procession to the Well, where they found the Water risen to the Brim, and the Handkerchief floating at the Top of it, which the King taking up in his Hand, was immediately cured of his Leprosy, and that the Water retains the same Virtue ever since.

I am apt to think some Persons may think this Story, but especially the latter Part of it, to be fabulous, and it is my Business to leave every Man to his own Way of Believing, and shall only add, that as we cannot prove the Impossibility of it, we must consult Probabilities; and as *Orsa* was not so far distant from the Place of our *Saviour*'s Birth and Travels but that a Correspondence might easily be maintain'd by Letters or Messengers, and if we further consider not only how frequent Leprosies

were

were in thoſe Countries, but how common it was to ſend to the Prophets to deſire a Cure, both which are atteſted in Holy Writ; and if we further obſerve, that *Eliſha*'s Word only ſent by a Servant to *Naaman*, made the Waters of *Jordan* become medicinal to him, and cured his Leproſy, 2. *Kings* v. 10, 14. or, that *Moſes* made the bitter Waters of *Marah* ſweet only by caſting a Stick into them by God's Appointment, *Exod.* xv. 25. it is very eaſy to believe that if *Agbarus* ſent the Petition to our *Saviour*, and receiv'd the Handkerchief from him, as above related, (though without any Promiſe to the Meſſenger of a Cure for his Maſter,) it might have that Effect upon *Agbarus* and the Well, as above, *for a greater than either* Eliſha *or* Moſes *was there*; nor does it at all derogate from the Credit of this Cure, that we do not read of it in the New Teſtament, for there are many other Things that *Jeſus* did which are not recorded there, *John* xxi. 25. This I thought fit to offer, and leave every Man to judge for himſelf, becauſe as too much Credulity in believing without Reaſon may be deem'd Superſtition; ſo too much Incredulity where Probabilities occur, may amount to Prejudice; but in what we relate that is any way dubious, we ſhall keep the middle Road between both Extreams.

Bir THE next Place of Note is *Bir*, or *Beer*, ſituate on the Eaſt Bank of the River *Euphrates*, about four Days Journey, or eighty Miles from *Aleppo* towards *Perſia*, and to the Southward of *Orſa*, on the ſame Side of the River *Euphrates*; this is the chief Paſs from *Aleppo* to *Meſopotamia*. The Town is built on the Side of a Hill, and is not very ſpacious; and on the Top of the Hill there is a Caſtle, where the Governor reſides; this Caſtle is built upon a Rock, and from it there is a Way cut under Ground to the River.

WHEN Mr. *Maundril* was there they ſhew'd him a Room full of old Arms, large Croſs-Bows and Beams of a prodigious Size, which he thought had been deſign'd for Battering-Rams; there were alſo large Head-pieces and *Roman* Saddles, *&c.* but he only ſaw them, for they would not give him any opportunity to examine into the Original or Antiquity of them; he obſerved in the Side of a Hill a large Cave or Vault cut into, with fifteen large natural Pillars left to ſupport the Roof. This City (like *Orſa*) is well wall'd, but meanly built; there is a Garriſon of ſix or ſeven hundred Men, commanded by an Aga; but it is within the Territories of the Baſſa of *Orſa*.

Sharmley ABOUT a Day's Journey to the Eaſtward of *Bir* lies the Town of *Sharmley*; but here is nothing obſervable; only there is a good Caravanſera and Baths, and a ſtrong Caſtle, or Fortreſs, upon a Mountain near it.

Mouſal *Mouſal* ſtands on the Weſt Side of the River *Tygris*, over againſt where old *Niniveh*, in *Aſſyria*, once ſtood, in the thirty ſeventh Degree of North Latitude. This City, like many other noted Places in *Turkey*, has ſtrong Walls, but the Houſes are ordinary, and many of them in Ruins; the City however is three Miles in Circumference, and govern'd by a Baſſa, who reſides in a little Caſtle built on the *Tygris*. It is a Place of good Trade, as being the common Road of the Caravans from *Aleppo* to *Perſia*, and its ſituation upon the *Tygris* in that Road ſtill increaſes the Trade and Concourſe of People, becauſe it has a navigable Communication with *Bagdat*, and conſequently with *Boſſora*, by the River *Tygris*, ſo that it is the Center of Trade between *Aleppo*, *Boſſora*, and *Perſia*. Here is commonly a Garriſon of three or four thouſand Horſe and Foot; here is a great Trade for Gauls, that being the chief Product of the adjacent Country; it has a Communication with *Aſſyria* by a Bridge of Boats over the River *Tygris*.

Merdin is ſix or ſeven Days Journey to the Eaſtward of *Orſa*; it is a ſmall City, ſtanding upon a Mountain; it is encompaſs'd with a good Wall, and has a Caſtle upon a riſing Ground on the North Side of it, here the Governor reſides with a Garriſon of two hundred Horſe and four or five hundred Foot, but it is an inland Town, and a Place of no great Trade, but only as it is in the Road from *Aleppo* to *Perſia*.

Nesbin THE Town of *Nesbin* is two Days Journey to the Eaſtward of *Merdin* in the Road to *Perſia*; this is the antient *Niſibis* which was once the Capital of *Meſopotamia*, or rather ſtands where it ſtood, and is now only a Shadow of it, being reduced to a large Village; it is ſituate on the River *Saba*, about thirty Miles to the Weſtward of the River *Tygris*; it is inhabited now by *Armenian* and *Neſtorian* Chriſtians. Here they ſhew Travellers the Tomb of St. *James* Biſhop of *Niſibis*. In the ſame Church-Yard is a Pedeſtal of Stone, on which are placed ſeveral lighted Candles, which poor People offer when they are ſick or in Diſtreſs, as ſuppoſing it to be the Pedeſtal of ſome Saint's Statue which the *Turks* have defac'd. We have a certain Author that obſerves with a ſort of a Surprize, that the poor People pay the ſame Reverence to the Pedeſtal as they would have given to the Image: from whence it is natural to ſuppoſe, that he thinks the Pedeſtal could not hear them as well, and do them as much Service, as the Image could have done if it had been there.

CHAP. XIV.

Treats of Armenia Major, *now known by the Name of* Turcomania.

ARMENIA MAJOR lies to the Northward of *Aſſyria* and *Meſopotamia*, and conſequently is bounded on the South by them, and on the Weſt by *Natolia*, on the North by *Georgia* and Part of *Natolia*, and on the Eaſt by *Adirbitzan*, or the antient *Media*, which is a Province of *Perſia*. The chief Towns are *Erzerom*, *Kars*, and *Van*, of which take the following Deſcription:

Erzerom *Erzerom* is in about forty Degrees of Latitude North, and about five or ſix Days Journey (allowing twenty Miles a Day) to the Southward of the *Black Sea*; it ſtands at one End of a fine Plain, at the End of a Chain of Mountains, which, as Mr. *Tournefort* obſerved, was cover'd with Snow when he was there, although it was in the middle of *June*, and the Place, as above obſerved, is but in forty Degrees of Latitude. The Plain of *Erzerom* is fruitful in all Manner of Grain, but their Harveſt ſeldom happens before *September*.

BUT another Thing that makes *Erzerom* very diſagreeable, is the want of Fuel; they have no Wood but Fir, and this they fetch two or three Days Journey; but as they have plenty of Cattle, the poorer Sort burn dry'd Cow's Dung mix'd with ſome other nauſeous Combuſtibles, which creates a very offenſive Smell in the Houſes where they are burnt, and partly leaves it's own Taſte upon Milk and Meat dreſt with it, which is otherwiſe very good, for the Country abounds with Graſs and Cattle.

AL-

Although *Georgia* lies in a more Northerly Climate, yet their Summer is ſo much forwarder, that *Erzerom* has their beſt Fruit from thence. The Town of *Erzerom* is water'd by ſeveral Rivulets which deſcend from the Hills, and not only ſupply the Town, but water the adjacent Fields. Their Wine and Spirits are the worſt in *Turkey*, and ſuch as they are, are very hard to come at; for as they are ſo ſtrictly prohibited, thoſe who are found ſelling of them are frequently puniſh'd with the Baſtinado.

This Town, like ſeveral others in this Part of *Turkey*, is encompaſs'd with a double Wall, or rather with two Walls, on which are ſeveral Towers; the whole is about two Miles in Circumference, but the Ditches are not deep, but almoſt fill'd up with Mire. The Viceroy of the Province reſides in an old Palace, and the Aga of the Janizaries, who is abſolute in his own Branch of Government, and independent of the Viceroy, dwells in a Caſtle which ſtands above the Town. It is moſt commonly fatal to the Viceroy when he is ſent for to the Aga's Caſtle; for if upon ſome Miſdemeanor or Diſguſt, ſometimes never diſcover'd to the ſuffering Perſon, the Grand Seignior thinks fit to put a Period to the Viceroy's Reign, he ſends a Capigi to ſummon him to the Aga's Caſtle, who, upon his Arrival there, immediately executes his Tragical Commiſſion.

The greateſt Part of the *Turks* inhabiting in this City paſs under the Name of Janizaries, not that they are in Pay as ſuch, but give Money to the Aga to purchaſe the Privilege of being inliſted as ſuch, to protect themſelves from the Inſults of thoſe that are really Janizaries; for they are ſuch a numerous and powerful Body, and the Empire has ſuch a Dependance upon them, that they are allow'd to inſult the reſt of their Fellow Subjects, and ſeldom call'd to Account for the Abuſes commited by them.

Erzerom a Biſhop's See.

Erzerom is the Reſidence of an *Armenian* Biſhop, ſubject to the Patriarch of *Erivan* in *Perſia*. The *Greeks* have alſo a Biſhop here, but they have but one Church, and are a ſort of a poor People, being moſtly Handicrafts, and quarter'd in the Suburbs, and pretty much employ'd in making Copper Utenſils, that Metal being dug up in the neighbouring Mountains; they have alſo a Trade for *Jarvada* Furs, which are Skins ſomewhat like thoſe of Martens. *Erzerom* is a conſiderable Thorough-fare from *India* and *Perſia* to *Conſtantinople*, and the rather, becauſe the thieviſh *Arabs* ſo much infeſt the Road by way of *Aleppo* that they think it ſafer to go by the Way of *Erzerom*, and from thence to *Trapeſonde* upon the South-Eaſt Coaſt of the *Black Sea*, where they can embark, and, without fear of any Enemies, go by Sea all the Way to *Conſtantinople*.

The River *Euphrates* has two Sources, or Springs, the Stream of one of which runs on one Side, and the other on the other Side of *Erzerom*, at ſome conſiderable Diſtance from it, and meet forty or fifty Miles below the Town, after which the River, or the two Rivers united, will carry ſmall Veſſels; but there are ſo many Rocks and Sands, that the Navigation is dangerous, if not impracticable.

When Mr. *Tournefort* was in this Country, his Curioſity excited him to ſee the main Source of the River *Euphrates*; but, not being acquainted either with the Roads or the Temper of the People, was told that the *Curdes* were what he had chiefly to be afraid of, becauſe they were ſo numerous; their Buſineſs is to attend their Flocks and Herds, for which Purpoſe they pitch their Tents on the Mountains, and remove from one Place to another, but being of a thieviſh Diſpoſition, they ſtick not to take Plunder when Opportunity offers; but, however, he being inform'd of the Veneration they pay to a Prieſt, he prevail'd upon an *Armenian* Biſhop to go along with him, and after two or three Hours riding they entred ſome fine Valleys, through which the winding Stream of the *Euphrates* paſs'd, and rendred them exceeding pleaſant; but aſcending the Mountains they were all cover'd with Snow, although it was then the two and twentieth of *June*, and in a Climate above ten Degrees of Latitude to the Southward of any Part of *England*; or where the Ground could be ſeen, they produc'd nothing but Moſs; however, they found abundance of Springs on the Tops of the Mountains, which trickling down the Sides of the Hills into the Valley, united and became one Stream, and this Collection of Springs was the Head, or Source, of the River *Euphrates*, which, with the Addition of the continual Springs that deſcend from the Mountains, and join it in its Paſſage, amounts to the famous River known by that Name.

Kars. The next Place of Note is *Kars*, or *Sars*, in the forty ſecond Degree of North Latitude; it is ſituate about five or ſix Days Journey North-Eaſt from *Erzerom*; it give Name to a River upon which it ſtands, which runs into the *Caſpian Sea*, tho it goes by another Name before it reaches the Sea. This Place before the preſent War was a Frontier Town of *Turkey* towards *Perſia*; it has a double Wall round it, and is about two Miles in compaſs, but thinly inhabited; the Caſtle ſtands next the River, on an inacceſſible Rock; the Houſes are very mean Buildings, but there is a ſtrong Garriſon, commanded by a Baſſa. A little below the City of *Kars* the River is join'd by that call'd *Arpagi*, and the River, as compos'd of theſe united Streams, falls into the *Araxes*, or *Arras*, before it reaches the *Caſpian Sea*. The *Turkiſh* Officers here impoſe very much upon Travellers, which makes the Paſſage through this Town into *Perſia* almoſt impracticable.

Van. The large City of *Van* lies South-Eaſt from *Erzerom*, upon a Lake of the ſame Name; it has a ſtrong Caſtle built upon a Mountain, it is a populous Place, and has a numerous Garriſon, commanded by a Baſſa; the Lake of *Van* is about fifty Miles in Circumference, but, beſides the Largeneſs of it, we do not find it remarkable for any thing but for the Plenty of Fiſh it produces, with which the Neighbourhood and Parts adjacent are ſupply'd.

CHAP. XV.

Gives an Account of the antient Syria, *and therein of* Aleppo, Scanderoon, Antioch, Tripoli, Tyre, Sydon, Damaſcus, Lebanon, *and the famous Cedars there*, &c.

SYRIA is ſeparated from *Meſopotamia* by the River *Euphrates*, the former being to the Weſtward, and the latter to the Eaſtward of that River; it is bounded on the North by *Natolia* and *Turcomania*, and on the South by *Arabia*, on the Weſt by the *Levant*, or *Mediterranean Sea*, and on the Eaſt by the *Euphrates*; in *Syria*, taken in its largeſt Extent, is included *Paleſtine*, or the *Holy*

Land.

Land; it is divided into three Viceroyalties, *Aleppo*, *Tripoli*, and *Damaſcus*, call'd by the *Turks Scham*, which Capitols are the Seats of the reſpective Viceroys. To begin at the Northermoſt, *Aleppo*, whoſe Capitol is of the ſame Name, lies in Latitude thirty ſix Degrees North, is about eighty Miles Weſt from the *Euphrates*. *Aleppo* is upon four Hills in the Middle of a pleaſant Plain; the City is about three Miles in Circumference; the Caſtle ſtands upon the higheſt of the four Hills, in the middle of the City, and is about three thouſand Foot, or a thouſand Yards, in Circumference; the Walls and Towers of the City and Caſtle is built of Stone, but not very ſtrong, there are ten Gates in the Walls of the Town, and the Houſes are handſomer than moſt of the Buildings in *Turkey*, and thoſe that belong to People of Figure have generally Domes or Cupeloes, and in general their Architecture exceed moſt of what is in other Parts of *Turkey*. The Natives are ſaid to be both ingenious and induſtrious; in the Town are very handſom Marble Buildings and Fountains, and ſix and twenty Moſques, ſome of which are very magnificent; there are alſo ſeveral Caravanſera's in *Aleppo*, one whereof is more ſpacious than the reſt, having two great Gates leading into a large Court, with a Piazza on every Side, under which are Rooms for the Foreign Merchants and their Goods. There are three Colleges for *Turkiſh* Education, and great Numbers of publick Bagnio's, and alſo of *Bazars*, or Market-Places, where Tradeſmen have their Shops.

Water. In *Aleppo* are two Fountains, or Receptacles of Water, which are ſupply'd by two Springs, which riſe at a ſmall Diſtance above the Town. They have plenty of Grapes, with which they make ſtrong Wine; they have alſo Oranges, Lemons, Pomegranats, *&c.* and their Kitchen Gardens afford plenty of Sallads, Collyflowers, Onions, Mellons, Artichokes, Kidney-Beans, and other kinds of Pulſe, but they have not Apples, Pears, and ſuch common *Engliſh* Fruit; but the Country about yields good Crops of Wheat and Barley, and their Valleys are full of Olive-Trees and Capers, but they have but little Graſs.

There are great plenty of Silks, Camblets, and *Turkey* Leather; they alſo make great Quantities of that fine, but rough, Leather that we call Shagreen, which is made of the thickeſt Part of an Aſs's Skin. Our *Turkey* Company have a Factory here, who converſe among themſelves and live very happy, although in a Heatheniſh Country.

Valley of Salt. About ſix or ſeven Miles from *Aleppo* there is a Valley of Salt, four or five Miles in Extent; it is an exact Level, and appears at a Diſtance like a Lake, or Pool of Water; there is a kind of a dry Cruſt upon the Surface of it, which when the Horſes go upon it ſounds like hollow Ice, or frozen Snow; there are four ſmall Rivers empty themſelves into this Pool, or Valley, which in the rainy Seaſons overflow it; but when the Heat has dried up the Water there remains a Cruſt of Salt, which they gather and diſtinguiſh into ſeveral Degrees of Fineneſs, and lay it in different Heaps accordingly, ſome of it being exquiſitely white, and the ordinary Sort incorporated with a kind of dirty Matter. The Surface was not equally hard, for in ſome Places the Horſes Feet ſtruck deep in a ſoft brown Clay, and in other Places into a black one, which at a great Depth was very ſalt; there is a great Precipice on one Side of the Valley, which is made by their digging for Salt, and in it may be diſcern'd how the Veins of Salt lie; and it was obſerved that what was expoſed to the Sun and other Varieties of Weather, retain'd its outward appearance of Salt, but had loſt its Savour; but the inward Part, which was not ſo expoſed, had the natural Taſte of Salt, and is uſed and ſold as ſuch, and there is ſuch a Call for it, that it is farm'd of the Government for 1200 Dollars a Year.

The Viceroy of *Aleppo* commands all the Country between *Scanderoon* and the River *Euphrates*; but beſides him there is an Aga, or General of the Horſe; there is alſo a General of the Janizaries, to whom the Keys of the Gates are deliver'd every Night, and beſides him, the Caſtle has another independent Governor; for it is one Maxim of *Turkiſh* Policy, never to truſt an important Place in the Hand of one Man, but to place two inveſted with full and equal Power, to be a Check upon one another, and to prevent Conſpiracies, which cannot be ſo unanimouſly carried on by Perſons of different Intereſts.

Scanderoon. *Scanderoon*, or *Alexandretta*, is the Port of *Aleppo*, inſomuch that they are promiſcuouſly underſtood to be both the ſame, but *Aleppo* is between twenty and thirty Leagues up in the Country, to the Eaſtward of *Scanderoon*; which, it is ſaid, was founded by *Alexander the Great*, but is not now any populous Place, but only affords a little Entertainment for Mariners that trade hither, but not for Merchants or Perſons of any Figure, the Factors and Dealers living at *Aleppo*; and when an *European* Ship arrives at *Scanderoon*, they ſend Notice from thence to *Aleppo* by a Letter faſtened to a Carrier Pidgeon; which, having been bred up for that Purpoſe, will fly home to *Aleppo* in four or five Hours, though it is near thirty Leagues, or ninety Miles, as above obſerved.

Belan. The Village of *Belan* is ſituate on a Mountain between *Scanderoon* and *Aleppo*; and from this Mountain may be ſeen the once-famous, but now ruinous, City of *Antioch*, where our Saviour's Diſciples were firſt call'd Chriſtians; it was once the Capitol of *Syria* and a Sea-Port, but is now gone to Ruin, and the Channel choak'd up. The Plain of *Antioch* is about fifteen Leagues long, and three broad, and therein is a long Cauſe-way, join'd together by ſeveral Bridges, over the Rivulets which water the Plain; there is a conſiderable Stream at the End of the Plain, over which is a great Stone Bridge; this Stream with the other Rivulets are collected into one Place, and call'd the Lake of *Antioch*; this Plain is very well planted with Olives; about eight or ten Miles beyond this are abundance of Ruins of antient Monaſteries for two or three Leagues on each Side of the Road.

Antioch. *Antioch* is ſituate an the River *Orontes*, now call'd *Haſi*; the *Turks* have had it in Poſſeſſion ever ſince the Year 1188; it was famous for the Grove and Oracle of *Apollo*, but is now a poor Place, and much fallen to decay.

Jebilee. Three or four Days Journey to the Southward of *Antioch* ſtands the antient City of *Gabala*, now *Jebilee*, on a Fruitful Plain, cloſe by the Sea. It was a Biſhop's See in the Time of the *Greek* Emperors, but now makes but a mean Appearance, though it retains ſome Marks of its former Splendor, eſpecially the Remains of a noble Theatre at the North Gate of the City; and there are alſo found a great many Pillars of Granate, with Capitals of white Marble curiouſly carved; ſome Part of the Wall, which is not above twenty Foot high, has been blown up by the *Turks* at their taking it, and not ſince repair'd, but the Marble Stones, of which it was compoſed, are applied to the repairing and beautifying the Moſque and Bagnio now remaining in this Place. There is yet ſtanding the Semicircle, being about a hundred Yards from Side to Side; in the Semicircular Part is a Range of ſeventeen round Windows juſt above the Ground, between which were raiſed maſſy Pillars upon high Pedeſtals, but now moſtly fallen to decay; the Seats of the Spectators, and alſo the Vaults under the Theatre, remain perfect; the Building has been very ſtrong,

and might have continued many Ages, if it had not fallen a Victim to *Turkish* Cruelty.

Tortosa. About twenty Miles to the Southward of *Jebilee* stands the antient *Orthosia*, now *Tortosa*; it was a Bishop's See, and a very strong Place; it stands in the Province of *Tyre* on the Sea Shore, on the Edge of a spacious Plain, which extends a great Distance on the North, East, and South Sides of it, but it is now in a ruinous Condition, though there is yet left a large Castle wash'd by the Sea; some Part of the Walls are still remaining. There is also a Church a hundred and thirty Foot long, and ninety three broad, and sixty one in Height; the Wall Arches, and Pillars are still so entire, that it would not require a great Charge to repair it, but the *Turks* use it as a Stable for Cattle, and the Ground about it is by that means almost to the Knees in Mire and Dirt, which makes the approach to it very troublesome.

Tripoli. The next remarkable Place to the Southward of *Tortosa*, is *Tripoli*, the Seat of the Viceroy of this Province, which was formerly call'd *Phenicia*; and is that antient *Phenicia*, and its then Inhabitants those antient *Phenicians*, so famous in History for their so early, or as some say, first improving Navigation to that degree, as by the help thereof to settle Colonies in the remote Parts of their contiguous Countries, or Quarters of the World, *Africa* and *Europe*, long before *America* was known to the Inhabitants of those Parts.

Tripoli is situate between two Hills, a small Distance from the Sea; there stands a ruinous Castle on one of the two Hills, which was built to command the Town, but is now rather like a Prison than a Garrison; the Port is rather a Road than a Harbour, but is made a little more safe by two Islands, which lie about two Leagues from the Shore. This City stands but a little Way distant from the famous Mount *Libanus*; in which, as in several other Mountains, there rises a Spring, which forms a Rivulet sufficient not only to supply the Town with Water, but to be dispers'd by small Channels to the upper Part of their Ground or Gardens, and so to water them by trickling Streams descending from thence. Here are plenty of Orange-Trees, and also Mulberry-Trees in such abundance, that they produce great Quantities of Silk, and have considerable Manufacturies here of that Commodity. This Town is supposed to have been call'd *Tripoli* from three Towns, which antiently stood in a Triangular Form, about a Furlong from each other; of which, they say, the first was inhabited by *Aradii*, the second by the *Sydonians*, and the third by the *Tyrians*; but, however probable it may be that the Name of the Town was derived as above, it seems unlikely that those Towns so near one another should be differently peopled by the respective Towns of *Tyre* and *Sydon*, the nearest of which two Places is at such a Distance from *Tripoli*.

Sydon. *Sydon*, by some call'd *Sayd*, is seventy or eighty Miles to the Southward of *Tripoli*, and upon the same Coast; it is still a populous Town, but the Pieces of Antiquity, as the many beautiful Pillars and other Remains of antient Buildings, which stand in the Gardens without the present Walls, are fatal Monuments of its being declined from its antient Grandeur. On the South Side of the City there stands an old Castle upon a Hill, and not far from it a Palace, where the Bassa resides; but, as most of the Buildings are either fallen to decay, or repairing and not quite finish'd, there cannot much be said as to the Beauty of the Place.

Tyre or Sur. The antient *Tyre*, by some now called *Sur*, is about twenty or twenty five Miles South of *Sydon*; it stands upon a Peninsula, and being an antient, but now ruinous, Place, it appears best at a Distance; there was an old *Turkish* Castle on the North Side, but little of it now remains but broken Walls and Pillars. The Town is mostly inhabited by poor Fishermen. This and the last Place described, are that *Tyre* and *Sydon* so often mention'd in Scripture, more especially in St. *Luke* x. 13, 14. The Place where *Tyre* stands was only an Island, but was made a Peninsula, and join'd to the Land by an artificial *Isthmus* by *Alexander*; there is yet the Remains of an antient Wall about it; and in the Middle of the Ruins there is a Pile higher than the rest, which is the East End of a great Church, supposed to be the antient Cathedral of *Tyre* when it was a Bishop's See, and from hence Mr. *Maundril* makes a particular Remark, and to it subjoins a Prophetick Conjecture; his Remark is, that he has seen not less than a hundred Instances of Churches in that Country, whose *East* End has been tolerably entire: this he imputes to a miraculous Providence, and looks upon it as a prophetical Presage of their future Restoration; the Fact we have no reason to dispute, having had it from so credible an Author; but whether we are to impute the *East* End standing longest to any Thing that will admit of a prophetick Conjecture, or to the superior Strength of that Part of the Building above the rest, we ought to leave every Reader to judge for himself; only I cannot forbear thinking that if the West End had stood longest, it had been as good a Presage as the other of a future Restoration, if there could be any Presage in either the East or West standing longest.

As we have begun, we shall proceed along the Coast to the Southward, and observe that the next remarkable Place to *Tyre* is *Acra*, or *Acho*, about ten Miles distant to the Southward of *Tyre*; it lies also upon the *Mediterranean*, but on the East and North of it is a spacious fertile Plain; the Bay on the South of it extends as far as Mount *Carmel*; it has of late fallen into the Hands of the *Turks*, as has now the rest of *Syria*, and now there is little to be seen of *Acra* but the Ruins of it, as compleated by the *Turks*. *Acra.*

We have a Report in History that the old Abbess and Virgins under her Care in *Acra*, being apprehensive that they should be exposed to the brutal Usage that they expected from the Soldiers, in case they lay under their Mercy, the old Abbess summon'd the Nuns together, and advised them to make themselves uncapable of giving any Temptations to the Soldiers, by cutting, mortifying, and disfiguring their Faces, and herself, as a President, first disfigured her own, to encourage the Virgins to undergo the same Operation, whereupon some of them cut, gash'd, and tore their Faces, some cut off their Noses, and all made themselves such dismal Spectacles to outward Appearance, that they thought they had put themselves beyond all Temptation to Rapes or Ravishments; but when the *Turks* found them in this Condition, by their own voluntary Performance, they finish'd what the Nuns had begun, and since they could so easily submit to cutting and slashing, they put them all to the Sword, having no more Mercy of them than they supposed they had had of themselves before, in so abusing themselves.

Damascus or Sham. The next Place of Note, but not upon the Coast, is what is now call'd *Scham*, but as it is called *Damascus* both in authentick History, and in Scripture itself, I rather chuse to treat of it under that Denomination, as being very sensible that those new Names of Places, so far as they differ from the common receiv'd Names by which these Places have been first represented to us in antient authentick History, and even in Scripture itself, has created a great deal of Confusion in, and been a great Obstruction to Geographical Studies and Improvements.

But to proceed to *Damascus*; it is the Capitol of the South Part of *Syria*, and since it has been subject

to

to the *Turks*, it continues to be the Seat of a Viceroy of that Empire; it is in thirty three Degrees and ſome odd Minutes of North Latitude, forty or fifty Miles Eaſtward of *Sydon*, and conſequently of the *Levant*, or *Mediterranean Sea*. As a Perſon approaches the Town, on the South-Weſt Side, there is a Precipice with a high Building upon the Top of it, from whence *Damaſcus* makes a very agreeable Proſpect; and what is yet more entertaining, the River *Barrady* runs under this Eminency and Building: *Damaſcus* is ſituate on a Plain ſo extenſive, that the Mountains which encompaſs it are but juſt diſcernible, and the Town ſtands upon the Weſt Side of this Plain, about two Miles from where the River *Barrady* falls out of the Mountains, moſt of which two Miles is taken up with handſom Gardens: The City is about two Miles in Length, and narroweſt in the Middle; there are ſeveral fine Moſques and Steeples in the Town, and encompaſſed with Gardens, well ſtored with all manner of Fruit round about it; the Gardens are water'd by Streams iſſuing from the River *Barrady*, which ſupplies both the City and Gardens with Water, and is ſo exhauſted in its Paſſage, that the remaining Water is dried up before ever it reaches the Sea.

The River *Barrady*, immediately after its Deſcent from the Mountains, divides itſelf into three Streams, of which the Middlemoſt is the greateſt, and runs directly to *Damaſcus*, the other two run one of each Side of the Town, and are by ſome Geographers reckon'd to be that *Abana* and *Pharphar* mention'd mention'd 2 *Kings*, v. 12. and with great Probability too, ſince theſe are called *Rivers of Damaſcus*, and we find no other at or about the Place that could poſſibly bear that Name.

Streets of Damaſcus. The Streets of *Damaſcus* are but narrow, and the Houſes make but a dull Appearance on the Outſide, only the Doors are adorn'd with Marble Portals, and the Inſides very agreeable: Their common Faſhion of Building, is to have a large ſquare Court, beautify'd with Trees and Fountains, and ſurrounded with fine Apartments, and alſo with broad Seats, ſixteen or eighteen Feet above the Floor, ſpread with Carpets, and furniſh'd with Pillows and Cuſhions to lean upon; and upon theſe Places it is that the *Turks* eat, drink, ſleep, ſmoak, receive Viſits, and perform their Devotions; and theſe *Duans* or Places of Entertainment, are built and furniſh'd richer or poorer, according to the Ability of him that is the Owner.

Place where Adam was created. There is a Tradition at *Damaſcus*, that the Meadow or Field call'd *Ager Damaſcenus*, through which the River *Barrady* abovemention'd runs to *Damaſcus*, was the Field, in which, and of whoſe Earth God form'd *Adam*; nor does this at all contradict our foregoing Deſcription of *Eden*, or earthly Paradiſe; for it is not ſaid, that God created *Adam* in *Paradiſe*, but only, that *the Lord God planted a Garden Eaſtward in* Eden, *and there he put the Man whom he had form'd*, Gen. ii. 8. From hence it is not inconſiſtent with the Account that *Moſes* has given us of the Creation, to ſuppoſe that *Adam* was created before he was put in the Garden of *Eden*, and that it was after he was fix'd and ſettled there, that the Woman was created.

Paul's Viſion. They ſhew Travellers a Place about half a Mile out of the Eaſt-Gate of the City, which is the Place where *Saul* (afterwards call'd *Paul*) had his Viſion, which ſeems very probable, becauſe he was come near to *Damaſcus* when he had the Viſion, *Acts* ix. 3, 4. About half Way between that and the City, there is a ſmall Timber Building with an Altar in it, where they ſay *Paul* reſted in his Way to *Damaſcus*: after he had ſeen the Viſion, there is a Gate, which they tell us, is the Place where *Paul* was let down in a Basket, but that Gate is at preſent wall'd up. The Street called *Straight*, Acts ix. 11. is yet in the City, and retains the ſame Name; it is about half a Mile in Length, and by the Houſe jutting over it, ſeems to be very narrow.

Towards the Weſt Part of the City is a large Caſtle, where they depoſite their old Arms, and other Things that they have plunder'd the Chriſtians of formerly. Their Market-Places are cover'd, and made commodious for the vaſt Concourſe of People that reſort thither, it being a Place of very great Trade. One great Manufacture here is, that of making Knives, Sword-Blades, and other Inſtruments of Iron and Steel; the Water of the River *Barrady* being reckon'd of an extraordinary Nature for tempering theſe Sort of Tools. They excel in making Damasks, Soap, Raw and wrought Silks, Wine, Prunes; and Water of Damask Roſes, which grow in Plenty here, is one of the principal Merchandizes brought from thence.

Cain ſlew Abel. A ſmall Diſtance from *Damaſcus* is a high Hill, upon which they ſay *Cain* and *Abel* offer'd up their Offerings, and *Cain* ſlew his Brother. About ten or twelve Miles Northweſt of *Damaſcus* ſtands the City of *Balbeck*, ſuppoſed to be the antient *Heliopolis*, or *City of the Sun*, it is encompaſs'd with Gardens, and is of a ſquare Form, ſurrounded with a tolerable good Wall and Towers at equal Diſtances, each Side of the Square being about a Quarter of a Mile in Length, but the Buildings within are but mean. There is on the South-weſt Side of the City the Ruins of a noble Heathen Temple, with other Buildings belonging to it, which ſeem to be the Remains of ſomething exceeding magnificent, but are now pieced up, and ſerve for a Caſtle. *Balbeck.*

The firſt Thing that offers it ſelf to view upon approaching the City of *Balbeck*, is a little round Pile of Buildings, all of Marble, encompaſs'd with beautiful Pillars of the Corinthian Order; theſe Pillars ſupport a Cornice that ſurrounds the Structure, and the whole is made uſe of as a Church, in which the *Greeks* celebrate divine Service: Near this Building, but not ſeeming to be a Part of it, is a lofty Pile of Building, compos'd of vaſt ſquare Stones, through which they paſs into a ſtately arch'd Walk or Portico, two hundred and fifty Yards in Length, and this Walk reaches to the Temple, which is built in an oblong Form of ſixty four Yards in Length, and thirty two in Breadth: The Anti-Temple is fallen, but what is now ſtanding, is encompaſs'd with a noble Portico, ſupported by handſome Pillars, ſix Foot three Inches in Diameter, and forty five Foot high, each Pillar conſiſting of three Stones only, and are nine Foot aſunder, and as far from the Wall.

Mr. Maundrel enlarges more upon the particular Deſcription of this Building, than we think neceſſary to trouble our Readers with; we ſhall only obſerve what he ſays, as to the Largeneſs of ſome of the Stones, three of which he aſſures us, he meaſur'd, and that two of them were ſixty Foot each in Length, and the other ſixty three, and all of them were twelve Foot broad, and as many deep, and theſe three Stones were laid End to End, extending one hundred eighty three Foot, and the Wall upon which they lay was above twenty Foot high, which would almoſt ſeem incredible, how they ſhould hoiſt Stones of ſuch a vaſt Magnitude ſo high, and plainly proves, that their Skill in mechanic Powers, was not inferior to the beſt that our Architects are at preſent Maſters of.

Cedars of Lebanon. The ſame Author gives us the following Account of Mount *Libanus* or *Lebanon*, ſo famous in Scripture for the Cedars that grow there; he tells us, there is a fine ſpacious Plain of three or four Hours travelling, and being got over it, he came to the Foot of the Mount, and from thence continually aſcending, he came in about four Hours and

a

a half to a Village call'd *Eden*, and in about two Hours and a half more, he came to the Cedars; they grow upon the higheſt Part of the Mountain, which was cover'd with Snow, amongſt which thoſe Cedars grow; ſome of them are very remarkable for Age and Bulk, of which Sort he could reckon but ſixteen, the largeſt of which he meaſur'd, and found it thirty ſix Foot ſix Inches about, and ſeemingly very ſound, the Boughs extended thirty ſeven Yards in Breadth, about ſixteen or eighteen Foot from the Ground; it parted into five Branches, each of which was as big as a large Tree; but tho' there were but few ſo large, yet thoſe of a younger and leſſer Growth were very numerous.

Canobine. But to purſue the ſame Author's Account of this Country, he tells us, that he arriv'd at *Canobine*, which is a Convent of *Moronites*, and the Seat of their Patriarch. The Structure is but mean, but admirably adapted for Retirement and Devotion. There is a very deep Aperture in the Side of *Lebanus*, which runs twenty Miles and upwards, directly up into the Mountains. It is on both Sides exceedingly ſteep, but cloath'd with fragrant Greens from Top to Bottom, being every where water'd with Fountains, which overflowing, fall down from the Rocks on every Side, and form moſt beautiful Caſcades, and the Streams uniting at the Bottom, make a rapid Torrent, whoſe murmuring Noiſe is not diſagreeable to the adjacent Inhabitants.

Canobine abovemention'd, is ſituate on the North-ſide of this great Chaſm, on the ſteepeſt Part of this Mountain, and about half Way up. It ſtands at the Mouth of a great Cave, having a few ſmall Rooms only, which front outward, and enjoy the Light of the Sun, the Reſt being all under Ground, and was firſt founded by *Theodoſius the Great*. This Valley of *Canobine*, was once much frequented by the Religious, the remaining Proofs of which are the Hermitages, Cells, and Monaſteries, almoſt without Number; and not only ſo, but almoſt every Jetting out of a Rock in the Side of the Mountain, is a Teſtimony of this Antiquity, as every one has ſome Remains of the Structures for the Reception of Monks and Hermits, tho' very few of them are now inhabited. This *Canobine* Monaſtery is about ten Miles diſtant from *Tripoli*.

Palmyra or Tadmor. The next Thing to be taken Notice of is *Palmyra* or *Tadmor*, though now in Ruins; it is about a hundred and fifty Miles South Eaſterly from *Aleppo*, and between the two there is a barren Deſart almoſt deſtitute of Water. *Palmyra* is a Place of ſuch Antiquity, that our *Engliſh* Merchants at *Aleppo*, have travell'd thither out of mere Curioſity, and as their Expeditions are recorded in the *Philoſophical Tranſactions*, we ſhall depend upon the undoubted Credit thereof, and extract our Account from thence.

In their firſt Expedition, they were ſixteen Gentlemen in Company, which with Servants and Muleteers, amounted to forty in all. In the ſecond Day's Journey, they came to a Well in the Deſart, where they met with ſome *Arabs* ſhooting Antelopes; their Bullets were little Stones artificially cover'd with Lead. The *Arabs* had Pieces of Antelope Skins faſtened upon their Feet, Elbows, Knees, and the Palms of their Hands, to prevent their being cut or bruiſed with creeping after their Game. They made uſe of an Aſs, inſtead of a ſtalking Horſe, till they came within their proper Diſtance. They alſo found others at work, making Pot-aſh of an ordinary ſort of Weed, which they put into Pits, and burn for that purpoſe; but the beſt Sort is made of the Weed *Sticaon*, which grows about *Palmyra*; it has not what can properly be call'd Leaves, but juicy Branches like our Sapphire, and in burning runs into Cakes like Cinders, but heavier, and not ſo hard or porous.

The next Day's Progreſs brought them to *Andrene*, where they were only entertain'd with the Sight of Ruins, both of ſome Churches, and of a Town lying in a beautiful Plain; the moſt they could obſerve amongſt thoſe Ruins, was ſome *Greek* Inſcriptions, which tho' imperfect, and may almoſt be ſaid unintelligible, yet they gather'd ſo much from them, as to conclude, that they were evidently Chriſtian, and conſequently were ſtanding Proofs, that the Chriſtian Religion had prevail'd here. *Andrene*

About ſix or ſeven Miles from thence (ſtill purſuing their Journey toward *Palmyra*) they came to a pleaſant Aqueduct, cut through a Rock, a long Way from the Mountains, at the End of which was a fine Garden, or rather Gardens, which afforded, Melons, Cucumbers, and other Garden-ſtuff; and adjacent to that, they found a Grotto, where an *Arab* lived with his Family, and kept Buffaloes, not only to give Milk, but to plow his Ground, which by this Means procured Wheat and Barley, and makes it capable of being a Rendezvous for thoſe thievith *Arabs*, who plunder Travellers upon the Road, and come here to divide the Spoil. *A Rendezvous*

In their next Day's Journey, which was now the fourth, they found the Ground ſo hollow and ſandy, that it was very fatiguing travelling, and the Burrows made by Rats, and other Vermin, made it ſtill more dangerous, but the Inhabitants are glad of the Company of thoſe undermining Neighbours for; they take thoſe Rats and other Vermin, and eat them with the ſame Pleaſure as we do the Conies taken in the Burrows in *England* Theſe and the Piſtachio Wood held them the fourth and fifth Days.

The ſixth Day, they came within Sight of the Caſtle of *Anure*, which ſtands upon ſo high a Mountain, that they could ſee it over a Plain which lay before them, of the Breadth of ſeveral Hours travelling, but when they had travell'd two or three Hours upon this Plain, they were met by an *Arab* mounted upon a ſwift Camel, and carrying a Launce; they were at firſt jealous of him, ſuſpecting him to be a Spy, but when they came up to him, he told them, he belong'd to *Tadmor*, of which is the ſame *Palmyra*; and that his Prince the *Emir Melkham*, had that Day made Peace with another *Arabian* Prince named *Hamet Shided*, and that they were both then at *Palmyra*. This *Arab* took the Opportunity of travelling an Hour or two with the *Engliſh* Gentlemen and their Company, and expreſs'd his Jealouſy, by enquiring of their Muleteers, if they were not *Turks* in Diſguiſe, and were come with Deſign to ſeize the *Emir Melkham*, and what rather increas'd his Suſpicion, was, that he thought there muſt be ſomething more than Curioſity in the Caſe, or elſe, that alone could never have induc'd them to undertake ſuch a dangerous Journey, in ſo ſtrange a Country; but as it was out of his Power to intercept them, they proceeded towards *Tadmor*, the *Arab* riding before them with all the ſpeed he was capable of, till he got to the Town, which created a Suſpicion in the Town, that the *Franks* were intending to attack them, and the *Franks* on the other Side, expected the ſame Treatment from the Natives, and thereupon diſpatch'd twenty of their Servants before them, each arm'd with a Fuzee and Piſtols, the Gentlemen following at a ſmall Diſtance, to know how their Servants and Repreſentatives were receiv'd; and in this Manner they proceeded arm'd with Carbines and Muskets, till they came to an Aqueduct cover'd with an Arch of Marble, and five Miles in Length. In this Order they advanc'd, till they came to the Top of the Hill, from

from whence they had a View of the vaſt and noble Ruins of *Palmyra*, with a Plain to the Southward of them like the Sea for its vaſt Extent.

HERE they and their Company took the Opportunity to refreſh themſelves, and then fetch'd a Compaſs, and deſcended by the Foot of a Mountain, upon which ſtands an uninhabited Caſtle; here they met two *Arabs*, who complimented them in the Emir's Name, with Aſſurances of his Friendſhip, whereupon they return'd the Compliment by a Janizary, themſelves diſmounting in the mean Time at a Watering-place amongſt the Ruins, but did not unload their Beaſts, but waited for the Janizary's Return, expecting that he would bring the Emir's *Teſcar* or Writing, for their Protection; when the Janizary return'd, there came with him one that belong'd to the Sheik of the Town, for whom they had Letters from ſome *Turks*, People of Figure and Character at *Aleppo*; he directed them to the Town Wall, under which they pitch'd their Tents, in the Ruins of a large Palace, where they continued a conſiderable Time to wait the Sheik's Anſwer to their Letters; but finding the Natives expreſs ſome Uneaſineſs, they began to imagine that the Emir expected a Preſent from them, whereupon two of the Company took with them a Janizary and a Servant, and carried with them two Pieces of Red Cloth, and four of green, beſides ſeveral other Things, intended as a Preſent to him; the Emir received them graciouſly and treated them handſomely, and asked them ſeveral Queſtions about the Reaſon of their Journey; to which they anſwer'd, that it was only their own Curioſity put them upon that Journey to viſit the Ruins of *Tadmor*, which they had heard ſo much of.

THE Emir went out and left them in his Tent, and calling their Servant and the Janizary to him, he told them that no *Frank* had ever been there, and that if they ſhould acquaint the *Turks* with the Way through the Deſart, it might be of fatal Conſequence to the *Arabs*, and that he was therefore minded to deſtroy them all, leſt they ſhould make any Diſcovery to the *Turks* at their Return, but as he had that good Opinion of them, that they did not come with any ill Deſign, he would only have four thouſand Dollars of them as a Preſent, which if they did not comply with, he would immediately hang up both of them, and the two *Franks* in the Tent, and then fall upon the reſt and deſtroy them all.

THE Emir communicated this his Reſolution to the Gentlemen in the Tent, who anſwer'd they could not do any thing till they acquainted the reſt of their Company with his Demands, but if he would permit them to ſpeak to them, they would return him an Anſwer; but the Emir at firſt deny'd them, and threaten'd them with preſent Death, but a little ſoftned by their Importunity, he gave them leave to ſend their Janizary with a Letter to their Fellow Travellers, to acquaint them with his Demand, and to deſire them to redeem them; but when they had conſulted each other, they found that all the Money and Effects they could then make up fell vaſtly ſhort of his Demands; which when the Emir was inform'd of, he came to them in Perſon, and although, conſidering his former Reſolution, they were under Apprehenſions of preſent Death, yet he mitigated that Sentence, and for paying fifteen hundred Dollars he diſcharg'd them all, and they to haſten out of his Dominions, ſet forward on their Journey for *Aleppo* the next Day.

WHEN they arrived at *Aleppo* and inform'd the Baſſa there of what had happen'd, it ſo irritated him againſt the Emir, or Prince of the *Arabs*, that he meditated Revenge, to accompliſh which he amuſed the Emir with ſome Hopes of his making him King of the *Arabs*, in order to which the Emir thought to conſult the Baſſa in Perſon, and being come with his Retinue near *Aleppo*, the Baſſa ſurprized him in his Tent, took him, and ſoon after put him to Death.

CHAP. XVI.

The Deſcription of Paleſtine, *or the* Holy Land.

SOME Authors limit *Paleſtine*, or the *Holy Land* to *Judea* only, but Dr. *Fuller* in his Holy War includes in *Paleſtine*, or the *Holy Land*, the four Diviſions of *Galilee* on the North, *Trachonitis* beyond *Jordan* on the Eaſt, *Judea* on the South, and *Samaria* in the Middle and, conſidering this Extent, it may be ſaid to be bounded by the Mountains of *Libanus* on the North, the *Mediterranean* on the Weſt, *Arabia Petræa* on the South, and *Arabia Deſerta* on the Eaſt. *Galilee* is divided into Upper and Lower; the Upper is ſometimes call'd in Scripture *Galilee* of the *Gentiles*, becauſe it borders upon them, and comprehends the Tribes of *Aſher* and *Naphtali*.

IN the Tribe of *Aſher* (which extends to the Sea, and is a Part of the antient *Phœnicia*, ſo famous for their early Improvement in Navigation,) we find near the Sea-ſide *Sarepta*, where *Elijah* multiplied the Widow's Oil; 2. *Tyre*, a famous Sea-port in the Infancy of Navigation; 3. *Aphek*, whoſe Walls falling, ſlew 27000 of *Benhadad*'s Soldiers; 4. *Cana*, where the Woman lived that *Chriſt* diſpoſſeſs'd of a Devil; 5. The famous Mount *Libanus*, ſo remarkable for the Cedars, and for its being cover'd with Snow, of which in the preceding Chapter, from which ſnowy Top, or the Frankincenſe growing thereupon, it is ſuppoſed it obtain'd the Name of Mount *Libanus*.

AMONGST other Places remarkable in the Tribe of *Naphtali*, is *Haroſheth* of the *Gentiles*, where *Siſera*'s Head was nail'd to the Ground, *Judges* iv. 16, 21. notwithſtanding his nine hundred Chariots of Iron; 9. *Capernaum* ſo much ſpoke of in the Goſpels, and not far from which our Saviour fed the Multitude by a Miracle; 3. *Kedeſh*, a City of Refuge; 4 *Riblah*, where King *Zedekiah* after he had ſeen his Sons ſlain, had his own Eyes put out.

Lower Galilee contains *Zebulun* and *Iſſachar*; in *Zebulun* is contain'd, 1. *Nazareth*, the Place of our Saviour's Conception and Education; 2. *Naim*, where *Chriſt* rais'd the Widow's Son; 3. *Bethulia*, where *Judith* cut off *Holofernes*'s Head; 4 *Kiſhon River*, where *Siſera*'s Hoſt was ſwept away, *Judges* v. 21. alſo 5. Mount *Carmel*, where the Prophets converſed; and 6. Mount *Tabor*, where our Saviour was transfigured. *Lower Galilee.*

IN *Iſſachar* is *Shunem*, the Habitation of that Woman who was thence call'd *Shunamite*, who ſo often entertain'd *Eliſha*, and whoſe Son he rais'd from the Dead. In this Tribe alſo was fought the following Battles, viz. *Gideon* againſt the *Midianites*, *Jehu* againſt *Joram*, and *Saul* againſt the *Philiſtines* upon Mount *Gilboa*. *Iſſachar.*

The Deſcription of Samaria.

THE next, or Middlemoſt Province is *Samaria*; it contains the Tribe of *Ephraim* and the half Tribe of *Manaſſeh*; in this latter is *Megiddo*, where *Joſiah* was ſlain, alſo *Ceſarea Stratonis*, where *Samaria*

Herod was eaten up with Worms, and also *Jezreel*, near which was *Naboth*'s Vineyard.

A Description of Judea.

Judea. THIS Province contains the Tribes of *Benjamin*, *Dan*, *Simeon*, and *Judah*. In the Tribe

Benjamin. of *Benjamin* was the first Landing-place of the *Israelites* after they had croſt the River *Jordan*, and here it was that they first eat of the old Corn of the Country, and the Mannah ceased. In this Tribe is *Gibeon*, where *Joshua* commanded the Sun to stand still, also *Jericho*, whose Walls fell down, and *Ai*, which was taken by Stratagem, *&c.* the History of all which we read at large in the first ten or twelve Chapters of the Book of *Joshua*.

Dan. IN the Tribe of *Dan*, amongst other Things remarkable, is the City of *Joppa*, a Sea-port and good safe Harbour upon the *Levant* or *Mediterranean*, *Acts* x. 5, 6. and where *Jonah* took Shipping to flee to *Tarshish*, to avoid going to *Nineveh*, *Jonah* i. 1, 2. here is *Timnath*, where *Judah* committed Incest with *Tamar*; and in the Tribe of *Simeon*, adjoining to the Southward, is *Askelon*, where *Herod* was born; *Gaza*, whose Gates *Sampson* carried away, and afterwards being sent for to make them Sport, it ended in his own and their Destruction; in this Tribe also is *Beersheba* and *Gerar*, where *Abraham* and *Isaac* lived, near the Brook *Bezor*.

Judah. THE Tribe of *Judah* is the largest to the Westward of the *Dead Sea* or Lake of *Sodom*, and to the Southward of the Tribe of *Benjamin*; here is *Hebron*; 2. The Cave of *Macpelah*; 3. *Tekoah*, where *Amos* was born; 4. *Zoar*, where *Lot* fled for Refuge at the Destruction of *Sodom*, and near which his Wife was turned into a Pillar of Salt; and adjoining hereunto is *Lot*'s Cave, where, being overcome with Wine, he committed Incest with his Daughters; also *Bethlehem*, where our Saviour was born, and *Jerusalem* the Capital of *Palestine*.

A Description of Trachonitis.

THIS contains the Tribes of *Reuben*, *Gad*, and the half Tribe of *Manasseh*, on the East Side of the River *Jordan*, and was known in Scripture by the Name of Mount *Hermon*, or *Gilead*.

Reuben. IN the Tribe of *Reuben* is the Mount *Abarim*, being a Ridge or Chain of Mountains, the highest whereof was called Mount *Nebo*, and the Summit of that which was therefore the highest Land in all that Country, was call'd *Pisgah*, and from hence it was that *Moses* view'd the Promised Land, died, and was buried.

Gad. IN the Tribe of *Gad* we read of several remarkable Places, as 1. *Peniel*, where *Jacob* wrestled with the Angel; 2. *Jabesh Gilead* where *Saul* was buried; 3. *Ramoth Gilead*, where *Ahab* was slain, also the Cave where *David* had hid himself when he cut off the Skirt of *Saul*'s Garment; but we shall enlarge more upon the Situation of those particular Places in the Table which will follow the Map, and proceed now to

A particular Description of Jerusalem.

NOtwithstanding the Alterations that *Jerusalem* has undergone, it is still accounted the Capital of *Palestine*, or the *Holy Land*. It is in about two and thirty Degrees of North Latitude, and is about thirty Miles East from the *Levant*, or *Mediterranean Sea*; it has been twice destroy'd, first by *Nebuchadnezzar*, King of *Babylon*, and afterwards by *Titus Vespasian*; before which Time it was situate upon four Mountains, *viz.* Mount *Sion*, Mount *Moriah*, Mount *Acra*, and Mount *Bezetha*.

Mount *Sion.* MOUNT *Sion* was the highest of all, and was within the City towards the South; here stood King *David*'s House, and the Castle of *Sion*, and the uppermost Town.

MOUNT *Moriah*, whereon the Temple stood, with other excellent Buildings, was on the East Side of the City, within the Walls. Mount *Moriah*

THE lower Town was built upon Mount *Acra*; this is the West Part of the City; here *Annas*, *Caiaphas*, *Pilate*, *Herod*, *Agrippa*, *Bernice*, *Helena*, and other Kings and great Princes dwelt. The lower Town.

IT was then about four Miles in Circumference, but it is now reduced, and is computed not above three Miles about, nor does it now stand upon the same Ground upon which the antient *Jerusalem* stood, for Mount *Calvary*, which is a small Eminence, or rising Ground, upon the great Mount *Moriah*, was at a small Distance without the Walls of the City, and was held in the utmost Contempt, as being the Place of Execution of common Malefactors, and for that Reason our blessed Saviour was there crucified; but his Suffering there has occasion'd such a Concourse of Christian Pilgrims, that it has drawn the City round about it, so that Mount *Calvary* may now be said to be in the Heart of the City, and a great Part of Mount *Sion* is now without the Walls.

THE City, according to the latest Description we have of it, has six Gates, *viz. Bethlehem*, Mount *Sion*, *Sterquilina*, or the Dung-Gate, *St. Stephen's*, *Herod's*, and that of *Damascus*; there is also the *Golden-Gate*, which is shut up. The Walls are not very strong, nor have they Bastions, but common Towers, according to the old Way of Fortification, and an inconsiderable Moat, or Ditch, and that but only on one Side; the Buildings are mean, the Streets narrow, and the Place but thinly inhabited, and indeed the chief Support of the Town depends upon the Concourse and Resort of Pilgrims or Travellers, whose Religion or Curiosity excites them to come to this Place, and accommodating those People with Necessaries seems to be the principal Business of the Inhabitants.

Jerusalem is under the Dominion of the Grand Seignior, who has a *Turkish* Bassa, or Resident here, to see good Orders kept, and to collect the Grand Seignior's Tribute from the Pilgrims, and the Fathers who reside here, and to protect them from the *Arabs*, when they go to visit the Holy Places about *Jerusalem*.

NO *Frank*, or *European* Christian, is allow'd to enter the City till the Governor is acquainted with his Arrival, and he has paid the Duties required, and then they are not allow'd to enter on Horseback, or with Arms, unless they come with some Consul or publick Minister. All the *Franks*, whether Papists or Protestants, go to the *Latin* Convent, where the Guardian and Friars entertain them handsomly for their Money; but they always distinguish between those that come for Devotion and those who come out of meer Curiosity; but whatever Inducement moves them to go there, they are always obliged, for their own Security, to maintain a good Correspondence with the Fathers of the *Latin* Convent, or if they refuse that Intimacy with them, and as it were a Sort of Protection from them, they are never safe, but charged as Spies, or some way entangled in Difficulties, which sometimes they never survive, nor return from thence to give an Account of what Usage they met with.

THERE is a Church upon Mount *Calvary* call'd the Church of the *Holy Sepulchre*; it is very much visited by Pilgrims; it is about five hundred Foot long, and three hundred Foot broad; it stands upon the Side of the Hill, but the Ground upon which it stands is reduced to a Level by taking away the higher Part of the Rock; but this Church is at a little Distance from that Part of Mount *Calvary* where our Saviour's Cross was fix'd, that Ground to this

Day being taken particular Care of, and not ſuffer'd to be broke or alter'd, or apply'd to any Uſe; it is upon the higher Part of Mount *Calvary*, and is a little Place nearly level, about ten or twelve Yards ſquare, and ſtands above the Church, or higher up, on the Mountain, ſo that there is one and twenty Steps, or Stairs, up from the Church to the Place where the Croſs was fix'd, and the Holy Sepulchre itſelf, which was firſt a Cave hewed in the Rock under Ground, but the Rock having been cut away all round it, and the Sepulchre left, it is now an Arch, or Grotto above Ground.

Reception of Pilgrims.

When Travellers or Pilgrims go to viſit the City of *Jeruſalem*, the Druggerman and others deputed by the Convent meet them without the Gate, where they pay the Duties required before they are admitted, and then they are brought into the Cloiſter, and handſomly entertain'd, and their Feet waſhed, &c. after which they are conducted to the Chapel, where they ſit down on a Crimſon-Velvet Couch, and the Father-Guardian, or his Monks, waſh their Feet in Veſſels of Water, in which is Plenty of Roſes; which done, they give every Pilgrim a white Wax Taper, and then go in Proceſſion round the Cloiſter, ſinging *Te Deum* at three ſeveral Altars, for the ſafe Arrival of the Pilgrims at the Holy City.

Things remarkable in *Jeruſalem*.

Mr. *Thevenot* gives us the following Account of what he ſaw in and about *Jeruſalem*: He ſays, that he and the reſt of the Pilgrims went out with proper Guides on the *Saturday* before *Palm Sunday*, to viſit the *Dolorus Way* and other Places; and firſt they paſs'd near the *Judgment Gate*, ſo call'd becauſe it was the Gate through which common Criminals went to Mount *Calvary*, the Place of Execution; and through this Gate it was that our Saviour went bearing his Croſs to be crucified at that common Place of Execution. On the Right Hand is the Houſe of *Veronica*, who ſeeing our Saviour's Face ſmear'd with Sweat and Blood with the exceſſive Load of his Croſs, made Way through the Crowd, and wip'd his Face with her white Veil; and a little further towards Mount *Calvary*, is the Place where *Simon* the *Cyrenean* help'd our Lord to carry his Croſs.

About a hundred and fifty Yards from this Place is an Arch under which they paſs'd; it is a large Arch, and extends from one Side of the Street to the other, and has two Windows (ſeparated only by a little Marble Pillar) which looks into the Street, under theſe Windows is this Inſcription, *Tolle tolle Crucifige eum.* At the End of that Street, on the Left Hand, is *Herod*'s Palace, where our Saviour was, in Deriſion, cloath'd with Purple, and ſent back to *Pilate*, to whom *Herod* was but that Day reconcil'd. When they had left this Street, they ſaw *Pilate*'s Palace on the Left Hand; it is but a Piece of dull Architecture at preſent; they afterwards proceeded to the Place where our Saviour was ſcourg'd; and from thence proceeds the *Dolorous Way*, which reaches from the Houſe of *Pontius Pilate* to Mount *Calvary*; the Way is ſo call'd becauſe our Saviour went that Way to be crucified, and not only ſo, but was even compell'd to carry the Croſs upon his own Back, on which he knew he was to ſuffer. This *Dolorous Way* leads from *Pilate*'s Houſe to Mount *Calvary*; and indeed, ſpeaking of our Saviour as to his Human Nature, it was (to him) the Way from Life to Death, yet it was to all Chriſtians and true Believers the Way from Death to Life; I might expatiate upon this Subject; but as I am not a Divine, to enlarge upon thoſe ſublime Affairs, but an Hiſtorian to relate Matters of fact, it is to be hop'd that my Zeal as a Chriſtian will excuſe this Digreſſion.

Herod's Palace.

Dolorous Way.

This *Dolorous Way* is about a Mile in Length, at the End of which the Temple of the Sepulchre is built, of which Mr. *Sandys* gives the following Account:

N. B. *This is the Temple before deſcribed, but by this Author more fully under the Name of the* Temple of the Sepulchre; *the other, which was call'd the Church of the Holy Sepulchre, being the ſame.*

Temple of the Sepulchre.

This Temple is lofty and curiouſly arch'd, and ſupported by large Marble Pillars; the outward Iſles have Galleries, and the whole Fabrick is very magnificent; but they entertain People with different Kinds of Reception, according to the different Inducements that bring them there; for if it is Devotion, the uſual Anthems *Pater-Noſters*, *Ave-Maria's*, &c. is ſung; but if it is only Curioſity induces them to come there, thoſe Ceremonies are omitted.

Right againſt the Door in the midſt of the South Iſle, and level with the Pavement, there lies a white Marble Grave-ſtone, ſurrounded with a Rail of Braſs about a Foot high; this is the Place where *Joſeph* of *Arimathea* and *Nicodemus* anointed the Body of our Saviour; over this Stone hang ſeven Lamps, which burn continually. Againſt the Eaſt End of the Stone there is a little Chapel; and near the Entrance on the Right Hand ſtands the Sepulchre of *Godfrey* of *Boloigne*, with this Inſcription:

Hic jacet inclitus Godefridus de Buglion, *qui totam iſtam Terram acquiſivit Cultui* Chriſtiano *cujus Anima, requieſcat in Pace*, Amen.

And on the Left Hand that of his Brother *Baldwin*, likewiſe in *Latin*, in the following Words:

Rex Baldwinus Judas *alter* Machabeus *ſpes Patria Vigor Eccleſiæ Virtus utriuſque quem formidabant, cui Dona Tributa ferebant Cedar* Egypti, *Dan ac Homicide* Damaſcus, *Proh Dolor in Modico Clauditur hoc Tumulo.*

Theſe were the two firſt Chriſtian Kings of *Jeruſalem*.

Over this Chapel are the Chapels of Mount *Calvary*, for although, as before obſerv'd, the Mountain is not demoliſh'd or dug away, yet they have built a Chapel upon it; at the Eaſt End of which, under a large arch'd Concave of the Wall, is the Place where our Saviour ſuffer'd, according to Mr. *Sandys*'s Account of the Place, and that on the Right Hand was the Place of the Penitent Thief's Suffering; and on the Left Hand the Place of the other Thief; but the latter is ſeparated from the Place where our Saviour's Croſs ſtood by the Rent in the Rock, which cleft aſunder at the Time of his Paſſion, and is about a Yard and a half from the Hole where the Foot of the Croſs was fix'd; and that this is the Rent in the Rock, mention'd *Matthew* xxvii. 51. ſeems evident, firſt, that the Rocks did rent is evident from the Scripture above quoted, and that it was ſomewhere near the Place of our Saviour's Crucifixion is more probable, becauſe the Vail of the Temple which was rent, as mention'd in the ſame Chapter and Verſe, was at *Jeruſalem* and at the ſame Time; but a ſecond Reaſon, which more than confirms the firſt is, that this Cleft in the Rock is not above a Span wide in the upper Part of the Rock, and of an immenſe Depth, ſo that Mr. *Maundrel* allows a Probability of it's reaching to the Center of the Earth; but be that how it will, it is plain that ſo far as the Eye can ſee into it, the two Sides, notwithſtanding their Irregularity, would fit exactly into one another, although it is impoſſible for any Men or Tools to approach to do by Art, what is therefore evident Nature, or rather Divine Providence, upon that extraordinary Exigency has in ſuch a diſtinguiſhing Manner done, becauſe it could neither be counterfeited by Art, nor come at by Men and Inſtruments.

Place of Suffering.

Rent in the Rock.

Noted Places.

It is obſerv'd, by thoſe that give our Travellers an Account of thoſe Antiquities, that this Chapel ſtands upon, or covers, the following Places, *viz.* the Place where the Soldiers divided his Garments; the Place where he was ſhut up while they digg'd

the

the Hole to set the Foot of his Cross in, and prepar'd every Thing for his Crucifixion; where the Cross was erected; where the Soldier stood who pierced his Side; where the Angels appeared to the Women after his Resurrection, and several other Things and Places relating to the Particulars of our Saviour's Sufferings and Resurrection, to all which Places the Christians who now inhabit there (holding it of the *Turk*) pay such Veneration, that all the above-mention'd Places, and several others, are adorn'd with each its several Altars, erected in little Chapels about the Church or Temple.

THERE have been very warm Disputes about the Propriety of the Holy Sepulchre of several Places and Denominations, as *Armenians*, *Greeks*, and *Latins*; but especially the two last have contended so hotly about saying Mass here, that their Debates have amounted to Blows. But, in order to put an End to those Religious Quarrels, the King of *France* interposed with his Letters to the Grand Vizier, desiring that the Holy Sepulchre might be put into the Possession of the *Latins*, and prevail'd so far that in the Year 1690 an Order was obtain'd for that Purpose and then the *Latins* only had the Privilege of saying Mass there, and so it continues to this Day with respect to publick Mass; but Christians of all Denominations, and from whence soever they come, are allow'd to perform their private Devotions there.

Keeping the Time of the Passion and Resurrection.

MR. *Maundril* gives us the following Account of their strict Observation of the Anniversary, or yearly Return of the Time of our Lord's Passion and Resurrection, from his own Experience upon the Spot in the Year 1697, in which Year on *Good Friday*, he attended the *French* Consul to the Church of the Holy Sepulchre; the Doors were open, but guarded by Janizaries, who are placed there to receive the *Caphar*, or Tribute, which the *Turk* exacts of every Christian Pilgrim that goes to visit the Holy Sepulchre, and the other Antiquities relating to our Saviour's Life, Death, and Resurrection; but they who have once paid this Duty may afterwards go in and out *Gratis*, as often as he pleases, at publick Times, during the whole Feast, provided the Doors be open, but if they are shut, the same Payment must either be repeated, or he must wait till the Doors are open at the usual Time.

As soon as the Pilgrims were entred, the Church Doors were shut, and open'd no more till *Easter-Day*, but when it grew duskish on *Good-Friday* Evening, all the Monks and Pilgrims assembled in a small Oratory on the North Side of the Holy Grave, which is called the Chapel of the Apparition; here one of the *Latin* Fathers preach'd a Sermon, which began *La quarta Notte Tenebrosa*, &c. at which Words all the Candles were put out to represent the Darkness which was at our Lord's Crucifixion; when the Sermon had continued about half an Hour, the Preacher left off, and every one had a large lighted Taper put into his Hand, and the Crucifixes and other Utensils were disposed in proper Order for the Procession; and amongst the rest there was a Crucifix that bore the Image of our Saviour as large as the Life; it was nail'd to the Cross with great Nails, crown'd with Thorns, smear'd with Blood, and in every Circumstance represented in a most lively Manner the tragical Spectacle of our Saviour's Body hanging upon the Cross.

Sermon on the Darkness.

THUS was carried at the Head of the Procession, first to the Pillar of Flagellation, or Scourging, where a Sermon was preach'd in *Spanish* upon that Occasion; then they proceeded to the Place where our Lord was imprison'd while the Soldiers prepared every Thing for his Crucifixion, here a Sermon was preach'd in *French*; they went next to the Altar built upon the Spot where the Soldiers divided his Garments, where they only sung a Hymn; and went from thence to where he was derided, spit upon, &c. here they had a Hymn and a Sermon, and thence proceeded to Mount *Calvary*.

Procession to Mount *Calvary*.

WHEN they came at the Foot of the Stairs before-mention'd, which leads up to the Mount *Calvary*, they left their Shoes at the Bottom, and so ascended to the Altar which is built upon the Spot where our Saviour was nail'd upon the Cross; there they laid down this large Crucifix, and perform'd the Ceremony with all the Actions and Motions of nailing him to the Cross, (though the Image was nail'd to the Cross before,) and then, after a Sermon on the Crucifixion, which was then preach'd in *Spanish*, they remov'd to the adjoining Altar on the Top of the Mount; which Altar was built close by, though not upon, the Place where the Cross stood, the Hole in the Rock being kept open in which the Foot of the Cross actually stood: In this very Hole they put the Foot of the Cross upon which the crucified Image was, and letting it stand, they sung a Hymn, and the Father Guardian preach'd a Passion Sermon in *Italian* before it. Crucifixion.

WHEN Sermon was ended came two Fathers, personating *Nicodemus* and *Joseph* of *Arimathea*, and approaching the Cross with great Solemnity, and drawing the Nails, took down the Body, which, besides its Colour and other Circumstances, was also as flexible as a dead Body composed of real Flesh and Bones; it was then received in a large Winding-sheet, and brought down from Mount *Calvary* with great Solemnity, and carried to the Stone of Unction, which is set upon the very Place where our Lord's Body was anointed and prepared for the Burial; here they laid it down, and having thrown sweet Powder and Spices upon it, they wrap'd it in a Winding-sheet, and one of the Fathers preach'd a Funeral Sermon in *Arabick*, and then the (supposed) Corps was buried in the (real) Sepulchre where our Saviour's Body once actually lay; and thus the Procession being finish'd, the People adjourn'd to their respective Habitations or Quarters. The Body taken down.

THE next Morning, being our *Saturday*, and with them *Easter Eve*, those Pilgrims that fancied it, had their Arms mark'd with the Ensigns of *Jerusalem*, but that being now so common in *London*, we need not describe it. In the Afternoon they assembled in the Area, or Plain, before the Holy Grave, and with singing the Lamentations of *Jeremiah*, they concluded *Easter Eve*.

EARLY on *Easter-Sunday* Morning the Fathers and People concern'd in perforing the whole Solemnity appear'd at the Sepulchre, the Grave was set open, and there was the utmost Apearance of Joy in all their Faces, as a Representation of their actual Belief of our Lord's being risen from the Dead; and this Morning they celebrated Mass before the Holy Sepulchre; here the Father Guardian had a Throne erected, and being cloath'd in Episcopal Robes, with a Mitre upon his Head, he gave the Host, in View of the *Turks*, to every Christian that was willing to receive it, after which the Company left the Church, and went to Dinner at the *Latin* Convent. They represent the Resurrection.

THE Pilgrims, to compleat their Visits, went to see the Valley of *Jehoshaphat* and River *Jordan*, being convoy'd by the Governor and a strong Detachment of the Garrison; the Pilgrims in this Expedition amounting to two Thousand, one Nation with another, every *Frank*, or *European* Pilgrim, paying for his Protection twelve Dollars, except the Ecclesiatticks, who pay only half as much; and if they have engaged in paying for visiting the Antiquities now already described, they are obliged to pay for all the succeeding, whether they pursue their Visits or no. They travel further.

THEY came to the Valley of *Jehoshaphat*, and having croft that and Part of Mount *Olivet*, they came in about half an Hour to *Bethany*, where *Martha* and *Mary* and their Brother *Lazarus* lived, see *John* xi. 1, 2, &c. *Bethany* is now but a small Village, very *Bethany*.

very little more than two Miles from *Jerusalem*, *John* xi. 18. Here they were shew'd the Tomb where *Lazarus* was buried, and call'd from the Dead again, *John* xi. 43: and about a Bow-shot further was the House where *Mary Magdalen* lived; and then descending a steep Hill, and travelled thro' an intricate, barren, mountainous Country or Desart, in which it was, their Guides told them, that our Saviour was tempted of Satan, and among the rest was an exceeding high one, which is the Mountain to the Top of which Satan took our Saviour when he tempted him, *Matt.* iv. 8. This Mountain has a Chapel on the Side of it about half way up, and another at the Top, besides several Caves and Cells in the Sides of the Mountains, where some Hermits resort to this Day to keep *Lent* in Imitation of our Saviour; but the Curiosity of the Pilgrims going up, was disappointed by abundance of *Arabs* being quartered there, who demanded so extravagantly of them for their Passage up, that rather than comply with their exorbitant Demands, they turn'd down to the Plain, and came to the Fountain of *Elissha*, so call'd, because he healed the Water of it, 2 *Kings* ii. 19, and 22. This Fountain is received into a large Bason, from whence it dispersés itself into several Streams, and waters the Fields between this Place and *Jericho*, making them exceeding fruitful.

Jericho. About a Mile to the Eastward of this Fountain is *Jericho*; it is a Place of no Entertainment, but a poor dirty Village, inhabited by the *Arabs*; and as it is a Place so despicable, the Governor did not think it worth while to expect any Accommodations there, but pitched with his Forces and the Pilgrims under his Convoy about a quarter of a Mile to the Eastward of *Jericho*.

Jordan. The next Morning they decamp'd, and set forwards to see the River *Jordan*, in their Way to which they passed thro' a wild barren Plain, scarce producing any thing but a green Thing like *Samphire*, and such other Marine Plants, or rather Weeds, as the sandy or rocky Ground near the Sea produces, and in many Places where the Water had stood and was dry'd up, it had left a white Crust of Salt. When they arriv'd within about a Furlong of *Jordan*, they found an old ruined Church and Convent dedicated to St. *John the Baptist*, in Memory of his baptizing our Saviour in *Jordan*. Near that Place, a little beyond the Convent, there begins a regular gradual Descent, the Top of which, it is thought, was the highest or broadest Bounds of *Jordan* at the Time when it was highest, and having proceeded by an easy Descent for about a Furlong, they were told they were near *Jordan*, but could see nothing but a Row of Bushes and Trees, such as *Tamarisk*, *Willow*, and other Sorts of Trees, which seemed to obstruct their intended Passage; but pressing a very little Way through them, they came at the Bank of the River, the Top of which was about two Yards above the Surface of the Water: When they came here, some cut down Branches to carry away with them; some stripp'd and wash'd themselves in *Jordan*, and, in short, every one did something, or carry'd something away to preserve the Memory of his having been at this famous Stream.

That Part of the River they came to is above twenty Yards over, and five or six Feet deep, and the Stream so rapid that it was impossible for a Man to swim against it. The other Side, or East Side of *Jordan*, was fuller of Woods or Thickets, at least it appear'd so to them, for they were so apprehensive of Danger from the thievish *Arabs* which skulk'd about that Wood, that they did not go over to the other Side.

Dead Sea. The *Dead Sea* or Lake where *Sodom* and *Gomorrah* once stood, beginning a little to the Right-hand, or to the Southward of them down the River *Jordan*, some of them went to see it, and tell us that it is enclosed on the East and West with vast high Mountains; on the North with the Plains of *Jericho*, through which the River *Jordan* runs into that great Stagnum or Lake which extends from North to South above seventy Miles. There are abundance of sulphureous Stones in the Hills about the Lake, which being held in the Flame of a Candle, burn, but yield a Smoke of an intolerable Stench. The Water of the Lake is salt, and extremely bitter and nauseous, and of prodigious Strenth to bear up any thing that swims upon it. This Lake is famous for a Sort of *Bitumen*, which is found in great Plenty in the Mountains on both Sides of it. It is exactly like Pitch, but is easily distinguish'd from it by its disagreeable sulphureous Smell and Taste.

The Pilgrims having satisfy'd their Curiosity, return'd to *Jerusalem*, and took a Tour to the Southward to see the once famous City of *Bethlehem*; it *Bethlehem.* is about five or six Miles from *Jerusalem*; it is now but a poor Village, and of little Resort but only by Travellers and Pilgrims, who visit it to see the Place of our Saviour's Nativity, which is now in a Temple built by *Helena* the Mother of *Constantine*: The Roof of the Temple is Cedar, and is supported by forty white Marble Pillars, being dispos'd in four Rows, ten in a Row; and the Walls are also fac'd with the same Sort of Marble. The Plan of the Church is in Form of a Cross, of which the Chancel is the upper Part, and is cover'd with a noble Cupola. Under there, in a Cave hewn out of the Rock, is the Place call'd the Chapel of the Nativity, where they shew the Manger our Saviour was laid in, cut also out of a Rock, but now crusted with Marble: There is also an Altar erected here with a Representation of the Nativity, and Lamps kept there burning before it: There is also a Valley near this Town, where the Shepherds were keeping Sheep when the Angels appear'd to them, declaring the Birth of Christ. Here also this Empress *Helena* built a Church, but by reason of Assaults of Enemies, or Length of Time, there is nothing of it appears now but the Ruins.

CHAP. XVII.

Treats of Natolia, *commonly known by the Name of* Lesser Asia.

Division of Natolia. NATOLIA or, *Lesser Asia*, is divided into four Parts, *viz. Caramania*, *Aladulia*, *Amasia*, and *Natolia Proper*; of which in order.

Caramania. *Caramania* is in the Southern Part of *Lesser Asia*; the South Part of it is the Coast of the *Levant*, or of the Eastermost Part of the *Mediterranean* Sea. It contains the antient *Lycia*, *Pamphylia*, *Pisidia*, *Licaonia*, and *Cilicia*.

Lycia. The antient *Lycia* is now known by the Name of *Menteshi*, and is bounded on the North and East by *Phrygia Major* and *Pamphylia*; on the South by the *Levant* or *Mediterranean*, and on the West by *Caria*; it is encompass'd by Mountains on every Side except the South. It has been a fruitful Part of the Country, but since it came into the Hands of the *Turks*, who have conquer'd more than they

can cultivate: Not only the Fields but Towns too lie in a great measure in Ruins. The chief Towns are, 1. *Telmessus*, on a Bay in the *Mediterranean* towards the West Part of the Province; 2. *Patara*, near the Sea to the Eastward of *Telmessus*; it is a little Town seated on a Hill, and famous in antient History for the Temple and Oracle of *Apollo*; 3. *Xanthus*, an inland Town, situate on a River of the same Name; 4. *Mira* or *Limira*, the Metropolis of the Province, standing upon the River *Mira*, at some Distance from the Sea.

Pamphylia.

The next in Order is *Pamphylia*; it lies on the Sea-coast to the Eastward of *Lycia*, and is bounded on the North by *Pisidia*, and on the East by *Cilicia*. The inland Country is very mountainous, but they maintain large Flocks of Goats, and make excellent Camlets of their Hair; and towards the Sea-coast it is naturally fruitful, where it is cultivated and improved. Chief Towns are, 1. *Attalia* or *Sattalia*, a Sea-port Town, and has a tolerable good Castle; 2. *Perga* on the River *Cestus*, antiently famous for a Temple dedicated to *Diana*; 3. *Syda* or *Candalor*, a Port Town to the Eastward of *Attalia*.

Pisidia.

Pisidia is a small Province on the North Side of *Pamphylia*; it is in itself a fruitful Plain, but intirely surrounded with Mountains. The chief Towns are 1, *Sagalassus*, situate towards the West Part of the Province. 2. *Antiochia Pisidia*, it was the Capital while under the *Roman* Government; 3. *Termessus*, a Town naturally strong, being seated in the Passage between the steep Mountains.

Lycaonia.

Lycaonia and *Isauria* together is but a small Province to the Eastward of *Pisidia*, but a fine Champion Country. The chief Towns are 1. *Iconium*; so call'd in *Acts* the 14th Chapter, but now known by the Name of *Cogni*, the Capital not only of *Lycaonia* but of all *Caramania*, and is the Residence of the Viceroy; it stands near a Lake of fresh Water, call'd *Trigolus Palus*, about a hundred Miles North from the Sea in the thirty-ninth Degree of North Latitude; 2. *Isauria*, which once gave Name to the Province, but is now entirely destroy'd; 3. *Derbe*, South-East from *Iconium*; and 4. *Lystra*, situate between both, where the People took the Apostles for Gods, calling *Barnabas Jupiter*, and *Paul Mercurius*, and would have sacrificed to them, *Acts* xiv. 12, 13.

Note, This Country of *Natolia* comprehended a considerable Part of the Travels of *Paul* and the rest of the Apostles, as in the Chapter above-mentioned, *Iconium*, ver. 1. *Lystra* and *Derbe*, ver. 6, &c. But of those Scripture Names, the Places where they are spoke of in the Old or New Testament, and in what Part of the World or Map they are situate, with other Explanations of them, we shall refer to the Table which will follow the Map of the *Turkish Empire*

Cilicia.

Cilicia is bounded by *Pamphilia* on the West, *Syria* on the East, *Lycaonia* on the North, and the *Levant* or *Mediterranean* on the South, and lies on the Continent North from the Island of *Cyprus*. The Country towards the Sea is plain and fruitful, but towards the North and East it is rocky and mountainous, and the Passes between the Mountains exceeding narrow and difficult. It was in some of these Streights that *Alexander* defeated the Forces of *Darius* a second Time at the Battle of *Issus*. Chief Towns are 1. *Tarsus* the Capital of the Province, and Birth-place of St. *Paul*, *Acts* xxii. 3. It is an Archbishop's See, situate on the River *Cydnus*, near the Middle of the Province. Those Geographers that affect new Names for antient Places, call it, at present, *Theraffe*, and some call it *Hemsa*. For my Part, where I treat of Places mention'd in Scripture, I had rather retain the Names by which they are there express'd, that it may give a greater Light to the Travels of the Prophets and Apostles, and to the Geography as well as History of those sacred Writings; 2. *Silenus*, on a River of the same Name near the Sea-Coast; 3. *Seleucia Trachea*, an Archbishop's See, the Town situate on the River *Calicadrius*; 4. *Philadelphia*, (but not that one of the seven Churches of *Asia* that went by that Name); 5. *Sole*, or *Pompeopopolis*, on the River *Lamus*; 6. *Issus*, now *Ajazzo*, or *Lajazzo*, in a Bay of the same Name, and chiefly remarkable for the Battle fought near it between *Alexander* and *Darius*, as mention'd above.

Battle between *Alexander* and *Darius*.

Aladulia.

The next grand Division of *Natolia*, or *Asia Minor*, is called *Aladulia*; but of late, by the Invention of the Moderns, it is known by the Name of *Morasch* or *Marat*; it extends East as far as the River *Euphrates*, and is otherways known by the Name of *Cappadocia*; it is bounded between *Galatia* on the West, and *Armenia Minor* on the East, and *Cilicia* on the South. Chief Towns are 1. *Cesarea*, but by some Geographers, I know not for what Reason, called now *Caisar*; it was the Capital of *Cappadocia* when it was under the Dominion of the *Romans*: It stands on an Eminency, a little distant from the River *Melus* or *Lyma*, and is still tolerably beautiful and populous; 2. *Metita*, now *Morasch* or *Marat*, near the *Euphrates*, and in the South-East Parts of the Province: It is a large Town, and is now the Seat of the Viceroy; 3. *Nissa*, which lies on the Confines of *Armenia*. This *Cappadocia*, for which our Moderns have found the Name of *Aladulia*, is an extensive Country, and formerly abounded with Corn, Wine, and Fruit, but now labours, or rather lies idle under the common Fate of the *Turkish* Conquests, looking no farther than to cultivate as much Land as will produce Bread and Meat to keep them from starving. This Country produces Mines of Silver, Copper, Iron, and Allom, good Horses, with Plenty of Seeep, Oxen, Buffaloes, Wild-fowl, Venison and other Sorts of Game.

Cappadocia.

Amasia.

The next or third Division of *Natolia* or *Asia Minor* is *Amasia*; it comprehends *Pontus Galaticus*, *Pontus Ptolemoniac*, and *Pontus Cappadocia*; of which in order.

Pontus Galaticus

Pontus Galaticus is on the South-side of the *Euxin* Sea, and on the East-side of *Galatia*. Chief Towns are 1. *Amasia*, about a League from the Banks of the River *Iris*, from whence the Town is supply'd with Water, but what is most remarkable, the *Aqueduct* by which the Water is convey'd is cut through a Rock as hard as Marble. *Amasia* is a fine Place, and has a very agreeable Prospect, especially to the Southward, and is sometimes the Residence of the Viceroy, but there is no great Trade nor sumptuous Buildings at this Time, though there are the Ruins of very magnificent Structures to be seen in or about it, which are supposed to have appear'd in their Grandeur when *Amasia* was the Seat of the Kings of *Cappadocia*; but what it is now most remarkable for, as a Piece of Antiquity, if it may be so call'd, is, for its being the Birth-place of *Strabo*, the (then) famous Geographer; 2. *Themiscyra*, (now *Lerio*) on the Coast of the *Euxin* Sea; and I might add, *Comana*, which was formerly a Bishop's See; but being within eight Miles of *Amasia*, it is now fallen to Decay, its rival Neighbour *Amasia*, like the Sun shining upon a Candle, obscuring its Dignity.

Pontus Ptolemoniac.

The next Sub-division in *Amasia* is *Pontus Ptolemoniac*, which is to the Eastward of *Galaticus*, and has two remarkable Towns or Cities; the first of which was called *Neocesarea*, but now known by the Name of *Tocat*; it is the Capital of the Province, and Seat of the Viceroy. It is built at the Foot of a Mountain, but there is a rocky Eminence almost in the Middle of the Town, upon which there is a Castle. The Streets are narrow, but the Houses are tolerably handsom, considering it is in *Turkey*; and among the Mosques, there is one very magnificent.

ficent. The Inhabitants are Mahometans, *Armenians*, *Greeks*, and *Jews*; and for fourteen or fifteen Leagues about the Town it is moſtly inhabited by *Armenian* Chriſtians, moſt of which are Mechanicks or Handicrafts, and among them the Smiths, do chiefly abound, whoſe chief Talent is working in Copper, which is the Reaſon that all Manner of Copper Veſſels are ſent hence to *Conſtantinople* and *Egypt*. They alſo make here excellent *Turkey* Leather of Goat-Skins, and the Place produces good Wine, and Fruit in great Plenty.

THIS Place is one of the greateſt Thorough-fares in the Eaſt, for here the Caravans lodge, whether coming from the Eaſtward from *Perſia*, &c. or from *Conſtantinople* or *Smyrna*, or any Place to the Weſtward. There is a fine River runs within a Mile to the Northward of *Tocat*, which renders the Country both pleaſant and fruitful. Saffron grows here very plentifully, and they make a great Advantage of it by ſending it to the *Eaſt Indies*, they uſing great Quantities of it in their Food, and upon other Occaſions.

Pontus Cappadocia extends ſtill farther Eaſt, as far as the Frontiers of *Georgia*, and is bounded on the North by the *Euxin Sea*, and on the South by *Armenia Minor*. Chief Towns are, 1. *Trabiſond*, or *Trapeſond*, or by ſome call'd *Tarrabaſſon*; from the Abridgment or Corruption of which Word it is ſuppoſed the other Names proceeded. It may be called a Sea Port, but the Harbour is now almoſt choak'd up, except for ſmall Veſſels. The Inhabitants are moſtly *Armenians* and *Greeks*, and they profeſs the Chriſtian Religion, of which they are allow'd the free Exerciſe. The Ground is not fruitful of Corn, nor is Fleſh or Fiſh very plenty: Oil is the beſt Thing in its kind that the Country produces. After ſeveral Viciſſitudes in its Government, it is now under the Poſſeſſion of the *Turks*, who keep a Viceroy here accordingly.

Pontus Cappadocia

THE fourth and laſt grand Diviſion of *Natolia Genaral*, or *Leſſer Aſia*, is *Natolia Proper*; it is larger than any of the reſt, and contains, according to their diſtinct Names, ten Provinces, *viz.* 1. *Pontus Paphlagonia*; 2. *Galatia*; 3. *Phrygia Major*; 4. *Lydia*, or *Mœnea*; 5. *Doris*; 6. *Caira*; 7. *Ionia*; 8. *Æolis*; 9. *Myſia* and *Phrygia Major*; and 10. *Bythinia*, of which in Order,

Natolia Proper.

Pontus Paphlagonia, or, as ſome ſay, *Pontus* and *Paphlagonia*, has two Provinces thrown together into one; it is bounded by the *Euxin Sea* on the North, *Cappadocia* on the Eaſt; on the South with *Galatia*, and on the Weſt with *Bythinia*. The Name of *Pontus* extended formerly along all the South Coaſt of the *Euxin Sea*; and hence that Sea is call'd by ſome *Mare Ponticum*, and by others *Pontus Euxinus*, however it generally goes now by the Name of the *Black Sea*: But this *Pontus Paphlagonia*, or that Part call'd *Paphlagonia*, contains but a ſmall Part of that Coaſt. Chief Towns of this Part, call'd *Pontus*, are 1. *Heraclea*, a Sea Port in the North-Weſt Part of this Country open to the *Black Sea*; 2. *Amaſtris*, or *Somaſtro*, which is alſo a Sea Port, ſituate at the Mouth of the River *Parthenius*; 3. *Claudiopolis*, or *Bythinium*, which is now known by the Name of *Caſtromena*, an inland Town.

Pontus.

Paphlagonia.

In that Part of the Province call'd *Paphlagonia* are, 1. *Tripoli*, formerly call'd *Touriania*; it is a Port Town ſituate at the Bottom of a ſmall Bay; 2. *Sinope* or *Sinabe*, a Sea Port on the South of the *Black Sea*, or, I might ſay, two Sea Ports, for it ſtands upon the *Iſthmus* of a *Peninſula*, and has a Harbour on each Side. It was antiently the Capital of the Dominions of *Mithridates* King of *Pontus*, and was by *Lucullus* firſt added to the *Roman* Conqueſts. Here the Cynick Philoſopher *Diogenes* was born.

Galatia is bounded on the Eaſt by *Cappadocia*, on the South by *Pamphilia*, on the Weſt by *Phrygia*, and on the North by *Paphlagonia*. Chief Towns are, 1. *Peſſinus*, on the River *Sangarus*, where, according to Poetical Fictions, the Goddeſs *Cybele* reſided; 2. *Therma*, on the ſame River, famous for Hot Baths; 3. *Ancyra*, on the River *Melus*; near which Place *Pompey* obtain'd a ſignal Victory over *Mithridates*, and this was alſo the Place where *Tamerlane* defeated *Bajazet*, and afterwards carried him about in an Iron Cage. It is to this Day a handſom City, and ſtill ſhews ſome Marks of its antient Grandeur, by the Remains of Marble Pillars with which the Streets abound, amongſt which are red and white Porphiry and Jaſper, and even their Clay Walls, of which the Town chiefly conſiſts, are ſo interſpers'd with Marble and Porphiry, and other fine and valuable Stone, and eſpecially their Doors and Gates ſhew ſo much of that ſort of Waſte, as is ſufficient to prove the antient Grandeur of the Place. Here is a fine Breed of Goats, their Hair eight or nine Inches long, as ſoft as Silk, and curled, and it is ſaid it makes the fineſt Stuffs and Cambletts, and is the chief Manufacture of that Part of the Country; but no ſuch fine Goats are to be ſeen, except within a hundred Miles of *Ancyra*, and if they are carried further to propagate, yet the Breed degenerates and falls ſhort of their Primitive Excellency. It was to the Inhabitants of this *Galatia* that St. *Paul* wrote his Epiſtle, called therefore *The Epiſtle to the* Galatians.

Galatia.

THE third Sub-diviſion of *Natolia Proper* is *Phrygia Major*, now by ſome called *Germain*; it is bounded on the North by *Bythinia*, on the Eaſt by *Galatia*, on the South by *Pamphilia*, and on the Weſt by *Myſia*. It is a good Soil, and formerly a fruitful Country, but for want of Cultivation it undergoes the common Fate of the reſt of the *Turks* acquired Dominions. Chief Towns are, 1. *Cotæum*, now *Chintaia*, once the Seat of the *Turkiſh* Emperors before they took *Conſtantinople*, and now a conſiderable Town, and Seat of the Viceroy of *Natolia*; 2. *Gordium*, the Seat of *Gordious* King of *Phrygia*; 3. *Apamia*, now of no great Note; 4. *Coloſs*, now called *Chonoſs*, on the South Side of the River *Meander*, the Place to whoſe Inhabitants St. *Paul* wrote his Epiſtle to the *Coloſſians*; 5. *Hieropolis* on the Frontiers of *Lydia*; 6. *Primneſia*, near the Head of the River *Sangarus*; and 7. *Tiberiopolis*, near the Mountain *Sipilus*; of theſe three laſt I find nothing worth obſerving but their Names and Ruins.

Phrygia Major.

LYDIA, or *Mœnea*, is the fourth in Order, and is bounded on the Weſt by *Æolis* and *Myſia*, on the South by *Caira*, and on the Eaſt by *Phrygia Major*; the wealthy *Cræſus* was formerly King of this Country; the chief Tows are, 1. *Sardis*, now a poor Village, but antiently the Capital, it is ſituate on the River *Pactolus*, about ſeventy Miles from *Smyrna*; it was a Biſhop's See, and one of the ſeven Churches of *Aſia*, to whom St. *John* wrote in the *Revelation*, Chap. i. 11. but was demoliſh'd by an Earthquake; but beſides the Village, there are ſome noble Ruins of the City yet remaining; *Philadelphia*, the Seat of the Metropolitan, and another of the ſeven Churches; it is ſituate on a fruitful Plain, on the North Side of the Mountain *Molus*; it is fallen much ſhort of its Primitive Grandeur; but by the lateſt Acounts of it, as it is now ſtands, it has four Churches, and above two thouſand Chriſtians inhabiting in it; 3. *Thyatira*, another of the ſeven Churches, and a Biſhop's See; it is now called *Akhiſar*, it is about thirty Miles North-Weſt of *Philadelphia*, there are the Ruins of ſome Marble Structures to be ſeen, and it has a ſmall Trade for Corn and Cotton, but the Buildings are only Clay Walls; 4. *Magneſia* now *Guoſethiſer*, on the River *Meander*, about fifty Miles South of *Sardis*; it is a large wall'd Town, and the chief Trade is to *Smyrna* with Cotton Yarn; 5. *Laodecia* is on the Eaſtermoſt Bounds of this Province; it was one of the ſeven Churches, and the Ruins that yet remain prove it to have been a large and magnificent City, there

Lydia or Mœnea.

Sardis.

Philadelphia.

Thyatira.

Laodecia.

there yet remaining three Theatres almoſt entire, all of white Marble, and a ſtately Circus, but there are no Inhabitans nor Houſes to dwell in.

Caria and Doris.

Caria and *Doris* are now comprehended in one, under the Name of *Adinelli*; it is bounded on the South and Weſt by the Sea, and on the North by the River *Meander*. Chief Towns are, 1. *Miletus*, on the South Side of the River *Meander*, and not far from the Sea; it was once the Seat of the Temple and Oracle of *Apollo*; it has been a large City, as the ſtill viſible Ruins prove, but it is now an inconſiderable Village, conſiſting of Shepherds Cots and poor ordinary Hovels, and the reſt of the Towns in *Caria* have nothing remarkable. In *Doris*, which is the Southern Part next to the *Levant*, the chief Towns are, 1. *Myndus*, a Sea Port in a ſmall Bay, and is the Seat of a *Turkiſh* Baſſa; 2. *Halicarnaſſus*, to the Southward of *Myndus*, once the Capital of the Province, but now a Heap of Ruins, and famous for nothing but the Tomb built by Queen *Artemiſia* in Honour of her Husband *Mauſolus*, being a Building ſo magnificent that it was accounted one of the Wonders of the World. The famous Hiſtorians *Herodotus* and *Dyoniſius* were born here. *Creſſa* and *Ceramus Cyndus* were good Harbours on this Coaſt, but now choak'd up and gone to Ruin.

Æolis and Ionia.

Æolis and *Ionia* taken together is a Tract of Land on the Weſt Coaſt of *Natolia* towards the *Archipelago*: *Ionia* is the Southermoſt. The chief Towns in *Æolis* are, 1. *Elea*, ſituate at the Mouth of the River *Caicus*, and the Port Town to *Pergamus*, one of the ſeven Churches, and the Birth Place of *Zeuo*; 2. *Myrina*, or *Sebaſtiopolis*; 3. *Cuma*, formerly the Capital of *Æolis*; it gave Name to one of the *Sybils*; and 4. *Phocea*, which is ſituate a little to the Southward upon the ſame Coaſt.

Smyrna.

Proceeding to the Southward we come to *Ionia*; in which the chief Towns are, 1. *Smyrna*, now called *Iſmir*, in the thirty ninth Degree of Latitude; it is about eight Days Journey, or one hundred and ſixty Miles from *Conſtantinople*, at the Bottom of a large Bay in the *Ægean Sea*, or *Archipelago*: The Town runs above half a Mile along the Shore, from whence it gradually riſes with an eaſy Aſcent, and thereby ſhews itſelf to thoſe that are aboard of Ships before the Town; the chief Houſes, as thoſe of the Conſuls, Merchants, *&c.* are near the Sea Side, and form a Street called *Frank-Street*, as being inhabited moſtly by *European* Chriſtians; *Smyrna* is a very fine Port, and very ſpacious, there being ſeldom leſs than a hundred Ships of ſeveral Nations there, and the Harbour is capable of containing a great Number more. The City, as it now ſtands, is about four Miles in Circumference, the Side next the Mountain being much the longeſt; the Houſes are poor and low, and for the moſt Part built of Clay Walls ſince the laſt Deſtruction of it by an Earthquake, which demoliſh'd a great Part of it; however, the Caravanſera's and publick Buildings are built more magnificent; the Streets are wide, and almoſt one continued Fair, where almoſt all Sorts of Goods, that either *Aſia* or *Europe* affords, are expoſed to Sale, with Proviſions Plenty, but not ſo cheap as in ſome other Parts of *Turkey*, becauſe the Place is populous in itſelf, and a vaſt Concourſe of Strangers reſort hither, and the *Turks*, under whoſe Government it is, are the moſt numerous of any other People, but there are great Numbers of *Greeks*, *Jews*, and *Armenians*, beſides *European* Chriſtians; there are ſeventeen Moſques, two *Greek* Churches, one *Armenian* Chriſtian Church, and five *Jewiſh* Synagouges; the Papiſts have three Convents, viz. *Jeſuits*, *Franciſcans*, and *Recollects*, one of each, beſides one of the Fathers *De la Terra Santa*; here is an Archbiſhop of the *Greek* Church, and a Biſhop of the *Latin*; and the *Engliſh* and *Dutch* Factories have each their own Chaplains.

Note, This was alſo one of the ſeven Churches of *Aſia*.

There is a Caſtle at the Entrance of the Port, which commands all the Shipping; there is alſo another, but now in Ruins, in the Middle of the City; as alſo a large Amphitheatre, of which it is reported to be here that *Polycarp* fought with the Lions; this Town alſo contends with *Rhodes*, *Scio*, *Athens*, and ſeveral other Places for the Birth-Place of *Homer*. Here grow good Grapes, Olives, Oranges, and Lemons, of which there are fine delightful Groves, but the Pleaſure of them is very much allay'd by the exceſſive Heats and the unhealthy Climate, and eſpecially by the Earthquakes, which it ſeldom eſcapes for two Years together, and have been ſometimes felt for forty Days ſucceſſively. There was in *June* 1688, an Earthquake which overturn'd a great Part of the Houſes, the Rock upon which the Caſtle ſtood open'd and ſwallow'd moſt of it up, with above five thouſand People, whereupon ſeveral Merchants and others, that eſcaped that dreadful Calamity, retired to *Scio*, but by degrees the Trade and Inhabitants return'd to the City, and it is now rebuilt or repair'd in the Manner above related.

The next Place of Note, or rather of Antiquity, is *Clazomene*; it is a Maritime Town, about thirty Miles South-Weſt from *Smyrna*; it was a conſiderable Place in the Time of the *Roman* Government, and there are ſeveral antient Medals with *Auguſtus* on one Side, and the Empreſs *Livia* on the other, but it is now a poor inconſiderable Village; as alſo is *Colophon* an once famous City, about thirty Miles to the Southward of *Smyrna*.

Epheſus.

The once famous City of *Epheſus* is ſituate about fifty Miles to the Southward of *Smyrna*; it was one of the ſeven Churches of *Aſia*, but now ſcarce deſerves the Name of a Village, having not above twenty or thirty Houſes in it; it ſtands near a fine Haven, and in the Time of the *Romans* was the Metropolis of *Leſſer Aſia*; here was the famous Temple of *Diana*, formerly one of the Wonders of the World; it was above a hundred and forty Yards long, ſeventy three broad, and ſupported by one hundred and twenty ſeven Marble Pillars, of ſeventy Foot high, but it was deſtroy'd by *Eroſtratus*, who ſet it on Fire the ſame Night that *Alexander the Great* was born. *Timothy* was the firſt Biſhop of this City; and St. *Paul*'s Epiſtle to the *Epheſians*, which we have in the New-Teſtament, was wrote to the Inhabitants of *Epheſus*, thence call'd *Epheſians*. There are yet the Remains of ſome ſtately Edifice, which they ſay is the Ruins of the ſecond Temple of *Diana*, it having been rebuilt ſince it was firſt deſtroy'd, the latter not at all inferior in Magnificence to the former.

Myſia and Phrygia Minor.

Myſia and *Phrygia Minor* taken together are bounded by the *Propontis*, or Sea of *Marmora*; on the North by *Bythinia*, and *Phrygia Major* on the Eaſt; alſo by *Lydia* on the South, and by the *Archipelago* or *Ægean* Sea on the Weſt. This Part of *Aſia Minor* is famous for the Battle fought between *Alexander* and *Darius* upon the Banks of the River *Granicus*, which riſes in the Mountains of this Country; and after about fifty or ſixty Miles Paſſage through this Country, falls into the Sea of *Marmora*. In this Country alſo is Mount *Ida*, where the Poets feign that *Paris* gave Judgment between the Goddeſſes; but no more of that any farther than to obſerve that Mount *Ida* is here, but we do not paſs for the Truth of thoſe poetical, not to ſay heatheniſh Fictions, notwithſtanding that they have been not only introduc'd into, but gain'd ſo much Ground in our Chriſtian Schools, as to draw ſome of the unwary Pupils to believe them to be Fact.

The chief Towns in theſe two Sub-diviſions are 1. *Cyzicus* or *Spigia*; it is on the South Coaſt of the

the *Propontis*, and in the Time of the *Romans* it was the Metropolis of the Conſular of *Helleſpont*; it was a beautiful City, but was overturn'd by an Earthquake, and never rebuilt; the Stones that could be ſaved being afterwards convey'd over the *Propontis*, and apply'd towards the building of *Conſtantinople*; it is about ſixty Miles Weſt of *Nice*; 2. *Lampſacus*, on the Coaſt of the *Propontis*; 3. *Abidus* or *Avido*, a Fortreſs oppoſite to *Seſtos* at the Mouth of the *Helleſpont*. This Place reſiſted *Philip* King of *Macedon* with ſo much Reſolution that the Inhabitants deſtroy'd themſelves as ſoon as they found they could no longer defend the Place. It is now the Southern of thoſe two Caſtles call'd the *Dardanelles*, ſo nam'd from a little Town to the Southward of them; 4. the once famous *Troy*, (now call'd *Ilium*) againſt the Iſland of *Tenedos*, one of the *Archipelagian* Iſlands; it is not far from the Sea, and is famous for the ten Years Siege which it is ſaid in Hiſtory to have held out againſt the *Greeks*, though ſo embelliſh'd by the poetical Flights of *Homer* and *Virgil*, that ſome impartial Perſons are at a Loſs to know how much of it to believe; nor is it the Buſineſs of an Hiſtorian to engage in poetical Fancies and Diſputes, but to relate Fact, as it is in a Geographer to determine the Situation of Places. However, the noble Ruins that are yet to be ſeen about the Place is ſufficient to prove that the famous Accounts given us of *Troy* in Hiſtory are not without good Foundation; 5. *Zoras Alexandria*, to the Southward of *Troy*, once the Capital of the Province but now in Ruins. This is that *Troas* mention'd *Acts* xx. 5, 6. which brings us to the next remarkable Town, *viz.* 6. *Aſſos*, about ten Miles South of *Troas*: See *ver.* 13, & 14. 7. *Pergamus*, near the Banks of the River *Caicus*: This was another of the ſeven Churches, and ſaid to be the Place of *Galen*'s Nativity. It was antiently a noble City, but now an obſcure Place, having but one *Turkiſh* Moſque and one *Chriſtian* Church.

Bythinia. *Bythinia* is ſeparated from *Europe* only by the *Thracian Boſphorus*, or Streights of *Conſtantinople*, which is there ſo narrow that *Scutari* in *Bythinia* is reckon'd a Suburb of *Conſtantinople*, as *Southwark* is of *London*, though *Conſtantinople* is in *Europe*, and *Scutari* in *Aſia*. Chief Towns are, 1. *Chalcedon*, two Miles from where *Scutari* now ſtands; it was once a populous City, and the fourth general Council was held in it, but it is now only an inconſiderable Village; 2. *Nicomedia*, eight Miles to the Southward of *Chalcedon*: It was the Capital of *Bythinia*, and is now a populous Town, and has a good Trade, and ſituate in a fruitful Country. Their chief Trade is in Silk, Cotton, Earthen-ware and Glaſs, and is ſo great a Place for Ship-building, that moſt of the Ships of *Conſtantinople* are built here. It takes the Name *Nicomedia* from *Nicomedes* King of *Bythinia*, who repair'd and enlarg'd it; but it was formerly call'd *Iſnigimid*. It ſeems by the Extent of the Ruins to have been larger than *Conſtantinople* or *London*, and it is at preſent pretty well inhabited, for there are in the Place twenty *Turkiſh* Moſques, ſome Chriſtian Churches, and two *Jews* Synagogues; 3. *Nice*, called by ſome *Iſnich*, South-Eaſt from *Nicomedia*, formerly a noble Place, and ſtill famous for the firſt general Council which was aſſembled by *Conſtantine* againſt the *Arian* Hereſy; and when *Conſtantinople* was taken by the *Latins*, the *Greek* Emperors reſided here. The Place is much declin'd from its primitive Grandeur, but is yet large and pretty populous; 4. *Lybuſſa*, between *Chalcedon* and *Nicomedia*, of which there is nothing remarkable except for its being the Place of *Hannibal*'s Death, who here put a Period to his own Life with his own Hands rather than fall into the Hands of *Nicomedia*; 5. *Pruſa* or *Burſa*, it ſtands on ſeveral little Hills at the Foot of the famous Mount *Olympus*, about forty or fifty Miles South-Weſt from *Nice*. It is now the Metropolis of *Bythinia*, as it formerly was of all the *Turkiſh* Empire till they took *Conſtantinople*. The City is about half a League in Length, and the ſame Wall in a great meaſure ſtanding that it was ſurrounded with when it was in the Hands of the Chriſtians. The Inhabitants are *Turks*, *Greeks*, *Armenians* and *Jews*. There are above thirty handſome *Turkiſh* Moſques. The Caravanſera's are grand, and cover'd with Lead, nor does *Conſtantinople* itſelf exceed it for a Biſiſtin or Exchange. The City ſtands upon the Edge of a fine Plain grown over with Mulberry and other Fruit-Trees, and the Water ſprings ſo plentifully out of Mount *Olympus*, that it is convey'd to almoſt every Houſe in the Town to ſupply them, as New River Water is convey'd to the ſeveral Houſes in *London*, but there is one exceeds the reſt; it ſends forth a Stream as big as a Man's Body, which is convey'd to the Town, and diſpos'd to all Parts of it where it is wanted. The Silk about this Place and Parts adjacent is the beſt in *Turkey*; and if we add to this, that they have the beſt of Workmen too, it will not be ſurprizing that *Turkey* ſhould afford better Tapeſtry and Hangings than any other Place in the known World. Here is to be ſeen the Ruins of the Palace where the Grand Seignior reſided when this was his Capital. Here are alſo the Sepulchres of the firſt *Turkiſh* Emperors and their Sultana's in little Chapels with Domes over them, but at preſent they expreſs more of Antiquity than Beauty.

Nice, famous for the Council.

Mount Olympus. THE famous Mount *Olympus* is in the Neighbourhood of this City of *Burſa*. It is of a prodigious height, and cover'd with Snow; of which they carry great Quantities to *Conſtantinople*; from whence they can ſee it though they are a hundred Miles aſunder. The Top of *Olympus* is barren, producing nothing but the Snow which the Clouds produce, but about the Middle or half Way up it produces Firs and other Sorts of Trees, and the Valleys beneath it affords all manner of Fruits, as Grapes, Apples, Mulberries, Melons, Nuts, as well as Fiſh, Fleſh and Fowl, but Corn is ſcarce, becauſe the *Turks* have no great Notion of cultivating and plowing their Land, but rather content themſelves with what the Earth brings forth without Labour, and were more like the *Arabians* and *Hebrews* or antient Patriarchs, who were rather Shepherds living by their Flocks and Herds than Husbandmen to till the Ground, for 'tis obſerv'd, that *Natolia*, as well as other Parts of *Turkey*, is a fruitful Country and and a good Soil, if they were not ſo indolent as to loſe the Benefit of it for Want of Cultivation.

I have now finiſh'd that Part of *Turkey* which is in *Aſia*, and ſhall proceed to a Deſcription of the other Parts of that ſpacious Empire contain'd in *Europe* and *Africa*; but as the great Scene of Action in the firſt Ages of the World in the Time of the Antediluvians, Patriarchs and Prophets, as well as the great Work of Redemption in the Birth, Sufferings, Reſurrection, and Aſcenſion of our Bleſſed Saviour were in *Aſia*, and the Goſpel was thence diffuſed to the Weſtward, and propagated in *Europe*, I ſhall endeavour to follow the ſame Order, and come next to a Deſcription of *Turkey* in *Europe*.

A DESCRIPTION OF TURKEY IN EUROPE.

CHAP. I.

Treats of Crim *or* Little Tartary, *and of* Oczakow *or* Budziack Tartary.

AS I propos'd in the Concluſion of the Deſcription of *Turkey* in *Aſia* to proceed Weſtward to *Turkey* in *Europe*, it will be neceſſary to begin at the Eaſtermoſt Part of it; and when we conſider that the fortify'd Town in *Crim* or *Taurica Cherſoneſe* and *Little Tartary* are gariſon'd by the *Turks*, and the *Cham* or *Han* of *Tartary* is a Vaſſal of the Grand Seignior's; and as he is as liable to be deſtroy'd by him as any other of his Viceroys, he may therefore be ſaid to be a Dependent upon him: theſe Places may well be deem'd the Eaſtermoſt Part of his Dominions, and moſt proper to begin with, according to the Method propoſed.

Bender. THE lateſt and beſt Account that we have of theſe Countries was by a late Traveller, who being at *Bender* a City upon the River *Nieſter*, which falls into the Black Sea in the Northweſt Part of it between the Influx of the *Boriſthenes* and the *Danube*, and is ſituate in *Podolia*, (the Place where *Charles* the Twelfth, late King of *Sweden* was, or was ſaid to be during his ſo long Abſence from his own Dominions in the Years 1710, 11, 12, *&c.* of which ſee a more particular Account in the next Chapter). This Traveller reſolved to viſit *Little Tartary*, *Crim*, *Koban* and *Nogaian Tartary* to get a better Account of their Government, Product and Manner of Living than we had before; and with this Reſolution he ſet out from *Bender November* the 14th, 1711; and on the twentieth he reach'd the Town of *Oczakow* on the Weſt Side of the River *Boriſthenes*, and not far from the Black Sea, about 46 Degrees of North Latitude; it ſtands on the Side of a Hill, on the Top of which there is a Caſtle; the Town is encompaſs'd by a Wall, and governed by a Baſſa, and may be ſaid to be the Capital of *Budziack Tartary*.

Oczakow.

Precop. FROM thence having travell'd thro' a Deſart of fifty Leagues he arriv'd at *Precop*, call'd by the Natives *Ur* or *Hor Capi*; it ſtands on the *Iſthmus* or Neck of Land that is the Paſſage between *Crim* and *Little Tartary*. The Houſes are miſerably built with Stakes and Branches of Trees wove together and cover'd with Mud or Cows Dung, which is the general Faſhion of the Country for Building. There is an Intrenchment caſt up quite croſs the *Iſthmus*, in the Middle of which is a Tower, and a Gate for a Paſſage into the Town, and is all the Land-Paſſage there is into the *Peninſula* of *Crim*; it is ſecured by a great Gate, and defended by ſeveral little Towers at equal Diſtances. The Line above-mention'd ſerves as a Ditch to the Town on the North-weſt Side. The Caſtle is in poor Repair, and fortify'd with only eighteen Iron Cannon mounted upon the Walls, and the Garriſon conſiſts only of a Company of Janizaries.

Hor Bey. THE Lord or Governour of the Town is generally the *Cham*'s ſecond Son, who is ſtyl'd *Hor-Bey*, or Lord of *Bey*, who is maintain'd by the Revenues ariſing from ſome Salt-Pits in the Neighbourhood of that City, and by the Duties on a certain Liquor called *Boza*, made of Millet, Flower and Water, which after it has had a Ferment like our Beer, is ſtrong enough to fuddle a Man. The *Hor-Bey* is not allow'd to live in the Caſtle, that being poſſeſs'd and garriſon'd by the *Turks* as well as all the other fortify'd Towns about *Crim Tartary*, but the *Cham* or his Son are ſo far from having any Authority in the Caſtles that they are never allow'd to lodge in them, and the Palace of the *Hor Bey* at *Precop* is ſuch an ordinary wooden Edifice that it is not worth a Deſcription.

WE obſerv'd at the Concluſion of *Turkey* in *Aſia*, that they were very remiſs in cultivating and improving their Land; and the ſame Indolence prevails here, which makes Bread ſo very ſcarce that the common People ſeldom taſt any, but live upon Milk, Cheeſe and Shorba, which laſt is a ſavoury Diſh, much like what we have deſcrib'd in other Eaſtern Countries: It is compos'd of little Pieces of Meal boil'd with Wheat and Barley, and high ſeaſon'd, with Spice and butter'd, but boil'd Milk is ſo common that you can ſcarce go into

Provi-ſions.

a Houſe

a Houſe but you'll find a Kettle of Milk upon the Fire.

Kuſtowe.

THE next Stage after *Precop* was to a Place called *Kuſtowe*, a pretty large Port Town ſurrounded by a Wall, and inhabited by *Turks*, *Tartars*, *Armenians*, and *Jews*, and encompaſs'd by an old decay'd Wall; here are ſome *Turkiſh* Moſques built of white Stone; the *Greeks* and *Armenians* have each of them a Church, and the *Jews* a Synagogue. The *Turks* import hither Rice, Coffee, dry'd Figs, Raiſons, Dates, Cloth, and Stuffs, and the Veſſels return loaden with Slaves and Corn, which are very acceptable in *Turkey*.

Bachiſerai.

FROM *Kuſtowe* he went to *Bachiſerai* the Capital of *Crim Tartary*, a Place ſo fortified by Mountains on each Side, that it has no need of Walls; this Place, as well as *Kuſtowe*, is moſtly inhabited by *Tartars*, *Armenians*, *Greeks*, and *Jews*; the three laſt pay to the Cham a Crown a Quarter each, but the native *Tartars* pay no Taxes, except the Tenth of the Slaves they take in their Expeditions, or rather Excurſions upon their Enemies; their Houſes are like the reſt, their Moſques of white Stone, and ſome of them cover'd with Lead; their Caravanſera's, or publick Inns, are tolerably convenient to entertain Travellers, and their Water is very good.

THE Palace of the Cham, or Han, is a large Building, but irregular; and, though the Chams of this Place ſel lom end their Days, and find Sepulchres here, becauſe the Grand Seignior's Power is arbitrary, and, as before obſerved, he can depoſe them when he pleaſes, as he frequently does, and is often ſo kind as to baniſh them to the Iſle of *Rhodes*, to let them have the Comfort of dying in in Exile, and laying their Bones there, yet in the Entrance of the Cham's Court there are two fine Tombs of the Chams who died and were buried there.

Forces.

HIS Guards, which amount to about twelve hundred, are paid by the Grand Seignior; but when he enters into a War, the Cham with all his Forces are obliged to aſſiſt againſt the Enemy, and then *Crim Tartary* furniſhes thirty thouſand Men, thoſe of *Akerman*, and the Deſarts between *Ozacow* and *Aloph* twenty thouſand, and the *Nogaians* more than both, though they may rather be call'd Voluntiers than Subjects, and go more for their Share of Plunder than out of Duty to the Prince, becauſe when they have this Opportunity they can plunder by Authority, and depend ſo much upon it, that they take no Pay, nor carry any Proviſion with them but *Talcan*, or Flower made of *Cammin*, of which they carry ſuch a Quantity along with them, which they mix up with Milk or Water for their Proviſion, till they meet with Plunder to furniſh them with better Variety.

THE Cham keeps but a ſmall Number of Women; and the *Tartars* generally content themſelves with one Wife, though their Law allows them four, nor do they make much Uſe of their Female Slaves, as in ſome other Parts of the Eaſt; but whether it is becauſe they are leſs lecherous or more covetous is hard to determine, for they commonly do by the handſomeſt of their Female Slaves as ſome People do with the beſt of their Goods, keep them for a Market; for, as they are their Plunder and a great Part of their Wages, they endeavour to make the beſt they can of them, and the *Turks* give a good Price for them if they are handſome.

THE Children of the Cham are not confined in the Seraglio's, as in other Eaſtern Countries before deſcribed, but they are brought up in ſome Military Place or Employment, as the eldeſt Son is ſtiled *Sultan Galga*, which bears the ſame Import as the *Dauphin* of *France*, or the like; the ſecond is *Nur Bey*, or Lord of *Precop*, as obſerv'd before, and the younger are dignified as Dukes, &c. according to their Age; there are other Degrees of Nobility the Heads of thoſe are called *Chirim Beys*; and the Cham conſults them in all Affairs of Importance; and out of them, and the *Myrſa's*, or Nobility, the *Tartars* chuſe their General Officers, and the People, as Voluntiers march under their Command; they deſire no Pay, Cloathing, or Subſiſtence, but look upon their Plunder as a ſufficient Reward for their Services, and no News can pleaſe them better than to hear of an approaching War, as aſſuring themſelves that they ſhall have a freſh Commiſſion to plunder.

WHEN the Cham joins the *Turkiſh* Army, he has immediately an Audience of the Grand Seignior or Vizier, which of the two ſoever be at the Head of the Army. And to inure the *Tartars* to plunder with the greater Dexterity, they have a Cuſtom to roaſt ſome thouſands of Oxen and Sheep whole, and having impal'd them on Stakes, ſet obliquely in the Ground in right Lines, and at equal Diſtances, and theſe are interſpers'd with Pyramids or Heaps of Loaves; the *Tartars* at a Signal given, run and ſcuffle for the Fleſh and Bread without any Order, but every one to be at it firſt, and get the moſt, and by this Means all is carried clean off in half an Hour's Time, and he is the moſt applauded that gets the greateſt Qnantity, becauſe he is ſuppoſed to be the moſt dextrous at plundering when he goes to work in Earneſt; and indeed Neceſſity as well as Ambition may make them active upon ſuch Occaſions; for after this they have no Proviſion allow'd them, but either what they can carry with them, or what they can take by Rapine or Force.

Exerciſe in Plundering.

WHEN they march, eſpecially in the Winter Time, they have a ſhort Cloak made of hard Felt, with a ſtiff Collar ſtanding up about their Necks; they can turn it round as they pleaſe, ſo that which Way ſoever the Wind blows, whether before or behind them, they always put the open Part on the contrary Side to that which the Weather blows upon. They carry Store of Horſes in their Expeditions, but they carry no Proviſions for them, but let them live upon what they can get, though they are forced to eat the Tops or Bark of Trees, or ſcratch up the Snow to come at the Graſs, and ſometimes the Horſes die a natural Death, or rather unnatural, by too much Work, or too little Victuals, or both, but then they loſe not all, for when he is dead they make a Feaſt of him, and invite their Neighbours, perhaps the Reaſon is, that they may eat him up while is ſweet and good.

Eat their dead Horſes.

IT is obſerv'd, notwithſtanding their rapacious plundering Temper to others, they are very juſt to one another; and if ten, twenty, or more or leſs, be one Company, or contract to divide equally what they get, then, if they ſeparate, every one brings his Booty to the appointed Place of Rendezvous, and there it is put all together, and divided equally amongſt all the contracted Parties, without any Regard to who got leaſt or moſt, and it would be reckon'd as odious and diſhonourable in any of them to conceal or embezzle any Part of his Prey, as it would be amongſt juſt and honeſt Traders to have one in Partnerſhip that ſhould do the ſame.

BUT though they live thus by Sharping and Plunder when they are in an Enemy's Country, or I might have ſaid, although they often go into an Enemy's Country to live thus by Sharping and Plunder, yet when they are travelling amongſt their own Country People, they meet with better Living, for either in their Excurſions, or Return among the *Tartarian* Villages, they have no occaſion to plunder, for all Things are as good as common; for as ſoon as a Brother *Tartar* appears at the Gate, there is no Queſtions ask'd from whence he came, but the Maſter, or ſome Servant, or Slave, takes his Horſes and gives them Hay, while the Stranger is like-

likewise conducted in and entertain'd with what the House affords, of which boil'd Milk is commonly one Dish.

THE next Stage that our Traveller made beyond *Bachiserai*, was about five Leagues, to a Place call'd *Almagick Serai*; this is the usual Residence of the *Saltan Galga*, or the Cham's eldest Son; at this Place he got Wine as good as *Burgundy* or *Champaign*, and so plenty that it was sold for two Pence a Bottle; *Chiflick.* and from thence he went to *Chiflick*, the Seat of *Cephenza Myrsa*, whom he found sitting by a good Fire, and made him sit down by him, and called for Pipes, Tobacco, and Coffee till Dinner was ready; which, when it came, consisted of three Dishes, namely, Pilo, (which has been described before,) also a broil'd Pike, and a Ragout, which look'd so fine and was so well drest that he thought it had been Veal, and eat heartily of it, but it was only a Piece of a Colt; the *Myrsa* also call'd for Wine for him, though he drank none himself. When Victuals and Drink is brought out, and a Person invited to eat and drink, they never repeat the Compliment, but leave the Guests to their own Inclination to eat and drink just as they please; when he had been entertain'd with Dinner, Wine, and Supper, the *Myrsa* retired to his Haram, and our Traveller was conducted to his Lodging to repose himself till next Morning.

Karasson. HIS next Journey was to *Karasson*, a great Town about two Leagues from *Chiflick*; this is a noted Place, as being the greatest Horse-Market in all *Crim Tartary*; here are four *Turkish* Mosques built of Stone, but the common Houses are low and mean, like those of the rest of the Country.

Crim. FROM *Karasson* he went next to *Crim*, now fallen so much from what it was formerly that he gives us rather an Account of the Ruins than the Place, and that there are not now so many Houses or Inhabitants in it as would amount to an ordinary Village.

Cassa. *Cassa*, or *Kaffa*, was the next Place he came to, it was formerly called *Theodosia*, it is situate on the *Peninsula* of *Crim Tartary*, and gives Name to the Streights upon which it lies, it is very agreeably situated on the South-East of some high Mountains, at the Foot of which it stands by the Sea Side; it retains a great deal of its antient Grandeur, and is defended by the same Walls that were built by the *Genoese*; the best of the Christian Churches are demolish'd, and *Turkish* Mosques built instead of them, and those that still remain are in the Hands of *Armenians* or *Greeks*, of which the former have twenty, and the latter seven, but they are all but in a ruinous Condition, the Arms and Paintings of them, which are yet visible in several Places, makes it appear that they have been built by the *Genoese*, but most of the Statues and embost'd Images have been destroy'd by those who have them now in Possession. The Harbour is almost choak'd up for want of cleaning.

Jegnicale THE next Place he went to was *Jegnicale*, a Sea Port for small Vessels; it is commanded by a *Turkish* Bassa; it is surrounded by a Wall of Stone, but the Town is not large, nor the Fortifications regular; the Castle is upon an Eminence at the South-West Part of the Town, and has a Platform of several Brass Cannon, which commands the Passage of the Streights of *Cassa*.

Taman. THE next Place is *Taman*, which stands on the other Side of the Streight, in *Koban*, (or as some call it, *Nogaian Tartary*,) it is a little but populous Town; the Castle, formerly built by the *Genoese*, is not strong, and garrison'd by only a Company of Janizaries.

BUT to pursue the Journey of our before-mention'd Traveller, the next Place was *Temrock* in his *Temrock.* Travels, to which he found several little artificial Hills, or such as seem'd to have been cast up in Memory of some Victory, or the Burial-place of some great Person rather than the Work of Nature, as we see the like in several Parts of *England*, and more especially in *Wales*; *Temrock* is about thirty Miles North-East from *Taman*; the Buildings and Inhabitants are so much like those of the rest of the Country, that a new Description is needless. The Trade of *Temrock* is chiefly in Hides, Cavier, Honey, and Horses, but especially in the fair *Circassian* Slaves, which bear a great Price in *Turkey*, whether they be Males or Females, but more especially the latter.

FURTHER to the Eastward is the Land of the *Nogaian Tartars*; they live mostly like the Patriarchs *Nogaian* of old, in moveable Villages composed of a Number *Tartars.* of Tents to be remov'd at Pleasure, for the sake of better Pasture, Water, or other Coveniences, so that, as above observ'd, they do not mind Tillage, because their Removes are so frequent, that if they were to plow and sow, it is likely they might be obliged to remove for Pasture for their numerous Flocks and Herds before their Crops would be ripe, and, although they are glad of Bread when they can meet with it, yet they prefer Horse-flesh before other Food, and can easily dispense with the want of Bread if they can but get that.

THEY are so hospitable that they will not suffer a *Hospi-* Traveller to pay for Meat for Horse or Man; *table.* if a Stranger, after the kind Entertainment he has receiv'd, should in return make a Present of a little Tobacco, they think themselves ungrateful if they do not subjoin an additional Return to their former Favours.

I SHALL conclude this Chapter with a Description of the City of *Asoph*, and shall leave the Rea- *Asoph.* der to judge for himself whether it belongs to the *Turk* or *Muscovite*. It is situate at the Mouth of the River *Don*, or *Tanais*, on the East Side of the Influx of that River into the *Palus Meotis*; this Town was in Possession of the *Turks* till the *Czar* of *Muscovy* took it from them, and fortify'd it, thereby opening and securing a Communication between *Muscovy* and the *Palus Meotis*, whereby he could not only command a Passage through the *Black Sea*, but even to *Constantinople* itself, whither the *Czar* sometimes sent his Men of War to the great Surprize of the *Turks*, who a long Time had held an undisturbed Possession of those Seas; but the *Turks*, in the Year 1711, gaining an Advantage of the *Czar* by hemming in his Forces near *Felezin* on the River *Pruth*, near the Place where it falls into the *Danube*, he and his whole Army were reduced to great Distress for Want of Provisions, and the *Czar* finding himself under Difficulties, from which he could not otherwise extricate himself, agreed to deliver up *Asoph* to the *Turk*, and to demolish all the Forts he had erected at the Mouth of the River *Don*, or *Tanais*, so that since that Time the *Muscovite* is excluded a Trade and Passage in, and Communication with, the *Palus Meotis* and the *Black Sea*, the Grand Seignior being now again sole Master of both.

CHAP.

CHAP. II.

Gives an Account of the Province of Beſſarabia, *and more particularly of the Action at* Bender *in the Time of the late King of* Sweden, *during his long Abſence from his ſaid Kingdom.*

TO the Weſtward or rather South-Weſt of *Budziack Tartary* is *Beſſarabia*, bounded on the North by the River *Nieſter*, which divides it from *Podolia*, and on the North-Eaſt and Eaſt by *Budziack Tartary* and the *Black Sea*; by the River *Danube* on the South, and by *Moldavia* on the Weſt.

The Hiſtory of the late King of Sweden during his Abſence at Bender.

THIS, as one of the Provinces of the *Turkiſh* Empire, was mentioned, and the chief Towns deſcrib'd in Chap. I. of the general Deſcription of the *Turkiſh* Empire; only *Bender*, whichw as the Scene of ſo much Action and even Admiration too in the Expedition of *Charles* II. King of *Sweden*, and his long Continuance there, we have reſerved the particular Account of the whole Affair for the following Chapter, that the Reader may have the Satisfaction of peruſing that at his Leiſure by itſelf, without its being interſpers'd with the reſt of the Hiſtory; but it is neceſſary to the better underſtanding of this Part of Hiſtory, to obſerve that *Bender* is ſituate upon the River *Nieſter*, above a hundred Miles North-Weſt from the North-Weſt Part of the *Black-Sea*, and is the Place to which the above-mention'd King of *Sweden* made his Retreat after his Defeat at *Poltowa* in *Ukrania*; the Particulars of which are as follow:

Charles the XIIth King of *Sweden* had for nine Years a Series of uninterrupted Succeſs, that it might be ſaid of him, that to Fight and to Conquer were in him inſeparable; and that where-ever he did the former, he was ſure of the latter, and looking upon himſelf invulnerable and invincible, neither to be wounded nor overcome, he deſpiſed the greateſt Dangers, and according to his Ambition ſo was his Succeſs, he remain'd unhurt in the Midſt of Showers of Bullets, and when his Troops fell round about him, and his Horſes under him, yet then he would never allow his own Countenance to expreſs the leaſt Apprehenſions of Danger.

WITH this Intrepidity he went on like the great *Alexander*, as if all the World was not ſufficient to ſatisfy his Conqueſts; and having dethron'd the King of *Poland*, and obtain'd great Advantages againſt the *Czar* of *Muſcovy*, ſaid, I'll treat him with the ſame Fate: And when the *Czar* made any Propoſals towards an Accommodation, he anſwer'd, *I'll treat with him at* Moſcow, intimating, that he could penetrate to that Capital when he pleas'd. His Reſolution was ſuch, that when an old Officer in *Ukrania* told him it was againſt the Rules of War to have fortify'd Towns behind him, and hazard the Deſtruction of his Army by advancing ſo far into an Enemy's Country without Proviſion or Ammunition, he reſolutely anſwer'd, *What, are you afraid to loſe Sight of your Wife? If you are a true Soldier, and a Lover of Glory, I'll lead you ſo far that you ſhall ſcarce have News from* Sweden *once in three Years.*
